**To Set Timing:**—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over until 'IGN/' mark on vibration dampener at front of engine lines up with pointer on timing gear cover (this mark is 2° or 9/64" before top dead center mark 'UDC.1-6'). Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, insert .016" feeler between advance arm and hold-down plate (to insure clearance for free advance arm movement), tighten clamp bolt, remove feeler gauge.

**CARBURETOR****CARBURETION:**—Carburetor—Stromberg Model BXO-26, 1 1/4" single, downdraft type.*For complete data, refer to Carburetor Index.*

**Idle Adjustment:**—With engine warm, Fast Idle and Automatic Choke inoperative so that engine idles at hot or slow idle speed, set throttle stop screw so that idling speed is 7-8 M.P.H., turn idle adjusting screw in until engine begins to miss or lag, turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust stop screw for correct idling speed.

**Accelerating Pump Adjustment:**—Three holes provided in throttle lever for pump link engagement. Change setting for seasonal requirements:

Inner Hole (Min. stroke)—Extreme warm weather.  
Center Hole—Normal operating conditions.  
Outer Hole (Max. stroke)—Extreme cold weather.

**NOTE:**—Metering jets need not be changed when heavy duty oil-bath type air cleaner installed. First size smaller main metering jet can be installed to secure greater fuel economy with slight loss of performance. See Jet Specification table in Carburetion Section for complete jet data.

**Fast Idle & Automatic Choke:**—Integral with carburetor.*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke Adjustment:**—Standard setting for ordinary fuel is with mark 'R' on thermostatic spring case lined with reference projection on housing. If this setting too rich (engine over-choke or loads up), rotate case to 'M' mark (leaner setting). Use 'H' position for highly volatile fuels.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC #1528630 oil-wetted type standard, #1528632 heavy-duty oil-bath type optl. (standard in severe dust condition states).

**NOTE:**—AC #1528665 oil-vent air cleaner used with oil-wetted type air cleaner, #1528629 heavy duty type with oil-bath cleaners.

**Fuel Pump:**—AC Type W, #1522227 Std., Type AD #1522228 combination fuel-and-vacuum pump Optl.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Auto-Lite (Motometer) Electric. No. NG-8711D (dash unit).

*For complete data, refer to Carburetion Equip. Index.***BATTERY****BATTERY:**—Willard, Type WHT-2-105. 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).**Starting Capacity:**—133 amperes for 20 minutes.**Zero Capacity:**—300 amperes for 3.9 minutes. Five second voltage—4.27 volts.

**Grounded Terminal:**—Positive (+) terminal.  
Battery grounded to frame. Engine grounded by separate ground strap at front engine mounting.

**Dimensions:**—Width 7 1/8". Length 10 5/16". Height 8 13/16".

**Location:**—On left hand side under front seat.**STARTER****Auto-Lite Model MAW-4015. Armature MAW-2091.****Drive:**—Outboard Barrel Type Bendix No. A-1719.**Rotation:**—Counter-clockwise at commutator end.**Brush Spring Tension:**—43-52 ozs. (new brushes).

**Cranking Engine:**—130 RPM., approximately 175 amperes at 5.0-5.5 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.6 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.5 "	400	4.0	400
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out two flange mounting screws, remove starter and switch as assembly.

**Starting Switch:**—R.B.M. Model 2214. Magnetic type. Mounted on starter and controlled by pushbutton switch on instrument panel.

**Contacts Close:**—4-4 1/2 volts. **Open:**—1 1/2 volts.**Current Draw:**—3-3 1/2 amperes.**GENERATOR****EARLY CARS**

**Auto-Lite Model GCJ-4808-A. Armature GCJ-2006B.**  
Fixed third brush type used with Auto-Lite Voltage Regulator Model VRD-4006-A.

**MODEL 7A—SERIAL No. 5,591,818 & UP****MODEL 8A—SERIAL No. 4,104,800 & UP**

**Auto-Lite Model GDF-4804-B. Armature GDF-2006.**  
Fixed third brush type used with Auto-Lite Voltage Regulator Model VRD-4006-B.

**NOTE:**—Third brush is fixed non-adjustable type. Any attempt to adjust third brush position will damage brush holder.

**Charging Rate Adjustment:**—Adjusted by changing Voltage Regulator setting (do not disturb third brush). See Regulator data below.

**Maximum Charging Rate:**—As given in tables below. Reached at car speed of 25 to 30 M.P.H. To check generator output, connect test ammeter in line at 'B' terminal on regulator, connect voltmeter between 'A' terminal and ground, short out regulator by connecting jumper between 'F' and 'GD' terminals. Operate generator at speed of 25-30 M.P.H., check ammeter reading. Disconnect jumper and restore original connections after making test.

**Performance Data—GCJ-4808-A**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.

28	7.9	2220	28.3	8.0	3200
32	8.0	3100			

**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—53 ounces (new brushes).

**Field Current:**—1.9-2.1 amperes at 6.0 volts.**Motoring Current (GCJ):**—4.0-4.4 amperes at 6 volts.**Motoring Current (GDF):**—5.3-5.9 amperes at 6 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, move generator out away from engine until fan can just be rotated with belt held stationary.

**REGULATOR**

**Auto-Lite Model VRD-4006-A (for GCJ Generator), VRD-4006B (with GDF generator).** Consists of Cut-out Relay and vibrating Voltage Regulator in case on engine side of dash.

**For complete data, refer to Electrical Equipment Index.**  
**NOTE:**—Regulator cover sealed. Serviced on exchange basis if seals not broken. Cover must be removed to make adjustments.

**Cutout Relay****Cuts In:**—6.4-7.0 volts Cold.**Cuts Out:**—5-3.0 amperes discharge current.**Contact Gap:**—.015" minimum.

**Air Gap:**—.034" min., .038" max., with contacts open.  
**Measure at hinge end of core.**

**Voltage Regulator**

**Setting:**—7.3-7.6 volts at 70°F. (Regulator Serial No. 8R-000001 Up). See Electrical Equipment Section for settings and changes on units before this serial no.

**To Check (Without Breaking Seals):**—Connect ammeter in charging line at 'B' terminal on regulator, connect voltmeter between 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. until voltage is steady. Voltmeter reading should be within limits of 7.3-7.6 volts (cold—70°F), 7.1-7.4 volts (hot—140°F). See Regulator Setting above.

**To Adjust:**—Change armature spring tension slightly by bending lower spring hanger. See Electrical Equipment Section for complete directions.

**Contact Gap:**—.010" Min., .020" Max. with armature against stop pin.

**Air Gap:**—.0595-.0625" with contacts just opening.

C NTINUED N NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown, pre-focused type. Upper and lower beams controlled by selector switch on toeboard (lower beam deflected slightly to right).

**Headlamp Adjustment (Model 7A)**—With car unloaded, on level floor 25' from screen, and with upper beams lighted, loosen mounting nut under headlamp and aim each lamp so that upper edge of beam is slightly above horizontal line at lamp-center height, and beam is centered on vertical line directly ahead of the lamp center.

**Headlamp Adjustment (Model 8A)**—Adjust for same beam pattern as 7A above. Adjusting screw for horizontal movement located on side of lamp body (remove hood side panel for access to screw), screw for vertical movement at rear of lamp body. **Beam Indicator**—Green Dot on face of speedometer dial, illuminated whenever upper beams in use.

**Switches**

**Lighting**—Douglas.  
**Beam Selector**—R.B.M. #1081.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (export)	32-32	2330
Parking, Ign., Instrument	1½	55
Stop & Tail	21-3	1158
License	3	63
Trunk	6	81
Dome	15	87

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 amperes. On back of lighting switch (nearest to instrument panel).

**Accessory**—20 amperes. On back of lighting switch. Protects Heater, Radio, etc.

**HORNS:**—Klaxon, Model K-33-S. Type 2083 (Std. 7A). Type 2078 (High Note, R.H. horn). Type 2077 (Low Note, L.H. horn) Std. on Model 8A, Optl. on 7A. All horns are vibrator type. Twin horns are matched tone and operated by horn relay.

Type	Current (at 6 volts)	Air Gap
Type 2077 (Low Note)	12-14 amperes	.032-.036"
Type 2078 (High Note)	11-13 amperes	.042-.046"

**Horn Relay:**—Delco-Remy Model 1116756.

**Contacts Close**—2.7-4.0 volts.

**Contact Gap**—.020". **Air Gap**—.015".

**ENGINE**

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head.

**Bore**—3 5/16". **Stroke**—4¾".

**Displacement**—226 cu. ins. **Rated HP**—28.35.

**Developed Horsepower**—90 HP. (Std. head), 94 HP. (Optl. high altitude head) at 3400 RPM.

**Compression Ratio**—6.0-1 Std. cast-iron head. 7.0-1 aluminum hd. Optl. (high altitude only).

See Studebaker Shop Note for Head installation.

**Compression Pressure**—105 lbs. (Std. head), 110 lbs. (Optl. head) at 150 RPM. (cranking speed).

**Vacuum Reading**—18-20" at 450 RPM. or 8 MPH.

**PISTONS:**—Lynite, aluminum alloy, tin-plated, T-slot, cam ground type. **Length**—3¾".

**Removal**—Pistons and rods removed from above. **Clearance**—.0005" new. Measure ¼" up on skirt 90° from pin bosses. See Fitting New Pistons.

**Original Bore Sizes:**—See Studebaker Shop Notes.

**Replacement Pistons:**—Finished pistons (pins fitted) furnished std. and .002", .004", .010", .015", .020", .030" oversize. Exact size stamped on piston head.

**Fitting New Pistons:**—Insert .002" X 1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler must be between 7-15 lbs.

**Installing Pistons:**—T-slot away from camshaft.

**PISTON RINGS:**—2 (P-C #70) compression, 1 (#85) oil ring per piston, all above pin. Narrow heat-dam groove (no ring fitted) above top ring. Oil ring groove drilled with ten 5/32" oil drain hole.

Ring	Width	End Gap	Side Clearance
Compression	¾"	.013-.018"	.0015-.002"
Oil Control	3/16"	.013-.018"	.0015-.002"

**NOTE**—Install compression rings with step down.

**Replacement Rings:**—Oversizes .010", .020", .030".

**PISTON PIN:**—Diameter—7/8". **Length**—27/8".

Pin locked in connecting rod.

**Pin Fit in Piston**—Light push fit (rod should rock in piston of own weight. **Clearance** .0001-.0003".

**NOTE**—Replacement pistons have pins fitted.

**CONNECTING ROD:**—Weight—33.2 ozs. **Length**—8½".

**Crankpin Journal Diameter**—2.18675-2.18775".

**Lower Bearing**—Spun babbitt. Rods exchanged.

**Clearance**—.0005-.002". **Sideplay**—.005-.009".

**Bearing Adjustment:**—None. Replace rods. Rods furnished std. and .010", .020" undersize. Ream to give clearance of .0005-.002". See Studebaker Shop Notes for 'Palnut' installation (some cars).

**Installing Rods:**—Install rods with narrow half of bearing toward front in cylinders #1, 3, 5, toward rear in #2, 4, 6. Marks on caps and rods must be together and oil hole toward camshaft.

**CRANKSHAFT:**—4 bearing, integral counterweights with vibration dampener at forward end.

**Journal Diameters**—2.4995-2.500" all bearings.

**Bearing Type**—Removable steel-backed, babbitt-lined type. **Clearance**—.0005-.0025".

**Bearing Adjustment:**—None (no shims). Replace bearings. Furnished Std., .010", .020" undersize. Tighten bearing cap bolts to 1100 in. lbs.

**End Thrust:**—Thrust plate assembled between front bearing and crankshaft gear. Controlled by shims between plate and bearing. **Endplay** .003-.006".

**CAMSHAFT:**—Four bearing. Helical gear drive.

See Studebaker Shop Notes for Camshaft Removal.

**Bearings**—Steel-backed, babbitt-lined, split type bushings. When replacing, oil holes in block and bushing must be in alignment.

**Clearance**—.00075-.00225" (#1), .002-.00375" (others).

**End Thrust:**—Steel thrust washer and spacer between gear hub and front bushing.

**Timing Gears:**—Crankshaft (cast-iron). Camshaft (Celeron Fabric). See Studebaker Shop Notes for Gear Removal & Replacement Gear size selection.

**Camshaft Setting:**—Mesh marked camshaft gear tooth with two marked teeth on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

**Seat Angle** **Lift** **Stem Clearance**

All valves 45° 11/32" .001-.003"

**Valve Guides:**—Pressed in block from above (1 5/32" below upper edge of valve seat) with stepped end down. Ream to inside diameter of .3435-.3445".

**Valve Springs:**—Install with closed coil at top. Dampener on top of spring. Replace spring if 10% weak. See Studebaker Shop Notes for Valve Spring Installation instructions. **Spring Pressure** **Spring Length** **Valve Open** 125-135 lbs. 1¾"

**Valve Lifters:**—Barrel type (no separate guides). Can be removed from top. Furnished .0005", .001" ov'size.

**VALVE TIMING**

**Tappet Clearance**—.016" all valves (cold). Remove right hood side panel for work on valves. See Studebaker Shop Notes for Side Panel Removal.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves**—Open 54° BLDC. Close 10° ATDC.

**To Check Timing**—Set tappet clearance #1 intake valve at .020". This valve should open with piston 15° or .0942" before top dead center when mark 'IN-OP.1-6/' on vibration damper at front of engine lines up with pointer on gear case cover. Reset tappet clearance at .016" (cold).

**LUBRICATION**

**LUBRICATION:**—Pressure system with oil pump mounted on right of engine. See Studebaker Shop Notes for Oil Pump installation instructions.

**Normal Oil Pressure:**—40 lbs. (min.) at 40 MPH.

**Oil Pressure Regulator:**—Located on right front corner of engine. Operates at 40 lbs. Not adjustable.

**Crankcase Capacity:** 5½ quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity—14½ qts.

**Water Pump:**—Centrifugal with adjustable packing.

See Water Pump Section for complete data.

**Removal**—With water drained and fan belt removed, disconnect pump inlet hose, take out pump mounting bolts, lift fan and pump assembly off.

**Thermostat:**—Bishop & Babcock or Fulton. In cylinder head water outlet. Install with bellows down.

**Setting**—Starts to open 148-153°F.

**CLUTCH**

**CLUTCH:**—Borg & Beck Model 9A6. Model #869 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings**—Moulded (flywheel side), Woven (opposite side). Inside Diam. 5½". Outside Diam. 9¼". Thickness .133".

**Adjustment**—Free travel 1" (min.). Sleeve adjustment on rod connecting pedal to shaft lever. Turn sleeve out for greater travel, in for less. Check Hill-Holder after adjusting clutch.

**Hill-Holder Adjustment:**—On cars with Hill-Holder check action after adjusting clutch to see that

brakes release just before clutch engages. Adjust by loosening locknut and turning adjusting nut at end of hill-holder control rod. Shorten rod for earlier brake release or lengthen rod for later release.

**Removal:**—Remove transmission (see Transmission Removal following), support engine at rear, remove rear engine mountings, remove clutch housing. Take out mounting screws and remove clutch.

### TRANSMISSION

**TRANSMISSION:** Warner 'Horizontal' Types. Model Nos. AS2-T88 (floor shift), AS4-T88 (Evans vacuum shift). All helical gear type with synchro-mesh (2nd & high).

*See Transmission Section for complete data.*

**Transmission Control:** Evans-Studebaker vacuum type optional equipment. Lever mounted on instrument panel.

*See Transmission Section for complete data.*

**Removal:** Disconnect front and rear universal joints. On cars with vacuum shift, disconnect vacuum power cylinder rod. Remove transmission mounting capscrews at clutch housing, pull transmission back and lift out.

### OVERDRIVE

**OVERDRIVE:** Warner Type R6 (Horizontal Transmission). Complete assembly model number (Horizontal transmission with R6 Overdrive) Warner No. AS1-T88 (floor shift), AS3-T88 (vacuum shift).

*See Transmission Section for complete data.*

**Removal:** Same as for regular transmission after removing Overdrive Support. *See Overdrive Transmission Rear Support Installation in Studebaker Shop Notes*

### UNIVERSALS

**UNIVERSAL JOINTS:** Thompson Products. Rubber bushed type. Two used.

*See Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Spicer Model 41-2. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.55-1 Std., 4.82-1 Optl.

**Backlash:**—.005-.007". Shim adjustment

**Removal:**—Hoist rear of car, disconnect propeller shaft at rear universal, brake line, and shock absorbers, remove spring U-bolts, disconnect rear spring shackles, withdraw axle assembly.

**Wheel Bearing Adjustment:**—Shims provided between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub, drum, and backing plate (retained by 6 nuts). Remove shims to decrease endplay, add shims to increase. Shim thickness at both wheels must be equal within .005".

**Endplay:**—.001-.005". Measure with dial indicator.

### SHOCK ABSORBERS

**SHOCK ABSORBERS:** Houdaille-Model BEDVS (front), Model ASC (rear). Double acting, adjustable, hydraulic types. Rear shocks have thermostat control.

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Planar type independent suspension with transverse spring. Specifications below apply with car unloaded on level floor.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—5½°.

**Caster:**—Minus ¼° to plus ¾°. Not adjustable.

**Camber:**—¼-¾°. Adjustable.

**Toe In:**—1/16-1/8". To adjust, turn center tie rod.

### STEERING GEAR

**Steering Gear:** Ross T-14 Cam-&-Twin Lever type.

*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type:

**Front Wheels:**—Front shoe cylinder 1⅜". Rear 1".

**Rear Wheels:**—Front shoe cylinder 1¼". Rear 1".

**NOTE:**—Wheel cylinder bore size marked on casting.

**Drum:**—Budd composite. Diameter—11".

**Lining:**—Front shoe—woven. Rear—moulded. Width 2". Thick. 3/16". Length per wheel 19 11/16".

**Clearance:**—.010" toe, .005" heel, for each shoe.

**Hand Brake Adjustment:**—See Service Brakes.

**Hill-Holder:**—Optional equipment.

*See Brake Section for complete data.*

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number 7120101 (South Bend), 7801801 (Los Angeles). Stamped on plate on left frame side member under left front fender.

**ENGINE NUMBER:**—Stamped on left side of engine block at center. First number B-24601.

**TUNE-UP**

**COMPRESSION:**—Ratio—6.0-1 Std. cast-iron head.

Pressure—105 lbs. at cranking speed of 150 RPM.

**VACUUM READING:**—18-20" steady reading with engine idling at 450 RPM. or 8 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type 8-A. 18 mm. Metric.

Gaps—Set at .025".

NOTE—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—33° Closed.

Synchronization—Set movable contacts to open 45° after stationary set.

Automatic Advance—14½° max. at 1800 RPM (distr.).

Vacuum Advance—6° distr. with 11-14" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Vibration dampener mark 'UDC.1-8' aligned with pointer at front of engine for stationary contacts. Mark 'UDC.3-6' for movable contacts (¼ revolution from 'UDC.1-8' mark).

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Set idle adjusting screws midway between 'miss' and 'roll' points. Idle speed 450 RPM or 8 MPH.

Float Level—Fuel level ⅝" below top edge of bowl. Accelerator Pump—Inner Hole (short stroke) for minimum charge, Outer hole (long stroke) maximum charge.

Fuel Pump Pressure: 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

To check valve, unlatch thermostatic coil (free outer end from bracket on manifold), operate valve by hand and see that shaft is free (shaft can be cleaned with emery if necessary). Make certain that thermostatic coil is properly latched to bracket and that tension spring (from shaft to clip on flange) is in place.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**Ignition Switch:**—Mitchellock Type 24-R, No. 7656 (Mahogany finish), 7660 (Silver Beige), 7699 Gun-metal Gray), 7701 (Burl Tan). Delco-Remy Model No. 1116257. Connected to coil by armored cable.

**Ignition Lock:**—Yale & Towne, Mitchell No. 6770.

**COIL:** Delco-Remy Model 1115021. Mounted on dash. Ignition Current—½-1½ amps. idling, 4-5 stopped.

**CONDENSER:** Delco-Remy—Part No. 1838163.

Capacity—.18-25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 662-M. Double breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control. NOTE—Movable contacts must be synchronized. Open 45° after stationary set.

**Firing Interval:**—Regular 45° (distr.) intervals.

**Breaker Gap:**—Set at .020". Limits .018-.024".

**Cam Angle or Dwell:**—33° (closed), 12° (open). Both sets operating together and synchronized.

**Breaker Arm Spring Tension:**—22 ounces.

**Rotation:**—Clockwise viewed from top.

**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	300	2.5.....	600
14.5 .....	1800	29 .....	3600

**Vacuum Spark Control D-R No. 681-S.** Mounted under distributor and linked to advance arm. Provides additional advance at speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Plunger travel ¼" max.

**Vacuum Advance**

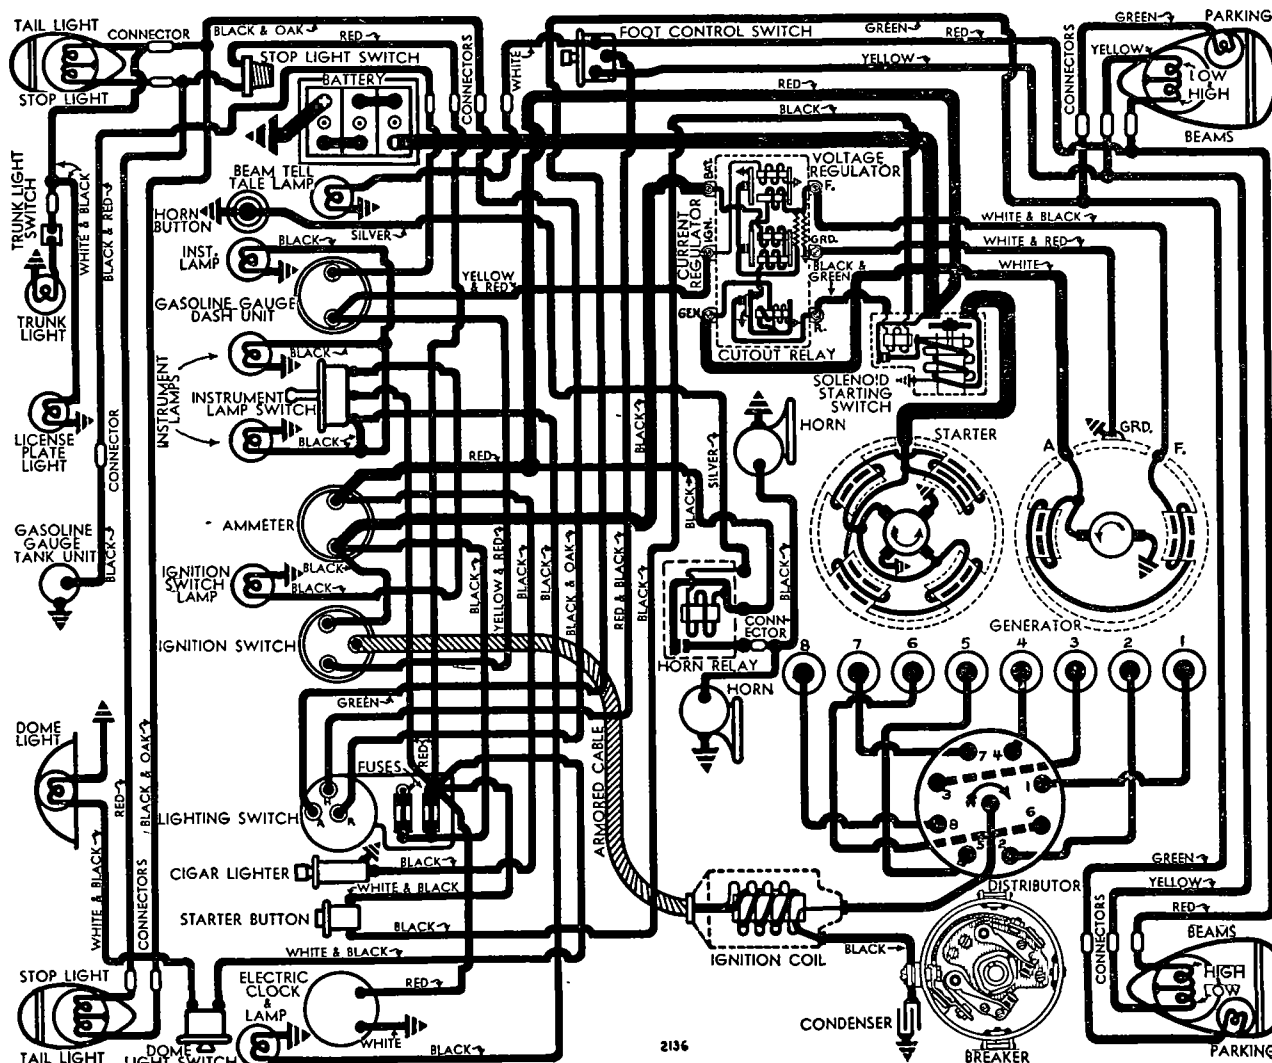

Dist. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7"
6°	12°	11-14"

**Removal:**—Mounted on right hand side of cylinder head. To remove, loosen advance arm clamp bolt (not necessary to disturb vacuum unit or vacuum connections).

**IGNITION TIMING**

**IGNITION TIMING:**—Setting for all engines as follows:

Flywheel Degrees	Piston Position
0° (At TDC.)	.0000" TDC.

**To Set Timing (Stationary Contacts)**—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over until piston reaches top dead center, stop when dead center mark 'U.D.C.1-8' on vibration dampener at front of engine lines up with pointer on timing gear cover. Loosen advance arm clamp bolt, rotate distributor until stationary breaker contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt, then synchronize movable contacts.

**Synchronization (On Engine)**—Turn engine over 90° to #6 firing position with vibration dampener mark 'U.D.C.3-6' lined up with pointer on timing gear cover. Loosen lock screws on movable sub-plate carrying second set of contacts, turn eccentric adjusting screw until contacts begin to open, tighten lock screws.

**Synchronization (Using Tool)**—Use Delco-Remy tool #1838182. See Distributor Synchronization in Electrical Equipment Section for complete instructions. Distributor firing intervals regular 45-45-45°.

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model AAO-161, 1" Dual Downdraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—Metering jets can be changed to first smaller size for increased fuel economy with slight loss in performance (jets for both barrels must be same size and should be changed as a unit). See Stromberg Jet Specifications in Carburetor Section for complete jet data.

**Idle Adjustment**—With engine warm so that Fast Idle and Automatic Choke inoperative and engine idling at hot or slow idling speed, set throttle stop screw for 7-8 MPH. idling speed, turn idle adjusting screw for each carburetor barrel (in succession) in until engine begins to lag or miss, out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump Adjustment**—Two holes provided in throttle lever for pump link engagement. Adjust for seasonal requirements as follows:

Inner Hole (Min. stroke)—Summer temperatures.

Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle & Automatic Choke**—Integral with carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke Adjustment**—Standard setting for ordinary fuel is with mark 'R' on thermostatic spring case lined up with reference projection on housing. If this setting too rich (engine over-choke or loads up), rotate case to 'M' mark (leaner setting). Use 'H' position for highly volatile fuel.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528631 oil-wetted type Std., #1528256 heavy duty oil-bath type Optl. (this type standard in severe dust condition states).

**NOTE**—AC #1528665 oil-vent air cleaner used with oil-wetted type air-cleaner, #1528629 heavy duty type with oil-bath cleaners.

**Fuel Pump:**—AC Type J #1521797 combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Auto-Lite (Motometer) Electric. Model No. NG-8711D (dash unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—Willard, Type WHT-2-105, 6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.9 minutes. Five second voltage—4.27 volts.

**Grounded Terminal**—Positive (+) terminal. Battery grounded to frame. Engine grounded by separate ground strap at front engine mounting.

**Dimensions**—Width 7 1/16". Length 10 5/16". Height 8 13/16".

**Location**—On left hand side under front seat.

## STARTER

**Delco-Remy Model 1107903.** Armature No. 820158.

**Drive**—Overrunning Clutch (solenoid pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ounces each.

**Cranking Engine**—110 RPM., 150-200 amperes, 5-5.5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
16 "	Lock	3.0	600

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws (remove starter and solenoid switch as an assembly).

**Starting Switch:** Delco-Remy Solenoid 1546. Mounted on starter field frame and controlled through relay (in switch case) by pushbutton switch on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch

Closes against 70 lb. pull with 1/2" air gap drawing 65-71 amperes at 5 volts. Holds switch closed with current draw of 12-14 amperes (hold-in coil only).

### Solenoid Relay

**Contacts Close**—1.9 volts Max. Open—1.0-1.2 volts.

**Contact Gap**—.035". **Air Gap**—.010".

## GENERATOR

**Delco-Remy Model No. 1102653.** Armature Number 1857866. Shunt (two brush) type with external vibrating voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output controlled by Current Regulator. See Control Unit section below.

**Maximum Charging Rate**—26 amperes (cold) with discharged battery as indicated on test ammeter connected in charging line at regulator 'BAT' terminal. Decreases as battery comes up on charge. Generator output constant at all speeds above 1750 R.P.M. or 21.1 M.P.H.

### Performance Data—Generator Cold

Amperes	Volts	R.P.M.
25	8.0	1650

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—22-26 ounces each.

**Field Current**—2.0-2.2 amperes at 6.0 volts.

**Removal:**—Generator now pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, pull generator out or away from engine until fan can just be turned with belt held stationary.

## REGULATOR

**Delco-Remy Model 5818.** Double Core Type Voltage & Current Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage & Current Regulators in case on dash. Cutout Relay has special 'ground' contacts for starter solenoid control.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Cover is sealed and units serviced on exchange basis if seals not broken. Unit can be checked without breaking seal but cover must be removed to make adjustments.

### Cutout Relay

**Cuts In**—6.7-7.6 volts, 800-850 R.P.M., 9.7 M.P.H.

**Cuts Out**—0-3.0 amperes discharge current.

**Contact Gap**—.020". **Air Gap**—.020" (closed).

### Voltage Regulator

**Setting**—7.5-7.95 volts (70°F.), 7.4-7.6 volts (150°F). Regulator over-compensated for temperature and must be checked at these points.

**To Check (without breaking seal)**—Disconnect lead at 'IGN' terminal on regulator, connect jumper between 'IGN' and 'BAT' terminals, connect ammeter in charging line at 'BAT' terminal, connect voltmeter between 'IGN' terminal and ground. Operate generator at 2800-3400 R.P.M., adjust charging rate to 8-10 amperes (use variable rheostat or AVR set). Voltmeter reading should check with setting given above.

**To Adjust (with cover removed)**—Change armature spring tension by bending spring hanger at lower end of spring slightly. Check performance as directed above.

**NOTE**—Voltmeter regulator readings must be taken with cover in place and setting should be checked by decreasing speed until Cutout Relay contacts open, and then increasing speed to original point.

**Contact Gap**—.020". **Contact Spring Tension**—3.5 oz.

**Air Gap**—.063" between armature and core with armature down so that fibre bumper just touches stop. .010" between fibre bumper and stop with armature up.

### Current Regulator

**Setting**—26 amperes.

**To Check (without breaking seal)**—Disconnect lead on 'IGN' terminal of regulator, connect ammeter in charging line at 'BAT' terminal, operate generator and check output.

**NOTE**—Generator voltage must not be allowed to exceed 8.5 volts with Voltage Regulator disconnected.

**To Adjust (with cover removed)**—Change armature spring tension by bending spring hanger at lower end of spring slightly. Check performance as directed above.

C NTINUED N NEXT PA E

## CONTINUED FR M PRECEDIN PAGE

**Contact Gap**—.020". **Contact Spring Tension**—3.5 oz.  
**Air Gap**—.075" between armature and core with armature down so that fibre bumper just touches stop. .010" between fibre bumper and stop with armature up.

**NOTE**—Repolarize generator whenever Control Unit disconnected or removed by connecting jumper between 'GEN' and 'BAT' terminals momentarily after all leads have been connected. Do not operate engine.

## LIGHTING

**LIGHTING**:—**Headlamps**—Corcoran-Brown, pre-focused type. Upper and lower beams controlled by selector switch on toeboard (lower beam deflected slightly to right).

**Headlamp Adjustment**—With car unloaded, on level floor 25' from screen, and with upper beams lighted, aim each headlamp so that upper edge of beam is slightly above horizontal line at lamp-center height, and beam is centered on vertical line directly ahead of lamp center. Adjusting screw for horizontal movement located on side of lamp body (remove hood side panel for access to screw), screw for vertical movement at rear of lamp body.

**Beam Indicator**—Green dot on face of speedometer dial, illuminated whenever upper beams in use.

## Switches

**Lighting**—Douglas.

**Beam Selector**—R.B.M. #1081.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (Export)	32-32	2330
Parking, Ign., Instrument	1½	55
Stop & Tail	21-3	1158
License	3	63
Trunk	6	81
Dome	15	87

## MISC. ELECTRICAL

**FUSES**:—**Lighting**—20 ampere. On back of lighting switch (nearest to instrument panel).

**Accessory**—20 ampere. On back of lighting switch (protects Heaters, Radio, etc.)

**HORNS**:—**Klaxon**, Model K-33-S. Type 2077 (Low Note, L.H. horn), Type 2078 (High Note, R.H. horn). Vibrator type, matched tone, twin horns operated by horn relay.

Type	Current (at 6 volts)	Air Gap
2077 (low note)	12-14 amperes	.032-.036"
2078 (high note)	11-13 amperes	.042-.046"

**Horn Relay**:—Delco-Remy Model No. 1116756.

**Contacts Close**—2.7-4.0 volts.

**Contact Gap**—.020". **Air Gap**—.015".

## ENGINE

**ENGINE**:—Own. 8 Cyl., 'L' head type.

**Bore**—3 1/16". **Stroke**—4¼".

**Displacement**—250.4 cu. ins. **Rated HP**—30.

**Developed Horsepower**—110 at 3600 RPM.

**Compression Ratio**—6.0-1 Std. cast-iron head.

**Compression Pressure**—105 lbs. at 150 RPM.

**Vacuum Reading**—18" at 450 RPM., 8 MPH.

*See Studebaker Shop Notes for Head Installation.*

**PISTONS**:—Lynite, aluminum alloy, T slot, Cam-ground, tin-plated type. Length 3¾".

**Weight**—13.6 ozs. (stripped).

**Removal**—Pistons and rods removed from above.

**Clearance**—.0015" (¼" up on skirt 90° from pin).

**Original Bore Sizes**:—*See Studebaker Shop Notes.*

**Replacement Pistons**:—Finished pistons (with pins fitted) furnished .002", .004", .010", .015", .020", .030" oversize. Exact size stamped on piston head.

**Fitting New Pistons**:—Install .003" x 1" hardened feeler between piston and cylinder wall on camshaft side (T slot away from camshaft, pin bosses parallel to crankshaft). Pull to withdraw feeler must be 7-15 lbs.

**Installing Pistons**:—T-slot away from camshaft.

**PISTON RINGS**:—Two compression, 1 oil control ring, all above pin with narrow heat-dam groove (no ring) above top ring groove. Oil ring groove drilled with ten 5/32" oil drain holes.

**Ring** **Width** **End Gap** **Side Clearance**

**Compr.** ..... ⅛" ..... .013-.018" ..... .0015-.002"

**Oil Contr.** ..... 3/16" ..... .013-.018" ..... .0015-.002"

**NOTE**—Install Compression rings with step down. Inner ring used with oil ring only.

**Replacement Rings**:—Oversizes .010", .020", .030".

**PISTON PIN**:—Diameter ⅞". Length 2⅞". Pin is locked in rod by clampscrew.

**Pin Fit in Piston**—Light push fit (rod should rock in piston of own weight). Clearance .0001-.0003".

**NOTE**—Replacement pistons have pins fitted.

**CONNECTING ROD**:—Weight 32 ozs. Length 8".

**Crankpin Journal Diameter**—1.87425-1.87525".

**Lower Bearing**—Removable, steel-backed, lead-bronze lined type.

**Clearance**—.00075-.00275". **Sideplay** .005-.010".

**Bearing Adjustment**:—None. Replace bearings. Furnished Std. and .005, .010", .020" undersize. Crankpin must be turned down to size (bearings should not be reamed). See that tongues on bearings engage slots and that oil holes line up.

*See Studebaker Shop Notes for 'Palnut' installation*

**Installing Rods**:—Oil hole in rod toward camshaft.

**CRANKSHAFT**:—9 bearing with bolted counterweights. Vibration dampener mounted on forward end. *See Studebaker Shop Notes for Vibration Dampener data.*

**Journal Diameters**—2.3435-2.3440" all bearings.

**Bearing Type**—Removable steel-backed, babbitt-lined type. Clearance .001-.003".

**Bearing Adjustment**:—None (no shims). Replace bearings. Do not file bearing caps. Tighten bearing cap bolts to 1100 in. lbs. Bearings furnished .010", .015" undersize.

**End Thrust**:—Thrust plate between front main bearing and crankshaft gear with shim adjustment.

**Endplay**—.003-.006".

**CAMSHAFT**:—Six bearing. Helical gear drive.

*See Studebaker Shop Notes for Camshaft Removal.*

**Bearings**—Split steel-backed, babbitted bushings.

**Clearance**—.00075-.00225" (#1), .002-.00375" (others). **NOTE**—Oil holes in bushing & block must line up.

**End Thrust**:—Steel thrust washer and spacer between gear hub and bearing. **Endplay**—.003-.006".

**Timing Gears**:—Cast-iron (crankshaft), Celeron Fabric (camshaft). *See Studebaker Shop Notes for Gear Removal and Replacement Gear Size selection.*

**Camshaft Setting**:—Mesh marked tooth on camshaft gear between two marked teeth on crankshaft gear.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 13/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"
	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.001-.003"

**Valve Guides**:—Pressed in block from above (1 5/16" below top of block) with stepped end down. Ream to inside diameter of .343-.344".

**Valve Springs**:—Install with closed-coll up and dampener on top of spring. Replace springs if 10% weak.

*See Studebaker Shop Notes for Valve Spring Installation instructions.*

**Spring Pressure** **Spring Length**

**Valve Open** ..... 125-135 lbs. .... 1¾"

**Valve Lifters**:—Mushroom type in bolted-on guide brackets (clusters of four). Assemblies may be removed through valve opening on side of engine.

## VALVE TIMING

**Tappet Clearance**:—.016" all valves, engine cold. Remove right hood side panel for work on valves. *See Studebaker Shop Note for Side Panel Removal.*

**Valve Timing**:—*See Camshaft Setting above.*

**Intake Valves**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves**—Open 54° BLDC. Close 10° ATDC.

**To Check Valve Timing**—Set tappet clearance #1 intake valve at .020". This valve should open with piston 15° or .0915" before top dead center when 'IN.OP/1-8' mark on vibration dampener at front of engine lines up with pointer on gear cover. Reset tappet clearance at .016" cold.

## LUBRICATION

**LUBRICATION**:—Pressure type. Gear type oil pump in crankcase. *See Studebaker Shop Notes for Oil Pump Installation directions.*

**Normal Oil Pressure**—40 lbs. min. at 40 MPH.

**Oil Pressure Regulator**—Located at right front corner of engine. Opens at 40 lbs. Not adjustable.

**Crankcase Capacity**—8 qts.

## COOLING

**COOLING SYSTEM**:—Capacity—17 quarts.

**Water Pump**:—Centrifugal with adjustable packing. *See Water Pump Section for complete data.*

**Removal**—Drain water, remove fan belt, disconnect hose, take out mounting bolts, lift pump out.

**Thermostat**:—Bishop & Babcock or Fulton. In cylinder head outlet. Install with bellows down.

**Setting**—Starts to open 148-153°F.

## CLUTCH

**CLUTCH**: Long Model 9½CF-CS. Semi-centrifugal, single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings**—Moulded (flywheel side), Woven (away from flywheel). Inside Diam. 6". Outside Diam. 9½". Thickness .125".

**Adjustment:**—Clutch pedal free movement must be 1" Min. Sleeve adjustment on rod connecting pedal and shaft lever. Check Hill Holder after adjusting.

**Removal:**—Disconnect clutch pedal linkage, remove Transmission (see Transmission Removal below), support engine at rear, remove rear engine mountings and clutch housing, take out mounting screws in clutch cover flange (turn all screws out evenly), remove clutch assembly. **CAUTION**—Support pressure plate by hand to avoid distorting pressure plate. See *Studebaker Shop Notes for Clutch Cross-shaft Oiler installation instructions.*

### TRANSMISSION

**TRANSMISSION:** Warner 'Horizontal' Types. Model Nos. AS2-T88 (floor shift), AS4-T88 (Evans vacuum shift). All helical gear type with synchro-mesh (2nd & high).

See *Transmission Section for complete data.*

**Transmission Control:** Evans-Studebaker vacuum type optional equipment. Lever mounted on instrument panel.

See *Transmission Section for complete data.*

**Removal:** Disconnect front and rear universal joints. On cars with vacuum shift, disconnect vacuum power cylinder rod. Remove transmission mounting capscrews at clutch housing, pull transmission back and lift out.

### OVERDRIVE

**OVERDRIVE:** Warner Type R6 (Horizontal Transmission). Complete assembly model number (Horizontal transmission with R6 Overdrive) Warner No. AS1-T88 (floor shift), AS3-T88 (vacuum shift). See *Transmission Section for complete data.*

**Removal:** Same as for regular transmission after removing Overdrive Support. See *Overdrive Transmission Rear Support Installation in Studebaker Shop Notes*

### UNIVERSALS

**UNIVERSAL JOINTS:**—Spicer, Model 1271-01X (front), 1278-01X (rear). Needle bearing type. See *Universals Section for complete data.*

### REAR AXLE

**REAR AXLE:**—Spicer Model 41-2. Semi-floating, Hypoid gear type with Hotchkiss drive. See *Rear Axle Section for complete data.*

**Ratio:**—4.55-1 Std., 4.82-1 Optl. (Std. with Overdrive).

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear of car, disconnect brake line, shock absorbers, drive shaft at rear universal, rear spring U bolts and rear spring shackles, withdraw axle assembly from beneath car. **NOTE**—Bleed brake lines when axle installed.

**Wheel Bearing Adjustment:**—Shims located between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub, brake drum, and backing plate (retained by 6 bolts). Remove shims (shim thickness at each wheel must be equal within .005").

**Endplay:**—.001-.005" (measured with dial indicator).

### SHOCK ABSORBERS

**SHOCK ABSORBERS:** Houdaille-Model BEDVS (front), Model ASC (rear). Double acting, adjustable, hydraulic types. Rear shocks have thermostat control. See *Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:**—Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load. See *Front Suspension Section for complete data.*

**Kingpin Inclination:**—5½° crosswise.

**Caster:**—Minus ¼° to plus ¾°. Not adjustable.

**Camber:**—¼-¾°. Adjustable.

**Toe In:**—1/16-1/8". To adjust, turn center tie rod.

### STEERING GEAR

**Steering Gear:** Ross T-14 Cam-&-Twin Lever type. See *Steering Gear Section for complete data.*

### BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes. See *Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type:

Front—Front Shoe Cylinder 1⅜". Rear 1".

Rear—Front Shoe Cylinder 1¼". Rear 1".

**NOTE**—Wheel cylinder bore size marked on casting.

**Drum:**—Budd Composite. Diameter 11".

**Lining:**—Front shoe—woven. Rear shoe—moulded. Width 2¼". Thickness 3/16". Length per wheel 19 11/16".

**Clearance:**—.010" toe, .005" heel each shoe.

**Brake Power:**—45% rear, 55% front.

**Hand Brake:**—See Service Brakes above.

**Hill-Holder:**—Optional equipment.

See *Brake Section for complete data.*

**HOOD LOCK & SIDE PANELS, OIL PAN REMOVAL, INSTALLATION OF ENGINE PANS AND FRONT FENDER APRONS & BAFFLES:**—See *Studebaker Shop Notes* for complete instructions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On plate riveted to frame side rail under left front fender. First number G-00001 (South Bend), G-800001 (Los Angeles).

**ENGINE NUMBER:**—Stamped on pad at upper left front corner of engine. First number 101.

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 std. cast-iron head. Pressure—105 lbs. at 150 RPM.

**VACUUM READING:**—17-18" steady at 8 MPH. idle spd.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type 8. 18 mm. Metric. Gaps—Set at .025".

**NOTE:**—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.020". Cam Angle—35° Closed. Automatic Advance—7° max. at 1400 RPM (distr.). Vacuum Advance—9° distr. with 14 $\frac{3}{4}$ " vacuum.

**IGNITION TIMING:** See Ignition Timing. Std. Setting—2° BTDC. Flywheel mark 'IGN' aligned with indicator in inspection hole on engine rear plate on left side. Use .016" feeler between advance arm and hold-down plate when setting distributor.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Set idle adjusting screw  $\frac{3}{4}$ -1 $\frac{1}{4}$  turns open. Idle speed 800 RPM or 8 MPH.

**Float Level:**— $\frac{3}{8}$ " (for 444-S),  $\frac{1}{2}$ " (for 453-SA and 453-S) from machined surface of bowl cover (gasket seat) to top of float with cover inverted.

**Accelerating Pump:** Not adjustable.

**Fuel Pump Pressure:** 3 $\frac{1}{2}$  lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. To check, unhook coil from pin (valve in closed position, counterweight up). Hooked end of coil should be  $\frac{1}{4}$  revolution away from pin (replace coil if beyond this limit). Lubricate shaft with kerosene & baking soda solution every 1000 miles.

**VALVES:** See Valve Timing.

**Tappet Clearance:**—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R. No. 8150.

**Ignition Lock:**—Yale & Towne. Mitchellock 6968.

**COIL:** Auto-Lite Model CE-4636. Service coil (less switch & cable) CE-3264S. Mounted on dash.

**Ignition Current:**— $\frac{1}{2}$ -1 $\frac{1}{2}$  amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

**Capacity:**—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4131 or IGW-4144 (with Special Tachometer Drive). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and Octane Selector. Breaker Gap—Set at .020".

**Cam Angle or Dwell:**—35° closed, 25° open (distr.).

**Breaker Arm Spring Tension:**—16-20 ounces.

**Rotation:**—Counter-clockwise viewed from top.

Automatic Advance			
Distributor	R.P.M.	Distributor	R.P.M.
Degrees		Degrees	
Start	400	0	800
8	500	1.6	1000
3	830	6	1660
5	1120	10	2240
7	1400	14	2800

**Vacuum Spark Control A-L No. VC-4009:**—Mounted below distributor and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4"
2°	4°	5 $\frac{1}{2}$ "
5°	10°	7 $\frac{3}{4}$ "
7°	14°	11 $\frac{1}{4}$ "
9°	18°	14 $\frac{3}{4}$ "

**Octane Selector:**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

**Distributor Removal:**—Mounted on left side of engine. To remove, loosen advance arm clamp bolt (not necessary to disturb vacuum unit connection).

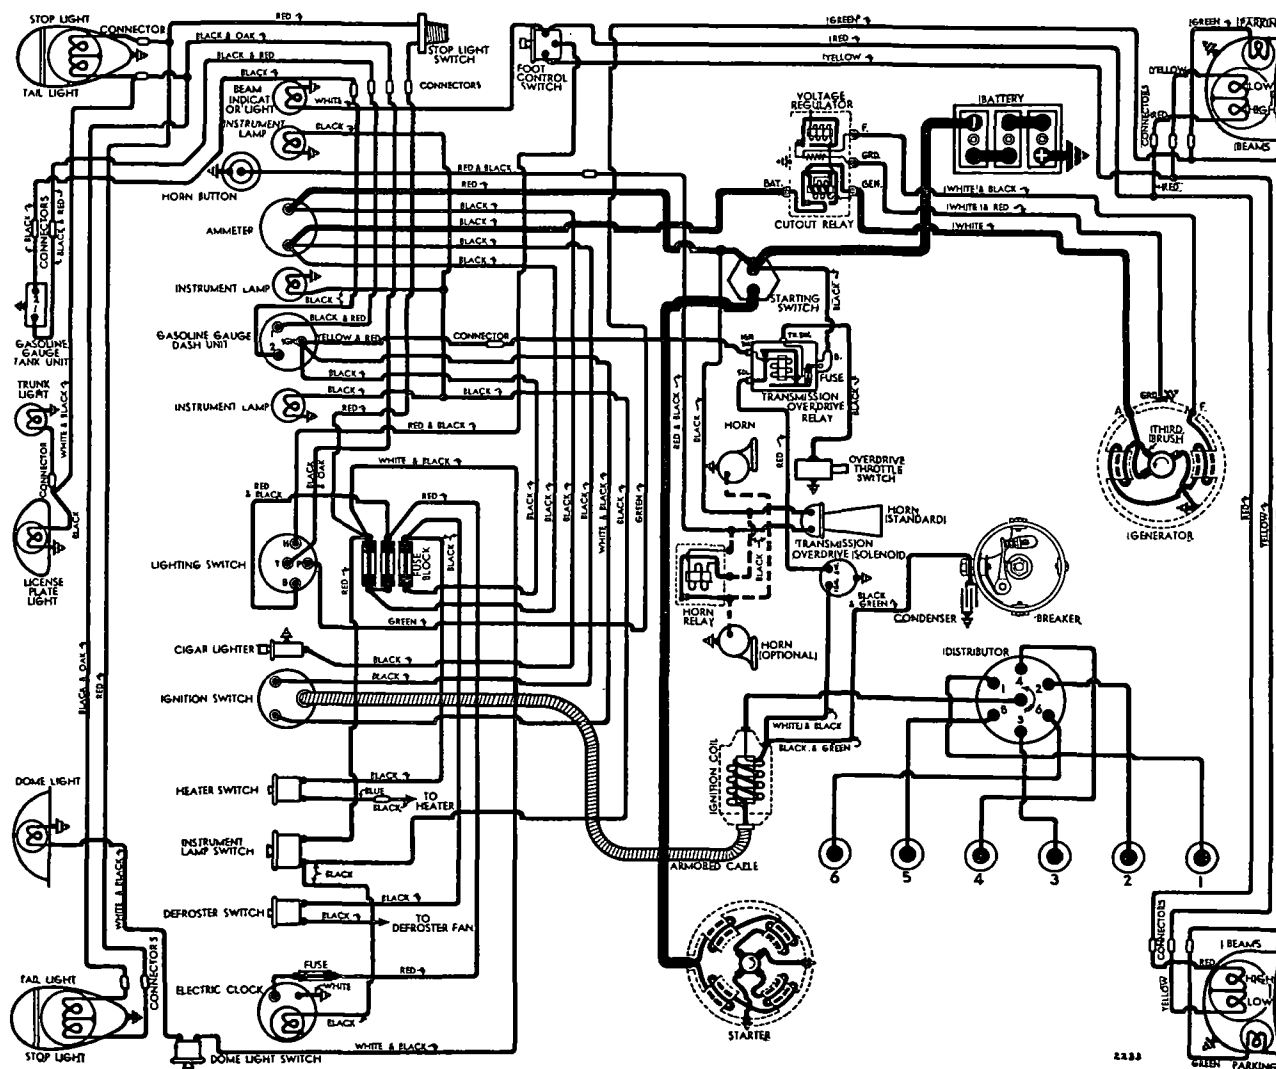

**NOTE:**—When installing distributor, insert .016" feeler between hold-down plate and advance plate while tightening advance plate clamp bolt to prevent binding and allow free advance plate motion.

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting as follows (see Octane Selector Setting following for correction dependent on fuel regularly used):

**Flywheel Degrees**      **Piston Position**  
2° BTDC      .0015" BTDC.

**To Set Timing:**—Crank engine by engaging gears and rolling car on floor. With #1 piston on com-

pression, turn engine over until 'IGN' mark (approx. 13/64" ahead of U.D.C.1-6 mark) on flywheel is in line with pointer on engine rear plate on left side of car. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, insert .016" feeler between advance arm and hold-down plate (to insure clearance for free advance arm movement), tighten clamp bolt, remove feeler gauge.

**NOTE**—Car manufacturer recommends use of Neon timing light.

**Octane Selector Setting**—After setting ignition timing, loosen selector (hold-down plate) screw and advance (move selector so that pointer toward 'A' end of scale) until motor 'pings' when hot and pulling hard. Then retard (move selector with pointer toward 'R' end of scale) until 'ping' just disappears.

## CARBURETOR

**CARBURETION**—Carburetor—Carter Model WO Type 444-S (Early—may be identified by #229 cast on flange), Type 453-S (Later cars). New type, single barrel, 1 1/4" downdraft type. **IMPORTANT PRODUCTION CHANGE NOTE**—See Carburetor article for part changes for Type 444-S to change over to latest type 453-S. See article in Carburetor Section. For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and choke valve wide open (fast idle inoperative), adjust throttle stop screw so that engine idles at 600 RPM. or 8 MPH. Turn idle adjusting screw in until engine begins to miss or lag, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 3/4-1 1/4 turns of screw open from inner or closed position. Readjust throttle stop screw for correct idle speed.

**Accelerating Pump**—Non-adjustable type.

**Fast Idle Setting**—Choke connector link opens throttle 3/32" with choke valve closed. Adjust by bending offset on connector link.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1529210 oil-wetted type. #1529211 heavy duty oil bath type optional.

**Fuel Pump**—AC Type W #1523957 diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite electric. No. NG-9211D (dash unit), No. NG-9197T (tank unit).

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Willard, Type SW-1-90.** 6 volt, 13 plate, 90 ampere hour capacity (20 hour rate).

**Starting Capacity**—114 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.0 minutes. Five second voltage—4.1 volts.

**Grounded Terminal**—Positive (+) grounded to dash. Engine Ground—Strap connector at right front mounting bolt.

**Dimensions**—Length & Height 9". Width 7".

**Location**—On left side of dash under hood.

## STARTER

**EARLY:** Auto-Lite MZ-4066. Armature MZ-2120.

**LATER:** Auto-Lite MZ-4074. Armature MZ-2130.

**Drive**—Barrel type Bendix N. A-2033 (similar in design to Ford '60' type A-1806).

**IMPORTANT**—A-2033 drive marked 'D' on pinion barrel. Must not be interchanged with Ford type due to difference in structure of pinion teeth.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 amperes, 5.2 volts, 130 RPM.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 " "	2500	5.5	100
2.55 " "	1325	5.0	200
4.95 " "	750	4.5	300
7.65 " "	220	4.0	400
7.8 " "	Lock	3.0	420
11.8 " "	Lock	4.0	560

**Removal**—Starter flange mounted on right rear engine plate. To remove, take out mounting bolts.

**Starting Switch**—A-L Model SW-4011. Mounted on left side of car below clutch pedal. Operated by depressing clutch pedal fully.

## GENERATOR

### STANDARD

**Auto-Lite Model GDF-4812-A.** Armature GDF-2006. Third brush control type used with Voltage Regulator.

**Maximum Charging Rate**—30 amperes (cold), 28 amperes (hot), at 8.0 volts, 3000 R.P.M. (generator), 32.5 M.P.H. Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

**Charging Rate Adjustment**—Maximum output controlled by third brush. Do not adjust third brush for output greater than shown in table below (with field terminal grounded to render regulator inoperative). See Regulator Section (following).

**NOTE**—Third brush setting 2 bars 1 mica strip to 2 bars 2 mica strips from insulated main brush.

### Cold Performance Data

Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
Start	6.4	920	0	6.4	1000
4	6.6	1030	4	6.6	1140
8	6.8	1140	8	6.85	1280
12	7.0	1300	12	7.1	1440
16	7.25	1460	16	7.3	1640
20	7.45	1650	20	7.55	1840
24	7.65	1880	24	7.75	2220
28	7.9	2220	28.3	8.0	3200
32	8.0	3100			

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.90-2.10 amperes at 6.0 volts.

**Motoring Current**—5.3-5.9 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Loosen pivot and clamp bolts, move generator out away from engine until fan can just be rotated with belt held stationary.

## GENERATOR

### SPECIAL EQUIPMENT

**Auto-Lite GCE-4824-A.** Armature No. GBX-2006AF. Two brush type used with Current-Voltage Regulator.

**Wiring Note**—Internal wiring for GCE Generator & VRP regulator same as shown on 1940 Studebaker Champion Model 2G car model page wiring diagram.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. **Maximum Charging Rate**—As given in table below.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	740	0	6.4	785
4	6.6	830	4	6.6	880
8	6.8	920	8	6.8	975
12	7.05	1015	12	7.05	1070
16	7.25	1100	16	7.25	1165
20	7.5	1190	20	7.5	1275
24	7.7	1280	24	7.7	1385
*30	8.0	1400	30	8.0	1580

\*—Current Regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—64-68 ozs. (new brushes).

**Field Current**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current**—5.03-5.57 amperes at 6.0 volts.

**Removal & Belt Adjustment**—As given above.

## REGULATOR

### STANDARD

**Auto-Lite Voltage Regulator Models VRD-4006-B or VRR-4002-B** (for GDF generator). In case on dash. For complete data, refer to Electrical Equipment Index. **NOTE**—Regulator cover sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts Cold (VRD), 6.4-6.8 volts Cold (VRR), 900 RPM, 9.1 MPH.

**Cuts Out**—5-3.0 amperes discharge current (VRD), 4.2-4.8 volts with approx. 4-6 amps. disch. (VRR).

**Contact Gap**—.015" minimum.

**Air Gap**—.034-.038". Contacts open—measure at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70° F.

**To Check** (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 MPH., charging battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger. See Electrical Equipment Section for data.

**Contact Gap**—.010-.020" (VRD), .012" min. (VRR) with armature against stop pin.

**Air Gap**—.0595-.0625" (VRD), .048-.052" (VRR) with contacts just opening.

## REGULATOR

### SPECIAL EQUIPMENT

**Auto-Lite Current-Voltage Regulator Model VRP-4004B** (for GCE generator). In case on dash. For complete data, refer to Electrical Equipment Index.

### Cutout Relay

**Air Gap**—.031-.034". Contacts open (measure at hinge end of core).

All other data same as for VRR (see preceding data).

CONTINUED ON NEXT PAGE

## C NTINUED FROM PRECEDING PAGE

## Voltage Regulator

Setting—7.2-7.5 volts at 70°F.

All other data same as for VRR (see preceding data).

## Current Regulator

Setting—29-31 amperes (marked '30' on cover).

To Check (without breaking seals)—Connect test meters as for Voltage check (above). Operate generator at speed equivalent to 30 MPH charging battery, turn on car lights and accessories so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 29-31 amperes. If more than slight excess noted, regulator is defective.

Adjustment &amp; Contact Gap—Same as VRR (above).

Air Gap—.034-.038" (before Reg. Ser. No. 5U-000001), .048-.052" (after above No.), contacts just opening.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown, pre-focused type. Upper and lower beams controlled by selector switch on toeboard.

Headlamp Adjustment—With car unloaded, 25' from screen, and with upper beams lighted, aim each headlamp so that top of beam is 2" below horizontal line at lamp-center height, and beam is centered on lamp vertical center-line. Brass adjusting screws located behind lamp rim at top (vertical movement), at side (horizontal movement).

Beam Indicator—Red dot on speedometer face. Lighted when upper beams in use.

## Switches

Lighting—Douglas No. 5724.

Beam Selector—R-B-M No. 1081.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (Export)	32-32	2330
Parking, Ign. Sw., Trunk	1½	55
Instrument	1½	55
Stop & Tail	21-3	1158
License Plate	3	63
Dome	15	87
Beam Indicator	1	51

## MISC. ELECTRICAL

**FUSES:**—Lighting—Three 20 ampere. On fuse block on back of instrument panel at center. Protects circuits as follows: Top—Clock, Dome, Stop, Instrument lamps. Center—Head and Tail lamps. Lower—Accessories.

Transmission Overdrive Control—14 amp. On relay.

**HORNS:**—Delco-Remy. Model K-26-H Single Horn Std., Model K-33-S No. 601 (low note—right), 602 (high note—left) twin horns with horn relay Optl.

Type	Current (at 6 volts)	Air Gap
K-26-H	6.5-8.5 amperes	.018-.022"
K-33-S601 (low note)	11-13 amperes	.042-.046"
K-33-S602 (high note)	10-12 amperes	.032-.036"

H rn Relay:—Delco-Remy Model 1116792.

Closing Voltage—2.3-3.5 volts.

Contact Gap—.020". Air Gap—.015" (closed).

## ENGINE

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head.

Bore—3". Stroke—3⅞".

Displacement—164.3 cu. in. Rated HP.—21.6.

Developed Horsepower—78 at 4000 RPM.

Compression Ratio—6.5-1 Std. cast-iron hd.

Compression Pressure—105 lbs. at 150 RPM.

See Studebaker Shop Notes for Cyl. Head Installation.

Vacuum Reading—Steady 17-18" idling at 8 MPH.

**PISTONS:**—Aluminum alloy, tin-plated, T-slot, cam ground type. Length—2⅞". Weight—.51 lbs.

Removal—Pistons and rods removed from above.

Clearance—.0005" new. See Fitting New Pistons.

Original Bore & Piston Sizes, Replacement Pistons:—See Studebaker Shop Notes for sizes and markings.

Fitting New Pistons:—Insert .002"x1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler 16-22 lbs. NOTE—Cylinders out-of-round or taper over .002" should be reconditioned.

Installing Pistons:—T-slot away from camshaft.

**PISTON RINGS:**—3 coated rings, all above pin. #1 Comp. '200' (step up), #2 Comp. (step down). #3 Oil '85' (slotted). Heat dam above #1 groove.

Ring	Width	End Gap	Side Clearance
Comp. (Top)	3/32"	.007-.017"	.0015-.002"
Comp. (#2)	⅜"	.007-.017"	.0015-.002"
Oil Control	3/16"	.007-.017"	.0015-.002"

Comp. (#2) ⅜" .007-.017" .0015-.002"

Oil Control 3/16" .007-.017" .0015-.002"

Replacement Rings:—.010", .020", .030" oversize.

**PISTON PIN:**—Diameter .7491-.7495". Length 2⅞". Pin locked in rod by tapered lockscrew and nut See Studebaker Shop Notes for Pin servicing data.

Pin Fit in Piston—.0001-.0003" clearance or light push fit. Replacement pistons have fitted pins.

Replacement Pins:—Std. & .0025", .005" oversize. Use Hone No. PH-1 to obtain proper fit in piston.

CONNECTING ROD:—Length 6 7/16". Weight 1.28 lbs.

Crankpin Journal Diameter—1.81175-1.81275".

Lower Bearing—Spun babbitt. Exchange rods furnished std. and .010" and .020" undersize.

NOTE—Babbitt in caps chamfered on upper edge.

Clearance—.0005-.002". Sideplay—.005-.009".

Bearing Adjustment:—None. Replace rods. See Studebaker Shop Notes for 'Palnut' installation.

Installing Rods:—Narrow portion of bearing to front (#1,3,5), to rear (#2,4,6). Side marked with number and oil spray hole toward camshaft.

CRANKSHAFT:—4 bearing, integral counterweights.

See Studebaker Shop Notes for data to correct Oil Leaks at Fan Drive Pulley.

Journal Diameters—2.437-2.4375".

Bearing Type—Removable steel-backed, babbitt-lined type. Clearance—.0005-.0025".

Bearing Adjustment:—None (no shims). Replace bearings. Furnished Std., .010", .020" undersize. Tighten bearing cap screws to 1100 in. lbs.

NOTE—Front oil pan seal block may be removed for access to front main bearing cap by removing 4 lower timing gear cover screws (on front face).

End Thrust:—Thrust plate assembled between front bearing and crankshaft gear. Controlled by shims between plate & journal face. Endplay .003-.006".

NOTE—Install new seals (specially treated wood) whenever rear main bearing cap replaced.

CAMSHAFT:—Four bearing with helical gear drive.

See Studebaker Shop Notes for Camshaft Removal.

Journal Diameters—#1, 1.7475-1.7480"; #2, 1.71625-1.71700"; #3, 1.68575-1.68650"; #4, 1.62325-1.62400".

Bearings—Steel-backed, babbitt-lined bushings. Align oil hole in block and bushing.

Clearance—.00075-.00225" (#1), .001-.00275" (others).

End Thrust:—Taken by thrust plate assembled on front face of engine behind camshaft gear. Spacer assembled back of gear hub. Endplay—.004-.008".

Timing Gears:—Crankshaft (cast-iron), Camshaft (Celeron Fabric). See Studebaker Shop Notes for Gear Removal & Replacement Gear size selection.

Backlash—.001-.003".

Camshaft Setting:—Mesh marked camshaft gear tooth between two marked teeth on crankshaft gear.

VALVES:—Head Diameter Stem Diameter Length

Intake ..... 1 11/32" ..... 310-311" 4 11/32"

Exhaust ..... 1 9/32" ..... 310-311" 4 11/32"

Seat Angle Lift Stem Clearance

All Valves ..... 45° ..... 5/16" ..... .001-.0035"

Valve Guides:—Pressed in block from above 1 3/16" below top of block. Finish ream to .312-.3135".

Valve Springs:—Install with closed coils at top. Replace if springs 10% weak. Free length 2 3/32".

Spring Pressure Spring Length

Valve Closed ..... 49-53 lbs. .... 1 21/32"

Valve Open ..... 90-94 lbs. .... 1 11/32"

See Studebaker Shop Notes for Valve Spring data.

Valve Lifters:—Mushroom type. Lifter clearance in block .0005-.0015".

## VALVE TIMING

Tappet Clearance:—.016" (cold) all valves. See Studebaker Shop Notes for Hood Side Panel removal and Self-locking Tappet Screw data.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 15° BTDC. Close 49° ALDC.

Exhaust Valves—Open 54° BLDC. Close 10° ATDC.

To Check Timing—Set tappet clearance #1 intake valve at .020". This valve should open with piston 15° or .0835" before top dead center when flywheel mark 'IN.OP.1-6/' lines up with pointer on left rear engine plate. Reset tappet clearance at .016" (cold).

## LUBRICATION

LUBRICATION:—Pressure system with oil pump mounted on right side of engine. See Studebaker Shop Notes for Oil Pump installation instructions.

Normal Oil Pressure:—40 lbs. at 40-60 M.P.H.

Oil Pressure Regulator:—Opens with 40 lbs. pressure. On right front corner of block. Not adjustable.

Crankcase Capacity:—5 quarts.

## COOLING

COOLING SYSTEM:—Capacity—10½ quarts.

Water Pump:—Packless, sealed ball-bearing shaft.

See Water Pump Section for complete data.

Removal—Drain water, remove fan belt, fan blades and pulley, hose, 3 pump mounting screws.

**Thermostat:**—Bishop & Babcock. In cyl. head outlet.

**Setting:**—Starts to open 156° F. to 160° F.

**Temperature Gauge:**—Auto-Lite (Motometer) Vapor tension type. Part No. H-9210.

*See Miscellaneous Section for complete data.*

## CLUTCH

**CLUTCH:**—Borg & Beck Model 8A7. Single plate, dry disc type. Identified by #925 stamped on cover.

*See Clutch Section for complete data.*

**Facings:**—Molded (flywheel side), woven (pressure plate side), Inside Diam. 5½". Outside Diam. 7⅞". Thickness .125". NOTE—Grooved facing used on pressure plate side (After '39 Engine No. 17804).

**Adjustment:**—Free travel 1" (min.). Turn clutch adjusting sleeve on connector link. Check Hill-holder.

*See Studebaker Shop Notes for Release Shaft Lubrication and new type shaft bushings to correct sticking.*

**Removal:**—Remove transmission (see below), take off clutch housing, take out mounting screws in clutch cover flange, remove clutch cover assembly.

## TRANSMISSION

**TRANSMISSION:** Warner. Model Number AS1-T84F. Helical gear type with synchro-mesh (second & high), sliding spur gear (low & reverse).

*See Transmission Section for complete data.*

**IMPORTANT:**—Correction for Shifting into Two Gears at Once (installation of Special Interlock), see Special Service Note in Transmission article in Transmission Section.

**Transmission Control:**—Remote steering col. shift Std. *See Transmission Section for complete data.*

**Removal (Std.):**—Disconnect shift rods and speedometer cable, remove propeller shaft. Place jack under engine rear plate, free rear engine mountings. Take out transmission mounting bolts, pull transmission out.

## OVERDRIVE

**Overdrive:**—Warner Type R7A, Model AS2-T84F with electrical 'kick-down' control. Optl.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy Model 1569.

**Throttle Switch:**—Hersee #1687S. Adjust so that shoe on idle lever just contacts switch plunger with throttle valve wide open (lever against stop).

**Control Relay:**—Auto-Lite Model HR-4201S. NOTE—Use only 14 ampere fuse on relay.

**Removal:** Same as regular transmission except that top radiator hose must be disconnected, exhaust pipe loosened at manifold and engine rear plate, clutch throw-out shaft pulled free, overdrive control lever and solenoid leads disconnected, propeller shaft disconnected at front universal, engine rear support cross-member removed, and rear of engine lowered so that transmission clears underside of frame X-member when removed.

## UNIVERSALS

**UNIVERSAL JOINTS:** Spicer. Model 1261-01 (front), 1268-02 (rear). Needle bearing types.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Spicer Model 23. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.56-1 standard, 4.1-1 optional.

**Backlash:**—.003-.005". Shim adjustment.

**Removal:**—Hoist rear of car, disconnect propeller shaft at rear universal, hydraulic brake lines, brake cables, and shock absorbers. Remove spring U-bolts, disconnect rear spring shackles, and withdraw axle.

**Wheel Bearing Adjustment:**—Shims provided between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub and drum assembly (Puller J-446), and backing plate. Remove shims to decrease endplay, add shims to increase.

**Endplay:**—.001-.005". Measure with dial indicator.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Houdaille. Model BBFSS (front), BBDS (rear). Double acting, hydraulic.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Planar type independent suspension with transverse spring.

*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—5½°.

**Caster:**—5½-6½°. Not adjustable.

**Camber:**—¼-¾°. Shim adjustment.

**Toe In:**—1/16-1/8". Adjust center rod (Early Cars), right reach rod (Later Cars).

**Steering Geometry (Toe-out on Turns):**—Inner wheel turned 22½°, Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Ross Model T-12. Cam & Twin Lever.

**NOTE:**—Steering linkage changed during production. Tie rod (center rod) is adjustable on Early Cars, Reach rods (to each wheel) adjustable on Later Cars.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, single anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drums:**—Diameter 9".

**Lining:**—Front shoe (U.S. #714) 10 3/16". Rear shoe (Man. DV2921) 7 13/16". Width 1¾". Thick. 3/16".

**Clearance:**—.010" toe, .006" heel, for each shoe.

**Braking Power:**—43% rear.

**Hand Brake Adjustment:**—See Service Brakes.

**Hill-Holder:** Optional on all models.

*See Brake Section for complete data.*

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 4110001 (South Bend), 4802301 (Los Angeles). Stamped on plate on left frame member under left front fender.

**ENGINE NUMBER:**—First number H-42501. Stamped on boss on left hand side of cylinder block.

## TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 Std., 7.0-1 Optl. (High Alt.).  
Pressure—105 lbs. (6.0-1 head), 110 lbs. (7.0-1 head) at 150 RPM. cranking speed.

**VACUUM READING:**—18-20" steady at 8 MPH. idling speed.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type 8. 18 mm. Metric.  
Gaps—Set at .025".  
NOTE—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.  
Breaker Gap—.020". Cam Angle—35° Closed.  
Automatic Advance—10" max. at 1400 RPM (distr.).  
Vacuum Advance—6" distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.  
Std. Setting—2° BTDC. Vibration dampener mark 'IGN/' aligned with pointer on timing gear cover.  
Use .016" feeler between advance arm and hold-down plate when tightening distributor clamp bolt (avoids binding vacuum control).

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Set idle adjusting screw midway between "miss" and "roll" points. Idle speed 450 RPM or 8 MPH.

Float Level—Fuel level  $\frac{5}{8}$ " below top edge of bowl.  
Accelerating Pump—Normal setting, Center Hole.

Fuel Pump Pressure:  $3\frac{1}{2}$  lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.  
To check valve, unlatch thermostatic coil by freeing outer end from bracket on manifold, operate valve by hand and see that valve is free (shaft can be cleaned with emery if necessary). Make certain that coil is properly latched on bracket and that tension spring (from shaft to clip on manifold flange) is in place.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8056.  
**Ignition Lock:**—Yale & Towne, Mitchellock #8078.

**COIL:** Auto-Lite Model IG-4653. Service Coil (less switch & cable) IG-3033ZS. Mounted on dash.  
Ignition Current— $\frac{1}{2}$ -1 $\frac{1}{2}$  amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.  
Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4101 or IGW-4111 (with Special Tachometer Drive). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.  
Breaker Gap—Set at .020".  
Cam Angle or Dwell—35° (closed), 25° (open).  
Breaker Arm Spring Tension—16-20 ozs.  
Rotation—Counter-clockwise viewed from top.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
3	700	6	1400
6	1000	12	2000
10	1400	20	2800

**Vacuum Spark Control A-L No. VC-4004.** Mounted below distributor and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0°	3"	
2°	4°	5"	
3°	6°	6"	
5°	10°	10"	
6°	12°	12"	

**Distributor Removal:**—Mounted on left side of engine. To remove, loosen advance arm clamp bolt (not necessary to disturb vacuum unit connection).  
NOTE—When installing distributor, insert .016" feeler between hold-down plate and advance plate while tightening advance plate clamp bolt to prevent binding and allow free advance plate motion.

## IGNITION TIMING

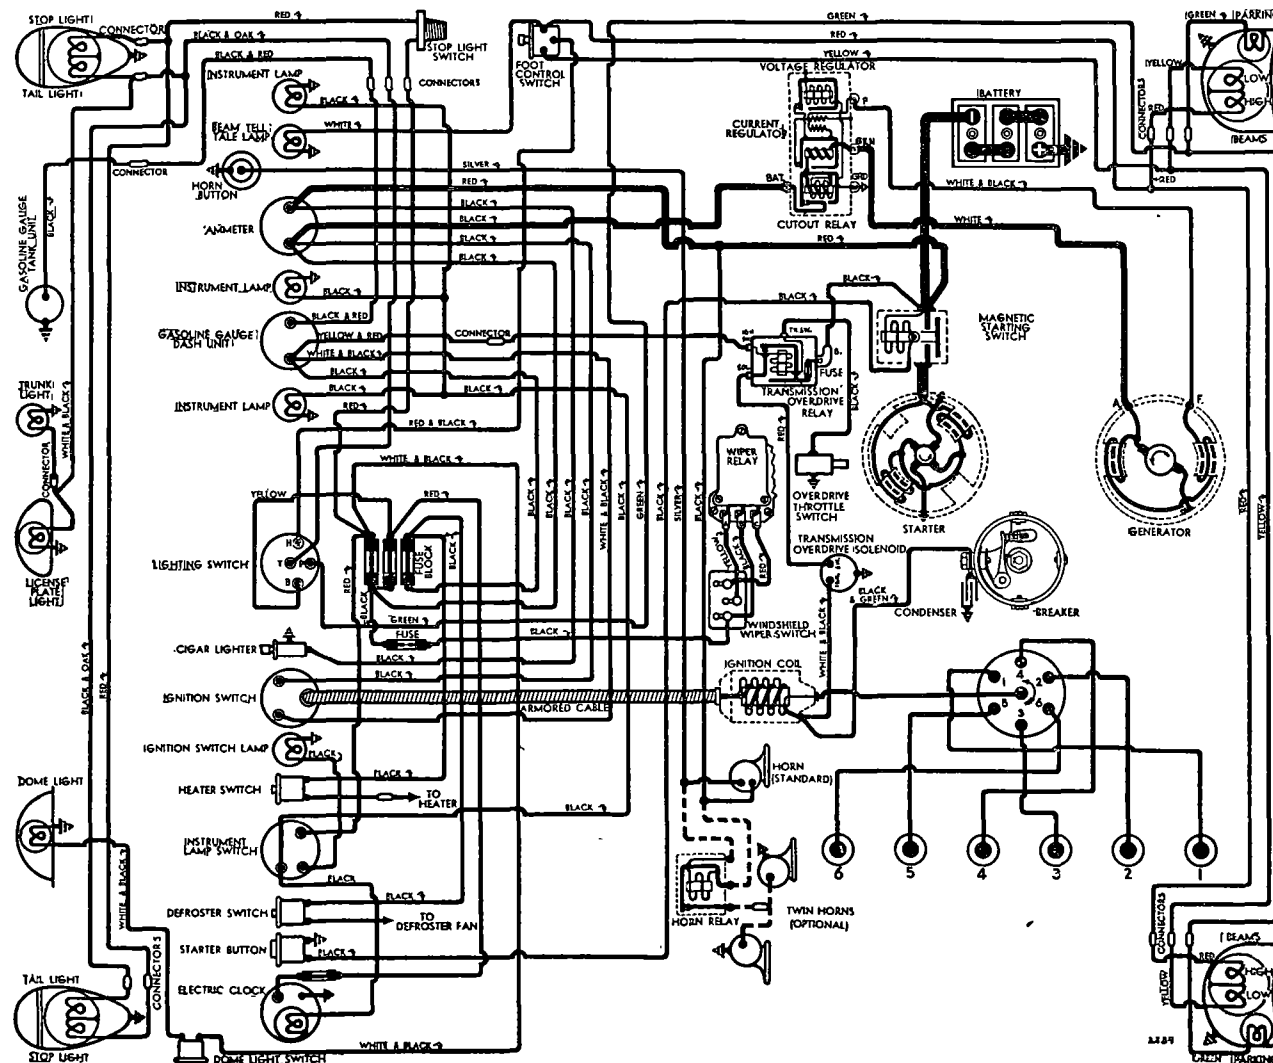

**IGNITION TIMING:**—For all engines as follows (see Octane Selector Setting following for correction dependent on fuel regularly used):

**Flywheel Degrees**

**Piston Position**

2° BTDC .0016" BTDC.

To Set Timing—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over until 'IGN/' mark on vibration dampener at front of engine lines up with pointer on timing gear cover (this mark is 2° or 9/64" before top dead center mark 'UDC.1-6'). Loosen advance arm clamp bolt, rotate distributor

until contacts begin to open, insert .016" feeler between advance arm and hold-down plate (to insure clearance for free advance arm movement), tighten clamp bolt, remove feeler gauge.

**Octane Selector Setting**—With engine at normal operating temperature, adjust Octane Selector so that slight ping evident when accelerating with wide open throttle (rotate distributor clockwise if no ping, counter-clockwise if ping too severe).

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model BXO-26, 1 1/4" single, downdraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—Metering jets need not be changed when heavy duty oil-bath type air cleaner installed. First size smaller main metering jet can be installed to secure greater fuel economy with slight loss of performance. See *Jet Specification table in Carburetion Section for complete jet data.*

**Idle Adjustment**—With engine warm, Fast Idle and Automatic Choke inoperative so that engine idles at hot or slow idle speed, set throttle stopscrew so that idling speed is 7-8 MPH., turn idle adjusting screw in until engine begins to miss or lag, turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust stopscrew for correct idling speed.

**Accelerating Pump Adjustment**—Three holes provided in throttle lever for pump link engagement. Change setting for seasonal requirements.  
**Inner Hole (Min. stroke)**—Extreme warm weather.  
**Center Hole**—Normal operating conditions.  
**Outer Hole (Max. stroke)**—Extreme cold weather.

**Fast Idle:**—Integral (Built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—No adjustment required (if stopscrew set for correct hot or slow idle speed above). See that stopscrew rests on highest step of fast idle cam with choke valve fully closed.

**Automatic Choke:**—Integral (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Mark 'R' on thermostatic spring case should line up with projection on housing (ordinary fuel). If this setting too rich (engine loads up), rotate case to 'M' mark (leaner setting). Use 'H' position only for very volatile fuels.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528630 oil-wetted type Std., #1528632 oil-bath type Optl. (Std. in severe-dust states).

**NOTE**—AC #1528605 oil-vent air cleaner Std., #1528629 type used with oil-bath air cleaners.

**Fuel Pump:**—AC Type W #1522227, Diaphragm type.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Stewart (Stewart-Warner) Electric type. No. G-99370.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Willard Type SW-1-95.** 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Positive (+) grounded to frame.

**Engine Ground**—Separate ground strap.  
**Dimensions**—Length 9". Width 7". Height 8 13/16".  
**Location**—In engine compartment on left side.

## STARTER

**Auto-Lite Model MAW-4015.** Armature MAW-2091.  
**Drive**—Outboard Barrel Type Bendix No. A-1719.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—43-52 ozs. (new brushes).  
**Cranking Engine**—130 RPM., approximately 175 amperes at 5.0-5.5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
.6 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.5 "	400	4.0	400
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out two flange mounting screws, remove starter and switch as assembly.

**Starting Switch:**—R.B.M. Model 2214. Magnetic type. Mounted on starter and controlled by Douglas #5701 pushbutton switch on instrument panel.

## GENERATOR

**Auto-Lite Model GDA-4804A.** Armature No. GDA-2006F. Two brush, shunt wound type with vibrating voltage and current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Adjusted by changing Voltage & Current Regulator settings (no adjustment at generator). See Regulator data below.

**Maximum Charging Rate**—28 amperes, 8.0 volts, 2025 R.P.M., 20.5 M.P.H. with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	930	0	6.4	1010
4	6.6	1060	4	6.6	1180
8	6.85	1210	8	6.85	1350
12	7.1	1350	12	7.1	1530
16	7.3	1500	16	7.3	1730
20	7.5	1660	20	7.5	1950
24	7.75	1830	24	7.75	2220
28	8.0	2025	28	8.0	2520

**NOTE**—28 amperes is Current Regulator setting.

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. Max. (new brushes).  
**Field Current**—1.66-1.84 amperes at 6.0 volts.

**Motoring Current**—3.50-4.15 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot bolts and clamp bolts.

**Belt Adjustment:**—Swing generator out until it is just possible to rotate fan with belt held stationary.

## REGULATOR

**Auto-Lite Model VRB-4012-A.** Consists of a Cutout Relay, Vibrating Voltage Regulator and Current Regulator in case on left hand side of dash.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator cover is sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.4-7.0 Volts Cold, 900 RPM., 7.8 MPH.

**Cuts Out**—5-3.0 ampere discharge current.

**Contact Gap**—.015" minimum.

**Air Gap**—.034-.038" Contacts open—measure at hinge end of core.

### Voltage Regulator

**Setting**—7.3-7.6 volts at 70°F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' and 'GD' terminals. Operate generator at speed equivalent to 30 MPH., charging battery, until voltage is steady. Voltage reading should be 7.3-7.6 volts (Cold—70°F), 7.1-7.4 volts (Hot—140°F).

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section for complete directions.

**Contact Gap**—.010-.020" (armature against stop pin).

**Air Gap**—.0595-.0625" with contacts just opening.

### Current Regulator

**Setting**—27-29 amperes (marked '28' on cover).

**To Check (without breaking seals)**—Connect test meters as for Voltage check (above). Operate generator at 30 MPH., charging battery, add load (use bank of headlamp bulbs, or turn on car lights and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed 28 amperes. If more than slight excess noted, regulator is defective.

**Adjustment, Contact Gap, Air Gap**—Same as for Voltage Regulator (above).

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown pre-focused type. Upper and lower beams controlled by selector switch on toeboard (lower beam deflected slightly to right).

**Headlamp Adjustment**—With car unloaded, 25' from screen, and with upper beams lighted, aim each headlamp so that top of beam is on horizontal line at lamp-center height, and beam is centered on lamp vertical center-line. Adjusting screws located behind lamp rim at top (vertical movement), at side (horizontal movement).

**Beam Indicator**—Red dot on speedometer dial. Illuminated when upper beams in use.

### Switches

**Lighting**—Douglas, #5740.

**Beam Selector**—R.B.M. #1081.

**Instrument**—Douglas, #5697.

### Bulb Specifications

C NTINUED N NEXT PAGE

CONTINUED FR M PRECEDING PAGE

**MISC. ELECTRICAL**

**FUSES**—Lighting—Thre 20 ampere. On fuse block on back of instrument board at center. Protect circuits as follows: Top—Clock, Dome, Stop, Instrument Lamps.

Center—Head and Tail Lamps. Lower—Accessories. Transmission Overdrive Control—14 ampere. On Relay.

Windshield Wiper—20 ampere. In control switch lead.

**HORNS**—Klaxon. Delco-Remy Model K-33-S, type 601 (right hand, low note), 602 (left hand, high note). Vibrator type, matched tone, twin horns operated by relay.

Horn Current—10-12 amperes (601), 9-12 (602).

Horn Relay:—Delco-Remy No. 1116756. Closing Voltage 2.3-3.5 volts.

Contact Gap—.020". Air Gap—.015" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS**—6 cylinder, 'L' head type. Bore—3 5/16". Stroke—4 3/8".

Displacement—226.2 cu. ins. Rated HP—26.35.

Developed Horsepower—90 HP (for Std. head), 94 HP (Optl. high altitude head) at 3400 RPM.

Compression Ratio—6.0-1 Standard cast-iron head. 7.0-1 aluminum head optional.

Compression Pressure—105 lbs. at 150 RPM (Std. hd.). See Studebaker Shop Notes for Cyl. Head Installation.

Vacuum Reading—Steady 18-20" idling at 8 MPH.

**PISTONS**: Lynite, aluminum alloy, tin-plated, T-slot, cam ground type. Length—3 3/4".

Removal—Pistons and rods removed from above.

Clearance—.0005" new. Measure 1/4" up on skirt 90° from pin bosses. See Fitting New Pistons.

**Original Bore & Piston Sizes, Replacement Pistons**:—See Studebaker Shop Notes for sizes and markings.

**Fitting New Pistons**:—Insert .002" x 1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler must be between 7-15 lbs.

**NOTE**—Car manufacturer recommends cylinders out-of-round or taper over .002" be reconditioned.

**Installing Pistons**:—T-slot away from camshaft.

**PISTON RINGS**: Before Engine No. H-81539, 2 (P-C #70) compression, 1 (#85) oil ring, all above pin. Narrow heat-dam groove (no ring fitted) above top ring. Oil ring groove has ten 5/32" oil drain holes.

Engine No. H-81539 & Up. New sealed power type, 2 compression (with upper inner edge beveled), 1 oil control ring (no inner ring used). Narrow heat-dam groove above top ring. Oil drain holes in oil ring groove.

Ring	Width	End Gap	Side Clearance
① Compression	1/8"	.013-.018"	.0015-.002"
② Compression	3/32"	.013-.018"	.0015-.002"
Oil Control	3/16"	.013-.018"	.0015-.002"

①—Before Eng. No. H-81539.

②—Engine No. H-81539 & Up.

**Replacement Rings**:—Std. & .010", .020", .030" oversize.

**PISTON PIN**:—Diameter—.8741-.8745". Length—2 7/8". Pin locked in connecting rod by lock screw.

Pin Fit in Piston—.0001-.0003" clearance or light finger-push fit at room temperature (70°).

**Replacement Pins**:—Std. & .0025", .005" oversize. Use Hone No. PH-1 to obtain proper piston fit.

**NOTE**—Replacement pistons fitted with pins.

**CONNECTING ROD**:—Length—8 1/8". Weight—33.2 ozs. Crankpin Journal Diameter—2.18675-2.18775".

**Lower Bearing**:—Spun babbitt (cap bearings chamfered on upper edge). New rods furnished on exchange basis standard and .010", .020" undersize. Clearance—.0005-.002". Sideplay—.005-.009".

**NOTE**—Use reamer HM-591-D to secure correct bearing clearance. Crankpin out-of-round, tapered or scored .0015" max. (use Tool No. 1C for reconditioning crankpins).

**Bearing Adjustment**:—None. Replace rods. See Studebaker Shop Notes for 'Palm' installation.

**Installing Rods**:—Narrow portion of bearing to front (#1, 3, 5), to rear (#2, 4, 6). Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and oil hole in lower end of rod toward camshaft side of engine.

**CRANKSHAFT**:—4 bearing, 5 integral counterweights. Vibration damper mounted on forward end of shaft.

See Studebaker Shop Notes for Vibration Damper data.

Journal Diameter—2.4995-2.5000".

**Bearings**:—Removable steel-backed, babbitt-lined. Clearance—.0005-.0025".

**Adjustment**:—None (no shims). Replace bearings (std. size, .010", .020", .030" undersize).

**End Thrust**:—Thrust plate assembled between front bearing and crankshaft gear. Controlled by shims (furnished .003", .005", .007" thick) between plate and journal face. Endplay—.003-.006".

**NOTE**—Install new seals (specially treated wood) whenever rear main bearing cap replaced.

**CAMSHAFT**:—Four bearing with helical gear drive.

See Studebaker Shop Notes for Camshaft Removal.

Journal Diameters—#1, 1.9975-1.998"; #2, 1.96625-1.967"; #3, 1.93575-1.9365"; #4, 1.12325-1.124".

**Bearings**:—Split steel-backed, babbitted bushings.

**NOTE**—Align bushing with oil hole in block.

Clearance—.00075-.00225" (#1), .001-.00275" (others).

**End Thrust**:—Taken by thrust plate assembled on front face of engine behind camshaft gear. Spacer assembled back of gear hub. Endplay—.004-.008".

**Timing Gears**:—Crankshaft (cast-iron), Camshaft (Celeron with steel hub). Backlash .001-.003".

See Studebaker Shop Notes for Gear Removal and Replacement Gear size selection.

**Camshaft Setting**:—Mesh marked camshaft gear tooth between two marked teeth on crankshaft gear.

VALVES	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

Seat Angle Lift Stem Clearance

All Valves 45° 11/32" .0015-.0035"

**Valve Guides**:—Pressed in block from above (1 5/32" below upper edge of valve seat) with stepped end down. Ream to inside diameter of .3425-.3445".

**Valv Springs**:—Install with closed-coil up and dampener on top of spring. Replace springs if 10% weak (test with Tool U-15). Free Length—2 1/2". See Studebaker Shop Notes for Valve Spring installation.

Spring Pressure Spring Length

Valve Closed	54-60 lbs.	2 3/32"
Valve Open	125-135 lbs.	1 3/4"

**Valve Lifters**:—Barrel type (remove from above with valve, valve spring and adjusting screw removed). Furnished std. size and .0005", .001" oversize. Diameter .9985-.999". Clearance .0005-.00175".

**VALVE TIMING**

**Tappet Clearance**:—.016" (cold) all valves. Remove hood side panel for access to valves.

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**:—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves**:—Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check**:—With .020" tappet clearance #1 intake valve should open with #1 piston 15° or .0942" BTDC with vibration damper mark 'IN.OPI-6/' aligned with pointer on timing gear cover. Reset tappet clearance .016" (cold).

**LUBRICATION**

**LUBRICATION**:—Pressure (pump on right of engine). See Studebaker Shop Notes for Oil Pump installation.

**Oil Pan Note**:—Place #2 piston at approx. top dead center to facilitate Oil Pan Removal & Installation.

**Normal Oil Pressure**:—40 lbs. at 25-30 MPH.

**Oil Pressure Relief Valve**:—On lower right front corner of engine. Opens at 30-40 lbs. Not adjustable.

**Crankcase Capacity**:—6 quarts.

**COOLING**

**COOLING SYSTEM**: Capacity—14 1/2 quarts.

**Water Pump**:—Centrifugal with adjustable packing, lubricant fitting and grease cup for bushings.

See Water Pump Section for complete data.

**Thermostat**:—Bishop & Babcock or Fulton. In cylinder head outlet. Install with bellows down.

**Setting**:—Starts to open 156°F. to 160°F.

**CLUTCH**

**CLUTCH**: Borg & Beck Model 9A6. Number 869 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings**:—Moulded (flywheel), Woven (pressure plate), Inside Diam. 5 5/8". O. Diam. 9 1/4". Thickness .133".

**Adjustment**:—Free travel 1" (min.). Turn adjusting sleeve on pedal connector link.

**Hill-Holder (NoRol) Note**:—Check whenever clutch pedal adjusted. Set so that Hill-Holder releases just as clutch engages (change rod length).

**Removal**: Remove transmission (see Transmission Removal following, disconnect clutch pedal linkage, support engine at rear, remove rear engine mountings, remove clutch housing. Take out mounting screws and remove clutch.

For Clutch Cross-shaft Oiler installation data, see Studebaker Shop Notes.

## TRANSMISSION

**TRANSMISSION:** Warner 'Horizontal' Type. All helical gear type with synchro-mesh on second and high.  
*See Transmission Section for complete data.*

**Transmission Control:** Steering Col. Shift Optional.  
*See Transmission Section for complete data.*

**Removal:** Remove shift lever (floor shift), or disconnect control rods at transmission (steering col. shift). Remove driveshaft, take out transmission mounting screws, pull transmission back and lift out.

## OVERDRIVE

**OVERDRIVE:** Warner R6 (Kick-down) Electric. This Overdrive used with 'Horizontal' T-88 transmission.  
*See Transmission Section for complete data.*

**Overdrive Solenoid:** Delco-Remy Model 1569.

**Throttle Switch:** Hersee #16878. Adjust so that shoe on idler lever just contacts switch plunger with throttle valve wide open (lever against stop).

**Control Relay:** Auto-Lite Model HR-42018. **NOTE:** Use only 14 ampere fuse on relay.

**Removal:** Same as for regular transmission after removing Overdrive Support. *See Overdrive Transmission Rear Support Installation in Studebaker Shop Notes*

## UNIVERSALS

**UNIVERSAL JOINTS:** Spicer. Model 1271-OIX (front), 1278-OIX (rear). Needle bearing types.  
*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:** Spicer Model 41-2. Semi-floating, Hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:** 4.55-1 standard, 4.82-1 optional.

**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Holst rear of car, disconnect propeller shaft at rear universal, hydraulic brake lines, brake cables, and shock absorbers. Remove spring U-bolts, disconnect rear spring shackles and withdraw axle.  
**NOTE:**—Use Puller HM-931 to remove axle shaft.

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed (use Hub Puller ST-500) check endplay with dial indicator. To adjust, remove backing plate, add or remove shims (.003", .005", .010", .030" thick).

**Endplay:**—.001-.005".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:** Houdaille Model BBFS (front), Model ACHS (rear). Double acting, adjustable, hydraulic types. Rear shocks have thermostat control.  
*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load.

**PRODUCTION CHANGE:** Re-designed Front Suspension began with the following Serial Numbers: 4,112,701 (South Bend).....4,803,802 (Los Angeles)  
*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—5½°.

**Caster:**—Negative ¼° to Positive ¾°.

**Camber:**—¼° to ¾°. Eccentric pin adjustment (Early), shim adjustment (Later Cars).

**Toe In:**—1/16-1/8". Cars with non-adjustable reach rods (to each wheel), adjustment made on center tie rod. Cars with adjustable reach rods (to each

wheel), toe in adjustment made on right rod after setting left front wheel in straight ahead position by means of left reach rod.

**Steering Geometry (toe-out on turns):**—Inner wheel turned 22-22½°. Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Ross T-14 Cam-&-Twin Lever type.  
*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type. Front Wheels.....Front Shoe cylinder 1¾". Rear 1".

Rear Wheels.....Front shoe cylinder 1¼". Rear 1".

**NOTE:**—Wheel cylinder bore size marked on casting.

**Drum:**—Budd composite. Diameter—11".

**Lining:**—Front Shoe: woven. Rear: moulded. Width

2". Thickness 3/16". Length per wheel 19 11/16".

**Clearance:**—.010" toe, .005" heel, for each shoe.

**Hand Brake:** See Service Brakes above.

**Hill-Holder:** Optional equipment on all models.

*See Brake Section for complete data.*

## MISC. MECHANICAL

**WINDSHIELD WIPER:**—Auto-Lite Model EW-5003 (early cars), EW-5103 (later cars). Electric type.

**Windshield Wiper Switch:**—A-L No. XA-535.

*See Miscellaneous Section for complete data.*

**NOTE:**—Use only 20 ampere fuse in wiper switch lead.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 7125501 (South Bend), 7802501 (Los Angeles). Stamped on plate on left frame member under left front fender.

**ENGINE NUMBER:**—First number B-30201. Stamped on boss on left center of cylinder block.

## TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 Std. cast-iron head.  
Pressure—105 lbs. at 150 R.P.M.

**VACUUM READING:**—Steady 18" at 450 RPM., 8 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS:** Champion Type 8. 18 mm. Metric.

Gaps—Set at .025".

NOTE—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—33° Closed.

Synchronization—Set movable contacts to open 45° after stationary set.

Automatic Advance—14½° max. at 1800 RPM (distr.).

Vacuum Advance—6° distr. with 11-14" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Vibration dampener mark 'UDC.1-8' aligned with pointer at front of engine for stationary contacts. Mark 'UDC.3-6' for movable contacts (¼ revolution from 'UDC.1-8' mark).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between 'miss' and 'roll' points. Idle speed 450 RPM or 8 MPH.

Float Level—Fuel level ⅝" below top edge of bowl.

Accelerator Pump—Inner Hole (short stroke) for minimum charge, Outer hole (long stroke) maximum charge.

Fuel Pump Pressure: 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

To check valve, unlatch thermostatic coil (free outer end from bracket on manifold), operate valve by hand and see that shaft is free (shaft can be cleaned with emery if necessary). Make certain that thermostatic coil is properly latched to bracket and that tension spring (from shaft to clip on flange) is in place.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8056.

Delco-Remy No. 1116288 (switch & cable).

Ignition Lock—Yale & Towne, Mitchell #8078.

**COIL:** Delco-Remy Model 1115021. Mounted on dash.

Ignition Current—½-1½ amps. idling, 4-5 stopped.

**CONDENSER:** Delco-Remy—Part No. 1838163.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 662-M. Double breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control. NOTE—Movable contacts must be synchronized. Open 45° after stationary set.

**Firing Interval:**—Movable contacts open 45° (distr.) after fixed set.

**Breaker Gap:**—Set at .020". Limits .018-.024".

**Cam Angle or Dwell:**—33° (closed), 12° (open). Both sets operating together and synchronized.

**Breaker Arm Spring Tension:**—22 ounces.

**Rotation:**—Clockwise viewed from top.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	2.5	600
14.5	1800	29	3600

**Vacuum Spark Control D-R No. 681-S.** Mounted under distributor and linked to advance arm. Provides additional advance at speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Plunger travel ¼" max.

### Vacuum Advance

Dist. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7"
6°	12°	11-14"

**Removal:**—Mounted on right hand side of cylinder head. To remove, loosen advance arm clamp bolt (not necessary to disturb vacuum unit or vacuum connections).

## IGNITION TIMING

**IGNITION TIMING:**—Standard setting as follows (see Octane Selector Setting following for correction dependent on fuel regularly used):

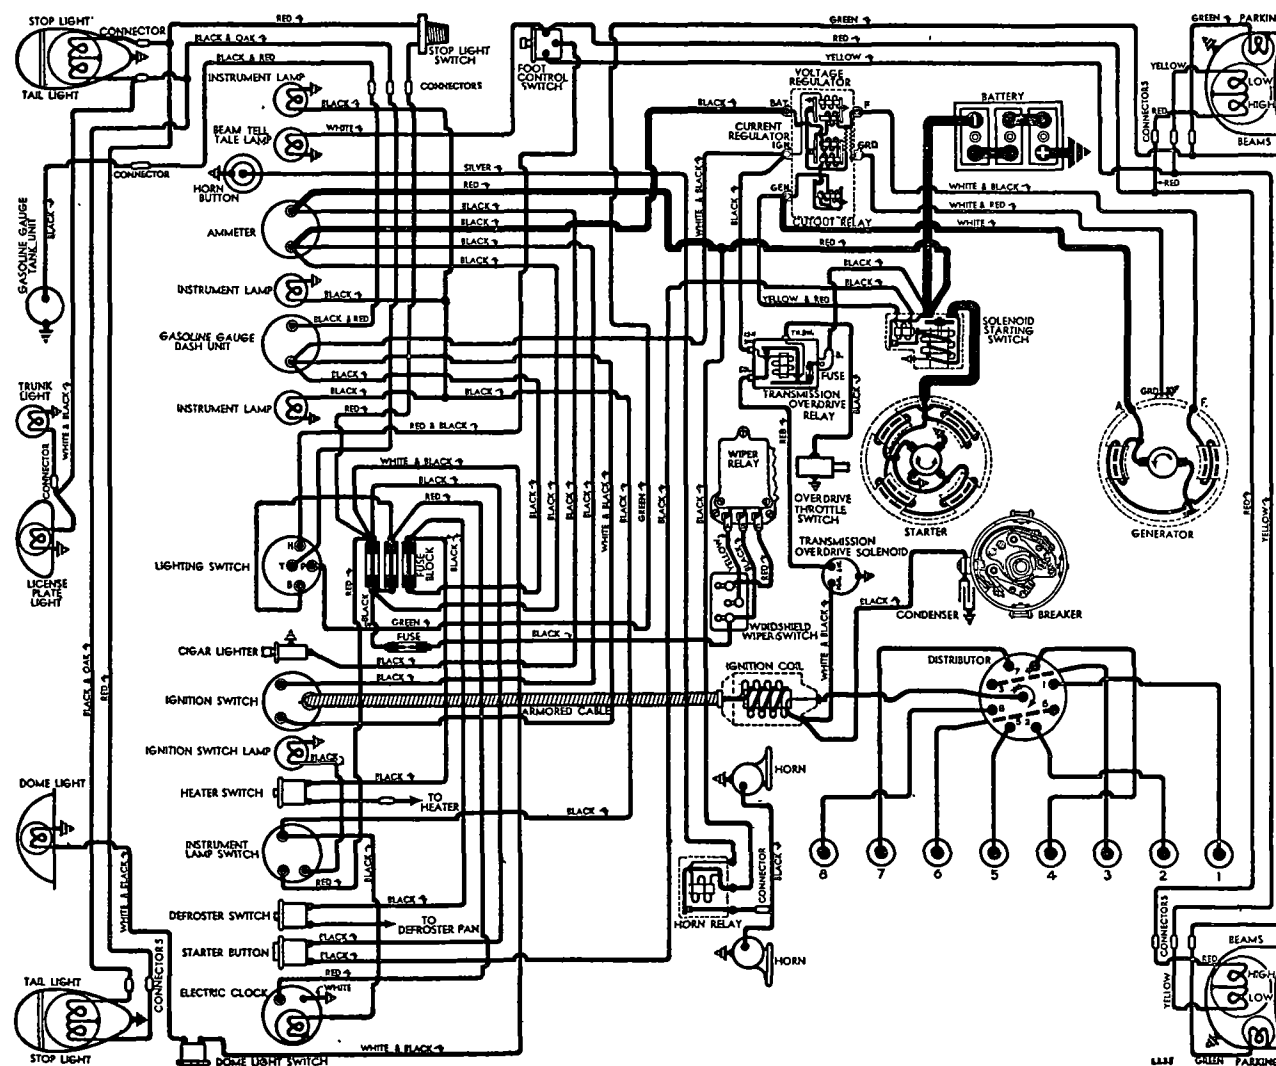

**Flywheel Degrees**

0° (At TDC.)

**Piston Position**

.0000" TDC.

**To Set Timing (Stationary Contacts)**—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over

until piston reaches top dead center, stop when dead center mark 'U.D.C.1-8' on vibration dampener at front of engine lines up with pointer on timing gear cover. Loosen advance arm clamp bolt, rotate distributor until stationary breaker contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt, then synchronize movable contacts.

**Synchronization (On Engine)**—Turn engine over 90° to #6 firing position with vibration dampener mark 'U.D.C.3-6' lined up with pointer on timing gear cover. Loosen lock screws on movable sub-plate carrying second set of contacts, turn eccentric adjusting screw until contacts begin to open, tighten lock screws.

**Synchronization (Using Tool)**—Use Delco-Remy tool #1838182. See Distributor Synchronization in Electrical Equipment Section for complete instructions. Distributor firing intervals regular 45-45-45°.

**Octane Selector Setting**—With engine at normal operating temperature, adjust Octane Selector so that slight ping secured when accelerating with wide open throttle (rotate distributor counter-clockwise if no ping noted, clockwise if ping too severe).

## CARBURETOR

**CARBURETION:**—Carburetor—Stromberg Model AAO-161, 1" Dual Downdraft type.

*For complete data, refer to Carburetor Index.*

**NOTE**—Metering jets can be changed to first smaller size for increased fuel economy with slight loss in performance (jets for both barrels must be same size and should be changed as a unit). See *Stromberg Jet Specifications in Carburetor Section for complete jet data.*

**Idle Adjustment**—With engine warm so that Fast Idle and Automatic Choke inoperative and engine idling at hot or slow idling speed, set throttle stop-screw for 7-8 MPH. idling speed, turn idle adjusting screw for each carburetor barrel (in succession) in until engine begins to lag or miss, out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Readjust throttle stop-screw for correct idling speed.

**Accelerating Pump Adjustment**—Two holes provided in throttle lever for pump link engagement. Adjust for seasonal requirements as follows:

Inner Hole (Min. stroke)—Summer temperatures.

Outer Hole (Max. stroke)—Winter temperatures.

**Fast Idle:**—Integral (Built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—No adjustment provided.

**Automatic Choke:**—Integral (built-in carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Mark 'R' on thermostatic coil case should line up with projection on housing (ordinary fuel). If this setting too rich (engine loads up), rotate case to 'M' mark (leaner setting). Use 'H' position only for very volatile fuels.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528631 oil-wetted type Std., #1528256 oil-bath type Optl. (std. in severe-dust states).

**NOTE**—AC #1528665 oil-filler air cleaner Std., #1528629 heavy duty type with oil-bath cleaner.

**Fuel Pump:**—AC Type J #1521797. Diaphragm type combination fuel-and-vacuum pump.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—Stewart (Stewart-Warner) Electric type. No. G-99370.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Willard Type SW-1-95.** 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Positive (+) grounded to frame.

**Engine Ground**—Separate strap connector.

**Dimensions**—Length 9". Width 7". Height 8 13/16".

**Location**—In engine compartment on left side.

## STARTER

**Delco-Remy Model 1107903.** Armature No. 820158.

**Drive**—Solenoid pinion shift & overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Cranking Engine**—110 RPM., 150-200 amperes, 5-5.5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
16 "	Lock	3.0	600

**Removal:**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting screws (remove starter and solenoid switch as an assembly).

**Starting Switch:** Delco-Remy Solenoid 1546. Mounted on starter and controlled through relay (in switch case) by pushbutton switch (Douglas #5701) on instrument panel.

*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch

Closes against 70 lb. pull with 1/2" gap drawing 65-71 amperes at 5 volts. Holds switch closed with 12-14 ampere current (hold-in coil only).

### Solenoid Relay

**Contacts Close**—1.9 volts Max. **Open**—1.0-1.2 volts. **Contact Gap**—.035". **Air Gap**—.010" (closed).

## GENERATOR

**Delco-Remy Model No. 1102656.** Armature Number 1873866. Two brush, shunt type with external vibrating Voltage and Current regulation. Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data below.

**Maximum Charging Rate**—30 amperes (cold), 8.0 volts, 1700 R.P.M., 20 M.P.H. and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Amperes	Volts	R.P.M.
Cold	30	8.0
		1700

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—2.0-2.2 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Swing generator out until fan can just be turned with belt held stationary.

## REGULATOR

**Delco-Remy Model 5861.** Double Core Type Voltage & Current Regulator (With 'IGN' Terminal). Cutout Relay and vibrating type Voltage & Current Regulators in case on dash. Cutout Relay has special 'ground' contacts for starter solenoid control.

*For complete data, refer to Electrical Equipment Index.*

**NOTE**—Regulator cover sealed. Serviced on exchange basis if seals not broken.

### Cutout Relay

**Cuts In**—6.9-7.6 volts, 800-850 RPM., 9.7 MPH.

**Cuts Out**—0-4.0 ampere discharge current.

**Contact Gap**—.020". **Air Gap**—.020" (closed).

### Voltage Regulator

**Setting**—7.5-7.9 volts at 70°F. 7.4-7.6 volts at 150°F. Regulator over-compensated for temperature and must be checked at these points.

**To Check (without breaking seals)**—Disconnect charging lead at regulator 'BAT' terminal, connect 3/4 ohm fixed resistance (Nicom wire capable of carrying 10 amperes) between this terminal and ground, disconnect lead on 'IGN' terminal, connect jumper between this terminal and 'BAT' terminal. Connect voltmeter between 'IGN' and 'GRD' terminals. Operate generator and increase speed to 2800-3000 R.P.M., note voltmeter reading (see setting above). **NOTE**—This test method recommended by manufacturer, does not require adjusting charging rate as with other methods (see Electrical Equipment Section for alternative checking directions).

**To adjust (with cover removed)**—Change armature spring tension by bending spring hanger at lower end of spring slightly. Recheck performance.

**NOTE**—Cover must be in place when regulator tests made. Check setting by decreasing speed until Cut-out contacts open and then increasing speed to original point.

**Contact Gap**—.020". **Contact Spring Tension**—3.5 ozs.

**Air Gap**—.063" between armature and core (armature down so that fibre bumper just touches stop). .010" between fibre bumper and stop (armature up).

### Current Regulator

**Setting**—28-30 amperes.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'BAT' terminal, disconnect lead at 'IGN' terminal (to eliminate regulator action), turn on car lights. Operate generator and increase speed until Current Regulator limits output, note ammeter reading.

**NOTE**—Generator must not be operated on open-circuit and voltage must not be allowed to exceed 8.5 volts with Voltage Regulator disconnected.

**To adjust (with cover removed)**—Same as for Voltage Regulator (see directions above).

**Specifications**—Contact Gap, Contact Spring Tension, Fibre bumper clearance same as for Voltage Regulator (above). Armature Air Gap should be .075".

C NTINUED FR M PRECEDING PAGE

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown pre-focused type. Upper and lower beams controlled by beam selector switch on toeboard (lower beam deflected slightly to right).

**Headlamp Adjustment:**—With car unloaded, 25' from screen, and with upper beams lighted, aim each headlamp so that top of beam is on horizontal line at lamp center height, and beam is centered on vertical lamp center-line. Adjusting screws located behind lamp rim at top (vertical movement), one side (horizontal movement).

**Beam Indicator:**—Red dot on face of speedometer dial. Illuminated whenever upper beams lighted.

**Switches**

**Lighting:**—Douglas #5740.

**Beam Selector:**—R.B.M. # 1081.

**Instrument:**—Douglas #5897.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (Export)	32-32	2330
Parking, Ign., Trunk	1½	55
Instrument	1 & 1½	51 & 55
Stop & Tail	21-3	1158
License Plate	3	63
Dome	15	87

**MISC. ELECTRICAL**

**FUSES:**—Lighting—Three 20 ampere. On fuse block on back of instrument board at center. Protect circuits as follows: Top—Clock, Dome, Stop, Instrument lamps.

Center—Head and Tail lamps. Lower—Accessories. Transmission Overdrive Control—14 amp. On Relay. Windshield Wiper—20 ampere. In control switch lead.

**HORNS:**—Klaxon. Delco-Remy Model K-33-S, Type 1999601 (right-low note), 1999602 (left-high note). Vibrator type, matched tone, twin horns operated by relay.

**Horn Relay:**—Delco-Remy No. 1116756. Closing voltage 2.3-3.5 volts.

**Contact Gap:**—.020". Air Gap—.015" (closed).

**ENGINE**

**ENGINE SPECIFICATIONS:**—8 cylinder, 'L' head type.

**Bore:**—3 1/16". Stroke—4¼".

**Displacement:**—250.4 cu. ins. Rated HP—30.

**Developed Horsepower:**—110 at 3600 RPM.

**Compression Ratio:**—6.0-1 Standard cast-iron head.

**Compression Pressure:**—105 lbs. @ 150 RPM (Std. hd).

*See Studebaker Shop Notes for Cyl. Head Installation.*

**Vacuum Reading:**—Steady 18-20" idling at 8 MPH.

**PISTONS:**—Aluminum alloy, T-slot, cam ground, tin plated. Length 3¾". Weight 13.6 ozs. (stripped).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .0115-.0165". Skirt .0015" selective.

**Original Bore & Piston Sizes, Replacement Pistons:**—*See Studebaker Shop Notes for sizes and markings.*

**Fitting New Pistons:**—Insert .003" x 1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler must be between 7-15 lbs.

**NOTE:**—Car manufacturer recommends cylinders out-of-round or taper over .002" be reconditioned.

**Installing Pistons:** T-slot away from camshaft.

**PISTON RINGS:** 3 piston rings, all above pin. #1 and #2 Compression (install with step down). #3 Oil Control (slotted type with expander ring installed behind this ring). Heat dam groove (no ring) above top ring groove. Oil drain holes in bottom groove.

Ring	Width	End Gap	Side Clearance
Compression	1/8"	.013-.018"	.0015-.002"
Oil Control	3/16"	.013-.018"	.0015-.002"

**Replacement Rings:**—Std. & .010", .020", .030" oversize.

**PISTON PIN:**—Diameter—.8741-.8745". Length—2½".

Pin locked in connecting rod by lock screw.

**Pin Fit in Piston:**—.0001-.0003" clearance or light finger-push fit at room temperature (70°).

**Replacement Pins:**—Std. & .002", .005" oversize. Use Hone No. PH-1 to obtain proper piston fit.

**NOTE:**—Replacement pistons fitted with pins.

**CONNECTING ROD:**—Length—8". Weight—32 ozs.

**Crankpin Journal Diameter:**—1.87425-1.87525".

**Lower Bearing:**—Removable, steel-backed, lead-bronze lined type.

**Clearance:**—.00075-.00275". Sideplay—.005-.009".

**NOTE:**—Turn crankpins for bearing clearance (Tool No. 1C). Do not ream bearings.

**Bearing Adjustment:**—None. Replace bearings. Furnished Std. and .005", .010", .020" undersize. Align oil hole in rod and bearing shell. See that tongues on bearing engage grooves in rod and cap.

*See Studebaker Shop Notes for 'Palmist' installation.*

**Installing Rods:**—Rods and caps marked with cylinder number. Numbers must be together and installed in same numbered cylinder with numbers and oil hole in lower end of rod toward camshaft.

**CRANKSHAFT:**—9 bearing, 12 bolted counterweights.

Vibration damper mounted on forward end of shaft.

*See Studebaker Shop Notes for Vibration Damper data.*

**Journal Diameters:**—2.3435-2.3440".

**Bearings:**—Removable steel-backed, babbitt-lined.

**Clearance:**—.001-.003".

**Adjustment:**—None (no shims). Replace bearings (furnished Std. and .010", .020", .030" undersize).

**End Thrust:**—Thrust plate assembled between front bearing and crankshaft gear. Controlled by pinned bronze washers (furnished .003", .005", .007" thick) between plate and journal face. Endplay—.003-.008".

**NOTE:**—Install new seals (specially treated wood) whenever rear main bearing cap replaced.

**CAMSHAFT:**—Six bearing with helical gear drive.

*See Studebaker Shop Notes for Camshaft removal.*

**Journal Diameters:**—#1, 1.935-1.9355"; #2, 1.90275-1.9035"; #3, 1.87225-1.873"; #4, 1.84075-1.8415"; #5, 1.80975-1.8105"; #6, 1.74725-1.748".

**Bearings:**—Split steel-backed, babbitted bushings.

**NOTE:**—Align bushing with oil hole in block.

**Clearance:**—.00075-.00225" (#1), .002-.00375" (others).

**End Thrust:**—Taken by thrust plate assembled on front face of engine behind camshaft gear. Spacer assembled back of gear hub. Endplay—.004-.008"

**Timing Gears:**—Crankshaft (cast-iron), Camshaft (Celoron with steel hub). Backlash—.001-.003".

*See Studebaker Shop Notes for Gear Removal and Replacement Gear Size selection.*

**Camshaft Setting:**—Mesh marked camshaft gear tooth between two marked teeth on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 13/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.001-.003"

**Valve Guides:**—Pressed in block from above (1 5/16" below upper edge of valve seat) with stepped end down. Ream to inside diameter of .343-.344".

**Valve Springs:**—Install with closed-coil up and dampener on top of spring. Replace springs if 10% weak (test with Tool U-15). Free Length—2½".

	Spring Pressure	Spring Length
Valve Closed	54-60 lbs.	2 3/32"
Valve Open	125-135 lbs.	1¾"

**Valve Lifters:**—Mushroom type in bolted-on guide brackets (clusters of four). Assemblies may be removed through valve opening on side of engine.

*See Studebaker Shop Notes for Valve Lifter Spring data.*

**VALVE TIMING**

**Tappet Clearance:**—.016" (cold) all valves. Remove hood side panel for access to valves.

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves:**—Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check:**—With .020" tappet clearance #1 intake valve should open with #1 piston 15° or .0915" BTDC with vibration damper mark 'IN.OP.1-8/' aligned with pointer on timing gear cover. Reset tappet clearance .016" (cold).

**LUBRICATION**

**LUBRICATION:**—Pressure (pump in crankcase).

*See Studebaker Shop Notes for Oil Pump installation.*

**Normal Oil Pressure:**—40 lbs. at 25-30 MPH.

**Oil Pressure Relief Valve:**—On lower right front corner of engine. Opens at 40 lbs. Not adjustable.

**Crankcase Capacity:**—8 quarts.

**COOLING**

**COOLING SYSTEM:** Capacity—17 quarts.

**Water Pump:** Adjustable packing type.

*See Water Pump Section for complete data.*

**Removal:**—Drain water, remove fan belt, fan blades and pulley, pump hose, and pump mounting screws.

**Thermostat:**—Fulton. In cylinder head outlet.

**Setting:**—Starts to open 156°F. to 160°F.

**Temperature Gauge:**—Stewart (Stewart-Warner) No. G-99388.

**CLUTCH**

**CLUTCH:**—Inland, 'Diaphragm' type, single plate, dry disc type with Long 9½ CF-CS driven member.

*See Clutch Section for complete data.*

**Facings:**—Spirally grooved. Moulded (flywheel side). W ven—Man. Hycoc (pressure plate side). Inside Diam. 6". Outside Diam. 9½". Thickness .125".

**Replacement Clutch Note:**—Remove spacers (one at each driving lug) after clutch installed on car.

**Pedal Adjustment:**—Free travel 1" min. Turn adjusting sleeve on pedal connector link. On cars with Hill-Holder (NoRol), check when pedal adjusted and see that brakes release just as clutch engages.

**Removal:** Remove transmission (see Transmission Removal following, disconnect clutch pedal linkage, support engine at rear, remove rear engine mountings, remove clutch housing. Take out mounting screws and remove clutch.  
*For Clutch Cross-shaft Oiler installation data, see Studebaker Shop Notes.*

## TRANSMISSION

**TRANSMISSION:** Warner 'Horizontal' Type. All helical gear type with synchro-mesh on second and high.  
*See Transmission Section for complete data.*

**Transmission Control:** Steering Col. Shift Optional.  
*See Transmission Section for complete data.*

**Removal:** Remove shift lever (floor shift), or disconnect control rods at transmission (steering col. shift). Remove driveshaft, take out transmission mounting screws, pull transmission back and lift out.

## OVERDRIVE

**OVERDRIVE:** Warner R6 (Kick-down) Electric. This Overdrive used with 'Horizontal' T-88 transmission.  
*See Transmission Section for complete data.*

**Overdrive Solenoid:** Delco-Remy No. 1569, 1573 (12 volt Exp.).

**Throttle Switch:** Hersee #1687S. Adjust so that end of throttle rod just contacts switch plunger with throttle valve wide open (lever against stop).

**Control Relay:** Auto-Lite Model HR-4201. NOTE—Use only 14 ampere fuse on relay.

**Removal:** Same as for regular transmission after removing Overdrive Support. *See Overdrive Transmission Rear Support Installation in Studebaker Shop Notes*

## UNIVERSALS

**UNIVERSAL JOINTS:** Spicer. Model 1271-OIX (front), 1278-OIX (rear). Needle bearing types.  
*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Spicer Model 41-2. Semi-floating, Hypoid gear type with Hotchkiss drive.  
*See Rear Axle Section for complete data.*

**Ratio:**—4.55-1 Std., 4.82-1 Optl. (Std. on Overdrive).  
**Backlash:**—.005-.007". Shim adjustment.

**Removal:**—Holst rear of car, disconnect propeller shaft at rear universal, hydraulic brake lines, brake cables, and shock absorbers. Remove spring U-bolts, disconnect rear spring shackles and withdraw axle.  
**NOTE:**—Use Puller HM-931 to remove axle shaft,

**Wheel Bearing Adjustment:**—Shims between backing plate and axle housing. With wheel and hub removed (use Hub Puller ST-500) check endplay with dial indicator. To adjust, remove backing plate, add or remove shims (.003", .005", .010", .030" thick).  
**Endplay:**—.001-.005".

## SHOCK ABSORBERS

**SHOCK ABSORBERS:** Houdaille Model BBFS (front), Model ACHS (rear). Double acting, adjustable, hydraulic types. Rear shocks have thermostat control.  
*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load.  
*See Front Suspension Section for complete data.*

**Kingpin Inclination:**—5½°.

**Caster:**—Negative ¼° to Positive ¾°.

**Camber:**—¼° to ¾°. Shim adjustment.

**Toe In:**—1/16-¼". Adjust right reach rod only for toe-in. Left rod should be adjusted first for left wheel straight-ahead position (steering wheel centered).  
**NOTE:**—If car equipped with non-adjustable reach rods (to wheels), adjustment is made on center rod.  
**Steering Geometry (toe-out on turns):**—Inner wheel turned 22-22½°. Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Ross Model T-14. Cam & Twin Lever.  
*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes.  
*See Brake Section for complete data.*

**Wheel Cylinders:**—Stepped or two-stage bore type.

**Front Wheels:**.....Front Shoe cylinder 1¾". Rear 1".  
**Rear Wheels:**.....Front shoe cylinder 1¼". Rear 1".

**NOTE:**—Wheel cylinder bore size marked on casting.

**Drum:**—Budd composite. Diameter—11".

**Lining:**—Front Shoe: woven. Rear: moulded. Width 2¼". Thickness 3/16". Length per wheel 19 11/16".

**Clearance:**—.010" toe, .005" heel, for each shoe.

**Hand Brake:** See Service Brakes above.

**Hill-Holder:** Optional equipment on all models.

*See Brake Section for complete data.*

## MISC. MECHANICAL

**WINDSHIELD WIPER:**—Auto-Lite Model EW-5003 (first cars), EW-5103 (later cars). Electric type.

*See Miscellaneous Section for complete data.*

**NOTE:**—Use only 20 ampere fuse in wiper switch lead.

**HOOD LOCK & SIDE PANELS, OIL PAN REMOVAL, INSTALLATION OF ENGINE PANS AND FRONT FENDER APRONS & BAFFLES:** See Studebaker Shop Notes for complete instructions.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number G-30501 (South Bend), G-803701 (Los Angeles). Stamped on right hand body front door hinge pillar (under left front fender on first cars).

**ENGINE NUMBER:**—First number 34101. Stamped on pad on upper left front corner of engine block.

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 std. cast-iron head.  
Pressure—105 lbs. at 150 RPM.

**VACUUM READING:**—Steady 17-18" at 8 MPH idle spd.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type 8. 18 mm. Metric.  
Gaps—Set at .025".

**NOTE:**—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—7° max. at 1400 RPM (distr.).

Vacuum Advance—9° distr. with 14 3/4" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. Flywheel mark 'IGN' aligned with indicator in inspection hole on engine rear plate on left side. Use .016" feeler between advance arm and hold-down plate when setting distributor.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw 3/4-1 1/4 turns open. Idle speed 600 RPM or 8 MPH.

Float Level 1/4" from machined surface of bowl cover (gasket seat) to top of float with cover inverted.

Accelerating Pump—Not adjustable.

Fuel Pump Pressure: 3 1/2 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

To check, unhook coil from pin (valve in closed position, counterweight up). Hooked end of coil should be 1/4 revolution away from pin (replace coil if not within this limit). Car manufacturer recommends application (every 1000 miles) of kerosene and baking soda solution on shaft at coil to insure free operation of valve shaft.

**Valve Noise Note:**—Manifold heater valve (No. 196657) has been changed to prevent rattle or noise by tapering lower (curved portion) of valve where it contacts manifold. Edge has been cut back 1/8" at one edge and tapers out to within 1/4" from opposite edge of valve (leaving 1/4" straight portion with remainder of edge tapered). If noise develops on early cars, valves should be tapered as above to remedy this condition.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R. No. 8271.

**Ignition Lock:**—Yale & Towne, Mitchell No. 6966.

**COIL:** Auto-Lite Model CE-4642. Service coil (less switch & cable) CE-3224US. Mounted on dash.

**Ignition Current:**—1/2-1 1/2 amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4131 or IGW-4144 (with Special Tachometer Drive). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control and Octane Selector. Breaker Gap—Set at .020".

Cam Angle or Dwell—35° closed, 25° open (distr.).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from the top.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
2	680	4	1360
4	975	8	1950
6	1265	12	2530
7	1400	14	2800

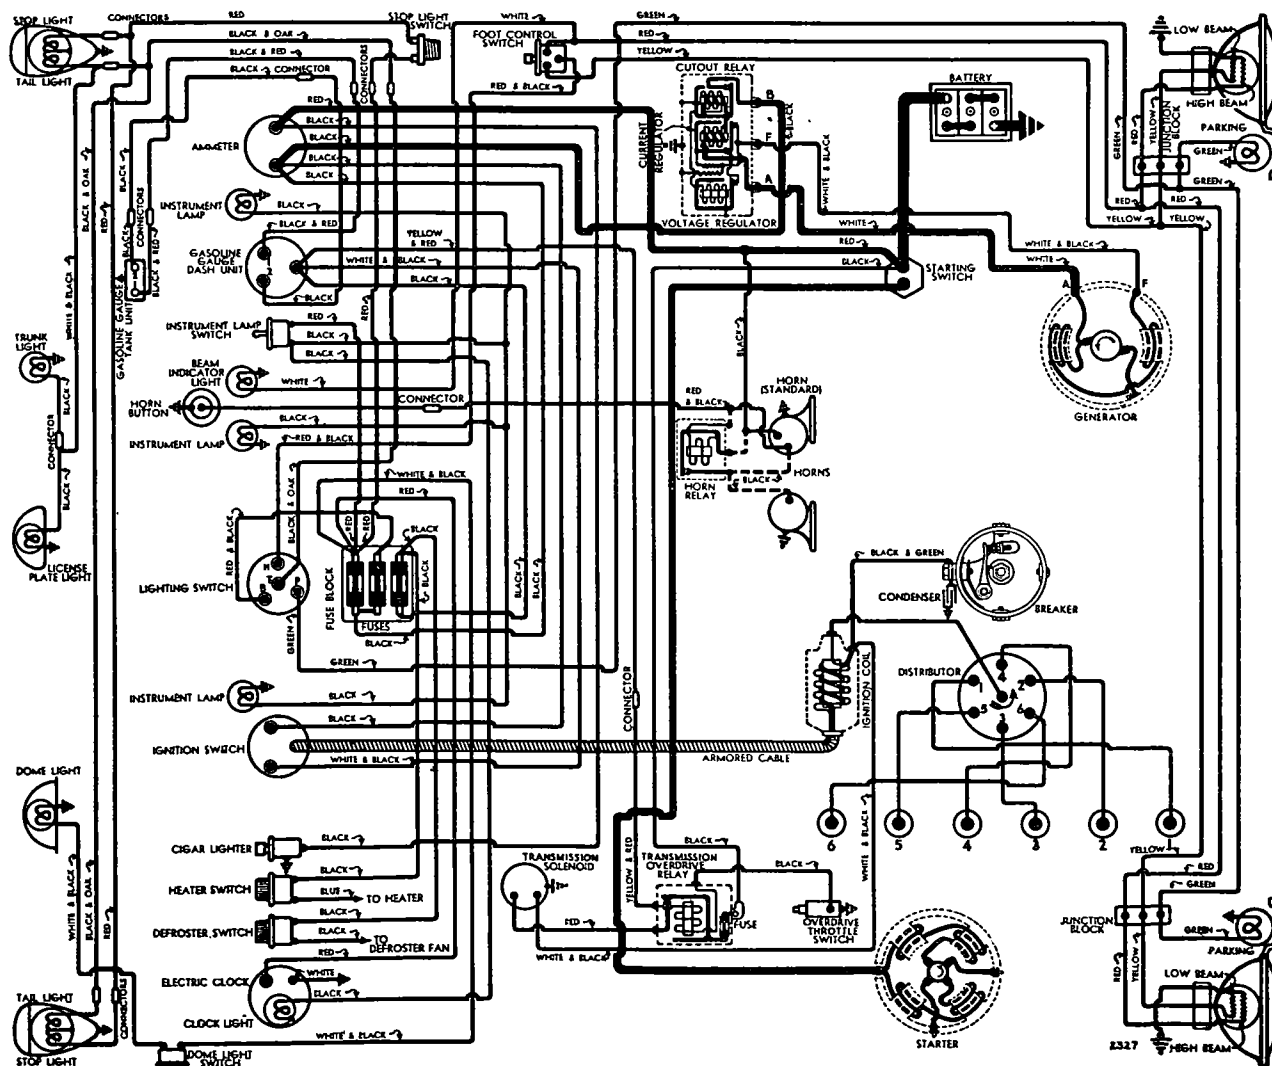

**Vacuum Spark Control A-L N . VC-4009 or VC-4011.** on hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4"
2°	4°	5 1/2"
5°	10°	7 3/4"
7°	14°	11 1/4"
9°	18°	14 3/4"

**Octane Selector:**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out screw in hold-down plate and lift distributor off.

**NOTE**—When installing distributor, insert .018" feeler between hold-down plate and advance plate while tightening advance plate clamp bolt to prevent binding and allow free advance plate motion.

### IGNITION TIMING

**IGNITION TIMING**—Standard setting as follows (see Octane Selector Setting following for correction dependent on fuel regularly used):

Flywheel Degrees	Piston Position
2° BTDC	.0015" BTDC

**To Set Timing**—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over until 'IGN' mark (approx. 13/64" ahead of U.D.C.1-6 mark) on flywheel is in line with pointer on engine rear plate on left side of car. Loosen hold-down plate screw and center scale on pointer, tighten screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, insert .018" feeler between advance arm and hold-down plate (to insure clearance for free advance arm movement), tighten clamp bolt, remove feeler gauge. Check Octane Selector Setting (following).

**NOTE**—Car manufacturer recommends use of Neon Timing Light for setting ignition timing.

**Octane Selector Setting**—After setting ignition timing, loosen selector (hold-down plate) screw and advance (move selector so that pointer toward 'A' end of scale) until motor 'pings' when it is hot and pulling hard. Then retard (move selector with pointer toward 'R' end of scale) until 'ping' just disappears.

See Studebaker Shop Notes in 'M' Section for Front Fender Apron Baffle Installation to correct Ignition missing or cutting out due to water splashing up from road.

### CARBURETOR

**CARBURETION**—Carburetor—Carter Type WO Model 468-S (#229 cast on flange). 1 1/4" single barrel, downdraft type.

For complete data, refer to Carburetor Index.

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 8 MPH or 600 RPM idle speed. Adjust idle adjusting screw until engine fires smoothly (3/4-1 1/4 turns open—turn screw in for leaner mixture). Readjust idle speed.

**Accelerating Pump**—Non-adjustable type.

**Float Level**—1/4" from top of float (free end) to gasket seat on cover. Invert to check with float hanging freely and spring in valve stem not compressed.

**Fast Idle Setting**—Choke connector link opens throttle .018-.022" with choke valve closed. Adjust by bending offset on connector link.

### CARB. EQUIPMENT

**Air Cleaner**—AC #1529210 oil-wetted type std. Heavy duty oil-bath type optional. Oil filler cap equipped with copper mesh cleaner.

**Fuel Pump**—AC Type W # 1523957 diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite electric type. No. NG-9211D (dash unit), No. NG-9197T (tank unit). For complete data, refer to Carburetion Equip. Index.

### BATTERY

**Willard, Type SW-1-90.** 6 volt, 13 plate, 90 ampere hour capacity (20 hour rate).

**Starting Capacity**—114 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.0 minutes. Five second voltage—4.1 volts.

**Grounded Terminal**—Positive (+) grounded to dash. **Engine Ground**—Strap connector at right front mounting bolt.

**Dimensions**—Length & Height 9". Width 7".

**Location**—In carrier on left front side of dash in engine compartment.

### STARTER

**Auto-Lite Model MZ-4074.** Armature No. MZ-2130.

**Drive**—Barrel type Bendix No. A-2033 (similar in design to Ford '60' type A-1806).

**IMPORTANT**—A-2033 drive marked 'D' on pinion barrel. Must not be interchanged with Ford type due to difference in structure of pinion teeth.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 amperes, 5.2 volts, 130 RPM.

Performance Data				
Torque	R.P.M.	Volts	Amperes	
0 ft. lbs.	4300	5.5	70	
.65 " "	2500	5.5	100	
2.55 " "	1325	5.0	200	
4.95 " "	750	4.5	300	
7.65 " "	220	4.0	400	
7.8 " "	Lock	3.0	420	
11.8 " "	Lock	4.0	560	

**Removal**—Starter flange mounted on right rear engine plate. To remove take out mounting bolts and lift starter off.

**Starting Switch**—A-L Model SW-4011. Mounted on left side of car below clutch pedal. Operated by depressing clutch pedal fully.

### GENERATOR

**Auto-Lite Model GEA-4804-A (Stand.), GEB-4803-A (Police).** Two brush type. Current-voltage control. Armature—GDZ-2006F (GEA Gen.), GEB-2006F (GEB).

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate**—35 amperes (GEA), 32 amperes (GEB), 8.0 volts, 1800 RPM (GEA), 1400 RPM (GEB) or approximately 18.3 MPH and above with load or discharged battery (Current Regulator Setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Performance Data—GEA-4804A				
Cold		Hot		
Amperes	Volts	R.P.M.	Amperes	Volts
0	6.4	780	0	6.4
4	6.6	870	4	6.6
8	6.8	960	8	6.8
12	6.95	1050	12	6.95
16	7.15	1140	16	7.15
20	7.3	1230	20	7.3
24	7.6	1320	24	7.6
28	7.7	1410	28	7.7
32	7.85	1500	32	7.85
35	8.0	1570	35	8.0

### Performance Data—GEB-4803A

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	560	0	6.4	600
4	6.6	630	4	6.6	675
8	6.8	700	8	6.8	750
12	7.0	775	12	7.0	840
16	7.2	845	16	7.2	930
20	7.4	920	20	7.4	1030
24	7.6	1000	24	7.6	1140
28	7.8	1075	28	7.8	1260
*32	8.0	1150	32	8.0	1400

\*—Current regulator setting.

**Rotation**—Counter-clockwise at commutator end. **Brush Spring Tension**—53 ozs. Max. (GEA Gen.), 64-68 ozs. (GEB Gen.) with new brushes.

**Field Current**—1.57-1.75 amperes (GEA Gen.), 1.6-1.78 amperes (GEB Gen.) at 6.0 volts.

**Motoring Current**—4.45-4.9 amperes (GEA Gen.), 4.0-4.5 amperes (GEB Gen.) at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out clamp and pivot bolts.

**Belt Adjustment**—Loosen pivot and clamp bolts, move generator out away from engine until fan can just be rotated with belt held stationary.

### REGULATOR

**Auto-Lite Model VRP-4004-A (for GEA Gen.), VRP-4004C (GEB Gen.).** Current-voltage type. In case on dash.

For complete data, refer to Electrical Equipment Index. **NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

**Cutout Relay**  
**Cuts In**—6.4-6.6 volts, 850 Gen. RPM., 8.6 MPH.  
**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap**—.015" minimum.  
**Air Gap**—.031" min., .034" max. with contacts open. Measure at hinge end of core.

**Voltage Regulator**  
**Setting**—7.2-7.5 volts at 70° F.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
**Contact Gap**—.012" Min. (armature against stop pin).  
**Air Gap**—.048-.052" with contacts just opening.

**Current Regulator**  
**Setting (VRP-4004A)**—34-36 amperes (marked '35' on cover). (VRP-4004C)—31-33 amperes (marked '32' on cover).

**To Check (without breaking seals)**—Connect test meters as for Voltage Check (above). Operate generator at 30 MPH, charging battery, add load (use bank of headlamp bulbs or turn on car lights and accessories and discharge battery) so that generator charges at peak rate and Current Regulator operates. Charging current should not exceed maximum setting given above. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap**—Same as for Voltage Regulator (above).

C NTINUED N NEXT PAGE

## CONTINUED FR M PRECEDING PAGE

**Air Gap**—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

## LIGHTING

**LIGHTING**:—Headlamps—Own 'Sealed Beam' type.  
For complete data, refer to *Electrical Equipment Index*.  
**Headlamp Adjustment**—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.  
**Beam Indicator**—Red light on speedometer face. Lighted whenever Country (upper) beam in use.

## Switches

**Lighting**—Douglas Model 5724.  
**Beam Selector**—Delco-Remy 1997002.  
**Instrument**—Douglas Model 5645.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, Instr., Trunk	1½	55
Beam Indicator	1	51
Stop & Tail	21-3	1158
Rear License	3	63
Dome	15	87

## MISC. ELECTRICAL

**FUSES**:—**Lighting**—Three 20 ampere. On fuse block on back of instrument panel at center. Protects circuits as follows: **Top**—Clock, Dome, Stop, Instrument lamps. **Center**—Head and Tail lamps. **Lower**—Accessories.

**Transmission Overdrive Control**—14 amp. On relay.

**HORNS**:—**Single**—Delco-Remy 1999805 standard.

**Dual**—Delco-Remy 1999511 (low note), 1999512 (high note) electric, air tone horns operated by relay.

Type	(Current at 6 volts)	Air Gap
1999805	7-9 amperes	.027-.033"
1999511 (low note)	19-21 amperes	.044-.049"
1999512 (high note)	18-20 amperes	.034-.039"

**Horn Relay**:—Delco-Remy Model 1116792.

**Contact Gap**—.020". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS**:—6 cylinder, 'L' head type.

**Bore**—3". **Stroke**—3 7/8".

**Displacement**—164.3 cu. ins. **Rated HP**—21.6.

**Developed Horsepower**—78 at 4000 RPM.

**Compression Ratio**—6.5-1 Std. cast-iron head.

**Compression Pressure**—105 lbs. at 150 RPM.

See *Studebaker Shop Notes for Cyl. Head Installation*.

**Vacuum Reading**—Steady 17-18" idling at 8 MPH.

**PISTONS**:—Aluminum alloy, T-slot, cam ground, tin plated. Length—2½". Weight—51 lb.

**Removal**—Pistons and rods removed from above. **Clearance**—.0005" new. See *Fitting New Pistons*.

**Original Bore & Piston Sizes, Replacement Pistons**:—See *Studebaker Shop Notes for sizes and markings*.

**Fitting New Pistons**:—Insert .002" x 1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler 16-22 lbs.

**NOTE**—Car manufacturer recommends cylinders out-of-round or taper over .002" be reconditioned.

**Installing Pistons**:—T-slot away from camshaft.

**PISTON RINGS**:—3 coated rings, all above pin. #1 Comp. '200' (step up). #2 Comp. '70' (step down). #3 Oil '85' (slotted). Heat dam above #1 groove.  
**Ring**      **Width**      **End Gap**      **Side Clearance**  
Comp. (Top) ..... 3/32" ..... .007-.017" ..... .0015-.002"  
Comp. (#2) ..... 1/8" ..... .007-.017" ..... .0015-.002"  
Oil Control ..... 5/32" ..... .007-.017" ..... .0015-.002"

**Replacement Rings**:—Std. & .010", .020", .030" oversize.

**PISTON PIN**:—Diameter .7491-.7495". Length—2½". Pin locked in rod by tapered pin and locknut. See *Studebaker Shop Notes for Pin Servicing data*. **Pin Fit in Piston**—.0001-.0003" clearance or light finger-push fit at room temperature (70°).

**Replacement Pins**:—Std. & .0025", .005" oversize. Use Hone No. PH-1 to obtain proper piston fit.

**NOTE**—Replacement pistons fitted with pins.

**CONNECTING ROD**: Length—8 7/16". Weight—1.28 lbs.

**Crankpin Journal Diameter**—1.81175-1.81275".

**Lower Bearing**—Spun babbit (cap bearings chamfered on upper edge). New rods furnished on exchange basis standard and .010", .020" undersize. **Clearance**—.0005-.002". **Sideplay**—.005-.009".

**NOTE**—Use reamer HM-591-F to secure correct bearing clearance. Crankpin out-of-round, tapered or scored .0015" max. (use Tool No. 1C for reconditioning crankpins).

**Bearing Adjustment**:—None. Replace rods.

See *Studebaker Shop Notes for 'Pinnut' installation*.

**Installing Rods**:—Narrow portion of bearing to front (#1, 3, 5), to rear (#2, 4, 6). Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and oil hole in lower end of rod toward camshaft side of engine.

**CRANKSHAFT**:—4 bearing, integral counterweights.

**Oil Leaks at Fan Drive Pulley**, see *Studebaker Shop Notes for installation of new type washers*.

**Journal Diameter**—2.437-2.4375".

**Bearings**—Removable steel-backed, babbit-lined. **Clearance**—.0005-.0025".

**Adjustment**:—None (no shims). Replace bearings (std. size, .010", .020", .030" undersize).

**NOTE**—Front oil pan seal block may be removed for access to front main bearing cap by removing 4 lower timing gear cover screws (on front face).

**End Thrust**:—Thrust plate assembled between front bearing and crankshaft gear. Controlled by shims (furnished .003", .005", .007" thick) between plate and journal face. **Endplay**—.003-.006".

**NOTE**—Install new seals (specially treated wood) whenever rear main bearing cap replaced.

**CAMSHAFT**:—Four bearing with helical gear drive.

See *Studebaker Shop Notes for Camshaft Removal*. **Journal Diameters**—#1, 1.7475-1.7480"; #2, 1.71625-1.71700"; #3, 1.68575-1.68650"; #4, 1.62325-1.62400".

**Bearings**—Split steel-backed, babbitted bushings.

**NOTE**—Align bushing with oil hole in block.

**Clearance**—.00075-.00225" (#1), .001-.00275" (others).

**End Thrust**:—Taken by thrust plate assembled on front face of engine behind camshaft gear. Spacer assembled back of gear hub. **Endplay**—.004-.008"

**Timing Gears**:—Crankshaft (cast-iron), Camshaft (Celeron with steel hub). **Backlash** .001-.003".

See *Studebaker Shop Notes for Gear Removal and Replacement Gear size selection*.

**Camshaft Setting**:—Mesh marked camshaft gear tooth between two marked teeth on crankshaft gear.

**VALVES**:—

	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	.310-.311"	4 11/32"
Exhaust	1 9/32"	.310-.311"	4 11/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	5/16"	.001-.0035"

**Valve Guides**:—Pressed in block from above 1 3/16" below top of block. Finish ream to .312-.3135".

**Valve Springs**:—Install with closed coil up. Replace if springs over 10% weak (test with Tool U-15). Free length 2 3/32". **Spring Pressure**      **Length**  
Valve Closed ..... 49-53 lbs. .... 1 21/32"  
Valve Open ..... 90-94 lbs. .... 1 11/32"

**Valve Lifters**:—Mushroom type (remove from below). **Diameter**—.62375-.62425". **Clearance** .0005-.00175".

Lifters furnished .0005", .001" oversize.

## VALVE TIMING

**Tappet Clearance**:—.016" (cold) all valves. Self-locking tappet screw tension should be 25 in. lbs. Remove hood side panel for access to valves.

**Valve Timing**:—See *Camshaft Setting* above.

**Intake Valves**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves**—Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check**—With .020" tappet clearance #1 intake valve should open with #1 piston 15° or .0835" BTDC with flywheel mark 'IN. OP. 1-6/' aligned with pointer on left rear engine plate. Reset tappet clearance at .016" (cold).

## LUBRICATION

**LUBRICATION**:—Pressure (pump on right of engine). See *Studebaker Shop Notes for Oil Pan and Oil Pump installation instructions*.

**Normal Oil Pressure**: 40 lbs. at 40-60 MPH.

**Oil Pressure Relief Valve**:—On lower right front corner of engine block. Opens at 30-40 lbs. Not adj.

**Crankcase Capacity**:—5 quarts.

## COOLING

**COOLING SYSTEM**: Capacity—10½ quarts.

**Water Pump**:—Packless, sealed ball-bearing type.

See *Water Pump Section* for complete data.

**Removal**—Drain water, remove fan belt, fan blades and pulley, pump hose, 3 pump mounting screws.

**Thermostat**:—Bishop & Babcock. In cyl. head outlet.

**Setting**—Starts to open 156°F. to 160°F.

**Temperature Gauge**—Auto-Lite (Motometer) Vapor

tension type. No. H-9210.

See *Miscellaneous Section* for complete data.

**Drain Valves**:—At radiator lower tank and plug on left side of cylinder block at rear. If heater used, disconnect hose at cylinder head and hold hose below level of heater.

## CLUTCH

**CLUTCH**:—Borg & Beck Model 8A7 with 'Borglite' driven member. Clutch assembly No. 925 stamped on cover. Single plate, dry disc type.

See *Clutch Section* for complete data.

**Facings**—Molded-metallic (spiral-grooved), 2 used. Inside Diam. 5 $\frac{3}{4}$ ". Outside Diam. 8". Thickness  $\frac{1}{8}$ ".  
**Adjustment**—Free travel 1" (min.). Turn adjusting sleeve on pedal connector link.  
**Hill-Holder (NoRol) Note**—Check whenever clutch pedal adjusted. Set so that Hill-Holder releases just as clutch engages (change rod length).  
**For Release Shaft Lubrication and New Type Shaft Bushings to Correct Sticking, see Studebaker Shop Notes.**  
**Removal**—Remove transmission (see below), take off clutch housing, take out 6 mounting screws in clutch cover flange, lift off cover assembly.

### TRANSMISSION

**TRANSMISSION**: Warner. Model Number AS5-T84F. Helical gear type with synchro-mesh (second & high), sliding spur gear (low & reverse).  
*See Transmission Section for complete data.*  
**IMPORTANT**—Correction for Shifting into Two Gears at Once (installation of Special Interlock), see Special Service Note in Transmission article in Transmission Section.  
**Transmission Control**:—Mechanical steering col. shift.  
*See Transmission Section for complete data.*  
**Removal**:—Disconnect the rear universal and withdraw propeller shaft from transmission. Disconnect shift levers and speedometer cable at transmission. Place jack under engine rear plate and free rear engine support. Remove transmission-to-clutch housing capscrews, pull transmission out.

### OVERDRIVE

**OVERDRIVE**: Warner R7A (Kick-down) Electric type. Complete assembly (with transmission) Warner Model No. AS6-T84F.  
*See Transmission Section for complete data.*  
**Overdrive Solenoid**—Delco-Remy Model 1118001.  
**Throttle Switch**—Cole-Hersee No. 1687-S. Adjust so that shoe on accelerator linkage just contacts

switch plunger with carburetor throttle in wide open position.  
**Control Relay**—Auto-Lite HR-4201S. 14 ampere fuse mounted in holder on relay.

**Removal**: Same as for regular transmission after disconnecting overdrive control cable and solenoid wires except that front universal must also be disconnected for removal of driveshaft.

### UNIVERSALS

**UNIVERSAL JOINTS**: Spicer: Model 1268-102 (both universals, cars with standard transmission, rear joint on cars with Overdrive), 1268-101 (front, cars with Overdrive). **NOTE**—Cars without Overdrive equipped with one piece propeller shaft with slip joint formed in rear of transmission ahead of front universal joint.  
*See Universals Section for complete data.*

### REAR AXLE

**REAR AXLE**:—Spicer Model 23. Semi-floating, Hypoid gear type with Hotchkiss drive.  
*See Rear Axle Section for complete data.*  
**Ratio**—4.56-1 standard. 4.10-1 optional.  
**Backlash**—.005-.007". Shim adjustment.

**Removal**:—Hoist rear of car, disconnect propeller shaft at rear universal, hydraulic brake lines, brake cables, and shock absorbers. Remove spring U-bolts, disconnect rear spring shackles and withdraw axle.  
**NOTE**—Use Puller HM-931 to remove axle shaft, Handle J-270-1 and disc J-270-13 to install inner shaft oil seal.

**Wheel Bearing Adjustment**:—Shims between backing plate and axle housing. With wheel and hub removed (use Hub Puller J-446) check endplay with dial indicator. To adjust, remove backing plate, add or remove shims (.003", .005", .010", .030" thick).  
**Endplay**—.001-.005".

### SHOCK ABSORBERS

**SHOCK ABSORBERS**: Houdaille. Model BBFSS (front), BBDS (rear). Double acting, hydraulic.  
*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension**:—Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load.  
*See Front Suspension Section for complete data.*

**Kingpin Inclination**—5 $\frac{1}{2}$ ".

**Caster**—1° to 2°.

**Camber**— $\frac{1}{4}$ ° to  $\frac{3}{4}$ °. Shim adjustment.

**Toe In**— $\frac{1}{16}$ — $\frac{1}{8}$ ". Adjust right reach rod only for toe-in. Left rod should be adjusted first for left wheel straight-ahead position (steering wheel centered).  
**Steering Geometry (toe-out on turns)**—Inner wheel turned 22 $\frac{1}{2}$ –23°. Outer wheel turned 20°.

### STEERING GEAR

**Steering Gear**: Ross T-12 Cam-&-Twin Lever type.  
*See Steering Gear Section for complete data.*

### BRAKES

**BRAKES**:—Service. Lockheed hydraulic, single anchor type. Hand lever applies rear service brakes.  
*See Brake Section for complete data.*

**Drum**—Budd composite. Diameter 9".

**Lining**—Moulded. Length per shoe 10  $\frac{3}{16}$ ". (front), 7  $\frac{13}{16}$ " (rear). Width 1 $\frac{3}{4}$ ". Thickness  $\frac{3}{16}$ ".

**Clearance**—.010" toe (top), .005" heel, for each shoe.

**Braking Power**—43% rear wheels, 57% front.

**Hand Brake**:—See Service Brakes (above).

**Hill-Holder**: Optional on all models.  
*See Brake Section for complete data.*

**HOOD LOCK:**—See Studebaker Shop Notes for data.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 4148501 (South Bend), 4807601 (Los Angeles). Stamped on left hand body front hinge pillar.

**ENGINE NUMBER:**—First number H-87601. Stamped on boss on upper left front corner of cylinder block.

## TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 standard cast-iron hd., 7.0-1 optl. high-altitude aluminum head.  
Pressure—105 lbs. (6.0-1 head), 110 lbs. (7.0-1 head) at 150 RPM cranking speed.

**VACUUM READING:**—18-20" at 450 RPM or 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type 8. 18 mm. Metric. Gaps—Set at .025".

NOTE—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—35° Closed.

Automatic Advance—10° max. at 1400 RPM (distr.).

Vacuum Advance—6° distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. Vibration dampener mark 'IGN/' aligned with pointer on timing gear cover. Use .016" feeler between advance arm and hold-down plate when tightening distributor clamp bolt (avoids binding vacuum control).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw midway between 'miss' and 'roll' points ( $\frac{1}{2}$ - $1\frac{1}{4}$  turns open for Carter). Idle speed 450 RPM or 8 MPH.

Float Level (Carter)— $\frac{1}{4}$ " from top of machined projection on float bowl cover to top of soldered seam at free end of float (invert to check).

Float Level (Stromberg)—Fuel level  $\frac{5}{8}$ " below top edge of float bowl.

Accelerating Pump—Normal setting, center hole.

Fuel Pump Pressure:  $3\frac{1}{2}$  lbs. (maximum).

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

To check valve, unlatch thermostatic coil by freeing outer end from bracket on manifold, operate valve by hand and see that valve is free (shaft can be cleaned with emery if necessary). Make certain that coil is properly latched on bracket and that tension spring (from shaft to clip on manifold flange) is in place.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

Ignition Switch:—Mitchellock Model 24-R, No. 8229.

Ignition Lock—Yale & Towne, Mitchell No. 8078.

**COIL:** Auto-Lite Model IG-4663. Service coil (less switch & cable) IG-3224JS. Mounted on dash.

Ignition Current— $\frac{1}{2}$ - $1\frac{1}{2}$  amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4101 or IGW-4111 (with Special Tachometer Drive). Single breaker, 6 lobe cam, full automatic advance type with auxiliary vacuum spark control.

Breaker Gap—Set at .020".

Cam Angle or Dwell—35° closed, 25° open (distr.).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from the top.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Start	400	0	800
2	600	4	1200
5	900	10	1800
8	1200	16	2400
10	1400	20	2800

**Vacuum Spark Control A-L No. VC-4004.** Mounted on hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with

wide open throttle (spark retarded by return spring in unit).

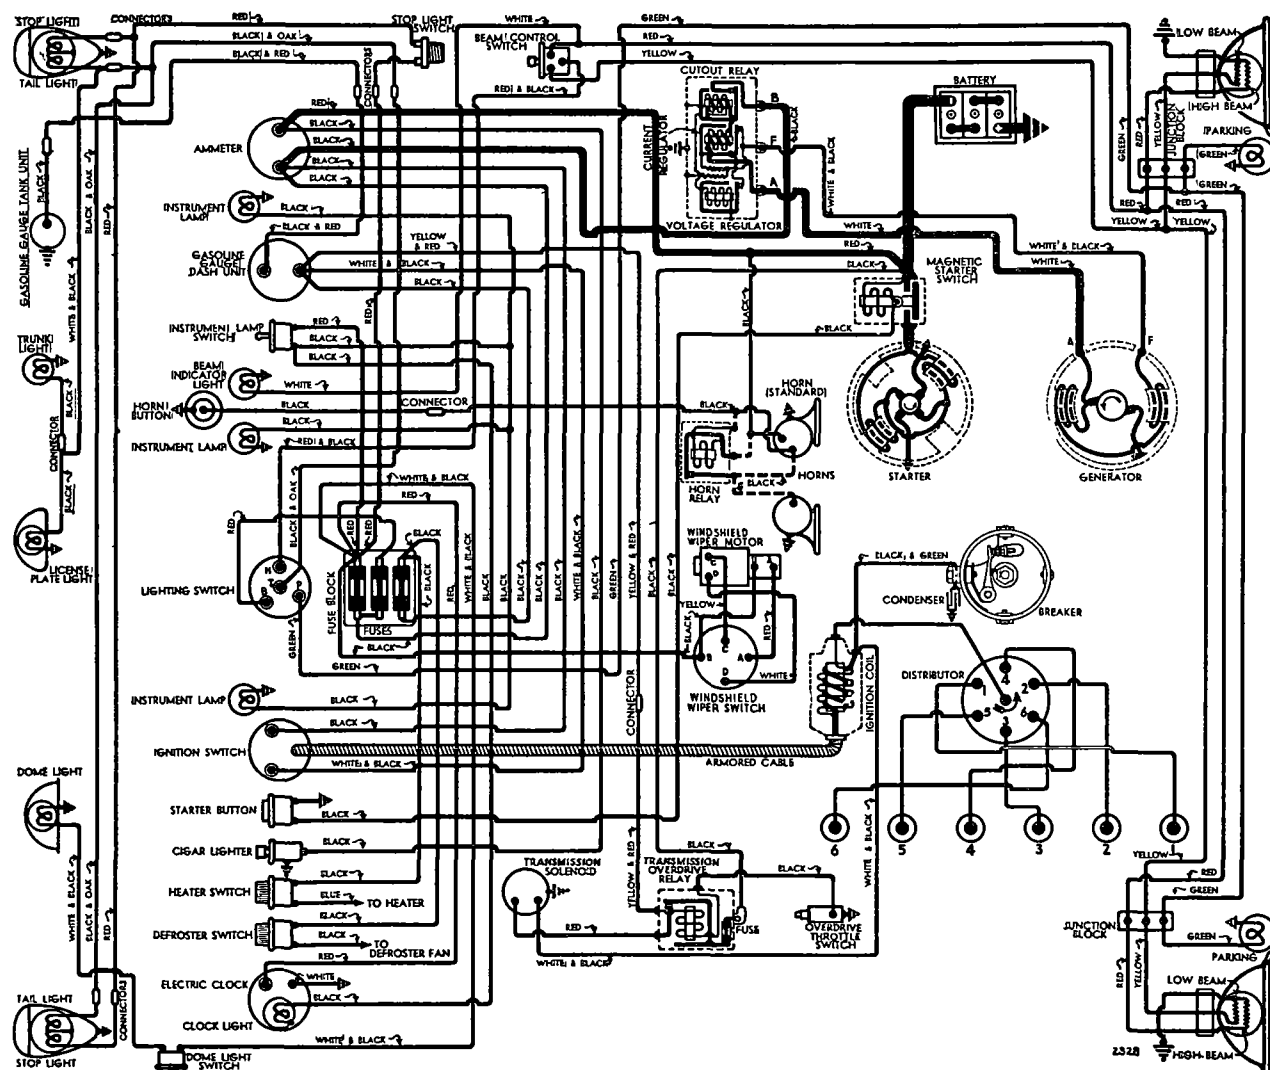

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3"
2°	4°	5"
3°	6°	6"
5°	10°	10"
6°	12°	12"

**Octane Selector:**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out screw in hold-down plate and lift distributor off.

NOTE—When installing distributor, insert .016" feeler between hold-down plate and advance plate while tightening advance plate clamp bolt to prevent binding and allow free advance plate motion.

## IGNITION TIMING

**IGNITION TIMING:**—For all engines as follows (see Octane Selector Setting following for correction dependent on fuel regularly used):

Flywheel Degrees	Piston Position
2° BTDC .....	.0016" BTDC.

To Set Timing—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over until 'IGN/' mark on vibration dampener at front of engine lines up with pointer on timing gear cover (this mark is 2° or 9/64" before top dead center mark 'UDC.1-6'). Loosen hold-down plate screw and center scale on pointer, tighten screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, insert .016" feeler between advance arm and hold-down plate (to insure clearance for free advance arm movement), tighten clamp bolt, remove feeler gauge.

**Octane Selector Setting:**—After setting ignition timing, loosen selector (hold-down plate) screw and advance (move selector so that pointer toward 'A' end of scale) until motor 'pings' when it is hot and pulling hard. Then retard (move selector with pointer toward 'R' end of scale) until 'ping' just disappears.

See Studebaker Shop Notes in 'M' Section for Front Fender Apron correction to correct ignition missing or cutting out due to water splashing up from road.

## CARBURETOR

**CARBURETION:**—Carburetor—Carter Type WA-1 Model 410-S or Stromberg Model BXO-26 (code marked 6-84 on float chamber). 1 1/4" single barrel, downdraft types. See separate articles in Carburetor Section for data on each model.

**Idle Adjustment:**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 8 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (1/2-1 1/4 turns open for Carter—turn screw in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting:**—3 holes provided in pump arm (Carter), throttle lever (Stromberg) for pump link engagement. Set as follows:

Inner Hole (min. stroke)—Extreme warm weather.  
Center Hole (Stromberg) or Lower Hole (Carter)—Normal operating conditions.

Outer Hole (Stromberg) or Upper Hole (Carter)—Extreme cold weather.

**Float Level (Carter):**—1/4" from top of machined projection on float bowl cover to top of soldered seam at free end of float (invert to check).

**Float Level (Stromberg):**—Fuel level 5/8" below top edge of float bowl.

**Fast Idle (Carter):**—Integral (built-in carburetor). For complete data, refer to Carburetion Equip. Index.

**Fast Idle Setting:**—Part of climatic control. Adjust by bending connector link offset to secure 5/8" choke valve opening with throttle stopscrew against (not on) first step of fast idle cam.

**Fast Idle (Stromberg):**—Stromberg BXO-26 carburetor type. See article in Carburetion Equipm't Section.  
**Fast Idle Setting:**—With throttle stopscrew against second step of fast idle cam, choke valve should be 11/32" open. To adjust, bend choke lever.

**Automatic Choke (Carter):**—Carter Climatic Control. For complete data, refer to Carburetion Equip. Index.  
**Setting:**—Set thermostatic coil housing 1 Notch Rich.

**Automatic Choke (Stromberg):**—Stromberg BXO-26 carburetor type. See article in Carburetion Equip. Sec.  
**Setting:**—Mark 'R' on thermostatic spring case should line up with projection on housing (ordinary fuel). If setting too rich rotate case to 'M' mark (leaner setting). Use 'H' position only for very volatile fuels.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528630 oil-wetted type Std. Heavy duty oil-bath type optional. Oil filler cap equipped with copper mesh cleaner.

**Fuel Pump:**—AC Type W #1522227 diaphragm type. For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Stewart (Stewart-Warner) Electric. Stewart-Warner No. G-102158. For complete data, refer to Carburetion Equip. Index.

## BATTERY

**Willard Type SW-1-95.** 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity:**—117 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.1 minutes. Five second voltage 4.2 volts.

**Grounded Terminal:**—Positive (+) grounded to frame. Engine Ground—Separate ground strap. Dimensions—Length 9". Width 7". Height 8 13/16". Location—In engine compartment on left side.

## STARTER

**Auto-Lite Model MAW-4015.** Armature MAW-2091. Drive—Outboard Barrel Type Bendix No. A-1729.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—43-52 ozs. (new brushes).

**Cranking Engine:**—130 RPM., approximately 175 amperes at 5.0-5.5 volts.

Performance Data				
Torque	ft. lbs.	R.P.M.	Volts	Amperes
0	"	4900	5.5	65
.6	"	3300	5.5	100
2.75	"	1480	5.0	200
5.45	"	820	4.5	300
8.5	"	400	4.0	400
11.5	"	Lock	3.0	505
18.0	"	Lock	4.0	670

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out two flange mounting screws, remove starter and switch as assembly.

**Starting Switch:**—R.B.M. Model 5607. Magnetic type. Mounted on starter and controlled by Douglas #5701 pushbutton switch on instrument panel.

## GENERATOR

**Auto-Lite Model GEA-4803-A.** Armature No. GDZ-2006F. Two brush type with current-voltage control.

**NOTE:**—If GDA-4804A Generator and VRB-4012A Regulator used, refer to the 1939 Commander 9-A car article (preceding) for complete data.

**Charging Rate Adjustment:**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate:**—35 amperes (hot or cold), 8.0 volts, 1600 gen. RPM or 17 MPH and above with load or discharged battery (Current Regulator Setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

## Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	780	0	6.4	840

24	7.6	1320	24	7.6	1420
28	7.7	1410	28	7.7	1550
32	7.85	1500	32	7.85	1685
35	8.0	1570	35	8.0	1800

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.57-1.75 amperes at 6.0 volts.

**Motoring Current:**—4.45-4.9 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out clamp and pivot bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, move generator out away from engine until fan can just be rotated with belt held stationary.

## REGULATOR

**Auto-Lite Model No. VRP-4904-A.** Current-Voltage type. In a single case mounted on engine dash.

For complete data, refer to Electrical Equipment Index.

**NOTE:**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

**Cuts In:**—6.4-6.6 volts, 800 Gen. RPM., 6.1 MPH.

**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap:**—.015" minimum.

**Air Gap:**—.031" min., .034" max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

**Setting:**—7.2-7.5 volts at 70° F.

**To Check (without breaking seals):**—Connect ammeter in charging line at regulator 'B' terminal, voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging battery until voltage is steady. Voltage reading should be 7.2-7.5 volts at 70° F. See Electrical Equipment Section for voltages at other temperatures.

**To Adjust (with cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
**Contact Gap:**—.012" Min. (armature against stop pin).

**Air Gap:**—.048-.052" with contacts just opening.

## Current Regulator

**Setting:**—34-36 amperes (marked '35' on cover).

**To Check (without breaking seals):**—Connect test meters as for Voltage Check (above). Operate generator at 30 MPH, charging battery, add load (use bank of headlamp bulbs or turn on car lights and accessories and discharge battery) so that generator charges at peak rate and Current Regulator

CONTINUED N NEXT PAGE

**CONTINUED FROM PRECEDING PAGE**

operates. Charging current should not exceed 34-36 amperes. If more than slight excess noted, regulator is defective.

**Adjustment & Contact Gap**—Same as for Voltage Regulator (above).

**Air Gap**—.034-.038" (before No. 5U-000001), .048-.052" (after above No.) with contacts just opening.

**LIGHTING**

**LIGHTING**:—Headlamps—Own 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator**—Red light on speedometer face. Lighted whenever Country (upper) beam in use.

**Switches**

**Lighting**—Douglas Model 5704.

**Beam Selector**—Delco-Remy 1997002.

**Instrument**—Douglas Model 7290.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking, Instr., Trunk	1½	55
Beam Indicator	1	51
Stop & Tail	21-3	1158
Rear License	3	63
Dome	15	87

**MISC. ELECTRICAL**

**FUSES**:—**Lighting**—Three 20 ampere. On fuse block on back of instrument panel at center. Protects circuits as follows: Top—Clock, Dome, Stop, Instrument Lamps and Windshield Wiper. Center—Head and Tail lamps. Lower—Accessories.

**Transmission Control**—14 ampere. On relay.

**Windshield Wiper**—No separate fuse (protected by accessory fuse on fuse block).

**HORNS**:—**Single**—Delco-Remy No. 1999515 Standard. **Dual**—Use Delco-Remy Package #1874459 (horn 1999512) to make matched set. Electric type, air tone horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999512 (low note)	19-21 amperes	.044-.049"
1999515 (high note)	18-20 amperes	.034-.039"

**Horn Relay**:—Delco-Remy Model 1116756.

**Contact Gap**—.020". **Air Gap**—.015" (closed).

**Contacts Close**—2.75-4.0 volts.

**ENGINE**

**ENGINE SPECIFICATIONS**:—Model 10A. 6 cylinder, 'L' head. Bore—3 5/16". Stroke—4 3/4".

**Displacement**—226 cu. ins. **Rated HP**—26.35.

**Developed Horsepower**—90 HP (Std. head), 94 HP (Optl. high altitude head) at 3400 RPM.

**Compression Ratio**—6.0-1 Standard cast-iron head. 7.0-1 aluminum head Optl. (high altitude only).

**Compression Pressure**—105 lbs. @ 150 RPM (Std. head).

*See Studebaker Shop Notes for Cyl. Head Installation.*

**Vacuum Reading**—18-20" at 450 RPM or 8 MPH.

**PISTONS**:—Lynite, aluminum alloy, tin-plated, T-slot, cam ground type. Length 3 3/4". Weight 14.4 ozs. (stripped).

**Removal**—Pistons and rods removed from above. Clearance—.0005" new. Measure 1/4" up on skirt 90° from pin bosses. See Fitting New Pistons.

**Original Bore Sizes**:—See Studebaker Shop Notes.

**Replacement Pistons**:—Finished pistons (pins fitted) furnished standard and .002", .004", .010", .015", .020", .030" oversize. Exact size stamped on piston head.

**Fitting New Pistons**:—Insert .002" x 1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler must be between 7-15 lbs.

**Installing Pistons**:—T-slot away from camshaft.

**PISTON RINGS**:—New sealed power type compression rings (2 used) with upper inner edge beveled, 1 oil control ring, all above pin. Narrow heat-dam groove (no ring fitted) above top ring. Oil ring groove drilled with oil drain holes. NOTE—New type ring used on 1939 Commander starting with Eng. #H-81539.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.013-.018"	.0015-.002"
Oil Control	3/16"	.013-.018"	.0015-.002"

NOTE—Install compr. rings with bevel edge up.

**Replacement Rings**:—Oversizes .010", .020", .030".

**PISTON PIN**:—Diameter—7/8". Length—2 7/8".

Pin locked in connecting rod.

**Pin Fit in Piston**—Light push fit (rod should rock in piston of own weight. Clearance .0001-.0003").

NOTE—Replacement pistons have pins fitted.

**CONNECTING ROD**:—Weight—33.2 ozs. Length—8 1/8".

**Crankpin Journal Diameter**—2.18675-2.18775".

**Lower Bearing**—Spun babbit. Rods exchanged.

NOTE—Babbitt in caps chamfered on upper edge. Clearance—.0005-.002". Sideplay—.005-.009".

**Bearing Adjustment**:—None. Replace rods. Rods furnished std. and .010", .020" undersize. Ream to give clearance of .0005-.002". See Studebaker Shop Notes for 'Palnut' installation instructions.

**Installing Rods**:—Install rods with narrow half of bearing toward front in cylinders #1, 3, 5, toward rear in #2, 4, 6. Marks on rods and caps must be together and oil hole toward camshaft.

**CRANKSHAFT**:—4 bearing, 5 integral counterweights with vibration dampener mounted at forward end.

**Journal Diameters**—2.4995-2.500" all bearings.

**Bearing Type**—Removable steel-backed, babbit-lined type. Clearance—.0005-.0025".

**Bearing Adjustment**:—None (no shims). Replace bearings. Furnished Std., .010", .020" undersize.

**End Thrust**:—Thrust plate assembled between front bearing and crankshaft gear. Controlled by shims between plate and bearing. Endplay—.003-.008".

**CAMSHAFT**:—Four bearing. Helical gear drive.

*See Studebaker Shop Notes for Camshaft Removal.*

**Bearings**—Steel-backed, babbit-lined, split type bushings. When replacing bushings, oil holes in block and bushing must be in alignment.

**Clearance**—.00075-.00225" (#1), .002-.00375" (others).

**End Thrust**:—Steel thrust washer and spacer between gear hub and front bushing.

**Timing Gears**:—Crankshaft (cast-iron). Camshaft

(Celeron fabric with steel hub). Two threaded holes in gears provided for puller for gear removal. See Studebaker Shop Notes for Gear Removal & Replacement Gear size selection.

**Camshaft Setting**:—Mesh marked camshaft gear tooth with two marked teeth on crankshaft gear.

VALVES:—	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All valves	45°	11/32"	.001-.003"

**Valve Guides**:—Pressed in block from above (1 5/32" below upper edge of valve seat) with stepped end down. Ream to inside diameter of .3425-.3445".

**Valve Springs**:—Install with closed coil at top. Dampener on top of spring. Replace spring if 10% weak. See Studebaker Shop Notes for Valve Spring Installation instructions.

	Spring Pressure	Spring Length
Valve Closed	54-60 lbs.	2 3/32"
Valve Open	125-135 lbs.	1 3/4"

**Valve Lifters**:—Barrel type (no separate guides). Can be removed from top. Furnished .0005", .001" ov/size.

**VALVE TIMING**

**Tappet Clearance**:—.016" all valves (cold). Remove right hood side panel for work on valves. See Studebaker Shop Notes for Hood Side Panel Removal.

**Valve Timing**:—See Camshaft Setting above.

**Intake Valves**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves**—Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check**—Set tappet clearance #1 intake valve at .020". This valve should open with piston 15° or .0942" before top dead center when mark 'IN-OP.1-6/' on vibration damper at front of engine lines up with pointer on gear case cover at front of engine. Reset tappet clearance at .016" (cold).

**LUBRICATION**

**LUBRICATION**:—Pressure system with oil pump mounted on right side of engine. See Studebaker Shop Notes for Oil Pump installation instructions.

**Normal Oil Pressure**:—40 lbs. at 25-30 MPH.

**Oil Pressure Regulator**:—Located on right front corner of engine. Operates at 40 lbs. Non-adjustable.

**Crankcase Capacity**:—6 quarts.

**COOLING**

**COOLING SYSTEM**:—Capacity—14 1/2 quarts.

**Water Pump**:—Centrifugal with adjustable packing. See Water Pump Section for complete data.

**Removal**—Drain water, remove fan belt, disconnect pump inlet hose, take out pump mounting bolts, lift fan and pump assembly out.

**Thermostat**:—Bishop & Babcock or Fulton. In Cylinder head water outlet. Install with bellows down.

**Setting**—Starts to open at 156-160°F.

**Temperature Gauge**—Stewart (Stewart-Warner). No. G-102072.

**CLUTCH**

**CLUTCH**:—Borg & Beck Model 9A7 with 'Borglite' driven member. Model #943 stamped on cover. Single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings**—Spiral wound molded woven, 2 used. Inside Diam. 6". Outside Diam. 9 $\frac{1}{4}$ ". Thickness  $\frac{1}{8}$ ".

**Pedal Adjustment**—Free travel 1" min. (sleeve on pedal connecting rod, turn out for greater travel, in for less). Check Hill-Holder after clutch adjustment.

*See Studebaker Shop Notes for Clutch Cross-shaft Oiler installation instructions.*

**Removal**—Disconnect clutch linkage, remove transmission (see Transmission Removal following), support engine at rear, remove rear engine mountings and clutch housing. Take out mounting screws in clutch cover flange (turn screws out evenly) and remove clutch.

## TRANSMISSION

**TRANSMISSION**: Warner—Model AS1-T86C (standard). All helical gear type (synchro-mesh second & high). *See Transmission Section for complete data.*

**Transmission Control**—New type remote shift. *See Transmission Section for complete data.*

**Removal**—Disconnect shift rods from levers and speedometer cable at transmission, take out U-bolts in front universal and lower propeller shaft. Remove transmission mounting screws at clutch housing, pull transmission back and lift out.

## OVERDRIVE

**OVERDRIVE**: Warner R7 (Kick-down) Electric type. Complete assembly (with transmission) Warner Model No. AS2-T86C.

*See Transmission Section for complete data.*

**Overdrive Solenoid**—Delco-Remy Model 1118001.

**Throttle Switch**—Cole-Hersee No. 1687-S. Adjust so that shoe on accelerator linkage just contacts switch plunger with carburetor throttle in wide open position.

**Control Relay**—Auto-Lite HR-4201S. 14 ampere fuse mounted in holder on relay.

**Removal**: Same as for regular transmission after disconnecting Overdrive cable and solenoid wires, and removing Overdrive Rear Support. *See Overdrive Transmission Rear Support Installation data in Studebaker Shop Notes.*

## UNIVERSALS

**UNIVERSAL JOINTS**:—Spicer—1271-101 (front), 1278-101 (rear). Needle bearing type. 2 used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE**:—Spicer Model 41-2. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—4.55-1 Std., 4.82-1 Optl.

**Backlash**—.005-.007". Shim adjustment.

**Removal**—Hoist rear of car, disconnect propeller shaft at rear universal, brake line, and shock absorbers, remove spring U-bolts, disconnect rear spring shackles, withdraw axle assembly from car.

**Wheel Bearing Adjustment**—Shims provided between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub, drum, and backing plate (retained by 6 nuts). Remove shims to decrease endplay, add shims to increase. Shim thickness at both wheels must be equal within .005".

**Endplay**—.001-.005". Measure with dial indicator.

## SHOCK ABSORBERS

**SHOCK ABSORBERS**:—Houdaille, Type BBFS (front), ACHS (rear). Double acting, hydraulic, adjustable type with thermostatic control (rear only).

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension**:—Planar type independent suspension with transverse spring. Specifications below apply with car unloaded on level floor.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—5 $\frac{1}{2}$ °.

**Caster**—Negative  $\frac{1}{4}$ ° to Positive  $\frac{3}{4}$ °. Not adjustable.

**Camber**— $\frac{1}{4}$ ° to  $\frac{3}{4}$ °. Adjustable.

**Toe In**—1/16- $\frac{1}{8}$ ". Adjust right reach rod for toe-in.

**Steering Geometry (Toe-out on Turns)**—Inner wheel turned 22°, Outer wheel 20°.

## STEERING GEAR

**Steering Gear**: Ross T-14 Cam-&-Twin Lever type. *See Steering Gear Section for complete data.*

## BRAKES

**BRAKES**:—Service—Lockheed hydraulic, double anchor type. Hand lever applies rear wheel brakes. *See Brake Section for complete data.*

**CAUTION**—*See Front Fender Apron Note in Studebaker Shop Notes to correct apron interference with brake tubes on early cars.*

**Wheel Cylinders**—Stepped or two-stage bore type:

Front Wheels—Front shoe cylinder 1 $\frac{3}{8}$ ", Rear 1".

Rear Wheels—Front shoe cylinder 1 $\frac{1}{4}$ ". Rear 1".

**NOTE**—Wheel cylinder bore size marked on casting.

**Drum**—Budd composite. Diameter 11".

**Lining**—Front shoe—woven. Rear—moulded. Width

2". Thickness 3/16". Length per wheel 19 11/16".

**Clearance**—.010" toe, .005" heel, for each shoe.

**Hand Brake Adjustment**:—*See Service Brakes*

**Hill-Holder**: Optional on all models.

*See Brake Section for complete data.*

## MISC. MECHANICAL

**WINDSHIELD WIPER**:—Auto-Lite Model EWB-4002.

Electric type. **NOTE**—No separate fuse used.

*See Miscellaneous Section for complete data.*

**HOOD LOCK:**—See Studebaker Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—On left front body hinge post. First No. 7133101 (South Bend), 7803301 (L.A.).  
**ENGINE NUMBER:**—First number B-38501. Stamped on left side of engine block at center.

### TUNE-UP

**COMPRESSION:**—Ratio—6.0-1 Std. CI. Hd. 6.5-1 Optl. Pressure—105 lbs. at 150 RPM.  
**VACUUM READING:**—Steady 18" at 450 RPM, 8 MPH.  
**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.  
**SPARK PLUGS:** Champion Type 8. 18 mm. Metric.

Gaps—Set at .025".

NOTE—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—33° Closed.

Synchronization—Set movable contacts to open 45° after stationary set.

Automatic Advance—14½° max. at 1800 RPM  
 Vacuum Advance—6° distr. with 11-14" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Vibration dampener mark 'UDC.1-8' aligned with pointer at front of engine for stationary contacts. Mark 'UDC.3-6' for movable contacts (¼ revolution from 'UDC.1-8' mark).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between 'miss' and 'roll' points (¼-1¼ turns open on Carter). Idle speed 450 RPM or 8 MPH.

Float Level (Carter)—3/16" from top of float to gasket seat on cover (valve seated, invert to check).  
 Float Level (Stromberg)—Fuel level 5/8" below top edge of float bowl.

Accelerator Pump—Inner hole (short stroke) for minimum charge, Outer hole (long stroke) max charge.

Fuel Pump Pressure: 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type. To check valve, unlatch thermostatic coil (free outer end from bracket on manifold), operate valve by hand and see that shaft is free (shaft can be cleaned with emery if necessary). Make certain that thermostatic coil is properly latched to bracket and that tension spring (from shaft to clip on flange) is in place.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8229. Delco-Remy No. 1116274, 1116288 (RHD) switch and cable.

**Ignition Lock:**—Yale & Towne, Mitchell No. 8078.

**COIL:** Delco-Remy Model 1115021. Mounted on dash.

Ignition Current—½-1½ amps. idling, 4-5 stopped.

**CONDENSER:** Delco-Remy—Part No. 1838163.

Capacity—18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 662-M. Double breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control. NOTE—Movable contacts must be synchronized. Open 45° after stationary set.

Firing Interval—Movable contacts open 45° (distr.) after fixed set.

Breaker Gap—.020". Limits .018-.024".

Cam Angle or Dwell—33° closed, 12° open (both sets operating together when properly synchronized).

**Breaker Arm Spring Tension:**—19-23 ounces.  
**Rotation:**—Clockwise viewed from above.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start	300	2.5	600
14.5	1800	29	3600

**Vacuum Spark Control D-R No. 681-S.** Mounted under distributor and linked to advance arm. Provides additional advance at speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit. Total plunger travel ¼".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
6°	12°	11-14"

**Octane Selector:**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly

used. See Ignition Timing following for adjustment.  
**Distributor Removal:**—Mounted on right side of cylinder head. To remove, take out screw in hold-down plate, loosen advance arm clamp bolt (not necessary to disturb vacuum unit or vacuum connections).

### IGNITION TIMING

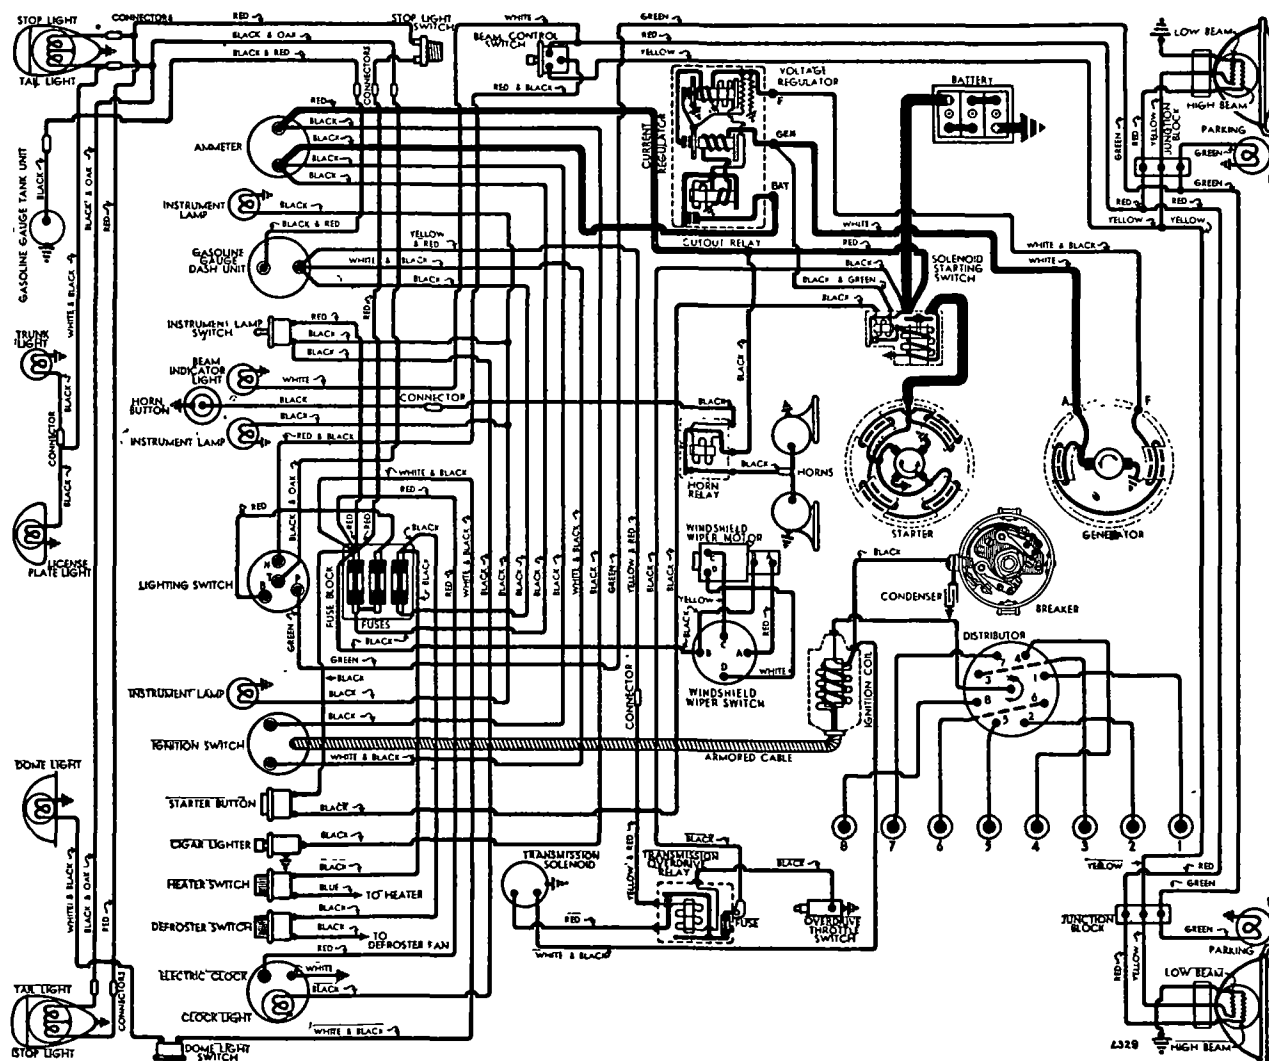

**IGNITION TIMING:**—Standard setting as follows (see Octane Selector Setting following for correction dependent on fuel regularly used):

**Flywheel Degrees**

**Piston Position**

0° (At TDC) ..... 0000" TDC.

To Set Timing (Stationary Contacts)—Crank engine by engaging gears and rolling car on floor. With #1 piston on compression, turn engine over until piston reaches top dead center, stop when dead center mark 'U.D.C.1-8' on vibration dampener at front of engine lines up with pointer on timing gear cover. Loosen hold-down plate screw, center scale on pointer, tighten screw. Loosen advance arm clamp bolt, rotate distributor until stationary

breaker contacts (mounted directly on breaker plate) begin to open, tighten clamp bolt, then synchronize movable contacts.

**Synchronization (On Engine)**—Turn engine over 90° to #6 firing position with vibration dampener mark 'U.D.C.3-6' lined up with pointer on timing gear cover. Loosen lock screws on movable sub-plate carrying second set of contacts, turn eccentric adjusting screw until contacts begin to open, tighten lock screws.

**Synchronization (Using Tool)**—Use Delco-Remy tool #1838182. See Distributor Synchronization in Electrical Equipment Section for complete instructions. Distributor firing intervals regular 45-45-45°.

**Octane Selector Setting**—After setting ignition timing, loosen selector (hold-down plate) screw and advance (move selector so that pointer toward 'A' end of scale) until motor 'pings' when it is hot and pulling hard. Then retard (move selector with pointer toward 'R' end of scale) until 'ping' just disappears.

*See the Studebaker Shop Notes (preceding) for Front Fender Apron correction to correct ignition missing or cutting out due to water splashing up from road.*

## CARBURETOR

**CARBURETION**—Carburetor—Carter Type WDO Model 409-S or Stromberg Model AAO-161 (code marked 6-85 on top of float chamber cover). 1¼" (Carter), 1" (Stromberg) dual, downdraft types. *See separate articles in Carburetor Section for data.*

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 8 MPH idle speed. Adjust idle adjusting screw for each barrel (in succession) until engine fires smoothly (¼-1¼ turns open for each screw on Carter—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting**—2 holes provided in pump arm (Carter), throttle lever (Stromberg) for pump link engagement. Set as follows:  
Inner Hole (min. stroke)—Summer temperatures.  
Outer Hole (max. stroke)—Winter temperatures.

**Float Level (Carter)**—3/16" from top of float to gasket seat on cover with needle valve seated (invert float chamber cover to check).

**Float Level (Stromberg)**—Fuel level ⅝" below top edge of bowl (level sight plug on engine side of carburetor—check with engine idling).

**Fast Idle (Carter)**—Integral (built-in carburetor). *For complete data, refer to Carburetion Equip. Index.*

**Fast Idle Setting**—Adjust fast idle screw for .018" throttle opening with choke valve fully closed.

**Fast Idle (Stromberg)**—Stromberg AAO-161 carburetor type. *See article in Carburetion Equipm't Section.*

**Fast Idle Setting**—No adjustment provided.

**Automatic Choke (Carter)**—Carter Climatic Control. *For complete data, refer to Carburetion Equip. Index.*

**Setting**—Set coll housing one Notch Rich.

**Automatic Choke (Stromberg)**—Stromberg AAO-161 carburetor type. *See Carburetion Equip. Sec. article.*  
**Setting**—Mark 'R' on thermostatic spring case should line up with projection on housing (ordinary fuel). If this setting too rich, rotate case to 'M' mark (leaner setting). Use 'H' setting for high test fuels.

## CARB. EQUIPMENT

**Air Cleaner**—AC #1529440 oil-wetted type Std. Heavy duty oil-bath type optl. Oil filler cap equipped with copper mesh cleaner.

**Fuel Pump**—AC Type E #1523926 diaphragm type. *For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—Stewart (Stewart-Warner) Electric Stewart-Warner No. G-102158.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**Willard Type SW-1-95**. 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Positive (+) grounded to frame. Engine Ground—Separate ground strap.

**Dimensions**—Length 9". Width 7". Height 8 13/16".

**Location**—In engine compartment on left side.

## STARTER

**Delco-Remy Model 1107903**. Armature No. 820158. Drive—Solenoid pinion shift & overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Cranking Engine**—110 RPM., 150-200 amperes, 5-5.5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
16 "	Lock	3.0	600

**Removal**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting screws (remove starter and solenoid switch as an assembly).

**Starting Switch**: Delco-Remy Solenoid 1546. Mounted on starter and controlled through relay (in switch case by pushbutton switch Douglas #5700 on instrument panel).

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Delco-Remy Model 1102671**. Armature No. 1879002. Two brush type with Current-Voltage Control.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. *See Regulator data following.*

**Maximum Charging Rate**—33-35 amperes (hot or cold), 8.0 volts, 1850 gen. RPM or 22 MPH and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

### Performance Data

Amperes	Volts	R.P.M.
Cold	30*	8.0
		1750

\*—Not maximum output—See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Swing generator out until fan can just be turned with belt held stationary.

## REGULATOR

**Delco-Remy Model 1118202**. 'Single Core' type. Vibrating Voltage & Current regulator on dash. **CAUTION**—Check generator for grounded fields before changing regulator settings.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts In**—6.2-6.7 volts (hot), 750 RPM., 8.9 MPH.

**Cuts Out**—0-4.0 amperes discharge current.

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with points just closed).

### Voltage Regulator

**Setting**—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature.

**To Check**—Connect ammeter in charging line at 'BAT' regulator terminal, voltmeter between 'BAT' terminal and ground. Operate generator at 2800 RPM, adjust charging rate to 8-10 amperes (use variable rheostat or 'AVR' set). With regulator at hot operating temperature, retard generator speed until cut-out relay points open, then increase generator speed to 2800 RPM and check hot voltage setting (above).

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for light (left) spring (or one spring if both alike) only. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for Heavy (or Other) Spring adjustment.

**Air Gap**—.070" between center of core and armature with contacts just closed.

### Current Regulator

**Setting**—34-36 amperes hot (at operating temp.).

**To Check**—Remove cover, connect short jumper from voltage regulator frame to upper contact support bracket (shorting out Voltage Regulator). Connect ammeter in charging line at 'BAT' regulator terminal. Turn on lights and accessories, operate generator and increase speed until output remains stationary (run until hot). Check setting with regulator at operating temperature.

**To Adjust**—Change regulator armature spring tension slightly by bending lower spring hanger for one spring. If further adjustment required see Single Core Regulator article in Electrical Equipment Section for adjustment of other spring.

**Air Gap**—.080" (check same as Voltage Regulator).

## LIGHTING

**LIGHTING**—Headlamps—Own 'Sealed Beam' type.

*For complete data, refer to Electrical Equipment Index.*

**Headlamp Adjustment**—Aim upper beam for each lamp straight ahead with center of hot spot 3" below lamp center height.

**Beam Indicator**—Red light on speedometer face. Lighted whenever Country (upper) beam in use.

### Switches

**Lighting**—Douglas Model 5704.

**Beam Selector**—Delco-Remy 1997002.

**Instrument**—Douglas Model 7290.

C N T I N U E D N E X T P A G E

## C CONTINUED FROM PRECEDING PAGE

Bulb Specifications			
Position	Candlepower	Mazda No.	
Headlamps		Sealed Beam	
Parking, Instr., Trunk	1½		55
Beam Indicator	1		51
Stop & Tail	21-3		1158
Rear License	3		63
Dome	15		87

## MISC. ELECTRICAL

**FUSES:**—Lighting—Three 20 ampere. On fuse block on back of instrument panel at center. Protects circuits as follows: Top—Clock, Dome, Stop, Instrument Lamps and Windshield Wiper. Center—Head and Tail lamps. Lower—Accessories.

Transmission Control—14 ampere. On relay.

Windshield Wiper—No separate fuse (protected by accessory fuse on fuse block).

**HORNS:**—Delco-Remy. Model 1999511 (low note), 1999512 (high note). Electric type, air tone operated by relay.

Type	Current (at 6 volts)	Air Gap
1999511 (low note)	19-21 amperes	.044-.049"
1999512 (high note)	18-20 amperes	.034-.039"

Horn Relay:—Delco-Remy Model 1116756.

Contact Gap—.020". Air Gap—.015" (closed).

Contacts Close—2.75-4.0 volts.

## ENGINE

**ENGINE SPECIFICATIONS:**—Model 6C, 8 cylinder, 'L' head type. Bore—3 1/16". Stroke—4 1/4". Displacement—250.4 cu. ins. Rated HP—30. Developed Horsepower—110 at 3600 RPM. Compression Ratio—6.0-1 standard cast-iron head. 6.5-1 high compression head optional. Compression Pressure—105 lb. @ 150 RPM (Std. hd.). Vacuum Reading—18" at 450 RPM or 8 MPH. See *Studebaker Shop Notes for cyl. head installation.*

**PISTONS:**—Lynite, aluminum alloy, T-slot, Cam ground, tin-plated type. Length—3 3/4". Weight—13.6 ozs. (stripped).

Removal—Pistons and rods removed from above. Clearance—.0015" (1/4" up on skirt 90° from pin).

Original Bore Sizes:—See *Studebaker Shop Notes.*

Replacement Pistons:—Finished pistons (with pins fitted) furnished .002", .004", .010", .015", .020", .030" oversize. Exact size stamped on piston head.

Fitting New Pistons:—Install .003" x 1" hardened feeler between piston and cylinder wall on camshaft side (T-slot away from camshaft, pin bosses parallel to crankshaft). Pull to withdraw feeler must be 7-15 lbs.

Installing Pistons:—T-slot away from camshaft.

**PISTON RINGS:**—Two compression, 1 oil control ring, all above pin with narrow heat-dam groove (no ring) above top ring groove. Oil ring groove drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Compression	3/8"	.013-.018"	.0015-.002"
Oil Control	3/16"	.013-.018"	.0015-.002"

NOTE—Install compression rings with step down. Inner ring used with oil ring only.

Replacement Rings:—Oversizes .010", .020", .030".

**PISTON PIN:**—Diameter—7/8". Length—2 5/8".

Pin locked in rod by clampscrew.

Pin Fit in Piston—Light push fit (rod should rock in piston of own weight). Clearance .0001-.0003".

NOTE—Replacement Pistons have pins fitted.

**CONNECTING ROD:**—Weight—32 ozs. Length—8".

Crankpin Journal Diameter—1.87425-1.87525".

Lower Bearing—Removable, steel-backed, lead-bronze lined type.

Clearance—.00075-.00275". Sideplay—.005-.010".

Bearing Adjustment:—None. Replace bearings. Furnished Std. and .005", .010", .020" undersize. Crankpin must be turned down to size (bearings should not be reamed). See that tongues on bearings engage slots and that oil holes are aligned.

See *Studebaker Shop Notes for 'Palm' installation.*

Installing Rods:—Oil hole in rod toward camshaft.

**CRANKSHAFT:**—9 bearing, 12 bolted counterweights. Vibration dampener mounted on forward end. See *Studebaker Shop Notes on Vibration Dampener installation.*

Journal Diameters—2.3435-2.3440" all bearings.

Bearing Type—Removable steel-backed, babbitt-lined type. Clearance—.001-.003".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps. Bearings furnished .010" and .015" undersize.

End Thrust:—Thrust plate between front main bearing and crankshaft gear with shim adjustment.

Endplay—.003-.006".

**CAMSHAFT:**—Six bearing. Helical gear drive.

See *Studebaker Shop Notes for Camshaft Removal.*

Bearings—Split steel-backed, babbitted bushings. NOTE—Oil holes in bushing & block must line up.

Clearance—.00075-.00225" (#1), .002-.00375" (others).

End Thrust:—Steel thrust washer and spacer between gear hub and bearing. Endplay—.003-.006".

Timing Gears:—Cast-iron (crankshaft), Celeron Fabric (camshaft). See *Studebaker Shop Notes for Gear Removal and Replacement Gear Size Selection.*

Camshaft Setting:—Mesh marked tooth on camshaft gear between two marked teeth on crankshaft gear.

**VALVES:**—Head Diameter Stem Diameter Length

Intake .....1 13/32".....11/32".....5 7/32"

Exhaust .....1 9/32".....11/32".....5 7/32"

Seat Angle Lift Stem Clearance

All Valves .....45°.....11/32"......001-.003"

Valve Guides:—Pressed in block from above (1 5/16" below top of block) with stepped end down. Ream to inside diameter of .343-.344".

Valve Springs:—Install with closed-coil up and dampener on top of spring. Replace springs if 10% weak. See *Studebaker Shop Notes for Valve Spring Installation instructions.*

Valve Closed .....Spring Pressure Spring Length

Valve Open .....54-60 lbs.....2 3/32"

Valve Lifters:—Mushroom type in bolted-on guide brackets (clusters of four). Assemblies may be removed through valve opening on side of engine.

## VALVE TIMING

Tappet Clearance:—.016" all valves—engine cold. Remove right hood side panel for work on valves.

See *Studebaker Shop Notes for Side Panel Removal.*

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 15° BTDC. Close 49° ALDC.

Exhaust Valves—Open 54° BLDC. Close 10° ATDC.

Valve Timing Check—Set tappet clearance for #1 intake valve at .020". This valve should open with piston 15° or .0915" before top dead center when 'IN.OP/1-8' mark on vibration dampener at front of engine lines up with pointer on gear cover. Reset tappet clearance at .016" cold.

## LUBRICATION

**LUBRICATION:**—Pressure type. Gear type oil pump in crankcase. See *Studebaker Shop Notes for Oil Pump Installation directions.*

Normal Oil Pressure:—60 lbs. (min.) at 25-30 MPH.

Oil Pressure Regulator:—Located at right front corner of engine. Opens at 60 lbs. Non-adjustable.

Crankcase Capacity—8 quarts.

## COOLING

**COOLING SYSTEM:**—Capacity—17 quarts.

Water Pump:—Centrifugal with adjustable packing. See *Water Pump Section for complete data.*

Removal—With water drained and fan belt removed, disconnect hose, take out mounting bolts, lift off pump and fan assembly.

Thermostat:—Bishop & Babcock or Fulton. In cylinder head outlet. Install with bellows down.

Setting—Starts to open 156-160°F.

Drain Valves:—On left side of radiator lower tank and plug at left rear of engine block.

Temperature Gauge—Stewart (Stewart-Warner). No. G-102072.

## CLUTCH

**CLUTCH:**—Inland. 'Diaphragm' type, single plate, dry disc type with Long 9 1/2 CF-CS driven member.

See *Clutch Section for complete data.*

Facings—Molded (spiral or chevron wound), 2 used. Inside Diam. 6". Outside Diam. 9 1/2". Thickness .125".

Pedal Adjustment:—Free travel 1" min. Sleeve adjustment on pedal connecting rod. Check Hill-Holder after adjusting clutch.

Removal:—Disconnect clutch pedal linkage, remove transmission (see Transmission Removal following), support engine at rear, remove rear engine mountings and clutch housing, take out mounting screws in clutch cover flange (turn all screws out evenly), remove clutch assembly. CAUTION—Support pressure plate by hand to avoid distorting pressure plate tension springs.

See *Studebaker Shop Notes for Clutch Cross-shaft Oiler installation instructions.*

## TRANSMISSION

**TRANSMISSION:** Warner—Model AS1-T86C (standard) All helical gear type (synchro-mesh second & high).

See *Transmission Section for complete data.*

Transmission Control:—New type remote shift.

See *Transmission Section for complete data.*

Removal:—Disconnect shift rods from levers and speedometer cable at transmission, take out U-bolts in front universal and lower propeller shaft. Remove transmission mounting screws at clutch housing, pull transmission back and lift out.

## OVERDRIVE

**OVERDRIVE:** Warner R7 (Kick-down) Electric type. Complete assembly (with transmission) Warner Model No. AS2-T86C.

*See Transmission Section for complete data.*

**Overdrive Solenoid**—Delco-Remy Model 1118001.

**Throttle Switch**—Cole-Hersee No. 1687S. Adjust so that end of accelerator rod just contacts switch plunger with throttle valve wide open.

**Control Relay**—Auto-Lite HR-4201S. 14 ampere fuse mounted in holder on relay.

**Removal:** Same as for regular transmission after disconnecting Overdrive cable and solenoid wires, and removing Overdrive Rear Support. *See Overdrive Transmission Rear Support Installation data in Studebaker Shop Notes.*

## UNIVERSALS

**UNIVERSAL JOINTS:**—Spicer—1271-101 (front), 1278-101 (rear). Needle bearing type. 2 used.

*See Universals Section for complete data.*

## REAR AXLE

**REAR AXLE:**—Spicer Model 41-2. Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—4.55-1 Std., 4.82-1 Optl. (Std. with Overdrive).

**Backlash**—.005-.007". Shim adjustment.

**Removal:**—Hoist rear of car, disconnect brake line, shock absorbers, drive shaft at rear universal, rear spring U bolts and rear spring shackles, withdraw axle assembly from car. **NOTE**—Bleed brake lines when axle installed.

**Wheel Bearing Adjustment:**—Shims located between flanged end of axle housing and brake backing plate. To adjust, remove wheel, hub, brake drum, and backing plate (retained by 6 bolts). Remove shims to decrease endplay, add shims to increase. Shim thickness at both wheels must be equal within .005".

**Endplay**—.001-.005". Measure with dial indicator.

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Houdaille, Type BBFS (front), ACHS (rear). Double acting, hydraulic, adjustable type with thermostatic control (rear only).

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:**—Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—5½°.

**Caster**—Negative ¼° to Pos. ¾°. Not adjustable.

**Camber**—¼° to ¾°. Adjustable.

**Toe In**—1/16-¼". Adjust right reach rod for toe-in.

**Steering Geometry (Toe-out on Turns)**—Inner wheel turned 22°, Outer wheel 20°.

## STEERING GEAR

**Steering Gear:** Ross T-14 Cam-&-Twin Lever type.

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Lockheed hydraulic, double anchor type. Hand lever applies rear wheel service brakes. *See Brake Section for complete data.*

**CAUTION**—*See Front Fender Apron Note in Studebaker Shop Notes to correct apron interference with brake tubes on early cars.*

**Wheel Cylinders**—Stepped or two-stage bore type: Front—Front Shoe Cylinder 1⅜". Rear 1".

Rear—Front Shoe Cylinder 1¼". Rear 1".

**NOTE**—Wheel cylinder bore size marked on casting.

**Drum**—Budd Composite. Diameter 11".

**Lining**—Front shoe—woven. Rear—moulded. Width 2¼". Thick. 3/16". Length per wheel 19 11/16".

**Clearance**—.010" toe, .005" heel, for each shoe.

**Braking Power**—45% rear, 55% front.

**Hand Brake:**—*See Service Brakes above.*

**Hill-Holder:** Optional on all models.

*See Brake Section for complete data.*

## MISC. MECHANICAL

**WINDSHIELD WIPER:**—Auto-Lite Model EWB-4002. Electric type. **NOTE**—No separate fuse used.

*See Miscellaneous Section for complete data.*

**HOOD LOCK:** See Studebaker Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on left (1941), right (1942) front door hinge post. First numbers:  
 Year Model South Bend Los Angeles  
 1941 3G G-90,101 G-811,201  
 1942 4G G-165,501 G-821,101

**ENGINE NUMBER:** On pad on upper left front corner of engine block. First Nos.: 101201 ('41), 186301 ('42).

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 std. cast-iron head.  
 Optl. 7.0-1 Cast Iron Hd. recommended for altitudes greater than 5000 ft. only.

Pressure—105 lbs. at cranking speed of 150 RPM.

**VACUUM READING:**—Steady 17-18" at 8 MPH idle spd.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion No. J-8 ('41), No. J-9 ('42).  
 14 mm. Metric types.

Gaps—.025".

**NOTE:**—Type J-9 plug recommended for service.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Limits .018-.022".

Cam Angle—Closed 35° (IGW distr.), 38° (IGC distr.).

Automatic Advance—7" max. at 1400 RPM (distr.).

Vacuum Advance—9" distr. with 14 3/4" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. Flywheel mark 'IGN' aligned with indicator in inspection hole on engine rear plate on left side. Use .020" feeler between advance arm and hold-down plate when tightening distributor clamp bolt (avoids binding vacuum control).

**CARBURETION:** See Carburetor & Carb. Equipment.  
 Idle Setting—Set idle adjusting screw 1/2-1 1/2 turns open. Idle speed 500-525 RPM or 8 MPH.

Float Level—5/16" from top of projection on bowl cover to top of soldered seam on float (inverted).

Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure: 3 1/2 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.  
 Setting—To test coil tension, unhook coil from pin. With valve closed (counterweight up), hooked end of coil should be approximately 90° away from pin with coil at 70°F. Replace coil if angle incorrect. If valve sticks, shaft should be lubricated with kerosene and baking soda solution (for shafts which are badly stuck, remove shaft and turn shaft down to give .005" clearance—shaft bore in manifold should not be disturbed).

**NOTE:**—Stainless steel bushings used in manifold for heater valve shaft mountings on 1942 models.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**NOTE:**—Self-locking tappet screws (no locknuts).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8771.

**Ignition Lock:**—Yale & Towne. Mitchell No. 8414.

**COIL:** Auto-Lite Model CE-4646. Service coil (less switch & cable) CE-3224 WS. Mounted on engine.

**Ignition Current:**—1/2-1 1/2 amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite No. IGB-1025 (for IGW distributor external mounting). No. IG-2671 (IGC distributor mounted inside distributor).

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4154 (1941-42), Model IGC-4801 (1942). Single breaker, 6 lobe cam, full automatic advance type with separate vacuum spark control and Octane Selector.

**NOTE:**—IGC Distributor has condenser mounted in-

side distributor and eccentric screw breaker point adjustment.

**Breaker Gap:**—Set at .020".

**Cam Angle or Dwell (IGW)**—35° Closed, 25° Open.

**Cam Angle or Dwell (IGC)**—38° Closed, 22° Open.

**Breaker Arm Spring Tension:**—17-20 ounces.

**Rotation:**—Counter-clockwise viewed from the top.

Automatic Advance			
Distributor	R.P.M.	Engine	R.P.M.
Degrees		Degrees	
Start	400	0	800
2	680	4	1360
4	975	8	1950
6	1265	12	2530
7	1400	14	2800

**Vacuum Spark Control A-L No. VC-4011:**—On hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide

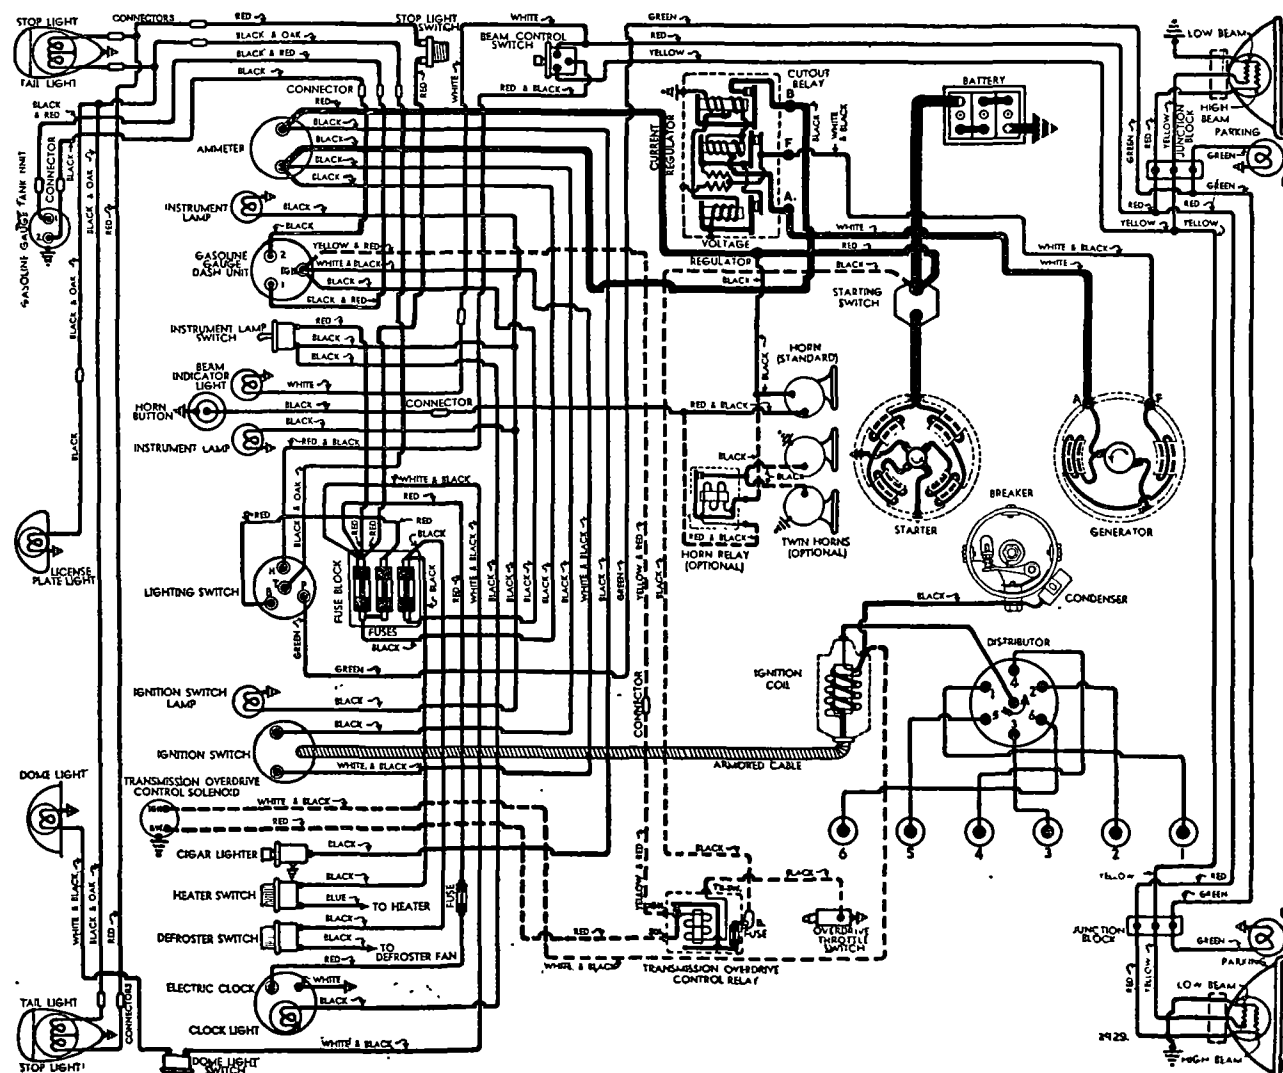

open throttle (spark retarded by return spring in unit).

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4"
2°	4°	5 1/2"
5°	10°	7 3/4"
7°	14°	11 1/4"
9°	18°	14 3/4"

**Octane Selector:**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note:**—When installing distributor, crank engine to firing position for #1 cylinder (flywheel mark 'IGN' in line with pointer on left rear engine plate), sight down distributor shaft

1941 MODELS

hole (distributor out) and see that distributor drive tongue in oil pump drive gear is parallel to and narrow half of offset toward camshaft, turn rotor to #1 segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening the clamp, to prevent binding), check timing.

### IGNITION TIMING

**IGNITION TIMING:**—Initial setting for regular fuel (see Octane Selector Setting following for correction dependent on fuel regularly used).

**Flywheel Degrees**

**Piston Position**

2° BTDC ..... 0016° BTDC

**1942 Timing Mark Note:**—Timing marks carried on the flywheel (same as for 1941). Vibration dampener at front of engine is new on 1942 models.

**Timing (with Neon Timing Light):**—Neon Light No. 890 recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct Neon light on flywheel inspection hole on left rear motor

support. Loosen hold-down plate screw, center scale on pointer, tighten screw. Loosen clamp arm, rotate distributor until 'IGN' mark on flywheel (approx. 13/64" before top dead center mark 'U.D.C.1-6') lines up with pointer on engine rear plate. Insert .020" feeler between modifier control arm and clamp arm before tightening clamp (to insure clearance for modifier control arm). Check Octane Selector Setting (following).

**Timing (without Neon Timing Light):**—Turn engine over to firing position for #1 piston with 'IGN' mark on flywheel in line with pointer on inspection hole on left rear motor support and distributor rotor at #1 segment in distributor cap. Adjust distributor as directed above.

**Octane Selector Setting:**—After setting ignition timing (above), loosen selector hold-down screw, advance selector (move toward 'A' end of scale) until motor 'plings' when it is hot and pulling hard. Then retard (move selector pointer toward 'R' end of

scale) until 'ping' just disappears.

### CARBURETOR

**CARBURETION:**—Carburetor—Carter Type WA-1 Model 496-S (#356 cast on face of flange). 1 1/4" single barrel downdraft type with Carter Climatic Control. For complete data, refer to Carburetor Index.

**Idle Adjustment:**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative, set throttle stopscrew for 8 MPH idle speed. Adjust idle adjusting screw until engine fires smoothly (1/2-1 1/2 turns open—turn screw in for leaner mixture). Readjust idle speed.

**Accelerating Pump:**—Non-adjustable type.

**Float Level:**—5/16" from top of projection on bowl cover to top of soldered seam on float at free end with needle valve seated (invert cover assembly to check level).

**Metering Rods & Jets:**—See Carter Jet Table in Carburetor Section for complete data.

**Fast Idle:**—Integral type (built-in carburetor).

For complete data, refer to Carburetion Equip. Index. Setting—Adjust by bending connector rod offset for 3/8" choke valve opening with throttle stopscrew against (not on) first step of fast idle cam.

**Automatic Choke:**—Carter Climatic Control.

For complete data, refer to Carburetion Equip. Index. Setting—1 Notch Lean (supersedes Centered setting originally specified for this model).

### CARB. EQUIPMENT

**Air Cleaner:**—AC #1529210 oil-wetted type standard. #1529211 heavy duty oil-bath type optional. Use Replacement Filter Element Assembly: Type #2 (for 1529210), Type #8 (for 1529211). NOTE—Oil filler cap equipped with filter element which should be serviced at the same intervals as air cleaner.

#### 1941 M DELS

**Fuel Pump:**—AC Type AE, diaphragm type. Replacement Part No. 527.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge:**—Auto-Lite electric type. No. NG-9594D (Dash Unit), No. NG-9659T (Tank Unit).

For complete data, refer to Carburetion Equip. Index.

#### 1942 MODELS

**Fuel Pump:**—AC 'W' #1523957—Exch. No. 527. Diaphragm type fuel pump.

For complete data, refer to Carburetion Equip. Index.

**Pressure:**—3 1/2 lbs. maximum.

**Gasoline Gauge:**—Stewart-Warner electric type. Studebaker Nos. 515610 (dash unit), 515684 (tank). For complete data, refer to Carburetion Equip. Index.

### BATTERY

**Willard Type WHT-1-13R.** 6 volt, 13 plate, 90 ampere hour capacity (20 hour rate).

**Starting Capacity:**—114 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 3.0 minutes. Five second voltage 4.1 volts.

**Grounded Terminal:**—Positive (+) terminal.

**Engine Ground:**—Strap at right front motor support.

**Dimensions:**—Length 9". Width 7". Height 9 3/8".

**Location:**—On left side under engine hood.

### STARTER

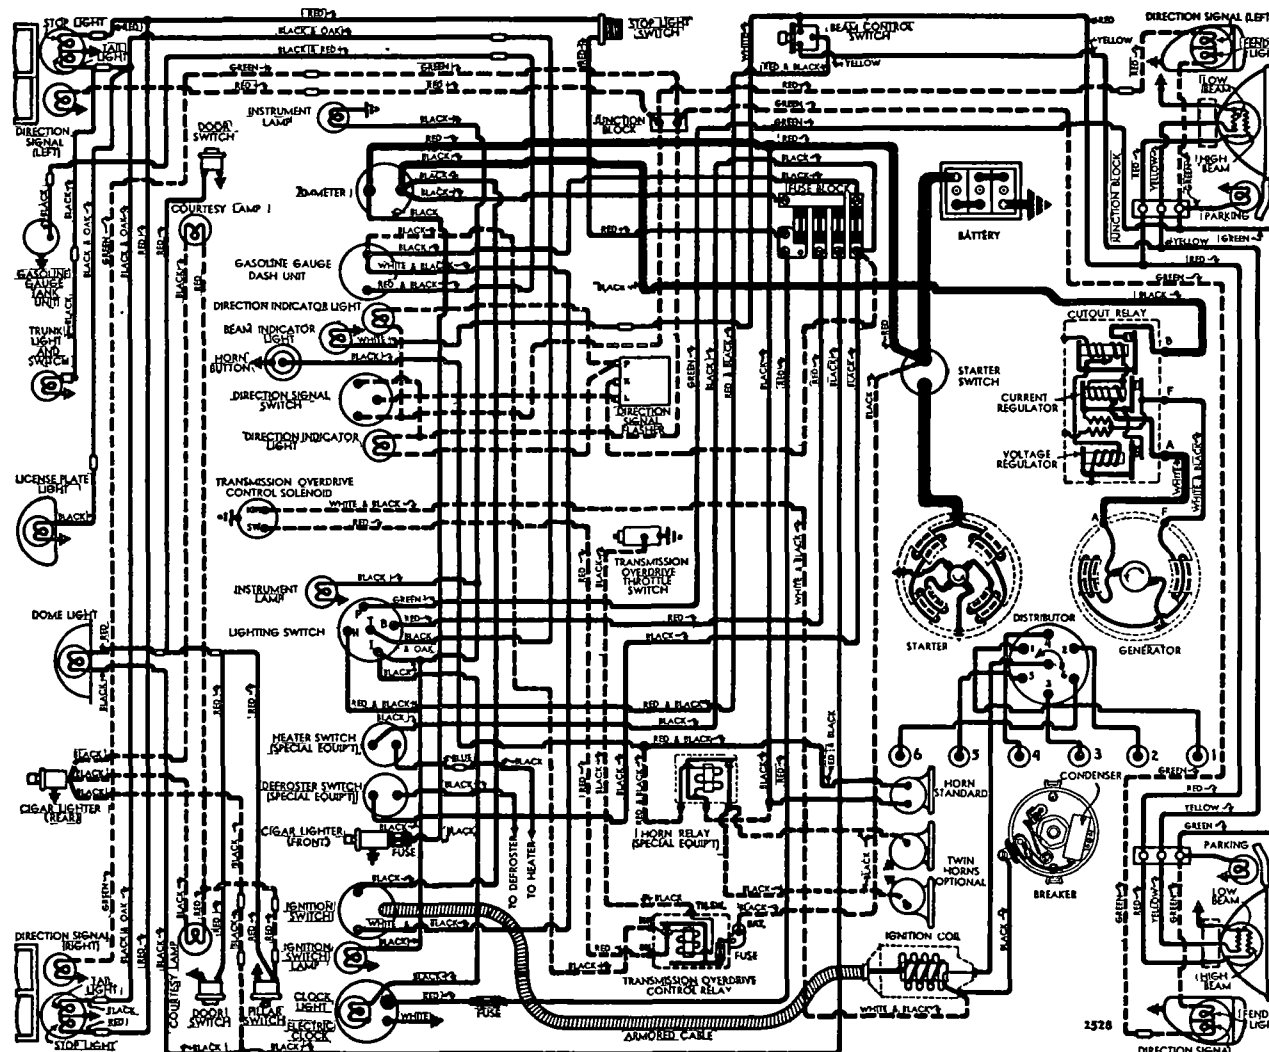

**Auto-Lite Model MZ-4090.** Armature No. MZ-2130. Drive—Barrel type Bendix. Special inboard type A-2033 (marked 'D' on pinion barrel).

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Cranking Engine:**—160 amperes, 5.2 volts, 130 RPM.

C N T I N U E D N N E X T P A G E

7.65	"	220	4.0	400
7.8	"	Lock	3.0	420
11.8	"	Lock	4.0	560

**Removal:**—Starter flange mounted on right rear engine plate. To remove take out mounting bolts and lift starter off.

**Starting Switch:**—A-L Model SW-4011. Mounted on left side of car below clutch pedal. Operated by depressing clutch pedal fully.

## GENERATOR

**Auto-Lite Model GDZ-4804-A.** Armature No. GDZ-2006F (Std.), GEB-4803A, Armature GEB-2006F (Police). Two brush (current-voltage control). Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. Maximum Charging Rate—35 amperes, 8.0 volts, 1600 Gen. RPM. or approx. 22.8 MPH. & above with load or discharged battery (Current Regulator Setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

## Performance Data—GDZ-4804A

28	7.8	1075	28	7.8	1260
32	8.0	1150	32	8.0	1400

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (GDZ), 64-68 ozs. (GEB) with new brushes.

**Field Current:**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current:**—4.16-4.60 amperes (GDZ), 4.0-4.5 amperes (GEB) at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, move generator out until  $\frac{3}{8}$ - $\frac{1}{2}$ " belt deflection midway between generator and fan pulleys is obtained.

## REGULATOR

**Auto-Lite Model VRP-4004-F** (for GDZ Generator), VRP-4004C (GEB Gen.). Current-Voltage Type. Varying type voltage and current regulators.

For complete data, refer to Electrical Equipment Index.

## Cutout Relay

**Cuts In:**—6.4-6.6 volts.

**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps, disch.).

**Contact Gap:**—.015" minimum.

**Air Gap:**—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

**Setting:**—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures. To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust** (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap:**—.012" min. (armature against stop pin). **Air Gap:**—.048-.052" with contacts just opening.

## Current Regulator

**Setting:**—(VRP-4004F) 34-36 amperes (marked '35'). (VRP-4004C) 31-33 amperes (marked '32').

**To Check** (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective. **To Adjust** (with cover removed)—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap:**—Same as Voltage Regulator.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran-Brown 'Sealed Beam' type. For data, refer to Elec. Equip. Index.

**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center hgt.).

**Beam Indicator:**—At top center of speedometer dial. Lighted whenever Country (upper) beam in use.

## Switches—1941

**Lighting:**—H. A. Douglas. No. 5724.

**Beam Selector:**—Delco-Remy No. 1997008.

**Instrument:**—Cole-Hersee.

## Switches—1942

**Lighting:**—Douglas No. 5966. Studebaker No. 515324.

**Beam Selector:**—Delco-Remy No. 1997008.

**Stop Light:**—Studebaker No. 666858 (hydraulic type).

**Dome Lamp Pillar:**—Studebaker No. 281130X1.

**Door Switches:**—Studebaker No. 282674.

**Direction Signal:**—Studebaker No. 515652.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking	1½	55
Front Dir. Sig. & Fender	21-3	1158
Instrument, Ign. Lock	1½	55
Direction Sig. Indicator	1½	55
Beam Indicator	1	51

Rear Direction Signal	21	1129
Rear License	3	63
Dome	15	87
Courtesy	3	64

## MISC. ELECTRICAL

**FUSES:**—Fuse block on left side back of instrument panel with three or four 20 ampere fuses. Refer to the wiring diagrams for electrical connections.

**Transmission Overdrive Control:**—14 amp. On relay.

**Clock:**—2 ampere. In clock lead connector.

**HORNS:**—Single—Delco-Remy 1999807 standard.

**Dual:**—Delco-Remy; Low Note 1999511 ('41), 1999541 ('42); High Note 1999512 ('41), 1999542 ('42). Air tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999807	7-9 amperes	.027-.033"
1999511, 41 (low)	19-21 amperes	.044-.049"
1999512, 42 (high)	18-20 amperes	.034-.039"

**Horn Relay:**—R-B-M Model 6003.

**Contacts Close:**—3-4 volts (with relay upright).

## ENGINE

**ENGINE SPECIFICATIONS:**—6 cylinder, 'L' head type.

**Bore:**—3". **Stroke:**—4".

**Displacement:**—169.6 cubic ins. **Rated HP:**—21.6.

**Developed Horsepower:**—80 at 4000 RPM. (Std. hd.).

**Compression Ratio:**—6.5-1 Std., 7.0-1 Optl. CI hds.

**Compression Pressure:**—105 lbs. @ 150 RPM (std. hd.).

See Studebaker Shop Notes for Cyl. Head installation.

**Vacuum Reading:**—17-18" steady idling at 8 MPH.

**PISTONS (1941):** Aluminum alloy, T-slot, cam ground, tin-plated type.

**Length:**—2 29/32". **Weight:**—8.96 ozs. (stripped).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .014-.019". Skirt .0015" selective.

**Original Bore & Piston Sizes, Replacement Pistons:**—See Studebaker Shop Notes for sizes and markings.

**Fitting New Pistons:** Insert .002" x 1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler must be between 16-22 lbs.

**NOTE:**—Car manufacturer recommends cylinders out-of-round or taper over .002" be reconditioned.

**Installing Pistons:** T-slot away from camshaft.

**PISTONS (1942):** New ferric alloy, cam ground type with 'Parco-Lubrized' finish. **Length:**—2 29/32".

**Weight:**—1.225-1.287 lbs. (with pin bushings).

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .006-.009". Skirt (see Fitting Pistons).

**Original Bore & Piston Sizes, Replacement Pistons:**—See Studebaker Shop Notes for sizes and markings.

**Fitting New Pistons:**—Fit pistons to 15-20 lbs. pull on .002" feeler, 1" wide, inserted between piston and wall on camshaft side at right angles to pin hole.

**NOTE:**—Cylinder out-of-round or taper .002" max.

**Installing Pistons:**—Install early type pistons with pattern no. (on inner surface of piston near pin boss) toward front of engine. Install later type pistons with raised boss (inside piston skirt on level of pin holes) toward valves. **NOTE:**—Dip piston and rings in clean oil before installing in engine.

**PISTON RINGS:** 1941. 3 coated rings above pin. #1 Comp. '200' (step up), #2 Comp. '70' (step down), #3 Oil '85' (slotted). Heat dam above #1 groove.

**1942 Type:**—2 coated, uniform pressure type compression rings, 1 uncoated, cast-iron oil ring, per piston, all above pin. **NOTE:**—Install top compression ring with step up, #2 Comp. with step down.

Ring	Width	End Gap	Side Clearance
Comp. (Top)	3/32"	.007-.017"	.0015-.002"
Comp. (#2)	1/8"	.007-.017"	.0015-.002"
Oil Control	5/32"	.007-.017"	.0015-.002"

**Replacement Rings:**—Std. & .010", .020", .030" oversize.

**PISTON PIN:**—Diameter—.7491-.7495". **Length:**—2 3/8".

Pin locked in rod by tapered pin and locknut.

See Studebaker Shop Notes for Piston Pin servicing.

**Pin Fit in Aluminum Pistons:**—.0001-.0003" clearance or light finger push fit at room temperature (70°F).

**Pin Fit in Cast-Iron Pistons:**—.0004" clearance, pin size selected as follows: Select pin which gives wring fit at 70°F., proper pin size will be one which is .0004" less in diameter than pin giving wring fit).

## ENGINE

## C N TINUED FR M PRECEDING PA E

Replacement Pins:—Std. & .0025", .005" oversize. Use Hone No. PH-1 to obtain proper piston fit.  
NOTE—Replacement pistons fitted with pins.

CONNECTING ROD:—Length 6 $\frac{3}{8}$ ". Weight 20.48 ozs. Crankpin Journal Diameter—1.81175-1.81275". Lower Bearing—Spun babbitt (cap bearings chamfered on upper edge). New rods furnished on exchange basis standard and .010", .020" undersize. Clearance—.0005-.002". Sideplay—.005-.009".

NOTE—Use reamer HM-591-F to secure correct bearing clearance. Crankpin out-of-round, tapered or scored .0015" max. (Crankpin Turning Tool #1-C).

Bearing Adjustment:—None (no shims). Replace rods. See Studebaker Shop Notes for 'Palnut' installation.

Installing Rods:—Narrow portion of bearing to front (#1, 3, 5), to rear (#2, 4, 6). Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and oil hole in lower end of rod toward camshaft side of engine.

CRANKSHAFT:—4 bearing, 4 integral counterweights. Vibration damper used on 1942 models.

See Studebaker Shop Notes for Vibration Damper data. Journal Diameter—2.437-2.4375".

Bearings—Removable steel-backed, babbitt-lined. Clearance—.0005-.0025".

Adjustment:—None (no shims.) Replace bearings (std. size, .010", .020", .030" undersize).

NOTE—Front oil pan seal block may be removed for access to front main bearing cap by removing 4 lower timing gear cover screws (on front face).

End Thrust:—Thrust plate assembled between front bearing and crankshaft gear. Controlled by shims (furnished .003", .005", .007" thick) between plate and journal face. Endplay—.003-.006".

NOTE—Install new seals (specially treated wood) whenever rear main bearing cap replaced.

CAMSHAFT:—Four bearing with helical gear drive. See Studebaker Shop Notes for Camshaft Removal data.

Journal Diameters—#1, 1.7475-1.7480"; #2, 1.71625-1.71700"; #3, 1.68575-1.68650"; #4, 1.62325-1.62400".

Bearings—Split steel-backed, babbitted bushings. NOTE—Align bushing with oil hole in block.

Clearance—.00075-.00225" (#1), .001-.00275" (others).

End Thrust:—Taken by thrust plate assembled on front face of engine behind camshaft gear. Spacer assembled back of gear hub. Endplay—.004-.008".

Timing Gears:—Crankshaft (cast-iron), Camshaft (Celeron with steel hub). Backlash .001-.003".

Refer to Studebaker Shop Notes for Timing Gear Removal and Replacement Camshaft Gear size selection.

Camshaft Setting:—Mesh marked camshaft gear tooth between 2 marked teeth on crankshaft gear.

VALVES:— Head Diameter Stem Diameter Length  
Intake .....1 11/32".....310-311".....4 11/32"  
Exhaust .....1 9/32".....310-311".....4 11/32"

Seat Angle Lift Stem Clearance  
All Valves .....45°.....5/16"......001-.0035"

Valve Guides:—Pressed in block from above 1 3/16" below top of block. Finish ream to .312-.3135".

Valve Springs:—Install with closed coil up. Replace if springs over 10% weak (test with Tool U-15).

Free length 2 3/32". Spring Pressure Length  
Valve Closed .....52-56 lbs.....1 21/32"  
Valve Open .....90-94 lbs.....1 11/32"

Valve Lifters:—Mushroom type (remove from below). Diameter—.62375-.62425". Clearance .0005-.00175".

Lifters furnished .0005", .001" oversize. Refer to Studebaker Shop Notes for Valve Lifter Tension Spring

## VALVE TIMING

Tappet Clearance:—.016" (cold) all valves. Self-locking tappet screw tension should be 25 in. lbs. Remove hood side panel for access to valves.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 15° BTDC. Close 49° ALDC.

Exhaust Valves—Open 54° BLDC. Close 10° ATDC.

Valve Timing Check—With .020" tappet clearance #1 intake valve should open with #1 piston 15° or .0893" BTDC with flywheel mark 'IN.OP.1-6/' aligned with pointer on left rear engine plate. Reset tappet clearance at .016" (cold).

## LUBRICATION

LUBRICATION:—Pressure (pump on right of engine). Refer to Studebaker Shop Notes for Oil Pan and Oil Pump installation instructions.

Normal Oil Pressure:—40 lbs. at 25-30 MPH.

Oil Pressure Relief Valve:—On lower right front corner of engine block. Opens at 30-40 lbs. Not adj.

Crankcase Capacity:—5 quarts.

## COOLING

COOLING SYSTEM:—Capacity—10 quarts.

Water Pump:—Packless, sealed ball-bearing type.

See Water Pump Section for complete data.

Thermostat:—Bishop & Babcock. In cyl. head outlet.

Setting—Starts to open 151° F. to 155° F.

Temperature Gauge (1941): Auto-Lite (Motometer vapor tension type. A-L Part No. H-9593).

See Miscellaneous Section for complete data.

Temperature Gauge (1942): Stewart-Warner type. Studebaker Part No. 515609.

## CLUTCH

CLUTCH:—Borg & Beck Model 8A7 with 'Borglite' driven member. Clutch assembly No. 925 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Molded-metallic (spiral-grooved), 2 used. Inside Diam. 5 $\frac{5}{8}$ ". Outside Diam. 8". Thickness  $\frac{1}{8}$ ".

Adjustment:—Free travel 1" (min.). Turn adjusting sleeve on pedal connector link.

Hill-Holder (NoRol) Note—Check whenever clutch pedal adjusted. Set so that Hill-Holder releases just as clutch engages (change rod length).

Removal:—Remove transmission (see below), take off clutch housing, take out 6 mounting screws in clutch cover flange, lift off cover assembly.

Refer to Studebaker Shop Notes for Clutch Release Shaft Lubrication instructions.

## TRANSMISSION

TRANSMISSION:—Warner Model AS1-T84G (Std.), AS2-T84G, Type R7C (optl. overdrive with electrical 'kick-down' control). All helical gear type, synchromesh (second & high), sliding gear (low & reverse).

See Transmission Section for complete data.

Transmission Control:—Mechanical steering col. shift. See Transmission Section for complete data.

Removal:—Disconnect the rear universal and withdraw propeller shaft from transmission. Disconnect shift levers and speedometer cable at transmission.

Place jack under engine rear plate and free rear engine support. Remove transmission-to-clutch housing capscrews, pull transmission out.

## OVERDRIVE

OVERDRIVE: Warner R7C (Kick-down) Electric type. Complete assembly (with transmission) Warner Model No. AS2-T84G.

See Transmission Section for complete data.

► 1941 Production Change: To correct free-wheel unit slippage when kicking down (also high speed vibra-

tion and grease leaks), free wheel unit bearing was changed to needle bearing type. See Special Service Note in Transmission article in Transmission Section.

Overdrive Solenoid—Delco-Remy Model 1118013.

Throttle Switch—Cole-Hersee No. 1687-S. Adjust so that shoe on accelerator linkage just contacts switch plunger with throttle valve wide open.

Control Relay—Auto-Lite No. HR-4201S (for 1941), No. HRB-4301 (1942). Fuse mounted in holder on relay. Fuse capacity, 14 ampere ('41), 20 ampere ('42).

Removal: Same as for regular transmission after disconnecting control cable and solenoid wires.

## UNIVERSALS

UNIVERSAL JOINTS:—Spicer Model 1268-102. Needle bearing type. Two used.

See Universals Section for complete data.

NOTE—1 piece driveshaft used. Slip joint formed at rear of transmission ahead of front universal.

## REAR AXLE

REAR AXLE:—Spicer Model 23. Semi-floating, Hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratio—4.10-1 Std. 4.56-1 Optl. (Std. on Overdrive). NOTE—Ratio stamped on each gear and pinion.

Backlash—.005-.007". Shim adjustment.

Removal:—Hoist rear of car, disconnect propeller shaft at rear universal, hydraulic brake lines, brake cables, and shock absorbers. Remove spring U-bolts, disconnect rear spring shackles and withdraw axle.

NOTE—Use Puller HM-931 to remove axle shaft, Handle J-270-1 and disc J-270-13 to install inner shaft oil seal.

Wheel Bearing Adjustment:—Shims between backing plate and axle housing. With wheel and hub removed (use Hub Puller J-446) check endplay with dial indicator. To adjust, remove backing plate, add or remove shims (.003", .005", .010", .030" thick).

Endplay—.001-.005".

## SHOCK ABSORBERS

SHOCK ABSORBERS: Houdaille. Dbl. acting, hydraulic 1941.....BBFS-2 FRONT.....BBDS REAR

1942.....BBFS-5 FRONT.....BBDS-2 REAR

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

Front Suspension:—Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load.

See Front Suspension Section for complete data.

Kingpin Inclination—5 $\frac{1}{2}$ ".

Caster—1° to 2°.

Camber— $\frac{1}{4}$ " to  $\frac{3}{4}$ ". Shim adjustment.

Toe In—1/16- $\frac{1}{8}$ ". Adjust right reach rod only for toe-in. Left rod should be adjusted first for left wheel straight-ahead position (steering wheel centered).

Steering Geometry (toe-out on turns)—Inner wheel turned 22 $\frac{1}{2}$ -23°. Outer wheel turned 20°.

## STEERING GEAR

Steering Gear: Ross T-12 Cam-&-Twin Lever type. See Steering Gear Section for complete data.

## BRAKES

BRAKES:—Service. Lockheed hydraulic, single anchor type. Hand lever applies rear service brakes.

See Brake Section for complete data.

Drum—Budd composite. Diameter 9".

Lining—Moulded. Length per shoe 10 3/16" (front), 7 13/16" (rear). Width 1 $\frac{3}{4}$ ". Thickness 3/16".

Clearance—.010" toe (top), .005" heel, for each shoe.

Hand Brake:—See Service Brakes (above).

Hill-Holder: Optional. See Brake Section for data.

**HOOD LOCK:** See Studebaker Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on left front door hinge post. First numbers as follows:

Year	Model	South Bend	Los Angeles
1941	11A	4,178,801	4,811,901
1942	12A	4,216,501	4,816,601

**ENGINE NUMBER:** On upper left side of cylinder block at center. First Nos.: H-122,201 ('41), H-164,301 ('42).

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 Std., 7.0-1 Optl. hds. Optl. 7.0-1 Cast Iron Hd. recommended for altitudes greater than 5000 ft. only.

Pressure—105 lbs. at 150 RPM (for Std. head).

**VACUUM READING:**—Steady 18-20" idling at 7-8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS (1941):** Champion No. 8. 18 mm. Metric. Gaps—.025".

**NOTE:**—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**SPARK PLUGS (1942):** Champion J-9. 14 mm. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Limits .018-.022".

Cam Angle—Closed 35° (IGW distr.), 38° (IGC distr.).

Automatic Advance—10° max. at 1400 RPM (distr.).

Vacuum Advance—6° distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC. Vibration damper 'IGN' mark aligned with pointer on timing gear cover at front of engine. Use .020" feeler between advance arm and hold-down plate when tightening distributor clamp bolt (avoids binding vacuum control).

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw midway between 'miss' and 'roll' points (½-1¼ turns open for Carter). Idle speed 8 MPH or 500-525 RPM.

Float Level (Carter)—¼" from top of machined projection on float bowl cover to top of soldered seam at free end of float (invert to check).

Float Level (Stromberg)—Fuel level ⅝" below top edge of float bowl.

Accelerating Pump—Normal setting, center hole.

Fuel Pump Pressure: 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Setting—To test coil tension, free outer end of coil from bracket on manifold. With valve closed, hooked end of coil should be approx. 90° from bracket with coil at 70°F. Replace coil if angle incorrect. If valve sticks, shaft should be lubricated with kerosene and baking soda solution (for shafts which are badly stuck, remove shaft and turn shaft down to give .005" clearance—shaft bore in manifold should not be disturbed). See that tension spring (from shaft to clip on manifold) is in place. **NOTE:**—Stainless steel bushings used in manifold for heater valve shaft mounting on 1942 models.

**VALVES:** See Valve Timing.

Tappet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8775.

Ignition Lock—Yale & Towne, Mitchell No. 8414.

**COIL:** Auto-Lite Model IG-4667. Service coil (less switch & cable) IG-3224VS. Mounted on engine.

Ignition Current—½-1½ amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite No. IGB-1025 (for IGW distributor, external mounting). No. IG-2671 (IGC distributor, mounted inside distributor).

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4101 (1941-42), Model IGC-4802 (1942). Single breaker, 6 lobe cam, full automatic advance type with separate vacuum spark control and Octane Selector.

**NOTE:**—IGC Distributor has condenser mounted inside distributor and eccentric screw breaker point adjustment.

Breaker Gap—Set at .020".

Cam Angle or Dwell (IGW)—35° Closed, 25° Open.

Cam Angle or Dwell (IGC)—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from the top.

#### Automatic Advance

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	400	0	800
2	600	4	1200
5	900	10	1800
8	1200	16	2400
10	1400	20	2800

**Vacuum Spark Control A-L No. VC-4004:**—On hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

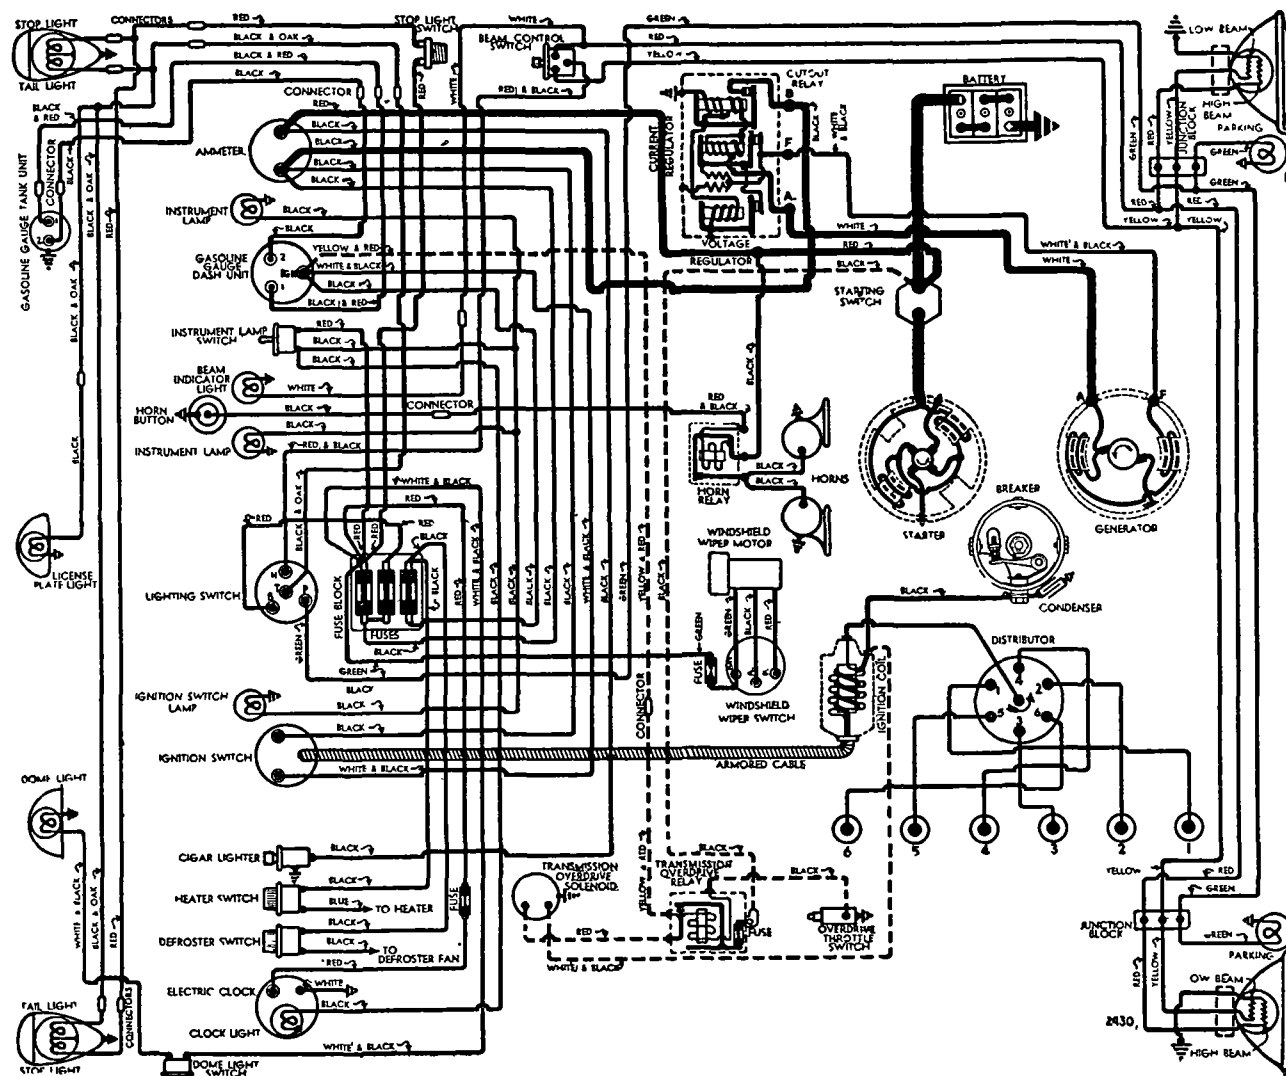

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3"
2°	4°	5"
3°	6°	6"
5°	10°	10"
6°	12°	12"

**Octane Selector:**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note:**—When installing distributor,

crank engine to firing position for #1 cylinder ('IGN' on vibration dampener in line with pointer on timing gear cover), sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is 30° from the horizontal and offset toward the top, turn rotor to #1 segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening the clamp, to prevent binding), check timing.

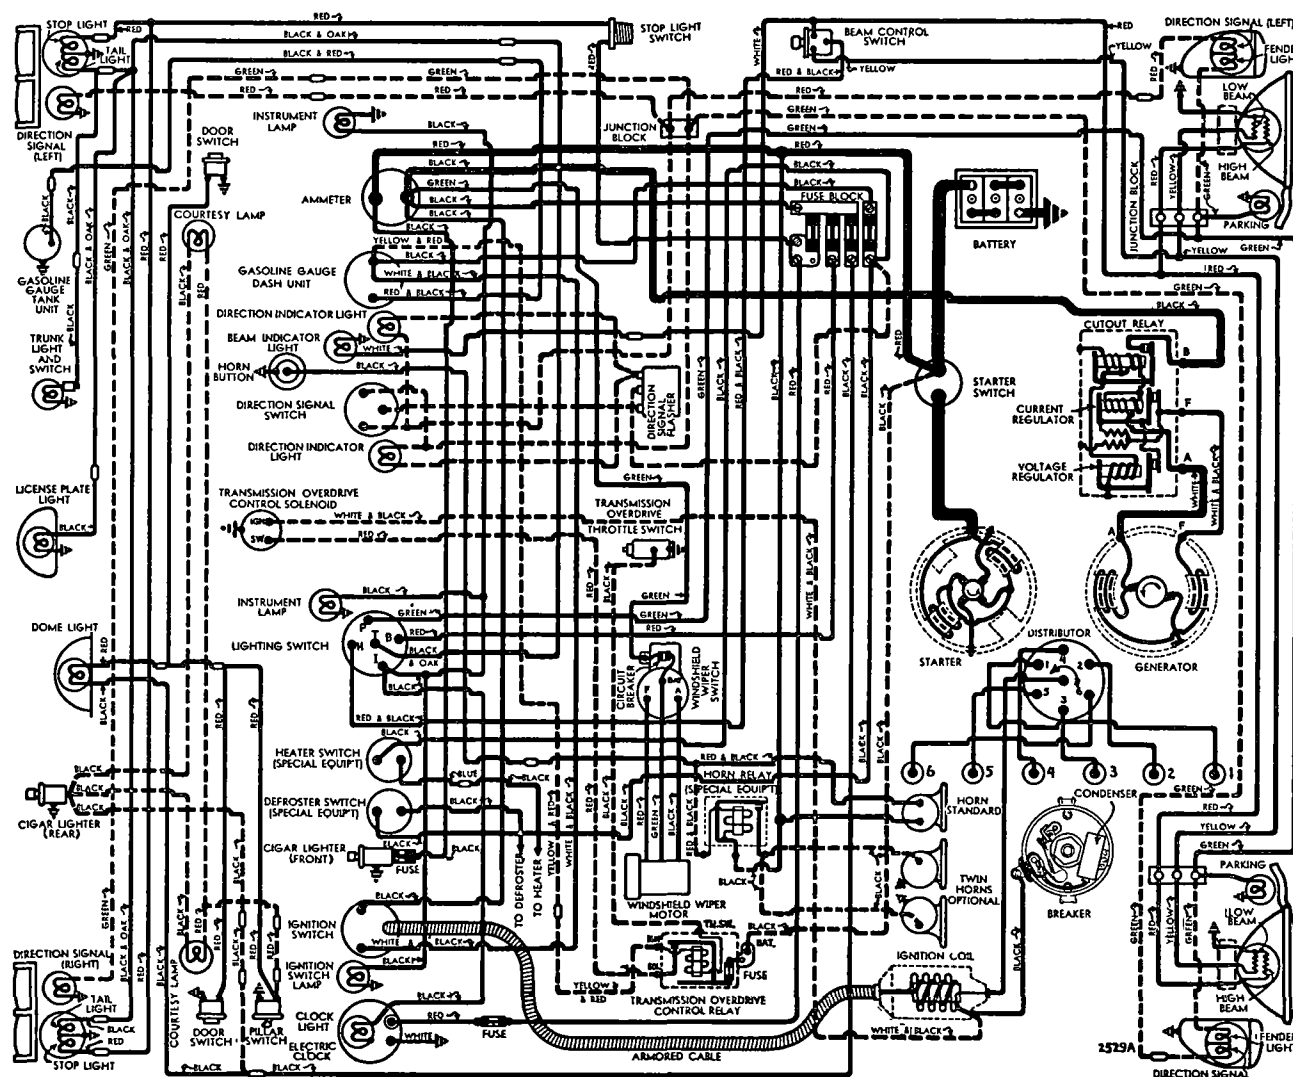

### IGNITION TIMING

**IGNITION TIMING:**—Initial setting for regular fuel (see Octane Selector Setting following for correction dependent on fuel regularly used).

**Flywheel Degrees Piston Position**  
All Engines.....2° BTDC......0016" BTDC  
**Timing (with Neon Timing Light)**—Neon Light No. 890 recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct light on

vibration dampener (at pointer on timing gear cover). Loosen hold-down plate screw, center scale on pointer, tighten screw. Loosen clamp arm, rotate distributor until 'IGN' mark on vibration dampener lines up with pointer on timing gear cover. Insert .020" feeler between modifier control arm and clamp arm before tightening clamp (to insure clearance for modifier control arm). Check Octane Selector Timing (without Neon Timing Light)—Turn engine over to firing position for #1 piston with 'IGN' mark on vibration dampener in line with pointer on timing gear cover and distributor rotor opposite #1 segment in distributor cap. Adjust distributor as directed above.

**Octane Selector Setting**—After setting ignition timing (above), loosen selector hold-down screw, advance selector (move toward 'A' end of scale) until motor 'pings' when it is hot and pulling hard. Then retard (move selector with pointer toward 'R' end of scale) until 'ping' just disappears.

1942 M DELS

### CARBURETOR

**Carter (1941) Type WA-1, Model 410-S.** Single barrel, 1¼" downdraft type with Carter Climatic Control. Casting No. 191 on flange.

**Stromberg (1941-42) Model BXOV-26.** Single barrel, 1¼" downdraft type with Stromberg automatic choke. Float bowl cover carries code No. 6-98 ('41), 6-98A ('42).

**For complete data, refer to Carburetor Index.**

**Idle Adjustment**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 8 MPH idle speed. Adjust idle screw until engine fires smoothly (½-1¼ turns open for Carter—turn screw in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting**—3 holes provided in pump arm (Carter), pump lever (Stromberg) for pump rod engagement. Set as follows:

Inner—Min.: Hot weather, hi-test gasoline.

Center—Med.: Std. all-year setting.

Outer—Max.: Cold weather, low-test gasoline.

**Float Level (All Carburetors)**—As follows:

**Carter**—¼" from top of projection on bowl cover to top of soldered seam on float at free end with needle valve seated (invert cover assembly to check).

**Stromberg**—Fuel level ⅝" below top edge of bowl with engine idling (3 lbs. pressure).

**Metering Jets & Rods**—See Carter & Stromberg Jet Tables in Carburetor Section for data.

**Fast Idle (All Carburetors)**—Integral types.

**For complete data, refer to Carburetion Equip. Index.**

**Setting (Carter)**—Adjust by bending connector link offset for ⅝" choke valve opening with throttle stopscrew against (not on) 1st step of fast idle cam.

**Setting (Stromberg)**—To check, hold throttle stopscrew against lowest step of fast idle cam, close choke valve until lip of next step on cam touches screw, check valve opening with 11/32" drill. Adjust by bending connector link.

**Automatic Choke (All Carburetors)**—Climatic Control (Carter), BXOV-26 Type (Stromberg). Built-in

**For complete data, refer to Carburetion Equip. Index.**

**Setting (Carter)**—Set coil housing 1 Notch Rich.

**Setting (Stromberg)**—'R' mark on thermostat cover in line with highest projection on housing. Shift to 'M' if engine loads up or overchokes. Use 'H' setting only if highly volatile fuels used.

### CARB. EQUIPMENT

**Air Cleaner:**—AC #1528630 oil-wetted type standard.

#1529840 heavy duty oil-bath type optional. Use Replacement Filter Element Assembly: Type #3 (for 1528630), #1542497 (for 1529840). NOTE—Service oil filler cap filter element at regular intervals.

**Fuel Pump:** AC Type 'AE' ('41), 'W' #1537378 ('42).

Exchange #540. Diaphragm type fuel pump.

**For complete data, refer to Carburetion Equip. Index.**

**Gasoline Gauge (1941):** Auto-Lite electric, No. NG-9594D (dash unit), No. NG-9659T (tank unit).

**For complete data, refer to Carburetion Equip. Index.**

**Gasoline Gauge (1942):** Stewart-Warner elec. type. Studebaker Nos. 515506 (dash unit), 515684 (tank).

**For complete data, refer to Carburetion Equip. Index.**

### BATTERY

**Willard Type WHT-1-15R.** 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).

**Grounded Terminal**—Positive (+) terminal.

**Engine Ground**—Strap at right front motor support.

**Location**—In engine compartment on left side.

C N T I N U E D N N E X T P A G E

CONTINUED FROM PRECEDING PAGE

**STARTER**

Auto-Lite Model MAW-4020 (LHD), No. MAW-4015 (RHD). Armature No. MAW-2091.

Drive—Outboard Barrel Type Bendix No. A-1729. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—42-53 ozs. (new brushes). Cranking Engine—130 RPM, 175 amperes, 5 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	Lock	4.0	670

Removal:—Starter flange mounted on engine rear plate, on left side. To remove, take out flange mounting screws, remove starter assembly.

Starting Switch (MAW-4020):—Auto-Lite Model SW-4011. On left side of car below clutch pedal. Operated by depressing clutch pedal fully.

(MAW-4015)—R.B.M. Model 5607. Magnetic type. Mounted on starter and controlled by Douglas No. 5848 push-button switch on instrument panel.

**GENERATOR**

Auto-Lite Model GDZ-4805A. Armature No. GDZ-2006F (Std.), GEB-4806D (Spec. Equip.). Two brush shunt types with voltage and current control.

Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. Maximum Charging Rate—35 amperes, 8.0 volts, 1900 Gen. RPM. or approx. 24 MPH. and above with load or discharged battery (Current Reg. Setting).

**Performance Data—GDZ-4805A**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Performance Data—GEB-4806D**

0	4	8	12	16	20	24	28	32
6.4	6.6	6.8	7.0	7.2	7.4	7.6	7.8	8.0
560	630	700	775	845	920	1000	1075	1150
600	675	750	840	930	1030	1140	1260	1400

Rotation—Counter-clockwise at commutator end. Brush Spring Tension—53 ozs. max. (GDZ), 64-68 ozs. (GEB) with new brushes.

Field Current—1.60-1.78 amperes at 6.0 volts. Motoring Current—4.16-4.60 amperes (GDZ), 4.0-4.5 amperes (GEB) at 6.0 volts.

Removal:—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

Belt Adjustment:—Loosen pivot and clamp bolts, move generator out until  $\frac{3}{8}$ - $\frac{1}{2}$ " belt deflection midway between generator and fan pulleys is obtained.

**REGULATOR**

Auto-Lite Model VRP-4004-F (for GDZ Generator), VRP-4004C (GEB Gen.). Current-Voltage Type. Vibrating type voltage and current regulators in a single case.

For complete data, refer to Electrical Equipment Index.

**Cutout Relay**

Cuts In—6.4-6.6 volts.

Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap—.015" minimum.

Air Gap—.031-.034" contacts open (hinge end).

**Voltage Regulator**

Setting—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage steady. Voltage should agree with setting.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. Contact Gap—.012" min. (armature against stop pin). Air Gap—.048-.052" with contacts just opening.

**Current Regulator**

Setting—(VRP-4004F) 34-36 amperes (marked '35'). (VRP-4004C) 31-33 amperes (marked '32').

To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above.

To Adjust (with cover removed)—Same as for Voltage Regulator (above).

Contact Gap & Air Gap—Same as Voltage Regulator.

**LIGHTING**

LIGHTING:—Headlamps—Corcoran-Brown 'Sealed Beam' type. For data, refer to Elec. Equip. Index.

Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center hgt.).

Beam Indicator—At top center of speedometer dial Lighted whenever Country (upper) beam in use.

**Switches—1941**

Lighting—H. A. Douglas, No. 5724.

Beam Selector—Delco-Remy No. 1997008.

Instrument—Cole-Hersee.

**Switches—1942**

Lighting—Douglas No. 5968. Studebaker No. 515324.

Beam Selector—Delco-Remy No. 1997008.

Stop Light—Studebaker No. 666858 (hydraulic type).

Dome Lamp Pillar—Studebaker No. 281130X1.

Door Switches—Studebaker No. 282674.

Direction Signal—Studebaker No. 515652.

**Bulb Specifications**

Position	Candlepower	Mazda No.

**MISC. ELECTRICAL**

FUSES: Lighting. Three or four 20 ampere fuses on fuse block behind instrument panel. Refer to wiring diagrams for electrical connections.

Overdrive Relay—14 amp. ('41), 20 ('42). On relay.

Windshield Wiper—14 amp. (Early '41), 20 (Late '41).

Klixon circuit-breaker (for 1942).

Clock—2 ampere. In clock lead connector.

HORNS & HORN RELAY: All data same as for 1941-42 Studebaker President. Refer to following car article.

**ENGINE**

ENGINE SPECIFICATIONS:—6 cylinder, 'L' head type.

Bore—3 5/16". Stroke—4 3/8".

Displacement—226.2 cubic ins. Rated HP—26.35.

Developed Horsepower—94 at 3600 RPM (Std. hd.).

Compression Ratio—6.5-1 Std., 7.0-1 Optl. CI hds.

Compression Pressure—105 lbs. at 150 RPM (std. hd.).

See Studebaker Shop Notes for Cyl. Head installation.

Vacuum Reading—18-20" steady idling at 8 MPH.

PISTONS (1941): Aluminum alloy, T-slot, cam ground, tin-plated. Length 3 3/4". Weight 14.4 oz. stripped.

Removal—Pistons and rods removed from above.

Clearance—Top .0125-.0175". Skirt .0015".

Original Bore & Piston Sizes, Replacement Pistons:—See Studebaker Shop Notes for sizes and markings.

Fitting New Pistons: Insert .002" x 1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler must be between 14-19 lbs.

NOTE—Cylinder out-of-round or taper .002" max.

Installing Pistons: T-slot away from camshaft.

PISTONS (1942): New ferric alloy, cam ground type with 'Parco-Lubrized' finish. Length—3 3/4".

Weight—1.72-1.755 lbs. (with pin bushings).

Removal—Pistons and rods removed from above.

Clearance—Top .006-.009". Skirt (see Fitting Pistons).

Original Bore & Piston Sizes, Replacement Pistons:—See Studebaker Shop Notes for sizes and markings.

Fitting New Pistons:—Fit pistons to 15-20 lbs. pull on .002" feeler, 1" wide, inserted between piston and wall on camshaft side at right angles to pin hole.

NOTE—Cylinder out-of-round or taper .002" max.

Installing Pistons:—Install early type pistons with pattern no. (on inner surface of piston near pin boss) toward front of engine. Install later type pistons with raised boss inside skirt toward camshaft.

PISTON RINGS:—3 coated rings, all above pin. #1 and #2 Compression (bevel face up), #3 Oil ring (revised slot on 1942 extends to gap ends).

Ring Width End Gap Side Clearance

Compression 3/32" .009-.014" .0015-.002"

Oil Control 3/16" .009-.014" .0015-.002"

Replacement Rings:—Std. & .010", .020", .030" oversize.

PISTON PIN:—Diameter—.8741-.8745". Length—2 7/8".

Pin locked in connecting rod by lock screw.

Pin Fit in Aluminum Pistons—.0001-.0003" clearance

or light finger push fit at room temperature (70°F).

Pin Fit in Cast-Iron Pistons—.0004" clearance, pin

size selected as follows: Select pin which gives wring

fit at 70°F., proper pin size will be one which is

.0004" less in diameter than pin giving wring fit).

Replacement Pins:—Std. & .0025", .005" oversize. Use

Hone No. PH-1 to obtain proper piston fit.

CONNECTING ROD:—Length—8 1/8". Weight—33.3 ozs.

Crankpin Journal Diameter—2.18675-2.18775".

Lower Bearing—Spun babbit (cap bearings cham-

fered on upper edge). New rods furnished on ex-

change basis standard and .010", .020" undersize.

Clearance—.0005-.002". Sideplay—.005-.009".

**ENGINE****CONTINUED FR M PRECEDING PAGE**

**NOTE**—Use reamer HM-591-D to secure correct bearing clearance. Crankpin out-of-round, tapered or scored .0015" max. (Crankpin Turning Tool #1-C).

**Bearing Adjustment**—None (no shims). Replace rods. See *Studebaker Shop Notes for 'Palnut' installation*.

**Installing Rods**—Narrow portion of bearing to front (#1, 3, 5), to rear (#2, 4, 6). Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and oil hole in lower end of rod toward camshaft side of engine.

**CRANKSHAFT**—4 bearing, 5 integral counterweights. Vibration damper mounted on forward end of shaft. See *Studebaker Shop Notes for Vibration Damper data*. Journal Diameter—2.4995-2.5000".

**Bearings**—Removable steel-backed, babbitt-lined. Clearance—.0005-.0025".

**Adjustment**—None (no shims.) Replace bearings (std. size, .010", .020", .030" undersize).

**End Thrust**—Thrust plate assembled between front bearing and crankshaft gear. Controlled by shims (furnished .003", .005", .007" thick) between plate and journal face. Endplay—.003-.006".

**CAMSHAFT**—Four bearing with helical gear drive. See *Studebaker Shop Notes for Camshaft Removal data*. Journal Diameters—#1, 1.9975-1.998"; #2, 1.98625-1.987"; #3, 1.93575-1.9365"; #4, 1.12325-1.124".

**Bearings**—Split steel-backed, babbitted bushings. **NOTE**—Align bushing with oil hole in block.

**Clearance**—.00075-.00225" (#1), .001-.00275" (others).

**End Thrust**—Taken by thrust plate assembled on front face of engine behind camshaft gear. Spacer assembled back of gear hub. Endplay—.004-.008".

**Timing Gears**—Crankshaft (cast-iron), Camshaft (Celeron with steel hub). Backlash .001-.003".

Refer to *Studebaker Shop Notes for Timing Gear Removal and Replacement Camshaft Gear size selection*.

**Camshaft Setting**—Mesh marked camshaft gear tooth between 2 marked teeth on crankshaft gear.

**VALVES**—

	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.0015-.0035"

**Valve Guides**—Pressed in block from above (1 5/32" below upper edge of valve seat) with stepped end down. Ream to inside diameter of .3425-.3445".

**Valve Springs**—Install with closed-coil up and dampener on top of spring. Replace springs if 10% weak (test with Tool U-15). Free Length—2 1/2".

	Spring Pressure	Spring Length
Valve Closed	54-60 lbs.	2 3/32"
Valve Open	125-135 lbs.	1 3/4"

**Valve Lifters**—Barrel type (remove from above with valve, valve spring and adjusting screw removed). Diameter .9985-.999". Clearance .0005-.00175". Lifters furnished .0005", .001" oversize. Refer to *Studebaker Shop Notes for Valve Lifter Tension Spring data*.

**VALVE TIMING**

**Tappet Clearance**—.016" (cold) all valves. Remove hood side panel for access to valves.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves**—Open 54° BLDC. Close 10° ATDC.

**Valv Timing Check**—With .020" tappet clearance #1 intake valve should open with #1 piston 15° or .0942" BTDC with vibration damper mark 'IN.OP1-6/'

aligned with pointer n timing gear cover. Reset tappet clearance .016" (cold).

**LUBRICATION**

**LUBRICATION**—Pressure (pump on right of engine).

See *Studebaker Shop Notes for Oil Pump installation*.

**Oil Pan Note**—Place #2 piston at approx. top dead center to facilitate Oil Pan Removal & Installation.

**Normal Oil Pressure**—40 lbs. at 25-30 MPH.

**Oil Pressure Relief Valve**—On lower right front corner of engine. Opens at 30-40 lbs. Not adjustable.

**Crankcase Capacity**—6 quarts.

**COOLING**

**COOLING SYSTEM**—Capacity—13 quarts.

**Water Pump**—Centrifugal with adjustable packing, lubricant fitting and grease cup for bushings.

See *Water Pump Section for complete data*.

**Thermostat**—Bishop & Babcock or Fulton. In cylinder head outlet. Install with bellows down.

**Setting**—Starts to open 151° F. to 155° F.

**Temperature Gauge (1941)**—Auto-Lite (Motometer) vapor tension type. A-L Part No. H-9593.

See *Miscellaneous Section for complete data*.

**Temperature Gauge (1942)**—Stewart-Warner type.

Studebaker Part No. 515505.

**CLUTCH**

**CLUTCH**—Borg & Beck Model 9A7 (all cars). Clutch assembly No. 943 or 963. Single plate, dry disc type.

See *Clutch Section for complete data*.

**Facings**—Molded-metallic (spiral-grooved), 2 used.

**Inside Diam.** 6". **Outside Diam.** 9 1/4". **Thickness** 1/8".

**Pedal Adjustment**—Free travel 1" min. Turn adjusting sleeve on pedal connector link. On cars with Hill-holder (NoRol), check when pedal adjusted and see that brakes release just as clutch engages.

**Removal**—Remove transmission (see below), take off clutch housing, take out 6 mounting screws in clutch cover flange, lift clutch off. Refer to *Studebaker Shop Notes for Clutch Release Shaft Lubrication*.

**TRANSMISSION**

**TRANSMISSION**—Warner—Model AS1-T86D (Std.), AS2-T86D, Type R7C (optl. overdrive with electrical 'kick-down' control). All helical gear type, synchromesh (second & high), sliding gear (low & reverse).

See *Transmission Section for complete data*.

**Transmission Control**—Mechanical steering col. shift. See *Transmission Section for complete data*.

**Removal**—Disconnect rear universal and withdraw propeller shaft from transmission. Disconnect shift levers and speedometer cable at transmission. Place jack under engine rear plate and free rear engine support. Remove transmission-to-clutch housing cap screws, pull transmission out to rear.

**OVERDRIVE**

**OVERDRIVE**—Warner R7C (Kick-down) Electric type. Complete assembly (with transmission) Warner Model No. AS2-T86D.

See *Transmission Section for complete data*.

► 1941 Production Change: To correct free-wheel unit slippage when kicking down (also high speed vibration and grease leaks), free wheel unit bearing was changed to needle bearing type. See *Special Service Note in Transmission article in Transmission Section*. Overdrive Solenoid—Delco-Remy Model 1118013. Throttle Switch—Cole-Hersee No. 1687-S. Adjust so that shoe on accelerator linkage just contacts the switch plunger with throttle valve wide open (switch should operate only after accelerator pedal is depressed past the wide open throttle position).

**Control Relay**—Auto-Lite N . HR-4201S (for 1941), No. HRB-4301 (1942). Fuse mounted in holder on relay. Fuse capacity, 14 ampere ('41), 20 ampere ('42). **Removal**: Same as for regular transmission after disconnecting control cable and solenoid wires.

**UNIVERSALS**

**UNIVERSAL JOINTS**—Spicer 1268-102. Needle bearing.

See *Universals Section for complete data*.

**NOTE**—1 piece driveshaft used. Slip joint formed at rear of transmission ahead of front universal.

**REAR AXLE**

**REAR AXLE**—Spicer Model 41-2. Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data*.

**Ratio**—4.55-1 (Std. '41, Optl. or with Overdrive '42), 4.09-1 (Std. '42), 4.82-1 (Optl. '41).

**NOTE**—Ratio stamped on each gear and pinion.

**Backlash**—.005-.007". Shim adjustment.

**Removal**—Hoist rear of car, disconnect propeller shaft at rear universal, hydraulic brake lines, brake cables, and shock absorbers. Remove spring U-bolts, disconnect rear spring shackles and withdraw axle.

**NOTE**—Use Puller HM-931 to remove axle shaft.

**Wheel Bearing Adjustment**—Shims between backing plate and axle housing. With wheel and hub removed (use Hub Puller ST-500) check endplay with dial indicator. To adjust, remove backing plate, add or remove shims (.003", .005", .010", .030" thick). Endplay—.001-.005".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS**—Houdaille. Dbl. acting, hydraulic, adjustable type (thermostatic control on rear).

1941.....BBFS-2 FRONT.....ACHS-2 REAR

1942.....BBFS-4 FRONT.....ACHS-3 REAR

See *Shock Absorber Section for complete data*.

**FRONT SUSPENSION**

**Front Suspension**—Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load.

See *Front Suspension Section for complete data*.

**Kingpin Inclination**—5 1/2°.

**Caster**—Negative 1/4° to Positive 3/4°.

**Camber**—1/4° to 3/4°. Shim adjustment.

**Toe In**—1/16-1/8". Adjust right reach rod only for toe-in. Left rod should be adjusted first for left wheel straight-ahead position (steering wheel centered).

**Steering Geometry (toe-out on turns)**—Inner wheel turned 22-22 1/2°. Outer wheel 20°.

**STEERING GEAR**

**Steering Gear**—Ross T-14 Cam-&Twin Lever type.

See *Steering Gear Section for complete data*.

**BRAKES**

**BRAKES**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes.

See *Brake Section for complete data*.

**Drum**—Budd composite. Diameter 11".

**Lining**—Moulded. Width 2". Thickness 3/16". Length per shoe (each wheel): 11 1/8" front, 8 9/16" rear.

**Clearance**—.010" toe (top), .005" heel, for each shoe.

**Hand Brake**—See Service Brakes (above).

**Hill-Holder**: Standard. See *Brake Section for data*.

**MISC. MECHANICAL**

**WINDSHIELD WIPER**: Auto-Lite Electric types.

Model EWD-5002 (1941), EWH-5004 (1942).

20 ampere fuse (supersedes 14 ampere on '41 type),

Klixon circuit-breaker used on 1942 type.

See *Miscellaneous Section for complete data*.

**HOOD LOCK:** See Studebaker Shop Notes for data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on left front door hinge post. First numbers as follows:

Year	Model	South Bend	Los Angeles
1941	7C	7,139,101	7,803,901
1942	8C	7,145,501	7,804,601

**ENGINE NUMBER:** On upper left side of cylinder block at center. First Nos. B-45,001 ('41), B-52,101 ('42).

### TUNE-UP

**COMPRESSION:**—Ratio—6.5-1 standard, 7.0-1 optional Optl. 7.0-1 Cast Iron Hd. recommended for altitudes greater than 5000 ft. only.

Pressure—105 lbs. at 150 RPM cranking speed.

**VACUUM READING:**—Steady 18-20" idling at 8 MPH.

**FIRING ORDER:**—1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUGS (1941):** Champion No. 8. 18 mm. Metric. Gaps—.025".

**NOTE:**—Champion No. 6 Com-62 recommended by car manufacturer for replacement use.

**SPARK PLUGS (1942):** Champion J-9. 14 mm. Metric. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—36° Closed.

Synchronization—Set movable contacts to open 45° after stationary contacts.

Automatic Advance—13½" max. at 1800 RPM (distr.) Vacuum Advance—6" distr. with 12" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—TDC. Vibration dampener mark 'U.D.C. 1-8' aligned with pointer at front of engine for stationary contacts (use .020" feeler between advance arm and hold-down plate when tightening clamp bolt to avoid binding vacuum control). Use mark 'U.D.C.3-8' for movable contacts (¼ revolution from 'U.D.C.1-8').

**CARBURETOR:** See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screws midway between 'miss' and 'roll' points (¼-1¼ turns open on Carter). Idle speed 450 RPM or 8 MPH.

Float Level (Carter)—3/16" from top of float to gasket seat on cover (valve seated, invert to check).

Float Level (Stromberg)—Fuel level 5/8" below top edge of float bowl.

Accelerator Pump—Inner hole (short stroke) for minimum charge, Outer hole (long stroke) max charge.

Fuel Pump Pressure: 3½ lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Thermostatic coil type.

Setting—To test coil tension, free outer end of coil from bracket on manifold. With valve closed, hooked end of coil should be approx. 90° from bracket with coil at 70°F. Replace coil if angle incorrect. If valve sticks, shaft should be lubricated with kerosene and baking soda solution (for shafts which are badly stuck, remove shaft and turn shaft down to give .005" clearance—shaft bore in manifold should not be disturbed). See that tension spring (from shaft to clip on manifold) is in place.

**NOTE:**—Stainless steel bushings used in manifold for heater valve shaft mounting on 1942 models.

**VALVES:** See Valve Timing.

Tapet Clearance—.016" for all valves, Cold.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

Ignition Switch:—Mitchellock Model 24-R, No. 8777.

Ignition Lock:—Yale & Towne, Mitchell No. 8414.

**COIL:** Auto-Lite Model IG-4647. Service coil (less switch & cable) CE-3224JS. Mounted on dash.

Ignition Current—½-1½ amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025C (for IGH-4029 distributor, condenser mounted outside), No. IGH-3076 (for IGH-4101 distributor, condenser on breaker plate).

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGH-4029 (for 1941), IGH-4101 (1942). Double breaker, 4 lobe cam, full automatic advance types with separate vacuum spark control and Octane Selector.

Firing Interval—Movable contacts open 45° (distributor degrees) after fixed set.

**NOTE:**—Contacts must be synchronized.

Breaker Gap—Set at .020".

Cam Angle or Dwell—36° closed, 9° open (both sets operating together when properly synchronized).

Breaker Arm Spring Tension—17-20 ounces.

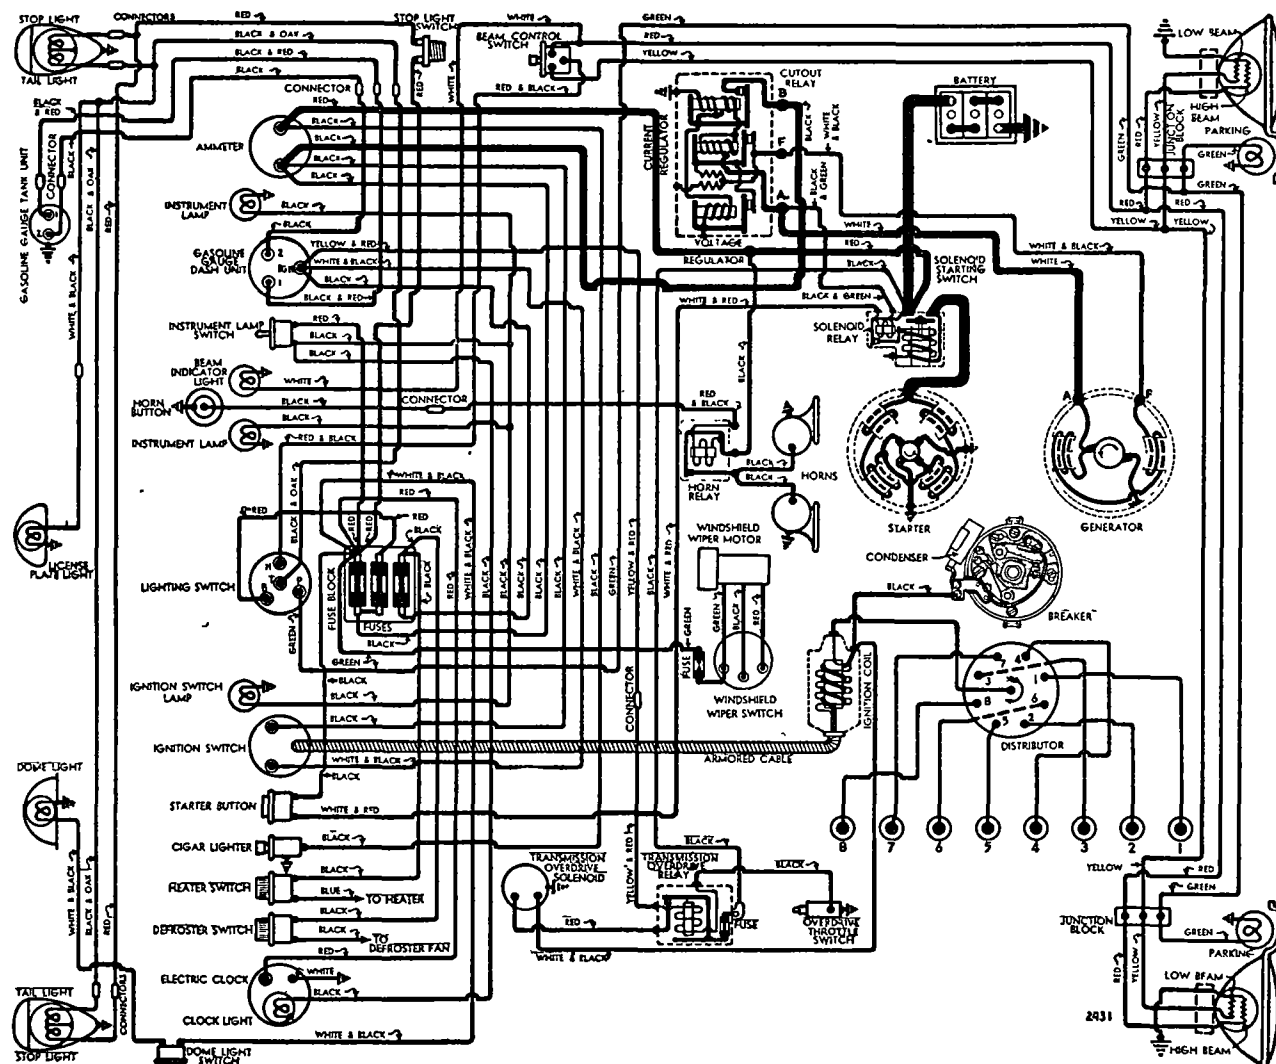

Rotation—Clockwise viewed from above.

Automatic Advance			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
3	630	6	1260
7	1070	14	2140
10	1410	20	2820
13.5	1800	27	3600

**Vacuum Spark Control A-L No. VC-4012.**—On hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

Vacuum Advance			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0	3"	
3	6	6"	
6	12	12"	

**Octane Selector**—Provides manual adjustment at distributor for timing variation. See Ignition Timing

**Distributor Removal:**—Mounted on right side of cylinder head. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note:**—When installing distributor, crank engine to firing position for #1 cylinder ('U.D.C.1-8' mark on vibration dampener in line with pointer on timing gear cover), groove in upper end of distributor drive shaft should be at right angles with camshaft and offset to rear, turn rotor to #1 segment, install distributor (insert .020" feeler between modifier control arm and clamp arm to prevent binding), tighten clamp, check timing.

### IGNITION TIMING

**IGNITION TIMING:**—Standard setting as follows (see Octane Selector Setting following for correction dependent on fuel regularly used):

<b>Flywheel Degrees</b>	<b>Piston Position</b>
0° (at TDC)	.0000" TDC

**Timing (Stationary Contacts)**—With #1 piston on compression, turn engine over until 'U.D.C.1-8' mark on vibration dampener lines up with pointer on timing gear cover. Loosen hold-down plate screw, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until contacts just open, tighten clamp bolt. Then synchronize movable contacts.

**Timing (with Neon Timing Light)**—Neon Light No. 890 recommended by car manufacturer. Clip Neon Light lead in series with #1 spark plug. Idle engine and adjust distributor as directed above.

**Synchronization (On Engine)**—Turn engine over 90° to #6 firing position with vibration dampener mark 'U.D.C.3-6' lined up with pointer on timing gear cover. Loosen 2 lockscrews on movable sub-plate carrying second set of contacts, shift sub-plate by placing screwdriver between knob and

plate and turning screwdriver until contacts begin to open, tighten lockscrews.

**Octane Selector Setting:**—After setting ignition timing, loosen selector screw, advance pointer toward 'A' end of scale until motor 'pings' when it is hot & pulling hard, then retard until 'ping' disappears.

### CARBURETOR

**Carter (1941) Type WDO, Model 409-S.** Double barrel, 1 1/4" downdraft with Carter Climatic Control.

*For complete data, refer to Carburetor Index.*

**Stromberg (1941-42) Model AAV-26.** Double barrel, 1 1/4" downdraft type with Stromberg Automatic Choke. Float bowl cover carries Code No. 6-97, 6-97A ('41), 6-97C ('42).

*For complete data, refer to Carburetor Index.*

► **Stromberg AAV-26 (Code 6-97) change to correct acceleration flat spot—See Stromberg AAV-26 carburetor in Carburetor Section.**

**Idle Adjustment:**—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for 8 MPH idle speed. Adjust idle adjusting screw for each barrel (in succession) until engine fires smoothly (1/4-1 1/4 turns open for each screw on Carter—turn screws in for leaner mixture). Readjust idle speed.

**Accelerating Pump Setting:**—Two holes provided: Inner Hole (min. stroke)—Normal Setting. Outer Hole (max.)—If greater charge required.

**Float Level (All Carburetors)**—As follows:

**Carter**—3/16" from top of float to machined surface of bowl cover (remove gasket, invert to check).

**Stromberg**—Fuel level 5/8" below top edge of bowl with engine idling (3 lbs. pressure) or even with bottom of inspection plug hole on side of bowl.

**Metering Jets & Rods**—See Carter & Stromberg Jet Tables in Carburetor Section for complete data.

**Fast Idle:**—Integral (built-in each carburetor).

*For complete data, refer to Carburetion Equip. Index.*

**Setting (Carter)**—Adjust fast idle screw for .018" throttle valve opening with choke valve closed.

**Setting (Stromberg)**—Hold throttle stopscrew against high lobe of fast idle cam, move choke valve toward closed position as far as possible, check valve opening. Adjust by bending fast idle connector rod for 7/64" choke valve opening.

**Automatic Choke:**—Climatic Control (Carter), AAV-26 type (Stromberg). Built-in carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Setting (Carter)**—Set coil housing 1 Notch Rich.

**Setting (Stromberg)**—'R' mark on thermostat cover in line with highest projection on housing. Shift to 'M' if engine loads up or overchokes. Use 'H' setting only if highly volatile fuels used.

### CARB. EQUIPMENT

**Air Cleaner:**—AC #1529907 oil-wetted type standard.

#1529745 heavy duty oil-bath type optional. Use Replacement Filter Element Assembly: Type #3 (for 1529907), #1529767 (for 1529745). NOTE—Service oil filler cap filter element at regular intervals.

**Fuel Pump:** AC Type 'AE' ('41), 'E' #1523926 ('42). Exchange #528. Diaphragm type fuel pump.

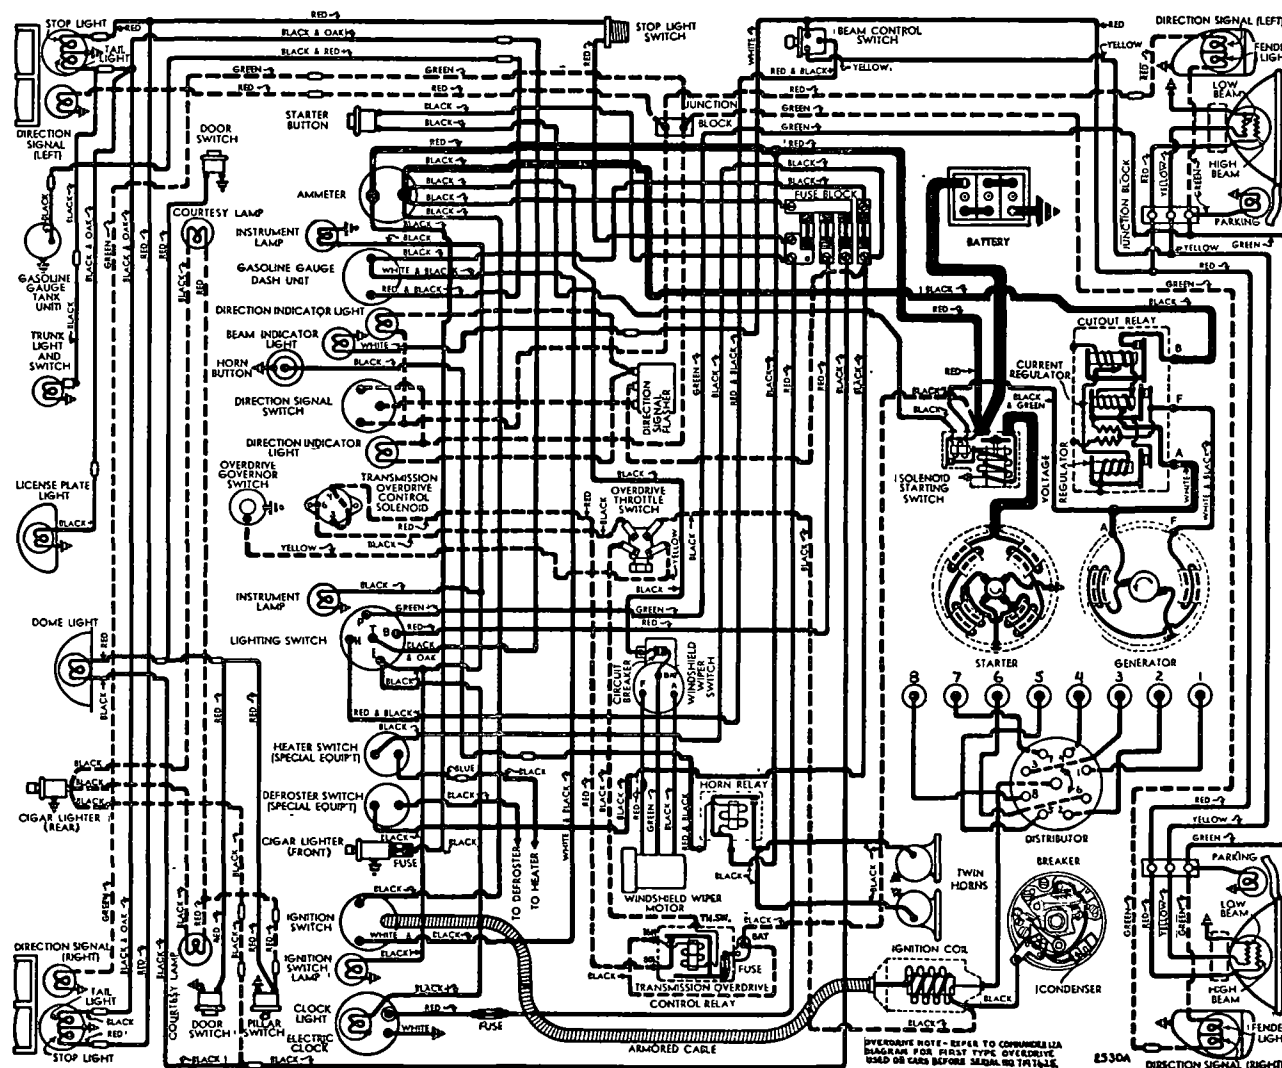

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge (1941):** Auto-Lite electric. No. NG-9594D (dash unit), No. NG-9659T (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge (1942):** Stewart-Warner elec. type. Studebaker Nos. 515508 (dash unit), 515684 (tank).

*For complete data, refer to Carburetion Equip. Index.*

1942 M DELS

See 1941 Diagram for R7C Overdrive Circuit. R9 Overdrive Circuit shown above

C NTINUED N NEXT PA E

CONTINUED FROM PRECEDING PAGE

**BATTERY**

**Willard Type WHT-1-15R.** 6 volt, 15 plate, 95 ampere hour capacity (20 hour rate).  
**Grounded Terminal—**Positive (+) terminal.  
**Engine Ground—**Separate strap connector from right front corner of engine to frame.  
**Location—**In engine compartment on left side.

**STARTER**

**1941—Auto-Lite MAX-4044.** Armature MAW-2030.  
**1942—Auto-Lite MAX-4051.** Armature MAW-2030.  
**Drive—**Overrunning clutch (solenoid pinion shift).  
**Rotation—**Counter-clockwise at commutator end.  
**Brush Spring Tension—**42-53 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

**Removal—**Flange mounted on engine rear plate at left side. To remove, take out flange mounting screws, take off starter and switch assembly.

**Starting Switch—**Auto-Lite Solenoid No. SS-4702. Controlled through relay by pushbutton located on instrument panel (1941), on toeboard for clutch pedal starting (on 1942 Models).

*For complete data, refer to Electrical Equipment Index.*

**GENERATOR**

**Auto-Lite Model GDZ-4805A.** Armature No. GDZ-2006F. Two brush type with current-voltage control.  
**Charging Rate Adjustment—**No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator.  
**Maximum Charging Rate—**35 amperes, 8.0 volts, 1800 Gen. RPM. or approx. 29 MPH. and above with load or discharged battery (Current Reg. Setting).

Cold		Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation—**Counter-clockwise at commutator end.  
**Brush Spring Tension—**53 ozs. max. (new brushes).  
**Field Current—**1.60-1.78 amperes at 6.0 volts.

**Motoring Current—**4.16-4.60 amperes at 6.0 volts.  
**Removal—**Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment—**Loosen pivot and clamp bolts, move generator out until  $\frac{3}{8}$ - $\frac{1}{2}$ " belt deflection midway between generator and fan pulleys is obtained.

**REGULATOR**

**Auto-Lite Model No. VRP-4004-F.** Current-Voltage type. In a single case mounted on engine dash.

*For complete data, refer to Electrical Equipment Index.*

**Cutout Relay**

**Cuts In—**6.4-6.6 volts.

**Cuts Out—**4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap—**.015" minimum.

**Air Gap—**.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting—**7.2-7.5 volts at 70°F.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage steady. Voltage should agree with setting. To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
**Contact Gap—**.012" min. (armature against stop pin).  
**Air Gap—**.048-.052" with contacts just opening.

**Current Regulator**

**Setting—**34-36 amperes (marked '35' on the cover).  
 To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above.  
**Adjustment, Contact Gap, Air Gap—**Same as given for Voltage Regulator above.

**LIGHTING**

**LIGHTING—**Headlamps—Corcoran-Brown 'Sealed Beam' type. *For data, refer to Elec. Equip. Index.*  
**Headlamp Adjustment—**Aim upper beam straight ahead (hot spot center 3" below lamp center hght.).  
**Beam Indicator—**At top center of speedometer dial. Lighted whenever Country (upper) beam in use.

**Switches—1941**

**Lighting—**H. A. Douglas. No. 5724.

**Beam Selector—**Delco-Remy No. 1997008.

**Instrument—**Cole-Hersee.

**Switches—1942**

**Lighting—**Douglas No. 5966. Studebaker No. 515324.

**Beam Selector—**Delco-Remy No. 1997008.

**Stop Light—**Studebaker No. 666858 (hydraulic type).

**Dome Lamp Pillar—**Studebaker No. 281130X1.

**Door Switches—**Studebaker No. 282674.

**Direction Signal—**Studebaker No. 515652.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking	1½	55

**MISC. ELECTRICAL**

**FUSES:** Lighting. Three or four 20 ampere fuses on fuse block behind instrument panel. Refer to wiring diagrams for electrical connections.

**Overdrive Relay—**14 amp. ('41), 20 ('42). On relay.

**Windshield Wiper—**14 amp. (Early '41), 20 (Late '41).

**Klixon circuit-breaker** (for 1942).

**Clock—**2 ampere. In feed wire to clock.

**HORNS:** Delco-Remy. Low Note: 1999511 ('41), 1999541 ('42). High Note: 1999512 ('41), 1999542 ('42). Electric type twin horns with relay.

Type	Current (at 6 volts)	Air Gap
1999511, 41 (Low)	19-21 amperes	.044-.049"
1999512, 42 (High)	18-20 amperes	.034-.039"

**Horn Relay—**R-B-M Model 6003.  
**Contacts Close—**3-4 volts (with relay upright).

**ENGINE**

**ENGINE SPECIFICATIONS—**8 cylinder, 'L' head typ.

**Bore—**3 1/16". Stroke—4 1/4".

**Displacement—**250.4 cubic inches. Rated HP—30.

**Developed Horsepower—**117 HP at 3800 RPM.

**Compression Ratio—**6.5-1 Std., 7.0-1 Optl. CI hds.

**Compression Pressure—**105 lbs. at 150 RPM (Std. hds.).

*See Studebaker Shop Notes for Cyl. Head Installation.*

**Vacuum Reading—**18-20" steady idling at 8 MPH.

**PISTONS (1941):** Aluminum alloy, T-slot, cam ground, tin-plated. Length 3 3/4". Weight 13.6 oz. stripped.  
**Removal—**Pistons and rods removed from above.

**Clearance—**Top .0115-.0165". Skirt .0015" selective.

**Original Bore & Piston Sizes, Replacement Pistons—**  
*See Studebaker Shop Notes for sizes and markings.*

**Fitting New Pistons:** Insert .003" x 1" feeler between piston and wall on camshaft side (pin parallel to crankshaft, T-slot away from camshaft). Pull to withdraw feeler must be between 7-15 lbs.

**Installing Pistons:** T-slot away from camshaft.

**PISTONS (1942):** New ferric alloy, cam ground type with 'Parco-Lubricized' finish. Length—3 3/4".

**Weight—**1.505-1.556 lbs. (with pin bushings).

**Removal—**Pistons and rods removed from above.

**Clearance—**Top .006-.009". Skirt (see Fitting Pistons).

**Original Bore & Piston Sizes, Replacement Pistons—**  
*See Studebaker Shop Notes for sizes and markings.*

**Fitting New Pistons—**Fit pistons to 10-15 lbs. pull on .002" feeler, 1" wide, inserted between piston and wall on camshaft side at right angles to pin hole.

**Installing Pistons—**Install early type pistons with pattern no. (on inner surface of piston near pin boss) toward front of engine. Install later type pistons with raised boss (inside piston skirt on level of pin holes) toward camshaft side.

**PISTON RINGS—**3 coated rings, all above pin. #1 and #2 Compr. ring installed with step down. New thin oil ring & expander used beginning with '42 Eng. No. B-52783 (expander used on all but early '42).

**Ring**

**Compression** 1/8" .013-.021" .0015-.002"

**Oil Control** 3/16" .013-.021" .0015-.002"

**Replacement Rings—**Std. & .010", .020", .030" oversize.

**PISTON PIN—**Diameter—.8741-.8745". Length—2 5/8".

Pin locked in connecting rod by lock screw.

**Pin Fit in Aluminum Pistons—**.0001-.0003" clearance

or light finger push fit at room temperature (70°F).

**Pin Fit in Cast-Iron Pistons—**.0004" clearance, pin

size selected as follows: Select pin which gives wring

fit at 70°F., proper pin size will be one which is

.0004" less in diameter than pin giving wring fit).

**Replacement Pins—**Std. & .0025", .005" oversize. Use Hone No. PH-1 to obtain proper fit in piston.

**NOTE—**Pins are fitted in replacement pistons.

**CONNECTING ROD—**Length—8". Weight—32 ounces.

**Crankpin Journal Diameter—**1.87425-1.87525".

**Lower Bearing—**Precision type, removable steel-

backed, lead-bronze lined (Early '41), micro-babbitt

lined ('41 after Eng. No. B-48529, All 1942).

**Clearance—**.00075-.00275". Sideplay—.005-.009".

**NOTE—**Turn crankpins for bearing clearance (Tool

No. 1C). Do not ream bearings.

**Bearing Adjustment—**None (no shims). Replace bearings. Furnished Std. & .005", .010", .020" under-

**ENGINE****C CONTINUED FROM PRECEDING PAGE**

size. Align oil hole in rod and bearing shell. See that tongues on bearing engage grooves in rod and cap. See *Studebaker Shop Notes for "Palnut" installation.*

**Installing Rods:**—Rods and caps marked with cylinder number. Numbers must be together and installed in same numbered cylinder with numbers and oil hole in lower end of rod toward camshaft

**CRANKSHAFT:**—9 bearing, 12 bolted counterweights. Vibration damper mounted on forward end of shaft. See *Studebaker Shop Notes for Vibration Damper data.* Journal Diameters—2.3435-2.3440".

Bearings—Removable steel-backed, babbit-lined. Clearance—.001-.003".

Adjustment:—None (no shims). Replace bearings furnished Std. & .010", .015", .020", .030" undersize. End Thrust:—Thrust plate assembled between front bearing and crankshaft gear. Controlled by pinned bronze washers (furnished .003", .005", .007" thick) between plate and journal face. Endplay—.003-.006". NOTE—Install new seals (specially treated wood) whenever rear main bearing cap replaced.

**CAMSHAFT:**—Six bearing with helical gear drive. See *Studebaker Shop Notes for Camshaft Removal data.*

Journal Diameters:—#1, 1.935-1.9355"; #2, 1.90275-1.9035"; #3, 1.87225-1.873"; #4, 1.84075-1.8415"; #5, 1.80975-1.8105"; #6, 1.74725-1.748".

Bearings—Split steel-backed, babbitted bushings. NOTE—Align bushing with oil hole in block.

Clearance—.00075-.00225" (#1), .002-.00375" (others).

End Thrust:—Taken by thrust plate assembled on front face of engine behind camshaft gear. Spacer assembled back of gear hub. Endplay—.004-.008".

Timing Gears:—Crankshaft (cast-iron), Camshaft (Celeron with steel hub). Backlash .001-.003".

Refer to *Studebaker Shop Notes for Timing Gear Removal and Replacement Camshaft Gear size selection.*

Camshaft Setting:—Mesh marked camshaft gear tooth between 2 marked teeth on crankshaft gear.

**VALVES:**—

	Head Diameter	Stem Diameter	Length
Intake	1 13/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.001-.003"

Valve Guides:—Pressed in block from above (1 5/16" below upper edge of valve seat) with stepped end down. Ream to inside diameter of .343-.344".

Valve Springs:—Install with closed-coil up and dampener on top of spring. Replace springs if 10% weak (test with Tool U-15). Free Length—2 1/2".

	Spring Pressure	Spring Length
Valve Closed	54-60 lbs.	2 3/32"
Valve Open	125-135 lbs.	1 3/4"

Valve Lifters:—Mushroom type in bolted-on guide brackets (clusters of four). Assemblies may be removed through valve opening on side of engine. See *Studebaker Shop Notes for Lifter Tension Spring.*

**VALVE TIMING**

Tappet Clearance:—.016" (cold) all valves. Remove hood side panel for access to valves.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 15° BTDC. Close 49° ALDC. Exhaust Valves—Open 54° BLDC. Close 10° ATDC. Valve Timing Check—With .020" tappet clearance #1 intake valve should open with #1 piston 15° or .0915" BTDC with vibration damper mark IN.OP.1-8/ aligned with pointer on timing gear cover. Reset tappet clearance .016" (cold).

**LUBRICATION**

**LUBRICATION:**—Pressure (pump in crankcase).

See *Studebaker Shop Notes for Oil Pump installation.*

Normal Oil Pressure:—40 lbs. at 25-30 MPH.

Oil Pressure Relief Valve:—On lower right front corner of engine. Opens at 40 lbs. To adjust, loosen locknut, turn adjusting screw to right to raise pressure, to left to decrease pressure.

Crankcase Capacity:—8 quarts.

**COOLING**

**COOLING SYSTEM:**—Capacity—15 quarts.

Water Pump:—Packless, sealed ball-bearing type.

See *Water Pump Section for complete data.*

Thermostat:—Fulton. In cylinder head outlet.

Setting—Starts to open 151° F. to 155° F.

Temperature Gauge (1941): Auto-Lite (Motometer) vapor tension type. A-L Part No. H-9593.

See *Miscellaneous Section for complete data.*

Temperature Gauge (1942): Stewart-Warner type. Studebaker Part No. 515505.

**CLUTCH**

**CLUTCH:**—Inland. 'Diaphragm' type, single plate, dry disc type with Long 9 1/2 CF-CS driven member.

See *Clutch Section for complete data.*

Facings—Spirally grooved. Moulded (both sides '42, flywheel side '41). Woven—Man. Hycoc (pressure plate side 1941). Inside Diameter 6". Outside Diameter 9 1/2". Thickness .125".

Replacement Clutch Note—Remove spacers (one at each driving lug) after clutch installed on car.

Pedal Adjustment:—Free travel 1" min. Turn adjusting sleeve on pedal connector link. On cars with Hill-holder (NoRoll), check when pedal adjusted and see that brakes release just as clutch engages.

Removal:—Remove transmission (see below), take off clutch housing, take out 6 mounting screws in clutch cover flange, lift clutch off. Refer to *Studebaker Shop Notes for Clutch Release Shaft Lubrication.*

**TRANSMISSION**

**TRANSMISSION:**—Warner—Model AS1-T86D (Std.).

All helical gear type, synchro-mesh (second & high), sliding gear (low & reverse).

See *Transmission Section for complete data.*

Transmission Control:—Mechanical steering col. shift. See *Transmission Section for complete data.*

Removal:—Disconnect rear universal and withdraw propeller shaft from transmission. Disconnect shift levers and speedometer cable at transmission. Place jack under engine rear plate and free rear engine support. Remove transmission-to-clutch housing capscrews, pull transmission out to rear.

**OVERDRIVE**

► ALL 1941 CARS, EARLY 1942 CARS

Overdrive (Cars before Serial No. 7147625):—Warner Type R7C electrical 'kick-down' control (with centrifugal pawls). Used with T86D transmission.

See *Transmission Section for complete data.*

► 1941 Production Change: To correct free-wheel unit slippage when kicking down (also high speed vibration and grease leaks), free wheel unit bearing was changed to needle bearing type. See *Special Service Note in Transmission article in Transmission Section.*

Overdrive Solenoid—Delco-Remy Model 1118013.

Throttle Switch—Cole-Hersee No. 1687-S. Adjust so that shoe on accelerator linkage just contacts switch plunger with throttle valve wide open.

Control Relay—Auto-Lite No. HR-42018 (for 1941), No. HRB-4301 (1942). Fuse mounted in holder on re-

lay. Fuse capacity, 14 ampere ('41), 20 ampere ('42). Removal: Same as for regular transmission after disconnecting Overdrive cable and wiring, and removing Overdrive Rear Support. See *Overdrive Transmission Rear Support Installation in Studebaker Shop Notes*

**OVERDRIVE**

► LATE 1942 CARS

Overdrive (Cars with Serial No. 7147625 & up):—Warner Type R9C Electric type (no centrifugal pawls) with Governor Control and Throttle switch 'kick-down'. Used with T86D transmission.

See *Transmission Section for complete data.*

Control Relay—Auto-Lite HRB-4301. 20 amp. fuse. Removal: Same as for Early '42 type above.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Spicer 1268-102. Needle bearing.

See *Universals Section for complete data.*

NOTE—1 piece driveshaft used. Slip joint formed at rear of transmission ahead of front universal.

**REAR AXLE**

**REAR AXLE:**—Spicer Model 41-2. Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

Ratio—4.55-1 (Std. '41, Optl. or with Overdrive '42), 4.09-1 (Std. '42), 4.82-1 (Optl. '41).

NOTE—Ratio stamped on each gear and pinion.

Backlash—.005-.007". Shim adjustment.

Removal & Wheel Bearing Adjustment: Same as '41-42 Studebaker Commander (see preceding car article).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:** Houdaille. Dbl. acting, hydraulic, adjustable type (thermostatic control on rear).

1941.....BBFS-2 FRONT.....ACHS-2 REAR

1942.....BBFS-4 FRONT.....ACHS-3 REAR

See *Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load.

See *Front Suspension Section for complete data.*

Kingpin Inclination—5 1/2°.

Caster—Negative 1/4° to Positive 3/4°.

Camber—1/4° to 3/4°. Shim adjustment.

Toe In—1/16-1/8". Adjust right reach rod only for toe-in. Left rod should be adjusted first for left wheel straight-ahead position (steering wheel centered).

Steering Geometry (toe-out on turns)—Inner wheel turned 22-22 1/2°. Outer wheel 20°.

**STEERING GEAR**

Steering Gear: Ross T-14 Cam-&-Twin Lever type. See *Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service. Lockheed hydraulic, double anchor type. Hand lever applies rear service brakes.

See *Brake Section for complete data.*

Drum—Budd composite. Diameter 11".

Lining Moulded. Width 2 1/4". Thickness 3/16". Length per shoe (each wheel): 11 1/2" front, 8 9/16" rear.

Clearance—.010" toe (top), .005" heel, for each shoe.

Hand Brake:—See Service Brakes (above).

Hill-Holder: Standard. See *Brake Section for data.*

**MISC. MECHANICAL**

**WINDSHIELD WIPER:** Auto-Lite Electric types. Model EWD-5002 (1941), EWH-5004 (1942).

20 ampere fuse (supersedes 14 ampere on '41 type). Klaxon circuit-breaker used on 1942 type.

See *Miscellaneous Section for complete data.*

**HOOD LOCK:** Alligator hood. To raise hood, pull out hood lock button under left side of instrument panel, pull forward on safety catch under lower front edge of hood.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** First No. G-193001. Stamped on plate on left front door hinge pillar post.

**ENGINE NUMBER:** First No. 216501. Stamped on pad on upper left front corner of engine block.

### TUNE-UP

**COMPRESSION:** Pressure—105 lbs. at cranking speed of 150 RPM for standard 6.5-1 Head.

**VACUUM READING:** Steady 17-18" idling at 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUGS:** Champion Type J-9. 14 mm. Metric. Gaps—.025". Limits .0225-.0275".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle—38° (closed).

Breaker Arm Spring Tension—17-20 ozs.

**Automatic Advance**—Starts at 400 RPM. Maximum advance 7° at 1400 RPM (Distr. degrees & RPM). **Vacuum Advance**—Starts with 4" vacuum. Maximum 9° distr. with 14¾" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—2° BTDC.

**Timing Mark**—Flywheel mark "IGN/" at indicator in inspection hole in left rear motor support.

**NOTE**—Insert .020" feeler between modifier control arm and clamp arm before tightening clamp-screw (to prevent binding).

**Octane Selector Setting**—Set to just eliminate ping when engine hot and pulling hard (advance spark toward "A" end of scale until engine pings, then retard spark toward "R" end until ping disappears).

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Idle adjusting screw ½-1½ turn open. Idle speed setting 8 MPH or 500-525 RPM.

**Float Level**—¼" from top of projection on float bowl cover to top of soldered seam on free end of float with valve seated (invert to check).

**Accelerating Pump**—No adjustment.

**Fuel Pump Pressure:** 3½ lbs. max.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type. See that valve operates freely (stainless steel bushings used in manifold to reduce sticking).

**Setting**—To test coil tension, unhook coil from pin. With valve closed (counterweight up), hooked end of coil should be approximately 90° away from pin with coil at 70°F. Replace coil if angle incorrect.

**VALVES:** See Valve Timing.

**Tappet Clearance**—.016" AH Valves—Cold.

**NOTE**—Self-locking tappet screws used (no lock-nuts).

**STARTING:** See Battery, Starter, Generator and Regulator.

### IGNITION

**Ignition Switch:**—Mitchellock Model 24-R, No. 8771. **NOTE**—Mitchell No. E-10446 (for Hurd Lock).

**Ignition Lock**—Yale & Towne. Studebaker #196900.

**COIL:** Auto-Lite CE-4646 or CE-4664. Service Coil CE-3224WS. Mounted on engine side of dash.

**Ignition Current**—½-1½ amperes idling, 4-5 stop-ped.

**CONDENSER:** Auto-Lite Part No. IG-2671.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGC-4801. Full automatic advance type with separate No. VC-4011 vacuum spark control unit and Octane Selector adjustment.

Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance			
Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start.....	400	0.....	800
2.....	680	4.....	1360
4.....	975	8.....	1950
6.....	1265	12.....	2530
7.....	1400	14.....	2800

**Octane Selector**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

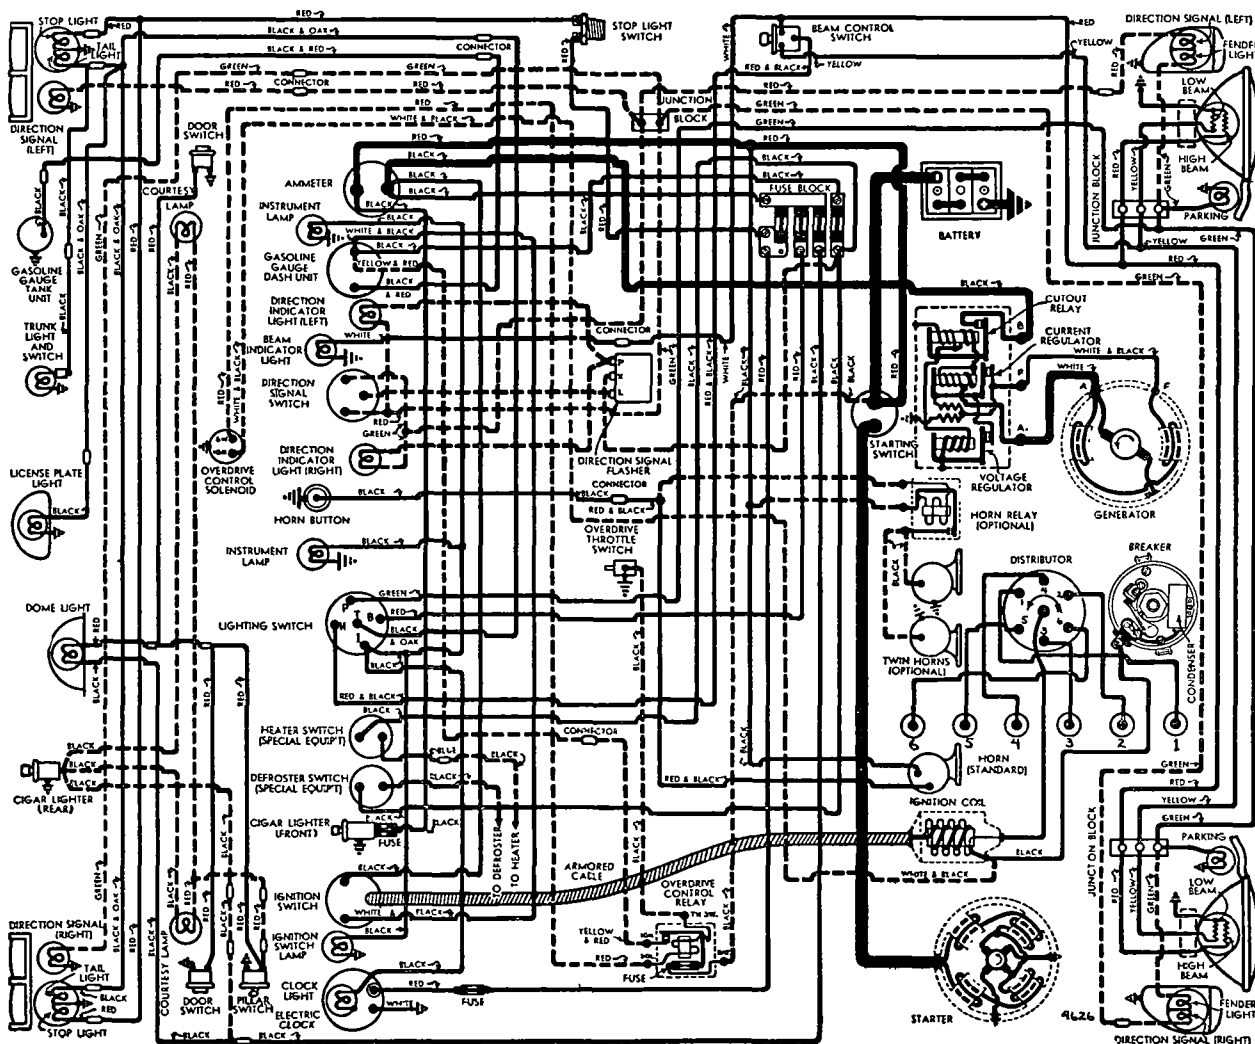

**Vacuum Spark Control:** Auto-Lite VC-4011. On hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	4"
2°	4°	5½"
5°	10°	7¾"
7°	14°	11¼"
9°	18°	14¾"

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note**—When installing distributor, crank engine to firing position for #1 cylinder (flywheel mark "IGN" in line with pointer on left rear engine plate), sight down distributor shaft hole (distributor out) and see that distributor drive

tongue in oil pump drive gear is parallel to and narrow half of offset toward camshaft, turn rotor to #1 segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening the clamp, to prevent binding), check timing.

### IGNITION TIMING

**Standard Setting**—Initial setting for regular fuel (see Octane Selector Setting following for correction depending on fuel regularly used).

**Flywheel Degrees** **Piston Position**  
2° BTDC .0016" BTDC

**Timing (with Neon Timing Light)**—Neon Light No. 890 recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct Neon light on flywheel inspection hole on left rear motor support. Loosen hold-down plate screw, center scale on pointer, tighten screw. Loosen clamp arm, rotate distributor until 'IGN' mark on flywheel (approx. 13/64" before top dead center mark 'U.D.C.1-6') lines up with pointer on engine rear plate. Insert .020" feeler between modifier control arm and clamp arm before tightening clamp (to insure clearance for modifier control arm). Check Octane Selector Setting (following).

**Timing (without Neon Timing Light)**—Turn engine over to firing position for #1 piston with 'IGN' mark on flywheel in line with pointer in inspection hole on left rear motor support and distributor rotor at #1 segment in distributor cap. Adjust distributor as directed above.

**Octane Selector Setting**—After setting ignition timing (above), loosen selector hold-down screw, advance selector (move toward 'A' end of scale) until motor 'pings' when it is hot and pulling hard. Then retard (move selector pointer toward 'R' end of scale) until 'ping' just disappears.

### CARBURETOR

**Carter Model WE, Type 532-S. 1 1/4" Single Barrel, Downdraft type with Fast Idle and Climatic Control** See Carburetor Section for complete data.

**Idle Setting**—Set throttle stopscrew for 500-525 RPM. or 8 MPH. hot or slow idle speed (fast idle inoperative). Set idle adjusting screw 1/2-1 1/2 turns open and adjust for smooth idle (turn screw in for leaner mixture), recheck idle speed.

**Accelerating Pump**—Non-adjustable type.

**Float Level**—1/4" from top of projection on bowl cover to top of seam on free end of float with needle valve seated (invert to check).

**Metering Rods & Jets**—Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.

**Fast Idle**—Integral type (built-in carburetor).

See Carburetion Equipment Section for data.

**Setting**—.054" throttle valve opening with choke valve closed. To check, open throttle wide to make certain fast idle cam drops into position, then with choke valve closed measure clearance between edge of throttle valve and carburetor wall on side opposite idle port (valve closed to fast idle position). To adjust, loosen locknuts and turn adjusting sleeve on connector link.

**Automatic Choke**: Carter Climatic Control (mounted on carburetor air horn).

See Carburetion Equipment Section for data.

**Setting**—Centered (cover reference mark centered on housing scale).

### CARB. EQUIPMENT

**Air Cleaner**: AC, No. 1529210 Oil-wetted type Std., No. 1529211 Heavy Duty Oil-bath type Optl. Replacement Filter Element Assy. No. 2 (1529210), No. 8 (1529211).

**Servicing (Oil-wetted type)**—Clean and re-oil filter element at 1000 mile intervals or as required by operating conditions.

**Servicing (Oil-bath type)**—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

**Fuel Pump**: AC Type W (AE). Diaphragm type. Pump Exchange type No. 527. Pressure—2 1/2-3 1/2 lbs. See Carburetion Equipment Section for data.

**Gasoline Gauge**: Stewart-Warner Electric type. See Carburetion Equipment Section for data.

### BATTERY

**Willard Type SW-1-90 (Orig. Equip), SW-1-92 (Replacement)**. 6 volt, 15 plate, 92 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—117 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.1 minutes. Five second voltage 4.2 volts.

**Grounded Terminal**—Positive (+) to front fender.

**Engine Ground**—Strap at right front motor support.

**Dimensions**—Length 9". Width 6 13/16". Height 8 5/8".

**Location**—On left side under engine hood.

### STARTER

**Auto-Lite Model MZ-4090, Armature No. MZ-2130, Drive**—Barrel type Bendix. Special inboard type A-2033 (marked 'D' on pinion barrel).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 amperes, 5.2 volts, 130 RPM.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
0.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal**—Starter flange mounted on right rear engine plate. To remove take out mounting bolts and lift starter off.

**Starting Switch**—A-L Model SW-4011. Mounted on left side of car below clutch pedal. Operated by depressing clutch pedal fully.

### GENERATOR

**Auto-Lite Model GDZ-4804A, Armature No. GDZ-2006F**. Two brush type with current-voltage control.

**Charging Rate Adjustment**—No adjustment at generator. Charging rate controlled by Voltage Regulator and maximum output by Current Regulator. See Regulator data following.

**Maximum Charging Rate**—35 amperes, 8.0 volts, 1900 generator RPM. or approx. 18.3 MPH. and above, with load or discharged battery (Current Regulator Setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

#### Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**—Loosen pivot and clamp bolts, move generator out until 3/4-1/2" belt deflection midway between generator and fan pulleys is obtained or until fan can just be turned with belt held stationary.

### REGULATOR

**Auto-Lite Model VRP-4004F, Voltage & Current Type**. Consists of Cutout Relay and vibrating type Voltage and Current Regulators in case on dash. See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

#### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

#### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**To Check (without breaking seals)**—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

**To Adjust (with cover removed)**—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. **Contact Gap**—.012" min. (armature against stoppin).

**Air Gap**—.048-.052" with contacts just opening.

#### Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover).

**To Check (without breaking seals)**—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective. **To Adjust (with cover removed)**—Same as for Voltage Regulator (above).

**Contact Gap & Air Gap**—Same as Voltage Regulator.

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type. See *Electrical Equipment Section* for complete data.  
**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator**—At top center of speedometer dial. Lighted whenever Country (upper) beam in use.

## Switches

**Lighting**—Douglas No. 5596.  
**Beam Selector**—Delco-Remy No. 1997008.  
**Stop Light**—Studebaker No. 668858 (hydraulic type)  
**Dome Light (Pillar)**—Studebaker No. 281130X1.  
**Dome Light (Door)**—Studebaker No. 282674.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Parking	1½	55
Dir. Sig. & Fender (Frt.)	21-3	1158
Dir. Sig. Indicator	1½	55
Instrument, Trunk	1½	55
Beam Indicator	1	51
Stop & Tail	21-3	1158
Rear License	3	63
Direction Signal (Rear)	21	1129
Dome	15	87
Courtesy (Step)	3	64

## MISC. ELECTRICAL

**FUSES:** Lighting—20 ampere. Three or four fuses on fuse block on back of instrument panel on left side. Protect lighting & accessory circuits thus:

- #1—Stop Light and Clock (power).
- #2—Headlamps, Tail & Instrument Lamps, Clock (lamps), Parking & Rear License Lamps.
- #3—Dome & Courtesy Lamps, Rear Cigar Lighter.
- #4—Accessories (Climatizer, Defroster, Direction Signal, etc.—controlled by Ignition Switch).

**Overdrive**—20 ampere. On Overdrive Relay.

**Clock**—2 ampere. In connector in feed wire.

**HORNS:** Single Delco-Remy No. 1999807 Standard.  
 Dual—Delco-Remy No. 1999511 (Low Note), 1999512 (High Note). Twin airtone horns operated by relay.

Type	Current (6 volts)	Air Gap
1999807	7-9 amperes	.027-.043"
1999511 (Low Note)	19-21 amperes	.044-.049"
1999512 (High Note)	18-20 amperes	.034-.039"

**Horn Relay:** R-B-M No. 6003, Studebaker No. 512534.  
**Contacts Close**—3.5-4.5 volts with relay upright.  
**Contacts Open**—2.5 volts minimum.

## ENGINE

**ENGINE SPECIFICATIONS:** 6 Cylinder, "L" Head  
 Bore—3.000". Stroke—4.000".  
 Displacement—169.6 cu. ins. Rated HP—21.6.  
 Developed Horsepower—80 at 4000 RPM (Std. Hd.).  
 Compression Ratio—6.5 Std., 7.0-1 Optl.  
 Compression & Vacuum Reading—See *Tune-up data*.  
**ORIGINAL BORE & PISTONS:** See *Studebaker Shop Notes*.

**TIGHTENING TORQUES:** See *Studebaker Shop Notes*.  
**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Studebaker Shop Notes*.

**PISTONS:** Lynite aluminum alloy. Cam ground, T-slot, tin-plated type. Length—2 9/32".  
 Weight—8.16 ozs. (stripped).

**Clearance—Selective Fit** (See Fitting Pistons).

**Rem val**—Pistons and rods removed from above.

**NOTE**—Car manufacturer recommends that cylinders out-of-round or tapered more than .002" be reconditioned.

**Fitting New Pistons:** Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 11-16 lbs.

**Replacement Pistons:** See *Studebaker Shop Notes*.

**Installing Pistons:** T-slot away from camshaft.

**PISTON RINGS:** Two compression, one oil control ring per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	.0015-.002"
Compr. #2	5/8"	.007-.017"	.0015-.002"
Oil Contr. (#3)	5/32"	.007-.017"	.0015-.002"

**Replacement Rings:** Std. & .010", .020", .030" oversize.

**PISTON PIN:** Diameter .7491-.7495". Length 2 5/8". Pin is locked in rod by tapered pin and locknut.

**Pin Fit in Piston**—.0001-.0003" clearance or light finger-push fit at room temperature (70°F).

**Replacement Pins:** Std. & .0025", .005" oversize. Use Hone No. PH-1 to obtain proper piston pin fit.

**NOTE**—Replacement pistons fitted with pins.

**CONNECTING ROD:** Length 6 3/8". Weight 20.96 ozs.

**Crankpin Journal Diameter**—1.81175-1.81275".

**Lower Bearing**—Spun babbitt (cap bearings chamfered on upper edge). See *Replacement Bearings*.

**Clearance**—.0005-.002". **Sideplay**—.005-.009".

**NOTE**—Use Reamer HM-591F to secure correct bearing clearance. Crankpin out-of-round, tapered, or scored limits .0015" max. Use tool No. 1C to recondition crankpins.

**Bearing Adjustment:** None. Replace rods. Do not file rods or caps.

**NOTE**—See *Studebaker Shop Notes* for "Palnut" data.

**Replacement Bearings:** New rods furnished on Exchange Basis in Std. Size and .010", .020" Undersize.

**Installing Rods:** Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number and Oil hole in lower end of rod toward camshaft.

**CRANKSHAFT:** Four bearing type with integral counterweights. Vibration dampener on front end.

**Journal Diameter**—2.437-2.4375" (all bearings).

**Bearing Type**—Removable steel-backed, babbitt-lined.

**Clearance**—.0005-.0025".

**NOTE**—Install new seals (specially treated wood), whenever rear main bearing cap removed and installed.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**NOTE**—Front oil pan seal block may be removed for access to front main bearing cap by removing four lower timing gear cover retaining screws.

**Replacement Bearings:** Furnished Standard size and .010", .020", .030" undersize.

**End Thrust:** Taken by thrust washer assembled between front main bearing and crankshaft gear.

Controlled by shims between thrust washer and main bearing journal. Adjust by changing shims furnished .003", .005", .007" thick.

**Endplay**—.003-.006".

**CAMSHAFT:** Four bearing type with helical gear drive.

**Journal Diameters**—#1, 1.7475-1.7480"; #2, 1.71625-1.71700"; #3, 1.68575-1.68650"; #4, 1.62325-1.624500".  
**Bearings**—Split, steel-backed, babbitted bushings.  
**Clearance**—.00075-.00225" (#1), .001-.00275" (others)

**Bearing Adjustment:** None. Replace bushings with camshaft removed. **NOTE**—Align bushing oil hole with oil hole in block.

**Camshaft Removal:** See *Studebaker Shop Notes*.

**End Thrust:** Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub).

**Endplay**—.004-.008".

**Timing Gears:** Crankshaft gear Cast Iron, Camshaft gear Celoron with steel hub.

**Backlash**—.001-.003".

**Removal & Replacement**—See *Studebaker Shop Notes* for directions and replacement gear oversizes.

**Camshaft Setting:** Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	.310-.311"	4 11/32"
Exhaust	1 9/32"	.310-.311"	4 11/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	5/16"	.001-.0035"
Exhaust	45°	5/16"	.0015-.0035"

**Valve Guides:** Pressed in block from above with top of guide 1 3/16" below top of block. Finish ream guides to inside diameter of .312-.3125".

**Valve Springs:** Install with closed coil end up. Replace springs if more than 10% weak (test with Tool U-15). Spring free length 2 3/32".

	Spring Pressure	Length
Valve Closed	52-56 lbs.	1 21/32"
Valve Open	90-94 lbs.	1 11/32"

**Valve Lifters:** Mushroom type. Remove from below with camshaft out of engine. For *Camshaft Removal* directions, refer to *Studebaker Shop Notes*.

**Valve Lifter Tension Spring**—See *Studebaker Shop Notes* for data.

**Clearance**—.0005-.00175".

**Replacement Lifters**—Furnished .0005" and .001" oversize.

## VALVE TIMING

**Tappet Clearance:** .016" All Valves, Engine cold.

**NOTE**—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum. Remove hood side panel for access to valves.

**Valve Timing:** See *Camshaft Setting* above.

**Intake Valves**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves**—Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check**—With .020" tappet clearance, #1 intake valve should open with #1 piston 15° or .0893" BTDC. with flywheel mark "IN.OP.1-6/" at pointer in inspection hole in left rear engine plate. Reset tappet clearance to .016" Cold running clearance.

## LUBRICATION

**Lubrication System:** Pressure to crankshaft, connecting rod, and camshaft bearings and to valve lifters. Timing gears lubricated by oil by-passed by pump.

Oil pump mounted externally on right side of engine.

**Crankcase Capacity** - 5 qts. ("Add Oil" point on oil level indicator stick is 3 qt. level).

**Normal Oil Pressure**—40 lbs. at 25-30 MPH.

**Oil Pressure Relief Valve**—On lower right front corner of engine block. Opens at 40 lbs. Not adjustable.

**Oil Pan Removal**—See *Studebaker Shop Notes*.

**Oil Pump:** Helical gear type. Mounted externally on right hand side of crankcase.

**Removal**—Remove capscrews and lockwashers on pump cover, remove cover, gasket, oil pump gears, and woodruff key. Remove "C" washer (horseshoe washer) from pump shaft within pump body, withdraw pump body. Shaft and driving gear are removed from within crankcase.

**Installation**—See *Studebaker Shop Notes*.

**Oil Filter:** Fram (optional equipment).

**Oil Pressure Gauge:** Stewart-Warner Bourden tube type (not electric).

## COOLING

**Cooling System:** Positive circulation with water pump mounted on front of block with fan.

**Capacity**—10½ quarts.

**Water Pump:** Packless, sealed ball bearing type.

See *Water Pump Section for complete data*.

**Removal**—Slack off drive belt, take out capscrews in fan pulley hub, remove fan and pulley. Disconnect hose connection, take out mounting screws in pump body flange, withdraw pump from engine block.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** Bishop & Babcock. In water outlet on cylinder head.

**Setting**—Starts to open at 151-155°F.

**Temperature Gauge:** Stewart-Warner Bourden tube type (not electric).

## CLUTCH

**Borg & Beck Model 8A7 with "Borglite" Driven Member.** Single plate, dry disc type. NOTE - Clutch Assembly marked by number 959 stamped on cover.

See *Clutch Section for complete data*.

**Facings**—Moulded-asbestos, 2 required. Inside Diameter 5 ¾". Outside Diameter 8". Thickness ⅛".

**Adjustment:** Pedal free-travel 1" minimum. Loosen locknuts on adjusting sleeve on link connecting pedal and clutch throw-out shaft lever, turn adjusting sleeve. Tighten locknuts after making adjustment.

**Hill Holder (NoRol) Note**—Check adjustment whenever clutch pedal adjusted. Hill Holder should be set to release just as clutch engages.

**Removal:** Remove Transmission (see Transmission Removal below), disconnect and remove clutch throw-out shaft, remove clutch housing by taking out mounting bolts in housing flange. Remove six mounting screws in clutch cover flange, lift out clutch assembly and driven member.

For *Clutch Release Shaft Lubrication instructions*, see *Studebaker Shop Notes*.

## TRANSMISSION

**Warner Model T84G Std.** All helical gear type, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section for complete data*.

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

See *Transmission Section for complete data*.

**Removal:** Disconnect propeller shaft at rear universal (remove nuts on "U" bolts), pull propeller shaft out toward rear disengaging front end of shaft from splined shaft in transmission case. Disconnect speedometer cable and shift lever rods at transmission case. Place support jack under engine at rear plate, free rear engine support. Remove transmission to clutch housing capscrews, pull transmission straight back and remove from beneath car.

## OVERDRIVE

**Warner Type R7C (with special T84G Transmission).** Optl. Equipment. Overdrive has electrical "kick-down" control.

See *Transmission Section for complete data*.

**Overdrive Control:** Control Solenoid (for "kick-down") mounted on over-drive case and controlled through relay by accelerator pedal operated kick-down switch.

See *Transmission Section for complete data*.

**Overdrive Solenoid**—Delco-Remy Model 1118013.

**Control Relay**—Auto-Lite Model HRB-4301.

**Throttle Switch**—Adjust so that shoe on accelerator linkage just contacts switch plunger with throttle valve wide open (switch should operate only when accelerator pedal depressed past wide open throttle position).

**Overdrive Control Fuse**—20 ampere. Mounted on relay.

**Removal:** Same as for conventional transmission (above) except that overdrive control cable and wires at solenoid terminals must be disconnected first.

## UNIVERSALS

**Spicer Type 1268-102X.** Needle bearing "cross" type, two used. NOTE—Propeller shaft is one piece type with slip joint at transmission main shaft ahead of front universal joint.

See *Universals Sections for complete data*.

## REAR AXLE

**Spicer Model 23.** Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section for complete data*.

**Ratio**—4.10-1 Std., 4.56-1 Optl.

**Backlash**—.003-.006" Shim adjustment.

**Removal:** Hoist rear of car, disconnect propeller shaft at rear universal by removing nuts on "U" bolts. Disconnect hydraulic brake lines, brake cables, and shock absorbers. Disconnect spring "U" bolts and rear spring rear shackles, withdraw axle assembly. **Axle Shaft Removal**—Remove wheel hub using Puller J-446, remove nuts on mounting studs and take off brake backing plate and brake assembly (CAUTION—do not lose wheel bearing adjusting shims in back of the backing plate). Use Puller HM-931

to remove axle shaft and bearing assembly.

**NOTE**—Inner oil seal can be removed by hooking axle shaft puller adapter under oil seal. Use Handle J-270-1 and Disc J-270-13 to install new oil seal.

**Wheel Bearing Adjustment:** Remove wheel and wheel hub (use Puller J-446). Check shaft endplay with dial indicator. To adjust, take off nuts on backing plate mounting studs, remove backing plate and brake assembly, add or remove shims on housing flange. Shims furnished in thickness of .003", .005", .010", .030".

**Endplay**—.001-.005".

## SHOCK ABSORBERS

**Houdé (Houdaille) Model BBFS-10 (Front), BBDS-5 (Rear).** Double acting, hydraulic type. Adjustable.

See *Shock Absorber Section for complete data*.

**Adjustment:** Adjusting pointer on end of shaft should be lined up with scribed line on end of shaft. Turn pointer clockwise for firmer action, counter-clockwise for softer action (not more than 1/32-1/16"). Stops provided to limit adjustment in each direction.

**Refilling:** Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—use only Houdaille Shock Absorber Fluid No. L-1404 (new type fluid used only on shock absorbers with new circular top plug).

## FRONT SUSPENSION

**Front Suspension:** Planar type independent suspension with transverse spring. Specifications below apply with car weight on wheels but without load.

See *Front Suspension Section for complete data*.

**Kingpin Inclination**—5½° crosswise.

**Caster**—1-2°. No adjustment.

**Camber**—½° (¼-¾°). Shim adjustment.

**Toe In**—1/16-1/8". Adjust right hand Reach Rod only for toe in after left hand rod adjusted first to place left wheel straight ahead with steering wheel centered.

**Steering Geometry (Toe out on Turns)**—Inner wheel turned 22½-23° with outer wheel turned exactly 20°.

## STEERING GEAR

**Ross Model T-12.** Cam-and-Twin Lever type with insulated steering arm and intermediate steering arm (idler) on right hand side of frame.

See *Steering Gear Section for complete data*.

## BRAKES

**Service:** Lockheed hydraulic, single anchor type. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data*.

**Drum**—Budd Composite type. Diameter 9".

**Lining**—Moulded type. Width 1¾", Thickness 3/16". Length per wheel 18" (10 13/16" front shoe, 7 3/16" rear shoe).

**Clearance**—.010" toe (top), .005" heel, for each shoe.

**Braking Power**—43% Rear Wheels, 57% Front.

**Hand Brake:** See *Service Brakes* above.

**Hill Holder:** Optional equipment.

See *Brake Section for complete data*.

**HOOD LOCK, LOCK ADJUSTMENT, HOOD ASSEMBLY ALIGNMENT:** See *Studebaker Shop Notes*.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on left front door lock pillar post.

1947 Numbers ..... South Bend ..... Los Angeles  
 1948 Numbers ..... G-212,501 Up ..... G-824,001 Up  
 1948 Numbers ..... G-314,501 Up ..... G-827,301 Up  
**Body Symbol Letter**—Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan.

**ENGINE NUMBER:** Stamped on pad on upper front left corner of engine block.

1947 Numbers 236,001 Up. 1948 Numbers 342,001 Up  
**NOTE**—Letter "A" following engine number indicates crankshaft main bearing journals .005" Undersize.

### TUNE-UP

**COMPRESSION PRESSURE:** 105 lbs. at 150 RPM.  
**VACUUM READING:** Steady 17-18" idling at 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUG GAPS:** .025" Limits .0225-.0275".

Plug Type—Champion Type J7 or J9. 14 mm.

**IGNITION:** See *Coil, Condenser, and Distributor*.

Breaker Gap—.020". Limits .018-.022".

Cam Angle or Dwell—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See *Distributor*.

**IGNITION TIMING:** 2° BTDC.

Timing Procedure—See *Ignition Timing*.

**Timing Mark**—Vibration dampener mark "IGN" aligned with pointer on left side of engine. **NOTE**—Insert .020" feeler between modifier control arm and clamp arm before tightening clampscrew.

**Octane Selector Setting**—Set to just eliminate ping when engine hot and pulling hard.

**CARBURETION:** See *Carburetor & Carb. Equipment*.

**Idle Setting**— $\frac{1}{2}$ -1 $\frac{1}{2}$  turns open. Turn screw out for richer mixture.

**Idle Speed**—8-10 MPH. at normal operating temp.

**Float Level**— $\frac{1}{4}$ " (532S),  $\frac{3}{8}$ " (661S). Measure from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover assembly inverted.

**Accelerating Pump**—No seasonal adjustment.

**Fuel Pump Pressure**—4-5 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type operating in stainless steel bushings.

**Setting**—To test coil tension, free outer end of coil from anchor post. With valve closed (counterweight up), hooked end of coil should be approx. 90° from anchor post with coil at 70°F. **NOTE**—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings (do not ream bushings).

**VALVE TAPPET CLEARANCE:** .016" All Valves, Cold.  
 Valve Timing Check—See *Valve Timing*.

**STARTING:** See *Battery, Starter, Generator, Regulator*.

### IGNITION

**IGNITION SWITCH:** Mitchellock Switch Model 42-R. No. E-10336 (for Y & T lock) or E-10522.

**Ignition Lock**—Yale & Towne.

**COIL:** Auto-Lite ('47) CE-4032, ('48) CE-6007. On eng. above distributor (under spark plug cable bracket).  
**Ignition Current**— $\frac{1}{2}$ -1 $\frac{1}{2}$  amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGC-4805. Full automatic advance type with vacuum spark control.  
**Breaker Gap**—.020". Limits .018-.022".  
**Cam Angle**—38° closed, 22° open.

**Breaker Arm Spring Tension**—17-20 ozs.

**Rotation**—Counter-clockwise viewed from above.

Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	400	0.....	800
2.....	680	4.....	1360
4.....	975	8.....	1950
6.....	1265	12.....	2530
7.....	1400	14.....	2800

**Vacuum Spark Control:** Auto-Lite Model VC-4011. Unit mounted on hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	4"
2°	4°	5 $\frac{1}{2}$ "
5°	10°	7 $\frac{3}{4}$ "
7°	14°	11 $\frac{1}{4}$ "
9°	18°	14 $\frac{3}{4}$ "

**Octane Selector**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See *Ignition Timing* following for adjustment.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note**—When installing distributor, crank engine to firing position for #1 cylinder (dampener mark "IGN" in line with pointer on the timing gear cover, sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is parallel to and narrow half of offset toward camshaft, turn rotor to

#1 segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening the clamp, to prevent binding),

### IGNITION TIMING

**Std. Setting** Flywheel Degrees Piston Pos.  
All Engines ..... 2° BTDC ..... 0016" BTDC  
This setting correct for regular fuel (See Octane Selector Setting for service and fuel modification).  
**NOTE**—Ignition marks now located on vibration dampener at front of engine.

**Timing (With Neon Timing Light)**—Clip timing light lead in series with #1 spark plug, direct light on vibration dampener at front of engine. Loosen hold-down plate screw, center octane selector pointer on scale, tighten hold-down screw. Run engine at idle speed, loosen clamp arm, rotate distributor until "IGN/" mark on dampener appears in line with pointer on left side of timing gear cover, tighten clamp screw. Check Octane Selector setting.  
**CAUTION**—Insert .020" feeler between modifier arm and clamp arm when tightening clamp arm.  
**Timing (Without Neon Timing Light)**—With #1 piston on compression, turn engine over until "IGN/" mark on vibration dampener lines up with pointer on left side of timing gear case. Adjust distributor as directed above.

**Octane Selector Setting**—After setting timing (above), loosen selector hold-down screw, advance timing by turning distributor clockwise (move pointer toward "A" end of scale) until engine "pings" when hot and pulling hard, then retard timing by turning distributor counter-clockwise (move pointer toward "R") until ping disappears.

### CARBURETOR

Before Eng. No. 350,841.....Carter WE, No. 532S  
After Eng. No. 350,841.....Carter WE, No. 661S  
1 1/4" single barrel, downdraft with Carter Clim. Cont. Casting No. on Flange—375 (both models).  
See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, & Accelerating Pump):** See Tune-Up.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Carter Single Barrel Carburetor type.

See Carburetion Equipment Section for data.

**Setting**—.054" throttle valve opening with choke valve closed. To check, open throttle wide to make certain fast idle cam drops into position, then with choke valve closed measure clearance between edge of throttle valve and carburetor wall on side opposite idle port (valve closed to fast idle position). To adjust, turn adjusting sleeve on connector link.

**Automatic Choke:** Carter Climatic Control (Single Carburetor type).

See Carburetion Equipment Section for data.

► **CAUTION**—Setting different on each type carburetor.  
**Setting (532S)**—Centered (cover centered on scale).  
**Setting (661S)**—1 Point Lean.

### CARB. EQUIPMENT

**Air Cleaner:** AC No. 1543970 Oil-wetted type Std. Filter Element AC #1. Oil-bath Air Cleaner Optl.  
**Servicing (Oil-wetted type)**—Clean and re-oil filter element at 1000 mile intervals.  
**Servicing (Oil-bath type)**—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

**Fuel Pump (Std.):** AC Type AE, Stude. No. 522249.  
**Optl. (Fuel & Vacuum):** AC, Studebaker No. 523824.  
**Exchange Pump**—AC, No. 576 (for Type AE).  
**Pressure**—4-5 lbs. maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge:** Stewart-Warner Electric type.

**Dash Unit**—Studebaker No. 522177.

**Tank Unit**—Studebaker No. 519423.

See Carburetion Equipment Section for data.

### BATTERY

**Willard Type HW-1-100.** 6 volt, 15 plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five Second Voltage 4.3 volts.

**Grounded Terminal**—Positive (+) to cyl. head.

**Dimensions**—L. 9 3/64". W. 6 13/16". H. 8 5/8".

**Location**—In engine compartment on left side.

### STARTER

1947.....Auto-Lite MZ-4136. Arm. No. MZ-2211

1948.....Auto-Lite MZ-4151. Arm. No. MZ-2211

**Drive**—Barrel type Bendix Drive No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 amperes, 5.2 volts, 150 RPM.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Starting Switch:** Magnetic switch mounted on starter and controlled by Auto-Lite Model SW-4016 manual switch on toeboard operated by clutch pedal.

**Removal:**—Flange mounted on engine rear plate at left side. To remove, take out flange mounting screws, take off starter and switch assembly.

### GENERATOR

**Auto-Lite Model GDZ-4804A.** Armature No. GDZ-2006F. Two brush type with current-voltage control.  
**Charging Rate Adjustment**—None. See Regulator.  
**Maximum Charging Rate**—35 amperes, 8.0 volts, 2250 Gen. RPM (hot), at car speed of 24 MPH & above with load or discharged battery (regulator setting).

Cold				Hot			
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.	Amperes	R.P.M.
0	6.4	925	0	6.4	1000	0	1000
4	6.6	1035	4	6.6	1120	4	1120
8	6.75	1140	8	6.75	1235	8	1235
12	6.95	1250	12	6.95	1350	12	1350
16	7.15	1370	16	7.15	1480	16	1480
20	7.3	1480	20	7.3	1590	20	1590
24	7.5	1590	24	7.5	1730	24	1730
28	7.7	1710	28	7.7	1900	28	1900
32	7.9	1820	32	7.9	2090	32	2090
35	8.0	1900	35	8.0	2250	35	2250

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, move generator out until 3/8-1/2" belt deflection midway between generator and fan pulleys is obtained.

### REGULATOR

**Auto-Lite Model VRP-4004F.** Voltage & Current Type. Consists of Cutout Relay and vibrating type Voltage & Current Regulators in case on dash.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

#### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts), 10.4 MPH.

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

#### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

#### Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover).

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

### LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—At center of speedometer dial. Lighted whenever Country (upper) beams in use.

**Direction Signal:** See Electrical Equipment Section.

**Direction Signal Indicators**—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

#### Switches

**Lighting**—Douglas, Studebaker No. 519798.

**Beam Selector**—Delco-Remy No. 1997008, Studebaker No. 519246.

**Stop Light**—Studebaker No. 666858.

**Direction Signal**—Studebaker No. 520304.

#### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking	1.5	55
Direction Signal (Front)	21	1129
Beam Indicator	1	51
Dirac. Signal Indicator	1.5	55
Instrument, Glove Compt.	1.5	55
Underhood, Trunk	1.5	55
Map, Dome	15	88
Stop & Tail	21-3	1158
Direction Signal (Rear)	21	1129
Rear License	3	63

### MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER (On Light Switch):** Studebaker No. 522014. 30-ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.

**Auxiliary Circuit Breaker (On Instrument Panel):** Studebaker No. 519825 (1947), 523056 (1948). 15-ampere thermostatic type. Protects Body & Stop Lamps by vibrating to limit current.

**ACCESSORY CIRCUIT BREAKER:** One 15-ampere type used in cars with Climatizer and Defroster.

CONTINUED ON NEXT PA E

## C NTINUED FROM PRECEDIN PAGE

**FUSES:** Clock—3 ampere. In clock lead.  
Direction Signal—14 ampere. In Flasher lead.  
Overdrive—20 ampere. On Overdrive Relay.  
Glove Comp. Light—5 ampere. In lamp lead.  
Under Hood Light—5 ampere. In lamp lead.  
Fog Lights—20 ampere. On Fog Light Switch.

**HORNS:** Sparton or Delco-Remy No. 1999610 (High Note), 1999611 (Low Note). Twin Airtone type horns operated by relay. Horn Current—12-15 ams. (each).

Horn Relay: Delco-Remy No. 1116775.

Contacts Close—2.75-4.0 volts.

C ntact Gap—.025". Air Gap—.015" (closed).

## ENGINE

**ENGINE REMOVAL** for Oil Pan Removal and all major engine work: See *Studebaker Shop Notes*.

**ENGINE SPECIFICATIONS:** Six cylinder, "L" Head. Bore—3". Stroke—4".

Displacement—169.8 cu.ins. Rated H.P.—21.6

Developed Horsepower—80 at 4000 RPM.

Compression Ratio—6.5-1 Std. 7.0-1 Optl. iron hds.

NOTE—7.0-1 Head for 5000 ft. & higher altitudes.

Compression & Vacuum Reading—See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Studebaker Shop Notes*.

**TIGHTENING TORQUES:** See *Studebaker Shop Notes*.  
**CYLINDER HEAD INSTALLATION:** See *Studebaker Shop Notes*.

**PISTONS:** Lynite aluminum alloy, Cam ground, T-slot, bearing-metal plated type. Length—2 29/32". Weight—8.48 ozs. (without rings or pin). Clearance—Selective fit (see *Fitting Pistons*). Removal—Pistons and rods removed from above. Fitting New Pistons: Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 11-16 lbs.

Replacement Pistons: See *Studebaker Shop Notes*.

Installing Pistons: T-slot away from camshaft.

**PISTON RINGS:** Two compression (Perfect Circle #200 Top, #70—2nd), one Oil Control (#85).

Ring Width End Gap Side Clearance

Compr. #1 3/32" .007-.017" .0015-.002"

Compr. #2 1/8" .007-.017" .0015-.002"

Oil Contr. (#3) 5/32" .007-.017" .0015-.002"

Installing Rings: Step up top ring, step down 2nd ring.

Replacement Rings: Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

**PISTON PIN:** Diameter .7491-.7495". Length 2 5/8". Pin is locked in rod by tapered pin and locknut.

Pin Fit in Piston—.0001-.0003" clearance or light finger-push fit at room temperature (70°F).

Installing Pins: Use Pin Assembly Tool J-1293. Install clamp bolt nut and star washer on heavy boss side of rod. NOTE—Threads on opposite end of clamp bolt used only to remove bolt from rod (install nut on this end, tighten nut to pull bolt out of rod).

Replacement Pins: Std. & .0025". .005" oversize. Use Hone No. PH-1 to obtain proper piston pin fit.

NOTE—Replacement pistons fitted with pins.

**CONNECTING ROD:** Length 6 3/4". Weight 20.48 ozs. Crankpin Journal Diameter—1.81175-1.81275"

Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims.

Clearance—.0005-.002" Sideplay—.005-.009".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or bearing caps.

NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.

Palnut Installation—See *Studebaker Shop Notes*.

Replacement Bearings: Bearings furnished Std. Size and .001", .005", .010", .020" Undersize.

Installing Rods: Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number and oil hole in lower end of rod toward camshaft side.

**CRANKSHAFT:** Four bearing type with integral counterweights. Vibration dampener on front end. Vibration Dampener—See *Studebaker Shop Notes*.

Journal Diameters—2.4370-2.4375" (All) Std.

►CAUTION—Journals are .005" Undersize on engines with letter "A" following Engine Number.

Bearing Type—Removable type, steel-backed, micro-babbitt lined. No shims.

Clearance—.0005-.0025".

Rear Bearing Oil Seals—Consist of rubber ring, Studebaker No. 521544 (After Eng. No. 284200), on crankshaft; two rubber seal strips, Studebaker No. 522144, in grooves on top of bearing cap; and two specially treated wood strips, Studebaker No. 197178, in grooves on sides of bearing cap.

►CAUTION—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.

NOTE—Front oil pan seal block may be removed for access to front main bearing cap by removing four lower timing gear cover retaining screws. Use only malleable iron type filler block on these cars.

►CAUTION—Do not securely tighten timing gear cover to-filler block screws until after oil pan screws tightened uniformly and securely.

Replacement Bearings: Furnished as sets or single bearings Std. & .001", .005", .010", .020", .030" U. S.

End Thrust: Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal. Adjust by changing shims (.003", .005", .007" thick). Endplay—.003-.006".

**CAMSHAFT:** Four bearing type. Helical gear drive. Journal Diameters—#1, 1.7475-1.7480"; #2, 1.7162-1.7170"; #3, 1.6857-1.6865"; #4, 1.6232-1.6240".

Bearings—Split, steel-backed, babbitted bushings. Clearance—.0007-.0022" (#1), .0010-.0027" (others).

Bearing Adjustment: None. Replace bushings with camshaft removed. NOTE—Align bushing oil hole with oil hole in block.

Camshaft Removal: See "Camshaft & Bearings" in *Studebaker Shop Notes*.

End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub).

Endplay—.004-.008" (or .004-.006" if new thrust plate and thrust spacer installed. Check thickness by which spacer exceeds plate (endplay)).

Timing Gears: Crankshaft gear Cast Iron, Camshaft gear Celoron with steel hub.

Backlash—.001-.003".

Replacement Gears—Camshaft gear furnished in three sizes: Standard (marked "S"), High Limit (marked "H"), Low Limit (marked "L"). Crankshaft gear furnished Standard size only.

Timing Gear Removal & Installation—See "Timing Gears" in *Studebaker Shop Notes*.

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

**VALVES:** Head Diameter Stem Diameter Length  
Intake ..... 1 11/32" ..... 5/16" ..... 4 11/32"  
Exhaust ..... 1 9/32" ..... 5/16" ..... 4 11/32"

Seat Angle Lift Stem Clearance  
All Valves ..... 45° ..... 5/16" ..... .0015-.0035"

Valve Guides: Pressed in block from above with top of guide 1 3/16" below top of block. Finish ream guides to inside diameter of .312-.3125". Use Valve Stem Guide Remover and Replacer Tool J-2034. Replace worn guides if clearance greater than .0035".

Valve Springs: Install with closed coil end up. Replace springs if more than 10% weaker than test pressure of 77-85 lbs. at 1 7/16" (U-15 or other accredited tester). Spring free length 2 3/32".

Spring Pressure Length

Valve Closed ..... 52-56 lbs. .... 1 21/32"

Valve Open ..... 90-94 lbs. .... 1 11/32"

NOTE—Install valve spring retainer with flange engaging flat surface on lower coil and tongue on inner diameter engaging groove in spring lock.

Valve Lifters: Mushroom type. Remove from below with camshaft out of engine. For *Camshaft Removal directions*, refer to *Studebaker Shop Notes*.

Valve Lifter Tension Spring—See "Valve System" in *Studebaker Shop Notes*.

Clearance—.0005-.00175".

Replacement Lifters—Furnished Std. size and .0005", .001" Oversize.

## VALVE TIMING

Tappet Clearance: .016" All Valves, Engine cold.

NOTE—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.

Valve Timing: See *Camshaft Setting* above.

Intake Valves—Open 15° BTDC. Close 49° ALDC.

Exhaust Valves—Open 54° BLDC. Close 10° ATDC.

Valve Timing Check—With .020" tappet clearance, #1 intake valve should open with #1 piston 15° or .8893" BTDC. with vibration dampener mark "IN. OP. 1-6/" in line with pointer on left side of timing gear cover. Reset tappet clearance to .016" Cold

## LUBRICATION

**Lubrication System:** Pressure to crankshaft, connecting rod, and camshaft bearings and to valve lifters. Timing gears lubricated by oil by-passed by pump. Crankcase Capacity—5 qts. ("Add Oil" point on oil level indicator stick is 3 qt. level).

Normal Oil Pressure—20-40 lbs. at 40 MPH.

Oil Pressure Relief Valve—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

Oil Pan Removal: See *Engine Removal* in *Studebaker Shop Notes* (recommended for pan removal).

Oil Pump: Helical gear type. Mounted externally on right hand side of crankcase.

Oil Pump Removal & Installation—See "Oil Pump" in *Studebaker Shop Notes*.

Oil Filter (Optl.): Fram Model F3-P2 (Std. Service), F4-P2 (Heavy Duty). Replacement Cartridge Kit Studebaker No. 520829 (F3-P2), 520830 (F4-P2).

Oil Pressure Gauge: Stewart-Warner Bourdon tube (not electric) type. Studebaker No. 522179.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).

Servicing—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—Filter in outlet pipe removed by taking out cotter pin.

## COOLING

**Cooling System:** Positive circulation with water pump mounted on front of block with fan.

**Capacity**—10 quarts (11 qts. with Climatizer)

**Water Pump:** Packless, sealed ball bearing type.

*See Water Pump Section for complete data.*

**Removal**—Slack off drive belt, take out capscrews in the fan pulley hub & remove fan blades. Disconnect hose connection, take out mounting screws in pump body flange, withdraw pump from engine. **Belt Adjustment**—*See Generator Belt Adjustment.*

**Thermostat:** Bishop & Babcock. In water outlet on cylinder head.

**Setting**—Starts to open at 151-155°F.

**Temperature Gauge:** Stewart-Warner Bourden tube type (not electric). Studebaker No. 522180.

## CLUTCH

**Borg & Beck Model 8A7 with Borglite Driven Member.** Single plate, dry disc type. NOTE—Clutch assembly marked by number 980 stamped on cover. *See Clutch Section for complete data.*

**Facings**—Moulded Metallic type, 2 required, I. D. 5 $\frac{3}{8}$ ". O. D. 8". Thickness  $\frac{1}{8}$ ".

► **CAUTION**—Special driven member used on cars with Overdrive. Identify each type by hub damper spring color as follows:

Damper Spring Color.

Cars with Conventional Trans.....2 Lavender, 2 Black

Cars with Overdrive Trans. ....4 Lavender

**Pedal Adjustment:** Pedal free travel  $\frac{1}{2}$ " to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

Cars before Serial No. G-217064—Pedal free travel must be set to  $\frac{1}{2}$ " to  $\frac{3}{4}$ " on these cars.

**Hill-Holder Note**—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages.

*See Studebaker Shop Notes for Clutch Release Shaft Lubrication and Hill-Holder Adjustment.*

**Removal:** Car manufacturer recommends Engine (with clutch attached) be removed. *See "Engine Removal" in Studebaker Shop Notes.* Block release levers. Remove six mounting screws in clutch cover flange, lift off clutch assembly and driven member.

## TRANSMISSION

**Warner Model AS1-T96 (Std.), AS2-T96 with R10B type Overdrive (Optl.).** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

*See Transmission Section for complete data.*

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

*See Transmission Section for complete data.*

**Removal:** Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

## OVERDRIVE

**Warner Type R10B (part of AS2-T96 Transmission).** New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."

*See Transmission Section for complete data.*

**Overdrive Solenoid**—Warner Model No. 3AR10B-62, Studebaker No. 521429.

**Overdrive Governor**—Warner Model No. AR10B-72, Studebaker No. 520454.

**Control Relay**—Auto-Lite HRT-4001, Studebaker No. 523297.

**Throttle Kick-down Switch**—Studebaker 515667.

**Lock-out Switch**—Studebaker No. 521436.

**Fuse**—20 ampere. On Overdrive Relay.

**Removal:** See Std. Transmission Removal data

## UNIVERSALS

**Spicer Model 1268-110X (Front & Rear), 1261-102X intermediate).** Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft) *See Universals Section for complete data.*

**Propeller Shaft & Support Bearing:** Two shafts used:

1) Front Shaft with intermediate universal yoke bolted on rear end (no slip-joint).

2) Rear Shaft with slip-joint on forward end at intermediate universal.

**Propeller Shaft & Support Bearing Removal & Servicing**—*See "Propeller Shaft" in Studebaker Shop Notes.*

## REAR AXLE

**Spicer Salisbury Model 23.** Semi-floating, Hypoid Gear type with Hotchkiss Drive. *See Rear Axle Section for complete data.*

**Ratio**—4.1-1 Std. 4.56-1 Optl. (Std. with Overdrive).

**NOTE**—Rear axle ratio stamped on plate attached to axle by cover capscrew.

**Backlash**—.005-.007" Shim adjustment.

**Removal:** Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

**Axle Shaft Removal**—Remove wheel, remove wheel hub (use puller J-446-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with Puller HM-931.

**Wheel Bearing Adjustment:** Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Endplay—.001-.005".

## SHOCK ABSORBERS

**Houde (Houdaille).** Double acting, hydraulic type. Front—Houde No. A-14269, Studebaker 523646.

Rear—Houde No. A-11478 (Left), A-11477 (Right), Studebaker No. 517696 (Left), 517695 (Right).

*See Shock Absorber Section for complete data.*

**Adjustment:** Adjusting pointer on end of shaft should be lined up with scribed line on end of shaft. Turn pointer clockwise for firmer action, counter-clockwise for softer action (not more than 1/32-1/16").

**Refilling:** Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—Use only Houdaille Shock Absorber Fluid No. L-1404 (new type fluid for shock absorbers with new circular top filler plug)

## FRONT SUSPENSION

**Front Suspension:** Planar type independent suspension with transverse spring. NOTE—Suspension system has lower control arms (with leaf spring).

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—5 $\frac{1}{2}$ " crosswise.

**Caster**—0° to Positive 1°. Not adjustable.

**Camber**— $\frac{1}{2}$ "  $\pm$   $\frac{1}{4}$ ". Shim adjustment (shims between upper control arm brackets and frame). One thin shim changes setting approx.  $\frac{1}{4}$ ". Thick shim equals 4 thin shims.

**CAUTION**—Add or remove shims equally at front and rear brackets when adjusting Camber.

**Toe In**—1/16- $\frac{1}{8}$ ". Adjust right hand tie rod only for toe in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. RHD Car Note—Make toe-in adjustments on left hand tie rod.

## STEERING GEAR

**Ross Model T-12 Cam-and-Twin Lever type.**

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes are new design with automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes. NOTE—New type actuating spring used on brake shoe contact plug on 1948 cars (replaces hairpin locks and contact plug coil spring).

*See Brake Section for complete data.*

**Drums**—Composite type. Diameter 9".

**Clearance**—Adjustment necessary only when new linings installed. *See Brake article in Brake Section.*

**Lining**—Moulded type (all shoes). Width 2". Thickness 3/16". Length per wheel 18.5".

**Braking Power**—57% Front. 43% Rear.

**Hand Brake:** See Service Brake data (above).

**Hill-Holder:** Optional Equipment on all models.

*See Brake Section for complete data.*

**Adjustment**—*See Studebaker Shop Notes.*

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive *See Miscellaneous Section for complete data.*

**HOOD LOCK, LOCK ADJUSTMENT, HOOD ASSEMBLY ALIGNMENT:** See *Studebaker Shop Notes*.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on left front door lock pillar post.

	South Bend	Los Angeles
1947 Numbers	4232501 Up.....	4818501 Up
1948 Numbers	4287001 Up.....	4820501 Up

Body Symbol Letter—Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan; Y, Land Cruiser.

**ENGINE NUMBER:** Stamped on pad on upper front left corner of engine block.

1947 Numbers H-182001 Up. 1948 Nos. H-239001 Up

### TUNE-UP

**COMPRESSION PRESSURE:** 105 lbs. at 150 RPM. cranking speed for Std. 6.5-1 Head.

**VACUUM READING:** Steady 18-20" idling at 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4.

**SPARK PLUG GAPS:** .025" Limits .0225-.0275".

Plug Type—Champion Type J7 or J9. 14 mm.

**IGNITION:** See *Coil, Condenser, and Distributor*.

Breaker Gap—.020". Limits .018-.022".

Cam Angle or Dwell—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See *Distributor*.

**IGNITION TIMING:** 2° (9/64") BTDC.

Timing Procedure—See *Ignition Timing*.

**Timing Mark:**—Vibration Dampener mark "IGN/" aligned with pointer on gear case cover. NOTE—Insert .020" feeler between modifier control arm and clamp arm before tightening clampscrew (to prevent binding).

**Octane Selector Setting:**—Set to just eliminate ping when engine hot and pulling hard.

**CARBURETION:** See *Carburetor & Carb. Equipment*.

**Idle Setting:**—Idle screw set for smooth idle. Turn screw out for richer mixture.

**Idle Speed:**—8-10 MPH. at normal operating temp.

**Float Level:**—Fuel level  $\frac{3}{8}$ " below top edge of float bowl with engine idling.

**Accelerating Pump:**—Center hole (med. stroke) Normal all-season setting. Inner hole (min.)—Summer, Outer hole (max.)—Winter used for temperature extremes.

**Fuel Pump Pressure:**—4-5 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type operating in stainless steel bushings.

**Setting:**—To test coil tension, free outer end of coil from bracket on manifold. With valve closed, hooked end of coil should be approx. 90° from bracket at 70°F. Replace coil if incorrect.

**NOTE:**—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings.

**VALVE TAPPET CLEARANCE:** .016" All Valves, Cold. Valve Timing Check—See *Valve Timing*.

**STARTING:** See *Battery, Starter, Generator, Regulator*.

### IGNITION

**IGNITION SWITCH:** Mitchellock Switch Model 42-R. No. E-10336 (for Y & T lock) or E-10522.

Ignition Lock—Yale & Towne.

**COIL:** Auto-Lite ('47) CE-4032, ('48) CE-6007. On eng. above distributor (under spark plug cable bracket). Ignition Current— $\frac{1}{2}$ -1 $\frac{1}{2}$  amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671.

Capacity—20-25 microfarad

**DISTRIBUTOR:** Auto-Lite Model IGC-4802. Full automatic Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

Degrees	Distr.	Automatic Advance	Eng.	Degrees	R.P.M.
Start		400	0		800
2		600	4		1200
5		900	10		1800
8		1200	16		2400
10		1400	20		2800

**Octane Selector:**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See *Ignition Timing* following for adjustment.

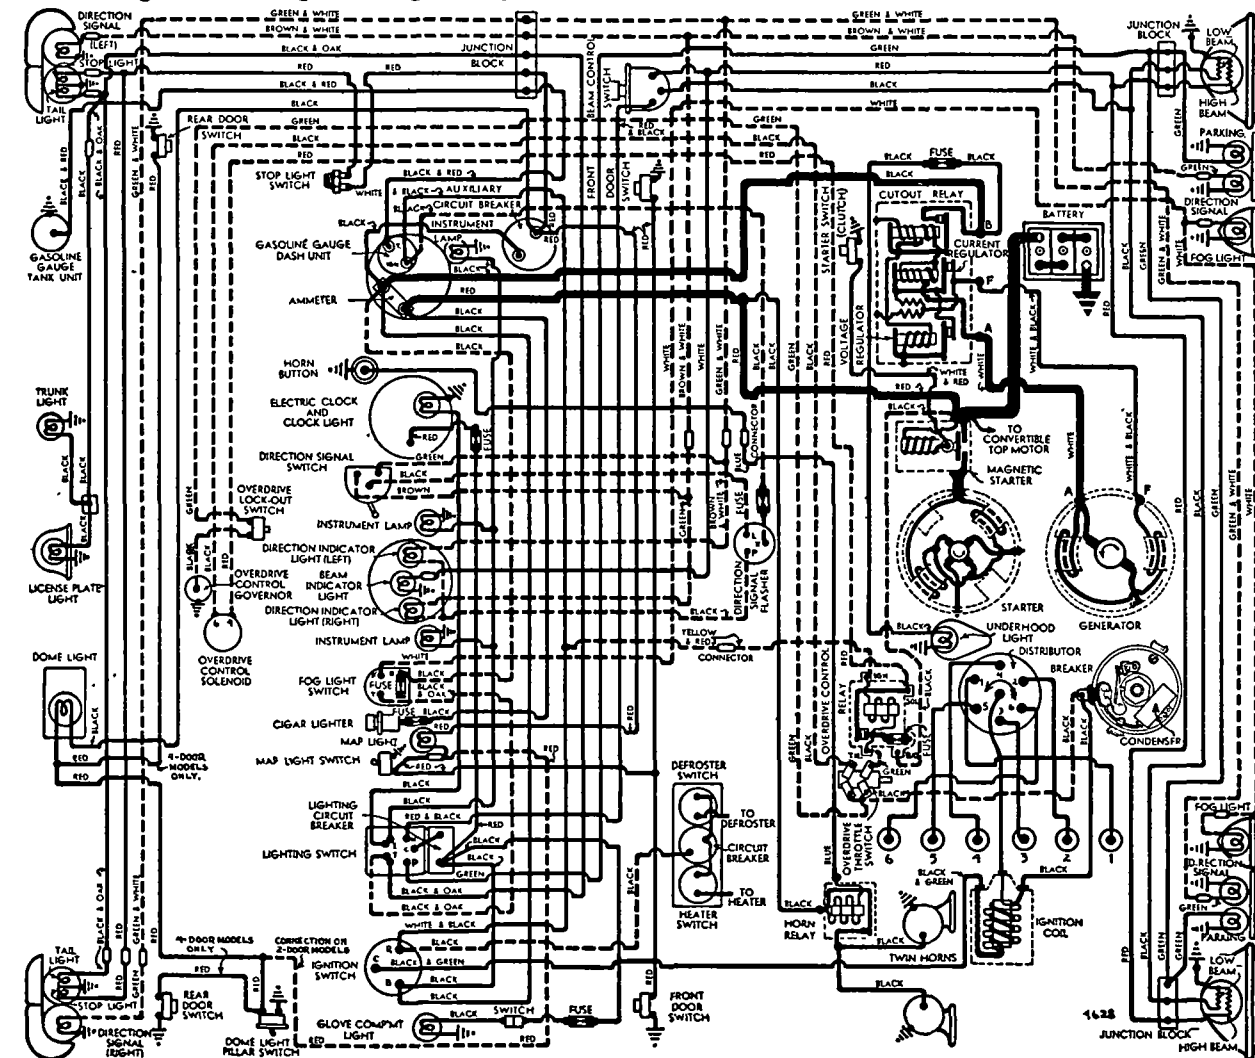

**Vacuum Spark Control:** Auto-Lite VC-4004. On hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring).

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3"
2°	4°	5"
3°	6°	6"
5°	10°	10"
6°	12°	12"

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note:**—When installing distributor, crank engine to firing position for #1 cylinder ('IGN' on vibration dampener in line with pointer on timing gear cover), sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is 30° from the horizontal and offset toward the top, turn rotor to #1

segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening clamp, to prevent binding), check timing.

### IGNITION TIMING

**Std. Setting** Flywheel Degrees—Piston Pos. All Engines.....2° (9/64") BTDC.....0016" BTDC This setting correct for regular fuel (see Octane Selector Setting for service and fuel modification) **Timing (with Neon Timing Light)**—Neon Light No. 890 recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct light on vibration dampener (at pointer on timing gear cover). Loosen hold-down plate screw, center scale on pointer, tighten screw. Loosen clamp arm, rotate distributor until 'IGN' mark on vibration dampener lines up with pointer on timing gear cover. Insert .020" feeler between modifier control arm and clamp arm before tightening clamp (to insure clearance for modifier control arm). Check Octane Selector **Timing (without Neon Timing Light)**—Turn engine over to firing position for #1 piston with 'IGN' mark on vibration dampener in line with pointer on timing gear cover and distributor rotor opposite #1 segment in distributor cap. Adjust distributor. **Octane Selector Setting**—After setting ignition timing (above), loosen selector hold-down screw, advance selector (move toward 'A' end of scale) until motor 'pings' when it is hot and pulling hard. Then retard until ping just disappears.

### CARBURETOR

**Stromberg Model BXOV-26**. 1¼" Single Barrel, Downdraft, with Fast Idle & Automatic Choke. Code No. (on bowl cover)—6-104.

See Carburetor Section for complete data.

**Settings (Idle Settings, Float Level, & Accelerating Pump)**: See Tune-Up data.

**Metering Jet**—Refer to Carburetor Index for Stromberg Downdraft Carburetor Jet Specification Table.

**Fast Idle**: Stromberg BXOV-26 carburetor type. See Carburetion Equipment Section for data.

**Fast Idle Setting**—To check, hold stopscrew against lowest step of fast idle cam, move choke valve as far as possible toward closed position, check valve opening with 11/32" drill. Adjust by bending connector

**Automatic Choke**:—Stromberg BXOV-26 type. See Carburetion Equipment Section for data.

**Automatic Choke Setting**—'R' mark on thermostat cover in line with highest projection on housing. Shift to 'M' if engine loads up or overchokes. Use 'H' setting only if highly volatile fuels used.

### CARB. EQUIPMENT

**Air Cleaner**: AC No. 1544024 Oil-wetted type Std. Filter Element AC #6. Oil-bath Cleaner Optl.

**Servicing (Oil-wetted Type)**—Clean and re-oil filter element at 1000 mile intervals or as required.

**Servicing (Oil-bath Type)**—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

**Fuel Pump (Std. 1947)**: AC type. Studebaker No. 520752 (523048 for RHD cars).

► **NOTE**—Oil pump vacuum booster (for windshield wiper operation) used on 1947 cars only.

(Std. 1948—Fuel-&Vacuum) AC type. Studebaker No. 523827.

Pressure—4-5 lbs. maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge**: Stewart-Warner Electric type.

**Dash Unit**—Studebaker No. 522177.

**Tank Unit**—Studebaker No. 519423.

See Carburetion Equipment Section for data.

### BATTERY

**Willard Type HW-1-100**. 6 volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five

**Second Voltage** 4.3 volts.

**Grounded Terminal**—Positive (+) to cylinder head.

**Dimensions**—Length 9 3/64". Width 6 13/16".

**Height** 8 5/8".

**Location**—In engine compartment on left side.

### STARTER

**Auto-Lite MAW-4020**, MAW-4020A or MCH-4001.

**Armature**—MAW-2091 (for MAW) or MCH-2006.

**Drive**—Barrel Type Bendix Drive No. A1729 (MAW Starters), No. A1792 (MCH Starter).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—130 RPM, approx. 175 amperes at 5.0-5.5 volts.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
18.0 "	Lock	4.0	670

**Removal**:—Starter flange mounted on engine rear plate, on left side. To remove, take out flange mounting screws, remove starter assembly.

**Starting Switch**: Magnetic switch mounted on starter and controlled by Auto-Lite Model SW-4016 manual switch. Manual switch is mounted on toeboard and operated by clutch pedal when fully depressed.

### GENERATOR

**Auto-Lite Model GDZ-4805A**. Armature No. GDZ-2006F. Two brush type with current-voltage control. **Charging Rate Adjustment**—None. See Regulator. **Maximum Charging Rate**—35 amperes, 8.0 volts, 2250 Gen. RPM (hot), at car speed 25.8 MPH and up with load or discharged battery (regulator setting).

Cold		Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal**:—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**:—Loosen pivot and clamp bolts, move generator out until 3/8-1/2" belt deflection midway between generator and fan pulleys is obtained.

### REGULATOR

**Auto-Lite Model VRP-4004F**. Volt & Current Type. Consists of Cutout Relay and vibrating type Voltage & Current Regulators in case on dash.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

#### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts), 10.4 MPH.

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

#### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

#### Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover). **Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

### LIGHTING

**Headlamps**: Corcoran-Brown "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.). **Beam Indicator**—At center of speedometer dial. Lighted whenever Country (upper) beams in use.

**Direction Signal**: See Electrical Equipment Section.

**Direction Signal Indicators**—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

#### Switches

**Lighting**—Douglas. Studebaker No. 519798.

**Beam Selector**—Delco-Remy No. 1997008, Studebaker No. 519246.

**Stop Light**—Studebaker No. 666858.

**Direction Signal**—Studebaker No. 520304.

#### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking	3	63
Direction Signal (Front)	21-3	1158
Beam Indicator	1	51
Dirac. Signal Indicator	1.5	55
Instrument, Glove Compt.	1.5	55
Underhood, Trunk	1.5	55
Map, Dome	15	88
Stop & Tail	21-3	1158
Direction Signal (Rear)	21	1129
Rear License	3	63

### MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER (On Light Switch)**: Studebaker No. 522014. 30-ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.

**Auxiliary Circuit Breaker (On Instrument Panel)**: Studebaker No. 519825 (1947), 523056 (1948). 15-ampere type. Protects Body & Stop Lamps.

C NTINUED ON NEXT PAGE

## C NTINUED FROM PRECEDIN PA E

**ACCESSORY CIRCUIT BREAKER:** One 15-ampere type used on cars with Climatizer and Defroster.

**FUSES:** Clock—3 ampere. In clock lead.

Direction Signal—14 ampere. In Fasher lead.

Overdrive—20 ampere. On Overdrive Relay.

Glove Compt. Light—5 ampere. In lamp lead.

Under Hood Light—5 ampere. In lamp lead.

Fog Lights—20 ampere. On Fog Light Switch.

**HORNS:** Sparton or Delco-Remy No. 1999610 (High Note), 1999611 (Low Note). Twin Airtone type horns operated by relay. Horn Current—12-15 amps (ea.).

**Horn Relay:** Delco-Remy No. 1116775.

Contacts Close—2.75-4.0 volts.

Contact Gap—.025". Air Gap—.015" (contacts closed).

## ENGINE

**ENGINE REMOVAL for Oil Pan Removal and all major engine work:** See *Studebaker Shop Notes*.

**ENGINE SPECIFICATIONS:** Six cylinder, "L" Head.

Bore—3 5/16". Stroke—4 3/4".

Displacement—226.2 cu. ins. Rated H.P.—26.35.

Developed Horsepower—94 at 3600 RPM.

Compression Ratio—6.5-1 Std., 7.0-1 Optl. iron hds.

NOTE—7.0-1 Head for 5000 ft. & higher altitudes.

Compression & Vacuum Reading—See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Studebaker Shop Notes*.

**TIGHTENING TORQUES:** See *Studebaker Shop Notes*.

**CYLINDER HEAD INSTALLATION:** See *Studebaker Shop Notes*.

**PISTONS:** Lynite aluminum alloy, Cam-ground, T-slot, bearing-metal plated type. Length 3 3/4".

Weight—14.4 ozs. (stripped).

Clearance—Selective Fit (see *Fitting Pistons*).

Removal—Pistons and rods removed from above.

NOTE—Car manufacturer recommends that cylinders out-of-round or tapered more than .002" be re-conditioned.

**Fitting New Pistons:** Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 14-19 lbs.

**Replacement Pistons:** See *Studebaker Shop Notes*.

**Installing Pistons:** T-slot away from camshaft.

**PISTON RINGS:** Two compression, one oil control ring per piston, all above pin. Oil drain holes provided in oil ring groove.

Ring

Width End Gap Side Clearance

Comp. (#1,2) ..... 3/32" ..... .009-.014" ..... .0015-.002"

Oil Contr. (#3) ..... 3/16" ..... .009-.014" ..... .0015-.002"

**Installing Rings:** Beveled side of compression rings (Sealed Power) up.

**Replacement Rings:** Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

**PISTON PIN:** Diameter .8741-.8745". Length 2 7/8". Pin is locked in rod by tapered pin and locknut.

**Installing Pins:** Use Pin Assembly Tool J-1293. Install clamp bolt nut and star washer on heavy boss side of rod. NOTE—Threads on opposite end of clamp bolt used only to remove bolt from rod (install nut on this end, tighten nut to pull bolt out of rod).

**Pin Fit in Piston—**.0001-.0003" clearance or light finger push fit at room temperature (70°F).

**Replacement Pins:** Std. & .0025", .005" Oversize. Use Hone PH-1 to obtain proper piston pin fit.

NOTE—Replacement pistons fitted with pins.

**CONNECTING ROD:** Length 8 1/8". Weight 33.3 ozs.

Crankpin Journal Diameter—2.18675-2.18775".

Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims.

Clearance—.0005-.002". Sideplay .005-.009".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.

NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.

**Palnut Installation—**See *Studebaker Shop Notes*.

**Replacement Bearings:** Bearings furnished Std. size and .001", .005", .010", .020" Undersize.

**Installing Rods:** Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number and oil hole in lower end of rod toward camshaft.

**CRANKSHAFT:** 4 bearing, 5 integral counterweights. Vibration dampener mounted on forward end.

**Vibration Dampener—**See *Studebaker Shop Notes*.

Journal Diameters—2.4995-2.5000".

**Bearings—**Removable steel backed, babbitt-lined type. No shims.

Clearance—.0005-.0025".

**Rear Bearing Oil Seals—**Consist of rubber ring, Studebaker No. 523134 (After Eng. No. H-269,723), on crankshaft; two rubber seal strips, Studebaker No. 522144, in grooves on top of bearing cap; and two specially treated wood strips, Studebaker No. 187106, in grooves on sides of bearing cap.

► **CAUTION—**Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** Furnished as sets or single bearings in Std. Size and .001", .010", .030" Undersize.

**End Thrust:** Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and main bearing journal. Adjust by changing shims furnished .003", .005", .007" thick.

Endplay—.003-.006".

**CAMSHAFT:** Four bearing type with helical gear Journal Diameters—#1, 1.9975-1.9980"; #2, 1.9662-1.9670"; #3, 1.9357-1.9365"; #4, 1.1232-1.1240".

**Bearings—**Split steel-backed, babbitted bushings.

NOTE—Oil hole in bushings must be aligned with oil holes in engine block.

Clearance—.0007-.0022" (#1), .0010-.0027" (others).

**Camshaft Removal:** See *"Camshaft & Bearings"* in *Studebaker Shop Notes*.

**End Thrust:** Taken by thrust plate assembled on front face of engine behind camshaft gear (spacer assembled back of gear hub).

Endplay—.004-.008" (or .004-.008" if new thrust plate and thrust spacer installed. Check thickness by which spacer exceeds plate (endplay)).

**Timing Gears:** Crankshaft gear Cast Iron. Camshaft gear Celeron with steel hub. Backlash—.001-.003".

**Replacement Gears—**Camshaft gear furnished in three sizes: Standard (marked "S"), High Limit (marked "H"), Low Limit (marked "L"). Crankshaft gear furnished Standard size only.

**Timing Gear Removal & Installation—**See *"Timing Gears"* in *Studebaker Shop Notes*.

**Camshaft Setting:** Mesh marked tooth of camshaft gear between two marked teeth on crankshaft gear.

**VALVES:** Head Diameter Stem Diameter Length

Intake ..... 1 15/32" ..... 11/32" ..... 5 7/32"

Exhaust ..... 1 9/32" ..... 11/32" ..... 5 7/32"

Seat Angle Lift Stem Clearance

All Valves ..... 45° ..... 11/32" ..... .0015-.0035"

**Valve Guides:** Pressed in block from above with upper end 1 5/32" below upper edge of valve seat and stepped end down. Ream guides to inside diameter of .3425-.3445". Replace worn guides when clearance exceeds .0035".

**Valve Springs:** Install with closed-coil end up. Replace springs if more than 10% weaker than test pressure of 125-135 lbs. at 1 3/4" (U-15 or other accredited tester). Spring free length 2 1/2".

Spring Pressure Length

Valve Closed ..... 54-60 lbs ..... 2 3/32"

Valve Open ..... 125-135 lbs ..... 1 3/4"

NOTE—Dampeners used on top of all springs.

**Valve Lifters:** Mushroom type. Remove from below with camshaft out of engine. For camshaft removal directions, see *Studebaker Shop Notes*.

**Valve Lifter Tension Spring—**See *"Valve System"* in *Studebaker Shop Notes*.

Clearance—.0005-.00175".

**Replacement Lifters—**Std. & .0005", .001" O.S.

## VALVE TIMING

**Tappet Clearance:** .016" All Valves, Engine Cold.

**Valve Timing:** See *Camshaft Setting* above.

**Intake Valves—**Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves—**Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check—**With .020" tappet clearance, #1 intake valve should open with #1 piston 15° or .0942" BTDC with vibration dampener mark "IN. OP. 1-6/" aligned with pointer on timing gear cover. Reset tappet clearance at .016" Cold.

## LUBRICATION

**Engine Oiling System:** Pressure to crankshaft, connecting rod, and camshaft bearings, and to valve lifters. Timing gears lubricated by oil by-passed by pump. Oil pump mounted externally on right side Crankcase Capacity—6 quarts.

**Normal Oil Pressure—**20-40 lbs. at 40 MPH.

**Oil Pressure Regulator—**On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

**Oil Pan Removal:** See *"Engine Removal"* in *Studebaker Shop Notes* (recommended for pan removal).

**Oil Pump:** Helical gear type mounted externally on right side of engine.

NOTE—Oil pump vacuum booster (for windshield wiper operation) used on 1947 cars.

**Oil Pump Removal & Installation—**See *"Oil Pump"* in *Studebaker Shop Notes*.

**Oil Filter:** Fram Model F4 or F30S. Replacement Cart-ridge Kit Studebaker No. 521948 (F4), 520831 (F30S).

**Oil Pressure Gauge:** Stewart-Warner Bourden Tube (not electric) type. Studebaker No. 522179.

**Crankcase Ventilation:** Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).

**Servicing—**Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—Filter in outlet pipe removed by taking out cotter pin.

## COOLING

**Cooling System:** Positive circulation with water pump mounted on front of block with fan.

Capacity—13 qts. (14 qts. with Climatizer).

**Water Pump:** Packless type. No lubrication required. See *Water Pump Section* for complete data.

**Removal—**Slack off drive belt, take out capscrews

in fan pulley hub and remove blades. Disconnect hose connection, take out mounting screws in pump  
**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat**: Fulton or Bishop & Babcock. In water outlet on cylinder head.

**Setting**—Starts to open at 151-155°F.

**Temperature Gauge**: Stewart-Warner Bourden Tube type (not electric). Studebaker No. 522180.

## CLUTCH

**Borg & Beck Model No. 9A7 with Borglite Driven Member**. Single plate, dry disc type.

**NOTE**—Clutch Assembly marked by number 943 See *Clutch Section for complete data*.

**Facings**—Moulded-metallic, 2 required. I.D. 6". O.D. 9 1/4". Thickness 1/8".

**Adjustment**: Pedal free travel 1/2 to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

**Hill-Holder Note**—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Adjusting nut and locknut at end of Hill-holder operating rod.

See *Studebaker Shop Notes for Clutch Release Shaft Lubrication and Hill-Holder Adjustment*.

**Removal**: Jack up rear end of car and rest on stands under rear axle. Remove transmission (see TRANSMISSION following). Disconnect one battery cable at battery take off starter and hang it clear of clutch housing. Remove clutch housing mounting cap-screws and bolts at top, working through opening in front floor. Free speedometer cable from frame cross-member and wire it up out of the way. Support rear end of engine with jack placed under oil pan at rear (CAUTION—Do not damage oil pan). Disconnect rear engine mounting by taking off nuts, bolts with insulators, washers, and spacers. Disconnect parking brake cable at bracket, clutch operating shaft from release shaft, and brake pedal return spring. Loosen exhaust pipe flange nuts at manifold, take off exhaust pipe support bracket at housing, loosen clamp and turn bracket for clearance. Remove rear engine support cross member. Take out clutch housing mounting bolts and remove housing. Block clutch release levers. Remove six mounting screws in clutch cover flange, lift off clutch assembly and driven member.

## TRANSMISSION

**Warner Model AS1-T86E (Std.), AS2-T86E with R10B type Overdrive (Optl.)**. All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section for complete data*.

**Transmission Control**: Remote control type with gearshift lever mounted on steering column.

See *Transmission Section for complete data*.

**Removal**: Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all

control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

## OVERDRIVE

**Warner Type R10B (part of AS2-T86E transmission)**. New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."

See *Transmission Section for complete data*.

**Overdrive Control Units**—Same as *Champion*. See 1947-48 Studebaker *Champion* pages for data.

**Removal**: See Std. Transmission Removal data

## UNIVERSALS

**Spicer Model 1268-111X (Front & Rear), 1261-102X (Intermediate)**. Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft) See *Universals Section for complete data*.

**Propeller Shaft & Support Bearing**: Two shafts used:  
1) Front Shaft with intermediate universal yoke  
2) Rear Shaft with slip-joint on forward end at intermediate universal.

**Propeller Shaft & Support Bearing Removal & Servicing**—See *Studebaker Shop Notes*.

## REAR AXLE

**Spicer Salisbury Model 41-2. Semi-floating, Hypoid Gear type with Hotchkiss Drive**.

See *Rear Axle Section for complete data*.

**Ratio**—4.09-1 Std., 4.55-1 Optl. (Std. with Overdr.).

**NOTE**—Rear axle ratio stamped on plate attached to axle by cover cap screw.

**Backlash**—.005-.007" Shim adjustment.

**Removal**: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

**Axle Shaft Removal**—Remove wheel, remove wheel hub (use puller J-596-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft assembly (Puller HM-931).

**Wheel Bearing Adjustment**: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Endplay—.001-.005".

## SHOCK ABSORBERS

**Houde (Houdaille)**—Double acting, hydraulic type. Adjustable type with thermostatic control on rear. Front (All)—Houde No. A-14269, Studebaker 523646. Rear (exc. Conv.)—Houde No. A-14174, Studebaker 523497.

**Rear (Convertible only)**—Studebaker No. 523538 (Right), 523539 (Left).

See *Shock Absorber Section for complete data*.

**Adjustment (Front)**: Pointer on end of shaft should be lined up with scribed line on end of shaft. Turn pointer clockwise for firmer action, counter-clockwise for softer action (not more than 1/32-1/16"). (Rear Shocks)—Remove cap on end of shaft to expose adjusting screw. Slot aligned with scribe mark between "0" and "S" mark is original factory setting. Use special tool No. T-2860 (do not use screw-driver). Turn screw clockwise (toward "S") for firmer action, counter-clockwise (toward "0") for softer action (not more than 1/32" at a time).

**Refilling**: Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—Use only Houdaille Shock Absorber Fluid No. L-1404 (new type fluid for shock absorbers with new circular top filler plug

## FRONT SUSPENSION

**Front Suspension**: Planar type independent suspension with transverse spring. NOTE—Suspension system has lower control arms (with leaf spring).

See *Front Suspension Section for complete data*.

**Kingpin Inclination**—5 1/2° crosswise.

**Caster**—(Early 1947) 0° to Pos. 1/2°. Not adjustable. (Late '47 & 1948) Neg. 2° to Neg. 3°. No adjustment.

►1947 Serial Nos. when Caster changed—See "Front Suspension Notes" in *Studebaker Shop Notes*.

**Camber**—1/2° ± 1/4°. Shim adjustment (shims between upper control arm brackets and frame). One thin shim changes setting approx. 1/4°. Thick shim equals 4 thin shims.

CAUTION—Add or remove shims equally at front and rear brackets when adjusting Camber.

**Toe In**—1/16-1/8". Adjust right hand tie rod only for toe in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. RHD Car Note—Make toe-in adjustments on left hand tie rod.

## STEERING GEAR

**Ross Model T-14 Cam-and-Twin Lever type**.

See *Steering Gear Section for complete data*.

## BRAKES

**Service**: Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes are new design with automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes. NOTE—New type actuating spring used on brake shoe contact plug on 1948 cars (replaces hairpin locks and contact plug coil spring).

See *Brake Section for complete data*.

**Drums**—Composite type. Diameter 11".

**Clearance**—Adjustment necessary only when new linings installed. See *Brake article in Brake Section*.

**Lining**—Moulded type (all shoes). Width 2". Thickness 3/16". Length per wheel 22 1/4".

**Braking Power**—57% Front, 43% Rear.

**Hand Brake**: See Service Brake data (above).

**Hill-Holder**: Std. See *Brake Section for complete data*.

**Adjustment**—See *Studebaker Shop Notes*.

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL**: Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive See *Miscellaneous Section for complete data*.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number—(61) 61101 (U.S.), 61C101 (Canada); (62) 62101 (U.S.), 62C101 (Canada). Stamped on plate on dash under hood.

**ENGINE NUMBER:**—First number—157,000. Stamped on left side of cylinder block opposite #6 cylinder.

## TUNE-UP

**COMPRESSION:**—Ratio 6.0-1 Std. cast-iron head, 7.0-1 Optl. high compression aluminum head. Check compression pressure by removing all spark plugs and cranking engine with throttle wide open.

Cylinder Head	Compression Pressure
Std. 6.0-1	111 lbs. at 215 R.P.M.
Optl. 7.0-1	127 lbs. at 207 R.P.M.

**VACUUM READING:**—Gauge should show steady reading of 18-19" of HG with engine idling at 350 RPM.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 (Std. 6.25-1 Eng.), Type J-9 (Optl. 7.0-1 Eng.). 14 mm. Metric type. Gaps—.025" (Std. Eng.), .022" (Optl. Eng.).

**IGNITION:** See Coil, Condenser, and Distributor. Breaker Gap—.020". Cam Angle—38° (closed). Automatic Advance—14° max. at 1580 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing. Std. Setting—At TDC with flywheel mark 'UDC.1-6/' at indicator in inspection hole in left front face of housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw ½-1 turn open (329-S), ¼-1 turn open (331-S). Idle speed 350 RPM or 7 MPH. Float Level—¾" from gasket seat on cover to top of float at free end (invert to check). Accelerating Pump—Center hole (medium) Normal. Inner hole (Summer), Upper hole (Winter) for extreme temperatures.

Fuel Pump Pressure: 3½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.006" Int., .008" Exh., Hot.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

## IGNITION

**Ignition Switch:**—Mitchelllock Model 24-B, Type 6696. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton No. 50184, Mitchell No. 6095.

**COIL:** Auto-Lite Model IG-4633. Resistor unit mounted on distributor terminal is connected in series with coil primary.

**Resistance Unit:**—Part No. SP-4008.

Coil Draw—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025J.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGB-4301-B. Single breaker, 6 lobe cam, full automatic advance type. Breaker Gap—Set at .020". Limits .018-.020". Cam Angle or Dwell—38° closed, 22° open (distr.). Breaker Arm Spring Tension—16-20 ounces.

### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	300	0 .....	600
3 .....	400	6 .....	800
5 .....	615	10 .....	1230
10 .....	1150	20 .....	2300
14 .....	1580	28 .....	3160

**Distributor Removal:**—Mounted on right side of crank case. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting for all engines as shown. See Final Setting Section for adjustment in accordance with octane rating of fuel used.

**Flywheel Degrees**                      **Piston Position**  
At TDC.                                      .000" TDC.

**NOTE:**—High octane type fuel must be used in engines with high compression 7.0-1 aluminum head.

**To Set Timing (Initial Setting):**—With #1 piston on compression, turn engine over until flywheel mark 'UDC.1-6/' lines up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of advance arm slot, then slowly rotate distributor counter-clock-

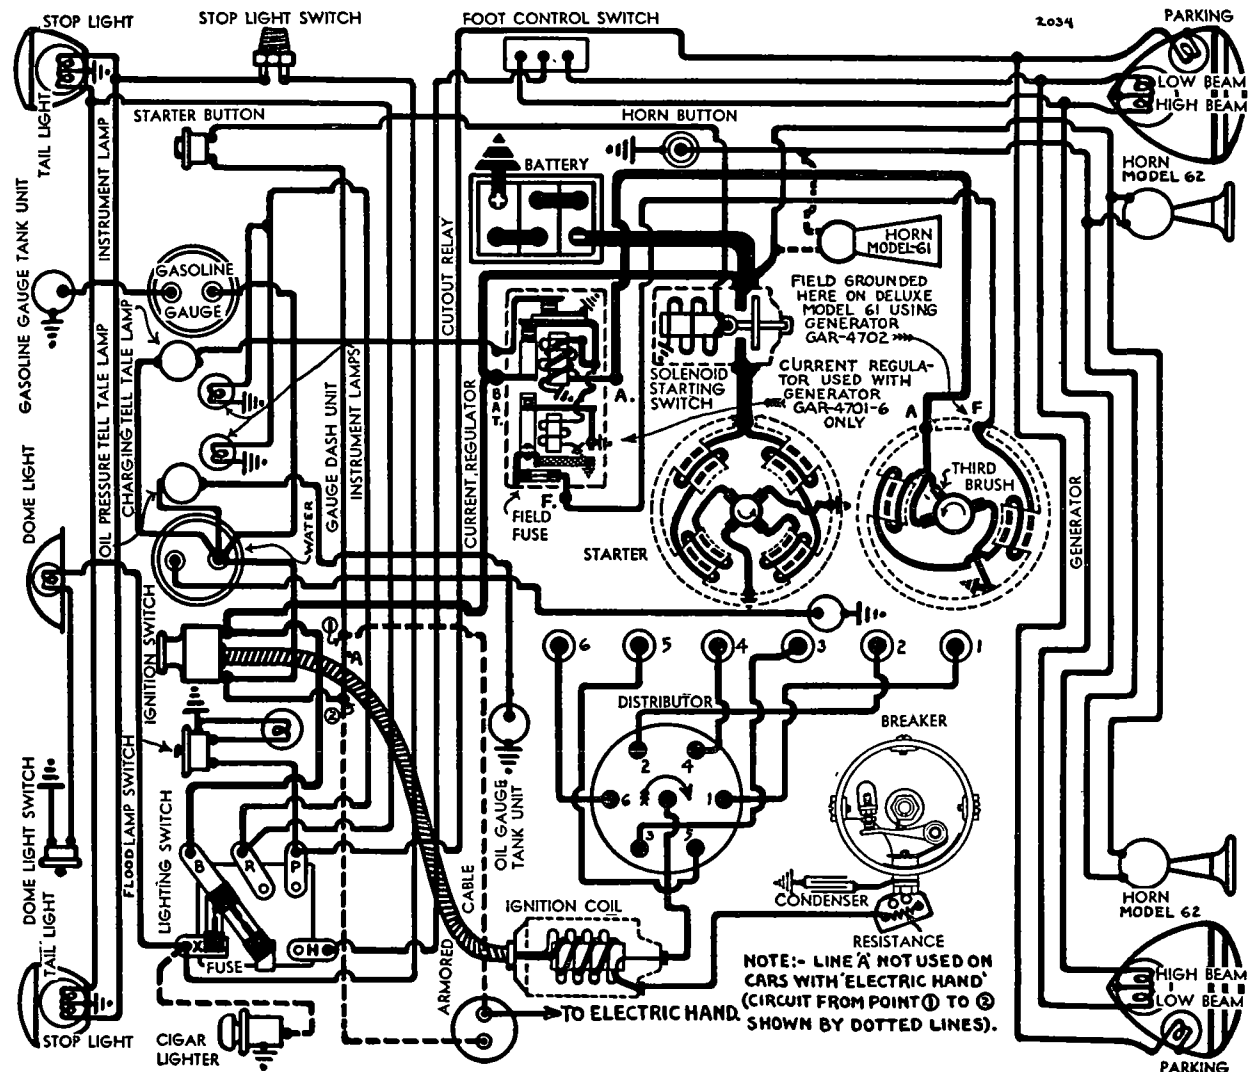

wise until contacts begin to open, tighten hold-down screw.

**Final Setting:**—Check ignition setting by road testing car. With engine warm and running in high gear on level road, a slight spark knock should be evident when car is accelerated from 10-15 M.P.H. with wide open throttle. Adjust by loosening hold-down screw in advance arm and rotating distributor one graduation on scale counter-clockwise (if no knock evident) or clockwise (if knock too severe). Repeat test until slight knock is evident. Final setting must not be more than ¾" on flywheel before 'UDC.1-6/' mark.

## CARBURETOR

**CARBURETION:**—Carburetor—(61) Carter Mod. 331-S, (62) Carter Model 329-S, 1¼" downdraft types. See Carburetion Section for complete adjustment, overhaul and Jet Specifications.

For complete data, refer to Carburetor Index.

**NOTE**—Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

**Idle Adjustment**—Adjust throttle stop screw so that speed is 350 R.P.M. or 7 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 1/4-1 (331-S), 1/2-1 (329-S) turn open from seated position. Readjust throttle stop screw for correct idling speed.

**Accelerating Pump Setting**—Pump lever (under dust cover at top of carburetor) has three holes for pump link engagement. Change for seasonal requirements as follows:

Center Hole—Normal summer temperatures.  
Inner Hole (Min. stroke)—Extreme hot weather.  
Upper Hole (Max. stroke)—Extreme cold weather.

**Throttle Cracking (331-S only)**—Opens throttle valve .036-.040" with choke fully closed. No adjustment.

**Fast Idle (329-S only)**—Integral with carburetor. No adjustment required. See article on Carter Fast Idle in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

**Automatic Choke (329-S only)**—Carter Climatic Control. See article in Carburetion Section.

*For complete data, refer to Carburetion Equip. Index.*

## CARB. EQUIPMENT

**Air Cleaner**—AC. #1526650 Std., #1526651 on cars with Electric Hand. Heavy duty oil-bath type optl.

**Fuel Pump**—AC. Type R #1521450. Diaphragm type. See 'Servicing AC Fuel Pumps' in Carburetion Equipment Section for recommended replacement pumps.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—King-Seeley Electric. K-S. No. 6190 (dash unit), No. 5835 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—National, Type ST-317X. 6 volt, 17 plate, 96 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left hand side under front floor.

## STARTER

**Auto-Lite Model MAB-4075.** Armature MAB-2113. Drive—Inboard Bendix (barrel), Type A-1673.

**Cranking Engine**—150 R.P.M., 120-125 amps. at 5 vs.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.	582
22.5 "	Lock	4.	775

**NOTE**—Lock Torque figures correct with ut switch.

**Removal**—Flange mounted on left front face of fly-wheel housing. To remove, take out flange mounting bolts.

**Starting Switch**—Solenoid Type SS-4001. Controlled by pushbutton switch (R.B.M. Model 1800) on dash. Operative with switch turned on. On cars with Electric Hand clutch must be disengaged to operate switch.

*For complete data, refer to Electrical Equipment Index.*

### Solenoid Switch

Closes with terminal voltage of 4 volts or less and will remain closed until voltage drops to .75-2.0 volts. Current draw 3 amperes at 6 volts.

## GENERATOR

**Auto-Lite Model GAR-4702 (Std. 61), GAR-4701-6 (Std. 62).** Armature No. GAR-2077. Third brush control type (Current Regulator or two-rate charging control used with GAR-4701-6 only). Ventilated by fan on drive pulley.

**Charging Rate Adjustment**—Use test meters to check generator output. On Mod. GAR-4701-6, short out regulator by connecting jumper wire from 'F' terminal on generator to ground. Take off commutator cover band, shift third brush by hand counter-clockwise to increase, or clockwise to decrease charging rate. Third brush held in position by friction. Remove jumper wire.

**NOTE**—Model GAR-4702 generator field terminal on generator frame is grounded by a grounding cup assembled on the terminal. If regulator is installed, this ground cup must be removed.

### Performance Data—GAR-4701-6

Cold—Regulator Inoperative—Hot					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	780	0	6.4	820
4	6.7	930	4	6.8	1000
8	6.95	1060	8	7.1	1180
12	7.25	1210	12	7.35	1400
16	7.6	1440	16	7.8	1790
22.8	8.0	2400	18.4	8.0	2700

### Model GAR-4702

Cold — No Regulator — Hot					
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	860	0	6.4	830
4	6.8	1000	4	6.85	1040
8	7.2	1200	8	7.3	1300
12	7.6	1480	12	7.75	1550
16	8.0	2150	14.5	8.0	2200

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—18-22 ozs. (new brushes).

**Field Current**—3.51-3.89 amperes at 6.0 volts (all).  
**Motoring Current**—4.84-5.36 amperes (GAR-4702), 5.32-5.88 amperes (GAR-4701-6) at 6.0 volts.

**Field Fuse**—5 ampere in knurled cup on side of regulator case (GAR-4701-6 only).

**Removal**—Pivot mounted at left front of engine, with fan belt drive. To remove, take out two pivot bolts and one clamp bolt.

**Belt Adjustment**—Swing generator away from engine until slack in belt midway between fan pulley and generator pulley is 1/4" (measure from straight edge across pulleys).

## CUTOUT RELAY

**Auto-Lite Model CBA-4003 (With GAR-4702 Gen.).** Mounted on dash. Extra set of ground contacts provided for generator charging tell-tale signal light.

*For complete data, refer to Electrical Equipment Index.*

**Cuts In**—6.5-7.25 volts.

**Cuts Out**—1.5-4.5 amperes discharge current after charging at 16 amperes.

**Contact Gap**—.015-.045" (with upper or ground contacts closed—ground contacts must be open with main contacts closed).

**Air Gap**—.010-.030" with contacts closed.

## REGULATOR

**Auto-Lite Model TC-4304A (With GAR-4701-6 Gen.).** Two-Charge Type. On dash. Consists of Cutout Relay and Current Regulator (two-rate charging control). See Equipment Section for complete data. Cutout Relay has extra set of ground contacts for generator charging tell-tale signal light control.

*For complete data, refer to Electrical Equipment Index.*

### Cutout Relay

**Cuts Out**—5-2.5 ampere discharge current.

**All other data** same as given for CBA-4003 above.

### Current Regulator

**Contacts Open**—8.0-8.50 volts at 70° F.

**Contacts Close**—1.2-1.4 volts below opening point.

**Contact Gap**—.005" minimum.

**Air Gap**—.045" with contacts closed.

## LIGHTING

**LIGHTING**—Headlamps—Hall, Pre-focused type. Head lamps aimed straight ahead (upper beams with lenses in place). Upper and lower beams controlled by foot selector switch.

### Switches

**Lighting**—R.B.M. Model 1650.

**Foot Selector**—R.B.M. Model 1082.

**Instrument Lights**—Soreng-Manegold Mod K2060A.

**Stop Light**—Motometer Model 58012-C. Hydraulic type mounted in brake line at left frame side rail in channel at rear.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Parking, Instrument	1	55
Signal Lights	1	51
Stop and Tail	21-3	1158
Dome	15	87

## MISC. ELECTRICAL

**SIGNAL LIGHTS**—Battery Charge Tell-tale and Oil Pressure Tell-tale lights mounted on instrument panel. See Equipment Section for complete data.

*For complete data, refer to Electrical Equipment Index.*

**FUSES**—Lighting—Two 20 ampere capacity on switch. Generator Field—5 ampere in regulator (on GAR-4701-6 only).

**HORNS**—E. A. Vibrator type. Twin horns on Model 62

## ENGINE

**ENGINE SPECIFICATIONS**—Type—6 cyl. 'L' head.

**Bore**—3". **Stroke**—5".

**Displacement**—212 cubic inches.

**Rated Horsepower**—21.6 (AMA).

CONTINUED ON NEXT PAGE

## ENGINE

## CONTINUED FROM PRECEDING PAGE

Developed Horsepower—88 at 3800 R.P.M. (Std. 6.0-1 head), 100 at 3800 R.P.M. (Optl. 7.0-1 head).

Compression Ratio & Pressure—To check pressures, remove spark plugs, crank engine with throttle wide open.

Std. 6.0-1 Head ..... 111 lbs. at 215 R.P.M.  
Optl. 7.0-1 Head ..... 127 lbs. at 207 R.P.M.

Vacuum Reading—Gauge should show steady reading of 18-19" of HG. with engine idling at 350 R.P.M. or 7 M.P.H.

NOTE—High Octane fuel must be used in engines with optional high compression 7.0-1 head.

**PISTONS:**—Own Lo-Ex aluminum alloy, 'T' slot, Cam ground type. Use finished replacement pistons when reconditioning engine. See Reconditioning paragraph. Weight—10.5 ozs. stripped. Stamped on piston head.

Length—3 3/16".

Removal—Pistons and rods removed from above.

Clearance—Top .016". Skirt .002". See Fitting New Pistons.

**Reconditioning Cylinders:**—Size of original bore indicated by letter stamped on lower edge of valve chamber opposite cylinder as follows: A-3.000", B-3.0005", C-3.001", D-3.0015", E-3.002", AO-3.010", BO-3.0105", CO-3.011", DO-3.0115", EO-3.012". Recondition cylinder to standard oversize for which replacement piston and rings are available (see piston and ring data below).

**Replacement Pistons:**—Standard and oversize pistons marked by letter on head available for cylinder bores of size indicated: 'B'-3.000&3.0005", 'D'-3.001&3.0015", 'F'-3.002 & 3.0025", 'J'-3.004", 'L'-3.005", 'BO'-3.010 & 3.0105", 'DO'-3.011 & 3.0115", 'FO'-3.012 & 3.0125", 'LO'-3.015", 'BB'-3.020", 'DD'-3.021", 'FF'-3.022". All pistons installed in engine must be of same weight as indicated by mark on head.

**Fitting New Pistons:**—Use .0015" feeler 1/2" wide on side opposite slot at right angles to pin bosses to check clearance. Tension to withdraw feeler must be 3-4 lbs.

**Installing Pistons:**—Slot toward left or away from camshaft.

**PISTON RINGS:**—Two compression, one oil ring above pin, one oil ring below pin per piston. Upper oil ring groove drilled with twelve 5/16" oil drain holes and two 5/16" holes to pins. Lower oil ring groove drilled with four 5/16" holes and two oil drain slots. Rings are straight cut and are positioned by pin in piston ring groove.

Ring	Width	End Gap	Wall Thickness
Comp.	3/32"	.005" Min.	.123"
Oil (both)	3/16"	.005" Min.	.128"

NOTE—Use standard or oversize rings of size indicated for replacement pistons (see Replacement Piston section above): 3.000"—B, D, F; 3.003"—J; 3.005"—L; 3.010"—BO, DO, FO; 3.015"—LO; 3.020"—BB, DD, FF. If rings are filed, clearance at pin must be kept uniform with end gap.

**PISTON PIN:**—Diameter 3/4". Length 2 7/16".

Pin floats in piston and rod. Held by locking ring at each end. Pin hole in rod is bronze-bushed. Pins furnished standard, .002", .005", .010" oversize.

**Pin Fit in Piston:**—Hand push fit with piston heated to 200° F.

**Pin Fit in Rod Bushing:**—.0003" clearance. With this clearance rod will just turn of own weight.

**CONNECTING ROD:**—Weight 29.4 ozs. Length 8 3/16".

Crankpin Journal Diameter—1 15/16".

**Lower Bearing:**—Spun-babbitt lined type. Rods serviced on 'exchange' basis.

Clearance—.001". Sideplay—.006-.010".

**Bearing Adjustment:**—Laminated shims. Do not file rods or caps.

**Installing Rods:**—Lower bearings are offset. Install rods with right hand offset (widest half of bearing toward rear) in cylinders #1, 2, 4, and rods with left hand offset (widest half of bearing toward front) in cylinders #3, 5, 6. Oil scoop on bearing cap must be toward camshaft on all rods.

**CRANKSHAFT:**—3 bearing. Integral counterweights.

See Hudson Shop Notes for Crankshaft and Vibration Damper removal, Main Bearing Removal, Installation and Line-Reaming data.

**Journal Diameters:**—#1, 2 11/32"; #2, 2 3/8"; #3, 2 13/32".

**Bearing Type:**—Removable bronze-backed, babbitt-lined. Bearings furnished for service reamed to standard size or unfinished (1/32" extra stock).

Clearance—.001".

**Bearing Adjustment:**—Shims. See Hudson Shop Notes.

**End Thrust:**—Taken by flanges on #2 (center) main bearing. Endplay .006-.012". Adjusted by replacing bearing.

**CAMSHAFT:**—Three bearing. Gear driven.

**Journal Diameters:**—#1, 2"; #2, 1 31/32"; #3, 1 1/2".  
**Bearing Clearance:**—.0015".

**End Thrust:**—Taken by spring-loaded plunger in end of camshaft and thrust plate on gear case cover.

NOTE—If gear case cover removed, see that spring and plunger are in place when cover is replaced.

**Timing Gears:**—Crankshaft gear cast-iron. Camshaft gear GE. or Cont. Diamond Fibre Bakelite.

1941 Hudson Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). See Hudson Shop Notes for data.

**Camshaft Setting:**—Gears are marked. Mesh marked tooth of crankshaft gear between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
All valves	1 1/8"	3/8"	5 11/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.003"
Exhaust	45°	11/32"	.003-.005"

**Valve Guides:**—Removable type. Pressed in block. Finish ream guides after installation to size giving correct clearance.

**Valve Springs:**—Dampeners originally used on bottom of all springs. Car manufacturer recommends that they be omitted when servicing valves.

	Spring Pressure	Spring Length
Valve Closed	44 lbs.	2"
Valve Open	102 lbs.	1 21/32"

**Valve Lifters:**—Slipper type operating in individual removable guides. Lifter is prevented from turning by pin in guide.

## VALVE TIMING

**Tappet Clearance:**—.006" Intake, .008" Exhaust (hot).

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 18°44' ATDC. These figures correct with .010" tappet clearance.

**To Check Timing:**—Set tappet clearance #1 intake valve at .010". This valve should open with piston 10°40' or .0562" before top dead center when point on flywheel approximately 3.94 teeth before 'UDC.1-6' mark lines up with indicator in hole in left front face of flywheel housing. Reset tappet clearance at .006" hot.

## LUBRICATION

**LUBRICATION:**—Duo-flow (splash) system. Force feed by oil pump to connecting rod troughs and timing gears. Splash to all other points from troughs.

**Normal Oil Pressure:**—3 lbs.

**Oil Pressure Regulator:**—Operates at 3 lbs. Located on right side of crankcase. Not adjustable.

**Crankcase Capacity:**—6 qts. refill.

**Oil Pump:**—Oscillating plunger type pump mounted on right side of crankcase and driven by gears from the camshaft.

**Oil Pressure Indicator:**—Consists of signal light on instrument panel and switch built in oil pressure regulator. See article in Equipment Section for complete data.

For complete data, refer to Electrical Equipment Index.

## CLUTCH

**CLUTCH:**—Own Make. Single plate, cork insert type operating in oil. Driven plate can be recorked but is customarily replaced.

See Clutch Section for complete data.

**Clutch Plate:**—Thickness .203". Inside diameter 5.375" Outside Diameter 8.625". Facing—90 cork inserts.

**Adjustment:**—Free movement of clutch pedal must be 1 1/2" at all times. To adjust, remove clevis pin in clutch pedal link rod (between frame and leg of 'X' member below clutch pedal shaft), loosen locknut at top of clevis, turn clevis to shorten or lengthen rod as required, tighten locknut, replace clevis pin. On cars with automatic clutch control, check linkage whenever clutch is adjusted.

**Automatic Clutch Linkage Adjustment:**—Hold accelerator pedal in depressed position, pull backward on clutch control power unit rod at left of engine. With rod in extreme rear position check clearance between back of slot in rod yoke and clevis pin which attaches it to operating lever. Clearance at this point must be 1/8".

**Servicing:**—Oil in clutch should be renewed at 5000 mile intervals. See Hudson Special Shop Notes for instructions.

## FRONT SUSPENSION

**Front Suspension:**—Conventional 'T' beam section front axle with Elliott type ends and semi-elliptic springs. Torque arm at each end of axle connected to frame at rear by rubber-bushed bolt maintains axle alignment.

**Kingpin Inclination:**—7° crosswise.

NOTE—Kingpin end thrust taken by five loose balls in upper bushing above kingpin. Ball seat formed in bushing and on kingpin end. To install kingpin, assemble sufficient shims to allow .006-.010" endplay below spindle, insert kingpin until it enters top bushing, drop the five thrust balls through the

lubrication fitting hole on top of bushing, insert driver J-479-1 in hole to position balls, drive king-pin up into place.

**Caster**— $3\frac{1}{2}$ – $4\frac{1}{2}$ °. To adjust, loosen nut on horizontal arm attaching torque arm to axle yoke, take out capscrew between arm and yoke at top, decrease shim thickness between arm and yoke to increase caster, or increase shim thickness to decrease caster. A difference in shim thickness of .060" changes caster by 1°. Shim thickness on both sides of car must be kept equal.

**Camber**— $1$ – $1\frac{1}{2}$ °. No adjustment. Axle may be bent cold for minor camber corrections.

**Toe In**— $\frac{1}{8}$ " ( $0$ – $\frac{1}{8}$ "). Adjusted in usual manner by loosening clamp bolts and turning tie rod.

**Steering Geometry**—Inner wheel turned 20°, outer wheel turned 17°. Check tie rod ends and steering arms for looseness, replace steering arms if bent.

## STEERING GEAR

**Steering Gear:** Gemmer Model. Worm-and-Sector type.

**NOTE**—An adjustable drag link with  $\frac{3}{4}$ " adjustment (made by shifting shims from front to rear of pitman arm ball seat) is used on Model 61 after #6110394 (except 6110601 to 6110650), Model 62 after #623419 (except 623506 to 623661 incl.).

*See Steering Gear Section for complete data.*

## BRAKES

**BRAKES:**—Service—Bendix hydraulic, Duo-Servo, Single Anchor type. Brake pedal connected to rear wheel brakes through cable linkage for additional reserve mechanical application of brakes. Hand lever applies rear wheel brakes through this same linkage.

*See Brake Section for complete data.*

**Brake Drum Diameters**— $10\frac{1}{16}$ ".

**Brake Lining**—Moulded & Woven type. Width  $1\frac{3}{4}$ ". Thickness  $7/32$ ". Length  $22\frac{1}{8}$ " per wheel.

**Brake Clearance**— $.010$ " heel and toe of each shoe.

**Brake Pedal Adjustment:**—For correct mechanical follow-up feature, adjust position of nut on connecting rod so that clearance between face of nut and end of push rod is  $1\frac{29}{32}$ " with equalizer against stop.

**Hand Brake Adjustment:**—See Service Brakes.

## MISC. MECHANICAL

**AUTOMATIC SHIFT (ELECTRIC HAND):**—Bendix electro-pneumatic type. Optional equipment.

*See Transmission Section for complete data.*

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—First number 70-101 (Commercial 70), 71-101 (Deluxe 71), 72-101 (Super 72). On plate on right front door hinge pillar post.

**ENGINE NUMBER:**—First number 250,000 (all models). Stamped on left side of block opposite #6 cylinder.

## TUNE-UP

**COMPRESSION:**—Ratio—6.25-1 Std. cast-iron head. 7.0-1 Optl. 'Super Power Dome' aluminum alloy hd. NOTE—High octane fuel must be used with this hd. Pressure—Check pressure by removing all spark plugs and cranking engine with throttle wide open.

Cylinder Head	Compression Pressure
6.25-1	103 lbs., 170 R.P.M.
7.0-1	119 lbs., 170 R.P.M.

**VACUUM READING:**—18-20" steady reading with engine idling at 350 R.P.M. or 6 M.P.H.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8 (Std. 6.25-1 Eng.), Type H-10 (Optl. 7.0-1 Eng.). 14 mm. Metric type. Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle 35° (closed).

Automatic Advance—14° max at 1580 RPM (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC. with flywheel mark "UDC. 1-6/" at indicator in inspection hole in left front face of housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting (Single Carb.)—Idle screw ¼-1 turn open. Idle speed 6 MPH.

Idle Setting (Dual Carb.)—Both idle screws ¼-¾ turn open. Idle speed 6 MPH.

Float Level (Single Carb.)—¾" gasket seat on cover to top of float at free end (invert to check).

Float Level (Dual Carb.)—15/64" from gasket seat on cover to top of float at each end.

Accelerating Pump (Single Carb.)—Center hole (medium) Normal. Inner hole (Summer), Upper hole (Winter) for extreme temperatures.

Accelerating Pump (Dual Carb.)—Inner Hole for Summer, Outer—Winter. Requires partial dismantling of carburetor.

Fuel Pump Pressure: 4½ lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.006 Int., .008" Exh., Hot.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

## IGNITION

**Ignition Switch:**—Michellcock Model 24-B, Type 7063. Connected to coil by armored cable.

**Ignition Lock:**—Briggs & Stratton, Mitchell No. 6095.

**COIL:** Auto-Lite Model IG-4644. Service Winding (coil less Switch and Cable) IG-3224JS. Resistor unit mounted on distributor terminal connected in primary circuit. NOTE—This resistor not used when Regulator (VRD-4003A, B) used. Resistor should be removed when regulator installed.

**Ignition Current:**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025J.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4012-A (70, 71), IGW-4013-A (72). Single breaker, 6 lobe cam, full automatic advance type.

Breaker Gap—Set at .020".

Cam Angle or Dwell—35° (closed), 25° (open).

Breaker Arm Spring Tension—16-20 ounces.

Automatic Advance			
Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	300	0	600
3	400	6	800
7	825	14	1650
11	1255	22	2510
14	1580	28	3160

**Distributor Rem val:**—Mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

## IGNITION TIMING

**IGNITION TIMING:**—Initial setting for all engines as shown. See Final Setting for adjustment dependent on Octane rating of fuel used.

**Flywheel Degrees**

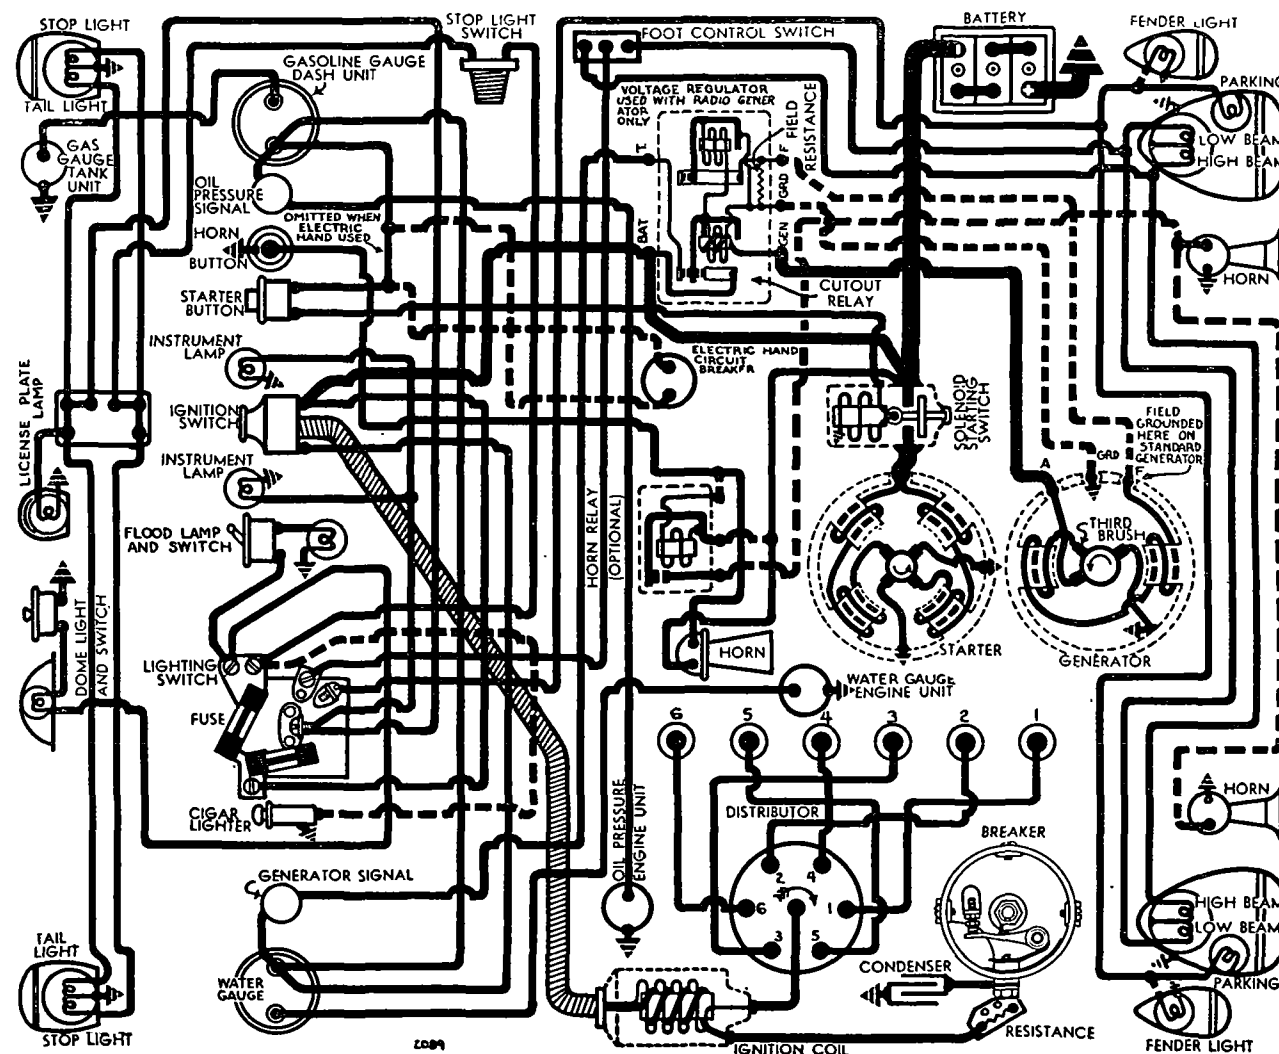

At TDC.

**Piston Position**

At TDC.

NOTE—High Octane fuel must be used in engines with 7.0-1 high compression aluminum head.

**To Set Timing (Initial Setting)**—With #1 piston on compression, crank engine over until flywheel mark "UDC.1-6/" lines up with pointer in left front face of flywheel housing. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw.

**Final Ignition Setting**—Road test car and note performance when accelerating from 10-15 M.P.H. with wide open throttle on level road (engine must be warm), slight spark knock should be evident. Adjust by loosening hold-down screw and rotating distributor one graduation on scale counter-clockwise (if no knock), clockwise (if knock too severe). Repeat test. Final setting must not be advanced more than  $\frac{3}{4}$ " before 'UDC.1-6/' mark on flywheel.

## CARBURETOR

### MODELS 70 & 71

**Carter Model W1, Type 348-S.** Single barrel, down-draft type with manual choke control.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—Engine must be warm so that choke valve wide open and throttle cracker inoperative. Set throttle lever stopscrew so that idling speed is 6 M.P.H. Turn idle adjusting screw in until engine begins to miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be  $\frac{1}{4}$ -1 turn open from inner seated position. Readjust throttle stop-screw for correct idling speed.

**Float Level**— $\frac{3}{8}$ " from gasket seat on cover to top of float at free end with needle valve seated. Invert to check.

**Accelerating Pump Setting**—Pump lever (under dust cover at top of carburetor) has three holes for pump link connection. Change for seasonal requirements as follows:

Center Hole—Normal summer temperatures.

Inner (Min. stroke)—Extreme hot weather.

Upper (Max. stroke)—Extreme cold weather.

**Throttle Cracker (348-S):** Set to open throttle valve .036-.040" with choke valve fully closed. No adjustment provided.

## CARBURETOR

### SUPER MODEL 72

**Carter Model WDO, Type 344-S or 377-S.** Dual (double barrel), downdraft type with Fast Idle and Carter Climatic Control (automatic choke).

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—Engine must be warm so that fast idle and automatic choke control inoperative. Set throttle lever stopscrew so that idling speed is 6 M.P.H. Turn each idle adjusting screw, in succession, in until engine begins to miss, then slowly out until engine fires smoothly. Final setting should be  $\frac{1}{4}$ - $\frac{3}{4}$  turn out from inner seated position and screws must be adjusted equally so that engine fires smoothly on all cylinders. Readjust throttle stop-screw if necessary.

**Float Level**— $\frac{15}{64}$ " from gasket seat on cover to top of float with needle valve seated. Invert assembly and check at each side of soldered seam.

**Accelerating Pump Setting**—Adjustable for minimum and maximum stroke. Requires partial dismantling of carburetor to change setting.

*For complete data, refer to Carburetor Index.*

**Fast Idle (344-S, 377-S):** Integral type (part of automatic choke assembly).

*For complete data, refer to Carburetion Equip. Index.*

**Adjustment**—With choke valve closed, adjust fast idle screw for .018" throttle opening.

**Automatic Choke (344-S, 377-S):** Carter Climatic Control. Mounted on carburetor.

*For complete data, refer to Carburetion Equip. Index.*

**Setting**—Centered (344-S), 2 Points Rich (377-S).

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1528159 (Std. 70, 71), 1528161 (Std. 72), 1528158 (70, 71 with Electric Hand), 1528160 (72 with Electric Hand), Oil-wetted type. Heavy duty oil-bath type Optl.

**Fuel Pump:**—AC. Type AK #1523289. Diaphragm type std., Type AB #1523290 combination fuel-and-vacuum type optl.

*For complete data, refer to Carburetion Equip. Index.*

**NOTE**—See 'AC Fuel Pump Servicing' in Carburetion Equipment Section for special pump gasket data.

**Gasoline Gauge:**—King-Seeley Electric Type. K-S No. 6190 (dash unit), 5835 (tank unit).

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—National, Type ST-317X. 6 volt, 17 plate, 96 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes.

**Grounded Terminal**—Positive (+) terminal.

**Location**—In left front fender. Accessible from engine compartment by taking out 3 slotted screws in cover flange (2 top, 1 rear) and removing cover.

## STARTER

**Auto-Lite Model MAB-4075.** Armature MAB-2113.

**Drive**—Inboard Barrel type Bendix No. A-1673.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM., 120-125 amps., 5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

**NOTE**—Lock torque figures correct without switch.

**Removal:**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:**—Type SS-4001. Magnetic solenoid type mounted on starter field frame. Controlled by pushbutton (R.B.M. Model 1815) on instrument panel. Operative only with ignition on (and clutch disengaged on cars with Electric Hand).

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite Model GCJ-4804A-1 (70, 71), GCJ-4803-A (72).** Armature No. GCJ-2006. Third brush control type. Ventilated by fan on drive pulley. Cutout Relay std. on Models 70, 71. Vibrating Voltage Regulator std. on Model 72 (also Models 70, 71 with radio).

**NOTE**—On std. 70, 71 cars (without Voltage Regulator) field terminal on generator frame is grounded by ground cup assembled on terminal stud. This ground cap must be removed if regulator installed.

**Maximum Charging Rate**—16 amperes (cold), 12.4 amperes (hot) without regulator, 25 amperes (cold) 22 amperes (hot) with regulator.

**Charging Rate Adjustment**—Remove commutator cover band, shift third brush by hand, counter-clockwise to increase or clockwise to decrease charging rate. Third brush held in position by friction. Do not exceed maximum rate as given above. Actual charging rate, on cars with regulator, determined by regulator setting and dependent upon battery condition (see Regulator Section below).

### Performance Data—GCJ-4804A-1

Cold Without Regulator			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	835	0	6.4	920
4	6.6	1025	4	6.9	1100
8	7.2	1225	8	7.4	1325
12	7.6	1460	12.4	8.0	2400
16	8.0	2250			

### Performance Data—GCJ-4804A-1 & 4803-A

Cold Cars with Regulator			Hot		
Amps.	Volts	R.P.M.	Amps.	Volts	R.P.M.
0	6.4	760	0	6.4	850
4	6.65	920	4	6.7	1020
8	6.9	1080	8	7.0	1240
12	7.2	1240	12	7.3	1400
16	7.45	1400	16	7.6	1650
20	7.7	1580	20	7.9	2100
25	8.0	2500	22	8.0	2700

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.9-2.1 amperes at 6.0 volts.

**Motoring Current**—4.0-4.4 amperes at 6.0 volts.

**Removal:**—Generator pivot mounted at left front of engine. To remove, take out clamp bolt and pivot bolts.

**Belt Adjustment:**—Loosen pivot bolts and clamp bolt, swing generator out until total sideplay or deflection midway between generator and fan pulleys is  $\frac{3}{4}$ -1 $\frac{1}{4}$ ".

## CUTOUT RELAY

**Auto-Lite Model CBA-4003 (GCJ-4804A-1 Generator).** Mounted on dash. Relay has extra "ground" contacts for generator charge signal control.

*For complete data, refer to Electrical Equipment Index.*

**Cuts In**—6.5-7.25 volts.

**Cuts Out**—1.5-4.5 amperes discharge current after charging at 16 amperes.

C NTINUED ON NEXT PA E

## C NTINUED FR M PRECEDIN PA E

Contact Gap—.015-.045" with upper ground contacts closed (upper contacts must open when main contacts close).

Air Gap—.010-.030" with contacts closed.

## REGULATOR

Auto-Lite Model VRD-4003-A, B (GCJ-4803-A Gen. & 4804A-1 Gen. with Radio). Voltage Type. Consists of Cutout Relay and vibrating type voltage regulator in case on the dash. Cutout Relay has extra "ground" contacts for generator charge signal control.

For complete data, refer to *Electrical Equipment Index*.

NOTE—Regulator cover is sealed. Serviced on exchange basis if seals unbroken. Cover must be removed to make adjustments.

## Cutout Relay

Cuts In—6.4-7.0 volts Cold.

Cuts Out—5 ampere Min., 3.0 amperes Max. Cold. Contact Gap—.015" minimum (with ground contacts closed—ground contacts must be open with main contacts closed).

Air Gap—.034" Min., .038" Max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

Setting (VRD-4003-A)—7.5-7.8 volts at 70°F. (Before #8R-000001), 7.35-7.65 volts at 70°F (After #8R-000001).

Setting (VRD-4003-B)—7.8-8.1 volts at 70°F (Before #8R-000001), 7.35-7.65 volts at 70°F (After #8R-000001).

See *Electrical Equipment Section* for complete settings and changes on these Regulator models.

To Check—Connect ammeter in charging line at 'B' terminal on regulator (use short heavy leads), connect voltmeter between regulator 'B' and 'GD' terminals. Operate generator, charging fully charged battery, at speed equivalent to 30 M.P.H. car speed until voltage is steady. Voltmeter reading should be within limits of 7.4-7.9 volts (VRD-4003-A before #8R-000001), 7.8-8.1 volts (VRD-4003-B before #8R-000001), 7.1-7.8 volts (all models after #8R-000001). If outside these limits, regulator is defective.

To Adjust—Change regulator armature spring tension by bending lower spring hanger. See *Electrical Equipment Section* for complete instructions.

Contact Gap—.010" Min., .020" Max. with armature against stop pin.

Air Gap—.0595-.0625" with contacts just opening.

## LIGHTING

LIGHTING:—Headlamps. Hall, pre-focused type. Lenses interchangeable. Aim headlamps straight ahead with top of beam 39" above floor level at 25' (car unloaded, upper beam lighted). Upper and lower beams controlled by foot selector switch with lighting switch in driving (right hand) position.

## Switches

Lighting—R.B.M.

Foot Selector—R.B.M. No. 1076.

Dome Light—R.B.M. No. 1220.

Stop Light—R.B.M. No. 965.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (export)	50-21	2520
Park, Instrument	1½	55
Signals, Service	1	51
Fender (Optl.) License	3	63
Stop-Tail	21-3	1158
Dome	15	87

## MISC. ELECTRICAL

SIGNAL LIGHTS:—Oil Pressure Indicator and Generator Charge Indicator mounted on instrument board. Similar to design used previously except that bulb lights up word 'Not' on dials. See article in *Electrical Equipment Section*.

For complete data, refer to *Electrical Equipment Index*.

FUSES:—Lighting—Two 20 ampere type on back of lighting switch.

HORNS (70,71):—Delco-Remy, Klaxon K16 Type 2010. Vibrator type. Current draw 6.5-8.5 amperes at 6.0 volts. Air Gap—.025-.029".

HORNS (72):—Delco-Remy K-33-S Std., K-33-F Optl. Blended tone, twin horns operated by relay.

Horn	Current (6 volts)	Air Gap
K-33-S, 2051 (low note)	11-13 amps	.042-.046"
K-33-S, 2052 (high note)	10-12 "	.032-.036"
K-33-F, 2117 (low note)	11-13 "	.040-.044"
K-33-F, 2118 (high note)	9-11 "	.032-.036"

Horn Relay Model 271-A:—Contacts close at 2.7-4.0 volts.

Contact Gap—.015-.030". Air Gap—.010-.025".

## ENGINE

ENGINE SPECIFICATIONS:—6 cyl. L head type.

Bore—3". Stroke—5". Displacement—212 cu. ins. Rated Horsepower—21.6 A.M.A.

Developed Horsepower—	70, 71	72
Std. 6.25-1	96 @ 3900	101 @ 4000
Optl. 7.0-1 'Super Power'	102 @ 3900	107 @ 4000

Compression Ratio & Pressure—Check at cranking speed, spark plugs removed, throttle wide open. Std. 6.25-1 head 103 lbs. at 170 R.P.M. Optl. 7.0-1 head 119 lbs. at 170 R.P.M. Vacuum Reading—18-21" at 350 RPM or 6 MPH.

PISTONS:—Own Lo-Ex aluminum alloy, "T" slot, cam ground type. Use finished replacement pistons. Weight—10.5 ozs. stripped. Length 3 3/16". Removal—May be removed from above or below. Clearance—.018" top, .002" skirt (see below).

Original Bore Size:—See *Hudson Shop Notes*.

Replacement Pistons:—See *Hudson Shop Notes*.

Fitting New Pistons:—3-4 lb. tension should be required to withdraw .0015" feeler ½" wide from between piston and cylinder wall on side opposite slot at right angles to pin bosses.

Installing Pistons:—Slot away from camshaft side.

PISTON RINGS:—Tw compression, one 11 ring above pin, 1 oil ring below pin. Rings positioned by pin in grooves.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.009-.011"	.001"
Oil (both)	3/16"	.009-.011"	.001"

Replacement Rings:—See *Hudson Shop Notes*.

PISTON PIN:—Diameter—¾". Length—2 7/16".

Pin floats in piston and rod, held by locking rings.

Pin hole in rod bronze-bushed. Pins furnished std., .002", .005", .010" oversize.

Pin Fit in Piston—.0003" clearance or hand push fit with piston heated to 200° F.

Pin Fit in Rod Bushing—.0003" clearance.

CONNECTING ROD:—Weight 29.4 ozs. Length 8 3/16". Crankpin Journal Diameter—1 15/16".

Lower Bearing—Spun-babbitt. Rods exchanged. Finished bearings furnished standard and undersize (special order).

Clearance—.001". Sideplay—.006-.010".

Bearing Adjustment:—Laminated shims. Do not file.

Installing Rods:—Offset. Install rods with widest half of bearing toward rear (#1, 2, 4), toward front (#3, 5, 6). Oil scoop on all rods toward camshaft.

CRANKSHAFT:—3 bearing, integral counterweights. See *Hudson Shop Notes for Crankshaft and Vibration Damper removal, Main Bearing Removal, Installation and Line-Reaming data*.

Journal Diameters—#1, 2 11/32; #2, 2 2/8; #3, 2 13/32".

Bearing Type—Bronze-backed, babbitt-lined. Furnished std., and unfinished (1/32" extra stock—ream to desired undersize). Clearance—.001".

Bearing Adjustment:—Shims. See *Hudson Shop Notes*.

End Thrust:—Taken by center bearing. Replace bearing to adjust. Endplay.006-.012".

CAMSHAFT:—Three bearing. Gear driven.

Journal Diameters—#1, 2"; #2, 1 31/32"; #3, 1 1/2". Bearing Clearance—.0015".

End Thrust:—Taken by thrust washer assembled between front face of crankcase and rear side of camshaft front flange, and by spring-loaded button in camshaft hub and thrust plate on gear cover. See that spring and button in place under cover.

Timing Gears:—Crankshaft gear cast-iron. Camshaft gear GE. or Continental Diamond Fibre Bakelite. 1941 Hudson Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). See *Hudson Shop Notes for data*.

Camshaft Setting:—Mesh marked tooth of crankshaft gear between two marked teeth on camshaft gear.

VALVES:—	Head Diameter	Stem Diameter	Length
All Valves	1 1/8"	5/8"	5 11/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.003"
Exhaust	45°	11/32"	.003-.005"

Valve Guides:—2 9/16" long. Top 1 1/16" below top of block. Finish ream to size after installation.

Valve Springs:—Springs are cadmium plated. Dampeners originally used on bottom of all springs, but car manufacturer recommends that they be omitted whenever valves are serviced. Spring check (out of engine)—34 lbs. min. at 2".

	Spring Pressure	Spring Length
Valve Closed	44 lbs.	2"
Valve Open	102 lbs.	1 21/32"

Valve Lifters:—Roller shoe type, fitted in removable guides. See *Hudson Shop Notes for lifter removal*.

**VALVE TIMING**

**Tappet Clearance:**—.006" Int., .008" Exh., engine hot

**Valve Timing:**—See camshaft setting above.

**Intake Valves:**—Open 14° 40' BTDC. Close 60° ALDC.

**Exhaust Valves:**—Open 50° BLDC. Close 18° 44' ATDC.

These figures correct with .010" tappet clearance.

**To Check Timing:**—Set tappet clearance #1 intake

valve at .010". This valve should open with piston

10° 40' or .0562" BTDC, when point on flywheel ap-

proximately 3.94 teeth before 'UDC.1-6/' mark lines

up with pointer in hole in left front face of flywheel

housing. Reset tappet clearance at .006" hot.

**LUBRICATION**

**LUBRICATION:**—Duo-flow (pressure and positive splash) system.

**Oil Pump:**—Oscillating plunger type, gear driven by

camshaft. Mounted on right side of crankcase.

**Normal Oil Pressure:**—3 lbs. (no gauge).

**Oil Pressure Regulator:**—Located on right side of

crankcase at rear. Opens at 3 lbs. Not adjustable.

**Oil Pressure Indicator:**—Teleflash Oil Pressure Indi-

cator. See article in Electrical Equipment Section.

*For complete data, refer to Electrical Equipment Index.*

**Checking Oiling System:**—See *Hudson Shop Notes*.

**Crankcase Capacity:**—5 qts. (refill), 6 qts. (dry).

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Removal:**—With water drained and fan belt re-

moved, disconnect water hoses at pump, remove

mounting bolts and lift fan and pump assembly off.

**Thermostat:**—On 72 only. In water outlet on cyl. hd.

**Setting:**—Start to open 150-155°F. Fully open 185°F.

**Water Capacity:**—13 quarts.

**CLUTCH**

**CLUTCH:**—Own make. Single plate, cork insert type, operating in oil.

*See Clutch Section for complete data.*

**Driven Member:**—Thickness .203". Inside Diameter

5.375", Outside Diam. 8.625". Facing 90 cork inserts.

**Automatic Clutch Control:**—Optional equipment.

*See Clutch Section for complete data.*

**Adjustment:**—Pedal free movement must be 1½". To adjust, remove clevis pin at lower end of connecting link on throw-out shaft lever, loosen locknut, turn clevis. On cars with Automatic Clutch control, check setting whenever clutch adjusted.

**Clutch Oil Servicing:**—See *Hudson Shop Notes* for data.

**Removal:**—Remove transmission (see Transmission

Removal following), take out 16 clutch cover cap-

screws and remove clutch assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own make. Constant-mesh, helical gears with synchronizing unit (second and high speeds). Sliding spur gears (low and reverse).

*See Transmission Section for complete data.*

**Electric Hand:**—Bendix type electro-pneumatic gear shift Optional Equipment.

*See Transmission Section for complete data.*

**Removal:**—Remove Electric Hand and Automatic

Clutch Control units and wiring from transmission

first, if car so equipped. See separate articles in

Clutch and Transmission Sections for necessary ad-

justments on these units when reinstalling. Dis-

connect transmission side bumpers, interlock

straps, speedometer cable and drive shaft at front

universal. Take out bell housing-to-engine mount-

ing bolts, pull transmission straight back.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Spicer. 1271 (front), 1278 (rear).

Needle bearing type.

*See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own make. Semi-floating, spiral bevel gear type.

*See Rear Axle Section for complete data.*

**Ratio:**—4.11-1 Std., 4.56-1 Optl. 3.89-1, 3.56-1 Special.

**Backlash:**—.0005-.003". Screw adjustment.

**Removal:**—Remove rear wheel and hub assembly (use

screw type puller only), take out four nuts on bear-

ing cap bolts, push bolts out through backing plate

remove shims, pull wheel bearing and axle shaft,

disconnect drive shaft at rear universal, remove 8

nuts from axle housing-to-carrier stud bolts, with-

draw differential assembly.

**Wheel Bearing Adjustment:**—Controlled by shims

under bearing cap. Measure endplay by dial indi-

cator clamped to backing plate with plunger against end of axle shaft. To adjust, remove bearing caps (as directed above), add or remove shims equally at both wheels. Endplay—.004-.010".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Monroe. 637502 (front), 635703 (rear). Hydraulic, direct acting type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Elliott type ends and semi-elliptic springs. Axle alignment maintained by torque arm at each end (71, 72—not used on 70).

**Torque Arms:**—See *Hudson Special Shop Notes*.

**Kingpin Inclination:**—7° crosswise. NOTE—Loose

ball type thrust bearing used. See 1936 page for data.

**Caster:**—1-2° and equal within ½° for both wheels.

To adjust (71, 72), loosen capscrews at front of

torque arm, insert shim between arm and axle at

upper screw or remove shim at lower screw to de-

crease caster, remove shim at upper screw or insert

shim at lower screw to increase caster. Shims .020"

thick, change caster ½°. To adjust (70), install

wedge shims between spring and spring seat.

**Camber:**—1-1½°. No adjustment.

**Toe In:**—⅛" measured 10" up from ground. Adjust

by loosening clamp bolts and turning tie rod.

**Steering Geometry:**—Inner wheel 20°. Outer 17¾°.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, Duo-servo, Single anchor type with Mechanical follow-up. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drum:**—Alloy-steel. Diameter—10 1/16".

**Lining:**—Moulded and woven type. Width 1¾".

**Thickness:** 7/32". Length 22½" per wheel.

**Clearance:**—.010" heel and toe of each shoe.

**Hand Brake:**—See Service Brakes above.

**Hill-Holder:**—Optional on all models.

*See Brake Section for complete data.*

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number 80101 (80), 88101 (88), 81101 (81), 82101 (82).—First two figures indicate model. Stamped on plate on right front door hinge pillar post.

**ENGINE NUMBER:**—First number 80101 (80), 88101 (88), 81101 (81), 82101 (82). On boss on left side of block near top front or on top of block between #1 and #2 exhaust manifold flanges.

**TUNE-UP**

**COMPRESSION:**—Ratio and pressure as follows:

Ratio	Compression Pressure
6.25-1 std. C. I. hd.	103 lbs. @ 170 R.P.M.
7.0-1 Optl. Al. hd.	119 lbs. @ 170 R.P.M.

NOTE—7.0-1 aluminum head—Super Power Dome.

**VACUUM READING:**—Gauge should show steady reading of 18-21" idling at 350 R.P.M. or 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUGS:** Champion Type J-8A (Std. 6.25-1 Eng.), Type H-10 (Optl. 7.0-1 Eng.). 14 mm. Metric type. Gaps—.032".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020". Cam Angle 35° (closed).

Automatic Advance—14° max at 1580 R.P.M. (distr.).

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC. with flywheel mark "UDC. 1-6/1" at indicator in inspection hole in left front face of housing above starter.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting (Single Carb.)—Idle screw 1/4-1 turn open. Idle speed 6 MPH.

Idle Setting (Dual Carb.)—Both idle screws 1/4-3/4 turn open. Idle speed 6 MPH.

Float Level (Single Carb.)—3/8" gasket seat on cover to top of float at free end (invert to check).

Float Level (Dual Carb.)—15/64" from gasket seat on cover to top of float at each end.

Accelerating Pump (Single Carb.)—Center hole (medium) Normal. Inner hole (Summer), Upper hole (Winter) for extreme temperatures.

Accelerating Pump (Dual Carb.)—Inner hole Summer, Outer hole—Winter.

Fuel Pump Pressure: 4 1/2 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—80, 81, 88—Manual adjustment type at center of exhaust manifold behind carburetor. Make seasonal adjustments as follows: Setting—To adjust, loosen nuts on strut bar on face of valve cover, turn cover so that pointer is in line with 'W' mark on manifold (Winter temperatures), straight up (Normal Summer temperatures), toward front in line with 'S' mark (Extremely hot temperatures).

Model 82:—Automatic thermostatic type. No adjustment required.

**VALVES:** See Valve Timing.

Tappet Clearance—.006" Int., .008" Exh., Hot.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

**IGNITION**

Ignition Switch:—Mitchellock Model 24-B, Type 7642.

Ignition Lock—Briggs & Stratton, Mitchell N. 6095.

**COIL:** Auto-Lite Model IG-4650. Service Winding (coil less switch and cable) IG-3224JS.

Ignition Current—5-6 amperes stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025J.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4104-A (Std. 80, 81, 88), IGW-4103-A (Std. 82, Optl. 80, 81, 88). Single breaker, 6 lobe cam, full automatic advance type.

**NOTE:**—Resistor unit used on IGW-4104A (mounted on distributor terminal connected in primary circuit). When voltage regulator is installed (for cars with radio), resistor should be removed or IGW-4103A type distributor installed.

**Breaker Gap:**—Set at .020".

Cam Angle or Dwell—35° (closed), 25° (open).

Breaker Arm Spring Tension—16-20 ounces.

Rotation—Clockwise viewed from the top.

**Automatic Advance**

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	0.....	600
3.....	400	6.....	800
7.....	825	14.....	1650
11.....	1255	22.....	2510
14.....	1580	28.....	3160

**Fuel Compensator:**—Provides manual adjustment at distributor for octane rating of fuel used. See Fuel Compensator Setting (following).

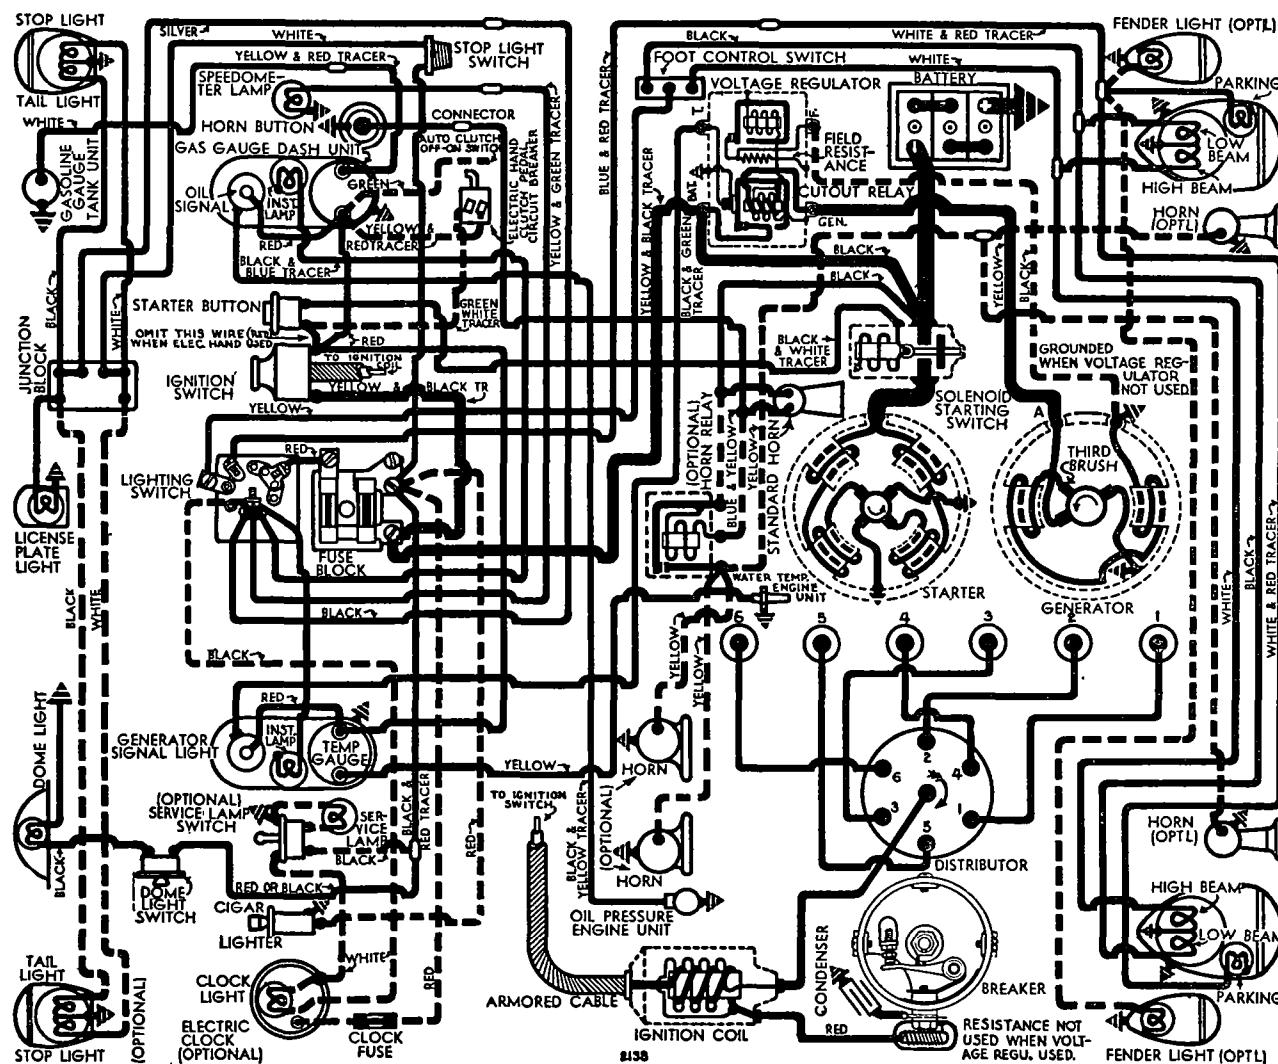

**Distributor Removal:**—Mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

**IGNITION TIMING**

**IGNITION TIMING:**—Initial Setting as shown. See Fuel Compensator Setting following.

Flywheel Degrees Piston Position

All engines 0° TDC. .000° TDC.

**NOTE**—High octane fuel must be used in engines with 7.0-1 'Super Power Dome' head.

**To Set Timing**—With #1 piston on compression, turn engine over until flywheel mark 'UDC.1-6/' lines up with pointer in left front face of flywheel housing. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw.

**To Set Timing (Using Synchroscope)**—Car manufacturer recommends this method. Clip lead to #6 spark plug, fill in timing mark with white chalk and direct light on flywheel through hole in housing.

**Fuel Compensator Setting**—Road test car and note performance when accelerating from 10-15 M.P.H. with wide open throttle on level road (engine must be warm). Slight spark knock should be evident. Adjust by loosening hold-down screw and rotating distributor one graduation on scale counter-clockwise (if no knock), clockwise (if knock too severe). Repeat test. Final setting must not be advanced beyond  $\frac{3}{4}$ " before 'UDC.1-6/' mark on flywheel.

## CARBURETOR

MODELS 80, 81, 88

**Carter Model W1 Vacuumer Type 397-S.**  $1\frac{1}{4}$ ", single barrel, downdraft type with manual choke control.

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—Engine must be warm so that choke valve is wide open and throttle cracker inoperative. Set throttle lever stopscrew to idle engine at 6 MPH. Turn idle adjusting screw in until engine begins to miss, then out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be  $\frac{1}{4}$ -1 turn open from inner seated position. Readjust throttle stop-screw for correct idling speed.

**Float Level**— $\frac{3}{8}$ " from gasket seat on cover to top of float at free end (invert to check).

**Accelerating Pump Setting (397-S)**—Lever under dust cover at top of carburetor has three holes for pump link engagement. Set as follows:

**Lower Hole (medium stroke)**—Normal setting.  
**Inner Hole (min. stroke)**—Hot temp., hi-test fuel.  
**Outer Hole (max. stroke)**—Cold temp., low-test fuel.

**Throttle Cracker (397-S)**—With choke valve closed, throttle opening should be .036-.040".

## CARBURETOR

SUPER MODEL 82

**Carter Model WDO, Type 402-S.** 1", Dual (double barrel), downdraft type with Fast Idle and Carter Climatic Control (automatic choke).

*For complete data, refer to Carburetor Index.*

**Idle Adjustment**—With engine warm and idling at hot or slow idle speed (automatic choke and fast idle inoperative), set throttle stopscrew to idle engine at 6 MPH., adjust both idle adjusting screws (2 used, one for each barrel) in succession until engine fires smoothly on all cylinders. Final setting of both idle screws should be  $\frac{1}{4}$ - $\frac{3}{4}$  turn open from inner seated position. Readjust throttle stopscrew for correct idle speed.

**Float Level**— $15/64$ " from gasket seat on cover to top of float with valve seated. Invert assembly to check and measure to each side of soldered seam on float.

**Accelerating Pump Setting (402-S)**—Adjustable for minimum and maximum stroke as follows:

**Short Stroke (Inner Hole)**—Hot Temperatures.  
**Long Stroke (Outer Hole)**—Cold Temperatures.

**Fast Idle (402-S)**—Carter stepped-cam type.

*For complete data, refer to Carburetion Equip. Index.*  
**Adjustment**—With choke valve closed, adjust fast idle screw for .018" throttle opening.

**Automatic Choke (402-S)**—Carter Climatic Control.

*For complete data, refer to Carburetion Equip. Index.*  
**Setting**—Centered (at index).

## CARB. EQUIPMENT

**Air Cleaner**—AC Oil-wetted Type 1528159 (Std. 80, 81, 88), 1528161 (Std. 82), 1528158 (80, 81, 88 with Electric Hand), 1528160 (82 with Electric Hand). United Heavy duty oil bath type Optl. on all models.

**Fuel Pump**—AC. Type AK #1523289 (LHD), #1523313 (RHD), diaphragm type, standard. Type AB #1523290 (LHD), #1523314 (RHD), combination fuel-and-vacuum pump optional.

*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge**—King-Seeley Electric type. K-S No. 6783 (Dash Unit 80, 81, 88), 6756 (Dash Unit 82), 5835 Tank Unit—All models.

*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY**—National, Type HT-17 (Original equipment), L-17-1F (Replacement). 6 volt, 17 plate, 100 ampere hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes.

**Grounded Terminal**—Positive (+) terminal. Grounded to left front fender support bracket. Engine grounded to frame by strap at bellhousing.

**Dimensions**—Length 10  $9/16$ ". Width  $7\frac{1}{4}$ ". Height 7  $15/16$ ".

**Location**—In left front fender under hood. Accessible from engine compartment by taking out 3 slotted screws in cover flange (2 top, 1 rear) and removing cover.

## STARTER

**Auto-Lite Model MAB-4075.** Armature MAB-2113.

**Drive**—Inboard Barrel Type Bendix No. A-1673.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 RPM., 120-125 amperes, 5 v.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3700	5.5	60
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.	582
22.5 "	Lock	4.	775

**NOTE**—Lock torque figures correct without switch.

**Removal**—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch**—Type SS-4001. Magnetic solenoid type mounted on starter. Controlled by pushbutton on instrument board (RBM Model 1815). Operative only with ignition on (and clutch disengaged on cars with Electric Hand).

*For complete data, refer to Electrical Equipment Index.*

## GENERATOR

**Auto-Lite Model GDF-4803A-1 (Std. 80, 81, 88), GDF-4802A (Std. 82, Optl. 80, 81, 88).** Third brush control with vibrating voltage regulation (GDF-4802A only). Ventilated by fan on drive pulley.

**NOTE**—Generator field terminal grounded by ground cup assembled on terminal stud (on cars without regulator). This cup must be removed when regulator installed.

**Maximum Charging Rate**—16-18 amperes (hot), 17-19 amperes (cold) without regulator. 26.5-29.5 amperes (hot), 29-32 amperes (cold) with regulator. Use test ammeter to check output.

**Charging Rate Adjustment**—Remove commutator cover band, shift third brush by hand, counter-clockwise to increase, clockwise to decrease charging rate. Third brush held in position by friction. Do not exceed maximum rate given above. On cars with regulator, actual charging rate determined by regulator (dependent on battery condition).

**NOTE**—Standard 3rd brush setting  $3\frac{3}{4}$ -4 (without regulator),  $2\frac{1}{2}$  (with regulator) commutator bars from insulated (nearest) main brush.

### Performance Data—GDF-4803A (Without Regulator)

(Without Regulator)			
Cold		Hot	
Amperes	Volts	Amperes	Volts
0.....	6.4	0.....	6.4
4.....	6.75	4.....	6.8
8.....	7.1	8.....	7.15

28.....7.9	2220	28.3.....8.0	3200
32.....8.0	3100		

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.90-2.10 amperes at 6.0 volts.

**Motoring Current**—4.6-5.2 amperes (without regulator), 5.3-5.9 (with regulator) at 6 volts.

**Removal**—Generator pivot mounted at left front of engine with fan belt drive. To remove, take out clamp and pivot bolts.

**Belt Adjustment**—Loosen clamp and pivot bolts, swing generator out until slack in belt midway between generator and fan pulleys is  $\frac{3}{4}$ " (measured with straightedge across pulleys).

## CUTOUT RELAY

**Auto-Lite Model CBA-4003 (With GDF-4803A-1 Generator).** Mounted on engine side of dash. Relay has extra "ground" contacts for Teleflash generator charge indicator control.

*For complete data, refer to Electrical Equipment Index.*  
**Cuts In**—6.5-7.25 volts. Approx. 10 M.P.H.

**Cuts Out**—1.5-4.5 amperes discharge current after charging at 16 amperes.

**Contact Gap**—.015-.045" with upper ground contacts closed (must open when main contacts close).

**Air Gap**—.010-.030" with contacts closed.

C N TINUED N NEXT PAGE

## CONTINUED FROM PRECEDIN PA E

## REGULATOR

**Auto-Lite Model VRD-4008A. Voltage Type.** Cutout Relay and vibrating type Voltage Regulator in case on dash. Cutout Relay has extra "ground" contacts for Teleflash generator charge indicator control. *For complete data, refer to Electrical Equipment Index.*  
**NOTE**—See distributor and generator notes for changes to be made when this unit installed in field.  
**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

## Cutout Relay

**Cuts In**—6.4-7.0 volts Cold. Approx. 10 M.P.H.  
**Cuts Out**—5 ampere min., 3.0 amperes max. cold.  
**Contact Gap**—.015" min.—ground contacts closed (must be open with main contacts closed).  
**Air Gap**—.034" min., .038" max. with contacts open. Measure at hinge end of core.

## Voltage Regulator

**Setting**—7.35-7.65 volts at 70°F. (after 15 minutes operation charging at 10 amperes).  
**To Check** (without breaking seal)—Connect ammeter in charging line at "BAT" terminal on regulator, connect voltmeter between "BAT" terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery until voltage is constant. Voltmeter reading should be within 7.1-7.8 volts (high limit cold, low limit hot). If outside these limits regulator is defective.  
**To Adjust** (with cover removed)—Change regulator armature spring tension slightly by bending lower spring hanger. Check setting as directed above. See Electrical Equipment Section for complete directions.  
**Contact Gap**—.010-.020" (armature against stop).  
**Air Gap**—.0595-.0625" with contacts just opening.

## LIGHTING

**LIGHTING**—**Headlamps**—Hall, pre-focused type with interchangeable lenses. Upper and lower beams (lower beam deflected slightly to right) controlled by foot selector switch with lighting switch in driving (right hand) position.  
**Headlamp Adjustment**—Aim headlamps straight ahead with top of beam 35¼" above floor level at 25' (car unloaded, upper beams lighted). Headlamps aimed by means of two screws on underside of headlamp body. Vertical movement obtained by turning both screws equally in or out, horizontal movement by turning one screw in until half desired movement obtained and completing movement by turning opposite screw out an equal amount.

## Switches

**Lighting**—R.B.M. #1725.

**Beam Selector**—R.B.M. #1076.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-32	2331
Headlamps (export)	21-50	2520D
Park, Instrument, Service	1½	55
License, Fender	3	63
Stop-Tail	21-3	1158
Dash Signals	1	51
Dome	15	87

## MISC. ELECTRICAL

**SIGNAL LIGHTS**—Teleflash Generator Charging Indicator and Oil Pressure Indicator.

*For complete data, refer to Electrical Equipment Index.*

**FUSES**—**Lighting**—Two 20 ampere capacity mounted on fuse block on lower flange of instrument panel  
**HORNS**—Single horn standard. Sparton twin horns with R.B.M. relay (optl.—dash mounted).

**Klaxon Model K-33-F**—Type 2117 (left—low note), 2118 (right—high note), twin horns, blended tone with Delco-Remy Horn Relay Optl.

**NOTE**—Data below for Delco-Remy equipment.

Horn Type	Current at 6 volts	Air Gap
2117 (low note)	11-13	.040-.044"
2118 (high note)	9-11	.032-.036"

**Horn Relay**—Model 271-A (with Klaxon horns' Contacts close 2.7-4.0 volts.  
**Contact Gap**—.020". **Air Gap**—.015".  
**NOTE**—R.B.M. #780 relay also used.

## ENGINE

**ENGINE SPECIFICATIONS**—8 cyl. L head type.

**Bore**—3". **Stroke**—5". **Displacement**—212 cu. ins.

**Rated Horsepower**—21.6 A.M.A.

**Developed Horsepower**—80, 81, 88 82

**Std. 6.25-1** ..... 96 @ 3900.....101 @ 4000

**Optl. 7.0-1 'Super Power'**.....102 @ 3900.....107 @ 4000

**Compression Ratio & Pressure**—Check at cranking

speed, spark plugs removed, throttle wide open.

**Std. 6.25-1 head** ..... 103 lbs. at 170 R.P.M.

**Optl. 7.0-1 head** ..... 119 lbs. at 170 R.P.M.

**Vacuum Reading**—18-21" at 350 RPM or 6 MPH.

**PISTONS**—Own Lo-Ex aluminum alloy, "T" slot, cam ground type. Use finished replacement pistons.

**Weight**—10.5 ozs. stripped. **Length**—3 3/16".

**Removal**—May be removed from above or below.

**Clearance**—.016" top, .002" skirt (see below).

**Original Bore Size**—See Hudson Shop Notes.

**Replacement Pistons**—See Hudson Shop Notes.

**Fitting New Pistons**—3-4 lb. tension should be required to withdraw .0015" feeler ½" wide from between piston and cylinder wall on side opposite slot at right angles to pin bosses.

**Installing Pistons**—Slot away from camshaft side.

**PISTON RINGS**—Two compression, one oil ring above pin, 1 oil ring below pin. Rings positioned by pin in grooves.

**Ring** ..... **Width** ..... **End Gap** ..... **Side Clearance**

**Compression** .3/32" ..... .005-.010" ..... .001"

**Oil (both)** ..... 3/16" ..... .005" ..... .001"

**Replacement Rings**—See Hudson Shop Notes.

**PISTON PIN**—Diameter—¾". Length—2 7/16".

Pin floats in piston and rod, held by locking rings.

Pin hole in rod bronze-bushed. Pins furnished std., .002", .005", .010" oversize.

**Pin Fit in Piston**—.0003" clearance or hand push fit

with piston heated to 200° F.

**Pin Fit in Rod Bushing**—.0003" clearance.

**CONNECTING ROD**—Weight 30.3 oz. Length 8 3/16".

*See Hudson Shop Notes for Connecting Rod change on late cars.*

**Crankpin Journal Diameter**—1 15/16".

**Lower Bearing**—Spun-babbitt. Rods exchanged.

Finished bearings furnished standard and under-size (special order).

**Clearance**—.001". **Sideplay**—.006-.010".

**Bearing Adjustment**—None (no shims). Replace rods.

*See Hudson Shop Notes for connecting rod pinnut (locknut) installation instructions.*

**Installing Rods**—Offset. Install rods with widest half of bearing toward rear (#1, 2, 4), toward front (#3, 5, 6). Oil scoop on all rods toward camshaft.

**CRANKSHAFT**—3 bearing, integral counterweights  
*See Hudson Shop Notes for Crankshaft and Vibration Damper removal, Main Bearing Removal, Installation and Line-Reaming data.*

**Journal Diameter**—#1, 2 11/32", #2, 2 3/8", #3, 2 13/32".

**Bearing Type**—Bronze-backed, babbitt-lined. Furnished std., and unfinished (1/32" extra stock—ream to desired undersize). **Clearance**—.001".

**Bearing Adjustment**—Shims. *See Hudson Shop Notes.*

**End Thrust**—Taken by center bearing. Replace bearing to adjust. **Endplay** .006-.012".

**CAMSHAFT**—Three bearing. Gear driven.

**Journal Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 1/2" **Bearing Clearance**—.0025".

**End Thrust**—Taken by thrust washer on front face of crankcase and by spring-loaded button in camshaft hub and thrust plate on gear cover. See that spring and button in place under cover.

**Timing Gears**—Crankshaft gear cast-iron. Camshaft gear GE. or Continental Diamond Fibre Bakelite. *1941 Hudson Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation). See Hudson Shop Notes for data.*

**Camshaft Setting**—Mesh marked tooth of crankshaft gear between 2 marked teeth on camshaft gear.

**VALVES**—Lighter valves (smaller stem diameter) used, than on previous models. New pilot size necessary for valve tools. *See Hudson Shop Notes for data.*

**Head Diameter** ..... **Stem Diameter** ..... **Length**

**All valves** ..... 1 3/8" ..... 11/32" ..... 5 11/32"

**Seat Angle** ..... **Lift** ..... **Stem Clearance**

**Intake** ..... 45° ..... 11/32" ..... .0015-.003"

**Exhaust** ..... 45° ..... 11/32" ..... .003-.005"

**Valve Guides**—2 9/16" long. Top 1 1/16" below top of block. Finish ream to size after installation.

**Valve Springs**—Springs are cadmium plated. Dampeners originally used on bottom of all springs, but car manufacturer recommends that they be omitted whenever valves are serviced. Spring check (out of engine)—34 lbs. min. at 2".

**Spring Pressure** ..... **Spring Length**

**Valve Closed** ..... 44 lbs. .... 2"

**Valve Open** ..... 102 lbs. .... 1 21/32"

**Valve Lifters**—Roller shoe type, fitted in removable guides. *See Hudson Shop Notes for Lifter Removal.*

## VALVE TIMING

**Tappet Clearance**—-.006" Int., .008" Exh., Hot.

**Valve Timing**—See camshaft setting above.

**Intake Valves**—Open 10°40' BTDC. Close 60° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 18°44' ATDC.

These figures correct with .010" tappet clearance.

**To Check Timing**—Set tappet clearance #1 intake valve at .010". This valve should open with piston 10°40' or .0562" BTDC. when point on flywheel approximately 3.94 teeth before UDC.1-6/ mark lines up with pointer in hole in left front face of flywheel housing. Reset tappet clearance at .006" hot.

## LUBRICATION

**LUBRICATION**—Duo-flo (pressure & splash) system.

**Oil Pump**—Oscillating plunger type, gear driven by camshaft. Mounted on right center of crankcase.

**Normal Oil Pressure**—3 lbs. (no gauge).

**Oil Pressure Regulator**—Located on right side of crankcase at rear. Opens at 3 lbs. Not adjustable.

**Oil Pressure Indicator**—Teleflash Oil Pressure Indicator. See article in Electrical Equipment Section.

*For complete data, refer to Electrical Equipment Index.*

**Checking Oiling System**—See Hudson Shop Notes.

**Crankcase Capacity**—5 qts. (refill), 6 qts. (dry).

**NOTE**—Capacity decreased ½ qt. after car #43845.

**COOLING**

**COOLING SYSTEM:**—Water Pump. Centrifugal, belt-driven, packless type.

*See Water Pump Section for complete data.*

**Thermostat:**—Std. on 82, optl. on others. In water outlet on cylinder head.

**Setting:**—Start to open at 150-155°F. Fully open 185°F.

**Water Capacity:**—12½ quarts.

**CLUTCH**

**CLUTCH:**—Own make. Single plate, cork insert type operating in oil.

*See Clutch Section for complete data.*

**Adjustment:**—Pedal free movement must be 1½". To adjust, remove clevis pin at lower end of connecting link on throw-out shaft lever, loosen locknut, turn clevis. On cars with Automatic Clutch control, check setting whenever clutch adjusted.

**Driven Member:**—80 Utility coach, coupe and sedan, 81. Thickness .203". Inside Diameter 5.375". Outside Diameter 8.625". Facing 90 cork inserts. All others—Thickness .203". Inside Diam. 6.375". Outside Diameter 9.75". Facing 108 cork inserts.

**Automatic Clutch Control:**—Optional equipment.

*See Clutch Section for complete data.*

**Clutch Oil Servicing:**—*See Hudson Shop Notes.*

**Removal:**—Remove transmission (see Transmission Removal following) take out 16 clutch cover cap-screws and remove clutch assembly from below.

**TRANSMISSION**

**TRANSMISSION:**—Own make. Constant-mesh, helical gear (second & high), sliding spur (low & reverse).

*See Transmission Section for complete data.*

**Electric Hand:**—Bendix type electro-pneumatic gear shift Optional Equipment.

*See Transmission Section for complete data.*

**Removal:**—Remove Electric Hand and Automatic Clutch Control units and wiring from transmission first, if car model so equipped. See separate articles in the Clutch and Transmission Section for necessary adjustments on these units when reinstalling. Disconnect transmission side bumpers, interlock straps, speedometer cable and drive shaft at front universal. Take out bell housing-to-engine mounting bolts, pull transmission straight back.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Spicer. 1271 (front), 1278 (rear). *See Universals Section for complete data.*

**REAR AXLE**

**REAR AXLE:**—Own make. Semi-floating, spiral bevel type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4 1/9-1, 4 5/9-1, 5 1/8-1.

**Backlash:**—.0005-.003". Screw adjustment.

**Removal:**—Remove rear wheel and hub assembly (use screw type puller only), take out four nuts on bearing cap bolts, push bolts out through backing plate remove shims, pull wheel bearing and axle shaft, disconnect drive shaft at rear universal, remove 8 nuts from axle housing-to-carrier stud bolts, withdraw differential assembly.

**Wheel Bearing Adjustment:**—Controlled by shims under bearing cap. Measure endplay by dial indicator clamped to backing plate with plunger against end of axle shaft. To adjust, remove bearing caps (as directed above), add or remove shims equally at both wheels. Endplay—.004-.010".

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Monroe. 156577 (front), 156578 (rear). Hydraulic, direct acting type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Conventional 'I' beam section front axle with Elliott type ends and semi-elliptic springs. Axle alignment maintained by torque arm at each end (81, 82—not used on 80, 88).

**Kingpin Inclination:**—7° crosswise. *See Hudson Shop Notes for Kingpin Thrust Bearing data.*

**Caster:**—1-2° and equal within ½° for both wheels. To adjust (81, 82), loosen capscrews at front of torque arm, insert shim between arm and axle at upper screw or remove shim at lower screw to decrease caster, remove shim at upper screw or insert shim at lower screw to increase caster. Shims .020" thick, change caster ½°. To adjust (80, 88), install wedge shims between spring and spring seat.

**Camber:**—1-1½°. No adjustment.

**Toe In:**—¼" measured 10" up from ground. Adjust by loosening clamp bolts and turning tie rod.

**Steering Geometry:**—Inner wheel 20°. Outer 17¾°.

**STEERING GEAR**

**Steering Gear:** Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES:**—Service—Bendix Hydraulic, Duo-servo, Single anchor type with Mechanical follow-up. Hand lever applies rear service brakes.

*See Brake Section for complete data.*

**Drum:**—Alloy-steel. Diameter—10 1/16".

**Lining:**—Moulded (primary), Woven (secondary).

**Width:** 1¾". **Thickness:** 3/16". **Lgth.** 22½" per wheel.

**Clearance:**—.010" heel and toe of each shoe.

**Hand Brake:**—See Service Brakes above.

**Hill-Holder:**—Optl.

*See Brake Section for complete data.*

**CYLINDER HEAD****ALL MODELS**

**CYLINDER HEAD: Installation**—Use a torque indicating wrench to tighten cylinder head stud nuts and capscrews, tighten in correct sequence as shown

**WILLYS FOUR****WILLYS SIX**

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS****1946-47-48 MODELS**

**TIGHTENING TORQUES:** When tightening capscrews or bolt nuts retaining the parts listed below, use a torque indicating wrench and tighten to tensions listed:

	<b>Ft.Lbs.</b>	<b>In.Lbs.</b>
Cylinder Head Capscrews.....	65-75	780-792
Cylinder Head Stud Nuts.....	60-65	720-780
Main Bearing Capscrews.....	65-70	780-840
Connecting Rod Bolts.....	50-55	600-660
Flywheel Attaching Bolts.....	36-40	432-480
Rear Engine Mounting Bolts.....	38-42	456-504
Manifold Attaching Stud Nuts.....	31-35	372-420
(Intake & Exhaust)		
Generator Bracket Bolts.....	31-35	372-420
Starter Mounting Capscrews.....	20-25	240-300
Universal Joint "U" Bolts.....	15-18	180-216
Spring Center Clip "U" Bolts.....	50-55	600-660
Spring Pivot Bolt Nut.....	27-30	324-360

**ENGINE REMOVAL****CJ-2A JEEP**

**ENGINE REMOVAL:** To remove engine from chassis as required for such service items as crankshaft and camshaft overhaul, perform the following operations in sequence:

1. **Drain Cooling System.** Drain cocks located at lower left corner of radiator and right front corner of cylinder block.

2. **Remove Battery.** Disconnect battery cables, remove battery from box on right side of engine.

3. **Remove Radiator.** Disconnect and remove upper and lower hoses, radiator stay rod, and hold-down nuts, lift radiator out. Do not lose radiator mounting pads (not necessary to remove radiator grille).

4. **Remove Air Cleaner.** Disconnect and remove air cleaner hose connection, remove wing nuts on mounting bracket and lift cleaner out.

**CAUTION**—Use care not to spill oil in cleaner.

5. **Remove Starter.** Disconnect cable at starter terminal. Remove two flange mounting capscrews and bolt in support bracket at commutator end, pull starter forward to clear Bendix Drive and lift out.

6. **On Right Side of Engine,** disconnect generator leads and ignition coil leads to distributor. Remove heat indicator bulb from cylinder head (**CAUTION**—Use care not to kink or break tube), disconnect engine ground strap (at right front engine mounting bracket), remove two bolts in engine mounting.

7. **On Left Side of Engine,** disconnect throttle and choke control rods at carburetor, and governor dash control cable at governor (if used). Disconnect and remove horn. Remove fuel tank filler cap (to relieve pressure), disconnect fuel line at fuel pump. Disconnect oil gauge lines at crankcase, remove accelerator linkage rod. Disconnect exhaust pipe at manifold. Remove two bolts in left front engine mounting.

8. **Underneath Engine,** disconnect rear end of engine stay cable at frame cross-member (left side), remove bell housing attaching bolts leaving one bolt at each side to support engine weight.

9. **Remove Engine.** Attach chain hoist to engine and take up on hoist just enough to support engine without binding remaining bell housing bolts, remove these bolts. Swing engine forward to withdraw clutch shaft from bushing in flywheel, lift engine out.

**INSTALLATION CAUTION**—Place small amount of grease in clutch shaft bushing in flywheel before installing engine.

**ORIGINAL BORE & PISTONS****ALL MODELS**

**BORE & PISTON SIZES:** Engines originally equipped at factory with special oversize pistons may be identified by code letter stamped on engine following the engine number:

"B"—Pistons are .002" Oversize.

"AB"—Pistons .002" Oversize. Main and connecting rod bearings are Undersize (see Original Bearing Sizes following).

"C"—Piston Pins .002" Undersize.

**4 CYLINDER MODELS**

**STANDARD BORE & PISTON SIZE VARIATION:** bores and pistons are graded in four .0005" steps as shown in table below and are marked as follows:

**Piston**—Letter stamped on piston head.

**Cylinder Bore**—Letter stamped on top of block between valve ports and bore at center.

**4 Cylinder Bore & Piston Sizes**

<b>Letter</b>	<b>Cylinder Bore Size</b>	<b>Piston Size</b>
A .....	3.1255-3.1250"	3.1235-3.1230"
B .....	3.1260-3.1255"	3.1240-3.1235"
C .....	3.1265-3.1260"	3.1245-3.1240"
D .....	3.1270-3.1265"	3.1250-3.1245"

**6 CYLINDER MODELS****STANDARD BORE & PISTON SIZE VARIATION:**

Cylinder bore and pistons are graded in six .0004" steps and are marked as follows:

**Piston**—Letter stamped on piston head.

**Cylinder Bore**—Similar letter stamped on top of block between valve ports and bore.

**ORIGINAL BEARING SIZES****ALL MODELS**

**MAIN & CONNECTING ROD BEARING SIZES:** Engines originally equipped with special undersize mains and connecting rod bearings can be identified by code letter stamped on engine following the engine number:

"A"—Main & Con. Rod Bearings .010" Undersize.

"AB"—Main & Con. Rod Bearings .010" Undersize and Pistons Oversize (see Original Bore & Pistons).

"D"—Main Bearings .010" Undersize.

"E"—Connecting Rod Bearings .010" Undersize.

**CRANKSHAFT & MAIN BEARINGS****1946-47-48 MODELS**

**CRANKSHAFT SERVICING: Bearing Replacement**—

Make certain that oil holes in bearings line up with oil holes in crankcase. On 4 cylinder, see that bearings fit snugly on dowel pins in crankcase and bearing caps.

**Rear Bearing Oil Seal**—Consists of a wick type packing installed in grooves in bearing cap and crankcase. To install new packing, insert packing in groove, use round piece of wood or steel to "roll" packing into groove, working from both ends toward center. With packing firmly seated in groove, cut off ends flush with surface. **NOTE**—Crankshaft must be removed to install packing in upper (crankcase) half of bearing.

**Rear Bearing Cap Seal**—Bearing cap sealed by cylindrical rubber packing strips inserted in holes between cap and case. When installing bearing cap, coat upper face lightly with sealing compound, insert new packing strips after cap is in place. Packing strips should protrude 1/4" to provide proper compression when oil pan installed. **CAUTION**—Do not cut off this protruding portion of the packing.

**Front (Timing Cover) Oil Seal**—Braided asbestos type impregnated with graphite and oil. Seal is installed in recess in inner face of timing chain cover and retained by steel retainer. To remove seal, pry out retainer and seal assembly.

**CAUTION**—Always use new steel retainer when installing new seal.

► **Production Change (Starting CJ-2A Eng. No. 62054, 4-63 Eng. No. 11080, All 2T & 4T Jeep Trucks)**—New timing case cover (with double baffle and spring loaded leather seal) and new crankshaft pulley (with polished surface for seal contact) used. This new cover and pulley can be installed as an assembly on earlier engines (either chain or gear drive).

**Flywheel**—Mounted on crankshaft flange by two special dowel bolts and four special head bolts. Whenever flywheel removed, make certain that arrow on flywheel center lines up with arrow on crankshaft flange when re-installed (to insure correct position of timing marks), tighten bolt nuts with a torque indicating wrench to 36-40 ft.lbs. and check flywheel run-out when installed. Run-out must not exceed .008".

**New Flywheel or Crankshaft Installation**—Taper dowel bolts should be replaced with new special snug fitting bolts supplied to eliminate necessity of reaming the special tapered holes. Assemble new parts as follows: Install flywheel on crankshaft (lining up arrows on both parts) using the four straight bolts previously used, tighten these bolts securely. Drill out tapered bolt holes with a 35/64" drill, ream these holes with a 9/16" (.5625") straight reamer, install special bolts, Part No. 116295 (with No. 52330 Lockwasher and No. 52804 Nut), in these holes and discard the tapered dowel bolts used previously. Tighten bolts to 36-40 ft.lbs. and check flywheel run-out (.008" max.).

## CAMSHAFT & BEARINGS

### 1946-47-48 MODELS

**CAMSHAFT SERVICING: Removal**—Drain radiator and cylinder block, remove radiator and grille, cylinder head, manifold, valves, and valve springs. Remove oil pump, fuel pump, oil pan, crankshaft pulley (use puller), fan and governor drive belts, and fan assembly. Remove nuts on front engine support rubber insulators. Remove timing chain cover, take out camshaft sprocket mounting screws, remove sprocket and chain. Block up all valve lifters (can be tied up by string from adjusting screw to manifold mounting studs). Place jack under crankcase (use block on jack to avoid damage to pan), raise front end of engine until camshaft will clear front cross-member, pull camshaft out.

**Gear Puller Tool**—Use Puller Tool No. W-172 to remove gear on engines equipped with timing gears.

**Camshaft Front Bearing**—Consists of a steel-backed, babbitt-lined bushing which takes thrust. When installing this bushing, make certain oil hole lines up with drilled oil hole in crankcase, stake bearing in place to prevent turning in service.

**Camshaft Thrust Plunger**—Plunger and spring should be installed in camshaft hub with round end out. Stationary pin on timing chain cover must be perpendicular so as to bear on spring-loaded plunger.

**INSTALLATION CAUTION**—Make certain that thrust washer installed in back of camshaft sprocket. Coat end of thrust pin on timing chain cover with cup grease when installing cover.

## OIL PUMP

### 1936-42 MODELS

#### CJ-2A JEEP UP TO ENG. NO. 44417

**PLANETARY GEAR TYPE OIL PUMP SERVICING:** Pump mounted externally on left hand side of crankcase.

**Pump Removal**—Remove nuts and lockwashers on three mounting studs, slide pump off studs. To disassemble pump, remove one screw in pump cover, lift off cover, remove idler gear and rotor disc. To remove rotor shaft assembly, file off end of pin in drive gear hub, drive pin through shaft, using a small drift, remove gear, withdraw rotor shaft assembly from housing.

**Pump Servicing & Assembly**—Pump shaft clearance in housing is .001-.003" (new), .005" (service limit). Idler gear clearance on shaft is .002-.004" (new), .006" (service limit). When assembling pump, make certain that gasket installed on shaft within

pump housing and that disc in place in shaft assembly. Use new body and cover gaskets. Make certain that driving gear pin is securely installed to prevent loosening in service.

**CAUTION**—Prime pump by filling with engine oil through plug hole in cover before installing pump on engine.

**Pump Installation**—Turn flywheel to #1 piston firing position with flywheel mark "IGN" centered in inspection hole in right front face of flywheel housing below starter. Turn distributor shaft to #1 firing position with distributor rotor finger opposite #1 terminal in distributor cap. Hold oil pump in same relative position as when installed on engine, turn pump shaft until tongue offset is upward (widest part of shaft down) and line up gear retaining pin with right hand side of slot in pump body. Slide pump into place on mounting studs, recheck rotor position. **NOTE**—If distributor rotor not at #1 terminal with pump installed, remove pump, turn shaft as required, and re-install.

### 1946-47-48 MODELS

#### CJ-2A JEEP STARTING ENG. NO. 44417

**ROTOR TYPE OIL PUMP SERVICING:** Pump mounted externally on left hand side of crankcase.

**Pump Removal**—Remove mounting screws in pump body flange, slide pump assembly out. To disassemble pump, remove cover screws and lockwashers, lift off cover, remove pump outer rotor. To remove shaft and rotor assembly, file off end of pin in drive gear hub, drive pin through shaft using a small drift, remove gear, withdraw shaft and rotor from housing. To remove oil regulator, remove hexagonal-headed plug on side of housing, withdraw regulator spring and plunger. **CAUTION**—Do not lose adjusting shims located within plug above spring.

**Pump Servicing & Assembly**—Replace rotors if clearance between inner and outer rotor excessive, or if rotor clearance in housing excessive. Replace cover if rotor bearing surface is worn or scratched. Use new body and cover gaskets. Make certain that driving gear pin is securely installed.

**Pump Installation**—See installation directions for previous type planetary gear oil pump (above).

## ENGINE GOVERNOR

### 1946-47-48 JEEP & TRUCK MODELS

**GOVERNOR:** Governor is mounted on bracket on left front corner of cylinder head and is belt driven from the crankshaft. Various types of Governors are used with different engaging mechanisms as listed below. All governors have a dash control by which engine speed can be set in 200 RPM. steps from 1000 RPM. to 2600 RPM. maximum.

**King-Seeley**—Governor is engaged by turning control on pulley hub ¼ turn in either direction from disengaged position which allows pins to drop into deeper recesses in hub.

**Monarch**—Governor is engaged by unlatching the spring loaded control lever on top of the governor body and allowing spring to carry the engaging clutch forward.

**Novi**—No clutch provided (governor directly belted to engine).

**Adjustment (King-Seeley & Monarch):** Check throttle linkage for sticking and binding by disconnecting accelerator spring and making certain that throttle opens and closes freely (this is necessary to prevent surging when governor operating). Reconnect accelerator spring, set hand throttle in wide open position, make adjustments in order as listed below. **CAUTION**—Novi governors are adjusted differently (see Novi data following).

**Throttle Linkage**—Adjust length of governor-to-throttle rod so that rod can be installed without disturbing position of the short (lower) governor lever or the carburetor throttle lever (King-Seeley), or to provide 1/16" slack or lost motion (Monarch). Rod length between ball centers should be 6" with King-Seeley governor. **NOTE**—1/16" slack required with Monarch governor to cushion governor action and prevent surging (no surge adjustment).

**Dash Control (Speed Adjustment)**—Engage governor clutch, place the governor dash control in first (1000 RPM) notch, make certain that hand throttle fully open, start engine and allow it to run until fully warmed up, then adjust governor control as follows: Check engine speed which should be 1000 RPM (see Note below), and if not correct disconnect dash control cable at upper end of governor upper (long) lever, place lever in position giving 1000 RPM speed, adjust clevis on lever end of dash control cable so that cable can be connected without disturbing position of lever, tighten adjustment locknut and connect cable. Recheck adjustment. If engine surges when throttle opened momentarily on cars with King-Seeley governor, adjust surge screw (below). **NOTE**—Monarch governor does not have surge adjustment.

**Engine Speed Note**—If tachometer not available, speedometer can be used to gauge engine speed. Jack up rear wheels securely, make certain that front drive disengaged, engage high or direct transmission gear. Speedometer readings for adjusting purposes should be 15 MPH. (1000 Engine RPM), 39 MPH (2600 Engine RPM).

**Surge Screw Adjustment**—If engine surges under load when controlled by governor, loosen locknut on adjusting screw on rear of governor housing, turn adjusting screw out until engine surges when dash control is operated between Low and High governed speeds, then turn screw in until surging stops and tighten locknut. **CAUTION**—Do not turn surge screw in further than necessary to eliminate surging or speed control will be lost.

**Adjustment (Novi Governor):** Check throttle linkage for sticking and binding. Disconnect accelerator spring, see that throttle opens and closes freely (prevents surging when governor operates). Reconnect spring. Make following adjustments in order:

**Throttle Linkage**—Adjust length of governor to throttle rod so that it can be installed on the ball studs with the governor hand control pulled out to last notch and carburetor throttle wide open, tighten adjustment locknut and install rod. **NOTE**—Rod length should be approximately 7 3/8" between ball stud centers.

**C NTINUED FR M PRECEDING PAGE**

**Dash Control (Speed Adjustment)**—With governor dash control in closed or "in" position, start engine and allow it to run until fully warmed up. With hand throttle control fully closed, check engine idling speed and adjust throttle stopscrew for 600-650 RPM idle speed. Pull governor hand control out to first notch, check engine speed which should be 900-1000 RPM (see Note below). If not correct, disconnect dash control cable at upper end of governor upper (long) lever, place lever in position giving correct 900-1000 RPM engine speed, adjust clevis on lever end of cable so that cable can be connected without disturbing position of lever, tighten locknut and connect cable. Then push governor hand control all the way in, recheck engine idle speed. If speed greater than original setting of 600-650 RPM, loosen nut locking governor control handle on rod, unscrew handle from rod until carburetor throttle closed and throttle stopscrew against stop, tighten governor control handle locknut.

**Engine Speed Note**—Speedometer can be used to

gauge engine speed as follows: Jack up rear wheels securely, make certain that front drive disengaged, engage transmission High or direct speed. Speedometer readings should be 13½-15 MPH for engine speed of 900-1000 RPM.

**SPRING SHACKLES****1946-47-48 JEEP & TRUCK MODELS**

**SPRING SHACKLES:** Springs are fitted with "U" type shackle (front end of front springs, rear end of rear springs on Jeep; front end of front springs only on Trucks). Opposite end of all springs fitted with bronze bushing and conventional pivot bolt (rear shackle of rear springs on Trucks has same type bushing and bolt.) **CAUTION**—When removing springs, remove pivot bolt first, then remove bushings from "U" shackle. Install springs as follows:

**Pivot Bolt Installation**—Install bolts with head and grease fitting toward outside, tighten bolt nut with a torque indicating wrench to 27-30 ft.lbs.

**"U" Shackle Installation**—Install grease seal retainer and grease seal on each leg of "U" shackle,

insert shackle through inner face of frame hanger and spring eye (threaded bushings installed with hexagonal head toward outside), hold shackle tightly against frame and start upper bushing on shackle (see Bushing Caution below) taking care that bushing is not cross-threaded on shackle or in spring eye. Turn bushing on shackle approximately half-way, then start lower bushing similarly, turn both bushings in alternately and evenly until heads of bushings are snug against frame bracket and bushing in spring eye is 1/32" away from spring (measured from inside hexagonal head to spring). Lubricate bushing with high-pressure lubricant, check shackles for binding by flexing spring. If shackle is tight, remove and re-install bushing.

**BUSHING CAUTION**—Left-hand threaded "U" shackles are used at left front spring and right rear spring (Jeep), at left front spring only (Trucks) with the left-hand threaded end down (toward spring eye) and special left-hand threaded bushings must be used with these shackles. Shackles may be identified by small boss forged on lower shank and bushings identified by groove around head. Right-hand shackles and bushings are unmarked.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on left hand frame member near rear shackle on left front spring and on body sill at left front door opening. First No. 42000.

**ENGINE NUMBER:**—Stamped on right front upper corner of cylinder block. 1st no. 42,000 ('36).

## TUNE-UP

**COMPRESSION:**— Ratio Pressure  
1936 ..... 5.7-1 ..... 87 lbs. at 216 R.P.M.  
NOTE—Cylinder heads are cast-iron.

**VACUUM READING:**—Gauge should show steady reading of  $18\frac{1}{2}$ " with engine idling at 7 M.P.H.

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUGS:** Champion Type C-7. 18 mm. Metric type.  
Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.018". Limits .018-.020".

Cam Angle—47° (closed).

Automatic Advance—14° (distr.) maximum at 1700 distributor RPM.

Vacuum Advance (IGS-4007)—10° max. (distr.). with 15" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° ATDC. with flywheel mark "IGN" at indicator in inspection hole in top left hand side of flywheel housing.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw approximately 1-1 $\frac{1}{4}$  turn open and set for smooth firing. Idle speed 7 MPH.  
High Speed Setting (1936 D-1E only)—High speed adjusting screw set for maximum speed and smooth running with throttle opening equivalent to 25-30 MPH. (block out idling system by turning idle screw all the way in while making high speed adjustm't).  
Float Level—1  $\frac{25}{32}$ " from face of gasket on cover to bottom of float with valve seated (invert to check).

Fuel Pump Pressure: 3 $\frac{1}{2}$  lbs. maximum.

**VALVES:** See Valve Timing.

Tappet Clearance—.004" Int., .006" Exh., Hot.

**STARTING:** See Battery, Starter, and Generator.

## IGNITION

**Ignition Switch:**—Mitchellock 17-A, Type 5159. Coil connection not armored.

**Ignition Lock:**—Independent Lock Co. No. 4044-H, Mitchell No. 4759.

**COIL:** Auto-Lite Model IG-4090. Service Coil IG-4070. Mounted on right side of engine.

Ignition Current—2.5 amperes idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4007. Single breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control.

Breaker Gap—Set at .018". Limits .018-.020"

Breaker Arm Spring Tension—16-20 ounces.

Cam Angle—47° (closed), 43° (open).

## Automatic Advance—IGS-4007

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start .....	300	0 .....	600
4.4 .....	420	8.8 .....	840
7 .....	770	14 .....	1540
10 .....	1165	20 .....	2330
14 .....	1700	28 .....	3400

**Vacuum Spark Control (IGS-4007)**—Integral with distributor. Mounted on distributor housing and linked directly to breaker plate. Provides additional advance for all speeds above idling except when engine is accelerated or operated with wide open throttle when spark is retarded by return spring within unit.

## Vacuum Advance—IGS-4007

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start .....	0° .....	3 $\frac{1}{2}$ "
2° .....	4° .....	5 $\frac{3}{4}$ "
5° .....	10° .....	9 $\frac{1}{4}$ "
8° .....	16° .....	12 $\frac{3}{4}$ "
10° .....	20° .....	15"

## IGNITION TIMING

**IGNITION TIMING:**— Flywheel Degs. Piston Position  
1936 Engines ..... 5° ATDC ..... 0103° ATDC  
Timing—Take off cover plate over inspection hole (top surface left hand side flywheel housing). Turn engine over with #1 piston on compression, stop when flywheel mark IGN lines up with pointed end of inspection plate screw, loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor is opposite #1 segment in distributor cap, check spark plug connections (see diagram).

## CARBURETOR

Tillotson Model D-1E, 1 $\frac{1}{8}$ " Single barrel, downdraft type with manual choke control.

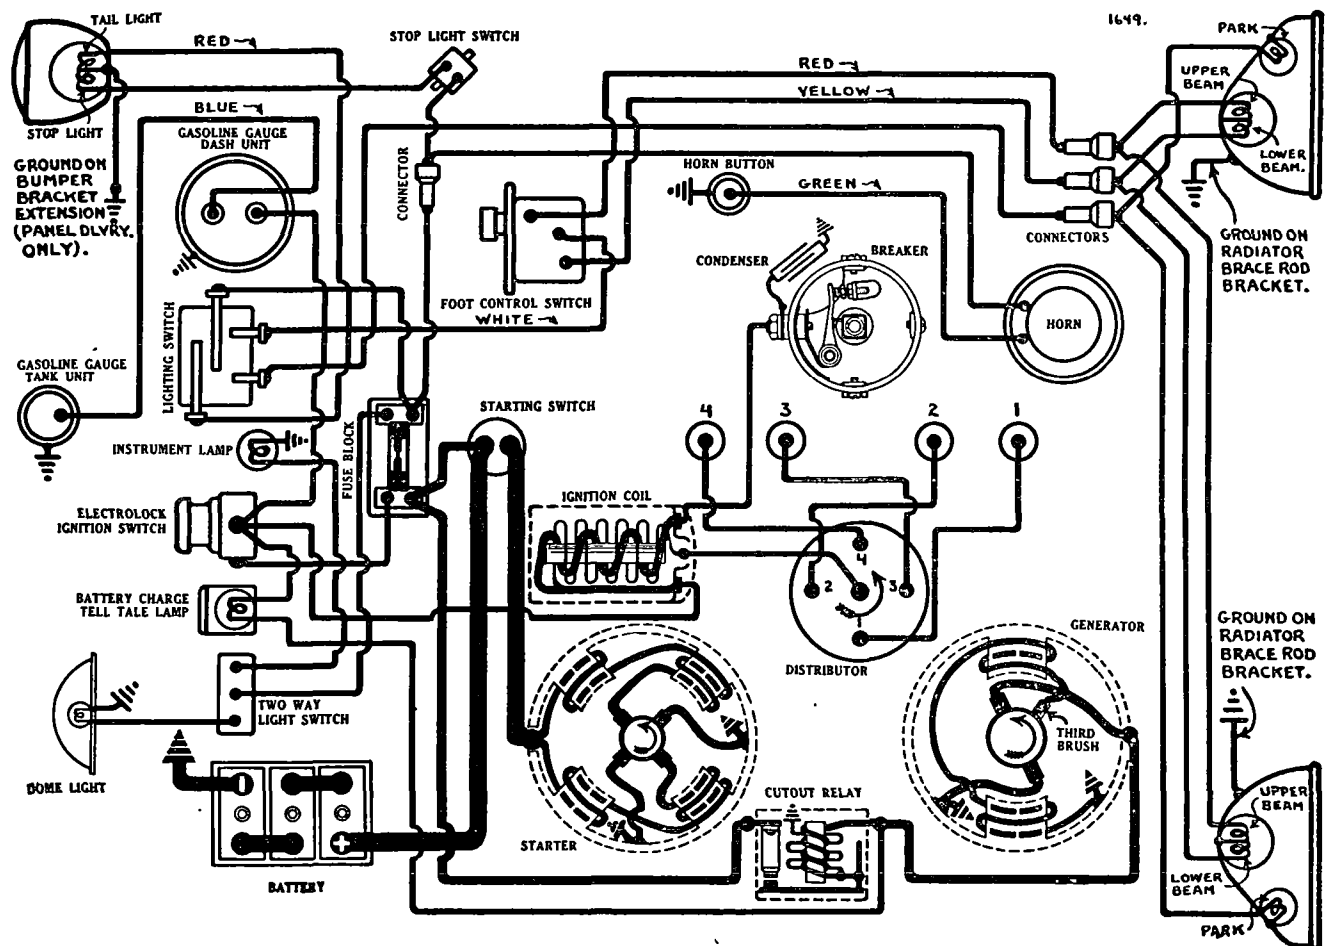

NOTE—This carburetor has High Speed as well as Low Speed adjustments.

For complete data, refer to Carburetor Index.

Adjust as follows:

**High Speed Adjustment:**—With engine warm set throttle for 25-30 M.P.H. speed. Turn idle adjusting screw in until it is closed. Then turn High Speed Adjusting Screw (screw with cross bar) in until

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

engine misses, turn screw out until engine begins to roll, finally turn screw in (approximately  $\frac{3}{4}$  turn) until engine fires smoothly. Then set Idle Adjustment as outlined below.

**Idle Speed Adjustment**—Open idle screw 1-1 $\frac{1}{4}$  turns and close throttle. Set throttle stop screw for idling speed of 7 M.P.H., turn idle adjusting screw out or left until engine misses, then turn screw in until engine fires smoothly. Reset throttle stop screw if necessary for correct idling speed.

## CARB. EQUIPMENT

**Air Cleaner**—Monroe oil-wetted type Std.

**Fuel Pump**—A.C. Type P-1521390.

For complete data, refer to Carburetion Equip. Index.

**Gasoline Gauge**—Auto-Lite electric type. Dash Unit No. NG-7709D. Tank Unit No. NG-7261T.

For complete data, refer to Carburetion Equip. Index.

## BATTERY

**U.S.L. Type A-13-A**. 6 volt, 13 plate, 78 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—90 amperes for 20 minutes.

**Grounded Terminal**—Negative (—) terminal.

**Location**—On "X" member under right front seat.

## STARTER

**Auto-Lite Model MZ-4033**. Armature No. MZ-2089.

**Starter Drive**—Special outboard Bendix RC10HD.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—120 R.P.M., 200 amperes, 5 volts.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 " "	2500	5.5	100
2.56 " "	1325	5.0	200
4.95 " "	750	4.5	300
7.65 " "	220	4.0	400
7.8 " "	Lock	3.0	420
11.8 " "	Lock	4.0	560

**Starting Switch**—Model SW-4001. Foot plunger type mounted on toeboard.

**Mounting**—Flang mounted on right hand front face of flywheel housing. To remove, take out two flange cap screws and one cap screw in bracket on commutator end.

## GENERATOR

**Auto-Lite Model GAM-4504**. Armature No. GAM-2055. Third brush control type.

**Charging Rate Adjustment**—Take off commutator cover band, shift third brush by hand by prying on brush mounting stud, counter-clockwise to increase, or clockwise to decrease charging rate. Third brush is held in position by friction.

**Maximum Charging Rate**—17 amperes (cold), 8.0 volts, 1950 R.P.M.

## Performance Data

Cold			Hot		
Amps	Volts	R.P.M.	Amps	Volts	R.P.M.
0	6.4	700	0	6.4	720
4	6.8	880	4	6.9	920
8	7.2	1075	8	7.35	1160
12	7.6	1280	12	7.8	1460
16.5	8.0	1950	13.8	8.0	2000

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—18-22 ozs. (new brushes).

**Field Current**—3.89-4.31 amperes at 6.0 volts.

**Motoring Current**—4.08-5.32 amperes at 6.0 volts.

**Mounting**—Pivot mounted at right front of engine. Fan belt drive. To remove, take out two pivot bolts, one clamp bolt.

**Belt Adjustment**—Loosen two pivot bolts and adjustment clamp bolt, pull generator away from engine until fan can just be turned with belt held stationary, tighten clamp bolt and pivot bolts.

## CUTOUT RELAY

**Auto-Lite Model CB-4008**. Mounted on top of right hand frame side member near generator.

For complete data, refer to Electrical Equipment Index.

**Cuts In**—6.5-7.25 volts, 700-800 generator RPM.

**Cuts out**—5-2.5 amperes discharge.

**Contact Gap**—.015-.045".

**Air Gap**—.010-.030" (contacts closed).

## LIGHTING

**LIGHTING**—Headlamps—Corcoran-Brown. Fixed focus type. Headlamps aimed straight ahead (upper beam with lenses in place). Upper and lower beams controlled by foot selector switch.

## Switches

**Lighting**—Culver-Stearns.

**Foot Selector**—Clum Model 9579.

## Bulb Specifications

Lamp	Candlepower	Mazda No.
Headlights	21-21	1110
Stop and Tail Light	21-2	1158
All others	3	63

## MISC. ELECTRICAL

**FUSES**—20 ampere capacity lighting fuse mounted on rear of dash under cowl.

**HORNS**—Schwartz vibrator type disc horn.

## ENGINE

**ENGINE**—Own Model 77. Four cylinder, 'L' head type.

**Bore**—3 $\frac{1}{8}$ ". **Stroke**—4 $\frac{3}{8}$ ".

**Piston Displacement**—134.2 cubic inches.

**Rated Horsepower**—15.63.

**Developed Horsepower**—48 at 3200 R.P.M.

**Compression Ratio**—5.7-1 Std. Cast iron head.

**Compression Pressure**—87 lbs. at cranking speed of 216 RPM.

**Vacuum Reading**—Gauge should show steady reading of 18 $\frac{1}{2}$ " idling at 7 MPH.

**NOTE**—Cylinder bores are offset  $\frac{1}{8}$ " from centerline of crankshaft toward valve side of engine.

**Pistons**—Hard Grey Iron (cast-iron). Light weight type, relieved at pin bosses. Length, 3 $\frac{3}{4}$ ". Weight—23-25 ozs. (without rings or pin).

**Removal**—Pistons and rods removed at top.

**Clearance**—Top .007-.008". Bottom .0025-.003".

**Fitting New Pistons**—Use .0025" feeler stock to check clearance. Pull required to withdraw feeler from between piston and cylinder wall must be 4 lbs. plus or minus 2 lbs.

**Piston Rings**—Three compression rings, one oil control ring per piston, all above pin. Oil ring groove drilled radially with oil drain holes.

Ring	Width	End Gap	Wall Thickness
Comp. (Top)	3/32"	.010-.012"	.132"
Comp. (2,3)	3/32"	.007-.012"	.132"
Oil Cont.	3/16"	.007-.015"	.140"

**NOTE**—Wall thickness of .140" on all 1936 rings.

**Piston Pin**—Diameter .875". Length 2.713". Pin floats in piston and rod. Retained by locking rings. Pins furnished .001" and .003" oversize.

**Clearance in Piston**—.0002-.0004". Hand press fit.

**Clearance in Rod Bushing**—.0004-.0006". Thumb press fit.

**Connecting Rod**—Length 9 3/16" (center-to-center).

**Lower Bearing Diameter**—1 15/16".

**Bearing Type**—Spun babbitt-lined type.

**Clearance**—.001-.0025". Sideplay .006-.008".

**Adjustment**—None (no shims). Replace rods.

**Installing Rods**—Connecting rod lower bearings are offset. Install rods with short side of bearing toward nearest main bearing (short side forward on #1 & #3, toward rear on #2 & 4). Oil hole in lower bearing upper half must be toward right (away from camshaft) on all rods.

**Crankshaft**—Three main bearing type.

**Journal Diameters**—2 3/16" (all bearings).

**Bearing Type**—Interchangeable steel-backed, babbitt-lined type.

**Clearance**—.001-.0025".

**Adjustment**—None (no shims). Replace bearings. Do not file bearing caps.

**End Thrust**—Taken by #1 (front) main bearing.

**Endplay** .004-.006". Adjustable by shims between crankshaft thrust washer and shaft.

**Camshaft**—Four bearing. Non-adjustable chain drive.

**Bearing Type**—Removable bushing (front), machined in crankcase (all others).

**Bearing Clearance**—.002".

**End Thrust**—Taken by thrust plate behind camshaft sprocket and spring loaded plunger in forward end of camshaft bearing against thrust stud on chain case cover.

**NOTE**—When replacing chain case cover see that plunger and spring are in place in camshaft.

**Timing Chain**—Link Belt #33403-2. Width 1 $\frac{1}{4}$ ". Pitch  $\frac{1}{2}$ ". Length 23 $\frac{1}{2}$ " or 47 links.

**Camshaft Setting**—Sprockets are marked. With pistons #1 and 4 at TDC, marks should be adjacent and in line with a straightedge across the shaft centers. Remove camshaft sprocket to install chain.

Head		Stem		Length
Valves	Diameter	Diameter	Diameter	
Intake	1 17/32"	.372"	5 13/64"	(5 $\frac{3}{4}$ " over all)
Exhaust	1 15/32"	.371"	5 13/64"	(5 $\frac{3}{4}$ " over all)
Seat Angle		Lift	Stem Clearance	
Intake	45°	.21/64"	.002-.004"	
Exhaust	45°	.21/64"	.003-.005"	

**ENGINE**

CONTINUED FR M PRECEDIN PA E

**NOTE**—Hard alloy steel inserts are used for exhaust valve seats.

**Valve Guides**—Removable type installed with taper end up. Remove old guides from above and press in new guides until lower end extends  $\frac{3}{4}$ " below valve spring recess machined in block. Exhaust guide longer than intake guide.

Valve Springs—	Pressure	Length
Valve Closed .....	46½ lbs.	2¼"
Valve Open .....	85½ lbs.	1 15/16"

**Valve Lifters**—One piece mushroom type. Operate in guide holes reamed in block. Clearance in guides .0008". Serviced by reaming guide hole and installing lifters furnished .005" oversize.

**VALVE TIMING**

**Tappet Clearance**—.004" Int., .006" Exh. engine hot.

**Valve Timing**—See Camshaft Setting above.

**Intake Valves**—Open at TDC. Close 45° ALDC.

**Exhaust Valves**—Open 40° BLDC. Close 5° ATDC. To Check Valve Timing—Set tappet clearance #1 intake and exhaust valves at .010". Intake valve opens with piston on top dead center when flywheel mark 'T.C.I.O.1-4' lines up with pointed end of inspection hole cover plate screw (top of flywheel housing on left hand side). Exhaust valve closes with piston 5° or .0103" down on intake stroke when flywheel mark 'E.C.' lines up with indicator. Reset tappet clearance at .004" (intake), .006" (exhaust) with engine hot.

**LUBRICATION**

**Lubrication**—Pressure. Gear type oil pump located at left of crankcase.

**NOTE**—When installing oil pump, turn engine over until 'IGN' mark on flywheel lines up with pointed end of inspection cover screw on left top side of flywheel housing with #1 piston on compression stroke. Rotate distributor shaft so that rotor is in #1 firing position, then mesh oil pump gear so that tongue-and-slot connection to distributor shaft is engaged without changing position of distributor shaft.

**Normal Oil Pressure**—30 lbs. at 30 M.P.H.

**Oil Pressure Relief Valve**—Located under plug on

oil pump cover. Operates at 30 lbs. Adjustable by adding or removing shims in plug above spring. Crankcase Capacity—4 quarts (refill).

**CLUTCH**

**CLUTCH**—Rockford Cover Assembly, Borg & Beck Driven Plate. Single plate, dry disc type.

See Clutch Section for complete data.

**Clutch Facings**—Molded type, 2 required, 5½" I.D., 7¼" O.D., .125" thick.

**Clutch Pedal Adjustment**—Clutch pedal free movement should be  $\frac{3}{4}$ -1" (providing clearance of 1/16" between clutch release levers and clutch release bearing within housing). To adjust, loosen lock nut, turn turnbuckle on end of clutch lever link cable.

**Removal**—Remove transmission (see Transmission Removal below), take out clutch mounting screws, lift out clutch cover assembly and driven member.

**TRANSMISSION**

**TRANSMISSION**—Own Make. Sliding spur gear type (all speeds).

See Transmission Section for complete data.

**Removal**—Remove the front seat and cowl trim pads, accelerator pedal can be pulled out from rubber connection at lower end, and floor boards. Alignment bolts (engine-to-bell housing) should enter from front, if not, they must be reversed. Turn fan so two top blades form 'V', cover with cloth to prevent injury to radiator core. Attach lifting block in #4 spark plug hole. Remove lower nuts on transmission mounting bolts, raise engine to allow removal of rubber mounting rings and mounting bracket-to-transmission capscrews, then continue to raise engine until bell housing clears brake cross shaft, remove engine-to-bell housing bolt nuts, lift transmission out from above.

**NOTE**—On 1936 cars, upper rebound rubber rings should be compressed to outside diameter of 1 11/16" with lower nuts drawn up tight. Adjust by upper nuts.

**UNIVERSALS**

**UNIVERSAL JOINTS**—'Detroit-Universal'. Series 200. Ball and trunnion type. Two used.

See Universals Section for complete data.

**REAR AXLE**

**REAR AXLE**—Own—Semi-floating, spiral bevel gear type, straddle mounted pinion, Hotchkiss drive. See Rear Axle Section for complete data.

Ratio—4.3-1.

**Backlash**—.006-.012". Shim adjustment.

**Removal**—Hoist rear of car, disconnect rear universal, brake cables, shock absorbers, remove spring U-bolts, disconnect rear spring shackles, pull assembly out from car.

**Wheel Bearing Adjustment**—Endplay controlled by shims between bearing retainer and backing plate. To adjust, remove wheel, hub assembly, oil seal and bearing retainer and add or remove shims.

**SHOCK ABSORBERS**

**SHOCK ABSORBERS**—Monroe—Single acting, hydraulic.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension**—Conventional 'T' beam section axle with Reverse-Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7½° (crosswise).

**Camber**—2°. No adjustment.

**Caster**—1-2°. Adjust by inserting shims between spring and spring pad on axle.

**Toe In**—3/32". Adjust by loosening tie rod clamp bolts and rotating tie rod.

**NOTE**—Kingpin bushing diameter, .625". End thrust is taken by a taper roller bearing assembled between axle end and steering knuckle lower yoke. Tie rod ends are rubber bushed.

**STEERING GEAR**

**Steering Gear**: Lavine. Worm-and-Block type.

See Steering Gear Section for complete data.

**BRAKES**

**BRAKES**—Service—Bendix Mechanical, Duo-Servo, Single anchor. Hand lever applies 4 service brakes. See Brake Section for complete data.

**Drum Diameter**—9".

**Lining**—Moulded type. Width 1¾". Thickness 3/16". Length 19 3/16" per wheel.

**Clearance**—.010" at heel and toe 1 each shoe.

**Hand Brake**—See Service Brakes.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On frame front cross member at center and on right side of cowl under hood.

1937 Numbers—37-1001 Up.

1938 Numbers—65,001 Up.

1939 Numbers—91,751 Up (see Note below).

**NOTE**—Cars manufactured after beginning of fiscal year (9/1/38), No. 89,001 up, are 1939 cars.

**ENGINE NUMBER:** Stamped on right front upper corner of cylinder block.

1939 Numbers—91,751 Up.

**TUNE-UP**

**COMPRESSION:**—Ratio—5.7-1. Pressure—87 lbs. at cranking speed of 216 R.P.M.

**VACUUM READING:**—Steady 18½" idling at 7 M.P.H.

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUGS:** Champion Type C-7. 18 mm. Metric Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020".

Cam Angle—(IGS) 47°, (IGW) 41° closed.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—5° ATDC. with flywheel mark "IGN" at indicator in inspection hole in top left face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment.

**Idle Setting**—Idle screw approximately 1 turn open (turn screw in from "missing" point until engine runs smoothly). Idle speed 7MPH.

**High Speed (Main) Adjustment**—Adjusting screw turned in approximately ¾ turn from point where maximum speed secured with throttle opening of 25 MPH. (screw approx. 2¾ turns open).

**Float Level**—Fuel level ¾" below top of bowl.

**Fuel Pump Pressure:** 3 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Manual type with three settings (depressions for valve lever setscrew engagement) as follows: 'Heatoft'—Summer operation (left hand), 'Midway'—Mild Winter operation (middle position), 'Heaton'—Extreme Winter operation (right hand). To adjust, loosen locknut, back off setscrew, move heat valve lever toward right (in direction of arrow) for more heat, opposite direction for less heat, tighten setscrew & locknut.

**VALVES:** See Valve Timing.

Tappet Clearance—.004" Int., .006" Exh., Hot.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

**IGNITION**

**Ignition Switch:**—Douglas. Coil connection is not armored.

**COIL:** Auto-Lite Model IG-4090, IG-4090A (Truck). Service Coil IG-4070. On right side of engine.

Ignition Current—2.5 amperes idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671G (IGS-4007 or 7A Distr.), IGB-1025 (IGW-4129A Distr.).

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Nos. IGS-4007, 7A or IGW-4129A. Single breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control.

**NOTE**—Vacuum unit integral type (IGS-4007, A), separate VC-4007 or VC-4010 (IGW-4129A).

**Breaker Plate Identification (IGS-4007, A)**—Maximum vacuum advance limited by slot and marked by number #10 stamped on plate.

**Breaker Gap**—.020".

**Cam Angle (IGS-4007, 7A)**—47° closed, 43° open.

**Cam Angle (IGW-4129A)**—41° closed, 49° open.

**Breaker Arm Spring Tension**—16-20 ozs.

**Rotation**—Counter-clockwise viewed from top.

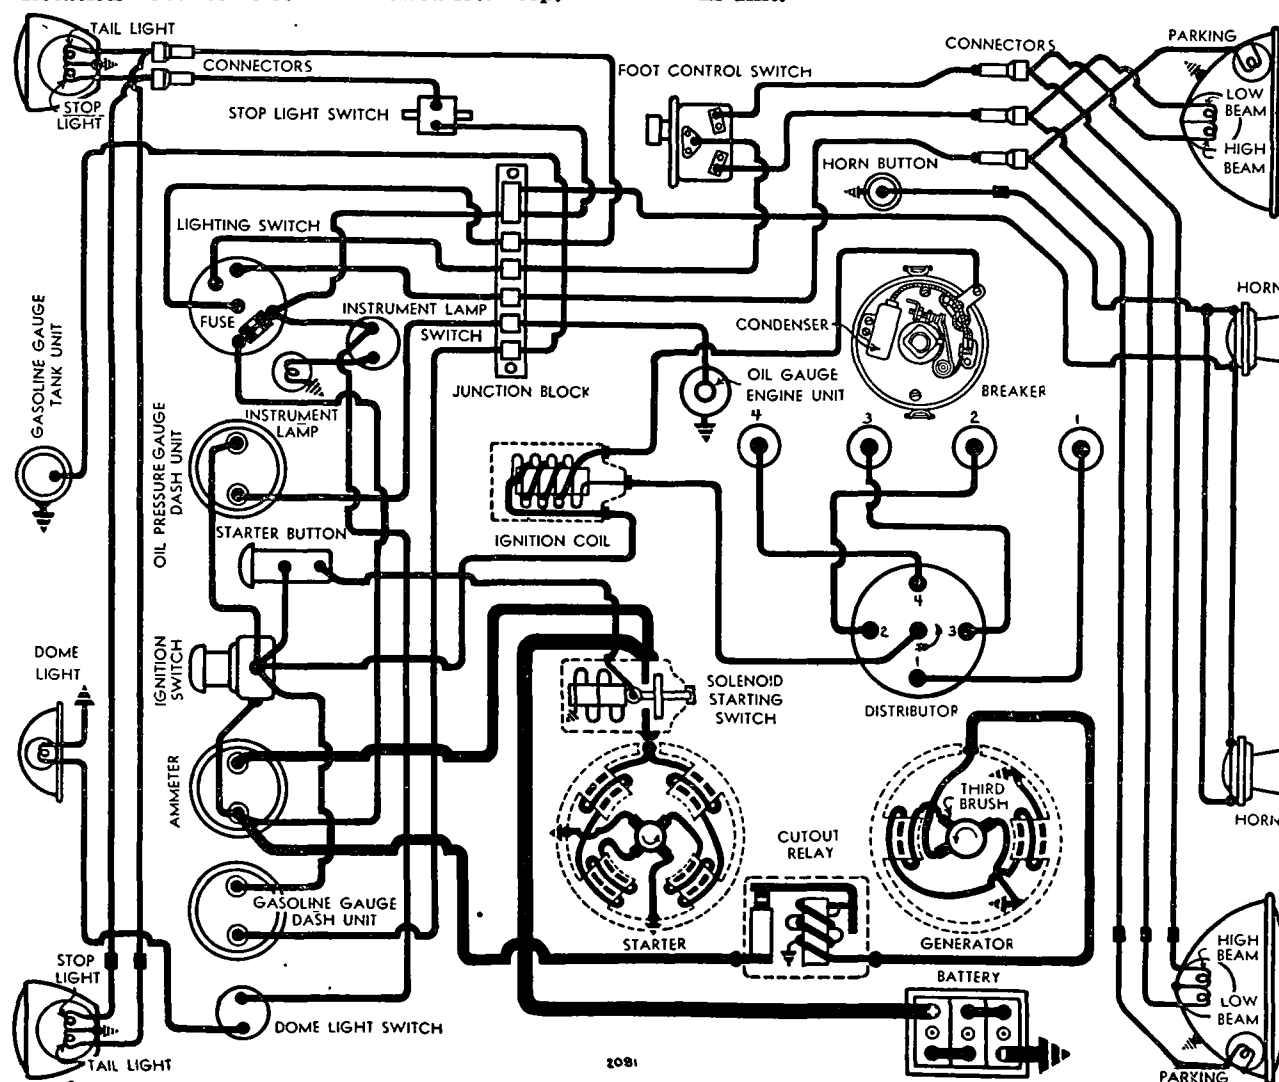

**Automatic Advance—IGS-4007, 7A**

Distributor	R.P.M.	Degrees Engine	R.P.M.
Start	300	0	600
4.4	420	8.8	840
7	770	14	1540
10	1165	20	2330
14	1700	28	3400

**Automatic Advance—IGW-4129A**

Distributor	R.P.M.	Degrees Engine	R.P.M.
Start	300	0	600
4	400	8	800
7	790	14	1580
11	1310	22	2620
14	1700	28	3400

**Vacuum Spark Control (IGS-4007, A)**—Mounted on distributor cup and linked to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

**Vacuum Advance—IGS-4007, 7A**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3½"
5°	10°	9¼"
10°	20°	15"

**Vacuum Spark Control (IGW-4129A), Type VC-4007 or VC-4010.** Mounted on bracket under distributor cup and linked to advance arm. Operates in same manner as IGS-4007A type.

**Vacuum Advance—VC-4007**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3½"
4°	8°	10½"
7°	14°	15"

**Vacuum Advance—VC-4010**

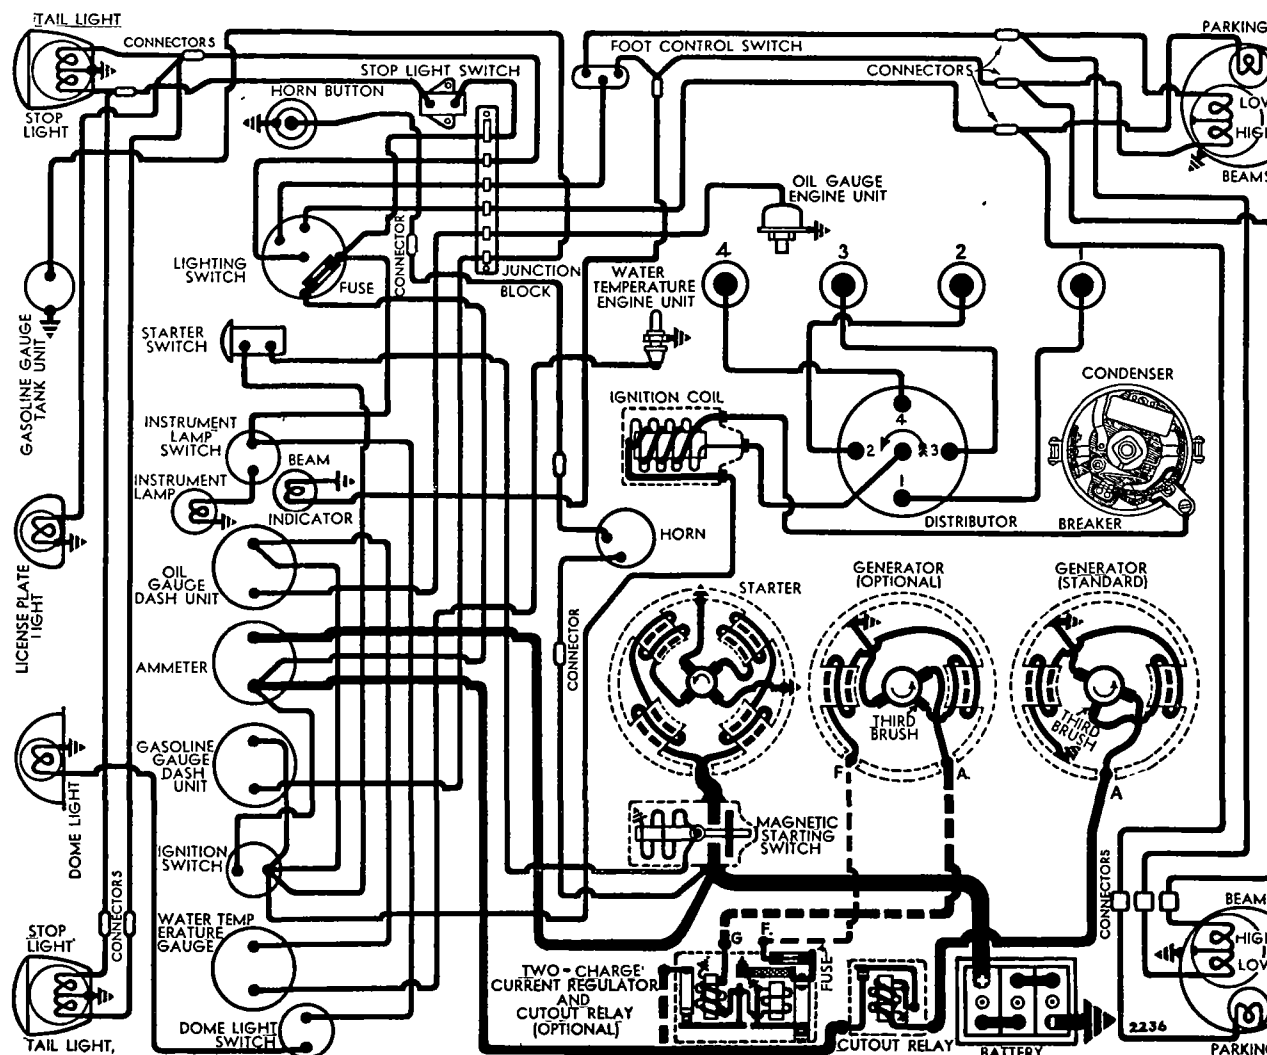

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3½"
5°	10°	9¼"
10°	20°	15"

**Distributor Removal:**—Mounted on right side of engine. To remove, disconnect vacuum line and take out hold-down screw in advance arm. To remove IGW-4129A without disturbing vacuum unit, loosen advance arm clamp bolt.

## IGNITION TIMING

**IGNITION TIMING: Flywheel Degrees Piston Position**  
All Engines .....5° ATDC.....0103" ATDC.

**To Set Timing:**—Remove inspection hole cover plate in left top face of flywheel housing. With #1 piston on compression, turn engine over until piston reaches firing position when flywheel mark "IGN" lines up with pointed end of inspection plate screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check spark plug cable connections (see diagram).

1939 WILLYS

## CARBURETOR

**CARBURETION:**—Carburetor—Tillotson Model U-1A. 1½" single barrel, downdraft type.  
*For complete data, refer to Carburetor Index.*

**Preliminary Adjustment** (If carburetor out of adjustment so that engine cannot be warmed up)—Turn main adjustment (high speed) needle valve clockwise or in until it is seated, then back off exactly 3 turns. Turn idle adjustment screw in or clockwise until seated, then back off ¾ turn. Start engine and run until warm. Then adjust as follows:

**High Speed Adjustment**—Set throttle so that engine runs at 25 MPH., turn main adjustment needle valve in or clockwise slowly until engine begins to slow down, then turn needle valve out until maximum speed is secured, finally turn needle valve in ¾ turn (setting approx. 2¾ turns open).

**Idle Adjustment**—Close throttle, set throttle stop-screw to idle engine slightly faster than normal, turn idle adjusting screw counter-clockwise or out until engine begins to miss, then turn screw in slowly until engine fires smoothly. Open throttle momentarily to clear manifold, close throttle, re-check idle adjustment. Final setting should be approximately 1 turn open from inner seated position. Then set throttle stop-screw for 7 MPH idle speed.

## CARB. EQUIPMENT

**Air Cleaner:** AC #1528326 oil-wetted type Std., No. 1529167 Oil-bath type Optl.

**Fuel Pump:**—AC Type AF #1523306. Diaphragm type.  
*For complete data, refer to Carburetion Equip. Index.*

**Gasoline Gauge:**—King-Seeley Electric. K-S No. 6270 (dash unit), No. 6280 (tank unit).  
*For complete data, refer to Carburetion Equip. Index.*

## BATTERY

**BATTERY:**—USL Type A-13. 6 volt, 13 plate, 78 ampere hour capacity (20 hour rate).

**Starting Capacity**—96 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 1.9 minutes.

**Grounded Terminal**—Negative (—) grounded to right side of front cross-member. Engine Ground—Strap connector at left front engine mounting.

**Dimensions**—Length 8½". Width 7". Height 8½".

**Location**—Right hand side under engine hood.

## STARTER

**Auto-Lite Model MZ-4049.** Armature No. MZ-2089. Drive—Special Bendix No. RC10HD.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—216 RPM., 135-150 amperes, 5.35 volts.

Performance Data			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	580

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Removal:**—Starter flange mounted on right front face of flywheel housing. To remove, take out two flange capscrews and one capscrew in bracket at commutator end, remove starter and switch as an assembly.

**Starting Switch:**—Model SS-4001. Magnetic type. Mounted on starter and controlled by pushbutton switch on instrument panel.

For complete data, refer to *Electrical Equipment Index*.

**Switch Specifications**

Closes with terminal voltage of 4 volts or less and will remain closed until voltage drops to .75-2.0 volts. Current draw 3 amperes at 6 volts.

**GENERATOR****STANDARD**

Auto-Lite Models GAM-4504-A or 4504-B. Armature No. GAM-2055. Third brush control type.

►NOTE—If Generator Model GBM-4612-A is used on Model 48 cars, refer to *Willys-Overland Model 39 (1939)* article for complete data on this model.

**Charging Rate Adjustment:**—Remove commutator cover band, shift third brush by hand, counter-clockwise to increase charging rate, clockwise to decrease charging rate. Brush is held by friction.

**Maximum Charging Rate:**—16 amperes (cold), 12.5 amperes (hot), 8.0 volts, 1950 R.P.M.

**Performance Data—GAM-4504-A or B**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	720	0	6.4	720
4	6.8	880	4	6.9	900
8	7.2	1050	8	7.4	1160
12	7.6	1280	12	7.95	1700
16.4	8.0	1950	12.5	8.0	2000

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—18-22 ozs. (new brushes).

**Field Current:**—3.89-4.31 amperes at 6.0 volts.

**Motoring Current:**—4.08-4.52 amperes at 6.0 volts.

**Removal:**—Pivot mounted at right front of engine. To remove, take out two pivot bolts, one clamp bolt.

**Belt Adjustment:**—Loosen pivot and clamp bolts, swing generator out from engine until fan can just be turned with belt held stationary, tighten bolts.

**GENERATOR****SPECIAL EQUIPMENT**

Auto-Lite Model GCS-4809A-5 (Std. on Trucks). Armature No. GCS-2049F. Third brush control type with non-vibrating type two-charge regulator.

**Charging Rate Adjustment:**—Use test meters to check output, connect jumper between fuse cup on regulator and ground to eliminate regulator action. Shift third brush by hand counter-clockwise to increase, or clockwise to decrease output. Brush held in position by friction. Do not exceed maximum rated output (secured with third brush set 1½ commutator bars minimum, or this distance less 1 mica strip maximum, from nearest main brush).

**Maximum Charging Rate:**—20 amperes (cold), 16.5 amperes (hot), 8.0 volts, 2000 R.P.M.

Performance Data—GCS-4809A-5					
Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	500	0	6.4	550
4	6.75	620	4	6.8	700
8	7.1	750	8	7.2	915
12	7.4	925	12	7.6	1200
16	7.7	1200	16.5	8.0	2150
20	8.0	2000			

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. maximum.

**Field Current:**—3.56-3.94 amperes at 6.0 volts.

**Field Fuse:**—5 ampere (in knurled cup on regulator)

**Motoring Current:**—4.99-5.51 amperes at 6.0 volts.

**Removal & Belt Adjustment:** Same as given above.

**CUTOUT RELAY**

Auto-Lite Model CB-4025 (with GAM-4504A,B Gen.). Mounted separately in engine compartment.

For complete data, refer to *Electrical Equipment Index*.

**Cuts In:**—6.5-7.25 volts.

**Cuts Out:**—5-2.5 ampere discharge current.

**Contact Gap:**—.015-.045".

**Air Gap:**—.010-.030" with contacts closed.

**REGULATOR**

Auto-Lite Model TC-4317A (GCS-4809A-5 Gen.). Two-Charge Type. Mounted separately. Consists of Cutout Relay and Two-charge (Current) Regulator. For complete data, refer to *Electrical Equipment Index*.

**Cutout Relay**

**Cuts In:**—6.5-7.25 volts.

**Cuts Out:**—5-2.5 ampere discharge current.

**Contact Gap:**—.015-.045".

**Air Gap:**—.010-.030" with contacts closed.

**Regulator**

**Contact Opening Voltage:**—8.25-8.75 volts at 70°F.

**Contact Closing Voltage:**—1.2-1.4 volts below opening voltage at same temperature.

**Contact Gap:**—.005" minimum.

**Air Gap:**—.045" with contacts closed.

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown Stabilite with pre-focused bulbs. Upper and lower beams controlled by Beam Selector Switch on toeboard.

**Headlamp Adjustment:**—Aim upper beam straight ahead (hot spot center at lamp center height at 25').

**Beam Indicator:**—At center of instrument panel. Lighted whenever upper beams in use.

**Switches**

**Lighting:**—Douglas. Beam Selector—Douglas.

**Instrument:**—Douglas.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1.5	55
Instrument, Beam Indicator	1	51
Stop & Tail	21-3	1158
Dome, License Plate ('39)	3	63

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 ampere. On Lighting Switch.

Generator Field Fuse (GCS-4809A-5 Generator only)—5 ampere. In knurled cup on regulator.

**HORNS:**—Schwarze. Vibrator, disc type. One horn Std., Twin horns Optl.

**Horn Current:**—10 amperes (each).

**ENGINE**

**ENGINE SPECIFICATIONS:**—4 cylinder, 'L' head type.

**Bore:**—3⅞". **Stroke:**—4¾".

**Displacement:**—134.2 cubic inches.

**Rated Horsepower:**—15.63 (A. M. A.).

**Developed Horsepower:**—48 HP. at 3200 R.P.M.

**Compression Ratio:**—5.7-1 cast-iron hd.

**Compression Pressure:**—87 lbs. at 217 R.P.M.

**Vacuum Reading:**—Steady 18½" idling at 7 M.P.H.  
NOTE—Cylinder bore offset ⅛" from center line of crankshaft toward valve side of engine.

**PISTONS:**—Full skirt, semi-steel, light weight type.

**Weight:**—21-23 ozs. (stripped). **Length:**—3¾".

**Removal:**—Pistons and rods removed from above.

**Clearance:**—Top .016". Skirt .0025-.003".

**Replacement Pistons:**—Finished pistons furnished Std. and .003", .005", .010", .015", .020", .025", .030" oversize.

**Fitting New Pistons:**—Use .0025" feeler stock ⅜" wide inserted between piston and cylinder wall to check clearance. Feeler pull must be 4 lbs. ± 2 lbs.

**PISTON RINGS:**—Three compression, one oil control ring per piston, all above pin. Oil ring groove drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.008-.013"	.0015"
Oil Control	3/16"	.008-.013"	.0015"
Wall Thickness	.130-.140" (Comp.)	.098-.103" (oil)	

**Replacement Rings:**—Furnished Std. and .003", .005", .010", .015", .020", .025", .030", .040" oversize.

**PISTON PIN:**—Diameter—15/16" (.9375"). Length—2.682". Pin floats in piston and rod. Retained by locking rings. Furnished .001", .003", .005" oversize.

**Pin Fit in Piston:**—.0002-.0004" clearance or hand push fit with piston dry.

**Pin Fit in Rod Bushing:**—.0004-.0006" clearance or thumb press fit.

**CONNECTING ROD:**—Weight 34 ozs. Length 9 3/16".

**Crankpin Journal Diameter:**—1.9395" (1 15/16").

**Lower Bearing:**—Spun-babbitt-lined type.

**Clearance:**—.001-.0025". **Sideplay:**—.005-.009".

**Bearing Adjustment:**—None (no shims). Replace or rebabbitt rods. Do not file rods or bearing caps. Rods furnished Standard and .010" undersize.

**Installing Rods:**—Lower bearings offset. Install rods with short side of bearing toward nearest main bearing (toward front of engine for #1 & 3, toward rear for #2 & 4) with oil squirt hole in rod toward right (away from camshaft) on all rods.

**ENGINE**

CONTINUED FROM PRECEDING PAGE

**CRANKSHAFT:**—Three main bearing type.**Journal Diameters:**—2.334" all bearings.**Bearing Type:**—Removable slip-in steel-backed, babbit-lined type. Bearings furnished Standard and .010" undersize. Clearance—.001-.0025".**Bearing Adjustment:**—None (no shims). Replace bearings. Do not file caps.**End Thrust:**—Taken by #1 front bearing. Adjustable by adding or removing shims between crankshaft thrust washer and shaft. Endplay—.004-.006".**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.**Bearing Type:**—Removable bushing (front), machined in crankcase (all others).**Bearing Clearance:**—.002-.0035".**End Thrust:**—Taken by thrust plate behind camshaft sprocket and spring-loaded plunger in forward end of camshaft bearing against thrust stud on cover.**Timing Chain:**—Link-Belt #33403-2. Width 1 1/4". Pitch 1/2". Length 23 1/2" or 47 links.**Camshaft Setting:**—With #1 piston on top dead center, mesh chain so that timing marks on sprockets are adjacent and in line with a straightedge across the shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.372"	5 13/64" (5 3/4" overall)
Exhaust	1 15/32"	.371"	5 13/64" (5 3/4" overall)
	Seat Angle	Lift	Stem Clearance
Intake	45°	21/64"	.002-.004"
Exhaust	45°	21/64"	.003-.005"

NOTE—Exhaust valve seat inserts are used.

**Valve Guides:**—Removable. Installed with taper end up. Remove old guides from above and press in new guides until lower end extends 3/4" below valve spring seat recess in block. Exhaust guide longer**Valve Springs:**—Free length 2 11/16".

	Spring Pressure	Length
Valve Closed	46 1/2 lbs.	2 1/4"
Valve Open	85 1/2 lbs.	1 15/16"

**Valve Lifters:**—Mushroom type. Guide holes reamed directly in block. Serviced by reaming guide hole and installing lifters furnished .005", .010", .020" oversize. Clearance—.0007-.001".**VALVE TIMING****Tappet Clearance:**—.004" Int., .006" Exh., engine warm. NOTE—Whenever valves ground or new valves installed, car manufacturer recommends .010" setting for all valves for at least the first 100 miles.**Valve Timing:**—See Camshaft Setting above.**Intake Valves:**—Open TDC. Close 45° ALDC.**Exhaust Valves:**—Open 40° BLDC. Close 5° ATDC.**To Check Timing:**—Set tappet clearance #1 intake valve at .010" (cold). This valve should open with piston on top dead center when flywheel mark "T.C. I.O.1-4" lines up with pointed end of inspection plate screw in inspection hole on left top face of flywheel housing. Reset tappet clearance at .004" warm.**LUBRICATION****LUBRICATION:**—Pressure system. Gear type oil pump mounted on outer left side of crankcase.**Oil Pump Installation Note:**—Turn engine over until 'IGN' mark on flywheel lines up with indicator (inspection hole in top left surface of flywheel housing) with #1 piston on compression stroke, turn distributor shaft so that rotor is at #1 segment in distributor cap, mesh oil pump gear so that distributor not disturbed when coupling engaged.**Normal Oil Pressure:**—30 lbs. at 30 M.P.H.**Oil Pressure Regulator:**—Located under plug on oil pump cover. Opens at 30 lbs. Adjustable by adding or removing shims within plug above spring.**Oil Pressure Gauge:**—King-Seeley Electric. K-S No. 6275 (dash unit), No. 6425 (engine unit). See Miscellaneous Section for complete data.**Crankcase Capacity:**—4 quarts.**COOLING****COOLING SYSTEM:**—Capacity—11 quarts.**Water Pump:**—Adjustable packing type. See Water Pump Section for complete data.**Thermostat:**—None used. Accessory thermostat (for installation in cylinder head outlet) available.**Temperature Gauge (1938):** King-Seeley Electric. Dash Unit—K-S No. 6628 (Std., Economy & Com'l) No. 6632 (Deluxe Models).**Engine Unit:**—K-S No. 5700. NOTE—No. 5700 Engine Unit serviced by new type No. 7000 which must be used with new Dash Unit No. 7142 (exc. Deluxe), 7140 (Deluxe Models).

See Miscellaneous Section for complete data.

**Temperature Gauge ('39 Pass.):** King-Seeley Electric. K-S No. 7205 (Engine Unit). Engine unit controls Signal Light on instrument panel.**Commercial Cars:**—King-Seeley Electric. K-S No. 6632 (dash unit), No. 5700 (engine unit).

NOTE—Use No. 7000 Engine Unit to replace 5700 (requires new Dash Unit No. 7140).

See Miscellaneous Section for complete data.

**CLUTCH****CLUTCH:**—Rockford Cover Assembly (with Borg & Beck Driven Plate). Single plate, dry disc type. See Clutch Section for complete data.**Facings:**—Moulded type, 2 required. Inside Diam. 5 1/2". Outside Diam. 7 7/8". Thickness 1/8".**Adjustment:**—Pedal free movement must be 3/4-1" (providing 1/16" clearance between release levers and release bearing). To adjust, loosen locknut, turn yoke on rear end of clutch control lever cable.**Removal:**—Remove transmission (see Transmission Removal below) and flywheel bell housing, take out mounting screws in clutch cover evenly, lift out.**TRANSMISSION****Warner.** T84-C ('37-38 Pass. Cars), T82-D (1938 Trucks), AS3-T84D ('39). Constant-mesh, synchromesh, helical gears (Second & High), sliding spur gears (Low & Reverse).

See Transmission Section for complete data.

**Removal (1937 & 1938):** Remove the front seat, gear shift lever (at retaining collar), disconnect accelerator pedal from rubber socket, remove toe boards, loosen radiator mounting bolts (at bottom) and brace rods (for fan clearance), disconnect propeller shaft at front, remove lower nuts from mounting bolts at rear of transmission, jack up rear of engine removing transmission rear mounting bracket, and raising until it clears frame cross member, remove housing to engine bolts (bolts should be driven in from front or engine side—holding motor plate in position). Lift out transmission from above.

NOTE—Upper snubbing rubber on mounting bolts should be compressed to 5/8" with lower nuts drawn up tight. Adjust to this thickness with upper nuts.

**Removal (1939):** Remove front seat and cover door trim; disconnect gear shift lever at retaining collar, and accelerator pedal from rubber socket, remove toeboards, loosen radiator mounting nuts and brace rod, disconnect propeller shaft at front universal, remove bell housing hand hole cover and unhook throw-out bearing retracting spring. Remove lower nuts on mounting bolts at rear of transmission, jack up rear of engine (see that fan blades do not damage radiator) to clear frame crossmember, remove transmission mounting bracket, remove bell housing bolts, pull transmission straight back.**UNIVERSALS****Detroit Universal.** Ball and Trunnion types.

1937-Early '38. Series 200 (plain bushing).

Late '38-1939. Series 4100 (needle bearing).

See Universals Section for complete data.

**REAR AXLE****Passenger Cars:**.....Own Make  
**1938-39 Trucks:**.....Spicer Model 21-1

Type. Semi-floating, spiral bevel gear types with Hotchkiss drive.

See Rear Axle Section for complete data.

**Ratio:**—4.1 or 4.3-1 Pass. 4.7-1 Std. trucks. 5.1-1 Panel Delivery and Optional on other truck models.**Backlash:**—.004-.008" Shim adjustment.**Removal:**—Hoist rear of car, disconnect drive shaft at rear universal, disconnect brake cables, shock absorbers, spring U bolts and rear shackles, pull assembly out.**Wheel Bearing Adjustment:**—To adjust, remove wheel, hub assembly, oil seal, and bearing retainer. Remove shims between retainer and backing plate at both wheels equally. Endplay—.004-.006".**SHOCK ABSORBERS****Monroe.** Direct acting, hydraulic.

1937—Front 152941, Rear 152942.

1938—Front 635702, Rear 635703.

1938 Pick-Up—Front 635702, Rear 636450.

1939—Front 637509, Rear 637508.

1939 Heavy Duty—Front 637645, Rear 637644.

See Shock Absorber Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**FRONT SUSPENSION**

**Front Suspension**—Conventional T beam section axle with Reverse-Elliot ends and semi-elliptic springs.

**Kingpin Inclination**— $7\frac{1}{2}^{\circ}$  crosswise.

**Camber**— $2^{\circ}$  or  $2\frac{1}{32}^{\circ}$ . Not adjustable.

**Caster**— $3^{\circ}$ . Adjustable by using wedge shims between spring and spring pad on axle.

**Toe In**— $1\frac{1}{16}$ – $1\frac{1}{8}^{\circ}$  (Pass. Cars),  $3\frac{1}{32}^{\circ}$  (Trucks).

**Steering Geometry (Toe Out on Turns)**—Inner wheel turned  $23^{\circ}15'$ , outer wheel  $20^{\circ}$ .

**NOTE**—Kingpin bushing diameter .750". End thrust taken by taper roller bearing assembled between axle end and steering knuckle lower yoke.

**STEERING GEAR**

**Steering Gear**: Gemmer Model 120. Worm-and-Sector type.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES**:—Service—Bendix Mechanical, duo-servo, single anchor. Hand lever applies all service brakes. *See Brake Section for complete data.*

**Drum**—Steel—Diameter 9" (passenger cars and trucks). Alloy cast-iron—Diameter 11" (Panel).

**Lining**—Moulded type. Width  $1\frac{3}{4}^{\circ}$ . Thickness  $3\frac{1}{16}^{\circ}$ . Length per wheel  $19\frac{3}{16}^{\circ}$  (passenger cars and trucks),  $23\frac{15}{16}^{\circ}$  (panel).

**Clearance**—.010" at heel and toe of each shoe.

**Hand Brake**:—See Service Brakes above.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:**—First number 39-1001. Stamped on plate on right side of cowl under engine hood and on center of front frame cross-member.  
**ENGINE NUMBER:**—First number 39-1001. Stamped on right front corner of engine block.

**TUNE-UP**

**COMPRESSION:**—Ratio—6.35-1 (Std.), 6.81-1 (High Alt.) cast-iron heads; 7.0-1 (Optl. HC) aluminum head. Pressure—105 lbs. at 185 RPM. (Std. head).

**VACUUM READING:** Steady 21-23" idling at 7 MPH.

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUGS:** Champion Type J-8. 14 mm. Metric Gaps—.025".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle 47° (IGS-4007B), 41° (IGW-4129) closed.

Automatic Advance—9.5° max. at 1500 RPM (distr.). Vacuum Advance—7° distr. (IGS-4007B & IGW-4129 with VC-4007 Unit), 10° distr. (IGW-4129 with VC-4010 Unit), with 15" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC with flywheel mark "TC-IGN" at indicator in inspection hole in top left face of housing.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting—Idle screw approximately ¾ turn open (turn in from "missing" point until engine fires smoothly). Idle speed 7 MPH.

Float Level—Fuel level 13/16" below top edge of float bowl.

Fuel Pump Pressure: 3 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic type. No adjustment required.

**VALVES:** See Valve Timing.

Tappet Clearance—.014" All Valves, Cold.

**STARTING:** See Battery, Starter, Generator, and Regulator (when used).

**IGNITION**

**Ignition Switch:**—Douglas. Coil connection not armored.

**COIL:** Auto-Lite Model IG-4090A. Service Coil No. IG-4070. Mounted on right side of engine.

Ignition Current—2.5 amperes idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671K (IGS-4007B Distr.), IGB-1025 (IGW-4129 Distr.). Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4007B or IGW-4129. Single breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control. NOTE—Vacuum Unit integral type (IGS-4007B), separate Model VC-4007 or VC-4010 (IGW-4129).

Breaker Plate Identification (IGS-4007B)—Maximum vacuum advance limited by slot and marked by number (#7) stamped on plate.

Breaker Gap—.020".

Cam Angle (IGS-4007B)—47° closed, 43° open.

Cam Angle (IGW-4129)—41° closed, 49° open.

Breaker Arm Spring Tension—18-20 ounces.

Rotation—Counter-clockwise viewed from top.

**Automatic Advance**

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start.....	300	0.....	600
2.....	550	4.....	1100
5.....	930	10.....	1860
7.....	1190	14.....	2380
9.5.....	1500	19.....	3000

**Vacuum Spark Control (IGS-4007B)**—Mounted on distributor cup and linked directly to breaker plate. Provides additional advance at all speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
2.5.....	5	9"
5.....	10	12.2"
7.....	14	15"

**Vacuum Spark Control (IGW-4129)**—Type VC-4007 or VC-4010. On bracket under distributor cup and linked to advance arm. Operates in same manner as IGS-4007B type above.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	3 5/8"
2.....	4°	6 7/8"
4.....	8°	10 1/8"
6.....	12°	13 1/2"
7.....	14°	15"

**Vacuum Advance—VC-4010**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	3 1/2"
2.....	4°	5 1/4"
5.....	10°	9 1/4"
8.....	16°	12 3/4"
10.....	20°	15"

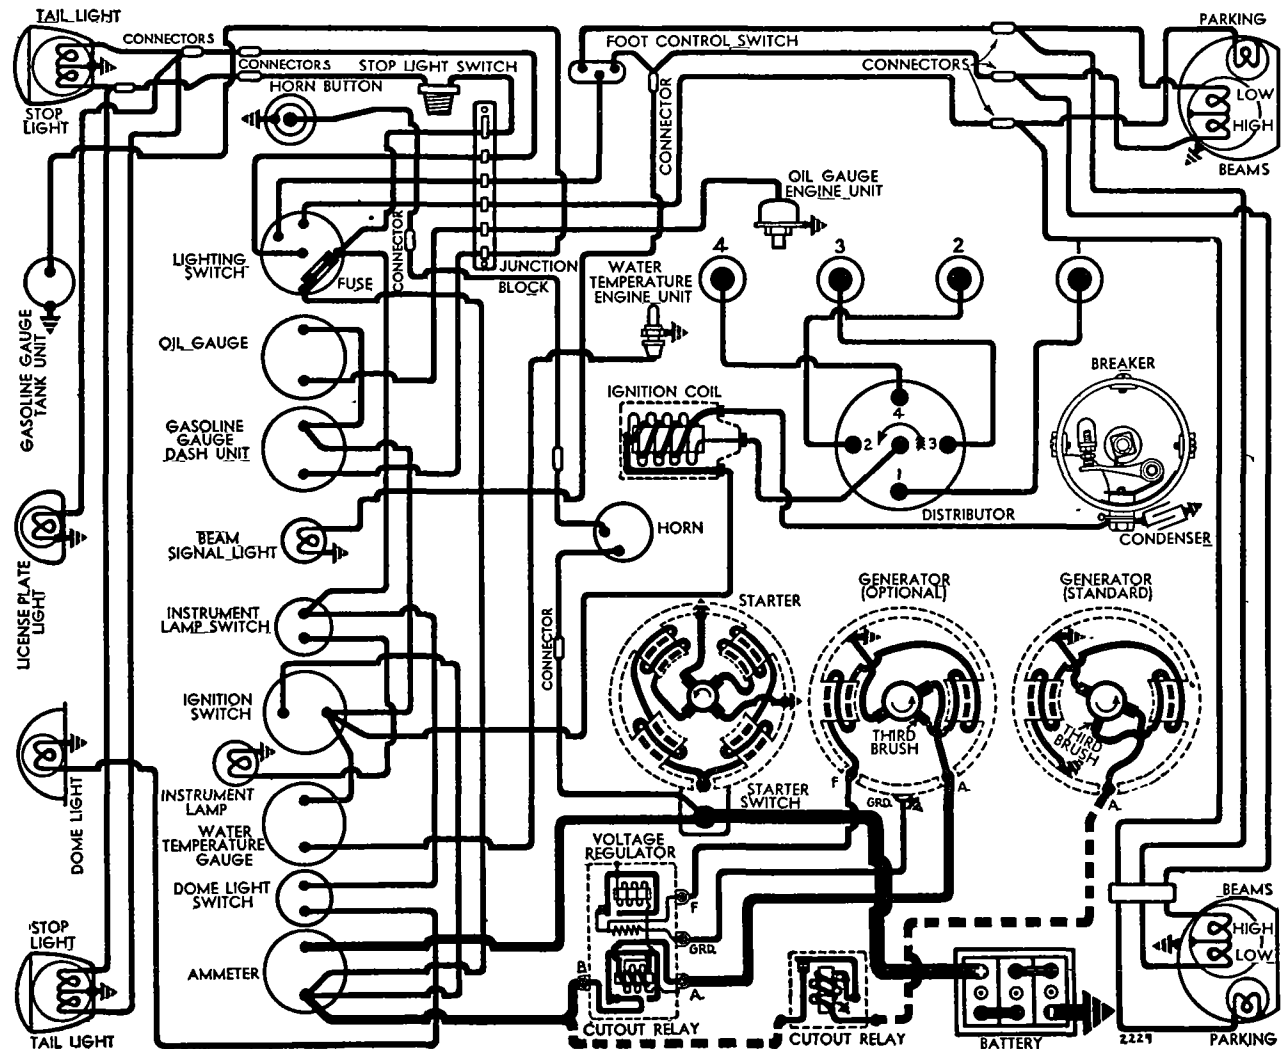

**Distributor Removal:**—Mounted on right side of engine. To remove, disconnect vacuum line and take out hold-down screw in advance arm. To remove IGW-4129 without disturbing vacuum unit, loosen advance arm clamp bolt.

**IGNITION TIMING**

**IGNITION TIMING:**—Flywheel Degrees Pist. Position  
 All Engines .....0° At TDC.....0000° TDC

**Timing:**—Remove inspection hole cover on top left hand side of flywheel housing. With #1 piston on compression, turn engine over until piston reaches top dead center, stop when flywheel mark "TC-IGN" lines up with pointed end of indicator screw. Loosen

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt and see that rotor is in line with #1 segment in distributor cap, check spark plug connections (see diagram). NOTE—Eliminate backlash in drive gears by pressing rotor clockwise when checking timing.

## CARBURETOR

**CARBURETION:**—Carburetor—Tillotson Model U-1B, 1½" downdraft type with manual choke control. NOTE—No high speed adjustment on this model. For complete data, refer to Carburetor Index. Idle Adjustment—If preliminary adjustment required (to warm up engine), turn idle adjusting screw in until just seated, then turn screw out ¾ turn. Warm up engine. With engine warm, adjust throttle lever stopscrew for slightly faster-than-normal idling speed, then turn idle adjusting screw out until engine begins to miss, finally turn screw in slowly until engine fires evenly. Set throttle lever stopscrew for 7 M.P.H. idling speed.

## CARB. EQUIPMENT

**Air Cleaner:**—AC #1528326 oil-wetted type Std., #1529187 heavy-duty oil-bath type Optl.  
**Fuel Pump:**—AC Model AF #1523306. Diaphragm type. For complete data, refer to Carburetion Equip. Index.  
**Gasoline Gauge:**—King-Seeley Electric. K-S No. 7044 (dash unit), No. 6280 (tank unit). For complete data, refer to Carburetion Equip. Index.

## BATTERY

**BATTERY:**—USL Type A-13. 6 volt, 13 plate, 78 Ampere Hour capacity (20 hour rate). Starting Capacity—96 amperes for 20 minutes. Zero Capacity—300 amperes for 1.9 minutes. Grounded Terminal—Negative (—) terminal grounded to right end of front frame cross-member. Engine Ground—Strap connector at front mounting. Dimensions—Length 8½". Width 7". Height 8½". Location—In engine compartment on right side.

## STARTER

**Auto-Lite Model MZ-4064.** Armature No. MZ-2089. Drive—Special Outboard Bendix No. RC10HD. Cranking Engine—185 RPM. 150-175 amperes, 5 volts. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—42-53 ozs. (new brushes).

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal:**—Flange mounted on right front face of flywheel housing. To remove, take out 2 flange mounting capscrews and capscrew in bracket on commutator end.

**Starting Switch:**—No. SW-37378. On starter. Cable-operated by pull button on instrument panel. Pull required to close switch should be 2.3 lbs. minimum

## GENERATOR

## STANDARD

**Auto-Lite Model GBM-4612-A (Standard).** Armature GBM-2065. Third brush control type. Ventilated by fan on drive pulley.

**Maximum Charging Rate—18 amperes (cold), 8 volts, 2150 R.P.M. (generator).**

**Charging Rate Adjustment:**—Remove commutator cover band, shift third brush by hand, counter-clockwise to increase, or clockwise to decrease output. Brush held in position by friction.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	800
4	6.8	920	4	6.9	960
8	7.25	1050	8	7.35	1150
12	7.65	1240	12	7.8	1360
16	8.1	1450	16	8.3	1750
20	8.5	2150	18	8.5	2450

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—50-60 ozs. (new brushes).

**Field Current:**—3.80-4.20 amperes at 6.0 volts.

**Motoring Current:**—5.7-6.3 amperes at 6.0 volts.

**Removal & Belt Adjustment:** Same as given below.

## GENERATOR

## SPECIAL EQUIPMENT

**Auto-Lite Model GCJ-4811-A (Deluxe).** Armature No. GCJ-2066F. Third brush control in conjunction with external vibrating type voltage regulator. Ventilated by fan on driven pulley.

**Maximum Charging Rate—25 amperes (cold), 22 amperes (hot), 8.0 volts, 2500 R.P.M.** Actual charging rate controlled by regulator and dependent on battery condition. See Regulator data below.

**Charging Rate Adjustment:**—See Regulator data below. Maximum output controlled by third brush and adjustable by removing commutator cover band and shifting third brush counter-clockwise to increase, clockwise to decrease output (brush held in position by friction). When checking output, ground 'F' terminal (to eliminate regulator action).

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	850
4	6.65	920	4	6.7	1020
8	6.9	1080	8	7.0	1240
12	7.2	1240	12	7.3	1400
16	7.45	1400	16	7.6	1650
20	7.7	1580	20	7.9	2100
25	8.0	2500	22	8.0	2700

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—53 ozs. max. (new brushes).

**Field Current:**—1.9-2.1 amperes at 6.0 volts.

**Motoring Current:**—4.0-4.4 amperes at 6.0 volts.

**Removal:**—Conventional pivot mounting at right front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, swing generator out until fan can just be rotated with belt stationary.

## CUTOUT RELAY

**Auto-Lite Model CB-4025 (with GBM-4612-A Gen.).** Mounted separately on the dash.

For complete data, refer to Electrical Equipment Index.

**Cuts In:**—6.5-7.25 volts.

**Cuts Out:**—5-2.5 amperes discharge current.

**Contact Gap:**—.015-.045".

**Air Gap:**—.010-.030" with contacts closed.

## REGULATOR

**Auto-Lite Model VRD-4004A (with GCJ-4811-A Gen.).** Voltage Type. Consists of Cutout Relay and vibrating type Voltage Regulator in case mounted on the dash.

For complete data, refer to Electrical Equipment Index.

## Cutout Relay

**Cuts In:**—6.4-7.0 volts cold.

**Cuts Out:**—5 ampere min., 3.0 amperes max. cold.

**Contact Gap:**—.015" minimum.

**Air Gap:**—.034-.038" (hinge end of core—contacts open).

## Voltage Regulator

**Setting:**—7.3-7.6 volts at 70°F.

**To Check (Without Breaking Seals):**—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between 'BAT' terminal and ground. Operate generator at speed of 30 M.P.H. charging fully charged battery until voltage is constant. Voltmeter reading should be within limits of 7.3-7.6 volts (cold—70°F.), 7.1-7.4 volts (hot—140°F.). See article in Electrical Equipment Section for voltages at other temperatures.

**To Adjust (With cover removed):**—Change regulator armature spring tension by bending lower spring hanger slightly. Check setting as directed above. See Electrical Equipment Section for complete instructions.

**Contact Gap:**—.010-.020" (armature against stop pin).

**Air Gap:**—.0595-.0625" with contacts just opening.

## LIGHTING

**LIGHTING:**—Headlamps—Corcoran - Brown Stabilite, Pre-focused type. Upper and lower beams controlled by beam selector switch on toeboard.

**Headlamp Adjustment:**—Adjust by loosening clamp-screw at lower end of mounting band (on back of lens body below lamp, under fender) 3 full turns and turning lamp in socket by grasping adjusting pin at rear. Aim upper beam of each lamp straight ahead so that hot spot centered on vertical line directly ahead of lamp center with upper edge on horizontal line at lamp-center height at 25 feet.

**Beam Indicator:**—In upper rim of speedometer dial. Lighted whenever upper or high beams in use.

## Switches

**Lighting:**—Douglas. **Beam Control:**—Douglas. **Instrument:**—Douglas.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1.5	55
Instrument, Beam Indicator	1	51
Stop and Tail	21-3	1158
Dome, License Plate	3	63

## MISC. ELECTRICAL

**FUSES:**—Lighting—20 amperes. On lighting switch.

**HORN:**—Schwarze. Vibrator type.

**Horn Current:**—10 amperes.

## ENGINE

**ENGINE:**—Own Model 39. 4 cylinder, 'L' head type.

**Bore—3½". Stroke—4¾". Displ'tmt—134.2 cu. ins.**

**Rated Horsepower—15.63.**

**Developed Horsepower—61 at 3600 RPM. Std. Head.**

**Compression Ratio—6.35-1 (Std.), 6.81-1 (High Alt.).**

**Cast-iron heads, 7.0-1 (Optl. HC.) aluminum head.**

**Compression Pressure—105 lbs. at 185 RPM. (Std. hd.).**

**Vacuum Reading—Steady 21-23" at 7 MPH. Idling speed.**

**NOTE:**—Cylinders offset ½" from center-line of crankshaft toward camshaft side of engine.

**PISTONS:**—Aluminum alloy, 'T' slot, Cam Ground, Tin-plated type with narrow 'heat-dam' above top piston ring.

**ENGINE****CONTINUED FROM PRECEDING PAGE**

Weight—12 ozs. (stripped). Length—3¾".

Removal—Pistons and rods removed from above.

Clearance—.0025" skirt. See Fitting New Pistons.

Replacement Pistons:—Finished pistons furnished Std. and .002", .005", .010", .020", .030" oversize.

Fitting New Pistons:—Use .0025" feeler stock ¾" wide inserted between piston and cylinder wall on side opposite slot to check clearance. Pull required to withdraw feeler must be within 5 to 10 lbs.

Installing Pistons:—Slot toward left (valve) side.

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin with narrow 'heat-dam' groove (no ring) above top ring. Oil ring groove drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr.	3/32"	.008-.013"	.002"
Oil Contr.	3/16"	.008-.013"	.002"

NOTE—Install taper-face compression ring with mark 'TOP' up.

Replacement Rings:—Furnished Std. and .005", .010", .020", .030" oversize.

**PISTON PIN:**—Diameter .8117-.8121". Length 2 25/32". Pin locked in connecting rod by clampscrew.

Pin Fit in Piston—.0001-.0009" clearance or light push fit with piston at 60° F.

Replacement Pins:—Furnished Std. and .005" oversize.

**CONNECTING ROD:**—Weight 34 ozs. Length 9 3/16".

Crankpin Journal Diameter—1.9395" (1 15/16").

Lower Bearing—Spun babbitt-lined type.

Clearance—.001-.0025". Sideplay—.005-.009".

Bearing Adjustment:—None (no shims). Replace or rebabbitt rods. Do not file rods or bearing caps. Rods furnished Standard and .010" undersize.

Installing Rods:—Lower bearings offset. Install rods with short side of bearing toward nearest main bearing (toward front of engine for #1 and 3, toward rear for #2 and 4) with oil squirt hole in rod toward right (away from camshaft) on all rods.

**CRANKSHAFT:**—Three main bearing type.

Journal Diameters—2.334" all bearings.

Bearing Type—Removable slip-in steel-backed, babbitt-lined type. Bearings furnished Standard and .010" undersize. Clearance—.001-.0025".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps.

End Thrust:—Taken by #1 front bearing. Adjustable by adding or removing shims between crankshaft thrust washer and shaft. Endplay—.004-.006".

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive. Bearing Type—Removable bushing (front), machined in crankcase (all others).

Bearing Clearance—.002-.0035".

End Thrust:—Taken by thrust plate behind camshaft sprocket and spring-loaded plunger in forward end of camshaft bearing against thrust stud on chain case cover. NOTE—Make certain that plunger and spring in place when replacing chain case cover.

Timing Chain:—Link Belt. Width 1¼". Pitch ½". Length 47 links or 23½".

Camshaft Setting:—With #1 piston on top dead center, mesh chain so that timing marks on sprockets are adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.373"	5¾" (overall)
Exhaust	1 15/32"	.3725"	5¾" (overall)
	Seat Angle	Lift	Stem Clearance
Intake	45°	23/64"	.0015-.00325"
Exhaust	45°	23/64"	.002-.00375"

NOTE—Separate valve seat inserts not used.

Valve Guides:—Removable. Installed with taper end up. Remove old guides from above and press in new guides until lower end extends ¾" below valve spring seat recess in block.

Valve Springs:—Free length 2.684". Cylindrical dampener installed within each spring at upper end.

	Spring Pressure	Length
Valve Closed	59.5 lbs.	2.165"
Valve Open	100 lbs.	1.814"

Valve Lifters:—Mushroom type. Guide holes reamed directly in block. Serviced by reaming guide hole and installing lifters furnished .005", .010", .020" oversize. Clearance—.0007-.001".

**VALVE TIMING**

Tappet Clearance:—.014" all valves, engine cold.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 9° BTDC. Close 50° ALDC.

Exhaust Valves—Open 47° BLDC. Close 12° ATDC.

To Check Timing—Set tappet clearance #4 intake valve at .020" (cold). This valve should begin to open with piston 9° or .039" before top dead center when flywheel marked 'I.O.' lines up with pointed end of indicator screw in inspection hole in top left surface of flywheel housing (¼" variation of mark permissible). Reset tappet clearance at .014".

**LUBRICATION**

LUBRICATION:—Pressure type. Gear type oil pump mounted on outer left side of crankcase.

Oil Pump Installation Note—Turn engine over until 'TC.IGN' mark on flywheel lines up with indicator (inspection hole in top left surface of flywheel housing) with #1 piston on compression stroke, turn distributor shaft so that rotor is at #1 segment in distributor cap, mesh oil pump gear so that distributor not disturbed when coupling engaged.

Normal Oil Pressure:—30 lbs. at 30 M.P.H.

Oil Pressure Regulator:—Located under plug on oil pump cover. Opens at 30 lbs. Adjustable by adding or removing shims within plug above spring.

Oil Pressure Gauge:—King-Seeley Electric. K-S No. 7047 (dash unit), No. 6425 (engine unit).

See Miscellaneous Section for complete data.

Crankcase Capacity:—4 quarts.

**COOLING**

COOLING SYSTEM:—Water Capacity—11¾ qts.

Water Pump:—New packless type with ball-bearing shaft. See Water Pump Section for complete data.

Removal—Drain water, remove fan belt and fan blades, loosen radiator mounting nuts, take out mounting bolts and lift pump out.

Thermostat:—Harrison. In outlet elbow on head.

Setting—Starts to open 140-147°F. Fully open 170°F. Temperature Gauge:—King-Seeley Electric. K-S No. 7041 (dash unit), No. 7000 (engine unit).

See Miscellaneous Section for complete data.

**CLUTCH**

CLUTCH:—Long Model 8½CB-CS6 (with Borg & Beck or Long Driven Member). Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Molded type, 2 required. Inside Diam. 5½" (Borg & Beck), 6" (Long); Outside Diam. 7½" (Borg & Beck), 8½" (Long); Thickness .125" (all).

Adjustment:—Pedal free movement must be ¾-1" (providing 1/16" clearance between release levers and release bearing). To adjust, loosen locknut, turn clevis on rear end of clutch fork cable.

Removal:—Remove transmission (see Transmission

Removal below) and flywheel bell housing, take out mounting screws on clutch cover rim, lift clutch assembly and driven plate out.

**TRANSMISSION**

TRANSMISSION:—Warner Model AS3-T84D. Constant-mesh, synchro-mesh, helical gears (Second & High), sliding spur gear (Low & Reverse).

See Transmission Section for complete data.

Removal:—Remove front seat cushion and cover door trim; disconnect gear shift lever at retaining collar, and accelerator pedal from rubber socket, remove toeboards, loosen radiator mounting nuts and brace rod, disconnect propeller shaft at front universal, remove bell housing hand hole cover and disconnect clutch throw-out bearing retracting spring. Remove lower nuts on mounting bolts at rear of transmission, jack up rear of engine (See that fan blades do not damage radiator) to clear frame cross-member, remove transmission mounting bracket, remove bell housing to transmission case bolts, pull transmission straight back and lift out.

**UNIVERSALS**

UNIVERSAL JOINTS:—Detroit Series 4100. Needle bearing, ball-and-trunnion type. 2 used.

See Universals Section for complete data.

**REAR AXLE**

REAR AXLE:—Own Model 39. Semi-floating, spiral bevel gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratio—4.3-1 Std., 4.55-1 Deluxe.

Backlash—.004-.008". Shim adjustment.

Removal:—Hoist rear of car, disconnect brake tube and cables, shock absorbers, spring U bolts and rear shackles, pull assembly out.

Wheel Bearing Adjustment:—To adjust, remove wheel, hub assembly, oil seal, and bearing retainer. Remove shims from between retainer and backing plate. Endplay—.004-.006" (total both shafts).

**SHOCK ABSORBERS**

SHOCK ABSORBERS:—Monroe. Model 637509—frt., 637508—rear (Std. control), 637645—frt., 637644—rear (H.D. control). Direct acting, hydraulic type.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

Front Suspension:—Front axle Own Model 39. Conventional 'I' beam section with Reverse-Elliott ends.

Kingpin Inclination—7½° crosswise.

Camber—2°. Not adjustable.

Caster—3°. Adjustable by using wedge shims between spring and spring pad on axle.

Toe In—1/16-¼". Adjustable by loosening tie rod clamp bolts and turning tie rod.

Steering Geometry (Toe out on Turns)—Inner wheel turned 23°15', outer wheel 20°.

**STEERING GEAR**

Steering Gear: Gemmer Model 120. Worm-and-Sector. See Steering Gear Section for complete data.

**BRAKES**

BRAKES:—Service—Wagner-Lockheed Hydraulic, Single Anchor type. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Drums—Alloy cast-iron. Diameter 9".

Lining—Moulded type. Width 1¾", Thickness 3/16", Length per wheel 18".

Clearance—.010" toe, .006" heel for each shoe.

Hand Brake:—See Service Brakes above.

**PANEL DELIVERY NOTE:**—Before Engine No. 35129, Engine used was similar to Model 48 and specifications listed below as 'First' apply. After Engine No. 35129, Model 440 Engine was used (same as Pick-up Model) and specifications marked 'Later' apply.

### MODEL IDENTIFICATION

**SERIAL NUMBER:**—First No. 440-17001 (all models). Stamped on plate on frame front cross-member (all models), and on right side of cowl under hood (Pass. cars & Pick-up), or on right front door riser (Panel Delivery).

**ENGINE NUMBER:**—First No. 17001. Stamped on right front upper corner of engine block.

### TUNE-UP

**COMPRESSION:** Note—7.0-1 Head is Aluminum.

Model	Ratio	Pressure (Crk. Speed)
Pass. Cars Std.	6.48-1	111 lbs., 185 RPM.
Pass. Cars High Alt.	6.81-1	111 lbs., 185 RPM.
Pass. Cars Optl. H.C.	7.0-1	111 lbs., 185 RPM.
Pick-up & Panel (later)	6.1-1	107 lbs., 185 RPM.
Panel Dlvry. (first)	5.7-1	87 lbs., 216 RPM.

**VACUUM READING:**—Steady 21-23" at 8 MPH. idling speed (exc. 18½" on First Panel Delivery).

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUGS:** Champion Type J-8 (exc. First Panel Delivery), Type C7 (First Panel Delivery only). 14 mm. Metric (J-8), 18 mm. Metric (C7). Gaps—.030".

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Cam Angle 41° (closed).

Automatic Advance—9.5° max. at 1500 RPM (IGW-4129 Distr.), 14° max. at 1700 RPM (IGW-4129A Distr.). Distributor degrees and RPM.

Vacuum Advance—10° distr. with 15" vacuum.

**IGNITION TIMING:** See Ignition Timing.

Std. Setting—At TDC. (Pass. Cars—all Heads), 4° BTDC. (Pickup & Panel—6.1-1 Head), 5° ATDC. (First Panel—5.7-1 Head) with flywheel mark "TC-IGN" or "IGN" centered in inspection hole.

**CARBURETION:** See Carburetor & Carb. Equipment. Idle Setting (Carter Carb.)—Idle screw ½-2½ turns open. Idle speed 8 MPH.

Idle Setting (Tillotson Carb.)—Idle screw approximately ¾ turn open (turn screw in from "missing" point until engine fires smoothly. Idle speed 8 MPH. Float Level (Carter Carb.)—¾" from gasket seat on cover to top of float at free end (invert to check—do not compress spring in valve stem).

Float Level (Tillotson Carb.)—Fuel level 13/16" below top edge of bowl.

Accelerating Pump—Not adjustable (both models).

Fuel Pump Pressure: 3 lbs. maximum.

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic type (no adjustment) on Pass. Cars, Pick-up & Later Panel Delivery. NOTE—On first Panel Delivery, manual type with seasonal adjustment used. See Willys 48 (1939) article for adjustment directions.

**VALVES:** See Valve Timing.

Tappet Clearance: .014" All Valves—Cold (except First Panel Delivery .004" Int., .006" Exh. Warm).

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**Ignition Switch:**—Douglas. Coil connection not armored. Ignition Lock—Douglas No. 2975.

**COIL:** Auto-Lite Model IG-4090A. Service Coil No. IG-4070. Mounted on right side of engine.

Ignition Current—2.5 amperes idling, 4 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite IGW-4129 (Cars, Pick-up, & Later Panel Delivery), IGW-4129A (First Panel Delivery). Full automatic advance type with auxiliary Vacuum Spark Control (VC-4010). Breaker Gap—.020".

Cam Angle or Dwell—41° closed, 49° open (distr.).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

#### Automatic Advance—IGW-4129

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
2	550	4	1100
5	930	10	1860
7	1190	14	2380
9.5	1500	19	3000

#### Automatic Advance—IGW-4129A

Start	300	0	600
4	400	8	800
7	790	14	1580
11	1310	22	2620
14	1700	28	3400

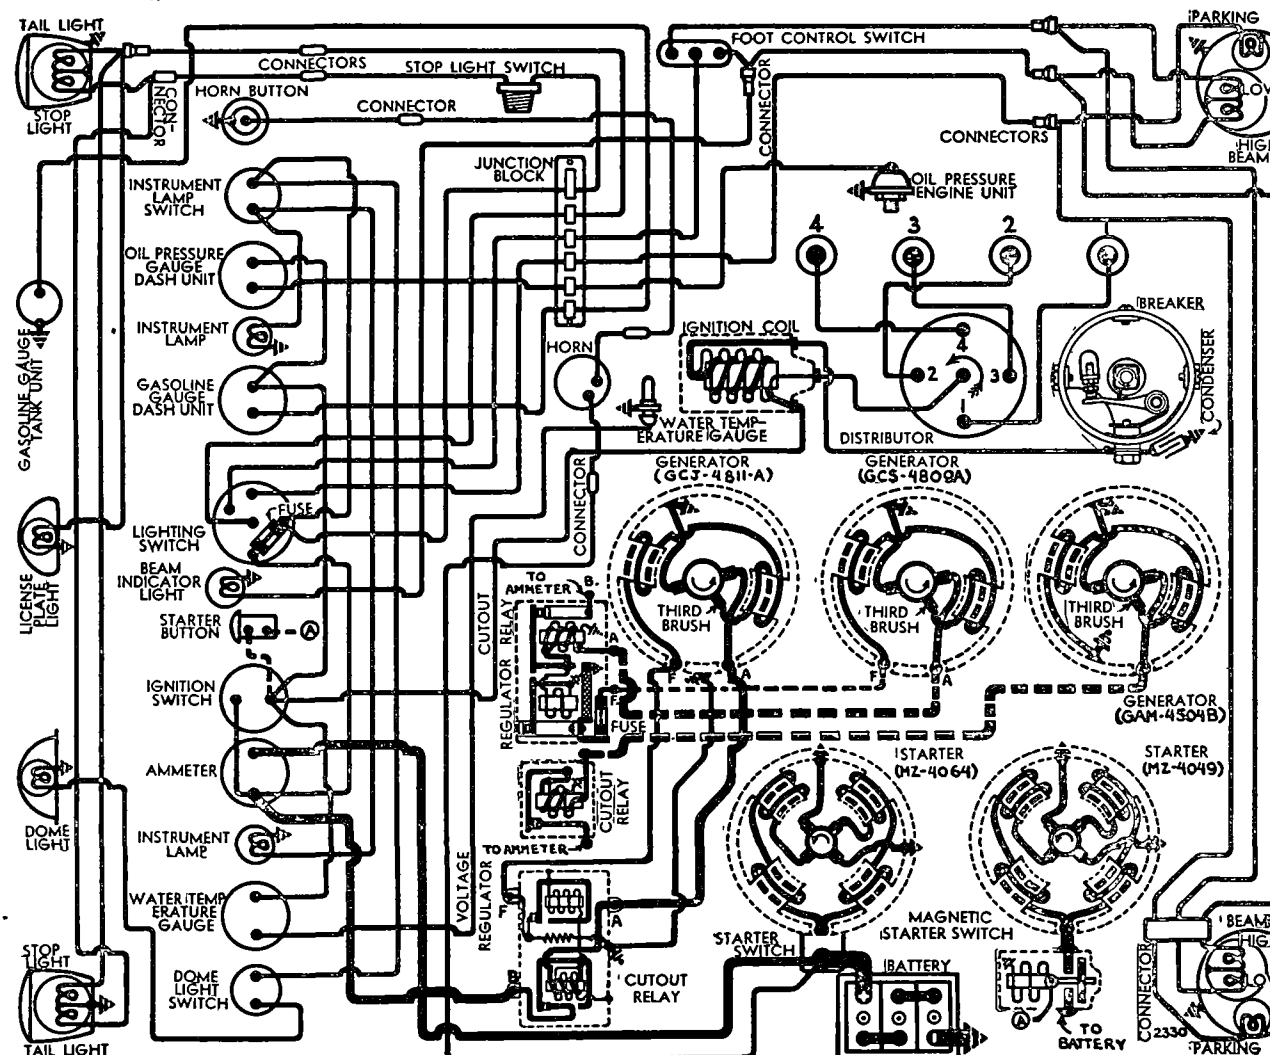

**Vacuum Spark Control**—Type VC-4010. Mounted on distributor bracket and linked to advance arm. Provides additional advance at all speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3½"
5°	10°	9¼"
10°	20°	15"

**Distributor Removal:**—Mounted on right side of engine. To remove (without disturbing vacuum unit), loosen advance arm clamp bolt.

**Note:**—If oil pump removed, turn crankshaft so that #1 piston on compression and flywheel mark "TC-IGN" at indicator on housing, turn distributor shaft so that rotor at #1 terminal in cap, install oil pump and mesh gears so that shaft engages distributor tongue-and-slot coupling without disturbing distributor shaft position. Check ignition timing.

**IGNITION TIMING**

**IGNITION TIMING:**—Flywheel Deg. Piston Pos.  
 Pass. Cars (All heads).....At TDC.....0000° TDC  
 Pick-up & Panel (later).....4° BTDC.....0066° BTDC  
 Panel Dlvry. (first 5.7-1).....5° ATDC.....0103° ATDC  
 Timing—With #1 piston on compression, turn engine over until piston reaches firing position (see above) with flywheel mark 'TC-IGN' or 'IGN' centered in inspection hole in front face of engine right rear support. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open (eliminate backlash in drive gears by pressing on rotor in clockwise direction), tighten clamp bolt, see that rotor is at #1 terminal in distributor cap.  
**NOTE**—Ignition mark on First Panel Delivery on top of flywheel housing on left side.

**CARBURETOR**

**CARBURETION:**—Carburetor—Carter Model WO Type 450-S (Pass. Cars), Tillotson Model U-1B (Pick-up & Panel Delivery). 1½" downdraft type.  
*For complete data, refer to Carburetor Index.*  
**Idle Adjustment**—If preliminary adjustment required (to warm up engine), turn idle adjusting screw in until just seated, then turn screw out 1¼ turns (Carter), ¾ turn (Tillotson); start engine and run until warm. With engine warm, set throttle stopscrew for slightly faster than normal idling speed, turn idle adjusting screw out until engine begins to roll, then turn screw in until engine fires smoothly. Recheck adjustment and set throttle stopscrew for 8 MPH idle speed pulling in high gear.  
**NOTE**—Tillotson carburetor does not have High Speed adjustment.  
**Accelerating Pump** (Carter & Tillotson)—No adjustment required.  
**Float Level** (Carter)—¾" from top of float (free end) to gasket seat on cover with needle valve seated (do not compress spring in valve stem).  
**Float Level** (Tillotson)—Fuel level 13/16" below top edge (gasket seat) of bowl with engine running.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC #1529478 oil-wetted type Std. Heavy duty oil-bath type optional.  
**Fuel Pump:**—AC Type AF #1523306. Diaphragm type.  
*For complete data, refer to Carburetion Equip. Index.*  
**Gasoline Gauge:**—King-Seeley Electric. K-S Nos. 7855—first, 8112—later (Dash Unit), No. 7695 (Tank Unit). Note—Dials on first dash units have ivory lines, later units have ivory dots.  
*For complete data, refer to Carburetion Equip. Index.*

**BATTERY**

**BATTERY:**—National Type HT-13. 6 volt, 13 plate, 77 ampere hour capacity (20 hour rate).  
**NOTE**—When USL battery used, specifications same as for 1939 models (Type A-13).  
**Starting Capacity**—90 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 1.7 minutes.  
**Grounded Terminal**—Negative (—) grounded to front frame cross-member. Engine Ground—Strap connector at front engine mounting on left side.  
**Location**—On right side in engine compartment.  
**Dimensions**—Length 9". Width 7". Hgt. 8 9/16".  
**(Pick-up Battery)** Auto-Lite Type AB-13. 6 volt, 13 plate, 80 AH. Capacity (20 hour rate).  
**Starting Capacity**—96 amperes for 20 minutes.  
**Zero Capacity**—300 amperes for 2.0 minutes.  
**Dimensions**—Length 9". Width 7". Hgt. 8¾".  
**Grounded Terminal & Location**—See above.

**STARTER**

**Auto-Lite Model MZ-4064 & MZ-4082** (Pass. Cars & Pick-up), MZ-4049 & MZ-4083 (Panel Delivery), Armature No. MZ-2089.  
**Drive**—Special Outboard Bendix #RC10HD.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—42-53 ozs. (new brushes).  
**Cranking Engine**—185 RPM, 150-175 amperes, 6 volts (Pass. Car & Pick-up), 216 RPM, 135-150 amperes, 5.35 volts (Panel Delivery).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
2.65 " "	1325	5.0	200
4.95 " "	750	4.5	300
7.65 " "	220	4.0	400
7.8 " "	Lock	3.0	420
11.8 " "	Lock	4.0	560

**Removal:**—Starter flange mounted on right front face of rear motor support. To remove, take out two flange capscrews and one capscrew in bracket at commutator end, remove starter and switch.

**Starting Switch** (MZ-4064, 4082):—SW-3737S. Mounted on starter, cable operated by button on instrument panel. Pull required to close switch should be 2.3 lbs. min. (at right angles to hole at end of lever). (MZ-4049, 4083)—SS-4001. Magnetic switch mounted on starter, controlled by pushbutton on instrument panel. See article in Electrical Equipm't Section.

**GENERATOR****PASSENGER CARS**

**Auto-Lite Model GCJ-4811-A** (Passenger Cars). Armature GCJ-2006-F. Third brush control in conjunction with vibrating type Voltage Regulator.  
**Maximum Charging Rate**—25 amperes (cold), 8.0 volts, 2500 RPM. Actual charging rate controlled by voltage regulator and dependent on battery condition. See Regulator data below.  
**Charging Rate Adjustment**—See Regulator data.  
**Third brush setting** 2 commutator bars minus 2 mica strips minimum, 2 bars minus 1 mica strip maximum from insulated (nearest) main brush. Setting adjustable by removing commutator cover band and moving third brush by hand counter-clockwise to increase, clockwise to decrease output.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	850
4	6.65	920	4	6.7	1020
8	6.9	1080	8	7.0	1240
12	7.2	1240	12	7.3	1400
16	7.45	1400	16	7.6	1650
20	7.7	1580	20	7.9	2100
25	8.0	2500	22	8.0	2700

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).  
**Field Current**—1.9-2.1 amperes at 6.0 volts.  
**Motoring Current**—4.0-4.4 amperes at 6.0 volts.  
**Removal:**—Conventional pivot mounting at right front of engine. To remove, take out mtg. bolts.  
**Belt Adjustment:**—Loosen pivot and clamp bolts, swing generator out until fan can be turned with belt stationary.

**GENERATOR****PICK UP & PANEL DELIVERY**

**Auto-Lite GAM-4504-B**. Armature GAM-2055. Third brush control.  
**Maximum Charging Rate**—16.5 amperes (cold), 8.0 volts, 1950 RPM.

**Charging Rate Adjustment**—Remove commutator cover band, shift third brush by hand counter-clockwise to increase, clockwise to decrease output.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	720	0	6.4	720
4	6.8	880	4	6.9	900
8	7.2	1050	8	7.4	1160
12	7.6	1280	12	7.95	1700
16.5	8.0	1950	12.5	8.0	2000

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—18-22 ozs. (all brushes).  
**Field Current**—3.89-4.31 amperes at 6.0 volts.  
**Motoring Current**—4.08-4.52 amperes at 6.0 volts.  
**Removal & Belt Adjustment:**—Same as above.

**GENERATOR****SPECIAL EQUIPMENT**

**Auto-Lite GCS-4809-A**. Armature GCS-2049F. Third third brush control type in conjunction with non-vibrating type two-charge Regulator. See Willys 48 (1939) article (preceding) for complete data

**REGULATOR****PASSENGER CARS**

**Auto-Lite Model VRR-4004-A** (with GCJ-4811A Gen.) Voltage Regulator. Vibrating type.  
*For complete data, refer to Electrical Equipment Index.*  
**Cutout Relay**

**Cuts In**—6.4-6.6 volts.  
**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap**—.015" minimum.  
**Air Gap**—.031-.034" (hinge end of core with contacts open).

**Voltage Regulator**

**Setting**—7.3-7.6 volts at 70°F.  
**To Check** (without breaking seal)—Connect ammeter in charging line at regulator 'BAT' terminal, voltmeter between this terminal and ground. Operate generator at speed of 30 MPH. charging battery until voltage is constant. Voltmeter reading should be within limits of 7.3-7.6 volts (Cold—70°), 7.19-7.49 volts (Hot 110°F). See Electrical Equip. Sect. To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.  
**Contact Gap**—.012" min. (armature against stop).  
**Air Gap**—.048-.052" with contacts just opening.

**CUTOUT RELAY****PICK UP & PANEL DELIVERY**

**Auto-Lite Model CB-4025**. (With GAM-4504B Gen.).  
*For complete data, refer to Electrical Equipment Index.*  
**Cuts In**—6.5-7.25 volts. **Cuts Out**—5-2.5 ampere discharge current (after charging at 15 amperes).  
**Contact Gap** .015-.045". **Air Gap** .010-.030" (closed).

**REGULATOR****SPECIAL EQUIPMENT**

**Auto-Lite Model TC-4317A** (With GCS-4809A Gen.). Two-charge non-vibrating current regulator (in case with Cutout Relay). Same as used on 1939 Commercial Models. See Willys Model 48 (1939) article (preceding) for data on this model.

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown pre-focused double filament type with upper and lower beams controlled by Beam Selector Foot Switch.  
**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center at lamp center height at 25').  
**Beam Indicator**—Red jewel in upper edge of speedometer dial. Lighted when upper beams in use.

## CONTINUED FROM PRECEDING PAGE

## Switches

Lighting—Douglas. Beam Selector—Douglas.  
Instrument—Douglas.  
Stop Light—A-L. #100840A (hydraulic type).

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1.5	55
Instrument, Beam Ind.	1	51
Stop & Tail	21-3	1158
Dome, License Plate	3	63

## MISC. ELECTRICAL

FUSES:—Lighting—20 ampere. On lighting switch.  
Generator Field—5 ampere (in knurled cup on regulator). Used on GCS-4809A generator only.  
HORNS:—Schwarze. Vibrating, disc type.  
Horn Current—10 amperes.

## ENGINE

## ALL M. DELS (440P AFTER ENG. No. 35129)

PANEL DELIVERY NOTE:—Engine data given below applies to later cars beginning with Engine No. 35129 which have the Model 440 Engine (same as Pick-up model). First Panel Delivery cars (before Engine No. 35129) have the Model 440P Engine for which specifications listed separately (following).

ENGINE:—Own Model 440. 4 cylinder, 'L' head type.

Bore—3.125" (3 1/8"). Stroke—4.375" (4 3/8").

Displacement—134.2 cu. ins. Rated HP—15.63

Developed Horsepower—61 (Pass. Car), 58 (Pick-up & Panel Delivery) at 3600 RPM. with Std. Heads. Compression Ratio & Pressure—For each model as follows (Heads Cast Iron exc. 7.0-1 Aluminum).

Model	Ratio	Pressure (Crk. Speed)
Pass. Car Std.	6.48-1	111 lbs., 185 RPM.
Pass. Car High Alt.	6.81-1	111 lbs., 185 RPM.
Pass. Car Optl. H.C.	7.0-1	111 lbs., 185 RPM.
Pick-up & Panel Divry	6.1-1	107 lbs., 185 RPM.

Vacuum Reading—Steady 21-23" idling at 8 MPH.  
NOTE—Cylinders offset 1/8" from center-line of crankshaft toward camshaft side of engine.

PISTONS:—Lynite Lo-Ex aluminum alloy, 'T' slot, Cam ground, Tin-plated type with narrow 'heat-dam' groove above top piston ring.

Weight—12 ozs. (stripped). Length—3 3/4".

Removal—Pistons and rods removed from above.

Clearance—.014-.019" top, .003" skirt.

Original Bore & Piston Sizes:—Engines and pistons graded in four .0005" steps as shown in table below and marked as follows: Piston—Letter stamped on head, Cylinder Bore—Letter stamped on top of block between valve ports and bore at center.

Grade Letter	Cylinder Bore Size	Piston Size
A	3.1255-3.1250"	3.1235-3.1230"
B	3.1260-3.1255"	3.1240-3.1235"
C	3.1265-3.1260"	3.1245-3.1240"
D	3.1270-3.1265"	3.1250-3.1245"

Replacement Pistons:—Finished pistons furnished Std. and .002", .005", .010" Oversize.

Fitting New Pistons:—Use .0025" feeler stock 3/4" wide inserted between piston and cylinder wall on side opposite slot to check clearance. Pull required to withdraw feeler must be within 5-10 lbs.

Installing Pistons:—Slot toward left (valve) side.

PISTON RINGS:—Two compression, one oil control ring per piston, all above pin (narrow heat-dam groove above top ring). Oil ring groove drilled for drainage.

Ring	Width	End Gap	Side Clearance
Compr.	3/32"	.008-.013"	.0015-.002"
Oil Cont.	3/16"	.008-.013"	.0015-.002"

NOTE—Install taper-faced compression ring with mark 'TOP' up toward head of piston.

Replacement Rings:—Furnished Standard and .005", .010", .020", .030" oversize.

PISTON PIN:—Diameter .8117-.8127". Length 2 25/32". Pin is locked in connecting rod by clampscrew.

Pin Fit in Piston—.0001-.0009" clearance or light push fit at 60° F.

Replacement Pins:—Furnished Standard and .001", .002", .003" oversize.

CONNECTING ROD:—Weight 34 ozs. Length 9 3/16". Crankpin Journal Diameter—1.9395" (1 15/16").

Lower Bearing—Spun babbitt-lined type.

Clearance—.0008-.0023". Sideplay—.005-.009".

Bearing Adjustment:—None (no shims). Replace or rebabbitt rods. Do not file rods or bearing caps. Rods furnished Standard and .010" undersize.

Installing Rods:—Lower bearings offset. Install rods with short side of bearing toward nearest main bearing (toward front of engine for #1 and #3, toward rear for #2 and #4) with oil squirt hole in rod toward right (away from camshaft) on all rods.

CRANKSHAFT:—Three bearing, counterweighted type. Journal Diameters—2.334" all bearings.

Bearing Type—Removable slip-in steel-backed, babbitt-lined type. Bearings furnished Standard and .010" undersize.

Clearance—.001-.0025".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps.

End Thrust:—Taken by #1 front bearing. Adjustable by adding or removing shims between crankshaft thrust washer and shaft. Endplay—.004-.006".

CAMSHAFT:—4 bearing. Non-adjustable chain drive. Bearing Type—Removable bushing (front), machined in crankcase (all others).

Bearing Clearance—.002-.0035".

End Thrust:—Taken by thrust plate behind camshaft sprocket and spring-loaded plunger in forward end of camshaft bearing against thrust stud on chain case cover. NOTE—Make certain that plunger and spring in place when replacing chain case cover.

Timing Chain:—Link-Belt #82, 1 1/4" (Before Engine No. 34266); #S-40936, 1" (After Engine No. 34266). Pitch 1/2". Length 47 links or 23 1/2".

Camshaft Setting:—With #1 piston on top dead center, mesh chain so that timing marks on sprockets are adjacent and in line with straightedge across shaft centers.

VALVES:—	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.373"	.534" (overall)
Exhaust	1 15/32"	.3725"	.534" (overall)

	Seat Angle	Lift	Stem Clearance
Intake	45°	23/64"	.0015-.00325"
Exhaust	45°	23/64"	.002-.00375"

NOTE—Separate valve seat inserts not used.

Valve Guides:—Installed with taper end up. Remove old guides from above, press new guides in until lower end extends 3/4" below valve spring seat recess in block.

Valve Springs:—Free length 2 11/16". Damper installed within each spring at upper end.

	Spring Pressure	Length
Valve Closed	46 lbs.	2 1/4"
Valve Open	85 1/2 lbs.	1 15/16"

Valve Lifters:—Mushroom type. Guide holes reamed directly in block. Serviced by reaming guide hole and installing lifters furnished .004" oversize.

Lifter Clearance—.0005-.002".

## ENGINE

## PANEL DELIVERY 440P (BEFORE ENGINE No. 35129)

LATER PANEL DELIVERY NOTE:—Engine data below applies to first cars only (from Engine No. 17001 to 35129). After Engine No. 35129, these models equipped with Model 440 Engine (same as used on Passenger Cars and Pick-up Models). Specifications for this model listed separately (preceding).

ENGINE:—Own Model 440P. 4 cylinder, 'L' head type.

Bore—3 1/8". Stroke—4 3/8".

Displacement—134.2 cubic inches.

Rated Horsepower—15.63 (A.M.A.).

Developed Horsepower—48 HP at 3200 RPM.

Compression Ratio—5.7-1 cast-iron hd.

Compression Pressure—87 lbs. at 216 RPM.

Vacuum Reading—Steady 18 1/2" idling at 8 MPH.

NOTE—Cylinder bore offset 1/8" from center line of crankshaft toward valve side of engine.

PISTONS:—Full skirt, hard grey iron, light weight type. Weight—21-23 ozs. (stripped). Length—3 3/4".

Removal—Pistons and rods removed from above.

Clearance—Top .0165-.017". Skirt .0025-.003".

Replacement Pistons:—Finished pistons furnished Std. and .003", .005", .010", .015", .020", .025", .030" oversize.

Fitting New Pistons:—Use .0025" feeler stock 1/4" wide inserted between piston and cylinder wall to check clearance. Pull required to withdraw feeler must be 4 lbs. plus or minus 2 lbs.

PISTON RINGS:—Three compression, one oil control ring per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.008-.013"	.0015"
Oil Control	3/16"	.008-.013"	.0015"

Replacement Rings:—Furnished Std. and .003", .005", .010", .015", .020", .025", .030", .040" oversize.

PISTON PIN:—Diameter—1.5/16" (.9375"). Length—2.682". Pin floats in piston and rod. Retained by locking rings. Furnished .001", .003" oversize.

Pin Fit in Piston—.0002-.0004" clearance or hand push fit with piston dry.

Pin Fit in Rod Bushing—.0002-.0004" clearance or thumb press fit.

CONNECTING ROD:—Weight 34 ozs. Length 9 3/16".

Upper Bearing (Piston Pin Bushing)—Bronze.

Crankpin Journal Diameter—1.9395" (1 15/16").

Lower Bearing—Spun-babbitt-lined type.

Clearance—.001-.0025". Sideplay—.004-.009".

Bearing Adjustment:—None (no shims). Replace or rebabbitt rods. Do not file rods or bearing caps.

Rods furnished Standard and .010" undersize.

Installing Rods:—Lower bearings offset. Install rods with short side of bearing toward nearest main bearing (toward front of engine for #1 & 3, toward rear for #2 & 4) with oil squirt hole in rod toward right (away from camshaft) on all rods.

CRANKSHAFT:—Three main bearing type.

Journal Diameters—2.334" all bearings.

Bearing Type—Removable slip-in steel-backed, babbitt-lined type. Bearings furnished Standard and .010" undersize. Clearance—.001-.0025".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps.

End Thrust:—Taken by #1 front bearing. Adjustable by adding or removing shims between crankshaft thrust washer and shaft. Endplay—.004-.006".

CAMSHAFT:—4 bearing. Non-adjustable chain drive. Bearing Type—Removable bushing (front), machined in crankcase (all others).

Bearing Clearance—.002-.0035".

End Thrust:—Taken by thrust plate behind camshaft

## ENGINE

C NTINUED FR M PRECEDING PAGE

sprocket and spring-loaded plunger in forward end of camshaft bearing against thrust stud on cover.  
**Timing Chain:**—Link-Belt #82 (Willys #S-40936). Width 1". Pitch  $\frac{1}{2}$ ". Length  $23\frac{1}{2}$ " or 47 links.  
**Camshaft Setting:**—With #1 piston on top dead center, mesh chain so that timing marks on sprockets are adjacent and in line with a straightedge across the shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.372"	5 13/64" (5 3/4" overall)
Exhaust	1 15/32"	.371"	5 13/64" (5 3/4" overall)
	Seat Angle	Lift	Stem Clearance
Intake	45°	21/64"	.002-.004"
Exhaust	45°	21/64"	.003-.005"

NOTE—Exhaust valve seat inserts are used.

**Valve Guides:**—Removable. Installed with taper end up. Remove old guides from above and press in new guides until lower end extends  $\frac{3}{4}$ " below valve spring seat recess in block. Exhaust guide longer.

Valve Springs:	Free length	2 11/16"
	Spring Pressure	Length
Valve Closed	46 1/2 lbs.	2 1/4"
Valve Open	85 1/2 lbs.	1 15/16"

**Valve Lifters:**—Mushroom type. Guide holes reamed directly in block. Serviced by reaming guide hole and installing lifters furnished .005", .010", .020" versize. Clearance—.0007-.001".

## VALVE TIMING

**Tappet Clearance:** .014" All Valves, Engine Cold (except first Panel Delivery with 440P Engine), .004" Intake, .006" Exhaust, Warm (First Panel Delivery). NOTE—Remove hand hole in left front fender splash shield for valve adjustment.

**Valve Timing (440 Engine):** See Camshaft Setting. NOTE—Does not apply to First Panel Delivery.  
**Intake Valves—Open** 9° BTDC. Close 50° ALDC.  
**Exhaust Valves—Open** 47° BLDC. Close 12° ATDC.  
**To Check Timing—Set tappet clearance** #1 intake valve at .020". This valve should open with piston 9° or .039" before top dead center when flywheel mark 'I.O.' centered in inspection hole in right front face of rear motor support ( $\frac{1}{4}$ " variation permissible. Reset tappet clearance at .014" Cold.

**Valve Timing (440P Engine):** See Camshaft Setting. NOTE—Applies only to First Panel Delivery.  
**Intake Valves—Open** TDC. Close 45° ALDC.  
**Exhaust Valves—Open** 40° BLDC. Close 5° ATDC.  
**To Check Timing—Set tappet clearance** #1 intake valve at .010" (cold). This valve should open with piston on top dead center when flywheel mark 'T.C. I.O. 1-4' lines up with pointed end of inspection plate screw in inspection hole on left top face of flywheel housing. Reset tappet clearance at .004" warm.

## LUBRICATION

**LUBRICATION:**—Pressure system. Gear type oil pump mounted on outer left side of crankcase.

**Oil Pump Installation Note:**—Turn engine over until 'IGN' mark on flywheel lines up with indicator (inspection hole in top right surface of flywheel housing) with #1 piston on compression stroke, turn distributor shaft so that rotor is at #1 segment in distributor cap, mesh oil pump gear so that distributor not disturbed when coupling engaged.

**Normal Oil Pressure:**—75 lbs. (on gauge) at 30 MPH.  
**Oil Pressure Regulator:**—Under plug on oil pump cover. Opens at 40 lbs. Adjustable by adding or removing shims within plug above spring.

**Oil Pressure Gauge:**—King-Seeley Electric, K-S No. Dash Unit—6275 (First Panel Delivery), 7860 (Other Models—with Ivory Lines), 8115 (Other Models—with Ivory Dots). Engine Unit—No. 6425 (All). See Miscellaneous Section for complete data.  
**Crankcase Capacity:**—4 quarts.

## COOLING

**Water Capacity:** 11 qts. (First Panel Delivery only), 11 3/4 qts. (All Other Models).

**Water Pump:**—Ball-bearing, packless type. See Water Pump Section for complete data.

**Removal:**—Drain water, remove fan belt and fan blades, loosen radiator mounting nuts, take out mounting bolts and lift pump out.

**Thermostat:**—Harrison. In outlet elbow on head. Starts to open 148-155°. Fully open at 173° F. NOTE Not used on First Pick-Up and Panel Delivery.

**Temperature Gauge:**—King-Seeley Electric, K-S No. Dash Unit—No. 6632 (First Panel Delivery), 7140 (Later Panel Delivery), 7850 (Other Models—with Ivory Lines), 8110 (Other Models—with Ivory Dots). Engine Unit—No. 5700 (First Panel Delivery with 6632 Dash Unit), No. 7000 (All Other Models). NOTE—Engine Unit No. 5700 serviced by No. 7000 Dash Unit No. 6632 must also be replaced by No. 7140 when No. 7000 Engine Unit installed. See Miscellaneous Section for complete data.

## CLUTCH

**CLUTCH:**—Atwood Model TP 28-7 (Pass. Cars), Rockford UCLA-13-1098 (Pick-up & Panel Delivery). Single plate, dry disc type. No adjustment for wear required. NOTE—Borg & Beck driven member used. See Clutch Section for complete data.  
**Facings:**—Molded type (Pass. Car), Molded & Woven type (Pick-up & Panel Delivery). Inside Diam. 5 1/8". Outside Diam. 7 7/8". Thickness .125".

**Adjustment:**—Pedal free travel must be 3/4-1" (providing 1/16" clearance between release bearing and release levers). To adjust, loosen locknut, turn clutch fork connecting cable.

**Removal:**—Remove Transmission (see Transmission Removal below) and flywheel bell housing, take out mounting screws in clutch cover, lift clutch out.

## TRANSMISSION

**TRANSMISSION:**—Warner Model AS3-T84D (Speedway Pass. Cars, Pick-up & Panel Delivery), AS4-T84F (Deluxe Pass. Cars with Steering Column Gearshift). Constant-mesh, synchro-mesh, helical gears (Second & High), sliding spur gears (Low & Reverse). See Transmission Section for complete data.

**Transmission Control:**—Own remote control type mounted on steering column. Std. on Deluxe Pass. See Transmission Section for complete data.

**Removal:**—Cover front seat cushion and door trim. On Deluxe Pass. Cars, disconnect control rods at transmission. On all other models, disconnect gearshift lever at retaining collar. Disconnect accelerator pedal from rubber socket, remove toeboards, disconnect propeller shaft at front universal, remove bell housing hand hole cover and disconnect clutch throw-out bearing retracting spring. Remove lower nuts on engine mounting bolts at rear of transmission, jack up rear of engine (Caution—see that fan blades do not damage radiator) to clear frame cross-member, remove transmission mounting bracket, remove bell housing-to-transmission bolts, pull transmission straight back and lift out.

## UNIVERSALS

**UNIVERSAL JOINTS:**—Detroit Series 4100. Needle bearing, Ball-and-trunnion type. Two used. See Universals Section for complete data.

## REAR AXLE

**REAR AXLE:**—Own Model 440 (Pass. Cars), Spicer (Salisbury) Model 21-1 (Pick-up & Panel Delivery). Semi-floating, spiral bevel gear type with Hotchkiss drive. See Rear Axle Section for complete data.  
**Ratio:**—4.3-1 (Speedway), 4.55-1 (Deluxe), 4.7-1 (Pick-up), 5.1-1 (Panel Delivery).

**Backlash:**—.004-.008". Shim adjustment.

**Removal:**—Hoist rear of car. Disconnect drive shaft at rear universal, brake tube and cables, shock absorbers, spring U-bolts, rear spring shackles. Pull axle assembly out toward rear.

**Wheel Bearing Adjustment:**—To adjust, remove wheel, hub assembly, oil seal and bearing retainer. Remove shims from between retainer and backing plate to decrease endplay. Endplay—.004-.008"

## SHOCK ABSORBERS

**SHOCK ABSORBERS:**—Monroe or Gabriel (Pass. Cars), Monroe (Pick-up & Panel Delivery). Direct acting. See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:**—Own Model 440 Front Axle. Conventional type with 'I' beam section and Reverse-Elliott ends.

**Kingpin Inclination:**—7 1/2° crosswise.

**Caster:**—3°. Adjustable by installing wedge shims between spring and spring pad on axle.

**Camber:**—2°. Not adjustable.

**Toe-In:**—1/16-1/8". Adjustable by loosening tie rod clamp bolts and turning tie rod.

**Steering Geometry (toe-out on turns):**—With outer wheel turned 20°, inner wheel should turn 23°15'.

## STEERING GEAR

**Steering Gear:** Passenger Cars—Gemmer Model 250. Worm-and-Roller type. Pickup & Panel Delivery—Gemmer Model 120. Worm-and-Sector type. See Steering Gear Section for complete data.

## BRAKES

**BRAKES (PASS. CARS):**—Service—Bendix (Lockheed) Hydraulic, double anchor type. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Drums:**—Alloy cast iron. Diameter 9".

**Lining:**—Molded type. Width 1 3/4". Thickness 3/16". Length 18 3/8" per wheel.

**Clearance:**—.010" toe, .005" heel for each shoe.

**Hand Brake:**—See Service Brakes above.

## BRAKES

**BRAKES (PICK-UP & PANEL DELIVERY):**—Service. Bendix Mechanical, Duo-servo, Single Anchor. Hand lever applies all service brakes.

See Brake Section for complete data.

**Drums:**—9" Pressed Steel (Pick-up), 11" alloy iron (Panel Delivery).

**Lining:**—Molded & Woven type (Pick-up), Molded (Panel Delivery). Width 1 3/4". Thickness 3/16". Length per wheel 19 3/16" (Pick-up), 23 15/16" (Panel Delivery).

**Clearance:**—.010" at heel and toe of each shoe.

**Hand Brake:**—See Service Brakes above.

**HOOD LOCK:**—Alligator type hood with instrument panel lock to left of light switch on Americar.

## MODEL IDENTIFICATION

**SERIAL NUMBER:**—Stamped on plate on frame front cross-member (all models) and on plate on right side of cowl under hood (Americar & Pick-up), on right front door riser (Panel Delivery). First Nos. as follows:

441-50001—1941 American, Plainsman, Willys Pick-up.

441P-50001—1941 Willys Panel Delivery.  
80.001—1942 (All Models).

**ENGINE NUMBER:**—Stamped on right front upper corner of engine. First No. 50001 (1941), 80301 (1942).

## TUNE-UP

**COMPRESSION:—Ratio—6.48-1 (American Std.), 6.81-1 (American Optl.), 6.1-1 (Pick-up & Panel Delivery).**  
**NOTE—7.0-1 Aluminum Head Optl. on 1941 American, Std. on 1941 Plainsman. Not used on 1942 cars.**  
**Pressure—111 lbs. (American), 107 lbs. (Pick-up & Panel Delivery) at cranking speed of 185 RPM.**

**VACUUM READING:—**Steady 21-23" idling at 8 MPH.

**FIRING ORDER:—1-3-4-2.** See diagram.

**SPARK PLUGS:** Champion Type J-8 or Auto-Lite A7F (1941 except 7.0-1 Head), Champion J-9 (All 1942, & 1941 7.0-1 Head). 14 mm. Metric type.  
Gaps—.030"

**IGNITION:** See Coil, Condenser, and Distributor.

**Breaker Gap—.020". Cam Angle 41° (closed).**

**Automatic Advance—9.5° max. at 1500 RPM (distr).**  
**Vacuum Advance—10° distr. with 15" vacuum.**

**IGNITION TIMING:** See Ignition Timing.

**Std. Setting**—At TDC with flywheel mark "TC-IGN" centered in inspection hole in front face of right rear engine support.

**CARBURETION:** See Carburetor & Carb. Equipment.  
Idle Setting—Idle screw 1-1½ turns open. Idle speed  
8 MPH

**Float Level**— $\frac{3}{8}$ " from gasket seat on cover to top of float at free end (invert to check—do not compress spring in valve stem).

**Accelerating Pump**—Not adjustable.

**Fuel Pump Pressure: 3 lbs. maximum.**

**MANIFOLD HEAT CONTROL:**—Automatic thermostatic coil type. No adjustment required.

**VALVES:** See Valve Timing.

**Tapet Clearance:—.014" all valves with engine cold.**

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**Ignition Switch:—**Douglas No. 2975. Coil connection not armored.

**Patent Lock—Yale & Towne.**

**COIL:** Auto-Lite Model IG-4090A. Service Coil No. IG-4070. Mounted on right side of engine.

**Ignition Current**—2.5 amperes idling, 5 amperes at 6.4 volts stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025.

**Capacity—.20-.25 microfarad.**

**DISTRIBUTOR: Auto-Lite Model IGW-4129. Single breaker, 4 lobe cam, full automatic advance type with auxiliary vacuum spark control.**

**Cam Angle or Dwell—**41° closed, 49° open (distr.)

**Breaker Arm Spring Tension**—17-20 ounces.

**Rotation**—Counter-clockwise viewed from above.

Automatic Advance			
Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	300	0	600
2	550	4	1100
5	930	10	1860
7	1190	14	2380
9.5	1500	19	3000

**Vacuum Spark Control VC-4010.** Mounted on distributor bracket and linked to advance arm. Provides additional advance at all speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°.....	3½"
2°.....	4°.....	5¾"
5°.....	10°.....	9¼"
8°.....	16°.....	12¾"
10°.....	20°.....	15"

**Distributor Removal:**—Mounted on right side of engine. To remove (without disturbing vacuum unit), loosen the advance arm clamp bolt. Installation Note—If oil pump removed, turn crankshaft so that #1 piston on compression and flywheel mark 'TC-IGN' at indicator on housing, turn distributor shaft so that rotor at #1 terminal in cap, install oil pump and mesh gears so that shaft engages distributor tongue-and-slot coupling without disturbing distributor shaft position. Check ignition timing.

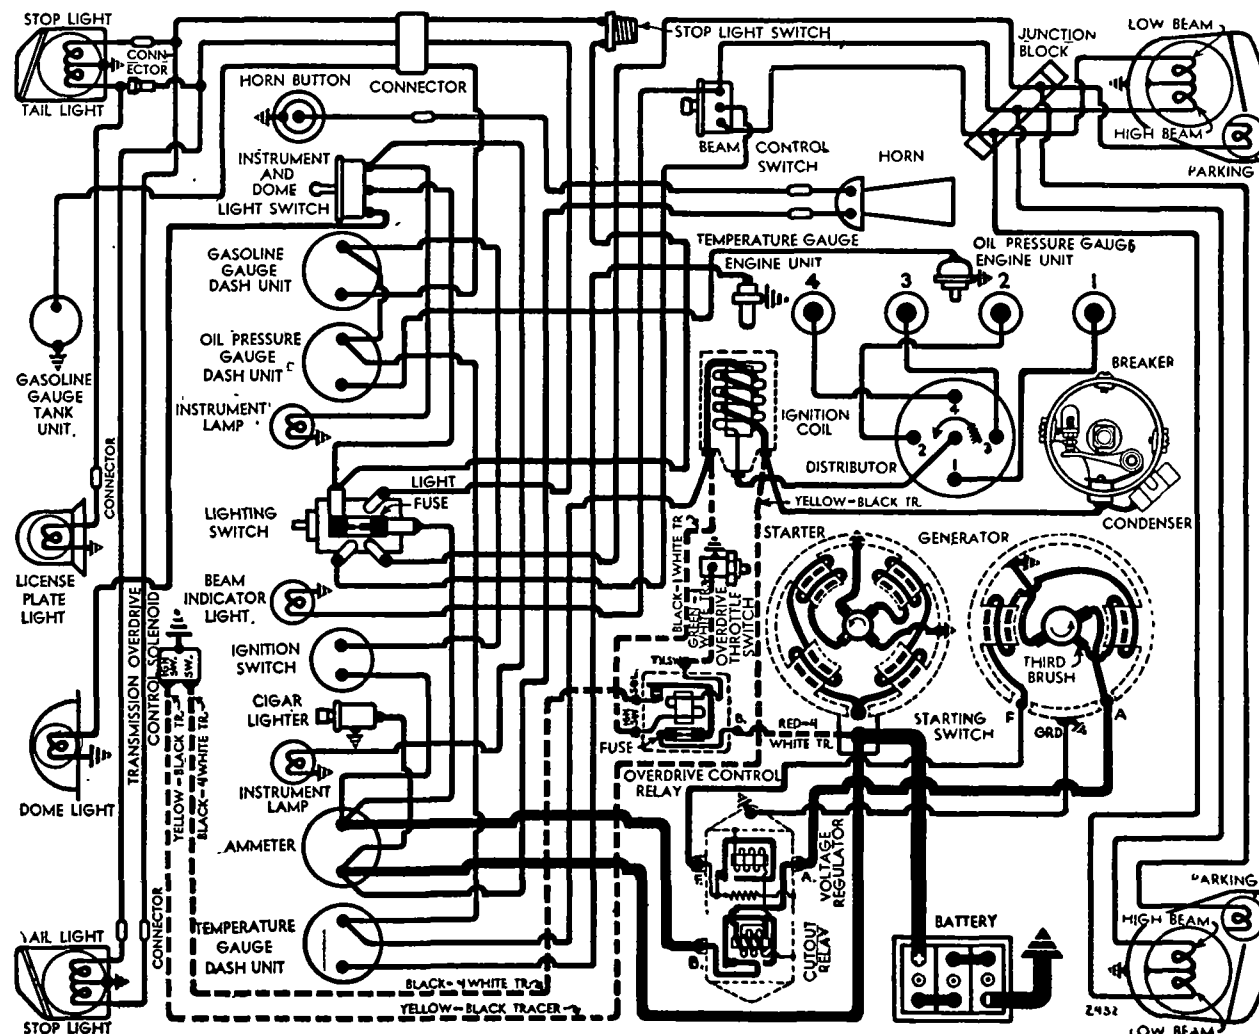

## IGNITION TIMING

**IGNITION TIMING:—** Flywheel Deg. Piston Pos.

All engines ..... at TDC ..... .0000" TDC

**Timing**—With #1 piston on compression, turn en-

gine over until piston reaches firing position (see above) with flywheel mark "TC-IGN" centered in inspection hole in front face of engine right rear support. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open (eliminate backlash in drive gears by pressing on rotor in clockwise direction), tighten clamp bolt, see that rotor is at #1 terminal in distributor cap.

**CARBURETOR**

**CARBURETION:**—Carburetor—Carter Type WO Model 507-S (No. 229 cast on face of flange). 1¼" single barrel, downdraft type.

For complete data, refer to *Carburetor Index*.

**Idle Adjustment:**—If preliminary adjustment required (to warm up engine), turn idle adjusting screw in until just seated, then turn screw out 1½ turns, start engine and run until warm. With engine warm, set throttle stop screw for slightly faster than normal idling speed, turn idle adjusting screw out until engine begins to roll, then turn screw in until engine fires smoothly. Final setting should be 1-1½ turns open. Adjust throttle stop screw for 8 MPH idle speed pulling in high gear.

**Accelerating Pump:**—No seasonal adjustment.

**Float Level:**—¾" from top of float to gasket seat on cover with needle valve seated (invert to check—do not compress spring in valve stem).

**Metering Rods & Jets:**—See *Carter Jet Table in Carburetor Section for complete data*.

**Fast Idle:**—Choke valve inter-connected to throttle valve to open throttle to fast idle position with choke valve in use.

**CARB. EQUIPMENT**

**Air Cleaner:**—AC #1529870 oil-wetted type Std., #1529769 heavy duty oil-bath type Optl. Replacement Filter Element Assembly Type #1 (Std.). Type #9 (heavy duty).

**Fuel Pump:**—AC 'AF' No. 1537320. Exchange Pump Type 538. Diaphragm type.

For complete data, refer to *Carburetion Equip. Index*.

**Gasoline Gauge:**—King-Seeley Electric type. K-S Nos. Dash Unit—No. 8188 (1941—except Panel Delivery), 40140 (1942—except Panel Delivery), 8895 (1941-42 Panel Delivery).

**Tank Unit:**—No. 8318 (1941-42 except Panel Delivery), No. 8484 (1941-42 Panel Delivery).

For complete data, refer to *Carburetion Equip. Index*.

**BATTERY**

**BATTERY:**—Auto-Lite, Type AB-13. 6 volt, 13 plate, 80 ampere hour capacity (20 hour rate).

**Starting Capacity:**—96 amperes for 20 minutes.

**Zero Capacity:**—300 amperes for 2.0 minutes.

**Grounded Terminal:**—Negative (—) grounded to front frame cross-member. **Engine Ground:**—Strap connector at front engine mounting on left side.

**Dimensions:**—Length 8 15/16". Width 7". Hght. 8¾".

**Location:**—In engine compartment on right side.

**STARTER**

**STARTER:**—Auto-Lite. For each model as follows:

Americar, Plainsman, Pickup (Early 1941).....MZ-4093

Americar, Plainsman, Pickup (Late 1941).....MZ-4099

Americar, Pickup (1942).....MZ-4109

Panel Delivery (Early 1941).....MZ-4049

Panel Delivery (Late 1941 & 1942).....MZ-4100

**Armature:**—Auto-Lite No. MZ-2089 (All Models).

**Drive:**—Two types used: Special Outboard Bendix No. RC10HD (MZ-4049 & MZ-4093), Special Barrel Type Bendix No. A-2233 (MZ-4099, MZ-4100, MZ-4109).

**NOTE:**—Later type Bendix, No. A-2233, can be used in servicing starters originally equipped with the No. RC10HD Bendix Drive.

**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—42-53 ozs. (new brushes).  
**Cranking Engine:**—185 RPM, 150-175 amps., 5 volts.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.65 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal:**—Starter flange mounted on right front face of rear motor support. To remove, take out two flange capscrews and one capscrew in bracket at commutator end, remove starter and switch as an assembly.

**Starting Switch (MZ-4093, 4099, 4109):**—Auto-Lite No. SW-3737S. Mounted on starter and cable operated by button on instrument panel. Pull required to close switch should be 2.3 lbs. min. (at right angles to hole at end of lever).

(MZ-4049, 4100)—Auto-Lite No. SS-4001. Magnetic switch mounted on starter and controlled by push-button on instrument panel.

For complete data, refer to *Electrical Equipment Index*.

**GENERATOR****STANDARD**

**GENERATOR:**—Auto-Lite GCJ-4811-A. Armature GCJ-2006-F. Third brush control in conjunction with vibrating type voltage regulator. Ventilated by fan on drive pulley.

**Maximum Charging Rate:**—25 amperes (cold), 8.0 volts, 2500 RPM. Actual charging rate controlled by voltage regulator and dependent on battery condition. See Regulator data below. When checking generator output, ground 'F' terminal to eliminate regulator action.

**Charging Rate Adjustment:**—See Regulator data. Third brush setting 2 commutator bars minus 2 mica strips minimum, 2 bars minus 1 mica strip maximum from insulated (nearest) main brush. Setting adjustable by removing commutator cover band and moving third brush by hand counter-clockwise to increase, clockwise to decrease output. Maximum output given above must not be exceeded.

**Performance Data**

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	760	0	6.4	850
4	6.65	920	4	6.7	1020
8	6.9	1080	8	7.0	1240
12	7.2	1240	12	7.3	1400
16	7.45	1400	16	7.6	1650
20	7.7	1580	20	7.9	2100
25	8.0	2500	22	8.0	2700

**Rotation:**—Counter-clockwise at commutator end.  
**Brush Spring Tension:**—53 ozs. max. (new brushes).  
**Field Current:**—1.9-2.1 amperes at 6.0 volts.  
**Motoring Current:**—4.0-4.4 amperes at 6.0 volts.

**Removal:**—Conventional pivot mounting at right front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, swing generator out until fan can be turned with belt stationary.

**GENERATOR****SPECIAL EQUIPMENT**

**SPECIAL GENERATOR (PICK-UP & PANEL DELIVERY):**—Auto-Lite GCS-4109A-5, Armature GCS-2049-F. Used with Two-charge (non-vibrating) Regulator Model TC-4317-A. If this equipment used on 1941-42 models, refer to 1939 Willys Model 48 article (preceding) for data on this model.

**REGULATOR**

**REGULATOR:**—Auto-Lite VRR-4004A. Voltage type. In single case on engine side of dash.

For complete data, refer to *Electrical Equipment Index*.

**Cutout Relay**

Cuts In—6.4-6.6 volts.

Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap—.015" minimum.

Air Gap—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

Setting—7.3-7.6 volts at 70° F. See Electrical Equipment Section for settings at other temperatures. To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section. Contact Gap—.012" min. (armature against stop pin). Air Gap—.048-.052" with contacts just opening.

**LIGHTING**

**LIGHTING:**—Headlamps—Corcoran-Brown pre-focused double filament type with upper and lower beams controlled by Beam Selector Switch on toe-board.

**Headlamp Adjustment:**—With upper beam lighted and car 25' from screen, aim each headlamp so that beams centered on vertical line directly ahead of lamp center, and upper edge at horizontal line at lamp-center height, with lamp door and lens in place. To adjust, remove door and lens, turn 3 adjusting screws on reflector rim.

**Beam Indicator:**—Red jewel in upper edge of speedometer dial. Lighted when upper beams in use.

**Switches**

**Lighting:**—Douglas No. 5864.

**Beam Selector:**—Douglas.

**Instrument:**—Douglas.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1.5	55
Instrument, Beam Ind.	1	51
Stop & Tail	21-3	1158
Dome, License Plate	3	63

**MISC. ELECTRICAL**

**FUSES:**—Lighting—20 ampere. On lighting switch.  
Overdrive Control Relay—20 ampere. On Overdrive Control Relay.

**HORN:**—Schwarze. Vibrating, disc type.  
Horn Current—8 amperes.

C NTINUED N NEXT PA E

# C NTINUED FR M PRECEDING PA E ENGINE

## ENGINE SPECIFICATIONS:—4 cylinder, 'L' head type.

Bore—3½". Stroke—4¾".

Displacement—134.2 cu. ins. Rated HP—15.63.

Developed Horsepower—63 (Americar), 61 (Pick-up & Panel), 65 (441 Plainsman) at 3800-4000 RPM.

Compression Ratio—6.48-1 (Americar Std.), 6.81-1 (Americar Optl.), 6.1-1 (Pick-up & Panel Delivery).

NOTE—All cylinder heads are cast-iron except 441 Plainsman which is equipped with 7.0-1 aluminum head.

Compression Pressure—At cranking speed of 185 RPM: 107 lbs. (Pick-up & Panel Del.), 111 lbs. (All others).

Vacuum Reading—Steady 21-23" idling at 8 MPH. NOTE—Cylinders offset ¼" from center-line of crankshaft toward camshaft side of engine.

**PISTONS (ALL MODEL 441, MODEL 442 Engine Nos. 80301 to 85392):**—Lynite, Lo-Ex aluminum alloy, "T" slot, cam ground, tin-plated type.

Weight—12.5 ozs. (stripped). Length—3¾".

Removal—Pistons and rods removed from above.

Clearance—.0205-.0225" top, .003" skirt.

**Original Bore & Piston Sizes:**—Engines and pistons graded in four .0005" steps as shown in table below and marked as follows: Piston—Letter stamped on head. Cylinder Bore—Letter stamped on top of block between valve ports and bore at center.

Grade Letter	Cylinder Bore Size	Piston Size
A	3.1255-3.1250"	3.1235-3.1230"
B	3.1260-3.1255"	3.1240-3.1235"
C	3.1265-3.1260"	3.1245-3.1240"
D	3.1270-3.1265"	3.1250-3.1245"

**Replacement Pistons:**—Finished pistons furnished Std. (see Table above), .002", .005", .010" oversize.

**Fitting New Pistons:**—Use .0025" feeler stock ¾" wide inserted between piston and cylinder wall on side opposite slot. Pull to withdraw feeler 5-10 lbs.

**Installing Pistons:**—Slot toward left (valve) side.

**PISTONS (ENGINE NO. 85393 & UP):**—New Molybdenum alloy iron, cam ground, tin-plated type.

Weight—24 ozs. (with pin bushings).

Removal—Pistons and rods removed from above.

Clearance—.010-.012" (top land), .002" (skirt).

**Original Bore & Piston Sizes:**—Graded and marked in same manner as for aluminum pistons (see above).

**Replacement Pistons:**—Finished Pistons furnished in following oversizes: .002", .005", .010", .020", .030".

**Fitting New Pistons:**—Alloy iron pistons must be fitted exactly as follows: With rings removed, wipe piston and cylinder bore clean and dry. Invert piston and insert in bore, work piston up and down full length of bore several times (slight pressure required at first due to tin-plate on piston). Remove piston, wipe piston and bore, recheck fit. Piston fit should be slight drag or just sufficient to hold piston at any point in cylinder (bore must be straight and true within .001").

**PISTON RINGS:**—Two compression, one oil control ring per piston, all above pin (heat dam groove above top ring). Oil ring groove drilled for drainage.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.008-.013"	.0015-.002"
Oil Control	3/16"	.008-.013"	.0015-.002"

NOTE—Install compression ring with mark TOP up.  
Replacement Rings:—Std. & .005", .010", .020", .030" OS.

**PISTON PIN:**—Diameter .8117-.8119". Length 2 25/32". Pin locked in connecting rod by clampscrew.

NOTE—Pin holes in alloy iron pistons are provided with bushings.

Pin Fit in Piston (Aluminum)—.0001-.0009" clearance or light push fit at 60°F.

Pin Fit in Piston (Alloy Iron)—.0003-.0004" in piston bushing or slide fit at 70°F. with piston and pin dry (pin should slide through piston of own weight).

Replacement Pins:—Std. & .001", .002", .003", oversize.

**CONNECTING ROD:**—Weight 34 ozs. Length 9 3/16".

NOTE—New type connecting rod with removable steel-backed, babbitt-lined bearing shells used beginning with Engine No. 88769. This new type rod should be used with the alloy iron pistons.

Crankpin Journal Diameter—1.9395" (1 15/16").

Lower Bearing—Spun babbitt-lined type (First type rod before Eng. No. 88769), removable steel-backed, babbitt-lined type. (Eng. No. 88769 up).

Bearing Adjustment:—None (no shims). Replace or rebabbitt rods (first type), replace removable bearing shells (second type). Do not file rods or bearing caps. NOTE—Babbitted rods or bearing shells furnished Std. and .010" Undersize.

Installing Rods:—Short side of bearing to front (#1, #3), to rear (#2, #4). Oil hole away from camshaft. (toward right of engine) on all rods.

**CRANKSHAFT:**—3 bearing with 4 counterweights.

Journal Diameters—2.3340" all bearings.

Bearings—Removable slip-in steel-backed, babbitt-lined. Furnished Standard and .010" Undersize. Clearance—.001".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps.

End Thrust:—Taken by #1 front bearing. Adjustable by adding or removing shims between crankshaft thrust washer and shaft. Endplay—.004-.006".

NOTE—Crankshaft thrust washer furnished .002" thick.

**CAMSHAFT:**—4 bearing. Non-adjustable chain drive.

Bearing Type—Removable bushing (front), machined in crankcase (all others).

Bearing Clearance—.002-.0035".

End Thrust:—Taken by thrust plate behind camshaft sprocket and spring-loaded plunger in forward end of camshaft bearing against thrust stud on chain case cover. NOTE—Make certain that plunger and spring in place when replacing chain case cover.

Timing Chain:—Link-Belt. Width 1". Pitch ½". Length 47 links or 23½".

Camshaft Setting:—With #1 piston at TDC, mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.373"	5¾" (overall)
Exhaust	1 15/32"	.3725"	5¾" (overall)

	Seat Angle	Lift	Stem Clearance
Intake	45°	23/64"	.0015-.00325"
Exhaust	45°	23/64"	.002-.00375"

NOTE—Separate valve seat inserts not used.

**Valve Guides:**—Remove from above. Press new guides in (taper end up) until lower end extends ¾" below valve spring seat recess in block.

NOTE—Exhaust valve guides counter-bored on upper inner diameter to .399" diameter, 5/16" deep.

**Valve Springs:**—Free length 2½".

	Spring Pressure	Spring Length
Valve Closed	50 lbs.	2 7/64"
Valve Open	116 lbs.	1¾"

**Valve Lifters:**—Mushroom type (remove from below). Guide holes reamed in block. Serviced by reaming guide hole for .004" oversize lifter.

Lifter Diameter—.6245".

Lifter Clearance—.0005-.002".

## VALVE TIMING

**Tappet Clearance:**—.014" all valves, with engine cold. Remove hand hole in left front fender splash shield by taking out screws for valve adjustment.

**Valve Timing:**—See Camshaft Setting above.

Intake Valves—Open 9° BTDC. Close 50° ALDC.

Exhaust Valves—Open 47° BLDC. Close 12° ATDC.

Valve Timing Check—With .020" tappet clearance #1 intake valve should open with #1 piston 9° or .039" BTDC with flywheel mark 'I.O' centered in inspection hole in right front side of engine rear support (¼" variation permissible). Reset tappet clearance at .014" (cold).

## LUBRICATION

**LUBRICATION:**—Pressure (pump on left of engine).

**Oil Pump Installation Note:**—Install pump with #1 piston on compression, 'TC-IGN' flywheel mark centered in inspection hole in right front side of engine rear support and distributor shaft turned so that rotor is at #1 segment in distributor cap.

**Normal Oil Pressure:**—40 lbs. (75 lbs. on instrument panel gauge) at 30 MPH.

**Oil Pressure Regulator:**—Under plug on oil pump cover. Opens at 40 lbs. Adjustable by adding or removing shims within plug above spring.

**Oil Pressure Gauge:**—King-Seeley Electric, K-S No. Dash Unit: 8190 (441 Pass. Cars), 40145 (442 Pass. Cars), 8898 (Panel Delivery). Engine Unit: 6425 (All Models).

See Miscellaneous Section for complete data.

Crankcase Capacity:—4 quarts.

## COOLING

**COOLING SYSTEM:**—Capacity—11¾ quarts.

**Water Pump:**—Packless, sealed ball-bearing type.

See Water Pump Section for complete data.

**Removal:**—Drain water, remove fan belt and fan blades, loosen radiator mounting nuts, take out pump mounting bolts and lift pump out.

**Thermostat:**—Harrison. In outlet elbow on head.

Setting—Starts to open 148-155° F. Fully open 173°.

**Temperature Gauge:**—King-Seeley Electric, K-S No. Dash Unit: 8184 (441 Pass. Cars), 40135 (442 Pass. Cars), 8868 (Panel Delivery), 8868-1 (Panel Delivery). —Tan Bezel). Engine Unit: No. 7000 (All Models).

See Miscellaneous Section for complete data.

**CLUTCH**

**CLUTCH:**—Atwood Model TP28-7 (Americar), TP28-7-1 (Pick-up & Panel Delivery). Single plate, dry disc type with new hydraulic type dampener.

**NOTE:**—Atwood Driven Member with hydraulic type dampener used on all Passenger Cars and some 1941 Pick-up and Panel delivery. Borg & Beck Driven Member used on some 1941 and all 1942 Pick-up and Panel Delivery.

*See Clutch Section for complete data.*

**Facings:**—Moulded, 2 required. Inside Diameter 5 $\frac{1}{8}$ ". Outside Diameter 7 $\frac{1}{8}$ ". Thickness .125".

**Adjustment:**—Pedal free travel  $\frac{3}{4}$ -1" (provides 1/16" clearance between release bearing & release levers). To adjust, change length of clutch fork connecting cable.

**Removal:**—Remove Transmission (see below) and flywheel bell housing. Take out mounting screws in clutch cover. Remove clutch assembly.

**TRANSMISSION**

**TRANSMISSION:**—Warner. Model AS5-T84G. All helical gear type with synchro-mesh (second and high), sliding gear (low & reverse). Overdrive with electrical 'kick-down' control Std. on Plainsmen, Optl. on other Americar models.

**NOTE:**—Pick-up and Panel Delivery transmission equipped with shielded bearing on main drive gear.

*See Transmission Section for complete data.*

**Transmission Control:**—Mechanical steering col. shift.

*See Transmission Section for complete data.*

**Removal:**—Disconnect accelerator pedal from rubber socket, remove toeboards. Disconnect control rods at transmission and front universal. Remove bell housing hand hole cover and disconnect the clutch throw-out bearing retracting spring. Remove lower nuts on engine mounting bolts at rear of transmission, jack up rear of engine (CAUTION—See that fan blades do not damage radiator) to clear frame cross-member. Remove transmission mounting bracket and bell housing-to-transmission case bolts. Pull transmission straight back and lift out. **Overdrive Removal:**—Same as above plus the following: Disconnect solenoid wires and overdrive control cable at transmission. Remove overdrive rear support by taking out bolts at frame ends. **NOTE:**—When installing overdrive rear support, install equal number of shims between frame and each end of support until bottom of overdrive case just touches rubber insulator, then remove shims equal to 3/16" thickness from each end of support to give proper compression of insulator.

**OVERDRIVE**

Warner Type R7. Overdrive with electrical "kick-down" control. Used with special Overdrive Transmission as Optl. Equipment on 1941-42 Passenger Car models.

*See Transmission Section for complete data.*

**Overdrive Solenoid:**—Delco-Remy No. 1569.

**Throttle Switch:**—Cole-Hersee No. 9016. Adjust position of switch on bracket so that switch plunger just contacts end of accelerator rod (max. clearance 1/32") when carburetor throttle is wide open.

**Overdrive Relay:**—Auto-Lite Model HR-4201AS.

**Removal:** Same as standard transmission (above) except that lock-out control and wires on transmission solenoid must be disconnected first.

**UNIVERSALS**

**UNIVERSAL JOINTS:**—Detroit Series 4100. Ball-and-trunnion type with needle bearings. 2 used.

*See Universals Section for complete data.*

**REAR AXLE****PASSENGER CARS**

**REAR AXLE (AMERICAR PASS. CARS):**—Own Model 441 (1941), 442 (1942). Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.44-1 Std. No Optl. ratios.

**Backlash:**—.006-.008". Shim adjustment.

**Removal:**—Hoist rear of car. Disconnect rear universal, brake tube and cables, shock absorbers, spring U-bolts, rear spring shackles. Pull assembly to rear.

**Wheel Bearing Adjustment:**—To adjust, remove wheel, hub assembly, oil seal and bearing retainer. Remove shims from between retainer and backing plate to decrease endplay. Endplay—.004-.006" total.

**REAR AXLE****PICK UP & PANEL DELIVERY**

**REAR AXLE (PICK-UP & PANEL DELIVERY):**—Spicer (Salisbury) Model 21-1 (1941 All Trucks, 1942 First 500 Trucks), Model 41-4 (1942 After first 500 Trucks). Semi-floating, spiral bevel gear (Model 21-1), hypoid gear (Model 41-4) type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio:**—4.9-1 (Model 21-1), 4.82-1 (Model 41-4).

**Backlash:**—.006-.008". Shim adjustment.

**Removal & Wheel Bearing Adjustment:**—Same as for Americar passenger cars (see data above).

**SHOCK ABSORBERS**

**SHOCK ABSORBERS:**—Monroe. Hydraulic (permanently sealed assembly), direct acting, adjustable type. Part No. for each model as follows:

	Front	Rear
	Monroe No. Willy	Monroe Willys
Std. ①	639022.....11422	639008.....11425
Hvy. Dty. ①	639187.....11429	639188.....11430
Comm'l. ②	639187.....11429	639537.....11434

①—Passenger Car. ②Pick-up & Panel Delivery.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:**—Own Model 441 (1941), 442 (1942) Front Axle. Conventional 'I' beam section with Reverse-Elliott ends.

**Kingpin Inclination:**—7 $\frac{1}{2}$ ° crosswise.

**Caster:**—3°. Adjustable by installing wedge shims between spring and spring pad on axle.

**Camber:**—2°. Not adjustable.

**Toe In:**—1/32-5/32". Adjustable by loosening tie rod clamp bolts and turning tie rod.

**Steering Geometry (toe-out on turns):**—With outer wheel turned 20°, inner wheel should turn 23°15'. Not adjustable (check for bent steering arms).

**STEERING GEAR**

**Steering Gear:** Ross Model T-12. Cam-and-Twin Lever type.

*See Steering Gear Section for complete data.*

**BRAKES**

**BRAKES (ALL MODELS):**—Service. Bendix (Lockheed) hydraulic, double anchor type. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Drums:**—Nickel chromium alloy iron. Diameter 9".

**Lining:**—Moulded type. Width 1 $\frac{3}{4}$ ". Thickness 3/16". Length per wheel 18 $\frac{5}{8}$ " (1941), 16 53/64" (1942).

**Clearance:**—.008" toe (top), .005" heel, for each shoe.

**Braking Power:**—43% rear wheels, 57% front.

**Hand Brake:**—See Service Brakes above.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** Stamped on plate on outside of left frame side rail at front end on Nameplate on right side of instrument panel.

1946 Numbers—10,001 Up.

1948 Numbers—148,459 Up.

**ENGINE NUMBER:** Stamped on boss on right front upper corner of cylinder block near water pump.

**TUNE-UP**

**COMPRESSION PRESSURE:** 111 lbs. at cranking speed of 185 RPM. for Std. 6.48-1 Head.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUG GAPS:** .030".

Plug Type—Auto-Lite AN-7 or AN-7B. 14 mm.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Limits .020-.024" (IGW-4177-1 & IGW-4189), .018-.022" (IAD-4008).

Cam Angle or Dwell—41° closed, 49° open (distr.).

Breaker Arm Spring Tension—17-20 ounces.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** 5° BTDC (72 Octane Fuel), At TDC (Low Octane Fuel).

Timing Procedure—See Ignition Timing.

Timing Mark—Flywheel mark "IGN/" (5° BTDC setting), "TC/" (TDC setting) centered in inspection hole in right front face of housing below starter.

►Timing Mark Change—Flywheel marked "5" (replacing "IGN/") starting Engine No. 175402.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—Idle screw 1-2 turns open (turn screw out for richer mixture).

Idle Speed—600 RPM. or 8 MPH.

Float Level— $\frac{3}{8}$ " from top of float at free end to machined surface (gasket seat) on bowl cover. Invert to check (allow float to hang freely).

**CAUTION—Do not compress spring in valve stem.**

Accelerating Pump—No seasonal adjustment.

**Fuel Pump Pressure:** 4½ lbs. maximum.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. No adjustment required. When installing assembly, see that thermostatic spring end rests on top of spring stop bracket on manifold.

**CAUTION—Check valve for free operation when tuning up engine.**

**CRANKCASE VENTILATOR:** Remove and clean Vacuum Control Valve on manifold. See Crankcase Ventilator (following CARB. EQUIPMENT) for data.

**VALVE TAPPET CLEARANCE:** .014" All Valves, Hot or Cold. NOTE—Self-locking adjusting screws used.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Willys No. 642073 (for Yale & Towne), No. 644001 (Hurd). In base of ign. coil.

Ignition Lock—Willys No. 661949 (for Yale & Towne), No. 644000 (for Hurd).

**COIL:** Auto-Lite Model IG-4314 or IG-4314A. Mounted on back of instrument panel with ignition switch in base.

Replacement Coil—Auto-Lite IG-3033XS with Service Bracket CE-1248S.

Ignition Current—2.5 ampere idling, 5 stopped.

**CONDENSER:** Auto-Lite Part No. IGB-1025 (IGW-4177-1 & IGW-4189 Distr.), IGW-3139 (IAD-4008).

Capacity—20-25 mfd. (IGB-1025), 23-26 mfd. (IGW-3139).

**DISTRIBUTOR:** Auto-Lite Model IGW-4177-1, IAD-4008, or IGW-4189. Single breaker, 4 lobe cam, full automatic advance type (vacuum spark control may be used with IGW-4189 distributor).

Breaker Gap—.020". Limits .020-.024" (IGW-4177-1 and IGW-4189), .018-.022" (IAD-4008).

Cam Angle—41° closed, 49° open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance—IAD-4008 & IGW-4177-1

Automatic Advance—IGW-4189

Start..... 350 0..... 700

2..... 560 4..... 1120

5..... 875 10..... 1750

8..... 1190 16..... 2380

11..... 1500 22..... 3000

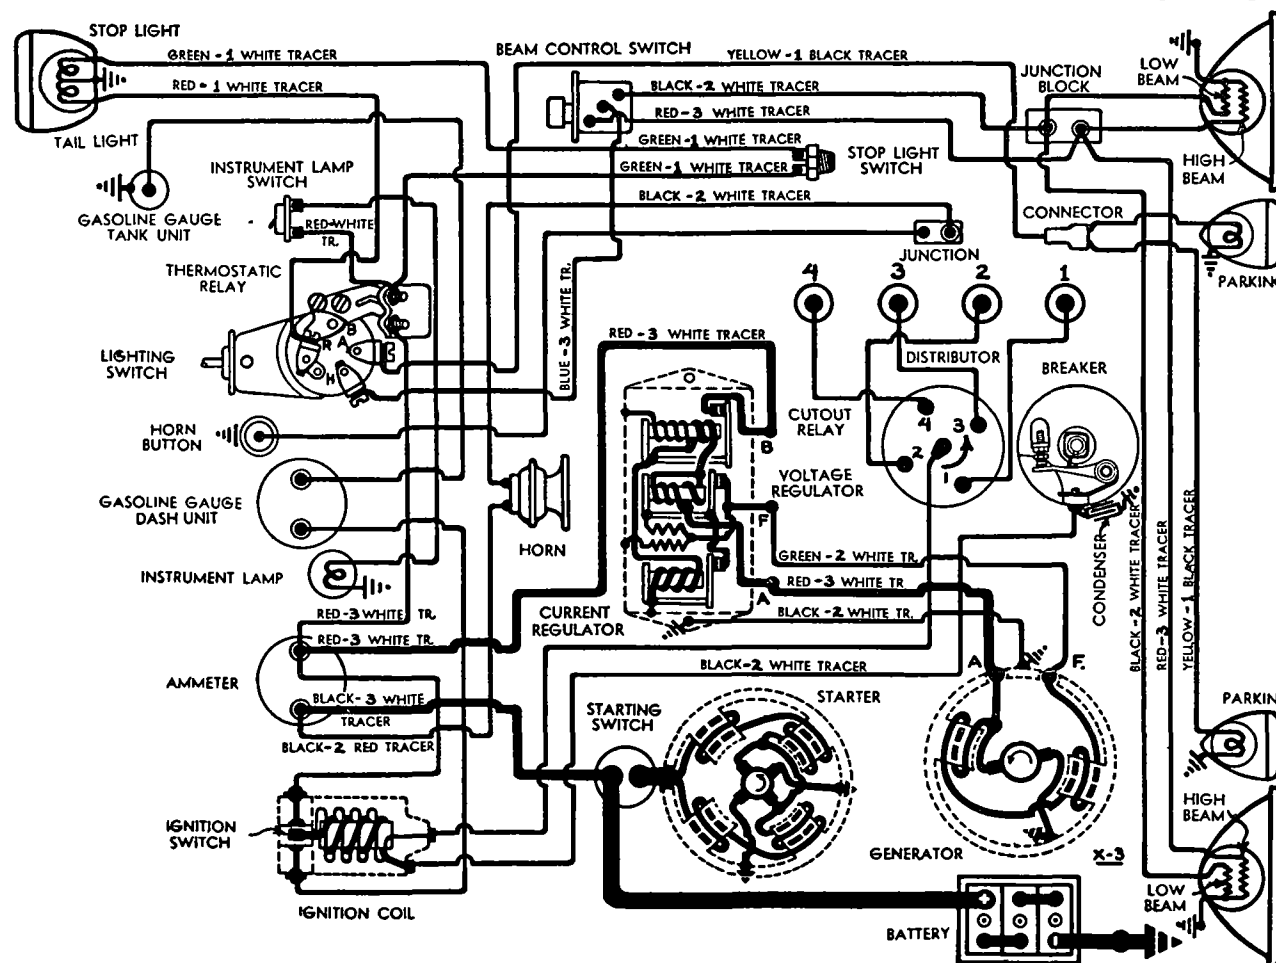

**Vacuum Spark Control (IGW-4189 Distr.) Auto-Lite Model VC-4010 Unit:** Separate unit mounted on hold-down plate and linked to advance arm. Provides additional advance for all speeds above idling except for acceleration and wide open throttle operation when spark retarded by return spring within unit.

**Vacuum Advance (for IGW-4189 Distr.)**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	3½"
2°	4°	5¾"
5°	10°	9¼"
8°	16°	12¾"
10°	20°	15"

**Distributor Removal:** Mounted on right hand side of engine. To remove, take out hold-down screw in advance arm.

**Installation Note—**If crankshaft has been turned with distributor off engine, install distributor as follows: Turn crankshaft to cylinder #1 firing position (see Timing), turn distributor rotor to #1 distributor cap segment position (see diagram), insert distributor drive shaft in drive housing on engine.

FIRST CIVILIAN JEEP

rock shaft back and forth until drive lug on end of shaft enters slot in drive coupling, push distributor down into place and install hold-down screw. Check Ignition Timing.

**CAUTION**—If Oil Pump removed, refer to Oil Pump Installation directions in Willys Shop Notes.

### IGNITION TIMING

**Std. Setting** Flywheel Degs. Piston Position  
72 Octane Fuel..... 5° BTDC .....010° BTDC  
68 Octane Fuel..... At TDC .....000° TDC  
**NOTE**—Set timing as specified in accordance with Octane Rating of fuel customarily used.

► **Timing Mark Change**—Flywheel marked "5°" (replacing "IGN/") starting Engine No. 175402.

**Timing**—With #1 piston on compression, turn crankshaft until piston reaches firing position (see Timing Table above), with flywheel mark "IGN" (5° BTDC setting) or "TC" (At TDC setting) centered in inspection hole in right front face of flywheel housing below starter. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open

(press rotor clockwise to eliminate backlash), tighten clamp bolt. See that rotor is at #1 segment in distributor cap and check spark plug cable connections (see diagram).

**Timing (Using Timing Light—Engine Idling)**—This method recommended by manufacturer. Direct timing light on flywheel, idle engine (engine must be warm), adjust distributor (as directed above) until timing mark is centered in inspection hole.

### CARBURETOR

Carter WO Type 636SA superseding 596S & 636S. 1½" Single Barrel, downdraft, with manual choke control (interconnected with throttle to provide fast idle).

**NOTE**—Carburetor may be identified by Casting Number 458 (596S), 505 (636S) on face of flange. See Carburetor Section for complete data.

**Idle Adjustment**—With engine warm (choke valve wide open and fast idle inoperative), set throttle stop screw for idling speed of 600 Engine RPM or

8 MPH. Turn idle adjusting screw out until engine begins to roll, then turn screw in until engine fires smoothly. Final setting of idle screw should be 1-2 turns open. Recheck idle speed.

**Accelerating Pump**—No seasonal adjustment.

**Float Level**—¾" from top of float at free end to machined surface (gasket seat) on cover with valve seated. To check, invert assembly and allow float to hang freely. Do not compress spring in valve stem.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section for complete data.

**Fast Idle**: Choke valve interconnected with throttle valve to open throttle to fast idle position when choke in use. No adjustment required.

### CARB. EQUIPMENT

**Governor (Special Equip.)**: King-Seeley "Handy" Model 26510-400, Monarch, or Novi Governors. Centrifugal types. Mounted on left front corner of cylinder head and driven by special belt from the crankshaft.

**Setting**—1000 to 2600 RPM of engine in steps of 200 RPM (in accordance with position of dash control lever which has nine settings).

**Adjustment**—See Willys Shop Notes for directions.

**Air Cleaner**: Oakes Model No. 613300. Oil-bath type.

**Servicing**—Clean and refill oil reservoir to indicated level with same grade engine oil used in crankcase at 2000 mile intervals (when crankcase drained), or more often if required by operating conditions (twice daily for extremely dust field conditions).

**Fuel Pump**: Carter M-587-S or AC Type AF No. 1538886 Diaphragm type (Std.), AC Type AM No. 1537409 combination fuel-and-vacuum pump (Optl.).

**Replacement Pump**—AC No. 572 (AF), 7409 (AM). See Carburetion Equipment Section for data.

**Pressure**—3 lbs. (4½ lbs. max. at 1800 RPM).

**Gasoline Gauge**: Auto-Lite (Motometer) elec. type.

**Dash Unit**—Auto-Lite No. NG-10764D.

**Tank Unit**—Auto-Lite No. NG-10762T.

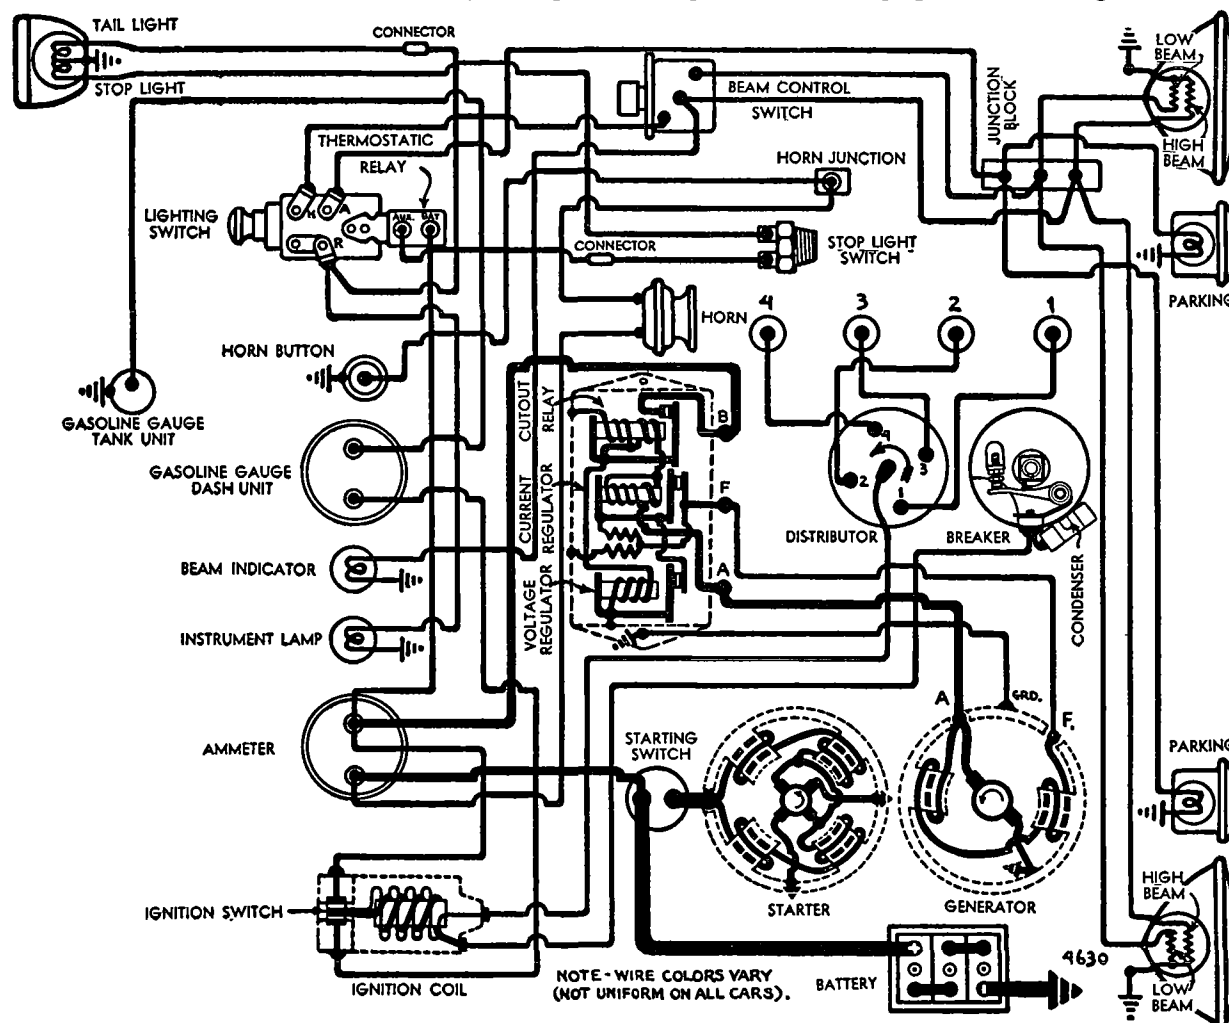

See Carburetion Equipment Section for data.

### CRANKCASE VENTILATOR

**Sealed Positive Ventilation Type**. Consists of Air Intake Pipe from Air Cleaner to Crankcase Oil Filler (Oil Filler Cap has gasket and must seat tightly to prevent air leaks at this point) and Air Outlet Pipe from Valve Chamber Cover to Intake Manifold. There is a Vacuum Valve at the manifold connection and this valve must close at idling speed for satisfactory engine idling performance.

**Servicing**—Make certain that connecting pipes are tight and that oil filler cap gasket seals cap tightly. Remove and clean control valve when tuning engine or whenever system does not operate satisfactorily.

**Vacuum Control Valve**: Remove control valve by disconnecting pipe at valve chamber cover and unscrewing valve from manifold, clamp valve in vice and remove top of housing, withdraw valve and spring. Clean valve and valve seat thoroughly. Reassemble and re-install unit.

LATER CIVILIAN JEEP

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**BATTERY**

**Auto-Lite (U.S.L.) Type PN-15.** 6 volt, 15 plate, 100 Ampere Hour capacity (20 hour rate). Starting Capacity—120 amperes for 20 minutes. Zero Capacity—300 amperes for 3.2 minutes. Five-second voltage 4.15 volts.

**Grounded Terminal—Negative (—)** terminal grounded to frame at right end of front cross-member.

**Engine Ground—**Strap connector between right front engine mounting leg (under generator) and engine mounting bracket on frame side rail.

**Dimensions—**Length 8 15/16". Wid. 7 1/4". Hgt. 8 3/8".

**Location—**In engine compartment on right side.

**STARTER**

**Auto-Lite Model MZ-4113.** Armature No. MZ-2089. Drive—Special type Bendix Drive No. A2233. Rotation—Counter-clockwise at commutator end. Brush Spring Tension—42-53 ozs. (new brushes). Cranking Engine—185 RPM, 150-175 amps., 5 volts.

**Performance Data**

Torque	RPM	Volts	Amperes
0	4300	5.5	70
.65	2500	5.5	100
2.55	1325	5.0	200
4.95	750	4.5	300
7.65	220	4.0	400
7.8	Lock	3.0	420
11.7	Lock	4.0	580

**Removal:** Starter flange mounted on right front face of flywheel housing. To remove, take out two flange mounting cap screws and one bolt in bracket at commutator end.

**Starting Switch:** Auto-Lite Model SW-4015. Mounted under floor to right of accelerator pedal. Operated manually by button on toeboard.

**GENERATOR**

**Auto-Lite Model GDZ-4817-A.** Armature GDZ-2006F. Two brush, shunt type with external vibrating voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate—**35 amperes, 8.0 volts, 1900 RPM. Actual charging rate controlled by regulator and dependent on battery condition.

**Charging Rate Adjustment—**None. See Regulator.

**Performance Data**

Cold			Hot		
Amperes	Volts	RPM	Amperes	Volts	RPM
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35	8.0	1900	35	8.0	2250

①—Current Regulator setting. See Regulator data.

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**35-53 ozs. (new brushes).

**Field Current—**1.6-1.78 amperes at 6.0 volts.

**Motoring Current—**4.16-4.60 amperes at 6.0 volts.

**Removal:** Conventional pivot mounting at right front of engine. To remove, take out clamp bolt above generator and two pivot bolts under generator. Slip off drive belt and lift generator out.

**Belt Adjustment:** Loosen clamp and pivot bolts, swing generator out away from engine until belt can be deflected 1" midway between generator and fan pulleys with thumb pressure.

**REGULATOR**

**Auto-Lite Model VRP-4007C-2.** Voltage-Current Type. Regulator case mounted on right side in engine compartment. Consists of Cutout Relay and vibrating type Voltage and Current Regulator units. See Electrical Equipment Section for complete data.

**Cutout Relay**

**Cuts In—**6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out—**4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap—**.015" minimum.

**Air Gap—**.031-.034" with contacts open measured at hinge end of core.

**Voltage Regulator**

**Setting—**7.35 volts (7.2-7.5) at 70°F. See Electrical Equip. Section for settings at other temperatures. **To Check—**Connect ammeter in charging line at regulator "B" terminal (use short heavy leads), connect voltmeter between "B" terminal and ground. Operate generator at speed equivalent to 30 MPH, charging a full charged battery until voltage is steady (charging rate approx. 10 amperes). Note voltmeter reading which should agree with Setting given above.

**To Adjust (with cover removed)—**Change regulator armature spring tension by bending lower spring hanger slightly. Increase tension to increase operating voltage, decrease tension to lower voltage. See Electrical Equipment Section for complete adjustment directions.

**Contact Gap—**.012" min. (armature against stop pin).

**Air Gap—**.048-.052" with contacts just opening.

**Current Regulator**

**Setting—**34-36 amperes (marked "35" on cover).

**To Check—**Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH, charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Note ammeter reading which should agree with Setting given above.

**To Adjust—**Same as for Voltage Regulator above.

**Contact Gap & Air Gap—**Same as Voltage Regulator.

**LIGHTING**

**Headlamps:** Corcoran-Brown "Sealed Beam" type.

Upper and lower beams controlled by Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Headlamp Adjustment—**Aim upper beam straight ahead (hot spot center exactly 3" below lamp center height at 25 feet).

**Switches**

**Lighting—**Willys No. 641622.

**Beam Selector—**Willys No. 640260.

**Instrument—**Willys No. 635737 (first cars only).

Controlled by lighting switch on later cars.

**Stop Light—**Willys No. A-1271.

**Bulb Specifications**

Position	Candlepower	Mazda No.
Headlamps	45-35 watt	Sealed Beam
Parking	3	63
Beam Indicator	1	51
Instrument	3	63
Stop & Tail	21-3	1158

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER:** Mounted on back of lighting switch. Protects lighting circuits by limiting current to 30 amperes. Vibrating thermostatic type. No adjustment.

**HORNS:** Sparton Model B-10419, Schwarze, or Auto-Lite Model HA-4033, HA-4037. Micro-vibrator type. Horn Current—8 amperes.

**ENGINE**

**ENGINE SPECIFICATIONS:** Own Make. Four cylinder, "L" Head type. Cylinder block and crankcase cast en bloc. Cylinders offset from center-line of crankshaft toward camshaft side of engine.

**Bore—**3 1/8" (3.125-3.127"). **Stroke—**4 3/8".

**Displacement—**134.2 cubic inches.

**Rated Horsepower (SAE)—**15.63

**Developed Horsepower—**60 at 4000 RPM.

**Compression Ratio—**6.48-1 Std. Cast Iron Head.

**NOTE—**7.0-1 Cylinder Head is optional.

**Compression & Vacuum Reading—**See Tune-up data.

**ENGINE REMOVAL:** See Willys Shop Notes.

**ORIGINAL BORE & PISTON SIZES:** See Willys Shop Notes.

**ORIGINAL BEARING SIZES:** See Willys Shop Notes.

**TIGHTENING TORQUES:** See Willys Shop Notes.

**CYLINDER HEAD INSTALLATION:** See Willys Shop Notes.

**PISTONS:** Lo-Ex aluminum alloy (Lynite, Bohn, Permite, or Arrowhead), "T" slot, Cam ground, tin-plated type with heat insulation groove above top piston ring. Length—3 3/4".

**Weight—**12.5 ozs. without rings or pin.

**Removal—**Pistons and rods removed from above.

**Clearance—**Top Land .017-.019". Skirt .004".

**Replacement Pistons:** Finished pistons furnished .005", .015", .025", .035", .045" Oversize.

**CAUTION—**Pistons must not be "lapped in." This will destroy tin-plated surface.

**Fitting New Pistons:** Use .003" feeler stock, 3/4" wide, inserted between piston and cylinder wall on opposite side from "T" slot. Pull required to withdraw feeler must be within 5-10 lbs. at 70°F.

**Installing Pistons:** "T" slot toward valve (left) side of engine (opposite side from oil spray hole in connecting rod lower end).

**PISTON RINGS:** Two compression, one oil control ring per piston, all above pin (piston has narrow heat insulation groove above top ring groove). Oil ring groove drilled with oil drainage holes.

**Ring Width End Gap Side Clearance**

Compression .3/32" .008-.013" .0005-.001"

Oil Contr. .3/16" .008-.013" .001-.0015"

**Installing Rings:** Install compression rings with mark "TOP" (on side) toward top. Rings have taper face and must be installed correctly. Top ring inner bevel edge must be up.

**Replacement Rings:** For Rebored Cylinders—Finished .005", .015", .025", .035", .045" Oversize.

**Service Type Rings (for cylinders not rebored)** furnished Std.—.009", .010-.019", .020-.029", .030-.039", .040-.049" Oversize.

**PISTON PIN:** Diameter .8117-.8119". Length 2 25/32".

Pin is locked in connecting rod by clampscrew.

**NOTE—**On new pistons, pin hole is .8118-.8120" in

## ENGINE

## C CONTINUED FROM PRECEDIN PAGE

diameter and is diamond-bored and tin-plated.  
Pin Fit in Piston—.0001-.0009" clearance or light thumb push fit with piston and pin at 70°F.

Replacement Pins: Furnished Standard and .001", .002", .003" Oversize.

**CONNECTING ROD:** Length 9 3/16". Weight 34 ozs. Crankpin Journal Diameter—1 15/16" (1.9393"). See "Original Bearing Sizes" in Willys Shop Notes.

**Lower Bearing**—Steel-backed, babbitt-lined, replaceable type. CAUTION—Oil spray hole in upper half of bearing must line up with oil spray hole in rod.

Clearance—.0005-.0025". Sideplay—.005-.009".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file connecting rods or bearing caps. See Willys Shop Notes for "Palnut" installation.

NOTE—Replace bearings when clearance exceeds .005" or sideplay exceeds .013".

Replacement Bearings: Furnished Standard & .010", .020", .030" Undersize.

**Installing Rods:** Lower bearing offset. Install rods with short side of bearing toward nearest main bearing or toward front of engine (#1, 3), toward rear (#2, 4). Oil spray hole in lower end of rod toward right of engine (away from camshaft) on all rods.

**CRANKSHAFT:** Three bearing type with integral counterweights (up to CJ-2A Jeep Engine Number 55137), removable counterweights (after above no.). Journal Diameters—2.3340" (all bearings). See "Original Bearing Sizes" in Willys Shop Notes.

**Bearings**—Steel-backed, babbitt-lined, replaceable type. Bearing shells are dowelled in bearing caps and crankcase.

Clearance—.001-.0025" (.0005-.001" new).

NOTE—Replace bearings when clearance exceeds .006" or when endplay exceeds .018".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. See Crankshaft Servicing instructions in Willys Shop Notes.

NOTE—Engine must be removed from chassis for bearing replacement and crankshaft servicing. See Engine Removal Instructions in Willys Shop Notes.

Replacement Bearings: Furnished Standard & .010", .020", .030" Undersize.

**End Thrust:** Taken by flanged faces of #1 (front) bearing. Adjustable by adding or removing shims between crankshaft sprocket thrust washer and sprocket. NOTE—Crankshaft sprocket must be removed with a gear puller in order to make endplay adjustments. Adjusting shims furnished .002", .004", .010" and .030" thick.

Endplay—.004-.008".

**CAMSHAFT:** Four bearing. Non-adjustable chain drive (first), helical gear drive (later).

Journal Diameters—#1, 2.188"; #2, 2 1/4"; #3, 2 3/16"; #4, 1 3/4".

**Bearings**—Removable steel-backed, babbitt-lined bushing (front), machined in crankcase (all others). Clearance—.002-.0035". Service limit .006" (front), .008" (all others).

Camshaft Removal—See Willys Shop Notes for data.

**End Thrust (for Engines with Timing Chain Drive):** End thrust taken by thrust washer behind camshaft sprocket and spring loaded plunger in forward end of camshaft which bears against stationary thrust pin on chain case cover. NOTE—Make certain that plunger and spring are in place when installing chain case cover.

**End Thrust (for Engines with Timing Gear Drive):** Taken by thrust plate assembled behind gear with a spacer assembled behind plate. If required, a thin shim can be installed behind spacer if too little clearance, or spacer can be dressed to provide greater clearance.

Endplay—.003-.0055".

► **Timing Case Cover (& Front Oil Seal) Change:** See "Crankshaft & Main Bearings" in Willys Shop Notes.

► **Timing Chain (to CJ-2A Jeep Engine No. 44417):** Link-Belt, non-adjustable. Width 1". Pitch 1/2". Length 23 1/2" or 47 links.

► **Timing Gears (after CJ-2A Jeep Engine No. 44417):** Crankshaft gear cast iron. Camshaft gear Fibre with steel hub.

► **CJ-2A Jeep Engines with Timing Gears** carry engine mark "J" ahead of engine number.

Timing Gear Backlash—.000-.002".

**Camshaft Setting (First Cars with Timing Chain):** With #1 piston on top dead center, mesh chain with marks on sprockets adjacent and in line with a straightedge across the shaft centers.

NOTE—Camshaft sprocket mounting screw holes offset to insure correct position of sprocket on shaft.

**Later Cars (With Timing Gears)**—Mesh gears with marked tooth of camshaft gear opposite marked space between gear teeth on crankshaft gear.

**VALVES:** Head Diameter Stem Diameter Length  
Intake ..... 1 17/32" ..... 373" ..... 5 3/4" (overall)  
Exhaust ..... 1 15/32" ..... 3725" ..... 5 3/4" (overall)

Seat Angle Lift Stem Clearance

Intake ..... 45° ..... 23/64" ..... .0015-.00325"①

Exhaust ..... 45° ..... 23/64" ..... .002-.00375"②

①—New. Replace when clearance exceeds .0045"

②—New. Replace when clearance exceeds .005"

**Valve Guides:** Removable type. Remove guides from above with puller, install new guides with driver or press guides down in place to following dimensions:

**Intake Guide**—Top of guide 1 5/16" below top face of block. The shorter smaller-diameter section end of the guide should be up.

**Exhaust Guide**—Top of guide 1" below top face of block. Taper end (counter-bored end) of guide should be up.

**Valve Springs:** Install springs with closed-coil end up toward cylinder block. Spring free length 1 1/2".

Spring Pressure Spring Length

Valve Closed ..... 50 lbs. .... 2 7/64"

Valve Open ..... 118 lbs. .... 1 3/4"

**Valve Lifters:** Mushroom type operating in reamed holes in block. Serviced by installing oversize lifters. Lifters furnished .004" Oversize.

Lifter Diameter—.6240-.6245".

Lifter Clearance—.0005-.002".

NOTE—Camshaft must be removed for lifter removal.

See Camshaft Removal instructions in Willys Shop Notes.

## VALVE TIMING

**Tappet Clearance:** .014" All Valves, Hot or Cold.

NOTE—Tappet adjusting screws are "self-locking" type (no locknuts).

**Valve Timing:** See Camshaft Setting (above).

**Intake Valves**—Open 9° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 47° BLDC. Close 12° ATDC.

► **Timing Mark Change (starting CJ-2A Jeep Engine No. 175402)**—Flywheel marked "5" (for 5° BTDC.) and "T.C." (top dead center). "I.O." mark not carried and intake opening point on these engines must be estimated.

**Valve Timing Check**—Set tappet clearance #1 intake valve at .020". This valve should open with #1 piston 9° or .039" before top dead center with flywheel mark "I.O." centered in inspection hole on right front face of flywheel housing below starter. Reset tappet clearance to .014" running clearance.

## LUBRICATION

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, and timing chain or timing gears. Oil pump mounted externally on left hand side of crankcase.

**Crankcase Capacity**—4 qts. (refill), 5 qts. (dry or whenever oil filter drained).

**Normal Oil Pressure**—40-50 lbs. (35 lbs. at 30 MPH., 10 lbs. at idling speed of 600 RPM).

NOTE—On first Universal Jeep, 50 lbs. gauge pressure equivalent to 25 lbs. actual pressure (oil pressure relief valve opens at 25 lbs.).

► **Oil Pressure Regulator (Early Universal Jeep)**—Under plug on oil pump cover. Opens at 25 lbs. (50 lbs. gauge pressure). Adjustable by adding or removing shims located above spring in plug.

► **Oil Pressure Regulator (Later Universal Jeep)**—Under plug on side of pump housing. Opens at 40 lbs. Adjustable by adding or removing shims located above spring in plug.

► **Oil Pump (up to CJ-2A Jeep Engine No. 44417):** Planetary gear type mounted on left side of crankcase.

**Oil Pump Servicing**—See Willys Shop Notes.

► **Oil Pump (after CJ-2A Jeep Engine No. 44417):** Rotor type pump mounted on left side of crankcase.

**Oil Pump Servicing**—See Willys Shop Notes.

**Oil Filter:** Purolator. On cylinder head bracket at right front corner of cylinder head with oil outlet connected to top of timing chain cover.

CAUTION—Filter should be drained at each crankcase oil change (2000 mile intervals) and filter element replaced at 8000 mile intervals for normal service.

**Oil Pressure Gauge:** Auto-Lite No. G-10763, Bourden tube type (not electric).

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in filler cap.

**Capacity**—11 quarts with standard radiator.

NOTE—Special "Hot Climate" radiator Optl.

**Pressure Valve**—AC No. 846709 (Radiator Filler Cap). Opens at 3 3/4 lbs. (3 1/4-4 1/4 lbs.).

**Water Pump:** Centrifugal, packless, ball bearing type. See Water Pump Section for complete data.

**Pump Removal**—Loosen drive belt adjustment and remove belt, disconnect hose, remove pump mount-

CONTINUED N NEXT PAGE

**CONTINUED FROM PRECEDING PAGE**

ing screws. Lift up pump and fan assembly.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat**: In outlet elbow on cylinder head.

**Setting**—Starts to open 145-155°F. Fully open 170°F.

**Temperature Gauge**: Auto-Lite No. H-10765. Bourdon tube type (not electric).

**CLUTCH**

Auburn (Atwood) Model 8501-23 (with Borg & Beck Driven Member). Single plate, dry disc type.

See *Clutch Section* for complete data.

**Facings**—Woven (pressure plate side), Molded Asbestos (flywheel side). I.D. 5 1/8". O.D. 8 1/2". Thickness .135" (.132-.138").

**Pedal Adjustment**: Set pedal free travel to 1 1/4" (to provide 1/16" clearance between release bearing and clutch release levers). To adjust, loosen locknut on clutch fork connecting cable clevis at cross-shaft connection, screw cable end in or out of clevis, tighten locknut.

**Removal**: Remove Transmission & Transfer Case Assembly (see Transmission Removal below), remove flywheel bell housing. Mark clutch pressure plate and flywheel to insure re-installation in same relative position. Take out mounting screws in clutch cover flange, turning all screws out evenly to relieve spring pressure, remove clutch assembly and driven member.

**TRANSMISSION**

Warner Model AS1-T90C (Floor Mtd. Gearshift), AS3-T90A (Steering Col. Mtd. Gearshift): Three-speed type. Constant-mesh, synchro-mesh, helical gears (Second & High), sliding spur gear (Low & Reverse).

See *Transmission Section* for complete data.

**Transfer Case**: Spicer Model 18. Two-speed auxiliary transmission and front-wheel drive unit mounted on rear of transmission case. Separate control levers provided for Low-High range (right hand lever), and front-wheel drive engagement (left hand lever). See *Transmission Section* for complete data.

**Transmission Control (AS3-T90A Transmission only)**: Remote control type with gearshift lever mounted on steering column.

See *Transmission Section* for complete data.

**Removal**: Transmission and transfer case are removed as an assembly. Disconnect front and rear propeller shafts at universal joints (NOTE—If equipped with Power Take-off drive, remove front end of power take-off propeller shaft assembly). Disconnect speedometer cable at transfer case, brake cable, transmission shift rods at transmission case levers, and clutch release cable at cross-shaft bell-crank. Place support jacks under engine and transmission, remove transfer case rubber snubber bolt nut (on right side) and rear mounting bolt nuts at cross-member under transmission case. Remove floor board inspection plate. Drain radiator and loosen upper radiator hose. Remove transfer case shift lever pivot pin screw, remove pin and shift levers (NOTE—If Power Take-off used, remove power take-off shift lever plate screws and lift lever out). Remove bolts holding center cross-member at frame side rails and remove cross-member (CAUTION—with cross-member removed, engine and transmission weight will rest on support jacks).

Remove bolts holding transmission on bell housing, force transmission to right until ball stud end can be disengaged from end of clutch control cross-shaft. Lower support jacks under engine and transmission and slide transmission and transfer case assembly to rear until clutch shaft clears bell housing, remove assembly from beneath car.

**UNIVERSALS**

**Front & Rear Drive Propeller Shaft Joints**: Spicer needle roller bearing types as follows:

1261-102X.....Transmission End—Front Drive

1261-1X.....Transmission End—Rear Drive

1268-104X.....Axle End—Front & Rear

See *Universals Section* for complete data.

**Front Axle Shaft Joint**: Bendix or Rzeppa Constant-velocity type. One joint used at outer end of each shaft (within steering knuckle housing).

See *Universals Section* for complete data.

**Power Take-off Propeller Shaft Joints**: Detroit Ball-and-Trunnion type. Two used (one at each end of shaft—no splined joint used).

See *Universals Section* for complete data.

**FRONT AXLE**

Spicer (Salisbury) Model 25. Full-floating, hypoid gear type. NOTE—Differential Assembly (Ring and Pinion Gear Assembly) is identical with Full-floating Rear Axle and is serviced in same manner.

See *Spicer (Salisbury) Full-Floating Rear Axle in Rear Axle Section* for complete data.

Ratio—5.38-1 Std.

Backlash—.005-.007". Shim adjustment.

**Removal**: Support front end of car securely with a chain hoist, remove front wheels. Disconnect front shock absorbers, front brake line (at frame connection), and steering linkage (at idler lever on frame front cross-member). Disconnect propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring center clip "U" bolts, remove bolts at rear ends of springs and lower the springs, remove axle assembly from beneath the car.

**INSTALLATION CAUTION**—Bleed brake lines after axle re-installed and brake lines connected.

**Spring Shackle & Pivot Pin Installation**—See "Spring Shackles" in *Willys Shop Notes*.

**Axle Shaft & Universal Joint Assy Removal**: Remove wheel, hub cap, axle shaft cotter pin, nut, and washer. Remove drive flange capscrews and washers, remove flange with a puller. Bend lip on bearing nut lockwasher out and remove locknut, lockwasher, adjusting nut, and bearing lockwasher. Remove wheel hub and bearing assembly (CAUTION—use care not to damage oil seal). Disconnect brake tube, take out mounting screws on backing plate, remove backing plate and wheel spindle. Pull axle shaft and universal assembly out of axle housing.

**INSTALLATION CAUTION**—Adjust front wheel bearings and bleed brake line when installation completed.

**Steering Knuckle Bearings**: The steering knuckle is mounted on two "stub" kingpins with Timken roller bearings in ball ends of axle housing. Bearings are adjustable by adding or removing shims located under kingpin bearing caps (upper cap integral with steering arm). Disassemble bearings as follows:

**Disassembly**—With Axle Shaft & Universal Joint out, remove 8 screws holding oil seal retainers in place on inner face of knuckle support, remove oil seal retainer halves. Remove four nuts and lockwashers on lower bearing cap, remove bearing cap and bearing adjusting shims (under cap). Remove four nuts and lockwashers on upper bearing cap (steering arm), remove brake hose shield, steering arm, and bearing adjusting shims (under steering arm). Remove steering knuckle (CAUTION—Do not allow lower bearing cone and roller assembly to fall when knuckle is pulled off).

**Bearing Adjustment**—Install steering knuckle on axle housing (reverse order of disassembly directions) without the oil seal placing one each of the following shims under both the upper and lower bearing caps—.003", .005", .010", .030" (total shim thickness at each end .048"), tighten bearing cap stud nuts securely. Then check bearing tension by hooking spring scale in tie rod hole at end of steering arm and noting pull required to turn steering knuckle on axle end. This pull or bearing tension should be 25-35 in. lbs. with oil seals out. Adjust by adding or removing shims under bearing caps. CAUTION—Total shim thickness under upper and lower bearing caps must be equal. Shims furnished in thicknesses of .003", .005", .010", .030".

**Oil Seal Replacement**—Felt type mounted in metal retainers bolted on inner face of steering knuckle. When replacing oil seal, make certain that spherical surface of axle housing is not scored or scratched (smooth down any roughness with emery cloth), bolt seal retainer halves on housing using lockwashers under mounting screw heads, make certain that felts have good fit at center joint.

**Wheel Bearing Adjustment**: Jack up front wheel, remove hub cap, axle shaft nut and washer, driving flange capscrews, and flange (use puller on flange). Bend lip of adjusting nut lockwasher back to free nut, remove locknut. Tighten adjusting nut until wheel binds (turn wheel while tightening nut), back off nut 1/8 turn or until wheel rotates freely. Replace lockwasher and locknut, tighten locknut securely and bend ear of lockwasher up against nut to prevent loosening in service. Check adjustment of bearings by grasping front and rear of tire and shaking wheels from side to side. A barely perceptible shake should be felt in the bearings. Install flange shims and flange. On cars with Bendix Universals, check axle shaft endplay (below) before completing assembly. NOTE—On cars with Rzeppa Universals, disregard endplay note below and install shim pack of .060" under flange.

**Axle Shaft Endplay Check (With Bendix Universal Joints)**—Tighten the flange nut (do not install lockwasher), swing wheel to maximum left or right position with punchmark on end of axle shaft straight up or down. Back off flange nut until clearance between nut and flange is .050" (measure with feeler gauge). Tap end of shaft with a soft hammer (shaft will move in an amount equal to the endplay). Recheck clearance between nut and flange with a feeler gauge. Subtract this measured clearance from the original .050" clearance. If resulting figure is less than .015", add shims to shim pack under flange, if figure is more than .035", remove shims from shim pack under flange. With correct thickness of shim pack under flange, install axle shaft lockwasher, nut, and cotter pin.

**REAR AXLE**

**FULL-FL ATIN TYPE**  
**UP TO SERIAL NUMBER 13453**

Spicer (Salisbury) Model 23-2. Full-floating, hypoid gear type with Hotchkiss Drive. NOTE—This axle used on first Universal Jeep models.

See *Rear Axle Section for complete data.*

Ratio—5.38-1 Std.

Backlash—.005-.007". Shim adjustment.

**Removal:** Support rear end of car securely with a chain hoist and support placed under frame ahead of rear springs, remove rear wheels. Disconnect rear shock absorbers, rear brake line (at frame connection), and propeller shaft by removing universal joint "U" bolts at axle end of shaft. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring center clip "U" bolts, remove pivot bolts at front end of springs and lower the springs, remove axle assembly from beneath the car.

**INSTALLATION CAUTION**—Bleed brake lines after axle re-installed and brake lines connected.

**Spring Shackle & Pivot Pin Installation**—See "Spring Shackles" in Willys Shop Notes.

**Axle Shaft Removal:** Remove six capscrews and washers holding axle shaft driving flange on wheel hub, thread two of these screws into "extra" holes (between regular mounting screw holes) and turn screws up evenly to pull axle shaft out, withdraw axle shaft from housing.

**Wheel Bearing Adjustment:** Remove the six axle shaft flange screws, turn two of these screws into "extra" holes in flange to start shaft, withdraw axle shaft. Adjust bearings in same manner as front wheels (above). When re-installing axle shaft, make certain that gasket installed under flange.

**REAR AXLE**

**SEMI-FLOATING TYPE**  
**After SERIAL NUMBER 13453**

Spicer (Salisbury) Model 23-1 or 41-2. Semi-floating, hypoid gear type with Hotchkiss Drive.

See *Rear Axle Section for complete data.*

Ratio—5.38-1.

Backlash—.004-.008". Shim adjustment.

**Removal:** Support rear end of car securely with a chain hoist and supports placed under frame ahead of rear springs. Remove wheels. Disconnect rear shock absorbers, rear brake line (at frame connection), and rear brake cables and conduits. Disconnect propeller shaft at rear universal joint. Place support jacks under axle housing so that springs relieved of all weight, remove nuts on spring center clip "U" bolts, remove pivot bolts on front end of springs and lower springs, remove axle assembly from beneath car.

**INSTALLATION CAUTION**—Bleed brake lines after axle re-installed and brake lines connected.

**Spring Shackle & Pivot Pin Installation**—See "Spring Shackles" in Willys Shop Notes.

**Axle Shaft Removal:** Remove wheel, hub cap, and axle shaft nut. Use wheel puller to remove wheel hub. Disconnect brake line at wheel cylinder and parking brake cable. Take out bolts mounting back-

ing plate, remove dust shield, oil seal and brake backing plate (CAUTION—Do not lose wheel bearing adjusting shims located between backing plate and axle housing flange). Pull axle shaft and bearing assembly out of the housing.

**Wheel Bearing Adjustment:** Bearing endplay controlled by shims between backing plate and axle housing flange. To adjust, remove wheel hub and backing plate (see Axle Shaft Removal above), add or remove shims between backing plate and housing flange for correct endplay. NOTE—In original production, shims used only at left hand end of axle housing. Shims may be installed at right hand end of axle housing, if required, for correct clearance with new axle shaft.

Endplay—.001-.003".

**SHOCK ABSORBERS**

Delco—Model 1030-K (Front), 1031-K (Rear).

Monroe—Model K-11436 (Front & Rear).

Direct acting, hydraulic types. Shock absorbers on first cars are adjustable.

See *Shock Absorber Section for complete data.*

**Adjustment:** Remove mounting bolt at lower end, fully collapse shock absorber by pressing up on lower end until adjusting key within unit engages slot in adjusting plate (can be determined by feel), turn unit in clockwise direction until limit of adjustment is reached (full range of adjustment is four turns), back off adjustment by turning unit counter-clockwise exactly two turns for standard setting. CAUTION—See that adjusting key does not slip out of engagement with slot while making adjustment.

NOTE—Later type shocks not adjustable.

**Refilling:** Requires dismantling of unit. See *Shock Absorber article in Shock Absorber Section for data.*

NOTE—Later type shocks not refillable.

**FRONT SUSPENSION**

**Front Axle:** Spicer (Salisbury) Model 25. Special full-floating driving unit. See *Front Axle data (above).*

**Front Suspension:** Special front-wheel drive unit with semi-elliptic springs. Steering knuckle mounted on taper roller bearings carried on two stub shafts in spindle housing.

Endplay—.001-.003".

**Steering Knuckle Bearing Servicing & Adjustment:** See *Front Axle data (above).*

**Kingpin Inclination**—7½° crosswise.

**Caster**—3°. No adjustment. If caster incorrect, check entire front end and correct by installing new parts.

**Camber**—1½°. No adjustment. Correct by installing new parts. Do not attempt to correct camber by cold bending or heating of parts.

**Toe In**—3/64-3/32" (1/32" each wheel). To adjust, first set each front wheel straight ahead (see Note below), then set toe in by shortening each tie rod approximately ½ turn. This procedure necessary to maintain correct position of steering idler arm.

NOTE—To set front wheels straight ahead, first set tie rod end of steering bell crank (idler lever on frame front cross-member) exactly at right angles to front axle. Check front wheels by using a straight

edge or sighting along rear and front wheels. Adjust each tie rod (loosen end clamp bolts and turn rod) until front wheels are exactly straight ahead. Then make toe in adjustment as directed above. Tie rod lengths between ball end centers should be 20⅞" (left), 25⅝" (right).

**Steering Geometry**—With inner wheel turned 20°, outer wheel should be turned exactly 18°30'.

**STEERING GEAR**

**Steering Gear:** Ross Model T-12. Cam-and-Twin Lever type.

See *Steering Gear Section for complete data.*

**BRAKES**

**Service Brakes:** Bendix (Lockheed) Four wheel, Hydraulic, Double anchor type. Hand lever applies independent brake on drive shaft at rear of transfer case.

See *Brake Section for complete data.*

**Drum Diameter**—9".

**Lining**—Width 1¾". Thickness .206-.216". Length per shoe 10 7/32" (forward shoes), 6 39/64" (rear shoes). NOTE—Manufacturer recommends use of new or replacement shoe assemblies with factory-installed linings.

**Clearance**—.008" toe, .005" heel, for each shoe.

**Hand Brake:** Mechanical type. Two-shoe, internal expanding type with drum mounted on drive shaft at rear of transfer case.

**Drum Diameter**—8".

**Lining**—Woven type. Width 1¾". Thickness .206-.216". Length per shoe 8⅞".

**Hand Brake (Adjustment for Wear)**—Make certain that hand brake cable and linkage operate freely. Lubricate if sticking or binding is evident. Place brake handle on instrument panel in "off" position. Rotate brake drum until one pair of adjusting holes (three pairs located on back face of drum) is opposite the adjusting screws (notched wheels) within the brake. Insert a screwdriver or adjusting tool through each hole and turn each adjusting screw equally until the brake shoes are snug against the drum (NOTE—with tool against edge of hole as a fulcrum, move outer end of tool out away from center of driveshaft to expand shoes). Back off each adjusting screw 7 notches to provide correct shoe clearance.

**Linkage Adjustment**—When brake shoes replaced or major adjustment required, check and adjust brake operating lever and cable as follows:

**Brake Lever**—The lever position is determined by adjustment of cam and will not change when new shoes or linings installed. Check clearance between closest point on lever and brake backing plate with brakes "off." This clearance should be 3/32". Adjust the special lever ball nut as required.

**Brake Cable**—Disconnect cable (remove clevis pin at brake operating lever. Place brake handle in "off" position. Make certain that brake operating lever position is correct (see above). Adjust clevis on brake operating lever end of cable so that clevis pin can just be inserted without changing position of brake handle or brake operating lever.

484

## IGNITION TIMING

**Std. Setting—** Flywheel Degrees      Piston Pos.  
All Engines ..... 5° BTDC. .... .010" BTDC.

▶ **Timing Mark Change**—Flywheel marked "5" (replacing "IGN/") starting 4-63 Engine No. 51379.

**Timing**—With #1 piston on compression, turn crankshaft until piston reaches firing position with flywheel mark "IGN" centered in inspection hole in right front face of flywheel housing. Loosen advance arm clampscrew, rotate distributor until contacts begin to open, tighten clampscrew. See that rotor is at #1 segment in distributor cap (see diagram), check spark plug cable connections.

**Timing (Using Timing Light—Engine Idling)**—This method recommended by manufacturer. Direct timing light at flywheel through inspection hole in front face of housing below starter, idle engine (engine must be warm), adjust distributor (as directed above) until timing mark is centered in inspection hole.

## CARBURETOR

## CARTER

Carter WA-1 No. 613S. 1¼", Single Barrel, Down-draft type with manual choke control.  
Casting Number on Flange—485.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Rods & Jets—See Carter Jet Table in Carburetor Section for complete data.

## CARBURETOR

## ZENITH

Zenith Model 28BV10. Single barrel, downdraft type with manual choke control.

Outline No.—10569-A. On round metal tag riveted on top of float bowl cover. Use in ordering parts.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Jets—See Zenith Jet Specifications in Carburetor Section.

## CARB. EQUIPMENT

**Fast Idle:** Interconnected linkage by which choke valve lever opens throttle to fast idle position when carburetor choked for starting.  
Setting—No adjustment required.

**Air Cleaner:** Oakes Model 616615 Oil-wetted type Std., Model X616150 Oil-bath type Optl.

Servicing (Oil-wetted type)—Clean filter element and re-oil at 2000 mile intervals or more often if required by operating conditions.

Servicing (Oil-bath type)—Clean filter and fill with same oil used in engine crankcase at 2000 mile intervals (at oil change). Capacity approx. 1¼ pts.

**Fuel Pump (Std.):** AC Type AF, No. 1538886.

(Optl.): AC No. 1537409 comb. fuel-and-vacuum.

Replacement Pump—AC No. 572 (for 1538886), No. 7409 (for 1537409).

See Carburetion Equipment Section for data.

Pressure—3 lbs. (4½ lbs. max. at 1800 RPM).

**Gasoline Gauge:** King-Seeley Electric Type.

Dash Unit—King-Seeley No. 41310.

Tank Unit—King-Seeley No. 41248.

See Carburetion Equipment Section for data.

## CRANKCASE VENTILATOR

**Sealed Positive Ventilation type.** Air Intake Pipe (from air cleaner to oil filler pipe) furnishes clean air to crankcase and Air Outlet Pipe (from valve chamber cover to intake manifold) allows fumes from crankcase to be sucked into intake manifold. There is a vacuum control valve at the manifold connection and this valve must close at idling speed for satisfactory engine idling performance.

Servicing—Make certain that connecting pipes are tight and that oil filler cap gasket seals cap tightly. Remove and clean vacuum control valve when tuning engine or if system operating incorrectly.

**Vacuum Control Valve**—Remove control valve by disconnecting pipe at valve chamber cover and unscrewing valve from manifold. Disassemble valve by clamping in vise and removing top, withdraw valve and spring. Clean valve and valve seat thoroughly, reassemble and re-install unit.

## BATTERY

Auto-Lite PN-15. 6 volt, 15 plate, 100 Amp. Hr.

Starting Capacity—120 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.3 minutes.

Grounded Terminal—Negative (—) terminal.

Engine Ground—At left front engine mounting.

Dimensions—Lgth. 9 3/32". Wdth. 7 1/8". Hgt. 8 5/8".

Location—On right side of dash under hood.

## STARTER

Auto-Lite Model MZ-4137. Armature MZ-2214.

Drive—Overrunning clutch and manual pinion shift.

Rotation—Counter-clockwise at commutator end.

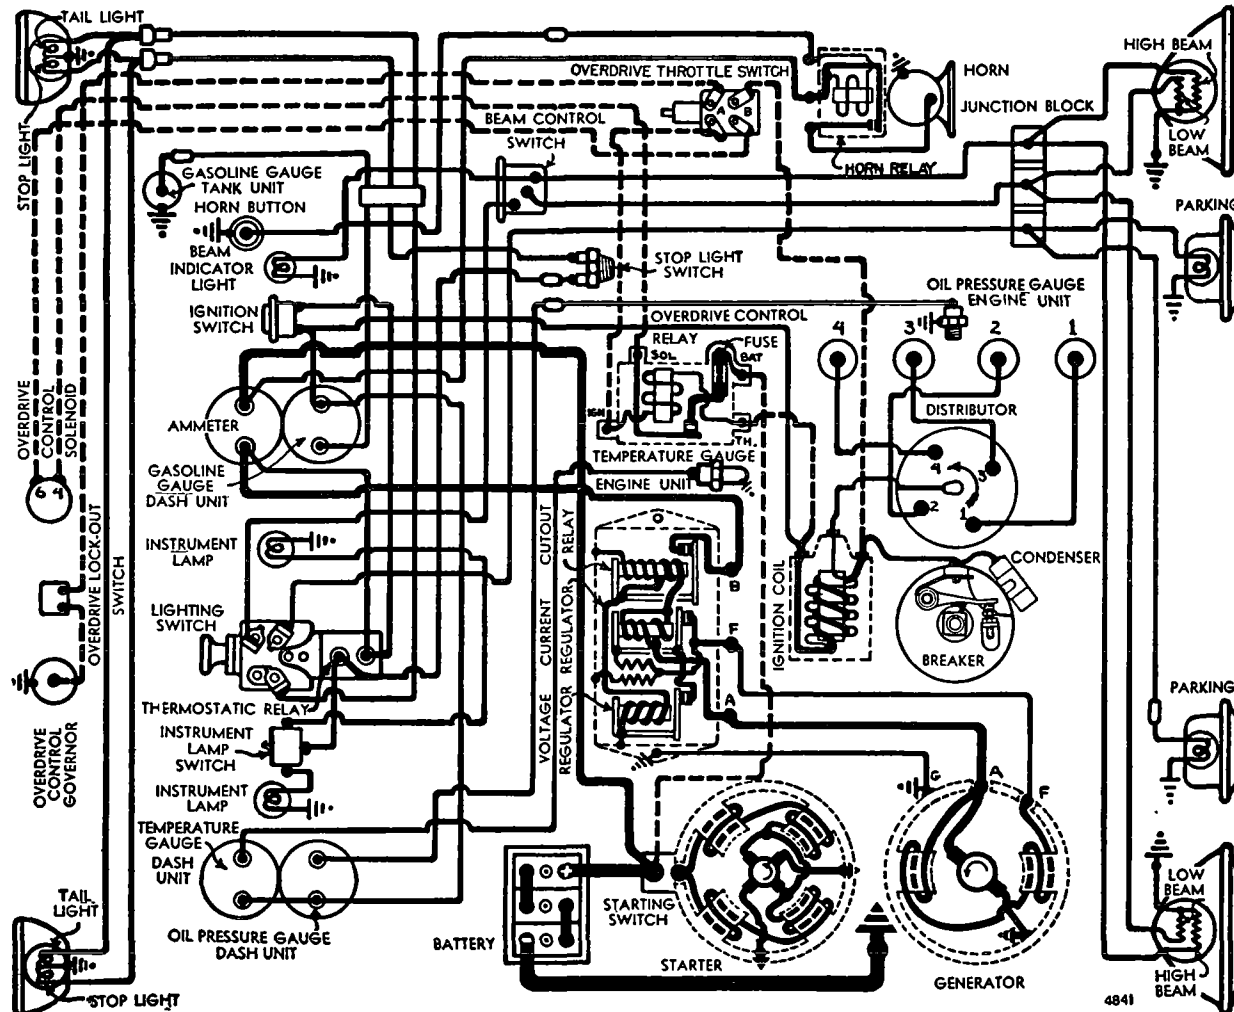

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—160 RPM., 150-175 amps., 5 volts.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

JEEPSTER M DEL VJ-2

## CONTINUED FROM PRECEDING PAGE

**Starter Removal**—Flange mounted on right front face of flywheel housing. To remove, disconnect starting linkage and battery cable, take out two flange mounting capscrews and bolt in bracket at commutator end.

**Starting Switch**—Auto-Lite SW-2877A. Mounted on starter and operated by pinion shift lever.

See *Electrical Equipment Section* for complete data.

## GENERATOR

**Auto-Lite Model GDZ-4817A, Armature GDZ-2006F.** Two brush with voltage and current regulation.

**Charging Rate Adjustment**—None. See Regulator. **Maximum Charging Rate**—35 amperes, 8.0 volts, 1900 RPM. and above. Actual charging rate controlled by regulator and dependent on the battery.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current Regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.2-4.6 amperes at 6.0 volts.

**Removal**: Take out pivot and clamp bolts.

**Belt Adjustment**—Loosen clamp and pivot bolts, swing generator out until belt deflection midway between fan and generator pulleys is 1".

## REGULATOR

**Auto-Lite Model VRP-4007C-2, Voltage-Current Type.** On right side in engine compartment.

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

See *Electrical Equipment Section* for complete data.

## Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open measured at hinge end of core.

## Voltage Regulator

**Setting**—7.35 volts (7.2-7.5) at 70°F. See *Electrical Equipment Section* for other temperatures.

**Checking** (without breaking seal) & **Adjustment**—See *Electrical Equipment Section*.

**Contact Gap**—.012" min. (armature against stop pin)

**Air Gap**—.048-.052" with contacts just opening.

## Current Regulator

**Setting**—34-36 amperes (marked "35" on cover).

**Checking** (without breaking seal) & **Adjustment**—See *Electrical Equipment Section*.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

## LIGHTING

**Headlamps**: Corcoran-Brown "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See *Electrical Equipment Section* for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25').

**Beam Indicator**—On left side of instrument panel. Lighted when Upper Beams in use.

**Switches**  
Lighting—Willys No. 645292.  
Instrument—Willys No. 641732.  
Beam Selector—Willys No. 640260.

Bulb Specifications		
Position	Candlepower	Mazda No.
Headlamps	35-45 watt	Sealed Beam
Parking	1½	55
Beam Indicator	1	51
Instrument (4-63)	1	51
Instrument (Jeepster)	3	63
Stop & Tail	21-3	1158
Dome	15	87

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER**: Mounted on lighting switch. Vibrating thermostatic type. Protects lighting circuits by vibrating to limit current to 30 amperes. No adjustment.

**FUSES**: Overdrive—20 ampere. On control relay.

**HORNS**: Auto-Lite. Vibrator type single horn with relay. Dual horns Optl.

**Horn Current**—7-9 amperes.

**Horn Relay**—Willys No. 643889.

## ENGINE

**ENGINE SPECIFICATIONS**: Own. Four Cylinder, "L"

**Head type**.

**Bore**—3½" **Stroke**—4¾"

**Displacement**—134.2 cu. ins. **Rated H.P.** 15.63

**Developed Horsepower**—63 at 4000 RPM.

**Compression Ratio**—6.48-1 Std. Cast Iron Head.

**Compression & Vacuum Reading**: See *Tune-up data*.

**ORIGINAL BORE & PISTON SIZES**: See *Willys Shop Notes*.

**ORIGINAL BEARING SIZES**: See *Willys Shop Notes*.

**TIGHTENING TORQUES**: See *Willys Shop Notes*.

**CYLINDER HEAD INSTALLATION**: See *Willys Shop Notes*.

**PISTONS**: Lo-Ex aluminum alloy (Lynite, Bohn, Permite, or Arrowhead). "T" slot, Cam ground, tin or brass plated type.

**Weight**—12.5 ozs. (stripped), Length 3¾"

**Removal**—Pistons and rods removed from above.

**Clearance**—.017-.019" top, .004" skirt.

**Replacement Pistons**: Finished pistons are furnished .005", .015", .025", .035", .045" Oversize.

**Fitting New Pistons**: Use .003" feeler gauge ¾" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler must be 5-10 lbs.

**Installing Pistons**: T-slot toward valve side of engine (opposite side from oil spray hole in lower end of connecting rod).

**PISTON RINGS**: Two compression rings, one oil control ring per piston, all above pin. Oil ring groove has oil drainage holes.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	3/32"①	.008-.013"	.0005-.001"
Oil (#3)	3/16"②	.008-.013"	.001-.0015"
①—.0925-.0935"	②—.1860-.1865"		

**Installing Rings**—Compression ring mark "TOP" (on side of rings) upward and inner bevel edge on top ring upward. Rings have taper face.

**Replacement Rings** (for Rebores Cyls.): Rings furnished .005", .015", .025", .035", .045" Oversize.

**Service Type Rings** (for Cylinders not Rebores)—Furnished 1) Std.—.009", 2) .010-.019", 3) .020-.029", 4) .030-.039", 5) .040-.049" Oversize.

**PISTON PIN**: Pin is locked in rod by clampscrew. Diameter—13/16" (.8117-.8119"). Length 2 25/32"

**Pin Fit in Piston**—.0001-.0009" clearance or light thumb push fit with piston at 70°F.

**Replacement Pins**: Furnished Standard size and .001", .002", .003" Oversize.

**CONNECTING ROD**: Length 9 3/16". Weight 34 ozs. Crankpin Journal Diameter—1 15/16" (1.9393"). See "Original Bearing Sizes" in *Willys Shop Notes*.

**Lower Bearing**—Replaceable steel-backed, babbitt lined type. No shims. **CAUTION**—Oil spray hole in bearing upper half must line up with oil hole in rod. Clearance—.0005-.0025" Sideplay—.005-.009"

**Bearing Adjustment**: None (replace the bearings). Do not file connecting rods or bearing caps. **NOTE**—Replace bearings when clearance exceeds .005" or sideplay exceeds .013".

**Pinnut Installation**—See *Willys Shop Notes*.

**Replacement Bearings**: Furnished Std. size and .010", .020", .030" Undersize.

**Installing Rods**: Lower bearing offset. Install rods with short side of bearing toward nearest main bearing or toward front of engine (#1, 3), toward rear (#2, 4). Oil spray hole in rod toward right side of engine (away from camshaft) on all rods.

**CRANKSHAFT**: Three bearing type with removable counterweights.

**Journal Diameters**—2.3340" (all bearings). See "Original Bearing Sizes" in *Willys Shop Notes*.

**Bearings**—Replaceable steel-backed, babbitt lined type. No shims. Bearing shells are dowelled in bearing caps and crankcase.

**Clearance**—.001-.0025" (.0005-.001" new).

**NOTE**—Replace bearings when clearance exceeds .006" or when endplay exceeds .018".

**Bearing Adjustment**: None (replace bearings). Do not file bearing caps. See *Crankshaft Servicing Instructions* in *Willys Shop Notes*.

**NOTE**—Engine must be removed from chassis for bearing replacement and crankshaft servicing.

**Replacement Bearings**: Furnished Std. size and .010", .020", .030" Undersize.

**End Thrust**: Taken by flanged face of No. 1 (front bearing and thrust washer in back of crankshaft gear. Adjusted by adding or removing shims behind the thrust washer. **NOTE**—Crankshaft gear must be removed with a gear puller for endplay adjustment. Shims furnished .002", .004", .010", .030" thick. Endplay—.004-.008".

**CAMSHAFT**: Four bearing with helical gear drive. **Journal Diameters**—#1, 2.188"; #2, 2¼"; #3, 2 3/16"; #4, 1¾".

**Bearings**—Removable steel-backed, babbitt-lined bushing (front), machined in crankcase (all others). **Clearance**—.002-.0035". **Service Limit** .006" (front), .008" (all others).

**Camshaft Removal**—See *Willys Shop Notes*.

**End Thrust**: Taken by thrust plate assembled behind gear with a spacer assembled behind plate. If required, a thin shim can be installed behind spacer if too little clearance, or spacer can be dressed to provide greater clearance. Endplay—.003-.0055".

**Timing Gears**: Crankshaft gear Cast Iron, Camshaft gear Fibre with steel hub.

**Timing Gear Backlash**—.000-.002".

**Camshaft Setting**: Mesh marked tooth of camshaft gear opposite marked space between teeth of crankshaft gear.

**ENGINE****C** NTINUED FR M PRECEDING PAGE

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.373"	5 3/4" (overall)
Exhaust	1 15/32"	.3725"	5 3/4" (overall)
	Seat Angle	Lift	Stem Clearance
Intake	45°	23/64"	.0015-.00325"①
Exhaust	45°	23/64"	.002-.00375"②
①—New. Replace when clearance exceeds .0045".			
②—New. Replace when clearance exceeds .005".			

**Valve Guides:** Removable type. Remove guides from above with puller, install new guides with driver or press guides down in place as follows:

**Intake Guide:**—Top of guide 1 5/16" below top face of block. Smaller diameter section upward.

**Exhaust Guide:**—Top of guide 1" below top face of block. Counter-bored end of guide upward.

**Valve Springs:** Install springs with closed coil end up toward cylinder block. Spring free length 2 1/2".

	Spring Pressure	Length
Valve Closed	50 lbs.	2 7/64"
Valve open	116 lbs.	1 3/4"

**Valve Lifters:** Mushroom type. In reamed holes in block. Serviced by installing oversize lifters (furnished .004" Oversize).

**NOTE:**—Camshaft must be removed for lifter removal. See *Camshaft Removal in Willys Shop Notes*.

**Lifter Diameter:**—.6240-.6245". Clearance .0005-.002".

**VALVE TIMING**

**Tappet Clearance:**—.014" All Valves, hot or cold. **NOTE:**—Tappet adjusting screws are self-locking.

**Valve Timing:**—See *Camshaft Setting* above.

**Intake:**—Open 9° BTDC. Close 50° ALDC.

**Exhaust:**—Open 47° BLDC. Close 12° ATDC.

► **Timing Mark Change** (starting 4-63 Engine Number 51379)—Flywheel marked "5°" (for 5° BTDC.) and "T.C." (top dead center). "I.O." mark not carried and intake opening point must be estimated.

**Valve Timing Check:**—Set tappet clearance #1 intake valve at .020". This valve should open with #1 piston 9° or .039" BTDC. with flywheel mark "I.O." centered in inspection hole in right front face of flywheel housing. Reset tappet clearance at .014".

**LUBRICATION**

**Engine Oiling System:** Pressure to crankshaft, conrod, and camshaft bearings, and to timing gears.

**Crankcase Capacity:**—4 qts. refill.

**Normal Oil Pressure:**—35 lbs. at 30 MPH. (10 lbs. idling at 600 RPM).

**Oil Pressure Regulator:**—Opens at 40 lbs. Located under plug on side of pump housing. Adjustable by adding or removing shims above spring within plug.

**Oil Pump:** New rotor type pump mounted externally on left side of crankcase.

**Oil Pump Servicing:**—See *Willys Shop Notes*.

**Oil Pressure Gauge:** King-Seeley Electric type.

**Dash Unit:**—King-Seeley No. 41305.

**Engine Unit:**—King-Seeley No. 40767.

See *Miscellaneous Section for complete data*.

**COOLING**

**Cooling System:** Pressure type, relief valve in cap.

**Capacity:**—11 quarts.

**Pressure Valve:**—AC No. 846709 (Filler Cap). Opens at 3 3/4 lbs. (3 1/4-4 1/4 lbs.).

**Water Pump:** Centrifugal, belt-driven, packless type. See *Water Pump Section for complete data*.

**Removal:**—Loosen drive belt adjustment, remove belt, disconnect hose. Remove pump mounting screws and lift out pump and fan assembly.

**Belt Adjustment:**—See *Generator Belt Adjustment*.

**Thermostat:** Harrison. In outlet on cylinder head.

**Starts to open at 148-155°F. Fully open at 173°F.**

**Temperature Gauge:** King-Seeley Electric type.

**Dash Unit:**—King-Seeley No. 41315.

**Engine Unit:**—King-Seeley No. 7000.

See *Miscellaneous Section for complete data*.

**CLUTCH**

**Auburn (Atwood) Model 8501-19.** Single plate, dry disc type with Borg & Beck 11735 Driven Member.

See *Clutch Section for complete data*.

**Facings:**—Moulded type. I.D. 5 1/2" (5.094-5.156"), O.D. 8 1/2" (8.520-8.480"). Thickness 1/8" (.132-.138").

**Pedal Adjustment:**—Pedal free travel 1" (provides 1/16" clearance between release levers and bearing). To adjust, loosen locknut and turn adjusting nut on connector link at clutch fork, tighten locknut.

**Removal:** Remove transmission (see *Transmission Removal* below), remove flywheel bell housing. Mark clutch pressure plate and flywheel to insure reinstallation in same position. Take out mounting screws in clutch cover flange (turn all screws out evenly), remove clutch and driven member.

**TRANSMISSION**

**Warner Model AS1-T90E (Std.), AS12-T96 (Optl. 4-63), AS18-T96 (Optl. VJ-2 Jeepster).** Three-speed, helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

**NOTE:**—Optl. transmissions have R10B Overdrive.

See *Transmission Section for complete data*.

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

See *Transmission Section for complete data*.

**Removal:** Remove floorboards, take off bell housing inspection hole cover, disconnect clutch throw-out bearing retracting spring. Disconnect transmission control rods and speedometer cable at transmission case. Disconnect propeller shaft at universal joints and remove shaft. Support engine with jack placed under bell housing, remove rear engine support bolts from cross-member under transmission case. Raise rear end of engine so transmission clears cross-member (use care that fan blades do not damage radiator), remove transmission to bell housing bolts, pull transmission straight back to clear clutch shaft and remove.

**OVERDRIVE**

**Warner Type R10B (part of AS12-T96 & AS18-T96 Transmission Assemblies).** New solenoid operated, governor controlled with throttle "kick-down".

See *Transmission Section for complete data*.

**Control Relay:**—Auto-Lite Model HRT-4001.

**Overdrive Governor:**—Auto-Lite Model TGE-4002.

**Transmission Solenoid:**—Delco-Remy 1118132.

**Removal:** Remove as a unit with transmission. Removal instructions same as for regular transmission (above) after governor and solenoid wires and lock-out control disconnected and overdrive case-to-cross-member bolts removed.

**UNIVERSALS**

**Spicer Model 1261-102X (Front—All Models), 1278-101X (Rear—All Models without Overdrive & First Cars with Overdrive), 1268-111X (Rear—Later models with Overdrive).** Needle roller bearing type.

See *Universals Section for complete data*.

**REAR AXLE**

**Spicer (Salisbury) Model 23-1.** Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See *Rear Axle Section for complete data*.

**Ratio:**—4.88-1 Std., 5.13-1 Optl.

**Backlash:**—.004-.008" Shim adjustment.

**Removal:** Support rear end of car securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables, and propeller shaft at rear universal joint. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of springs and lower springs, remove axle assembly.

**Axle Shaft Removal:** Remove the wheel & hub assembly (use wheel puller), disconnect brake line at wheel cylinder, remove nuts on bolts holding backing plate and brake assembly on housing, remove dust shield, oil seal, and backing plate (with brake assembly). **CAUTION:**—Do not lose bearing adjusting shims located between backing plate and flange on axle housing. Remove axle shaft and wheel bearing.

**Wheel Bearing Adjustment:**—Endplay .001-.006". Adjust by adding or removing shims between backing plate and axle housing flange (at each wheel). See axle shaft removal (above).

**SHOCK ABSORBERS**

**Delco:**—Model 1030-C (Front), 1031-Q (Rear).

**Monroe:**—Model K-18004 (Front), K-18005 (Rear). Direct acting, hydraulic, adjustable (first cars).

**NOTE:**—Shock absorbers are sealed and cannot be refilled or serviced.

See *Shock Absorber Section for complete data*.

**FRONT SUSPENSION**

**Planar Type.** Independent, linked parallelogram type with transverse spring (spring acts as lower control arm).

See *Front Suspension Section for complete data*.

**Kingpin Inclination:**—5 1/2° crosswise.

**Caster:**—1° No adjustment.

**Camber:**—1° Shim adjustment.

**Toe In:**—1/16-1/8".

**STEERING GEAR**

**Ross T-12, No. 13108.** Cam-and-Twin Lever type.

See *Steering Gear Section for complete data*.

**BRAKES**

**Service Brakes:** Bendix (Lockheed) Hydraulic, self-centering type. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data*.

**Drums:**—Chrome-nickel type. Diameter 9.948".

**Lining:**—Moulded type. Width 1.760". Thickness .222". Length per wheel 19".

**Clearance:**—.008" Toe, .005" Heel each shoe.

**NOTE:**—No anchor pin adjustment provided. Brake shoes should be centralized by hand brake application (and then released) before adjustments made.

**Hand Brake:** See *Service Brakes* above.

**Adjustment:**—Tighten link rod adjustment at lever on cross-member for slight drag with hand lever set two notches "on" (must be free of drag when lever released).

**HOOD LOCK:** Hood is Alligator type. To raise hood, pull out lock button to left of center instrument cluster, release safety catch under front edge of hood.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On plate on outside of left frame side rail at front end and on floor riser to left of driver's seat.

1947 Numbers—(2WD) 2T-10001 Up, (4WD) 4T-10001 Up.

1948 Numbers—(2WD) 2T-12643 Up, (4WD) 4T-12347 Up.

**ENGINE NUMBER:** Stamped on top of water pump boss at front of engine.

1947-48 Numbers—10001 Up.

### TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. at cranking speed of 160 RPM.

**VACUUM READING:** Steady 18-21" idling at 8 MPH.

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUG GAPS:** .030".

Plug Type—Auto-Lite Type AN-7. 14 mm. Metric.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Limits .020-.024".

Cam Angle or Dwell—41° Closed, 49° Open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** 5° BTDC. (Regular Fuel), At TDC. (Low Octane Fuel).

Timing Procedure—See Ignition Timing.

Timing Mark—Flywheel mark "IGN/" (5° BTDC setting), "TC/" (TDC setting) centered in inspection hole in right front face of housing below starter.

► **Timing Mark Change**—Flywheel marked "5°" (replacing "IGN/") starting 2T Engine No. 13887, 4T Engine Number 14251.

**CARBURETION:** See Carburetor & Carb. Equipment.

Idle Setting—1-2 turns open—one screw. Turn screw out for richer mixture.

Idle Speed—600 RPM. or 8 MPH.

Float Level— $\frac{3}{8}$ " top of float at free end to gasket seat on cover with valve closed (invert assembly).

► **CAUTION**—Do not compress spring in valve stem (allow float to hang freely on inverted cover assembly).

Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure— $4\frac{1}{2}$  lbs. at 1800 RPM.

**CRANKCASE VENTILATOR:** Remove and clean the vacuum control valve. See Crankcase Ventilator (following Carb. Equipment) for directions.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. Valve must operate freely (no adjustment required). When installing assembly, see that thermostatic spring end rests on top of spring stop bracket on manifold.

**VALVE TAPPET CLEARANCE:** .014" All Valves, Hot or Cold.

NOTE—Adjusting screws self-locking type.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Douglas or Mitchellock Switch. Willys No. 641720.

Lock Cylinder—Briggs & Stratton No. 50184.

Key Series—C250 to C499. Groove—No. 3.

**COIL:** Auto-Lite Model IG-4090A. Service Coil IG-4070 (with Bracket IG-1798S). On right side of engine.

Ignition Current—5 amperes at 6.3 volts (stopped).

**CONDENSER:** Auto-Lite Part No. IGB-1025. Capacity—.20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4189. Automatic advance type with separate Vacuum Spark Breaker Gap—.020". Limits .020-.024".

Cam Angle—41° closed, 49° open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance			
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	350	0.....	700
2 .....	560	4.....	1120
5 .....	875	10.....	1750
8 .....	1190	16.....	2380
11 .....	1500	22.....	3000

**Vacuum Spark Control:** Auto-Lite Type VC-4010. Separate unit mounted on hold-down plate, linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated

or operated with wide open throttle when spark retarded by return spring.

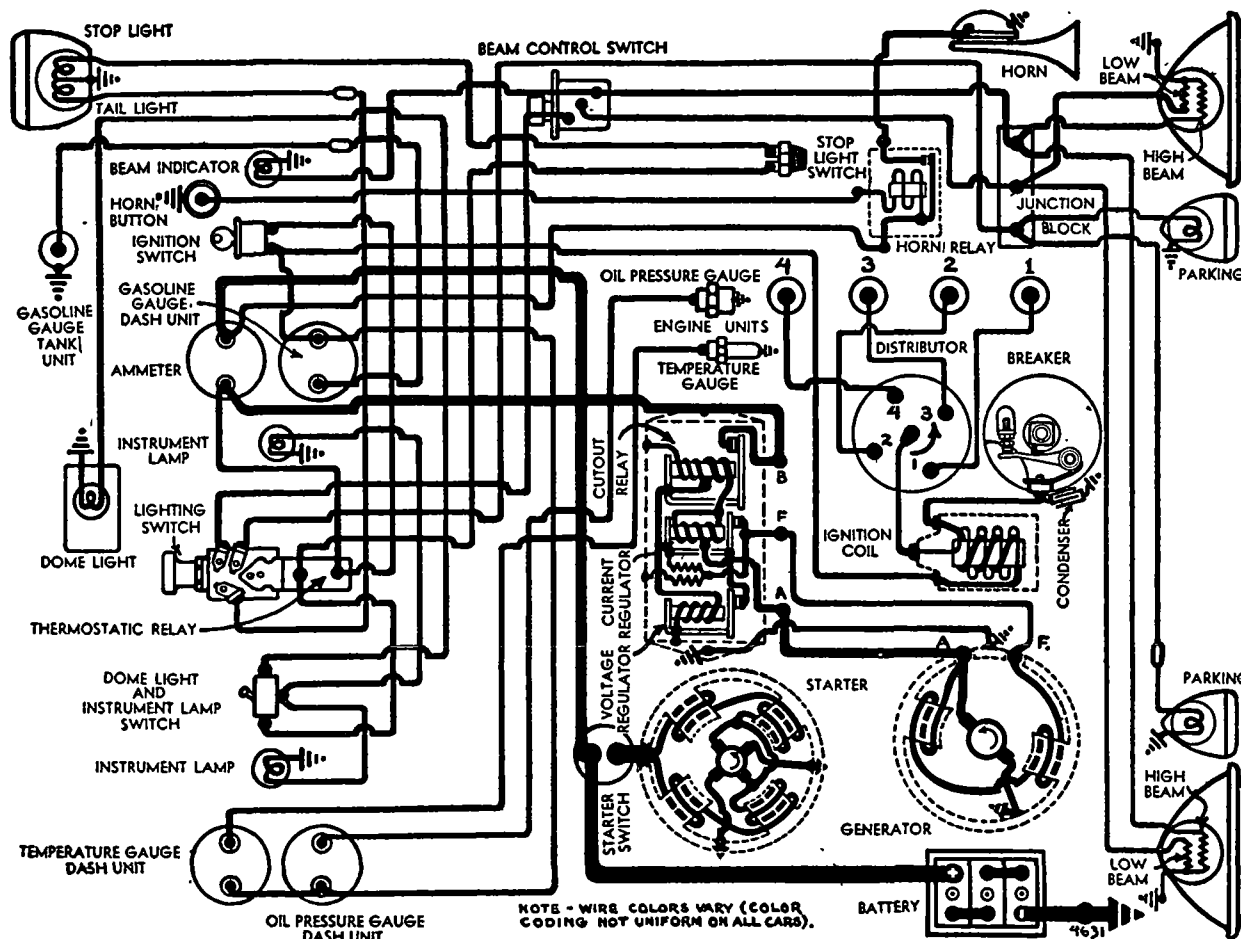

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	3½"
2° .....	4°	5¾"
5° .....	10°	9¼"
8° .....	16°	12¾"
10° .....	20°	15"

**Distributor Removal:** On right side of engine. To remove, disconnect vacuum line, take out hold-down screw in mounting plate.

**Installation Note**—If crankshaft has been turned with distributor off engine, install distributor as follows: Turn crankshaft to #1 cylinder firing position (see Timing), turn distributor shaft until rotor is at #1 segment (see diagram), install distributor on engine, rocking shaft slightly to engage drive coupling, push distributor down into place, install hold-down screw, check ignition timing.

**CAUTION**—If oil pump has been removed, see Oil Pump Installation under "Oil Pump" in Willys Shop Notes.

FIRST TRUCKS

**IGNITION TIMING**

Std. Setting (Regular Fuel) ..... 5° BTDC  
 Spec. Setting (Low Octane Fuel) ..... At TDC  
**Timing Marks**—Flywheel mark "IGN/" (5° BTDC) or "TC/" (TDC) centered in inspection hole in right front face of housing below starter (remove inspection hole cover).

► **Timing Mark Change**—Flywheel marked "5°" (replacing "IGN/") starting 2T Engine No. 13887, 4T Engine Number 14251.

**Timing (Engine not Running)**—With #1 piston on compression, turn engine over until piston reaches firing position (see settings above) with flywheel mark "IGN/" (5° BTDC setting), or "TC/" (TDC setting) centered in inspection hole in right front face of housing, loosen advance arm clampscrew, rotate distributor until contacts begin to open, tighten clampscrew, see that rotor at #1 segment in distributor cap (see diagram), check spark plug cable connections.

**Timing Using Timing Light—Engine Running**—This method recommended by manufacturer. Direct timing light through inspection hole at flywheel, idle engine (engine must be warm), adjust distributor (as directed above) until "IGN/" (5° BTDC set-

ting) or "TC/" (TDC setting) mark centered in inspection hole.

**CARBURETOR**

Carter WO Type 636SA superseding 636S. 1 3/16" Single Barrel, Downdraft type with manual choke. See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets:** See Carter Jet Table in Carburetor Section.

**Fast Idle:** Interconnected linkage by which choke valve lever opens throttle to fast idle position when carburetor choked for starting.

**Setting**—No adjustment required.

**CARB. EQUIPMENT**

**Governor (Special Equip.):** King-Seeley "Handy" Model 28510-354, Monareh, or Novi Governors. Centrifugal types. Mounted on left front corner of cylinder head and driven by special belt from the crankshaft.

**Setting**—1000 to 2600 RPM of engine in steps of 200 RPM (in accordance with position of dash control lever which has nine settings).

**Adjustment**—See Willys Shop Notes for directions.

**Fuel Pump:** AC No. 1539106 Diaphragm type combination fuel-and-vacuum pump.

**Replacement Pump**—AC No. 9106.

**Pressure**—4½ lbs. max. at 1800 Eng. RPM.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric type.

**Dash Unit**—King-Seeley No. 41310.

**Tank Unit**—King-Seeley No. 41285.

See Carburetion Equipment Section for complete data.

**Air Cleaner:** Oakes Model 618615 Oil-wetted type Std., X618150 Oil-bath type Optl.

**Servicing (Oil-wetted Type)**—Clean filter element and re-oil at 2000 mile intervals or more often if required by operating conditions.

**Servicing (Oil-bath Type)**—Clean filter and fill to oil level mark with same oil used in engine crankcase at 2000 mile intervals (when engine oil changed) or more often if required by operating conditions.

**CRANKCASE VENTILATOR**

**Sealed Positive Ventilation Type.** Air intake pipe (from air cleaner to oil filler pipe) furnishes clean air to crankcase, air outlet pipe (from valve cover to manifold) allows fumes from crankcase to be sucked into intake manifold. Vacuum control valve at manifold connection must close at idling speed for satisfactory idling performance.

**NOTE**—Clean Vacuum Control Valve when engine tuned up.

**Cleaning Vacuum Control Valve**—Remove control valve by disconnecting pipe and unscrewing valve from manifold. Disassemble valve, withdraw valve and spring, clean valve and valve seat thoroughly.

**Servicing**—Make certain all connecting pipes tight and that oil filler cap gasket seals cap tightly. Remove and clean control valve when tuning engine or whenever system does not operate satisfactorily.

**BATTERY**

**Auto-Lite Type PN-15.** 6 volt, 15 Plate, 100 Ampere Hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes.

**Five-second Voltage**—4.15 volts.

**Grounded Terminal**—Negative (—) grounded at starter.

**Engine Ground**—Strap at right front engine mounting.

**Location**—Right hand side of dash in engine compartment. Dimensions—Lgth. 8 15/16". Width 7 1/8". Hgt. 8 5/8".

**STARTER**

**Auto-Lite Model MZ-4137.** Armature No. MZ-2214. Drive—Overrunning clutch and positive pinion shift actuated by starting pedal.

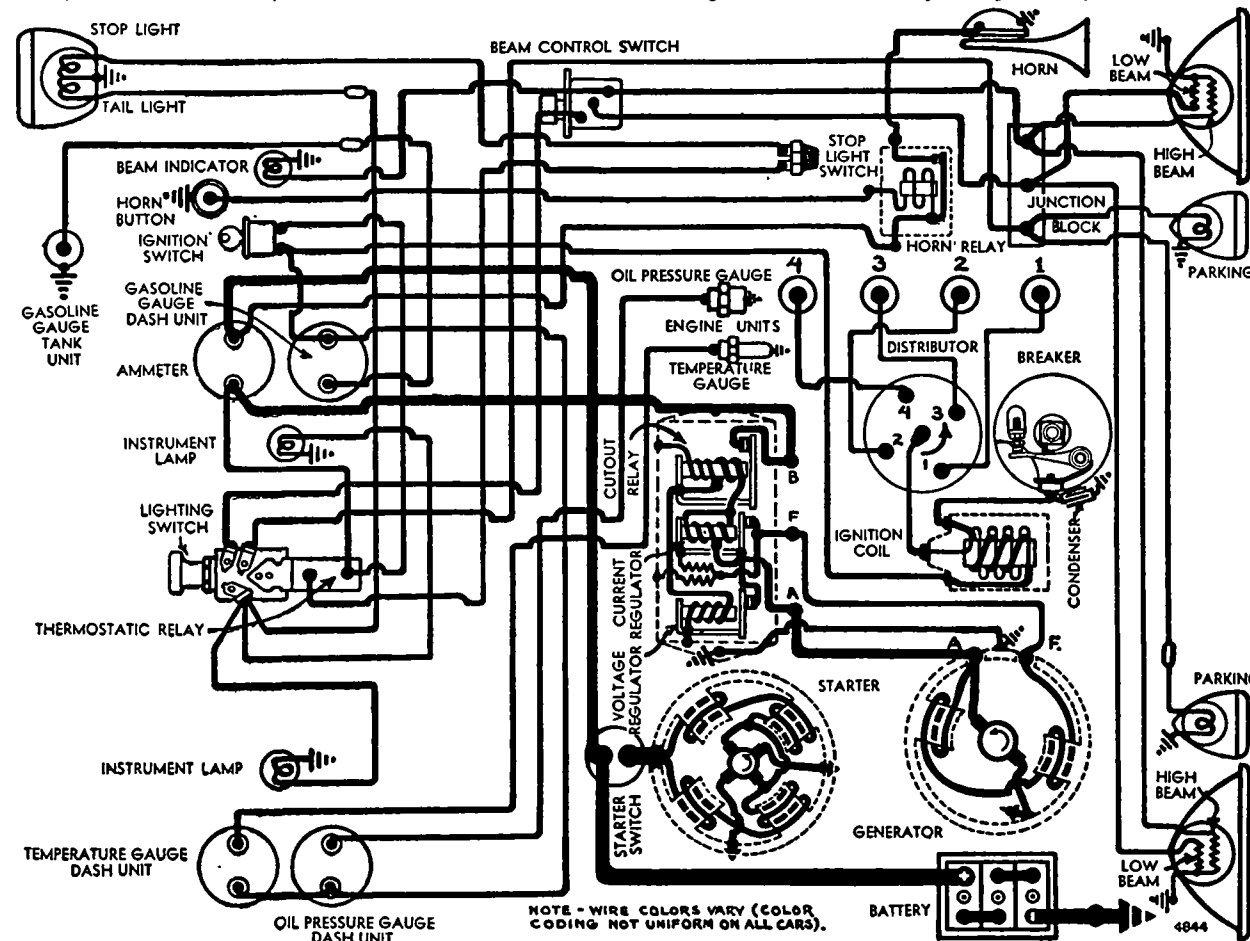

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—185 RPM., 150-175 amps., 5 volts.

**Performance Data**

Torque	R.P.M.	Volts	Ampers
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.85 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

LATER TRUCKS

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

**Removal:** On right front face of flywheel housing. To remove, disconnect pedal linkage and cables, take out flange mounting capscrews and bolt in bracket on commutator end.

**Starting Switch:** Auto-Lite SW-2677A. Mounted on starter and operated by pinion shift lever.

See Electrical Equipment Section for complete data.

## GENERATOR

**Auto-Lite Model GDZ-4817A, Armature GDZ-2006F.** Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate—35 amperes, 8.0 volts (cold)** with discharged battery (controlled by regulator).

**Charging Rate Adjustment—None** (see Regulator).

Cold Performance Data					
Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35	8.0	1900	35	8.0	2250

**Rotation—Counter-clockwise** at commutator end.

**Brush Spring Tension—35-53 ozs.** (new brushes).

**Field Current—1.60-1.78 amperes** at 6.0 volts.

**Motoring Current—4.2-4.6 amperes** at 6.0 volts.

**Removal:** Conventional pivot mounting at right front of engine. To remove, take out two pivot bolts and clamp bolt, slip off drive belt.

**Belt Adjustment:** 1" deflection (thumb pressure) midway between generator and pump pulleys. To adjust, loosen all mounting bolts, pull generator away from engine.

## REGULATOR

**Auto-Lite Model VRP-4007C-2, Voltage & Current type.** On right side in engine compartment.

See Electrical Equipment Section for complete data.

**NOTE—Regulator cover sealed.** Warranty void if seals broken.

## Cutout Relay

**Cuts In—6.4-7.0 volts** (set to 6.4-6.6 volts).

**Cuts Out—4.1-4.8 volts** (approx. 4-6 amps. disch.).

**Contact Gap—.015" minimum.**

**Air Gap—.031-.034" with contacts open** (measured at hinge end of core).

## Voltage Regulator

**Setting—7.35 (7.2-7.5) volts** at 70°F. See Electrical Equipment Section for data at other temperatures.

**Checking (without breaking seal) & Adjustment—** See Electrical Equipment Section.

**Contact Gap—.012" min.** (armature against stop pin).

**Air Gap—.048-.052" with contacts just opening.**

## Current Regulator

**Setting—34-36 amperes** (marked "35" on cover).

**Checking (without breaking seal) & Adjustment—** See Electrical Equipment Section.

**Contact Gap & Air Gap—Same as Voltage Regulator.**

## LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Adjustment—Aim** upper beam straight ahead with hot spot center 3" below lamp center height at 25 ft.

**Beam Indicator—On** left side of instrument panel (above Radio panel). Lighted when upper beams in use.

## Switches

**Lighting—Willys No. 645292.**

**Beam Selector—Willys No. 640260.**

**Instrument—Willys No. 641732.**

**NOTE—Separate instrument light switch** used on first trucks only. On later trucks, these lights controlled by main lighting switch.

## Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking	1½	55
Instr. & Beam Ind.	1	51
Stop & Tail	21-3	1158
Dome	15	87

**LIGHTING CIRCUIT BREAKER:** 30-ampere type. Mounted on lighting switch. Vibrating thermostatic type. Protects lighting circuits by vibrating to limit current. No adjustment.

**HORNS:** Sparks-Withington (Sparton) No. C-5992. Vibrator type single horn controlled by relay.

**Horn Current—7-9 amperes.**

## ENGINE

► See Willys Civilian Jeep Model CJ-2A for ALL TRUCK ENGINE DATA. All specifications same as for later type Jeep Engine (with Timing Gears).

## VALVE TIMING

**Tappet Clearance:.014" All Valves, Hot or Cold.**

**NOTE—Adjusting screws self-locking type.**

**Valve Timing:** See Camshaft Setting above.

**Intake Valves—Open 9° BTDC. Close 50° ALDC.**

**Exhaust Valves—Open 47° BLDC. Close 12° ATDC.**

► **Timing Mark Change** (starting 2T Engine Number 13887, 4T Engine No. 14251)—Flywheel marked "5" (for 5° BTDC.) and "T.C." (top dead center). "I.O." mark not carried and intake opening point must be estimated.

**Valve Timing Check—Set** tappet clearance #1 intake valve at .020". This valve should open with piston 9° or .039" BTDC. with flywheel mark "I. O." centered in inspection hole in right front face of housing below starter. Reset tappet clearance at .014".

## LUBRICATION

**Engine Oiling System:** Pressure to crankshaft, connecting rod, and camshaft bearings, and to timing gears.

**Crankcase Capacity—4 qts.** refill.

**Normal Oil Pressure—35 lbs.** at 30 MPH., 5-10 lbs. with engine idling at 600 RPM.

**Oil Pressure Regulator—Opens** at 40 lbs. Located under plug on side of oil pump. Adjustable by adding or removing shims above spring within plug.

**Oil Pump:** New Internal Rotor type. Mounted externally on right side of crankcase.

**Oil Pump Servicing—See Willys Shop Notes.**

**Oil Filter:** Fram (Optl. equipment).

**Servicing—Drain** filter at each crankcase oil change. Replace filter cartridge at 8000 mile intervals.

**Oil Pressure Gauge:** King-Seeley Electric type.

**Dash Unit—King-Seeley No. 41305.**

**Engine Unit—King-Seeley No. 40767.**

See Miscellaneous Section for complete data.

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in filler cap.

**Capacity—11 qts.**

**Pressure Valve—AC No. 846709** (Radiator Filler Cap). Opens at 3¾ lbs. (3¼-4¼ lbs.).

**Water Pump:** Centrifugal, packless, ball bearing type. See Water Pump Section for complete data.

**Removal—Loosen** and remove drive belt, disconnect hose. Remove pump mounting screws, lift out pump and fan assembly.

**Belt Adjustment—See Generator Belt Adjustment.**

**Thermostat:** Harrison. In outlet elbow on cylinder head. Starts to open at 148-155°F. Fully open at 173°F.

**Temperature Gauge:** King-Seeley Electric type.

**Dash Unit—King-Seeley No. 41315.**

**Engine Unit—King-Seeley No. 7000.**

See Miscellaneous Section for complete data.

## CLUTCH

**Auburn Model 8501-23** (with Borg & Beck Driven Member). Single plate, dry disc type.

See Clutch Section for complete data.

**Facings—Molded** (flywheel side), Woven (pressure plate side). I. D. 5½". O. D. 8½". Thickness .135"

**Pedal Adjustment:** Pedal free travel 1¼" (gives 1/16" clearance between release bearing and clutch levers). To adjust, loosen locknut and turn adjusting nut on connector link at clutch fork, tighten locknut.

**Removal:** Remove transmission (see Transmission Removal), remove flywheel bell housing. Mark pressure plate and flywheel to insure correct re-installation, take out mounting screws in clutch cover flange (turn all screws out evenly), remove clutch assembly and driven member.

## TRANSMISSION

## TRUCK MODEL 2T

**Warner Model AS1-T90E.** Constant-mesh, synchromesh (Second & High), sliding gear (Low & Reverse), all helical gear type.

See Transmission Section for complete data.

**Transmission Control:** Remote control type with gearshift lever on steering column.

See Transmission Section for complete data.

**Removal:** Remove floor boards, take off bell housing inspection hole cover, disconnect clutch throw-out bearing retracting spring. Disconnect transmission

control rods and speedometer cable at transmission case. Disconnect propeller shaft at universal joints and remove shaft. Support engine with jack placed under bell housing, remove rear engine mounting bolts from cross-member under transmission case. Raise rear end of engine so that transmission clears cross-member (CAUTION—see that fan blades do not damage radiator). Remove transmission to bell housing bolts, pull transmission straight back to clear clutch shaft, remove from truck.

## TRANSMISSION

### TRUCK MODEL 4T

**Warner Model AS3-T90A.** Constant-mesh synchromesh (Second & High), sliding spur gear (Low & Reverse).

*See Transmission Section for complete data.*

**Transfer Case: Spicer Model 18.** Two-speed auxiliary transmission and front-wheel drive unit mounted on rear of transmission case. Separate control levers provided for Low-High range (right hand lever), and front-wheel drive engagement (left hand lever).

*See Transmission Section for complete data.*

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

*See Transmission Section for complete data.*

**Removal:** *See Universal Jeep Model CJ-2A Transmission Removal instructions.*

## UNIVERSALS

### TRUCK MODEL 2T

**Detroit Ball-and-Trunnion Type.** Two used (First Trucks), three used (Later Trucks). NOTE—Later trucks have two propeller shafts with support bearing and intermediate universal joint at frame cross-member.

*See Universals Section for complete data.*

## UNIVERSALS

### TRUCK MODEL 4T

**Front & Rear Drive Propeller Shaft Joints:** Spicer needle roller bearing types as follows:

1261-102X ..... Transmission End—Front Drive  
1261-1X ..... Transmission End—Rear Drive  
1268-104X ..... Axle End—Front & Rear

*See Universals Section for complete data.*

**Front Axle Shaft Joint:** Bendix Constant-velocity type. One joint used at outer end of each shaft (within steering knuckle housing).

*See Universals Section for complete data.*

**Power Take-off Propeller Shaft Joints:** Detroit Ball-and-trunnion type. Three used (additional joint at intermediate support bearing on frame cross-member).

*See Universals Section for complete data.*

## FRONT AXLE

### TRUCK M DEL 4T

**Spicer (Salisbury) Model 25.** Full-floating, hypoid gear type. Differential assembly (ring and pinion gear assembly) is identical with Spicer Model 23-2 Full-Floating Rear Axle and is serviced in same manner.

*See Spicer (Salisbury) Full Floating Rear Axle in Rear Axle Section for complete data.*

Ratio—5.38-1.

Backlash—.005-.007". Shim adjustment.

**Removal:** *See Universal Jeep Model CJ-2A Front Axle Removal instructions.*

**Wheel Bearing Adjustment:** *See Universal Jeep Model CJ-2A "Front Axle" for Wheel Bearing Adjustment.*

## REAR AXLE

**Timken Model No. 51540.** Semi-floating, spiral bevel gear type with Hotchkiss Drive.

*See Rear Axle Section for complete data.*

Ratio—5.38-1 Std. Optl. Ratios (2T only) 4.88-1 and 6.17-1.

Backlash—.004-.018". Shim adjustment.

**Removal:** Support rear end of truck securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables and propeller shaft at rear universal. Place support jacks under axle housing to relieve springs of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of springs, lower springs to floor. Remove axle assembly.

**Axle Shaft Removal:** Remove wheel and hub assembly (use wheel puller), remove nuts on bolts holding backing plate and brake assembly, remove dust shield, oil seal, and backing plate. Remove axle shaft and wheel bearing. CAUTION—Do not lose bearing adjusting shims.

**Wheel Bearing Adjustment—Endplay .003-.005".** Adjust by adding or removing shims between backing plate and flange on axle housing. See axle shaft removal above for dismantling instructions.

**NOTE—**Shims installed on left hand end of axle housing only in production. Shims can be installed on right hand end of axle housing, if necessary, for correct endplay.

## SHOCK ABSORBERS

**Gabriel.** Hydraulic, direct acting, adjustable type. NOTE—Shock absorbers are sealed and cannot be dismantled for servicing or refilling.

*See Shock Absorber Section for complete data.*

**Adjustment—**Remove mounting bolt at lower end, fully collapse shock absorber by pressing up on

lower end until adjusting key within unit engages slot in adjusting plate (can be determined by feel), turn unit in clockwise direction until limit of adjustment is reached (full range of adjustment is 4 turns), back off adjustment by turning unit counter-clockwise exactly one turn for standard setting. Make certain that adjusting key does not slip out of slot while making adjustment.

CAUTION—Units on both sides must be set alike.

## FRONT SUSPENSION

**Front Axle (Model 2T):** Clark "T" beam type with reverse-Elliott ends.

**Front Axle (Model 4T):** Spicer (Salisbury) Model 25. Special full-floating driving unit. See Front Axle data (above).

**Front Suspension:** Conventional type (see Front Axles above) with semi-elliptic springs.

**Steering Knuckle Bearing Servicing & Adjustment 4T Trucks with Front-wheel Drive.** *See Universal Jeep Model CJ-2A "Front Axle" for data.*

**Kingpin Inclination—**7½° crosswise.

**Caster—**3°.

**Camber—**1° (2T), 1½° (4T).

**Toe In—**3/64-3/32".

## STEERING GEAR

**Ross Model T12, No. TA-13018, Cam-and-Twin Lever**

*See Steering Gear Section for complete data.*

## BRAKES

**Service Brakes:** Bendix (Lockheed) Hydraulic, self-centering, type. Hand lever applies rear wheel service brakes.

**NOTE—**These self-centering brakes do not have anchor pin adjustment.

*See Brake Section for complete data.*

**Drums—**Chrome-nickel type. Diameter 11".

**Lining—**Moulded type (all shoes). Width 2". Thickness .182-.192". Length per wheel 22 1/16".

**Clearance—**.008" toe, .005" heel, for each shoe.

**NOTE—**No anchor pin adjustment provided. Brake shoes should be centralized by hand brake application (and then released) before adjustments are made.

**Braking Power—**56% front, 44% rear.

**Hand Brake:** See service brakes above.

**Adjustment—**Tighten link rod adjustment (cable equalizer connector) at brake lever on frame cross-member for slight drag with hand lever set two notches "on". Release hand lever and make certain that brakes free of any drag.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On plate on outside of left frame side rail at front end and on plate on floor riser at left of driver's seat.  
1948 Numbers—10,001 Up.

**ENGINE NUMBER:** Stamped on right front upper corner of cylinder block.  
1948 Numbers—S-10001 Up.

## TUNE-UP

**COMPRESSION PRESSURE:** 125 lbs. at 185 RPM cranking speed.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .030"

Plug Type—Auto-Lite Type A-7. 14 mm. Metric.

**IGNITION:** See Coil, Condenser, and Distributor.

Breaker Gap—.020" Limits .018-.022".

Cam Angle or Dwell—34½° Closed, 25½° Open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Distributor.

**IGNITION TIMING:** TDC. (At Top Dead Center).

Timing Procedure—See Ignition Timing.

Timing Mark—Line on rim of vibration dampener aligned with pointer on timing gear cover on right side.

Octane Selector Setting—Set to just eliminate ping with engine pulling hard.

**CARBURETION:** See Carburetor & Carb Equipment.

Idle Setting—1-2 turns open—one screw. Turn screw out for richer mixture.

Idle Speed—600 RPM. or 6 MPH.

Float Level—5/16" from top of machined projection on bowl cover to top of soldered seam on free end of float with cover assembly inverted.

Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure—4½ lbs. max. at 1800 RPM.

**CRANKCASE VENTILATOR:** Remove and clean the vacuum control valve. See Crankcase Ventilator (following Carb. Equipment) for directions.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. Valve must operate freely (no adjustment required).

**VALVE TAPPET CLEARANCE:** .014" All Valves, Hot or Cold.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Douglas or Mitchellock Switch. Willys No. 641720.

Ignition Lock—Briggs & Stratton. B&S No. 50184. Key Series—C250-499. Groove No. 3.

**COIL:** Auto-Lite IG-4090A. Service Coil IG-4070 (with bracket IG-1798S). On right side of engine to rear of distributor.

Ignition Current—2.5 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite No. IG-2671.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGC-4513 or IGC-4514. Automatic advance type with Vacuum Spark Control and Octane Selector adjustment.

Breaker Gap—.020". Limits .018-.022".

Cam Angle—34½° closed, 25½° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

## Automatic Advance

Degrees Start	Distr. R.P.M.	Degrees Eng. R.P.M.
1	350	0
7	380	2
11	550	14
12	1300	22
	1500	24
		3000

**Octane Selector:** 20° advance or retard adjustment at distributor. See Ignition Timing.

**Vacuum Spark Control:** Auto-Lite. Separate type (vacuum unit mounted on bracket, linked to quadrant on distributor). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

## Vacuum Advance

Distr. Degrees Start	Eng. Degrees	Vacuum (" of HG)
1°	0°	3½"
3°	2°	5½"
5°	6°	9¼"
6°	10°	13"
	12°	15"

**Distributor Removal:** On right side of engine. To remove, disconnect vacuum line, take out hold-down screw in mounting plate (vacuum unit mounting bracket).

**Installation Note—**If crankshaft has been turned with distributor off engine, install distributor as follows: Turn crankshaft to #1 cylinder firing position (see Timing), turn distributor shaft until rotor opposite #1 segment in cap (see diagram), install distributor on engine, rocking shaft slightly to engage drive coupling, push distributor down into place, install hold-down screw, check ignition timing.

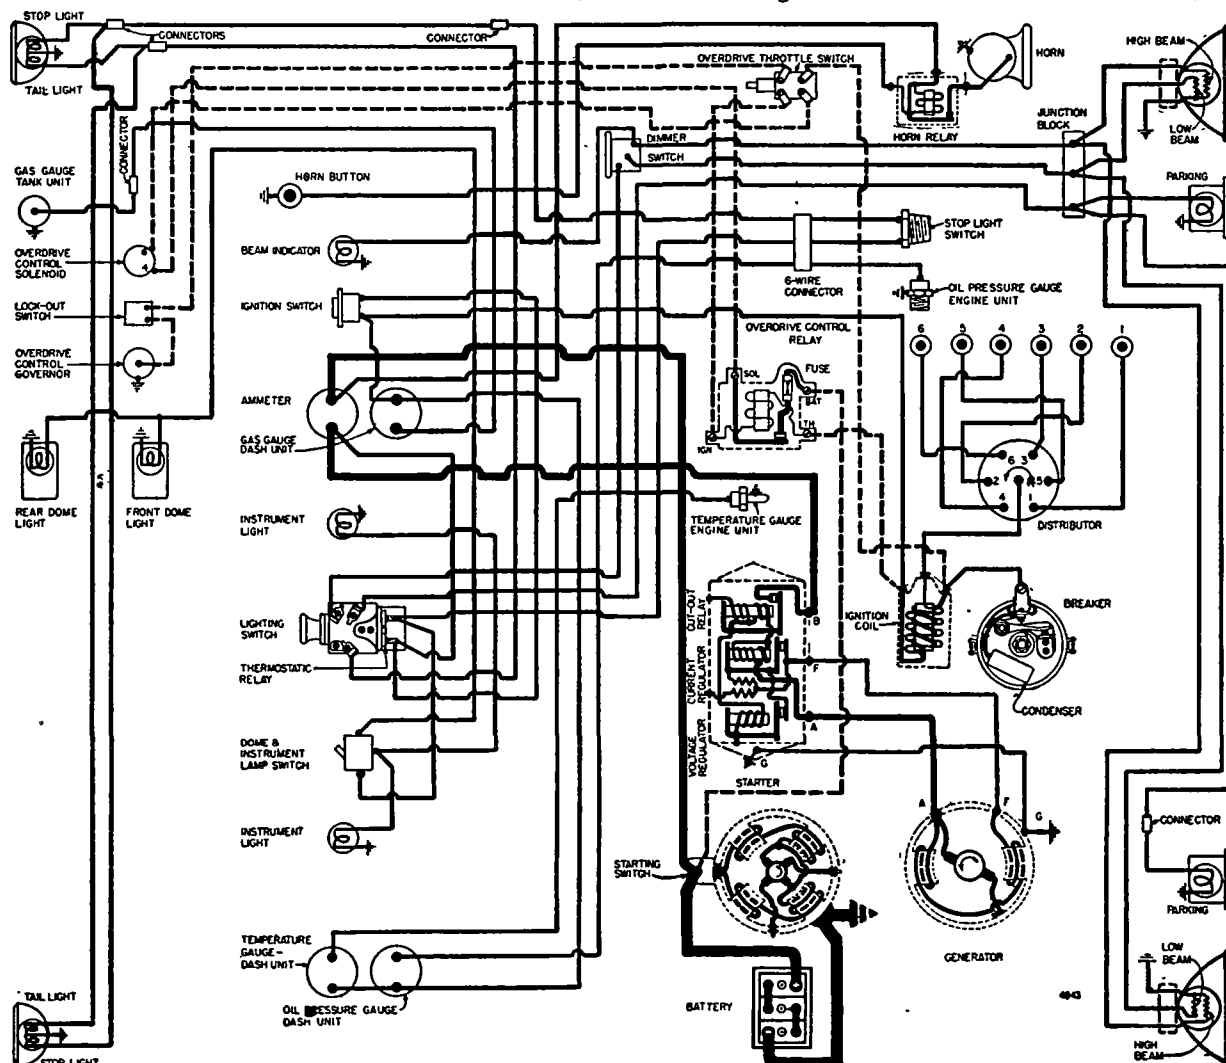

**CAUTION—**If oil pump has been removed, see Oil Pump Installation under "Oil Pump" in Willys Shop Notes.

## IGNITION TIMING

**Std. Setting**.....**At Top Dead Center**

**NOTE—**See Octane Selector Setting to compensate for special fuel and operating conditions.

**Timing Marks—**Line on rim of vibration dampener

and pointer on timing gear cover. Flywheel also marked ("TC" on flywheel in line with horizontal center-line of inspection hole, right front face of housing).

**Timing (Engine not Running)**—With #1 piston on compression, turn engine until piston reaches firing position (TDC) with line on vibration dampener aligned with pointer on right side of timing gear cover. Loosen vacuum control link screw in distributor quadrant, center pointer on scale, tighten screw. Loosen clampscrew on hold-down plate, rotate entire distributor assembly until contacts begin to open, tighten clampscrew, see that rotor at #1 segment in distributor cap, check spark plug connections.

**Timing (Using Timing Light—Engine Idling)**—This method recommended by manufacturer. Direct timing light at vibration dampener, idle engine (engine must be warm), adjust distributor (as directed above) until timing mark lines up with pointer.

**Octane Selector Setting**—If engine pings on heavy pull, loosen vacuum control link screw at distributor quadrant, retard spark slightly by rotating distributor counter-clockwise. For High Octane Fuel, spark can be advanced by rotating distributor clockwise.

## CARBURETOR

Carter WA1 No. 6458. 1¼" Single Barrel, Downdraft type with manual choke control.  
See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Interconnected linkage by which choke valve lever opens throttle to fast idle position when carburetor choked for starting.

**Setting**—No adjustment required.

## CARB. EQUIPMENT

**Fuel Pump:** AC No. 1539245. Diaphragm type combination fuel-and-vacuum pump.

**Replacement Pump**—AC No. 9245.

**Pump Pressure**—4½ lbs. max. at 1800 Eng. RPM.  
See Carb. Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric type.

**Dash Unit**—King-Seeley No. 41310.

**Tank Unit**—King-Seeley No. 41248.

See Carb. Equipment Section for complete data.

**Air Cleaner:** AC No. 1544113 Oil-wetted type (Std.), Oil-bath type (Special Equipment).

**Servicing (Oil-wetted Type)**—Clean filter element and re-oil at 2000 mile intervals or more often if required by operating conditions.

**Servicing (Oil-bath Type)**—Clean filter and fill to oil level mark with same oil used in engine crankcase at 2000 mile intervals (when engine oil changed) or more often if required by operating conditions.

## CRANKCASE VENTILATOR

**Sealed Positive Ventilation Type.** Air intake pipe (from air cleaner to oil filler pipe) furnishes clean air to crankcase, air outlet pipe (from valve cover to manifold) allows fumes from crankcase to be sucked into intake manifold. Vacuum control valve at

manifold connection must close at idling speed for satisfactory idling performance.

**NOTE**—Clean Vacuum Control Valve when engine tuned up.

**Cleaning Vacuum Control Valve**—Remove control valve by disconnecting pipe and unscrewing valve from manifold. Disassemble valve, withdraw valve and spring, clean valve and valve seat thoroughly.

**Servicing**—Make certain all connecting pipes tight and that oil filler cap gasket seals cap tightly. Remove and clean control valve when tuning engine or whenever system does not operate satisfactorily.

## BATTERY

Auto-Lite PN-15 or Willard HW-1-100. 6 volt, 15 plate, 100 Ampere Hour capacity (20 hr. rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes.

**Five-second Voltage**—4.15 volts.

**Grounded Terminal**—Negative (—) grounded at starter.

**Engine Ground**—Strap at left front engine mount.

**Location**—Right hand side of dash in engine compartment.

**Dimensions**—Lgth. 8 15/16". Width 7½". Hgt. 8½".

## STARTER

Auto-Lite Model MZ-4137. Armature No. MZ-2214. Drive—Overrunning clutch and positive pinion shift actuated by starting pedal.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—185 RPM., 150-175 amps., 5 volts.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal:** On right front face of flywheel housing. To remove, disconnect pedal linkage and cables, take out flange mounting capscrews and bolt in bracket on commutator end.

**Starting Switch:** Auto-Lite SW-2677A. Mounted on starter and operated by pinion shift lever.

See Electrical Equipment Section for complete data.

## GENERATOR

Auto-Lite Model GDZ-4817A. Armature GDZ-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—35 amperes, 8.0 volts (cold) with discharged battery (controlled by regulator).

**Charging Rate Adjustment**—None (see Regulator).

Cold		Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.2-4.6 amperes at 6.0 volts.

**Removal:** Conventional pivot mounting at right front of engine. To remove, take out two pivot bolts and clamp bolt, slip off drive belt.

**Belt Adjustment:** 1" deflection (thumb pressure) midway between generator and pump pulleys. To adjust, loosen all mounting bolts, pull generator away from engine.

## REGULATOR

Auto-Lite Model VRP-4007C-2. Voltage & Current type. On right side in engine compartment.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (measured at hinge end of core).

### Voltage Regulator

**Setting**—7.35 (7.2-7.5) volts at 70°F. See Electrical Equipment Section for data at other temperatures.

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked "35" on cover).

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

## LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead with hot spot center 3" below lamp center height at 25 ft.

**Beam Indicator**—On left side of instrument panel (above Radio). Lighted when upper beams in use.

### Switches

**Lighting**—Willys No. 645292.

**Beam Selector**—Willys No. 640302.

**Instrument**—Willys No. 641732.

### Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking	1½	55
Instr. & Beam Ind.	1	51
Stop & Tail	21-3	1158
Dome	15	87

CONTINUED N NEXT PA 8

## CONTINUED FROM PRECEDING PAGE

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:** 30-ampere type. Mounted on lighting switch. Vibrating thermostatic type. Protects lighting circuits by vibrating to limit current. No adjustment.

**FUSES:** Overdrive—20 ampere. On control relay.

**HORNS:** Willys No. 645952 (Single Horn Std.), No. 645956 (Dual Horns—Optl.). Vibrator type with horn relay.

Horn Relay—Willys No. 643889.

## ENGINE

**ENGINE SPECIFICATIONS:** Own 6-63. Six cylinder, "L" head type.

Bore—3" (3.000-3.002"). Stroke—3½".

Displacement—148.44 cu. ins. Rated HP. 21.6.

Developed Horsepower—70 at 4000 RPM.

Compression Ratio—6.42-1. Std. cast-iron head.

Compression & Vacuum Reading—See Tune-Up.

**ORIGINAL BORE & PISTON SIZES:** See Willys Shop Notes.

**ORIGINAL BEARING SIZES:** See Willys Shop Notes.

**TIGHTENING TORQUES:** See Willys Shop Notes.

**CYLINDER HEAD INSTALLATION:** See Willys Shop Notes.

**PISTONS:** Aluminum alloy, "T" slot, cam ground, tin or brass plated type. Length—3".

Weight—.985 lbs. (with pin and rings).

Removal—Pistons and rods removed from above.

Clearance—.016-.0185" (top), .0025" (skirt).

**Replacement Pistons:** Furnished .005", .015", .030" .045" Oversize.

**Fitting New Pistons:** Use .0025" feeler gauge ¾" wide between piston and cylinder wall on side opposite slot. Pull required to withdraw feeler must be 7-12 lbs.

**Installing Pistons:** T-slot toward left (valve) side of engine (opposite side from oil spray hole in rod).

**PISTON RINGS:** Two compression rings, one oil ring per piston, all above pin. Oil drain holes in oil ring groove.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"①	.008-.018"	.002-.004"
Compr. (#2)	3/32"①	.008-.018"	.0015-.0035"
Oil (#3)	3/16"②	.008-.018"	.001-.0025"
①—.0925-.0935".	②—.1860-.1865".		

**Installing Rings:** Compression ring mark "TOP" (on side of rings) and bevel on inner edge must be UP.

**Replacement Rings:** Furnished .005", .015", .030", .045" Oversize.

**PISTON PIN:** Locked in rod by clampscrew.

Diameter—.7497". Length—2 17/32".

Pin Fit in Piston—.0001-.0005" or a light thumb push fit at normal room temperature.

**NOTE:**Pin hole in piston diamond-bored to inside diameter of .7498-.7500".

**Replacement Pins:** Furnished Standard size only.

**CONNECTING ROD:** Length—6.343-6.347".

Crankpin Journal Diameter—1.875". See "Original Bearing Sizes" in Willys Shop Notes.

**Lower Bearing:** Replaceable steel-backed, babbitt lined type. No shims. **CAUTION:**Oil spray hole in bearing upper half must line up with oil hole in rod.

**NOTE:**Palnuts used as locknuts on rod bolts.

Clearance—.0004-.0025". Sideplay—.004-.010".

**Bearing Adjustment:** None (replace bearings). Do not file rods or bearing caps.

**Palnut Installation:** See Willys Shop Notes.

**Replacement Bearings:** Furnished Std. size and .010", .020" Undersize.

**Installing Rods:** Rods not offset. Install with oil spray hole in lower end toward right (away from camshaft) on all rods.

**CRANKSHAFT:** Four bearing with integral counterweights. Vibration dampener on forward end.

**Journal Diameters:**—2.250" all Bearings. See "Original Bearing Sizes" in Willys Shop Notes.

**Bearings:** Replaceable steel-backed, babbitt lined type. No shims.

►**NOTE:**Bearing shells can be removed and replaced without removing crankshaft (bearings are NOT doweled on six cylinder engine).

Clearance—.0009-.003".

**Bearing Adjustment:** None (replace bearings). Do not file bearing caps. Bearings can be removed and replaced without removing crankshaft.

**Rear Bearing Oil Seal Servicing:** See "Crankshaft & Main Bearings" in Willys Shop Notes.

**Replacement Bearings:** Furnished Std. size and .010", .020" Undersize.

**End Thrust:** Taken by #1 front bearing (flanged type) and thrustwasher in back of crankshaft gear. Adjusted by adding or removing shims behind thrust washer. Shims furnished .002" thick.

**NOTE:**Crankshaft gear must be removed with a gear puller for endplay adjustment.

Endplay—.004-.008".

**CAMSHAFT:** Four bearing with helical gear drive.

**Journal Diameters:**—#1, 1.8755-1.8760"; #2, 1.8425-1.8435"; #3, 1.8110-1.8120"; #4, 1.6245-1.6250".

**Bearings:**Removable steel-backed, babbitt-lined bushing (Front), machined in crankcase (all others). Front bearing reamed to 1.877" diameter.

Clearance—.001-.0025".

**Camshaft Removal:** See Willys Shop Notes.

**End Thrust:** Taken by thrust plate assembled behind camshaft gear with a spacer assembled behind plate. If required, a thin shim can be installed behind spacer if too little clearance, or spacer can be dressed to provide greater clearance.

Endplay—.003-.0055".

**Timing Gears:** Crankshaft gear Cast Iron. Camshaft gear Fibre with steel hub.

Gear Backlash—.000-.002".

**Camshaft Setting:** Mesh marked tooth of camshaft gear with marked space (between teeth) on crankshaft gear.

**VALVES:** Head Diameter Stem Diameter Length

Intake ..... 1 3/8" ..... 340" ..... 4½"

Exhaust ..... 1 9/32" ..... 340" ..... 4½"

Seat Angle Lift Stem Clearance

Intake ..... 45° ..... 2843" ..... 0015-.00325"

Exhaust ..... 45° ..... 300" ..... 0025-.0045"

**Valve Guides:** Removable type. Remove guides from above with puller. Install new guides with driver or

press guides down until upper end ⅞" below upper edge of valve seat (taper end up).

**Valve Springs:** Springs can be installed with either end up. Free length 1 57/64".

Spring Pressure Length

Valve Closed ..... 50 lbs. .... 1 5/8"

Valve Open ..... 105 lbs. .... 1 21/64"

**Valve Lifters:** Mushroom type. In reamed holes in block. Service by installing oversize lifters.

**NOTE:**Camshaft must be removed for lifter removal.

**Camshaft Removal:** See Willys Shop Notes.

Lifter Diameter—.597-.605". Length—2".

Clearance in Block—.0005-.002".

## VALVE TIMING

**Tappet Clearance:** .014" All Valves, Hot or Cold.

**NOTE:**Adjusting screws self-locking type.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves:** Open 5° BTDC. Close 44° ALDC.

**Exhaust Valves:** Open 47° BLDC. Close 12° ATDC.

**Valve Timing Check:** Set tappet clearance #1 intake valve at .020". This valve should be about to open (clearance taken up) with #1 piston 5° or .007" BTDC. with flywheel mark "5°/" centered in inspection hole in right front face of housing below starter. Reset tappet clearance to .014".

## LUBRICATION

**Engine Oiling System:** Pressure to crankshaft, connecting rod, and camshaft bearings and to timing gears.

**Crankcase Capacity:**—5 qts. refill.

**Normal Oil Pressure:**—35 lbs. at 30 MPH., 10 lbs. with engine idling at 500 RPM.

**Oil Pressure Regulator:** Opens at 25 lbs. Located on oil pump housing. Adjustable by adding or removing shims from above spring within plug.

**Oil Pump:** Internal Rotor type. Mounted externally on right side of crankcase.

**Oil Pump Servicing:** See Willys Shop Notes.

**Oil Pressure Gauge:** King-Seeley Electric type.

**Dash Unit:** King-Seeley No. 41305.

**Engine Unit:** King-Seeley No. 40767.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** See special data following "Carb. Equipment."

## COOLING

**Cooling System:** Pressure type with relief valve in radiator filler cap.

**Capacity:**—8¾ qts. (9½ qts. with heater).

**Pressure Valve:** AC No. 846740. In filler cap. Opens at 3¾ lbs. (3¼-4¼ lbs.).

**Water Pump:** Centrifugal, packless type with special sealed ball bearing shaft (no lubrication required). See Water Pump Section for complete data.

**Removal:** Loosen and remove drive belt, disconnect hose, remove pump mounting screws. Lift out pump and fan assembly.

**Belt Adjustment:** See Generator Belt Adjustment.

**Thermostat:** Harrison. In outlet on cylinder head. Starts to open at 148-155°F. Fully open at 173°F.

**Temperature Gauge:** King-Seeley Electric type.

**Dash Unit:** King-Seeley No. 41315.

**Engine Unit:** King-Seeley No. 7000.

See Miscellaneous Section for complete data.

**CLUTCH**

Auburn Model 8501-19 (with Borg & Beck Driven Member). Single plate, dry disc type.  
*See Clutch Section for complete data.*

Facings—Molded (flywheel side), woven (pressure plate side). I. D.  $5\frac{1}{8}$ ". O. D.  $8\frac{1}{2}$ ". Thickness .135".

**Pedal Adjustment:** Pedal free travel 1" (provides  $1/16$ " clearance between release bearing and clutch levers). To adjust, loosen locknut and turn adjusting nut on connector link at clutch fork, tighten locknut.

**Removal:** Remove transmission (see Transmission Removal), remove flywheel bell housing. Mark pressure plate and flywheel to insure correct re-installation, take out mounting screws in clutch cover flange (turn all screws out evenly), remove clutch assembly and driven member.

**TRANSMISSION**

Warner Model AS20-T96 (with Overdrive). Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type.  
*See Transmission Section for complete data.*

**Transmission Control:** Remote control type with gear-shift lever on steering column.  
*See Transmission Section for complete data.*

**Removal:** Remove floor boards, take off bell housing inspection cover, disconnect clutch throw-out bearing retracting spring. Disconnect transmission control rods and speedometer cable at transmission case. Disconnect propeller shaft at universal joints and remove shaft. Support engine with jack placed under bell housing, remove rear engine support bolts from cross-member under transmission case, raise rear end of engine so that transmission clears cross-member (CAUTION—use care that fan blades do not damage radiator). Remove transmission to bell housing bolts, pull transmission straight back to clear clutch shaft, remove from car.

**OVERDRIVE**

Warner Type R10B (part of AS20-T96 Transmission). New solenoid operated, governor controlled type overdrive (no centrifugal pawls) with throttle operated "kick-down."

*See Transmission Section for complete data.*

**Control Relay**—Auto-Lite Model HRT-4001.

**Overdrive Governor**—Auto-Lite Model TGE-4002.

**Transmission Solenoid**—Delco-Remy Model 1118132

**Removal:** Remove as a unit with the transmission. Removal instructions same as for regular transmission (above) after governor and solenoid wires and lock-out control cable disconnected, and overdrive case-to-cross-member bolts removed.

**UNIVERSALS**

UP TO SERIAL NO. 11494

Spicer Model 1261-102X (Front), 1268-111X (Rear). Needle roller bearing type.

*See Universals Section for complete data.*

**UNIVERSALS**

AFTER SERIAL NO. 11494

Detroit Universals Series 4100. Ball-and-trunnion type.

*See Universals Section for complete data.*

**REAR AXLE**

Spicer (Salisbury) Model 23-1. Semi-floating, Hypoid Gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

Ratio—5.38-1 Std., 4.88-1 Optl.

Backlash—.004-.008". Shim adjustment.

**Removal:** Support rear end of car securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables, and propeller shaft at rear universal joint. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of springs, lower springs. Remove axle assembly from beneath car.

**Axle Shaft Removal:** Remove wheel and hub assembly (use wheel puller), disconnect brake line at wheel cylinder, remove nuts on bolts holding backing plate and brake assembly on housing, remove dust shield, oil seal, and backing plate (with brake assembly). CAUTION—Do not lose bearing adjusting shims located between backing plate and flange on housing. Remove axle shaft and wheel bearing.

**Wheel Bearing Adjustment**—Endplay .001-.006". Adjust by adding or removing shims between backing plate and axle housing flange at each wheel. See axle shaft removal (above).

**SHOCK ABSORBERS**

Delco—Model 1030-C (Front), 1031-Q (Rear).

Monroe—Model K-18004 (Front), K-18005 (Rear). Direct acting, hydraulic type.

*See Shock Absorber Section for complete data.*

**NOTE**—Shock absorbers are sealed and cannot be dismantled for servicing or refilling.

**FRONT SUSPENSION**

**Planar Type.** Independent, linked parallelogram type with transverse spring (spring acts as lower control arm).

*See Front Suspension Section for complete data.*

**Kingpin Inclination**— $5\frac{1}{2}^{\circ}$  crosswise.

**Caster**— $1^{\circ}$  No adjustment.

**Camber**— $1^{\circ}$  Shim adjustment.

**Toe-In**— $1/16$ - $1/8$ ".

**STEERING GEAR**

Ross Model T-12. Cam-and-Twin Lever type.

*See Steering Gear Section for complete data.*

**BRAKES**

**Service Brakes:** Bendix (Lockheed) Hydraulic, self-centering type. Hand lever applies rear wheel service brakes.

**NOTE**—These self-centered brakes do not have anchor pin adjustment.

*See Brake Section for complete data.*

**Wheel Cylinders**—Diameter: Front 1", Rear  $7/8$ ".

**Drums**—Chrome-nickel type. Diameter 9.948".

**Lining**—Moulded type (all shoes). Width 1.760". Thickness .222". Length per shoe: 10  $11/16$ " forward shoe, 8  $5/16$ " reverse shoe.

**Clearance**—.008" toe, .005" heel, for each shoe.

**NOTE**—No anchor pin adjustment provided. Brake shoes should be centralized by hard brake application (and then released) before adjustments are made.

**Hand Brake:** See Service Brakes (above).

**Adjustment**—Tighten link rod adjustment (cable equalizer connector) at brake lever on frame cross-member for slight drag with hand lever set two notches "on". Release hand lever and make certain that brakes free of any drag.

## EQUIPMENT INDEX

# IMPORTANT FACTORY PRODUCTION & RECOMMENDED CHANGES FOR PREVIOUS MODELS & 1949-50 MODELS

► See Data Sheets for additional Changes, Cautions, & Corrections

## BUICK

- LATE 1948 & ALL 1949-50 DYNAFLOW—HYDRAULIC VALVE LIFTERS USED—See 1949 & 1950 Buick car pages and 1949-50 Buick Special Data.
- 1949 MODELS AFTER 1ST 5000 ENGINES—CONNECTING ROD BEARING CHANGE—Replaceable precision bearings used. See 1949 Buick car pages
- LATE 1948 & ALL 1949-50 MODELS—REAR AXLE PINION BEARING CHANGE—See Buick Rear Axle in 1949 Rear Axle Section.

## CADILLAC

- 1949 MODELS—REAR AXLE PINION BEARING PRE-LOAD ADJUSTMENT & SETTINGS—See Cadillac Rear Axle in 1949 Rear Axle Section.
- LATE 1949 MODELS—CARBURETOR CHANGE TO CORRECT ACCELERATION STUMBLE—See Carter WCD Carburetors in 1949 Carburetor Section.

## CHEVROLET

- 1949 MODELS—NEW CARTER CARBURETOR WITH FAST IDLE & RE-DESIGNED ACCELERATING PUMP—See Carter (Chevrolet) W1 carburetor in 1949 Carburetor Section.
- LATE 1949 MODELS—NEW ROCHESTER CARBURETOR—See Rochester Carburetor in 1949 Carburetor Section.
- 1949 PASS. CARS—LOWER CONTROL ARM PRODUCTION CHANGE—See Chevrolet Front Suspension in 1949 Front Suspension Section.
- 1948-49 TRUCKS—GEAR DISENGAGEMENT (1ST, 2ND, REVERSE) & HIGH GEAR NOISE (15-40 MPH)—See Chevrolet 4-Speed Transmission in 1949 Transmission Section.
- 1948-49 TRUCKS—SHIFTER HEAD & YOKE PRODUCTION CHANGE—See Chevrolet 4-Speed Transmission in 1949 Transmission Section.
- 1948-49 TRUCKS—LOCKING IN 3RD OR 4TH GEAR CORRECTION—See Chevrolet 4-Speed Transmission in 1949 Transmission Section.
- 1948-49 TRUCKS—MAINSHAFT & SLIDING GEAR PRODUCTION CHANGE—See Chevrolet 4-Speed Transmission in 1949 Transmission Section.

## CHRYSLER—DE SOTO—DODGE

- ALL 1946-47-48 MODELS—SPARK PLUG GAP CHANGE—SHOULD BE .030"  $\pm$  .002". This figure supersedes earlier data. CAUTION—This setting is not the same and DOES NOT APPLY TO 1949 MODELS.
- 1949 MODELS—CARBURETOR CHANGES—See Carter (B&B) Downdraft Carburetors in 1949 Carburetor Section.

## FORD

- 1949 PASS. CARS—NEW FRONT END SPECIFICATIONS & PARTS PRODUCTION CHANGES—See Ford Front Suspension in 1949-50 Front Suspension Section.
- 1949 PASS. CARS—FRONT SUSPENSION NOISE CORRECTION—See Ford Front Suspension in 1949-50 Front Suspension Section.
- 1949 "V8" CARS & TRUCKS—PISTON CHANGE—See 1949-50 Ford V8 Pass. Car pages.
- 1949 "V8" CARS & TRUCKS—CONNECTING ROD CHANGE—See 1949-50 Ford V8 Pass. Car pages.
- 1949 "V8" CARS & TRUCKS—CAMSHAFT CHANGE—CAUTION—Two types used (each require DIFFERENT TAPPET CLEARANCE. See 1949-50 Ford V8 Pass. Car pages.
- 1949 "V8" CARS—TIMING GEAR CHANGE—See Ford V8 Pass. Car pages.

## HUDSON

- ALL 8 CYL.—NEW VALVE TAPPET CLEARANCE—.008" Intake Valves, .010" Exhaust Valves. This setting supersedes earlier data. APPLIES TO ALL 8 CYLINDER ENGINES INCLUDING 1949 MODELS.
- ALL 1948-49 MODELS—FLYWHEEL MARK CHANGE—Cyl. U.D.C.-1 is latest marking. Indicates upper dead center position of piston in #1 cylinder.
- 1948-1949 SIX CYL.—647S CARBURETOR CHANGE TO CORRECT LEAN CONDITION—See Carter WDO Carburetors in 1949 Carburetor Section.

## LINCOLN

- 1949 MODELS—CARBURETOR CHANGES—See Lincoln Dual Concentric Carburetor in 1949 Carburetor Section.
- 1949 MODELS—FRONT END SPECIFICATION CHANGES—See 1949 Lincoln Car pages for latest Kingpin Inclination and Steering Geometry settings.

## MERCURY

- 1949 MODELS—CARBURETOR CHANGES—See Mercury Dual Concentric Carburetor in 1949-50 Carburetor Section.
- 1949 MODELS—TIMING GEAR CHANGE—Fiber gear used on late '49 and available for replacement on early '49 cars. See 1949-50 Mercury Car Pages.
- 1949 MODELS—INTAKE VALVE GUIDE CHANGE—Rubber seal added. See 1949-50 Mercury Car Pages.
- 1949 MODELS—FRONT END SPECIFICATION CHANGES—See 1949-50 Mercury Car Pages for latest Kingpin Inclination and Steering Geometry settings.

## NASH

- 1949 "600"—CARBURETOR CHANGE TO IMPROVE ACCELERATION PERFORMANCE—See Carter WAI Carburetors in 1949-50 Carburetor Section.
- 1949 AMBASS.—CARBURETOR METERING ROD CHANGE—See Carter WAI Carburetors in 1949-50 Carburetor Section.

## OLDSMOBILE

- LATE '49 6 & 8—DELCO-REMY DISTRIBUTOR WITH NEW "CENTER-BEARING" BREAKER PLATE—See Delco-Remy Distributors "Center-Bearing Breaker Plate" in 1949 Electrical Equip. Section.

## PACKARD

- LATE 1948 MODELS—DELCO-REMY REGULATORS NEW "1118300" SERIES—Have screw adjustment for settings and single regulator springs. See Delco-Remy Regulators "1118300" Series in 1949 Electrical Equipment Section.
- LATE 1948 MODELS—WARNER R11 OVERDRIVE—Used on some cars. See 1949 Packard Car Pages and Warner R11 Overdrive in 1949-50 Transmission Section.
- 1949 & EARLIER MODELS—REAR AXLE PINION BEARING PRE-LOAD SETTING CHANGE—See Packard Rear Axle in 1949 Rear Axle Section.

## PLYMOUTH

- ALL 1946-47-48 MODELS—SPARK PLUG GAP CHANGE—SHOULD BE .030"  $\pm$  .002". This figure supersedes earlier data. CAUTION—This setting is not the same and DOES NOT APPLY TO 1949 MODELS.

## PONTIAC

- EARLY 1949—HYDRA-MATIC NEUTRAL SWITCH REPLACEMENT TO CORRECT INOPERATIVE STARTER—See Pontiac Hydra-Matic Drive in 1949-50 Transmission Section.
- 1937-49 MODELS—VALVE TAPPET CLEARANCE COLD SETTING—Set to .012-.014" COLD. This setting should be re-checked when engine warmed-up for limits of .011" to .013".

## STUDEBAKER

- 1950 MODELS—OIL PAN REMOVAL WITH ENGINE IN CAR—See Studebaker 1949-50 Special Data & Shop Notes.

## WILLYS

- LATE 1948 MODELS—CLUTCH RETURN CLIP SPRING INSTALLATION TO PREVENT RATTLING NOISE WHEN CLUTCH DISENGAGED—See Auburn Clutch in 1949 Clutch Section.
- 4-63 & 6-63—TOE-IN ADJUSTMENT PROCEDURE TO PREVENT UNDUE TIRE WEAR—See Willys Front Suspension in 1949 Front Suspension Section.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

### ALL MODELS

	Ft. Lbs.	In. Lbs.
Spark Plugs (14 mm. type).....	22-28	264-336
Cylinder Head Capscrews.....	65-70	780-840
Main Bearing Bolts.....	90-100	1080-1200
Connecting Rod Bolts (40,50).....	45-50	540-600
Connecting Rod Bolts (60,70,90).....	60-65	720-780
Piston Pin Clamp Bolt.....	25-30	300-360
Rocker Arm Bracket Capscrew.....	30-35	360-420
Flywheel to Crankshaft (40,50).....	35-40	420-480
Flywheel to Crankshaft (70).....	45-50	540-600
Manifold Studs.....	25-30	300-360
Timing Chain Cover.....	15-20	180-240
Balancer Bolt.....	100-110	1200-1320
Diff. carrier to Axle Hous'g.....	20-25	240-300
Brake Backing Plate to Axle.....	35-40	420-480
Wheel Bolts.....	70-75	840-900
Pitman Arm Nut.....	70-75	840-900
Front Shock Abs. to frame.....	60-65	720-780
Lower Control Arm to frame.....	45-50	540-600
Body Bolts.....	25-30	300-360

### CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature.

BUICK

**NOTE**—On models using “crimped” cylinder head gaskets, cylinder head should be tightened initially and then the entire tightening procedure repeated to compensate for gradual flattening of crimping. **Tightening Torque**—See Tightening (Torque Wrench) Specifications above.

### ENGINE MOUNTINGS

#### 1949-50 MODELS

**“CONTROLLED FREQUENCY” ENGINE MOUNTINGS:** Engine and transmission supported at 3 points on “Controlled Frequency” mountings (special synthetic rubber pads).

**Front Mountings.** At approximate center of crankcase at each side of engine. Mounting pads secured between brackets on frame and engine. Designed to support engine weight and provide torsional control.

**Rear Mounting.** At rear of transmission. Consists of: 1) Transmission Support (between legs of frame X-member), 2) Rubber Mounting Pad (on support under transmission rear bearing retainer), 3) Rubber Thrust Pad (between rear of support and thrust plate extending down from rear bearing retainer). Steel shims fitted between thrust pad and support. Mounting pad supports part of weight and thrust pad takes drive thrust from rear wheels.

**Engine Mounting (and Centering) Adjustment:** With torque tube disconnected from torque ball make adjustments as follows:

1) At front engine mountings. Tighten brackets at frame and crankcase, loosen front mounting pad top stud nuts at engine bracket on each side.

2) At rear mounting. Tighten at following points: a) transmission support ends at frame X-member, b) mounting pad at support and at transmission rear bearing retainer, c) thrust pad to thrust plate stud nuts at rear. Then loosen thrust pad to transmission support stud nuts at front. Remove steel shims ahead of thrust pad.

3) Then center engine as follows: Distance between front edge of crankshaft balancer (at horizontal center line) and center of nearest shock absorber bolt head at each side must be equal. If required, shift engine sidewise (oversize holes in engine bracket at rubber mounting permit engine movement) until distance equal at each side (engine centered in frame). Tighten front mounting pad top stud nuts at each engine bracket.

4) **Shimming rear mounting.** Insert steel shims from above (shim tabs UP on left side on Dynaflo UP on right side on Synchro-mesh Trans. cars) to snugly fill space between front face of rubber thrust pad and rear face of transmission support (CAUTION—Engine and transmission must be seated normally on mounting pads). Tighten thrust pad to transmission support stud nuts at front. Then retighten front engine mounting pad stud nuts at each side of engine. Connect torque tube to ball.

### TORQUE BALL ADJUSTMENT

#### 1949-50 MODELS

**TORQUE BALL:** Operates between an inner and outer retainer bolted to transmission rear bearing retainer. Universal joint seal provided at rear of torque ball. Shims provided between front flanged ends of inner and outer retainers for adjustment. 1949-50 Models—Synthetic rubber boot fitted from rear of outer retainer to flange of torque ball (replaces packing and spring washer formerly used on inner rear edge of outer retainer).

**Torque Ball Adjustment:** Proceed as follows:

**Disassembly**—Disconnect rear axle, move to rear. Take off torque ball boot, thrust plate, and torque ball assembly from transmission rear bearing retainer (on 40, 50, be sure to mark top of outer retainer and use mark for reassembly). Clean all parts. Replace worn or damaged parts.

**Reassembly and Adjustment**—As follows:

1)—Install guide pins in upper bolt holes in transmission rear bearing retainer.

2)—Install one shim (with 3 notches in outer edge) and inner ball retainer (with oil drain hole and notch in edge down) on guide pins.

3)—Oil bearing surfaces of retainers and torque ball, and universal oil seal in torque ball with transmission lubricant.

**NOTE**—If universal oil seal replaced, install seal with feather edge in towards ball, use bar or flat piece of metal and press seal flush with boss on flange of ball. Leather must be soft and pliable (soaked in neatsfoot oil prior to installation).

4)—Assemble torque ball in outer retainer with “TOP” mark on ball and top of retainer (mark on 40, 50; flat portion on 70) together.

5)—Use Installing Tool J 2597 and push tool (sleeve and plug) through rear side of torque ball until

leather edge of seal on plug (sleeve will drop off plug). Assemble torque ball and outer retainer (with TOP marks up) on guide pins, fill space between flanges of inner and outer retainers with shims (see Torque Ball Shims below). See that oil seal has seated on universal joint, remove tool plug.

**Torque Ball Shims**—Four thicknesses (marked by notches on outer edge) as follows:

3 Notches .....004-.008”      2 Notches .....009-.011”  
1 Notch .....011-.013”      Unmarked .....013-.015”

6)—Install thrust plate and bolts in retainers (remove guide pins and install short bolts at these holes). **DO NOT TIGHTEN BOLTS.**

7)—Tighten retainer bolts evenly while continually moving torque ball by means of hardwood club inserted in end of universal joint. Use soft mallet and tap outer retainer if ball binds while tightening bolts. **CAUTION**—For proper centering of ball and retainers, torque ball must be moved while tightening retainer bolts.

8)—Torque ball should require 5 to 10 lbs. drag with 5 $\frac{5}{8}$ ” leverage (insert hardwood club in universal, attach spring scale in groove on club 5 $\frac{5}{8}$ ” behind the rear edge of the universal). If the torque ball not within this tension, repeat centering operation and recheck tension. If further adjustment required, add torque ball shims if too tight, or remove shims if too loose (see Torque Ball Shims above) until correct adjustment secured.

**CAUTION**—Always use Tool J-2597 when installing torque ball to avoid damaging universal joint oil seal.

9)—Install torque ball boot by turning large end over small end, engage small end in groove on flange of torque ball, then turn large end to front to engage rear end of outer retainer.

10)—Re-install shims between thrust plate and thrust pad and tighten thrust plate stud nuts.

11)—Re-install rear axle assembly.

### PISTONS

#### 1949-50 MODELS

**PISTONS (REPLACEMENT SERVICE):** Pistons are fitted weight aluminum alloy type and are fitted with pins (pistons not furnished without pins).

#### Series 40, 50 Replacement Pistons

Part No.	Nominal Size	Piston Diameter
1393028.....	Standard①	3.0910-3.0922”
1393029.....	.005” Oversize	3.0966-3.0972”
1393030.....	.010” Oversize	3.1016-3.1022”
1393032.....	.020” Oversize	3.1116-3.1122”
1393033.....	.030” Oversize	3.1216-3.1222”

#### Series 70 Replacement Pistons

Part No.	Nominal Size	Piston Diameter
1393034.....	Standard①	3.4358-3.4370”
1393035.....	.005” Oversize	3.4414-3.4420”
1393036.....	.010” Oversize	3.4464-3.4470”
1393038.....	.020” Oversize	3.4565-3.4570”
1393039.....	.030” Oversize	3.4664-3.4670”

①—Standard pistons are “High Limit” type.

### PISTON RINGS

#### 1949-50 MODELS

**REPLACEMENT PISTON RINGS:** Car manufacturer supplies oversize rings in sizes listed below.

Ring Oversize	For Piston Oversizes
.010”.....	.005” to .010”
.020”.....	.011” to .020”
.030”.....	.021” to .030”

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Piston Ring Tools (1940 & later)**—Use Service Tool KMO-297-E (Series 40, 50), KMO-297-D (on Series 60, 70, 90) for removing and installing rings.

**Ring Fitting**—Fit rings to specifications listed on Buick car pages (.010" min. end gap on all rings).

**Excessive Oil Consumption Note**—When installing rings to correct this condition use a fine hone very lightly on all bores (just enough to dull glaze surface and not changing bore size). This will allow quicker break-in of new rings.

## CRANKSHAFT &amp; MAIN BEARINGS

## 1949-50 MODELS

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE**: Consists of plastic rod material supplied in envelope marked with scale which gives bearing clearance in thousandths of an inch when used to measure flattened plastigage in bearing cap. Use Plastigage as follows:

**Bearing Clearance Check**—Remove bearing cap, wipe oil from the bearing insert and shaft journal (plastigage is soluble in oil). On connecting rod, turn crankshaft to place rod 30° before lower dead center (gives minimum clearance position and places oil hole away from plastigage). On main bearings, turn crankshaft to place oil hole up to avoid oil drainage on plastigage, install paper shims in adjacent bearings to take weight of crankshaft off lower bearing being checked. Place piece of plastigage rod across full width of bearing insert in cap, re-install bearing cap and tighten bolts to recommended torque (see Tightening Specifications). Remove cap, match widest width of flattened plastigage with correct graduation of scale on envelope (marking of this graduation is bearing clearance).

## 1949-50 MODELS

**REAR MAIN BEARING OIL SEAL**: Consists of oil slinger on crankshaft operating in groove to rear of rear main bearing. Slinger groove in bearing cap has oil return hole to crankcase. Braided fabric seal fitted in groove behind slinger groove in crankcase and bearing cap. Vertical joint between cap and crankcase fitted with cork seals at each side.

**Installation**—With crankshaft removed, place new braided fabric seal in groove in crankcase with both ends extending out from bearing parting line, force seal in groove with hammer handle or smooth piece of wood so that seal seats within 1/16" of crankcase. Cut ends of seal off flush with crankcase (use razor blade or sharp knife). Repeat operation for bearing cap. Coat vertical grooves in cap with gasket cement (allow to set until tacky), use new cork gasket and fit into groove with putty knife (ends will project beyond cap). Place cap in vise to lightly compress seals in grooves, cut ends of cork seals flush with cap surface. Coat cork gaskets with vaseline, install cap in crankcase.

## VALVE SYSTEM

## ALL DYNAFLOW 1949-50 MODELS

(including LATE 1948 DYNAFLOW)

**INITIAL ADJUSTMENT OF HYDRAULIC VALVE LIFTERS**: Required only when cylinder head has been removed, valves refaced, valve lifters removed, or when setting of adjusting ball stud disturbed.

► **CAUTION**—Adjust only with lifter OFF CAM.

**Adjustment**—Set engine in firing position for cylinder to be worked on placing lifters off cam (if all

valves being adjusted use table below to avoid setting firing position for each cylinder). Turn adjusting ball stud to point where all play just removed at each end of push rod and all lash clearance removed from valve train, then turn adjusting ball stud down exactly two (2) turns. Oil groove on ball stud must be at least halfway down in rocker arm (ball stud can be turned down one additional turn—if this does not bring oil groove down, replace push rod or lifter).

**Adjusting All Valves**—By using the flywheel mark "U.D.C. 1-8" and setting engine in firing position for #1 cylinder, valves in left half of table below can be adjusted, then set #8 cylinder firing position and valves in right half of table can be adjusted.

## Hydraulic Valve Adjusting Table

No. 1 Cyl. Firing		No. 8 Cyl. Firing	
Valve No.	Valve	Valve No.	Valve
1.....	#1 Exh.	3.....	#2 Int.
2.....	#1 Int.	5.....	#3 Exh.
4.....	#2 Exh.	6.....	#3 Int.
7.....	#4 Int.	9.....	#5 Exh.
8.....	#4 Exh.	10.....	#5 Int.
11.....	#6 Int.	13.....	#7 Exh.
12.....	#6 Exh.	15.....	#8 Int.
14.....	#7 Int.	16.....	#8 Exh.

## 1949-50 MODELS

**ROCKER ARMS**: Mounted on tubular shaft and held against sides of shaft brackets by spring installed on shaft between adjacent rocker arms. Arm at each end of shaft held by spring washer assembled between two flat washers, and a cotter pin. Shaft retained by pilot setscrew installed in top of #2 bracket.

**Series 40 & 50**. Two different types of offset rocker arms used.

**Series 70**. Three types of rocker arms used (two offset type arms for intake valves—same as used on 40 & 50 above, one straight arm for all exhaust valves).

**Engines with Hydraulic Valve Lifters**. Use different rocker arms—these arms do not have small oil feed hole on underside of arm at adjusting screw end.

## 40 &amp; 50 Engines without Hydraulic Lifters

Part Number	Identification Marks <sup>①</sup>	Intake	Exhaust
1303840.....	2 Dots	0.....	1-3-5-7.....
1303841.....	1 Dot	1.....	2-4-6-8.....

## 40, 50, 70 Engines with Hydraulic Lifters

Part Number	Identification Marks <sup>①</sup>	Intake	Exhaust
1324123.....	2 Dots	0.....	1-3-5-7.....
1324122.....	1 Dot	1.....	2-4-6-8.....
1337336.....	42	X.....	All "70"

①—Stamped on adjusting screw end of rocker arm.

► **CAUTION**—Rocker arms for engines WITHOUT Hydraulic Lifters have oil feed hole for ball stud on UNDERSIDE of arm.

**Rocker Arm Installation**—Install rocker arms in the following order (numbered from front to rear):

Series	Rocker Arm Position	Identification
40 & 50.....	1-3-5-7-9-11-13-15.....	marked 1 & 1 Dot
40 & 50.....	2-4-6-8-10-12-14-16.....	marked 0 & 2 Dots
70.....	1-4-5-8-9-12-13-16.....	marked X & 42
70.....	2-6-10-14.....	marked 0 & 2 Dots
70.....	3-7-11-15.....	marked 1 & 1 Dot

► **CAUTION**—Rocker arms must not be interchanged between engines with or without hydraulic lifters.

**Rocker Arm Lubrication**: Outlet side of oil filter connected to drilled passage in cylinder head with pipe connected to top of #1 bracket. Upper pipe fitting in cylinder head restricted to provide proper oil flow.

## OIL PUMP

## 1949-50 MODELS

**OIL PUMP OVERHAUL**: With pump removed from engine, take out cotter pin and remove screen and float, wash screen in kerosene or solvent, use light air pressure at inlet tube to clean screen. Oil pressure valve must be free in body and fit hole in body through entire length (hole size should be checked for wear). Valve clearance should be .003-.006". Pump gear position on shaft should be (40, 50) 7½" minus .010", (70) 8" minus .010", from slotted end of shaft to inner end of gear. With gears and shaft installed in pump body (idler gear with rounded end of teeth on inside), lay straightedge on pump body across gears, clearance between straightedge and gears should be .0025-.004". Backlash between pump gears should be .003-.006". Install pump cover. Place screen and float assembly in position and secure with cotter pin (float must swing freely and stop must allow complete vertical movement). Use thin fibre gasket and assemble pump to crankcase. Pump shaft must turn freely (check by turning shaft every 180° through 2 complete revolutions—should turn freely within backlash limits). If shaft not free, loosen two attaching screws and shift slightly until shaft aligned. If shifting of pump does not relieve binding of shaft, remove pump and distributor and grind off end of distributor shaft and pump shaft (at tongue-and-slot coupling) for slight end clearance. **CAUTION**—Distributor gear must be removed from distributor shaft for grinding operation—make sure gear pin properly peened at both ends when re-installed.

## CLUTCH NOTES

## 1949-50 MODELS

**CLUTCH PEDAL OVER-CENTER RETURN SPRING**: Used on all models. Consists of spring connected to angular link attached to lower end of pedal or equalizer shaft and anchored to frame. This design allows spring to exert pressure to hold pedal down with clutch disengaged and out with clutch engaged. **NOTE**—Angular link not used on 38-40.

**Adjustment**—Angular link is self-positioning on pedal shaft or equalizer shaft. Tighten frame mounting bolt nut as much as possible by turning nut up to limit of threads so that maximum spring tension is secured.

**IMPORTANT**—Spring tension must always be relieved (by backing off eye-bolt nut) before disconnecting clutch linkage.

## 1949-50 MODELS

**CLUTCH YOKE BOOT ASSEMBLY**: Consists of a flexible boot installed on release yoke to seal opening in flywheel housing. Boot is mounted on yoke at outer end by bolt which also attaches release rod nut lock and has a retainer spring at inner end which engages rim of hole in housing. When installing boot, make certain that spring fingers are properly engaged in housing and that release rod nut lock is correctly positioned.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on left front door hinge pillar post and on right side of cowl.

1949 Numbers—First number for All Series:

1-5020984 ..	Flint	5-5050001	Wilmington
2-5030001 ..	Southgate	6-5054001	Atlanta
3-5036001 ..	Linden	7-5057001	Framingham
4-5043001	Kansas City		

**Identification**—First digit of serial number indicates assembly plant as listed above.

**ENGINE NUMBER:** Stamped on boss on right side of crankcase below pushrod cover.

1949 Numbers—First numbers as follows:

52209724 (for 40), 52209725 (for 50), 52209727 (70).

**Identification**—Last digit of engine no. indicates Series: 4—Series 40, 5—Series 50, 7—Series 70.

## TUNE-UP

**COMPRESSION PRESSURE:** 112 lbs. (40), 114 lbs. (50), 118 lbs. (Dynaflow 50, 70), at cranking speed.

**VACUUM READING:** Steady 18-20" idling at 8 MPH. or 450 RPM. for all models.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAPS:** .025". Limits .023-.028".

Plug Type—AC No. 48. 14 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.015" (.0125-.0175"). Cam Angle—Closed 21° to 30° with .016" gap.

► **CAUTION**—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

Breaker Arm Spring Tension—19-23 ounces.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.18-.23 microfarad.

**IGNITION TIMING:** 4° BTDC. (40, 50), 6° BTDC. (70).

► **CAUTION**—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.

Timing Procedure—See Ignition Timing.

**Flywheel Mark**—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel 1/8" wide which gives timing range of 1° (4-5° for 40, 50, 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter. **Final Ignition Setting**—Very light "ping" may occur with part throttle on a hard pull, or during acceleration between 10-20 MPH. with wide open throttle.

## CARBURETION:

**Idle Setting**—Both screws 1 turn open (Carter), 1 3/4 turns open (Stromberg). Adjust both screws exactly alike. Turning screws out gives richer mixture.

**Idle Speed**—450 RPM. (or 8 MPH. on level road in 3rd gear).

**Float Level (Carter)**—5/32" from top of each float to gasket seat on cover with valve seated (invert to check). Fuel level even with bottom of inspection hole on side of float bowl with engine idling.

(Stromberg)—Fuel level 19/32" below top edge of float bowl or even with bottom of inspection hole on side of bowl with engine idling.

**Accelerating Pump (Carter)**—Two holes in arm. Inner hole minimum charge, Outer hole maximum

(Stromberg)—3 holes. Center hole (med. stroke) normal setting.

**Choke Setting (Carter):** Centered (index mark on cover centered on reference mark on housing).

(Stromberg)—"V" mark on cover one graduation Lean or clockwise (40, 50), Centered (Series 70).

**Fuel Pump Pressure:** 4 1/2-5 1/2 lbs. at the pump outlet, 4-5 lbs. at carburetor.

**MANIFOLD HEAT CONTROL:** Setting—Thermostatic coil wind-up 1/4 turn at 70°F. (valve closed). To prevent valve rattles, counterweight should have 1/16-1/8" movement at extreme end positions, adjust by bending anti-rattle spring lower clip.

► **VALVE TAPPET CLEARANCE (SERIES 40 & 50 ENGINES WITHOUT HYDRAULIC VALVE LIFTERS):** Identified by BLUE "Buick Fireball" lettering on valve rocker arm cover. **CAUTION**—Feeler gauge used depends on engine temperature (do not use .015" feeler). To secure .015" lash at Road Operating Temperature, following shop procedure should be used: Loosen radiator cap, run engine at fast idle for 20 minutes (700 RPM. minimum—lower speed will not provide proper circulation for stabilizing water

temperature), then adjust tappets using .017" feeler as "Go", .018" feeler as "No Go" gauge.

► **ALCOHOL ANTI-FREEZE NOTE**—Must be drained and cooling system filled with water during shop warm-up for above adjustment. This anti-freeze will boil before engine temperature stabilized.

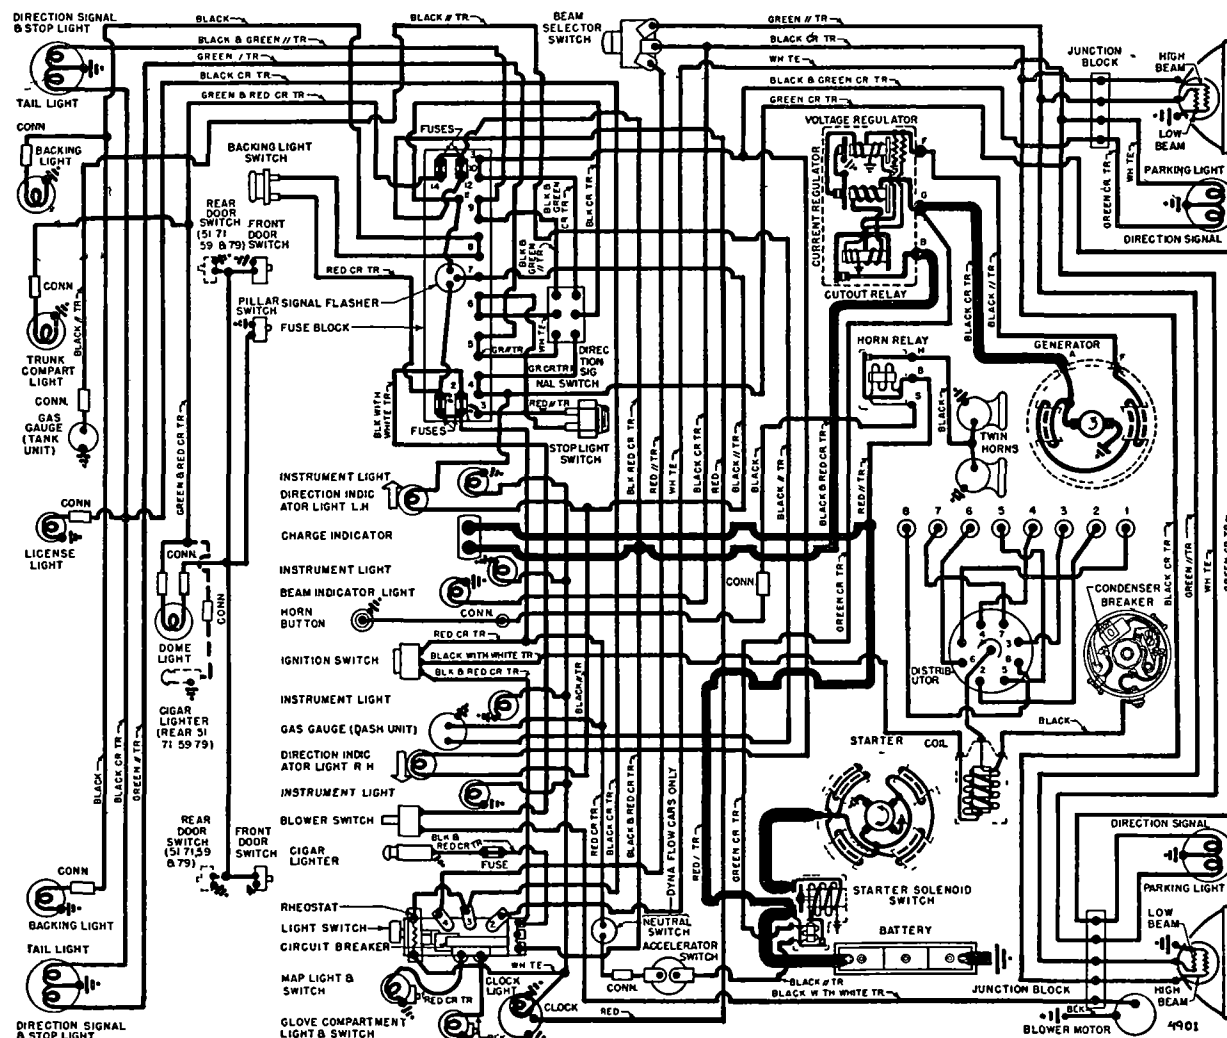

► **VALVE TAPPET CLEARANCE (SERIES 50 & 70 ENGINES WITH HYDRAULIC VALVE LIFTERS):** Identified by RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters." No service adjustment required.

**Initial Adjustment of Hydraulic Valve Lifters** (when installing cylinder head, or whenever adjusting ball stud setting disturbed): See "Valve System" in Buick Special Data.

**Valve Timing Check**—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

1949 SERIES 50 & 70 SH WN ABOVE (IF R 1949 SERIES 40—SEE 1948 DIAGRAM)

CONTINUED FROM PRECEDING PAGE

## IGNITION

**IGNITION SWITCH:** Delco-Remy No. 1116359 (40 LHD), 1116297 (40 RHD), 1116452 (50 & 70).

**Ignition Lock—**Briggs & Stratton or Delco-Remy. Buick No. 1393108.

**COIL:** Delco-Remy No. 1115328 (LHD), 1115026 (RHD). Mounted on push rod cover on right side of engine.

**Ignition Current—**2½ amperes idling, 4½ stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

**Capacity—**18-23 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110815. Automatic and vacuum advance type with new "center-bearing" breaker plate.

► **Breaker Plate Bearing Assembly—**Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 oz. min., 16 oz. max. with breaker plate assembly out of housing.

See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

**Breaker Gap—**.015". Limits .0125-.0175".

**Cam Angle—**Closed 21° to 30° with .016" gap.

► **CAUTION—**Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

**Breaker Arm Spring Tension—**19-23 ounces.

**Rotation—**Counter-clockwise viewed from above.

Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	2.....	500
7 .....	400	14.....	800
13 .....	1500	26.....	3000

**Vacuum Spark Control:** Delco-Remy No. 1116046.

**Plunger Travel—**1/8".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0° .....	5-7"
5½° .....	11° .....	10½-12½"

**Distributor Removal:** Mounted on right side of crankcase. To remove, disconnect vacuum line, take out two hold-down screws in advance arm, lift out.

## IGNITION TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
Series 40①, 50②.....	4° BTDC .....	.0063" BTDC.
Series 70②.....	6° BTDC .....	.0149" BTDC.

①—Regular Fuel. ②—Ethyl Fuel.

► **CAUTION—**Ignition timing should be set within yellow band of flywheel mark for proper engine performance. Flywheel Mark—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel 1/8" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter.

**Timing (With Synchroscope)—**Connect synchroscope to #1 spark plug lead, direct light on flywheel through inspection hole in right front face of housing. Idle engine at speed not greater than 350 RPM., loosen two distributor hold-down screws, rotate distributor until "ADV" mark on flywheel (see Flywheel Mark Note above) lines up with indicator, tighten hold-down screws. Refer to Final Ignition Setting.

**Timing (Without Synchroscope)—**With #1 cylinder on compression, turn engine over until "ADV" mark on flywheel lines up with indicator in inspection hole in right front face of housing. Loosen two distributor hold-down screws, rotate distributor until contacts begin to open, tighten hold-down screws.

**Final Ignition Setting—**Must be within yellow band of flywheel mark (leading edge desired). If timing advanced, engine roughness may result even with high octane fuel. If timing retarded to overcome heavy "ping", engine performance and economy will be lessened (higher octane fuel should be used). A very light "ping" may occur with part throttle on a hard pull, or during acceleration with wide open throttle between 10-20 MPH. Do not retard timing to eliminate this light "ping."

## CARBURETOR

**Carter WCD (All Series) or Stromberg AAV-167 (Series 40, 50), AAV-267 (Series 70).** Dual downdraft types with Automatic Choke.

	Carter	Stromberg
Series 40, 50.....	WCD 663S.....	AAV-167 Code 7-69
Series 70 .....	WCD 664S.....	AAV-267 Code 7-70

Casting No. (Carter)—546 (for 663S), 573 (664S) on face of flange.

**Casting No. (Carter)—**546 (for 663S), 573 (664S) on face of flange.

**Code No. (Stromberg)—**Stamped either on body or on a metal tag attached to the body.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump Setting):** See Tune-Up.

**Metering Jets & Rods—**See Carburetor Section for Carter & Stromberg Jet Specifications.

**Throttle Linkage Adjustment (Synchro-Mesh Transmission):** Check linkage for smooth operation of throttle valve from closed to wide open position (pedal correctly secured to floor, pedal rod free in hole in floor mat, return spring proper tension for closed position). Wide open throttle stop should be accelerator pedal striking floor mat (not throttle lever stop striking boss on carburetor). Adjust as follows: With linkage disconnected at throttle operating ball joint, open throttle valve to wide open position against stop, have man press accelerator against floor mat, adjust ball joint so screw will just enter upper hole in throttle lever, turn ball joint 1 or 2 turns clockwise, connect ball joint to throttle lever. Check choke unloader operation.

► **Throttle Linkage Adjustment (Dynaflow Drive Cars):** With engine idling at 450 RPM., clearance between edge of bracket (attached to dash at lower end of vertical equalizer shaft) and ear on lever (just above shaft operating lever) should be 1/32-1/16" (adjust at ball joint end of throttle operating rod). Check wide open position of throttle valve with engine stopped and adjust at ball joint (as above) to secure wide open throttle position with pedal striking floor mat (not throttle lever stop striking boss on carburetor). Check choke unloader operation. Check Dash-Pot Setting (following).

► **Dash Pot Setting (Dynaflow Drive Cars):** Turn adjusting screw on lever ahead of dash pot plunger for 1/64-1/32" clearance between fast idle cam and fast idle screw with choke valve held closed.

**Fast Idle:** Carter Dual (WCD) Carburetor type or Stromberg Type (AAV-167, AAV-267 Carburetors). See Carburetion Equipment Section for data.

**Setting (Carter Carb.)—**Adjust fast idle screw on throttle shaft lever for .015" (663S), .018" (664S) throttle opening with choke valve tightly closed and screw on "high" step of fast idle cam.

**Setting (Stromberg)—**Close choke valve on #53 (.0595") drill rod, adjust by bending fast idle cam rod so that locking lever on throttle valve shaft just clears loose lever on fast idle cam stud as throttle is opened and closed.

**Automatic Choke:** Carter Climatic Control (Dual Carb.) or Stromberg AAV-16, AAV-26 Type.

See Carburetion Equipment Section for complete data.

**Setting (Carter Carb.)—**Centered (index mark on cover centered on reference mark on housing).

**Setting (Stromberg)—**"V" mark on cover one graduation Lean (40, 50), Centered (70).

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544236 (40, 50 incl. Early Dynaflow), 1544638 (50 Later Dynaflow), 1544239 (70).

**Filter Element—**AC No. 19 (all).

**Servicing—**Clean and refill with 1 pint of SAE No. 50 engine oil at 5000 mile intervals.

**Fuel Pump:** AC Type AJ, No. 1537337 (40, 50), 1537338 (70), diaphragm type fuel-and-vacuum pump.

**Replacement Pump—**AC No. 529 (40, 50), 530 (70).

**Pressure—**4½-5½ lbs. at fuel pump outlet port or 4-5 lbs. at carburetor inlet.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** AC Electric type.

**Dash Unit—**AC No. 1517078 (40), 1517040 (50, 70).

**Tank Unit—**AC No. 1516277 (40), 1517146 (50, 70).

See Carburetion Equipment Section for complete data.

## BATTERY

**Delco 15E4 (40, 50); 17E4 (70); 19E4 (Optl. 50, 70); 17K4 (Export 50, 70).** 6 Volt, 15 plate (15E4), 17 plate (17E4, 17K4), 19 plate (19E4).

**Grounded Terminal—**Negative (—) to engine block.

**Location—**On right side under engine hood.

## STARTER

**Delco-Remy Model 1107049 (40 LHD), 1107078 (50 RHD), 1107953 (70 LHD), 1107057 (40, 50 RHD), 1107935 (70 RHD).**

**Armature—**1867897 (Series 40, 50), 820158 (Series 70).

**Drive—**Overrunning clutch (solenoid pinion shift).

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**24-28 ounces.

**Cranking Engine (40, 50)—**90-110 RPM., 150 amps., 4.5 volts.

(70)—105 RPM., 175 amperes, 5 volts.

**Performance Data—1107049, 57, 78**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5000.....	5.7.....	80①
12 " .....	Lock.....	3.4.....	525

**Performance Data—1107935, 53**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5500.....	5.7.....	80①
15 " .....	Lock.....	3.0.....	600

①—Includes current draw of starter switch.

**Removal:** Starter flange mounted on right front face of flywheel housing. To remove, disconnect cables, remove flange mounting screws.

**Starting Switch:** Delco-Remy Solenoid Switch No. 1118019 controlled by Stromberg Starter Switch No. 385000 (Cars with Stromberg Carb.), Carter Car Starter Model 192-11U (Cars with Carter Carb.).

**Starter Switch Setting—**See Stromberg or Carter Carburetors in Carburetor Section.

► **Dynaflow Neutral Safety Switch—**Delco-Remy No. 1997838. At lower end of steering column. Connected in starter control circuit so that starter operative only with lever in "N" Neutral or "P" Parking.

► **Neutral Safety Switch Adjustment—**See "Buick Dynaflow Drive" in Transmission Section.

## GENERATOR

**Delco-Remy 1102679 (40), 1102709 (50), 1102708 (70).** Two brush types with voltage & current regulation. Armature—D-R 1877806 (1102679), 1912599 (1102708, 9).

**Charging Rate Adjustment—None.** See Regulator. **Maximum Charging Rate—(1102679)** 34-36 amperes, 8.0 volts, 2600 RPM., 25 MPH. (1400 Eng. RPM), Hot. (1102708, 9)—40 amperes, 8.0 volts, 2400 RPM., 25 MPH. (1250 Eng. RPM.), Hot.

### Performance Data—Cold

	Amperes	Volts	R.P.M.
1102679	30①	8.0	1825
1102708, 9	40	8.0	1950

①—Not maximum output. See Current Regulator.

**Brush Spring Tension—25 ounces each.**

**Field Current—1.75-1.9 amperes** (for 1102679 generator), 1.90-2.05 amperes (1102708, 9), at 6.0 volts.

**Rotation—Counter-clockwise at commutator end.**

**Removal:** Pivot mounted at left front of engine. To remove, disconnect leads, remove pivot & clamp bolts.

**Belt Adjustment:** ½" belt deflection with light pressure at point midway between generator and fan.

## REGULATOR

**Delco-Remy 1118301**.....for 1102679 Generator  
**Delco-Remy 1118357**.....for 1102708 & 9 Generators

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. See *Electrical Equipment Section for complete data.*

**CAUTION—**Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

### Cutout Relay

**Cuts In—5.9-6.8 volts hot** (set to 6.4 volts hot).

**Contact Gap—.020"** (same for both contacts).

**Air Gap—.020"** (with contacts just closed).

### Voltage Regulator

**Setting—7.0-7.7 volts hot** (set to 7.4 volts hot).

Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

**Air Gap—.075"** with armature pressed down to point where contacts are just touching.

**Checking & Adjustm't—See Electrical Equip. Section.**

### Current Regulator

**Setting (1118301)—32-40 amps. hot** (set at 36).

(1118357) 40-46 amps. hot (set at 42 amps. hot).

**Air Gap—.075"** with armature pressed down to point where contacts are just touching.

**Checking & Adjustm't—See Electrical Equip. Section.**

## LIGHTING

**Headlamps:** Guide "Sealed Beam" type.

See *Electrical Equipment Section for complete data.*

**Adjustment—**Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator—**In upper edge of speedometer dial. Lighted when Upper (Country) Beam in use.

**Direction Signal:** Buick. See *Electrical Equip. Section.*

**Direction Signal Indicators—**Left and right arrows in left and right instrument clusters.

### Switches

**Lighting—D-R No. 1995016 (40), 1995031 (50, 70).**

**Beam Selector—D-R No. 1997008, 1997015 (RHD).**

**Instrument—(Series 40)** Delco-Remy No. 1997762.

(Series 50 & 70) Part of Lighting Switch. Rheostat operated by turning Light Switch Knob.

**Glove Box—D-R No. 1997747 (40), 1997771 (50, 70).**

**Direction Signal—(40)** D-R 1995537, 1995538 (RHD). (Series 50 & 70) D-R No. 1995529, 1995530 (RHD). (Dynaflow) D-R No. 1995534, 1995545 (50 RHD).  
**Back-Up Light—**Delco-Remy No. 1997825 (synchromesh transmission), 1997847 (for Dynaflow).

## MISC. ELECTRICAL

► **DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENTS (SERIES 50 & 70):** Located on left side of dash under hood with removable plate screwed to dash.

**THERMOSTATIC RELAY:** Delco-Remy. On lighting switch (protects lighting circuits). Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adjustable.

### SERIES 40

**FUSES:** Clock—3 ampere SFE. In clock lead.

**Instrument Lights—**14 ampere SFE. On instr. switch.

**Direction Signal—**14 ampere SFE. In flasher lead.

**Blower—**14 ampere SFE. On back of switch.

**Defroster—**14 ampere SFE. On back of switch.

### SERIES 50 & 70

► **FUSE BLOCK:** On lower flange of instrument panel at left of steering column. Four fuses:

1)—**Direction Signal.** 15 ampere 3AG for Dir. Sig. Lamps and Back-Up & Stop Lamps.

2)—**Dome.** 30 ampere SFE for Dome Lamp, Trunk Lamp, and Rear Cigar Lighter.

3)—**Blower.** 14 ampere SFE for Heater Blower.

4)—**Clock.** 3 ampere 1AG. Clock power.

**HORNS:** Delco-Remy No. 1999519 (Low Note—Right Horn), 1999520 (High Note—Left Horn). Vibrator type, blended tone, twin horns operated by relay.

### Current (at 6 Volts)

1999519 (Low Note).....19-21 amperes .....044-.049"

1999520 (High Note).....18-20 amperes .....034-.039"

**Horn Relay:** Delco-Remy No. 1116775.

**Contacts Close—**2.75-4.0 volts (set to 3.5 volts).

**Contact Gap—.027". Air Gap .014"** (contacts closed).

## ENGINE

► **ENGINES WITH HYDRAULIC VALVE LIFTERS:** Used on cars with Dynaflow Drive. These engines use different camshaft, push rods, rocker arms, ball studs, and valve springs.

**Identification—**By RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters."

**ENGINE SPECIFICATIONS (for SERIES 40 and 50):** Eight cylinder, Overhead Valve ("I" Head) type.

► **Bore—**3.091-3.094". **NOTE—.010"** Oversize production standard engine marked by stamped dash (—) approx. ¼" long following engine number.

**Stroke—**4½". **Displacement—**248.1 cu. ins.

**Rated Horsepower—**30.63.

**Developed Horsepower—**110 (40), 115 (50 std.), 120 (40, 50 with Dynaflow) at 3600 RPM.

**Compression Ratio—**6.3-1 (40), 6.6-1 (50 Synchromesh), 6.9-1 (40, 50 Dynaflow). Increased ratio on Dynaflow obtained by milling cylinder head.

**NOTE—.050"** thick Steelbestos gasket used on 40.

**.015"** thick lacquered steel gasket used on 50.

**Compression & Vacuum Reading—See Tune-Up.**

**ENGINE SPECIFICATIONS (SERIES 70 Engines):** Eight cylinder, Overhead Valve ("I" Head) type.

► **Bore—**3.436-3.439". **NOTE—.010"** Oversize production standard engine marked by stamped dash (—) approx. ¼" long following engine number.

**Stroke—**4 5/16". **Displacement—**320.2 cu. ins.

**Rated Horsepower—**37.81.

**Developed Horsepower—**150 at 3600 RPM.

**Compression Ratio—**6.9-1.

**Compression & Vacuum Reading—See Tune-Up.**

**TIGHTENING TORQUES:** See *Buick Special Data.*

**CYLINDER HEAD INSTALLATION:** See *Buick Special Data.*

**"CONTROLLED FREQUENCY" ENGINE MOUNTINGS:** See *Buick Special Data.*

**PISTONS:** Light weight, aluminum alloy, four ring, Turbulator top, cam ground, transverse slot type with Anodized finish.

**Weight (stripped)—**13.776 ozs. (40, 50), 17.94 ozs. (70).

**Length—**4 21/64" (40, 50), 4 9/16" (70).

**Removal—**Pistons and rods removed from above.

**Clearance—**See Fitting New Pistons below.

**Top Land** **Top—Skirt—Bottom**

Series 40, 50.....023-.030".....0021".....0015"

Series 70.....026-.033".....0023".....0017"

**NOTE—**Car manufacturer recommends reboring if taper exceeds .005", or out-of-round over .003".

**Replacement Pistons:** See *Buick Special Data.*

**Fitting New Pistons:** Use feeler stock ¼" wide (for "GO" gauge), ½" wide ("NO GO" gauge) and 12" long suspended in cylinder at right angles to engine center-line, invert piston in cylinder. With piston and cylinder clean and dry and at 70°F., piston should pass through cylinder of own weight with "GO" gauge and should hold its own weight with "NO GO" gauge as follows:

	Clearance Limits	Feeler Gauges
	Top of Skirt	"GO" "NO GO"
Series 40, 50.....	0018-.0024"	0015".....002"
Series 70.....	0020-.0026"	0015".....002"

**Installing Pistons:** Hollow side of head to camshaft.

**PISTON RINGS:** Two compression (upper inner edge stepped or beveled), one slotted oil ring in #3 groove, "Flex-fit" oil ring in #4 groove. All rings above pin. #1, #2, and #4 rings are coated.

**Ring** **Width** **End Gap** **Side Clearance**

① Compr. (#1, 2) .....3/32".....010-.020".....0015-.0035"

Oil (#3) .....1875".....010-.020".....0015-.003"

Oil (#4) .....1860".....② .....0015-.0035"

①—Wall thickness .160" Upper (40, 50), .140" Lower (40, 50); .170" Upper (70), .150" Lower (70).

②—End Gap .0015" (segmental). No checking or fitting required on this "Flex-fit" ring.

**Replacement Rings:** See *Buick Special Data.*

**PISTON PIN:** Clamped in rod (pin hole in new pistons diamond-bored and oil-grooved).

**Diameter—**.8124-.8129" (40, 50), .8744-.8749" (70).

**Length—**2 11/16" (40, 50), 3 1/16" (70).

**Pin Fit in Piston—.0003-.0004"** clearance or easy finger push fit at 70°F.

**Replacement Pins:** Std. and .003", .005" oversize. Pins fitted and furnished with new pistons (pistons not furnished without pins).

► **CONNECTING ROD (CAST BEARING):** 1st 5000 Eng.

**Length—**7½" (40, 50), 8¼" (70).

**Weight—**(40, 50) 1.779 lbs., (70) 2.224 lbs.

**Crankpin Journal Diameter—**(40, 50) .1997-1.999".

(70) 2.248-2.249".

**Lower Bearing—**Centrifugal cast (spun) babbit.

**Clearance—.0015-.002". Sideplay—.005-.010".**

**Bearing Adjustment:** Shims. Do not file rods or caps. Remove shims until slight drag secured when rocking crankshaft or moving rod back and forth on

## ENGINE

## CONTINUED FROM PRECEDING PAGE

crankpin, then install 3 additional shims (shim pack should be equal on each side as near possible).

**Replacement Bearings:** Install replacement rods.

**Installing Rods:** Ridge on edge of cap and boss in web of rod must be toward rear of engine. Oil hole in rod toward camshaft.

► **CONNECTING ROD (REPLACEABLE PRECISION BEARING):** After Approx. First 5000 Engines.

Length— $7\frac{7}{8}$ " (40, 50),  $8\frac{1}{4}$ " (70).

Weight—(40, 50) 1.804 lbs., (70) 2.224 lbs.

Crankpin Journal Diameter—(40, 50) 1.998-1.999". (70) 2.248-2.249".

**Lower Bearing—**Replaceable, precision type. No shims used.

Clearance—.0008-.0015" (new), .002" max. (used).

Sideplay—.005-.010".

► **PLASTIGAGE** for checking bearing clearance. See "Crankshaft & Main Bearings" in Buick Special Data.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:** Undersize bearings marked with number on outer surface of near tang indicating size.

**Installing Rods:** Same as for Cast Bearing type above.

**CRANKSHAFT:** Five bearing, counterweighted type.

Journal Diameters—(40, 50) #1, 2.3105-2.3115"; #2, 2.3735-2.3745"; #3, 2.4355-2.4365"; #4, 2.4985-2.4995"; #5, 2.5605-2.5615".

(Series 70) #1, 2.5605-2.5615"; #2, 2.6235-2.6345"; #3, 2.6855-2.6865"; #4, 2.7485-2.7495"; #5, 2.8105-2.8115".

Bearing Diameters—(40, 50) #1, 2 5/16"; #2, 2 3/8"; #3, 2 7/16"; #4, 2 1/2"; #5, 2 9/16".

(Series 70) #1, 2 9/16"; #2, 2 5/8"; #3, 2 11/16"; #4, 2 3/4"; #5, 2 13/16".

**NOTE—**Car manufacturer recommends crankshaft be replaced or reground if journal out-of-round over .0015".

**Bearings—**Steel-backed, Durex 100-A, slip-in type. Clearance—.0008-.0015" (new), .002" max. (used).

► **PLASTIGAGE** for checking bearing clearance. See "Crankshaft & Main Bearings" in Buick Special Data.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

► **CAUTION—**Arrow on main bearing caps must point toward front of engine when installed.

**Replacement Bearings:** Single bearings in std. size, .020" and .022" undersize. Complete sets in std. size, .0012", .002", .020", .022" undersize.

Rear Bearing Oil Seal data, see Buick Special Data.

**End Thrust:** #3 (center bearing). Endplay .004-.008".

**CAMSHAFT:** 5 bearing. Non-adjustable chain drive.

► **CAUTION—**Two types of camshafts used, one for engines with plain sleeve valve lifters, one for engines with hydraulic valve lifters (identified by  $\frac{1}{2}$ " wide machined cut 60° around shaft between #6 & #7 cams). Engine operation will be rough and noisy if shafts are interchanged on either engine.

Bearing Diameters (for All Series)—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

**Bearings—**Steel-backed, babbit-lined.

Clearance—.0005-.0035". **NOTE—**Replacement bearings must be line reamed after installation.

**End Thrust:** Spacing ring between front bearing journal and thrust plate (on front of crankcase behind camshaft sprocket). Endplay—.004-.008".

**Timing Chain:** Link Belt. Width 1". Pitch .500". Length (40, 50) 49 links or  $24\frac{1}{2}$ ", (70) 50 links or 25".

**Camshaft Setting:** Mesh copper-plated washers on chain (10 links apart) with sprocket marks (crankshaft and camshaft turned so that marks are up).

► **VALVES: CAUTION—**Engines with hydraulic valve lifters use different camshaft, push rods, rocker arms, ball studs, and valve springs.

## VALVE SPECIFICATIONS—SERIES 40 &amp; 50

	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	3715-.3725"	5 7/64"
Exhaust	1 11/32"	3711-.3719"	5 7/64"
	Seat Angle	Lift	Stem Clearance
Intake	45°	.348"-.0025"	(.0015-.0035")
Exhaust	45°	.342"-.003"	(.0021-.0039")

## VALVE SPECIFICATIONS—SERIES 70

	Head Diameter	Stem Diameter	Length
Intake	1 25/32"	3715-.3725"	5 1/4"
Exhaust	1 7/16"	3711-.3719"	5 1/4"
	Seat Angle	Lift	Stem Clearance
Intake	45°	.347"-.0025"	(.0015-.0035")
Exhaust	45°	.348"-.003"	(.0021-.0039")

**Valve Guides:** Upper end of guide 1 5/32" above head. Finish ream replacement guides after installation to .374-.375" (use Valve Guide Reamer J129-3).

► **Valve Springs: CAUTION—**Engines with hydraulic valve lifters use different valve springs.

Free Length—1 29/32" (inner), 2 11/32" (outer).

## VALVE SPRING SPECIFICATIONS

## ► ENGINES WITH ADJUSTABLE VALVE LASH

	Inner Spring			Outer Spring		
	Lbs. Press.	Lgth.		Lbs. Press.	Lgth.	
Closed	17½-22½	1 21/32"	.....	29½-34½	1 15/16"	
Open	48-54	1 5/16"		74-80	1 19/32"	

## ► ENGINES WITH HYDRAULIC VALVE LIFTERS

	Lbs. Press.	Lgth.
Closed	22-26	1 21/32"
Open	49-55	1 5/16"

**Valve Lifters (Engines with Adjustable Valve Lash):** Plain sleeve, barrel type. Diameter .9975-.9985" Clearance in Crankcase—.0005-.0025".

► **Hydraulic Valve Lifters:** New hydraulic valve lash adjuster maintaining zero valve clearance used on cars equipped with Dynaflo Drive.

See Miscellaneous Section for complete data.

**Identification—**By RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters."

► **CAUTION—**Engines with hydraulic valve lifters are equipped with adjusting ball studs in rocker arms but these are used only for initial adjustment of hydraulic lifters (when installing cylinder head, etc.). NO SERVICE ADJUSTMENT REQUIRED.

**NOTE—**Car manufacturer recommends that properly operating hydraulic valve lifters be left alone. Do not disassemble and clean when removed from engine for other work (wrap in clean paper to prevent entrance of dirt).

► **Initial Adjustment of Hydraulic Valve Lifters (required when installing cylinder head, or whenever adjusting ball stud setting disturbed):** See "Valve System" in Buick Special Data.

**Rocker Arms: CAUTION—**Engines with hydraulic valve lifters use different rocker arms and ball studs. Rocker arms used with hydraulic valve lifters do not

have small oil hole on underside of arm. Ball studs used with hydraulic lifters have drilled oil hole through center for oil feed to lifter through push rod.

**Rocker Arm Installation—**See Buick Special Data.

## VALVE TIMING

► **VALVE TAPPET CLEARANCE (SERIES 40 & 50 ENGINES WITHOUT HYDRAULIC VALVE LIFTERS):** Identified by BLUE "Buick Fireball" lettering on valve rocker arm cover. **CAUTION—**Feeler gauge used depends on engine temperature (do not use .015" feeler). To secure .015" lash at Road Operating Temperature, following shop procedure should be used: Loosen radiator cap, run engine at fast idle for 20 minutes (700 RPM. minimum—lower speed will not provide proper circulation for stabilizing water temperature), then adjust tappets using .017" feeler as "Go", .018" feeler as "No Go" gauge.

► **ALCOHOL ANTI-FREEZE NOTE—**Must be drained and cooling system filled with water during shop warm-up for above adjustment. This anti-freeze will boil before engine temperature stabilized.

► **VALVE TAPPET CLEARANCE (SERIES 50 & 70 ENGINES WITH HYDRAULIC VALVE LIFTERS):** Identified by RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters." No service adjustment required.

**Initial Adjustment of Hydraulic Valve Lifters (when installing cylinder head, or whenever adjusting ball stud setting disturbed):** See "Valve System" in Buick Special Data.

**Valve Timing:** See Camshaft Setting above.

## VALVE TIMING—SERIES 40 &amp; 50

**Intake Valves—**Open 13° BTDC. Close 68° ALDC.

**Exhaust Valves—**Open 55° BLDC. Close 22° ATDC.

## VALVE TIMING—SERIES 70

**Intake Valves—**Open 14° BTDC. Close 71° ALDC.

**Exhaust Valves—**Open 56° BLDC. Close 25° ATDC.

**Valve Timing Check—**For engines with adjustable valve lash set tappet clearance for .015" road operating lash (see above), on engines with hydraulic lifters run engine for approx. 1 minute to fill lifters with oil. #2 or #7 exhaust valve should be .145" open (Series 40 & 50), .155" open (Series 70), with #1 & #8 pistons at top dead center and flywheel mark "UDC/1&8" visible through inspection hole in right front face of housing. **NOTE—**This is actual valve opening and should be checked with dial indicator mounted on cylinder head.

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and restricted flow to rocker arm bearings, push rods and hydraulic valve lifters (if used).

**NOTE—**Valve system feed taken from outlet side of oil filter.

**Crankcase Capacity—**Refill—5½ qts. (40, 50), 7 (70).

**Dry Capacity—**6½ qts. (40, 50), 8 qts. (70).

**NOTE—**If oil filter is dry add 1½ qts. to capacities.

**Normal Oil Pressure—**35 lbs. at 35 MPH.

**Oil Pressure Regulator—**Non-adjustable spring and valve type on oil pump. Opens at 35 lbs.

**Oil Pump:** Helical gear type in crankcase.

**Oil Pump Clearances—**See Buick Special Data.

**Crankcase Ventilation:** Filter in oil filler breather cap and in crankcase ventilator inlet on left side of engine. Outlet pipe mounted on right side of engine.

**Cleaning**—Wash both filter elements every 5000 miles (when carburetor air cleaner serviced).

**Oil Filter:** AC with by-pass valve (opens 7-9 lbs.).

**Filter Element**—AC No. P-127 folded paper low-restriction type. **CAUTION**—Element not interchangeable with 1948 type. Change element 1st 2000 & 5000 miles, then every 5000 miles.

## COOLING

**Cooling System:** Pressure type with pressure valve and vacuum valve (relief valves) in filler cap. Re-circulation of water through engine (with thermostat closed) permitted by fixed by-pass passage between water outlet and pump inlet.

**Capacity—No Heater**—(Series 40 and 50) 13 qts., (40 & 50 Dynaflo) 14 qts., (70) 16¾ qts.

**With Heater**—Add 1¼ qts. to above capacities.

► **Pressure Valve**—**CAUTION**—Two types used:

1)—AC No. 850563—7 lb. type. For all Series 40 & 50, and Series 70 after Serial Nos. below.

2)—AC No. 850559—13 lb. type. For Series 70 UP TO Serial Numbers: Flint 15122924, California 25093697, Linden 35099981, Kansas City 45107724, Wilmington 55112152, Atlanta 65116047, Framingham, 75118525.

**Water Pump:** Packless, sealed ball-bearing type.

See *Water Pump Section* for complete data.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** Harrison. In cylinder head water outlet. Buick No. 3122282 Std. 151°, No. 3122285 Hi. T. 182°.

**Setting**—(151°) starts to open 148-155°F. Fully open not over 175°F.

**Temperature Gauge:** AC No. 1512091 (40), 1517013 (50, 70). Thermo (not electric) gauge.

See *Miscellaneous Section* for complete data.

## CLUTCH

**Own "Crown Spring" with Borg & Beck or Long Driven Member.** Single plate, dry disc type.

See *Clutch Section* for complete data.

**Facings**—Woven type, 2 used. Inside diameter 6". Outside Diameter 10". Thickness .125" (1/8").

**Pedal Adjustment:** Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod linking cross-shaft lever to clutch fork. Pedal positioned by rubber bumper under toeboard.

► **Correction of Low & Reverse Gear Clash due to Spinning Clutch Plate**—Car manufacturer permits reducing pedal lash to ½" in exceptional cases where gear clash continues (with regular ¾-1" pedal lash) beyond normal waiting period for plate to stop.

**Clutch Over-Center Spring:** See *Buick Special Data*.

**Removal:** Remove Rear Axle and Transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

## TRANSMISSION

**Own Make.** All Helical Gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with steering column mounted shift control. See *Transmission Section* for complete data.

**Transmission Control:** Buick type remote control. See *Transmission Section* for complete data.

**Removal:** Disconnect Rear Axle (see data following), drain transmission, fill with clean gasoline or kerosene and run approx. 15 seconds in Neutral, drain cleaner. Disconnect speedometer cable, lower shift rod, and selector rod. Take out toggle spring and extension, remove shift lever and lock washer from selector shaft—hold shift lever in neutral when removing attaching bolt—remove outer selector lever. Reinstall support bar (see Note below) under rear end of oil pan positioning left hook over frame between brake master cylinder and clutch release equalizer, tighten nuts on two hooks evenly. Remove transmission mounting as follows: Disconnect rubber thrust pad from rear of transmission support by taking off 3 nuts and bolt plate, remove shims from behind support, disconnect mounting pad on top of support by taking out 2 attaching bolts and bolt plate, raise engine by turning up on nuts on two support hooks evenly to take load off transmission support, take out transmission support (disconnect at frame ends), and remove thrust pad from thrust plate. Install guide pins J-851 in place of two top mounting bolts, remove remaining mounting bolts, pull transmission straight back and lower from car. For instructions on shimming Rear Mounting when installing transmission, see "Engine Mounting" in *Buick Special Data*.

**Engine Support Bar Note**—Consists of length of 2 x 4 (approx. width of frame) with hole through each end to take hooked rods (hook rests on top of frame. Raise and lower support by nuts on rods.

**Lubrication Note**—When transmission reinstalled in car, inject ½ pint of transmission lubricant through universal joint yoke before attaching torque tube to transmission.

## DYNAFLOW DRIVE

STD. ON SERIES 70, OPTL. ON SERIES 50

**Own Make.** Torque Converter and hydraulically operated planetary unit with manual control.

See *Transmission Section* for complete data.

► **Throttle Linkage Adjustment and Dash Pot Setting on Dynaflo Drive Cars**—See *CARBURETOR*.

**Lubrication**—Check fluid level in transmission every 1000 miles, drain and refill every 15,000 miles.

► **Use only Special Buick Oil for Dynaflo Drive or Automatic Transmission Fluid Type "A".**

**Capacity**—(50) 8½ quarts, (70) 10 quarts.

**Draining & Refilling**—See "Buick Dynaflo Drive" in *Transmission Section*.

**Checking Fluid Level**—Engine must be idling with selector lever at "P" (parking) & transmission oil warm. Raise right side of floor mat, take off cover in floor above transmission, lift out oil gauge rod. Add fluid to "FULL" mark level with engine idling.

► **Late 1949 Cars**—Oil gauge rod under right side of hood between battery and engine.

► **CAUTION**—Engine must be idling with transmission in Parking position and transmission oil warm when checking Dynaflo Drive Fluid Level.

## UNIVERSALS

**Saginaw (All Series) or Spicer (Series 40 & 50).** One used (in torque ball at rear of transmission).

See *Universals Section* for complete data.

**NOTE**—New rubber seal used on torque ball.

► **Torque Ball Adjustment**—See *Buick Special Data*.

## REAR AXLE

**Own Make.** Hypoid Gear, semi-floating type with Torque Tube Drive. **NOTE**—Pinion rear bearing now consists of 2 roller bearings (formerly one).

See *Rear Axle Section* for complete data.

**Ratio**—4.454-1 (49:11) Std. 40 & All 50.

4.1-1 (41:10) Std. 70, Optl. 40 & 50 S-M trans.

**NOTE**—Stamped nos. under housing indicate ratio.

**Backlash**—.008-.010" (desired), .008-.012" (limits).

**Screw adjustment.**

**Removal:** Raise rear end of car and set on car stands. Disconnect parking brake cable at rear brake sheave and at bracket of front end of torque tube, hydraulic brake line from pipe at frame X member and remove retainer. Disconnect lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs, and torque tube from torque ball. Hoist rear end of car and roll axle assembly out.

► **CAUTION**—Torque tube should not be disconnected from carrier (except for gasket replacement).

**Axle Shaft Removal:** See *Rear Axle Section*.

**Wheel Bearing Adjustment**—None.

**Rear Suspension:** Coil springs & conventional axle. See *Rear Axle Section* for complete data.

## SHOCK ABSORBERS

**Delco Model 1948-A (front), Model 2105-C, D (rear).**

Double acting, Hydraulic (parallel cylinder rear).

See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**Kinpin Inclination**—4¼° crosswise for ¾° Camber.

**Camber**—¾° Positive (¾° Pos. to ¾° Neg.) and equal for both wheels within ¾° at curb weight.

**Caster**—¾° Positive (1¼° Pos. to 1½° Pos.) equal for both wheels within ½° at curb weight. Adjustable.

**Toe In**—1/16-1/8". Adjust both tie rods equally.

► **CAUTION**—Tie rod clamps must be within ½" of end of tube and ear of clamp must overlap slot in tube not less than 1/16".

**Steering Geometry (Toe Out on Turns)**—With outer wheel turned 20°, inner wheel turns 21½° ± ¾°.

## STEERING GEAR

**Saginaw.** Ball bearing Worm-and-Nut type.

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without Eccentric Adjustment. Parking brake "Step-on" lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Drums**—Cast-iron with steel flange. Drum diameter 11.997-12.003". Max. rebore .060" O.S. (.030" cut).

**Lining**—Moulded. Width (40, 50) 1¾", (70) 2¼".

**Thickness** 3/16". Length per shoe: Primary (40, 50) 9 15/16", (70) 10"; Secondary: (40, 50) 12 3/4", (70) 12 15/16".

**Clearance**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Step On (Parking Brake):** See *Service Brakes* (above).

## MISC. MECHANICAL

**Power Operated Convertible Tops, Windows, & Front Seat:** Hydro-Electric type (hydraulic actuation with motor-driven pump supplying oil under pressure).

See *Miscellaneous Section* for complete data.

**Windshield Wiper:** Cable Operated—Vacuum type.

See *Miscellaneous Section* for complete data.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on left front door hinge pillar post and stamped on left front frame "X" bar extension just ahead of dash.

**1950 Numbers—First numbers:**

1-5360001 .. Flint	5-5388001 Wilmington
2-5370001 Southgate	6-5393001 Atlanta
3-5374001 Linden	7-5397001 Framingham
4-5380001 Kansas City	

**Identification—**First digit of serial number indicates assembly plant as listed above

**ENGINE NUMBER:** Stamped on boss on right side of crankcase below pushrod cover.

## TUNE-UP

**COMPRESSION PRESSURE:** 112 lbs. (std), 118 lbs. (with Dynaflo) at cranking speed.

**VACUUM READING:** Steady 18-20" idling at 8 MPH. or 450 RPM.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See Diagram.

**SPARK PLUG GAPS:** .025". Limits .023-.028".

**Plug Type—**AC No. 48, 14 mm. Metric.

**DISTRIBUTOR: Breaker Gap—.015"** (.0125-.0175").

**Cam Angle—**Closed 21° to 30° with .016" gap.

► **CAUTION—**Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".

**Breaker Arm Spring Tension—**19-23 ounces.

**Automatic & Vacuum Advance—**See Ignition.

**Condenser Capacity—**18-.23 microfarad.

**IGNITION TIMING:** 4° BTDC.

► **CAUTION—**Ignition timing should be set within yellow band of flywheel mark for proper engine performance.

**Timing Procedure—**See Ignition Timing.

**Flywheel Mark—**"ADV. 4°" followed by yellow knurled section on flywheel 1/8" wide which gives 1° timing range of 4° to 5°. Index mark located on edge of timing hole under cover on housing above starter.

**Final Ignition Setting—**Very light "ping" may occur with part throttle on a hard pull, or during acceleration between 10-20 MPH. with wide open throttle

## CARBURETION:

**Idle Setting—**Adjust both screws exactly alike for smooth idle (7/8-1 1/8 turns open for Carter). Turning screws out gives richer mixture.

**Idle Speed—**450 RPM. (or 8 MPH. in high).

**Float Level—**(Carter) 5/32" from top of each float to gasket seat on cover with valve seated (invert to check). Fuel level even with bottom of inspection hole on side of float bowl with engine idling.

(Stromberg)—Fuel level even with bottom of inspection hole on side of bowl with engine idling.

**Accelerating Pump—**(Carter) Two holes in arm. Inner hole minimum charge. Outer hole maximum.

**Choke Setting (Carter):** One Notch Rich.

**Fuel Pump Pressure:** 4 1/2-5 1/2 lbs. at pump outlet, 4-5 lbs. at carburetor.

**MANIFOLD HEAT CONTROL: Setting—**Thermostatic coil wind-up 1/4 turn at 70°F. (valve closed). To pre-

vent rattles, counterweight should have 1/16-1/8" movement at extreme end positions, adjust by bending anti-rattle spring lower clip

► **VALVE TAPPET CLEARANCE (ENGINES WITHOUT HYDRAULIC VALVE LIFTERS):** Identified by BLUE "Buick Fireball" lettering on valve rocker arm cover. **CAUTION—**Feeler gauge used depends on engine temperature (do not use .015" feeler). To secure .015" lash at Road Operating Temperature, following shop procedure should be used: Loosen radiator cap, run engine at fast idle for 20 minutes (700 RPM. minimum—lower speed will not provide proper circulation for stabilizing water temperature), then adjust tappets using .017" feeler as "Go", .018" feeler as "No Go" gauge

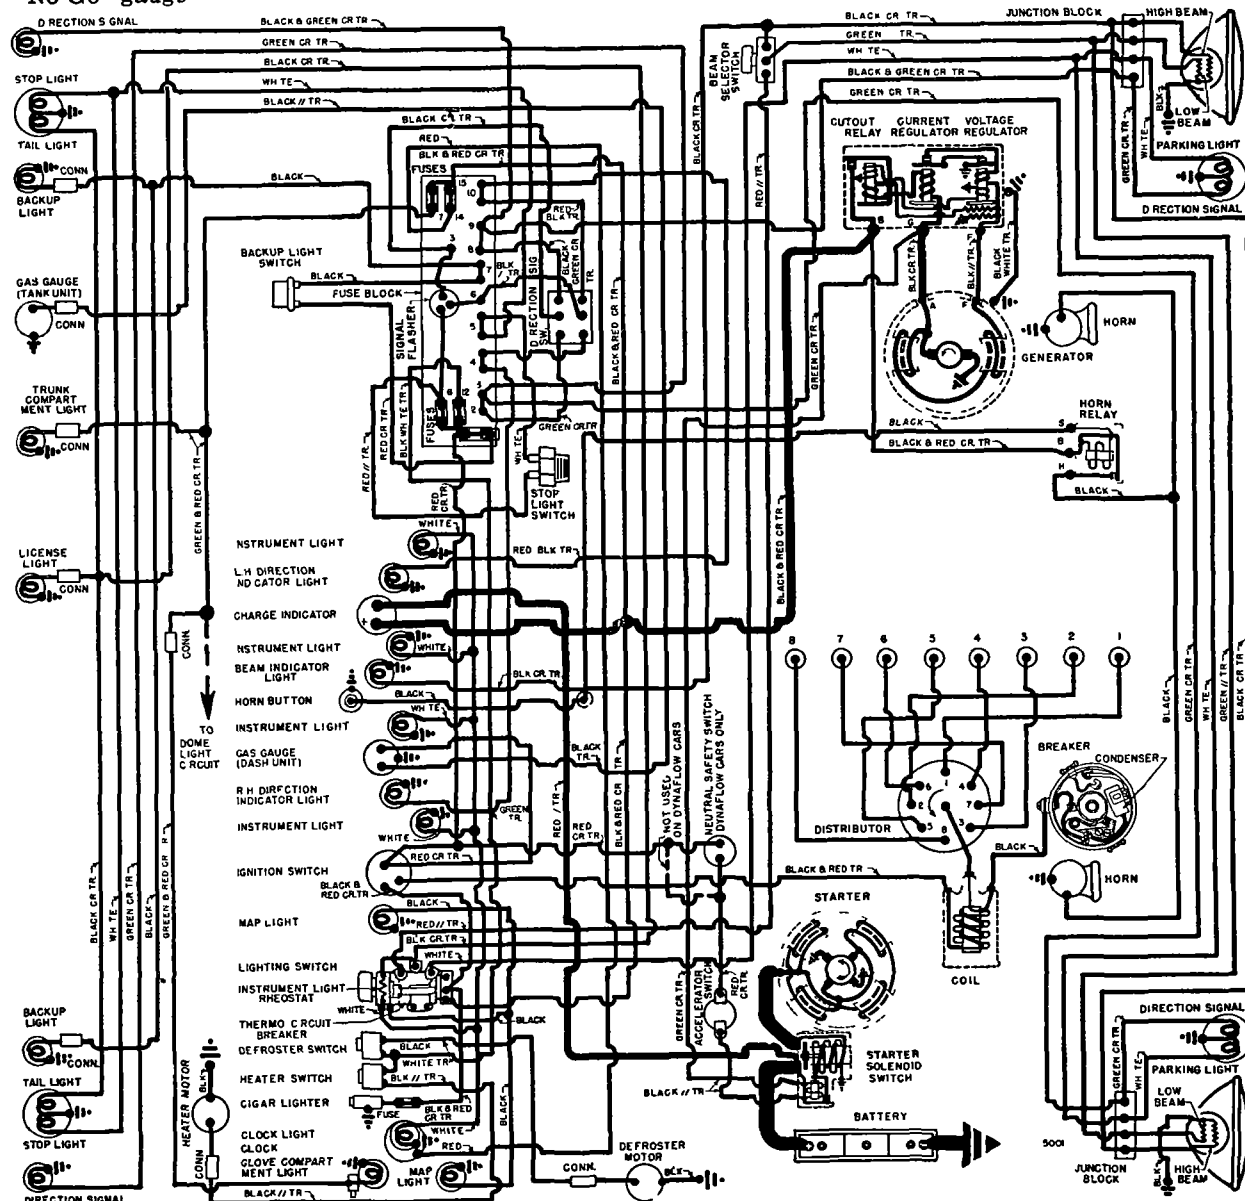

► **ALCOHOL ANTI-FREEZE NOTE—**Must be drained and cooling system filled with water during shop warm-up for above adjustment. This anti-freeze will boil before engine temperature stabilized

► **VALVE TAPPET CLEARANCE (ENGINES WITH HYDRAULIC VALVE LIFTERS):** Identified by RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters." No service adjustment required.

**Initial Adjustment of Hydraulic Valve Lifters** (when installing cylinder head, or whenever adjusting ball stud setting disturbed): See "Valve System" in Buick Special Data.

**Valve Timing Check—**See Valve Timing.

**STARTING: See Battery, Starter, Generator, Regulator.**

**IGNITION**

**IGNITION SWITCH:** Delco-Remy No. 1116452.

Ignition Lock—Briggs & Stratton or Delco-Remy. Buick No. 1393108.

**COIL:** Delco-Remy 1115328. On pushrod cover.

Ignition Current—2½ amperes idling, 4½ stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—18-23 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110815. Automatic and vacuum advance type with new "center-bearing" breaker plate. See 1949 Buick pages for data.

**IGNITION TIMING**

Standard Setting ..... 4° BTDC.

See 1949 Buick car pages for Timing Procedure.

**CARBURETOR**

Carter WCD Model 725S or Stromberg Model AAUVB-267. 1½" dual downdraft types with Automatic Choke.

Casting No. (Carter)—624 on face of flange.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump Setting): See Tune-Up.

Metering Jets & Rods—See Carburetor Section for Carter & Stromberg Jet Specifications.

Throttle Linkage Adjustment, Dash Pot Setting (for the Dynaflo Drive Cars), Fast Idle, and Automatic Choke): See 1949 Buick for data except as follows: Automatic Choke Setting (Carter): One Notch Rich.

**CARB. EQUIPMENT**

Air Cleaner: AC No. 1544638 oil bath type.

Filter Element—AC No. 19.

Fuel Pump: AC Type AH, fuel-and-vacuum pump.

Pressure—4½-5½ lbs. at pump outlet port or 4-5 lbs. at carburetor inlet.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.

See Carburetion Equipment Section for complete data.

**BATTERY**

Delco Type 15EA. See 1949 Buick car pages for data.

**STARTER**

Delco-Remy Model 1107078 (LHD), 1107057 (RHD).

See 1949 Buick Series 50 car pages for data.

**GENERATOR**

Delco-Remy Model 1102709. Armature No. 1912599.

See 1949 Buick Series 50 car pages for data.

**REGULATOR**

Delco-Remy Model 1118364. Voltage-Current type.

See 1949 Buick Series 50 car pages for data. Set to Specifications listed for Model 1118357.

**LIGHTING**

Headlamps and Direction Signal—See 1949 Buick Series 50 car pages for data except as follows:

Direction Signal. Separate rear bulbs and new switch circuit used.

**Switches**

Lighting—Delco-Remy No. 1995044.

Beam Selector—D-R No. 1997008, 1995015 (RHD).

Instrument—Delco-Remy No. 1997855.

Glove Box—Delco-Remy No. 1997858.

Direction Signal—Delco-Remy No. 1995547, (Dynaflo) 1995546, (RHD) 1995553.

Back-Up Light—Delco-Remy No. (synchro-mesh transmission) 1997825, (Dynaflo) 1997847.

**MISC. ELECTRICAL**

► **DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENT PANEL:** Located on left side of dash under hood with removable plate screwed to dash.

**THERMOSTATIC RELAY:** Delco-Remy. On lighting switch (protects lighting circuits). Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adjustable.

**FUSE BLOCK:** On lower flange of instrument panel at left of steering column. Five fuses:

1)—Dome, Glove Box, & Trunk Lights. 30 ampere.

2)—Clock. 3 ampere.

3)—Defroster and Heater. 30 ampere.

4)—Direction Signal and Stop Lamp. 14 ampere.

5)—Back-Up Lights. 14 ampere.

**HORNS:** Delco-Remy No. 1999621 or 649 (Low Note—Right Horn), No. 1999622 or 650 (High Note—Left). Vibrator type, twin horns operated by relay.

NOTE—Nos. 1999649 & 650 are welded type.

Current (at 6 volts) Air Gap

Low Note ..... 19-21 amperes.....044-.049"

High Note ..... 18-20 amperes.....034-.039"

**Horn Relay:** Delco-Remy No. 1116775.

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

Contact Gap—.027". Air Gap—.014" (contacts closed)

**ENGINE**

► **ENGINES WITH HYDRAULIC VALVE LIFTERS:** Used on cars with Dynaflo Drive. These engines use different camshaft, push rods, rocker arms, ball studs, and valve springs.

Identification—By RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters."

**ENGINE SPECIFICATIONS (for 1950 SERIES 40):** Eight cylinder, Overhead Valve ("I" Head) type.

► **Bore—3.091-3.094". NOTE—.010" Oversize production standard engine marked by stamped dash (—) approx. ¼" long following engine number.**

Stroke—4½". Displacement—248.1 cubic inches.

Rated Horsepower—30.63.

Developed Horsepower—110 at 3600 RPM. (6.3-1 hd.).

120 at 3600 RPM. (6.9-1 hd. Dynaflo Drive engines).

Compression Ratio—6.3-1 (Std.), 6.9-1 (Dynaflo).

NOTE—.050" thick Steelbestos gasket for 6.3-1 hd.,

.015" thick lacquered steel gasket for 6.9-1 head.

Compression & Vacuum Reading—See Tune-Up.

► See 1949 Buick car pages for all engine data (Pistons, Rings, Pins, Replaceable Precision Bearing Connecting Rods, Crankshaft & Bearings, Camshaft, and Valves).

**VALVE TIMING**

Valve Tappet Clearance: See Tune-Up.

Valve Timing: See Camshaft Setting on 1949 Buick.

Intake Valves—Open 13° BTDC. Close 68° ALDC.

Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

Valve Timing Check—See 1949 Buick 40 car pages.

**LUBRICATION**

Engine Oiling System: Pressure type. See 1949 Buick 40 car pages for all Lubrication information.

**COOLING**

Cooling System: Pressure type. See 1949 Buick 40 car pages for all information except as follows:

Engine Block Water Inlet—Moved from front of

engine to left side with separate elbow connection

Water Pump Outlet Pipe for Dynaflo Drive—Separate pipe on right side below pump inlet. Used only on cars with Dynaflo Drive.

**CLUTCH**

Own "Crown Spring" with Borg & Beck or Long Driven Member. Single plate, dry disc type.

See Clutch Section for complete data.

Facings, Pedal Adjustment, Removal: See 1949 Buick 40 car pages.

**TRANSMISSION**

Own Make. All Helical Gear. See 1949 Buick pages.

**DYNAFLOW DRIVE****OPTIONAL EQUIPMENT**

Own Make. Torque Converter and hydraulically operated planetary unit with manual control.

See Transmission Section for complete data.

► **Throttle Linkage Adjustment and Dash Pot Setting on Dynaflo Drive Cars—See CARBURETOR on 1949 Buick car pages.**

**Lubrication—**Check fluid level in transmission every 1000 miles, drain and refill every 15,000 miles.

► **Use only Special Buick Oil for Dynaflo Drive or Automatic Transmission Fluid Type "A".**

Capacity—8½ quarts.

Draining & Refilling—See "Buick Dynaflo Drive" in Transmission Section.

Checking Fluid Level—Engine must be idling with selector lever at "P" (parking) and transmission oil warm. Raise right side of hood, lift out oil gauge rod between battery and engine. Add fluid to "FULL" mark level with engine idling.

► **CAUTION—Engine must be idling with transmission in Parking and transmission oil warm when checking Dynaflo Drive Fluid Level.**

**UNIVERSALS**

Saginaw or Spicer. One used (in Torque Ball at rear of transmission).

See Universals Section for complete data.

NOTE—New rubber seal used on torque ball.

Torque Ball Adjustment—See Buick Special Data.

**REAR AXLE**

Own Make. Hypoid gear type. See 1949 Buick pages for all information except as follows:

Rear Axle Ratio—(standard) 4.1-1 (41:10). (Dynaflo Drive) 3.9-1 (43:11).

**SHOCK ABSORBERS**

Delco Model 1948-A (front), Model 2105-C, D (rear). Double acting, Hydraulic (parallel cylinder rear).

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

Front Suspension: Independent, linked parallelogram type with coil springs. See 1949 Buick car pages for all specifications.

NOTE—New external adjusting sleeves used on tie rods for Toe-In adjustment.

**STEERING GEAR**

Saginaw. Ball bearing Worm-and-Nut. See Steering Gear Section for complete data.

**BRAKES**

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type without Eccentric Adjustment. See 1949 Buick Series 40 car pages for data.

**MISC. MECHANICAL**

Windshield Wiper: Cable Operated—Vacuum type. See Miscellaneous Section for complete data.

## ENGINE REMOVAL

## 1949 MODELS

**ENGINE REMOVAL:** Engine and transmission assembly can be removed as follows: Drain crankcase and cooling system. Remove hood by taking out nut on center moulding-to-strainer assembly and two panel-to-hinge bolts at each side (if shims used, replace same number when re-assembling to maintain alignment). Raise front of car and place on wheel stands at each front wheel. Disconnect battery cables. Remove starter (with solenoid). Take off Backup Light switch bracket from rear of transmission. Free clutch pedal to release yoke rod (cars with synchro-mesh trans). Take out support bolts at transmission extension housing. Disconnect shift linkage at transmission, and propeller shaft at front universal. Disconnect exhaust pipe from rear end of right exhaust manifold. Remove generator, and fan blade and pulley. Remove radiator (see Radiator Removal). Remove carburetor and air cleaner. Disconnect ignition switch wire at coil, oil pressure gauge line at rear of block, and flexible fuel pump hose at pipe. Take off windshield washer bottle and bracket, disconnect heater hoses. Loop rope (or chain) around intake manifold. Attach rope to hoist and tighten hoist to take slack out of rope, then disconnect front engine supports (one each side). Engine and transmission can then be raised out of car.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

## 1949 MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Bolts	65-70	780-840
Main Bearing Caps	90-100	1080-1200
Connecting Rod Nuts	35-40	420-480
Flywheel to Crankshaft (H-M)	70-75	840-900
Flywheel to Crankshaft (S-M)	65-70	780-840
Manifolds to Head	25-30	300-360
Engine Rear Support	50-60	600-720
Eng. Front Support Stud Nut	80-90	960-1080
Diff. Carrier to Axle Housing	30-35	360-420
Spring U-bolts	45-52	540-624
Backing Plate to Axle (60S,61,62)	35-40	420-480
Backing Plate to Axle (75,86)	55-60	660-720
Wheel Mounting Nuts	110-120	1320-1440
Steering Gear to Frame	40-45	480-540
Steering Wheel Nut	45-50	540-600
Front Shock Absorber Bolts	85-95	1020-1140
Susp. Arm Shafts to Frame	60-70	720-840

## CYLINDER HEAD

## 1949 MODELS

**CYLINDER HEAD INSTALLATION:** Use a Torque Wrench and tighten cylinder head capscrews starting from the center row of bolts and working outward and toward each end.

Cylinder Head Gasket. Install with side stamped "Top" UP.

Cylinder Head Capscrews. 8 short screws in outside row, 5 medium length screws in center row, 4 long screws at rocker arm shaft.

Tightening Torque. See Tightening (Torque Wrench) Specifications.

## ORIGINAL BORE &amp; PISTONS

## 1949 MODELS

**ORIGINAL PRODUCTION ENGINE BORE & PISTON SIZES:** Cylinder bores and pistons are graded in sizes listed below. Can be identified as follows:

**Cylinder Bore Marking**—Letter stamped on top of block to right or left of cylinder bore, mark to left indicating "+", to right "-".

**Piston Marking**—Letter stamped on piston head.

## 1949 Piston &amp; Cylinder Sizes

Letter <sup>①</sup>	Piston Size	Cylinder Size
A	3.8104-3.8106"	3.8125-3.8127"
B	3.8106-3.8108"	3.8127-3.8129"
C	3.8108-3.8110"	3.8129-3.8131"
D	3.8110-3.8112"	3.8131-3.8133"
E	3.8112-3.8114"	3.8133-3.8135"
H	3.8114-3.8116"	3.8135-3.8137"
J	3.8116-3.8118"	3.8137-3.8139"
K	3.8118-3.8120"	3.8139-3.8141"
L	3.8120-3.8122"	3.8141-3.8143"
M	3.8122-3.8124"	3.8143-3.8145"

①—Cylinder bore letter to left of center of bore indicates "+", to right "-".

## PISTONS

## 1949 MODELS

**FITTING NEW PISTONS:** Pistons should be fitted by Micrometer Gauge Method or Feeler Gauge Method as described below to the following Skirt Clearance (with proper allowance for temperature variation):

Year	Skirt Clearance <sup>①</sup>
1949 Engines	.0020-.0022"
①—This is proper clearance with engine block and piston at 70°F. Subtract .0001" clearance (or 2/5 lb. pull on feeler gauge) for each 6° increase in piston temperature over 70°, add .0001" clearance (or 2/5 lb. pull) for each 6° decrease in piston temperature below 70°.	

**Micrometer Gauge Method:**—Measure cylinder bore with micrometer gauge at point 1¼" below top edge and at right angles to crankshaft. Set inside micrometer at cylinder bore size, then measure this gauge length with same outside micrometer used to measure piston. This method will eliminate any error introduced by using different gauges to measure cylinder and piston. Use outside micrometer to measure piston diameter at upper corner of "T" slot (adjacent to "T" slot and ⅛" below horizontal slot)—piston must be measured at this point since skirt tapered with .0012-.0021" larger diameter at lower end). Select piston of correct size to give skirt clearance listed above.

**Feeler Gauge Method:**—Use ½" feeler stock .002", .0025", or .003" thick (see Feeler Gauge Note and table below) on side of piston directly over "T" slot (center feeler on slot) with lower rounded end of feeler extending ½" down on piston skirt past horizontal slot (feeler must not extend further down on piston skirt because skirt is tapered with greater diameter at bottom). Install piston and feeler in cylinder with piston right side up and feeler toward side, measure pull required to withdraw feeler. Pull will vary in accordance with thickness of feeler gauge used and with piston temperature. See table below for correct pull for each feeler gauge thickness to obtain proper skirt clearance listed above.

Feeler Pull (In lbs.)	Piston Clearance (70°F.)		
	.002" Feeler	.0025" Feeler	.003" Feeler
1	.00225"	.00275"	.00326"
2	.002"	.00252"	.00304"
3	.00175"	.00228"	.0028"
4	.0015"	.00205"	.00258"
5	.00125"	.00182"	.00235"
6	.001"	.00157"	.00213"
7	.00075"	.00133"	.0019"

**Feeler Gauge Note:**—Feeler gauges used for piston clearance measurement should be clean and smooth with lower end rounded. Rusted or wrinkled feelers should be discarded and rough edges should be honed to prevent scratching cylinder wall.

## 1949 MODELS

## REPLACEMENT PISTONS (WITH RING AND PIN):

Slipper skirt type pistons furnished as follows:

Nominal Size	Piston Skirt Diameter
Standard	3.8104-3.8124"
.010" Oversize	3.8204-3.8224"
.020" Oversize	3.8304-3.8324"
.030" Oversize	3.8404-3.8424"

## CRANKSHAFT &amp; MAIN BEARINGS

## 1949 MODELS

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE:** Connecting rod and main bearing clearance can be checked as follows: Remove cap, wipe crankshaft journal and bearing insert free of oil, place piece of Plastigage across bearing, install cap (on connecting rods, crank pin should be at bottom dead center), tighten cap bolts to specified torque (see Tightening Specifications). Remove cap, check widest width of flattened Plastigage with scale on envelope. Replace rod bearings if over .0045", main bearings if over .005".

## 1949 MODELS

**CRANKSHAFT REMOVAL (Engine in Car):** Jack up all four wheels and install a stand at each wheel. Drain crankcase and cooling system. Remove oil pan (see Oil Pan Removal), oil pump (see Oil Pump Removal), timing chain (see Timing Chain Removal), and flywheel (see Flywheel Removal). Take off steering idler at right frame side bar and lower linkage to floor. Remove spark plugs. Take off rod caps and push rod and piston assemblies up into bores to clear shaft. Remove front and rear main bearing caps, support shaft at front and rear and remove three remaining caps, lower shaft out of engine.

## 1949 MODELS

**MAIN BEARING REMOVAL:** Upper bearing halves can be rotated out with flattened cotter pin inserted in oil hole in crankshaft and turning shaft clockwise. Crankshaft does not have to be taken out. **Installation:**—Reverse removal instructions given above. **CAUTION:**—Do not interchange caps. Install caps with marking numbers (not casting nos.) on left side and in order from front-to-rear of engine.

## 1949 MODELS

**REAR MAIN BEARING OIL SEAL:** Wiper seal installed in rear groove in bearing cap and block (oil slinger operates in front groove).

**Oil Seal Installation**—With crankshaft out of engine (see Crankshaft Removal), and bearing cap off, install length of new packing in groove in block. Use Tool J-3048 and drive seal in place. With tool in place, cut ends of packing flush at each end. Repeat operation for bearing cap.

#### 1949 MODELS

**FLYWHEEL REMOVAL:** Jack up car 8" off floor, install stand at each wheel. Remove Hydra-Matic Transmission (see Cadillac Hydra-Matic Drive in Transmission Section), or transmission, clutch, and flywheel housing lower cover on cars so equipped (see Transmission and Clutch Removal on car page). Remove flywheel-to-crankshaft bolts, flywheel, and gasket.

**Crankshaft Pilot Bearing and Retainer**—If replacement required, Tool No. J-164 can be used for removal, and Tool J-2985 for installation. Flywheel should be attached to crankshaft for this operation.

**Flywheel Installation:** Reverse removal instructions given above. Use new gasket on crankshaft and dip flywheel mounting bolts in sealer before installing.

### TIMING CHAIN

#### 1949 MODELS

**TIMING CHAIN REMOVAL:** Set engine in firing position for #6 cylinder (this places chain sprocket marks adjacent to one another). Remove water pump (see Cooling on car page), oil pan (see Oil Pan Removal), crankshaft pulley, engine front cover (9 screws), and camshaft thrust plug and spring from front end of camshaft. Take out two camshaft sprocket screws and lock washers. Pull camshaft sprocket and chain off together using Tool No. J-3080. Remove crankshaft sprocket.

**Timing Chain Installation:** Reverse removal instructions given above. Timing marks on sprockets must be together and aligned with straightedge across shaft centers.

### CAMSHAFT & BEARINGS

#### 1949 MODELS

**CAMSHAFT REMOVAL:** Remove radiator (see Radiator Removal), radiator shroud support, timing chain (see Timing Chain Removal), valve lifters (see Valve Lifter Removal), distributor (see Ignition on car page), distributor drive gear, use Tool No. J-3080 and pull camshaft half way out, remove tool and withdraw camshaft all the way out.

**CAUTION**—Slide camshaft out carefully and avoid scratching camshaft bushings with cam lobes.

**Camshaft Alignment Check:** Place camshaft on surface plate and support at front and rear bearing

journals on "V" blocks, or on centers. Mount dial indicator on surface plate over centerline of camshaft with pointer touching shaft. Check heel of each cam through 180° rotation with dial set at zero. Replace camshaft if dial reading greater than .0015".

**Camshaft Installation:** Reverse removal instructions given above.

### VALVE SYSTEM

#### 1949 MODELS

**VALVE REMOVAL:** With cylinder heads removed, take out spark plugs. Install head upside down on Cylinder Head Holding Stand Tool No. J-3064. Install Holding Strap No. J-3064-6 over heads of valves. Turn head right side up, compress valve spring with compressor bar and stirrup of Head Holding Tool, remove valve keepers. Release bar and remove valve spring retainer, also rubber seal from lower groove on valve stem. Turn head over, remove Holding Strap, take out valves. **CAUTION**—Note location of each valve, must be re-installed in same position.

**Valve Installation:** Reverse removal instructions given above and note the following:

**Valve Spring Retainers.** Install retainers with long skirts on intake valves.

**Valve Stem Oil Seals.** Installed in lower groove (nearest valve head) ahead of valve keepers. Check for proper sealing after keepers installed by striking ends of valve stem to seat keepers, then using suction cup (similar to type used for grinding valves), compress cup on spring retainer. If seal properly seated, cup will stick to retainer, or if cup does not stick, seal is broken and a new seal will have to be installed.

#### 1949 MODELS

**VALVE LIFTER REMOVAL:** Remove rocker arm covers (hang on cowl), intake manifold, three valve compartment cover screws. Loosen crankcase ventilator pipe screw at flywheel housing, move pipe to permit removal of valve cover. Remove rocker arm assemblies and push rods. Take out lifters (use Tool No. J-3049), turn lifters while removing to remove any carbon or varnish deposit from lifter base.

**CAUTION**—Keep lifters in order—must be re-assembled in same holes.

**Partial Removal Note**—If one or two lifters only to be removed, rocker arm assembly need not be removed, proceed as follows: Compress valve spring, slide rocker arm over, withdraw pushrod.

#### 1949 MODELS

**ROCKER ARM INSTALLATION:** When assembling rocker arm assemblies note the following points:

**Rocker Arm Shafts.** Locating notch on front end of shaft must point inward and down.

**Rocker Shaft Brackets.** Front and rear brackets must be assembled with rocker arm cover screw hole on top on valve end of rocker arm. Intermediate (second and third) brackets must be installed right side up (can cause shaft misalignment if upside down).

### OIL PAN REMOVAL

#### 1949 MODELS

**OIL PAN REMOVAL:** Remove oil level indicator, exhaust cross-under pipe nuts, pipe, gaskets, and manifold heat control valve. Take off starter and lay on frame side rail. Remove two oil pan nuts and eighteen screws, take off oil pan.

**Oil Pan Installation:** Cement new pan gaskets to pan, install new cork seals in rear main bearing cap and engine front cover with ends of seals seated in grooves. Coat each end of pan gaskets with chassis grease so that ends will slip over front and rear seals. Position pan over two studs on left side of crankcase, then raise right side and insert two pan screws opposite the two studs, put on washers and nuts on two studs. Tighten remaining screws, tightening two screws and nuts originally installed last.

### OIL PUMP

#### 1949 MODELS

**OIL PUMP REMOVAL:** Take off oil pan (see Oil Pan Removal). Remove oil pan baffle, and two nuts securing pump to rear main bearing cap. Remove pump and float and screen assembly.

**Oil Pump Specifications:** Backlash between gears .008-.012". Driveshaft to Body Clearance .0010-.0025" (new), .005" max. (worn). Endplay between cover and gears .001-.004" (new), .006" max. (worn).

**Pressure Regulator**—Valve Plunger to Body Clearance .0020-.0035" (new), .005" (worn). Spring Free Length 2 25/64". Spring Pressure at 1 13/32"—5 3/4 to 6 1/4 lbs.

**Oil Pump Installation:** Reverse removal instructions given above and use new gasket between pump and bearing cap.

### RADIATOR

#### 1949 MODELS

**RADIATOR CORE REMOVAL:** Drain radiator, remove radiator hoses, six radiator-to-air deflector screws, and radiator anchor nut and spacers at frame bracket (check number of spacers and reinstall same number when radiator replaced). Lift out radiator.

**Radiator Core Installation:** Reverse removal instructions given above. **NOTE**—Core must be properly positioned for spacing between core and fan—this space must be 1/2" to 1".

## MODEL IDENTIFICATION

**ENGINE SERIAL NUMBER:** Stamped on right front of crankcase above water pump and on right frame side member to rear of engine support bracket.

**Identification**—First two figures indicate year, third and fourth figures indicate model (last five figures numbered consecutively regardless of series).

**1949 Numbers**—First numbers as follows:

Series	First 1949 Number
49-61	496100000
49-62	496200000
49-60S Special	496000000
49-75	497500000
49-86 Commercial	498600000

**ENGINE UNIT NUMBER:** Stamped on lower end of rough flat surface on crankcase behind right hand block (directly above boss for clutch housing locating pin).

1949 Numbers	Engine Unit Number	Std. Transmission	Hydra-Matic
49-60S, 61, 62	8-L-1 Up	9-L-1 Up	
49-75, 86	2-L-1 Up	9-L-1 Up	

## TUNE-UP

**COMPRESSION PRESSURE:** 140 lbs. at cranking speed (7.25-1 Std. Cast-iron head).

**VACUUM READING:** Steady 20-21" idling at 375 RPM. (for Hydra-Matic), 400 RPM. (with Synchro-Mesh).

**FIRING ORDER:** 1-8-4-3-6-5-7-2. (Cyl. Nos. 1-3-5-7 Left Bank, 2-4-6-8 Right Bank, front-to-rear). See diagram.

**SPARK PLUG GAPS:** .033-.038".

Plugs—AC No. 48, 14 mm. (10 mm. insulator in 14 mm. shell providing greater heat range).

► **CAUTION**—Tighten plugs to 20-25 ft. lbs. torque.

**DISTRIBUTOR:** Breaker Gap—.016-.021" (new), .0125-.0175" (used points).

► **CAUTION**—Set new points at .016-.021" to allow for wearing in of rubbing block.

Cam Angle—31° (new), 28° (used) 2° closed.

► **CAUTION**—Manufacturer recommends final check with feeler gauge or dial indicator if dwell-meter used to set contact gap.

Breaker Arm Spring Tension—19-23 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.18-.25 microfarad.

**IGNITION TIMING:** 5° BTDC.

Timing Procedure—See Ignition Timing.

Timing Mark—"A/" on harmonic balancer at front of engine lined up with pointer on front cover (for fuel of 80 Octane Rating).

► **CAUTION**—If fuel of less than 80 Octane Rating used, and detonation ping noted, timing may be retarded to "C" mark on balancer (top dead center).

**CARBURETION:**

**Idle Setting**—Both screws ½-1½ turns open (turn screws out for richer mixture) and set for smooth idle with engine warm.

**Idle Speed**—375 RPM (Hydra-Matic Trans.), 400 RPM (Synchro-mesh Trans.) with engine warm and Hydra-Matic selector lever in "Dr" position.

► **CAUTION**—Use tachometer to set idling speed.

**Float Level**—9/64" from top of each float to gasket seat on cover with valve seated (invert to check). Fuel level even with bottom of inspection plug hole on side of bowl with engine idling.

**Accelerating Pump**—No seasonal adjustment.

► **Choke Setting:** **CAUTION**—Different setting used on each carburetor.

(682S)—1 Point Rich.

(722S)—Centered (housing centered on scale).

**Fuel Pump Pressure:** 4-5¼ lbs. at carburetor.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. Blocker type valve located between left bank exhaust manifold and cross-under pipe (diverts exhaust through bypass under intake manifold when valve closed).

► **CAUTION**—Valve assembly must be installed with coil toward left side and dampener weight toward rear of engine.

**VALVE TAPPET CLEARANCE:** None in service (automatic hydraulic type tappet take-up).

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Delco-Remy No. 1116462.

Ignition Lock—Briggs & Stratton or Delco.

**COIL:** Delco-Remy 1115380. Mounted on manifold directly in front of distributor.

**Ignition Current**—2.2 amperes (engine running).

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy 1110812. Automatic and vacuum advance type with new "center-bearing" breaker plate.

► **Breaker Plate Bearing Assembly**—Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 ozs. min., 16 ozs. max. with breaker plate assembly out of housing.

See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

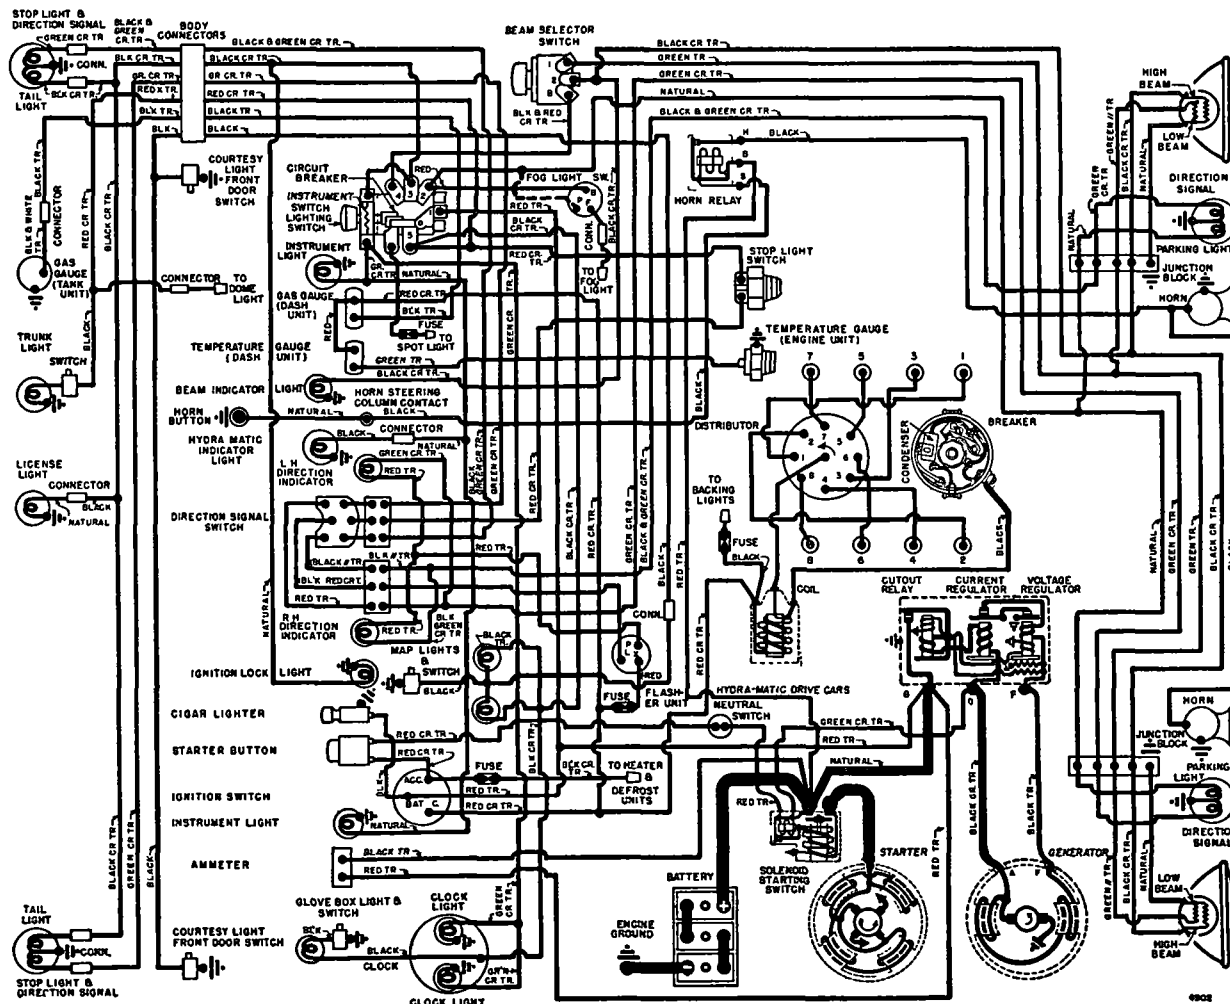

Breaker Gap—.016-.021" (new), .0125-.0175" (used).

► **CAUTION**—Set new points at .016-.021" to allow for wearing in of rubbing block.

Cam Angle—31° (new), 28° (used) ± 2° closed.

► **CAUTION**—Car manufacturer recommends final check with feeler gauge or dial indicator if dwell-meter used to set contact gap.

Breaker Arm Spring Tension—19-23 ozs.

**Rotation**—Counter-clockwise viewed from above.

#### Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	300	1.5.....	600
7.75.....	1000	15.5.....	2000
18.75.....	1800	37.5.....	3600

**Vacuum Spark Control:** Delco-Remy 1116047, Integral type linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

**Plunger Travel**—7/32" (.190-.212").

#### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	6-8"
6°	12°	9-11"
10°	20°	13-15"

**Removal:** Turn crankshaft to top dead center position for #1 piston (mark "C" on vibration balancer in line with pointer on front cover), remove distributor cap, disconnect breaker lead and vacuum line, remove nut on hold-down clamp stud, hold rotor clockwise (against direction of rotation), lift distributor straight up and out.

► **CAUTION**—Use care not to nick tapered drive tongue and do not lose distributor flange-to-crankcase gasket.

## IGNITION TIMING

**Std. Setting**①..... Flywheel Degrees 5° BTDC.

①—For fuel of 80 Octane Rating. See Manual Adjustment (below) for other fuels.

**Timing Mark**—"A/" on vibration balancer (located 5° ahead of dead center mark "C" in line with pointer on right side of engine front cover).

**Timing (Using Timing Light)**—Loosen distributor hold-down clamp nut just enough to permit distributor adjustment, disconnect vacuum line (to prevent vacuum advance operating), connect timing light to #1 cylinder spark plug lead, direct light on vibration balancer from right side of engine. Warm up engine. With engine idling, rotate distributor until balancer mark "A/" lines up with pointer on front cover, tighten hold-down clamp nut to 15-18 ft. lbs. Recheck timing, connect vacuum line.

**Manual Adjustment**—If fuel of less than 80 Octane Rating used and detonation "ping" noted with std. setting (above), timing can be retarded to "C" mark on balancer (top dead center), by loosening hold-down clamp nut and rotating distributor counter-clockwise (in direction of rotation).

## CARBURETOR

**Carter WCD Model 682S** (First Cars), 722S (After 6566 Cars). 1 1/4" Dual (double barrel) downdraft.

**Casting No.**—610 on face of flange (both).

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level & Accelerating Pump):** See Tune-Up data.

**Hydra-Matic Throttle Linkage Adjustment:** See "Cadillac Hydra-Matic Drive" in Transmission Section.

**Metering Jets & Rods**—See "Carter Downdraft Carburetor Jet Specifications" in Carburetor Section.

**Fast Idle:** Carter Dual (WCD) Carburetor type.

See Carburetion Equipment Section for complete data.

**Setting**—.020" throttle opening (Gauge T109-29 with

choke valve tightly closed. Adjust by turning fast idle adjusting screw.

**Automatic Choke:** Carter Climatic Control (Dual Carburetor).

See Carburetion Equipment Section for complete data.

► **Setting**—**CAUTION**—Two different settings used.

(682S)—1 Point Rich.

(722S)—Centered (housing centered on scale).

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544432. Oil-bath type.

**Filter Element**—AC No. 20.

**Servicing**—Drain reservoir, clean with kerosene, refill with 1 pint engine oil every 2000 miles. Use SAE #50 oil (above 32°F.), #20 (below 32°F.).

**Fuel Pump:** AC No. 1539143 or 1539488. Combination fuel-and-vacuum pump.

**Replacement Pump**—AC No. 9143.

**Pressure**—4-5 1/4 lbs. (at carburetor).

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** AC. Electric type.

**Dash Unit**—AC No. 1517131.

**Tank Unit**—AC No. 1517068.

See Carburetion Equipment Section for complete data.

## BATTERY

### STANDARD

**Delco Type 17K-4.** 6 Volt, 17 Plate, 115 Ampere Hour Capacity (20 hr. rate).

**Starting Capacity**—137 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.3 minutes.

**Five Second Voltage**—4.4 volts.

**Grounded Terminal**—Negative (—) terminal connected to engine at starter mounting flange.

**Location**—In engine compartment on right hand side (mounted outside frame side rail).

### COMMERCIAL MODELS

**Delco Type 19Q-4.** 6 Volt, 19 Plate, 125 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—145 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes.

**Five Second Voltage**—4.5 volts.

**Grounded Terminal & Location**—Same as Std. models above.

## STARTER

**Delco-Remy Model 1107945.** Armature No. 820158.

► **Hydra-Matic Drive Car Starter**—Starter operative only with Selector lever in Neutral (Neutral Safety Switch connected in starter solenoid relay circuit).

**Drive**—Overrunning clutch (solenoid pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5500.....	5.7.....	80①
15 ".....	Lock.....	3.0.....	600

①—Includes current draw of starter switch.

**Removal:** Starter flange mounted on right front face of flywheel housing. To remove, disconnect battery cable and control leads, take out two flange mounting screws, pull starter out.

**Starting Switch:** Delco-Remy Solenoid Switch No. 1118141 mounted on starter and controlled by Push-button Switch No. 1996009 on instrument panel and Neutral Safety Switch No. 1997844 (Hydra-Matic Drive Cars).

See Electrical Equipment Section for complete data.

## GENERATOR

**Delco-Remy Model 1102700.** Armature No. 1880550. Two brush type with voltage and current regulation. Charging Rate Adjustment—None. See Regulator.

**Maximum Charging Rate**—40-46 amperes reached at 28 MPH. Actual charging rate controlled by regulator and dependent on battery condition.

### Performance Data

	Amperes	Volts	R.P.M.
Cold .....	40①.....	8.0.....	1900

①—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.9-2.05 amperes at 6.0 volts.

**Removal:** Generator pivot mounted at right of engine. To remove, disconnect leads, take out two pivot bolts and clampscrew in adjusting link.

**Belt Adjustment:** Tighten belt to 24 in. lbs. torque measured as follows: Loosen both pivot bolts and adjusting strap screw, install Fan Belt, Adjusting Tool J-3046 on head of lower front mounting bolt, rotate tool until arm contacts edge of generator end plate. Use 7/8" socket and torque wrench on tool to pull generator out away from engine until 24 in. lb. reading secured on wrench, tighten adjusting strap screw before releasing wrench.

## REGULATOR

**Delco-Remy 1118300.** Voltage & Current Regulator.

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. See Electrical Equipment Section for complete data.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

### Cutout Relay

**Cuts In**—5.9-6.8 volts hot (set to 6.4 volts hot).

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

### Voltage Regulator

**Setting**—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Electrical Equipment Section.

### Current Regulator

**Setting**—40-46 amperes hot (set to 42 hot).

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Electrical Equipment Section.

## LIGHTING

**Headlamps:** Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—At center of panel above speedometer. Lighted when country (upper) beam in use.

**Direction Signal:** See Electrical Equipment Section.

**Direction Signal Indicators**—Left & Right Turn Indicator located at either end of speedometer dial. Lights when direction signal on same side of car operating (Stop Light flashes at rear).

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

## Switches

**Lighting**—Delco-Remy No. 1995031.  
**Instrument**—Part of lighting switch (rheostat operated by rotating light switch knob).  
**Beam Selector**—Delco-Remy No. 1997008.  
**Map Light**—Delco-Remy No. 1997848.  
**Direction Signal**—Delco-Remy No. 1995541 (Std. Cars), 1995540 (Hydra-Matic Cars).  
**Back Up Light**—Delco-Remy No. 1997774.

## MISC. ELECTRICAL

**FUSES:** Direction Signal—9 ampere. On Flasher under back of instrument panel on left side.  
**Defroster & Heater Motor**—30 ampere. In lead from "Acc" terminal on ignition switch.  
**Back Up Light**—20 ampere. In lead from switch terminal of ignition coil.  
**THERMOSTATIC CIRCUIT BREAKER:** Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.  
**HORNS:** Delco-Remy No. 1999621 (Low Note), 1999622 (High Note). Vibrator type, blended tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999621 (Low Note)	19-21 amperes	.044-.049"
1999622 (High Note)	18-20 amperes	.034-.039"

**Horn Relay:** Delco-Remy No. 1116775.  
**Contact Gap**—.027". **Air Gap**—.014" (closed).  
**Contacts Close**—2.75-4.0 volts (set to 3.5 volts).

## ENGINE

**ENGINE SPECIFICATIONS:** New 90° V8 with Overhead Valves. Both cylinder blocks and crankcase cast Enbloc.  
**Bore**—3 13/16" (3.8125-3.8145"). See "Original Bore & Pistons" in Cadillac Special Data.  
**Stroke**—3 5/8". **Displacement**—331 cu. ins.  
**Rated Horsepower**—46.5.  
**Developed Horsepower**—160 at 3800 RPM.  
**Compression Ratio**—7.5-1.  
**Compression & Vacuum Reading**—See Tune-Up.  
**TIGHTENING TORQUES:** See Cadillac Special Data.  
**CYLINDER HEAD INSTALLATION:** See Cadillac Special Data.

**ENGINE REMOVAL:** See Cadillac Special Data.

**OIL PAN REMOVAL:** See Cadillac Special Data.

**PISTONS:** Aluminum alloy, three-ring, T-slot, tin-plated, "slipper skirt" type (skirt cutaway at pin bosses).  
**Diameter (Std. Size)**—3.8104-3.8124". See "Original Bore & Pistons" in Cadillac Special Data.  
**Weight**—19.296 ozs. (without rings or pin).  
**Length**—3 15/16".  
**Removal**—Pistons and rods removed from above.  
**Clearance**—.0020-.0022" at 70° measured 1/8" below upper cross slot and at right angles to piston pin.  
**Original Piston & Bore Sizes**—See Cadillac Special Data.  
**Replacement Pistons:** See Cadillac Special Data.  
**Fitting New Pistons:** Use micrometer or feeler gauges. See Cadillac Special Data.  
**Installing Pistons:** Mark "REAR" on piston pin boss toward right (#1, 3, 5, 7), toward left (#2, 4, 6, 8) of number on boss on connecting rod when facing this numbered boss end of rod. Install pistons with mark "REAR" toward rear of engine on all pistons.  
**PISTON RINGS:** Two compression, one oil control ring per piston, all above pin. Oil ring slotted type with oil drain holes in groove.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	5/64"	.010-.020"	.0017-.0035"
Oil Contr. (#3)	3/16"	.010-.020"	.0013-.0026"

**Installing Rings**—Beveled inner edge of compression rings must be upward.

**PISTON PIN:** Diameter 1". Length 2 3/4".  
 Floating type with lock ring at each end.

► **CAUTION**—Install lock rings with tang pointing away from pin and toward piston head at 45° angle.  
**Pin Fit in Piston**—.00005-.0001" at 70°F. (new), .0007" (worn limit). Pin should be light push fit at 70° with no perceptible play.

**Pin Fit in Rod Bushing**—.00005-.000035" (new), .0007" (worn limit). Pin should be free hand-press fit at 70°F. with no perceptible play.

► **CAUTION**—Do not attempt to replace pin bushing (fit oversize pin with KMO-754 Piston Pin Hone or replace rod).

**CONNECTING ROD:** Length 6 5/8".

**Crankpin Journal Diameter**—2.2488-2.2493" (out-of-round limit .00025" maximum). Connecting rod diameter (without bearing) 2.3740-2.3745".

**Lower Bearing**—Removable steel-backed, Moraine-Durex lined type. No shims.

**Clearance**—.0005-.0020" (new), .0045" (worn limit).  
**Sideplay**—.008-.014".

► **PLASTIGAGE** for checking bearing clearance—see "Crankshaft & Main Bearings" in Cadillac Special Data.

**Bearing Adjustment:** None (no shims), replace bearings.

► **CAUTION**—Tang on bearings must register with grooves in rod and cap and oil spit hole register with oil groove in bearing cap (for cylinder wall lubrication).

**Installing Rods:** Cylinder No. mark on rod and cap (on small boss on end) must be together and installed in same numbered cylinder with piston mark "REAR" toward rear of engine (lubrication groove in rod cap will be on upper side).

**CRANKSHAFT:** 5-bearing, integral counterweights.  
**Removal & Installation**—See Cadillac Special Data.

**Journal Diameters**—2.4990-2.4995" all bearings (out-of-round limit .00025" maximum).

**Bearings**—Removable, steel-backed, Moraine-Durex lined type. No shims.

**Clearance**—.0008-.0025" (new), .005" (worn limit).

► **PLASTIGAGE** for checking bearing clearance—see "Crankshaft & Main Bearings" in Cadillac Special Data.

**Bearing Adjustment:** None (no shims), replace bearings.

**Bearing Removal & Installation**—See "Crankshaft & Main Bearings" in Cadillac Special Data.

► **CAUTION**—Bearing caps must not be interchanged. Install caps with marking numbers (not casting nos.) on left side and in order from front-to-rear of engine.

**End Thrust:** Taken by flanged rear (#5) bearing.

**Endplay**—.001-.005" (new), .010" (worn limit).

**Rear Main Bearing Oil Seal Installation:** See "Crankshaft & Main Bearings" in Cadillac Special Data.

**FLYWHEEL Removal & Installation**—See Cadillac Special Data.

**CAMSHAFT:** 5-bearing, Cast-iron type with non-adjustable chain drive.

► **CAUTION**—Handle shaft with care to avoid damage or misalignment. Check alignment whenever removed.

**Removal, Alignment & Installation**—See Cadillac Special Data.

**Bearing Type**—Steel-backed, babbitt bushings.  
**Clearance**—.001-.0022" (new), .004" (worn limit).

**End Thrust:** Spring-loaded plug in forward end of shaft bearing against thrust plate in cover.

► **CAUTION**—See that plug and spring in place when installing chain case cover.

**Timing Chain:** Link-Belt side-guide type. Width 11/16". Pitch .500". Length 23" or 46 links.

► **CAUTION**—Install chain "endless" and as a unit with camshaft sprocket (sprocket press fit on shaft with locating dowel and two retaining capscrews).  
**Timing Chain Removal**—See Cadillac Special Data.

**Camshaft Setting:** Both sprockets marked "0". Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.745-1.755"	3415-.3425"	4 5/8"
Exhaust	1.4325-1.4425"	3405-.3415"	4 5/8"

	Seat Angle	Lift	Stem Clearance
Intake	44° ②	330"	.0005-.0025" ①
Exhaust	44° ②	330"	.0015-.0035" ①

①—New valves & guides. Worn limit .005" max.  
 ②—New valves (valves in service can be refaced to 45° if seat width recommendations not exceeded).

► **CAUTION**—Do not lap new valves in so that seat width is more than 1/64" (1° difference between valve and block angle designed to provide "hairline" contact).

► **Valve Seat Width Recommendations**—3/64-1/16" (moderate speeds or city driving), 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to edge of flange on valve head is not more than 1/32".

► **Valve Stem Oil Seal**—New rubber oil seal installed in lower groove on valve stem (below valve keeper).  
**Oil Seal Installation**—See "Valve Removal & Installation" in Cadillac Special Data.

**Valve Removal & Installation:** See "Valves" in Cadillac Special Data.

**Valve Guides:** Pressed in cylinder head with counter-bored end down toward valve head. Use Remover tool J-3062 to drive old guides out toward top of head, Installer tool J-3066 to drive new guides in (tool plate serves as stop for driver to position guide).

**Valve Springs:** Free Length 1.968".

	Pressure	Length
Valve Closed	57.5-62.5 lbs.	1.696"
Valve Open	130-140 lbs.	1.366"

► **CAUTION**—Lower end of spring must seat in recess in cylinder head.

**Valve Lifters:** New hydraulic type which maintains zero tappet clearance in service. Lifters operate in guide holes integral with block.

See Miscellaneous Section for complete data.

**Valve Lifter Removal**—See Cadillac Special Data.

**Rocker Arms:** New rocker arm and shaft assemblies mounted on each cylinder head.

**NOTE**—No adjusting screws provided on rocker arms.

**Rocker Arm Installation**—See Cadillac Special Data.

## VALVE TIMING

**Tappet Clearance:** None in service (hydraulic type lifters which maintain zero clearance).

**Valve Timing:** See *Camshaft Setting* above.

**Intake Valves—**Open 15° BTDC. Close 73°7' ALDC.

**Exhaust Valves—**Open 49° BLDC. Close 39°7' ATDC.

**Valve Timing Check—**#1 cylinder (front-left bank) intake valve should open with piston 15° before top dead center. Vibration dampener marked "/C" for top dead center (also carries ignition timing mark "A/" which is 5° before top dead center).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and hydraulic valve lifters (from right and left oil channels in block); and to rocker arms (through hollow rocker arm shafts). Timing chain lubricated by oil return from forward end of right hand cylinder head (return line from rear of right block and front and rear of left block lead directly to crankcase).

**Oil Pan Removal:** See *Cadillac Special Data*.

**Crankcase Capacity—**5 quarts.

**Normal Oil Pressure—**25 lbs. min. at 30 MPH. 15 lbs. with engine idling.

**Oil Pressure Regulator—**Located on oil pump. Opens at 30 lbs. Non-adjustable.

**Pressure Regulator Spring—**Free length 2 25/64". Pressure should be 5 3/4-6 1/4 lbs. compressed to 1 13/32".

**Oil Pump:** Gear type. Located in crankcase at rear of engine.

**Pump Removal & Installation—**See *Cadillac Special Data*.

**Oil Pressure Gauge:** AC No. 1507364. Not electrical.

**Crankcase Ventilation:** Air intake in oil filler cap (oil-wetted type cleaner) with outlet connection at rear of valve compartment cover and outlet pipe extending down below engine at right rear corner.

**Servicing—**Wash filter element in gasoline and re-oil by dipping in engine oil whenever crankcase oil changed (every 2000 miles).

## COOLING

**Cooling System:** Pressure type with pressure valve (relief valve) in filler cap. Re-circulation with thermostat closed provided by by-pass in pump body.

**Capacity—**18 qts. (1 qt. add'l with heater).

**Pressure Cap—**AC No. 850559. Radiator Filler Cap. Opens at 12-15 lbs.

**Radiator Removal:** See *Cadillac Special Data*.

**Water Pump:** Packless type with ball bearing shaft. See *Water Pump Section* for complete data.

**Removal—**Drain cooling system. Loosen and remove generator drive belt. Remove upper and lower radiator hoses (and heater hose). Take out eight capscrews mounting pump and water manifold assembly on front of engine, lift out pump and fan assembly.

**NOTE—**Water manifold and thermostat are part of pump body casting.

**Belt Adjustment—**See *Generator Belt Adjustment*.

**Thermostat:** Harrison. In water outlet connection on top of pump body casting.

**Setting (Std. Type)—**Begins to open at 162-168°F. Fully open at 190-195°F.

**Setting (High Temp. Type)—**Begins to open at 177-183°F. Fully open at 205-210°F.

**Temperature Gauge:** AC. Electric type.

**Dash Unit—**AC No. 1512143.

**Engine Unit—**AC No. 1512015.

See *Miscellaneous Section* for complete data.

## CLUTCH

**Long 11CF-10 1/2 TI (60S, 61, 62), 11CF-TI (75, 86).**

Semi-centrifugal, single plate, dry disc type.

See *Clutch Section* for complete data.

**Facings—**Woven type. I.D. 7" (all), O.D. 10 1/2" (60S, 61, 62), 11" (75, 86). Thickness .137" (all).

**Pedal Adjustment:** Pedal free travel 7/8-1 1/8". Adjust by turning nut on connector rod at clutch fork.

**Removal:** Remove transmission (see *Transmission Removal*), remove starter, remove lower flywheel housing, remove clutch release yoke-to-lever rod. Remove flywheel housing with clutch release yoke, release bearing, and bearing retainer as an assembly. Punch mark flywheel and clutch cover to insure correct re-installation. Take out six clutch cover mounting screws (CAUTION—turn all screws out evenly to relieve spring pressure), lift clutch and driven member out.

► **Driven Member Installation Caution—**Oil guard must be toward rear.

► **Replacement Clutch Caution—**Clutches furnished with locking pin or block at each release lever. These locking pins must be removed when clutch installed.

## TRANSMISSION

### STANDARD

**Own Make.** Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type with remote shift control.

See *Transmission Section* for complete data.

**Transmission Control:** Remote control type mounted on steering column.

See *Transmission Section* for complete data.

**Removal:** Support engine on stand, Tool No. J-3068, or use jack under rear end of oil pan (use block of wood on jack to prevent damage to pan). Disconnect rear universal joint, remove propeller shaft. Disconnect speedometer cable and shift rods at levers on transmission case. Disconnect rear engine support at transmission extension housing and remove cross-member on which support mounted. Loosen transmission mounting capscrews (CAUTION—support transmission so that it does not hang on drive-shaft in clutch), remove screws, move transmission straight back to free shaft from clutch (CAUTION—plug clutch connection shaft oil drain hole as soon as accessible to prevent loss of lubricant), lower front end of transmission and remove from car.

## HYDRA-MATIC DRIVE

### OPTIONAL EQUIPMENT

**Own Make.** Consists of Fluid Coupling and automatic self-shifting Four-Speed Transmission. Optional on all models.

See *Transmission Section* for complete data.

**Lubrication—**Check fluid level in transmission every month or every 1000 miles. Drain and refill after first 6000 miles and every 12000 miles thereafter. Use only "Cadillac Hydra-Matic Fluid."

**Draining & Refilling—**See "Hydra-Matic Drive" in *Transmission Section*.

**Capacity—**Approximately 11 qts. (refill).

**Checking Fluid Level—**Clean all sand, lint, and dirt away from sheet metal cover in floor under right front corner of front compt. rug. Run engine for approx. 1 1/2 minutes at speed equivalent to 20

MPH. with selector lever in "Neutral". Remove sheet metal cover from floor for access to dip stick, reduce engine speed to slow idle and move selector lever to "Drive" position, measure level with dip stick, add fluid until level is at "FULL" mark with engine idling.

► **CAUTION—**Engine must be running at slow idle speed with selector lever in "Drive" position when checking Hydra-Matic Drive Fluid Level.

**Linkage Adjustment—**See "Hydra-Matic Drive" in *Transmission Section*.

**Removal:** See "Hydra-Matic Drive" in *Transmission Section*.

## UNIVERSALS

**Mechanics Model 3C.** Needle bearing type, two used (three on Comm'l cars with center bearing).

See *Universals Section* for complete data.

**Propeller Shaft (Pass. Cars):** One shaft used (no slip joint—front universal yoke slides on transmission mainshaft in extension housing).

**(Commercial Cars)—**Two shafts used with center bearing at rear of front shaft. Slip joint provided at rear end of rear shaft.

**Propeller Shaft Removal & Installation—**See *Cadillac Special Data*.

## REAR AXLE

**Own Make.** Hypoid gear, semi-floating type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

► **CAUTION—**Manufacturer recommends that Carrier Assembly be serviced by replacement. Do not disassemble this unit or attempt service work other than oil seal and universal yoke replacement.

► **Axle Identification—**Axles marked by number stamped on bottom of differential case below center of pinion shaft as indicated in ratio table below.

**Ratio—** Synchro-mesh Trans. Hydra-Matic Drive

	Ratio	Marking	Ratio	Marking
60S, 61, 62	.3.77-1	None	3.61-1	6
75, 86	4.27-1	4	3.77-1	⑦

①—Series 86 axle also blue-paint marked at spring seats.

**Backlash—.003-.010" Screw Adjustment.**

**Removal:** Disconnect propeller shaft at rear universal joint, lower shaft out of the way. Drain rear axle. Remove axle shafts (see below). Remove nuts and washers on carrier mounting bolts, lift out carrier assembly.

► **CAUTION—**Do not disturb nut on end of pinion shaft retaining rear universal yoke unless yoke or oil seal being replaced. Pinion bearing pre-load must be adjusted whenever this nut disturbed.

**Axle Shaft Removal:** Remove wheel. Take out two screws holding brake drum on axle shaft flange, remove drum. Remove nuts and lockwashers from four bolts holding bearing retainer and backing plate on axle housing, use Puller J-942-1 and Slide Hammer Tool J-2619 to remove axle shaft.

► **CAUTION—**Use care not to damage axle shaft oil seal when sliding shaft out and do not disturb position of backing plate on housing.

**(Commercial Cars)—**Remove wheel, remove nut and washer on end of shaft. Use puller (Snap-On No. S-4567 or similar 5-jaw type) to remove wheel hub and brake drum. Disconnect brake line. Take out retaining screws and remove dust shield (bearing retainer) and backing plate. Use Puller J-838 to pull axle shaft and bearing assembly out using care not to damage oil seal in housing.

Wheel Bearings: Sealed ball-bearing type.

Adjustment—None.

► **CAUTION**—Check bearings for loss of lubricant when shaft removed. If bearing spins freely indicating loss of lubricant, install new bearing.

**Pinion Bearing Pre-load Adjustment:** Should be adjusted whenever nut on end of pinion shaft disturbed (for universal yoke or oil seal replacement).

See *Rear Axle Section* for complete data.

### SHOCK ABSORBERS

Delco. Double acting, opposed piston, hydraulic types (front & rear). Model Nos. as follows:

	Front	Rear
60S, 61 62	1946-G,H	1754-N,P
75	1946-G,H	2007-N,P
86 Comm'l	1946-G,H	1751-V,W

See *Shock Absorber Section* for complete data.

### FRONT SUSPENSION

**Front Suspension:**—Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**NOTE**—Specifications below correct with car at curb weight (car unloaded with full gas tank).

**Kingpin Inclination**—5°51' crosswise (0° Camber).

**Caster**—Neg. ½° to Pos. ½°. Equal within ½°.

**Camber**—Neg. ¾° to Pos. ¾°. Equal within ½°.

**Toe In**—1/32-3/32" (at rest). Loosen clamp bolts, turn adjusters at outer end of each rod equally.

**Steering Geometry (Toe-out on turns)**—Outer wheel turned 20°. Inner wheel as follows:

	Left Turn	Right Turn
60S, 61 62	25°25'	24°42'
75, 86 Comm'l	24°7'	23°6'

### STEERING GEAR

Saginaw. Ball bearing Worm-and-Nut type (re-circulating ball type).

See *Steering Gear Section* for complete data.

### BRAKES

**Service:** Bendix Hydraulic, Duo-servo, Single Anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Drums**—Centrifuse. Diameter 12" (11.995-12.005").

**NOTE**—Drum out-of-round limit is .007" and remachining limit (to true up drums) is .030" max.

**Lining**—Molded type (all models).

60S, 61, 62 75 Comm'l 86

Width (Front) ..... 2¼" ..... 2¼" ..... 2¼"

Width (Rear) ..... 2¼" ..... 2½" ..... 2½"

Thickness ..... 3/16" ..... 3/16" ..... 3/16"

Length (Fwd.Shoe) 11 17/32" 11 17/32" 12 31/32"

Length (Rev.Shoe) 12 31/32" 12 31/32" 12 31/32"

Fwd.—Forward or Primary (front) shoe.

Rev.—Reverse or Secondary (rear) shoe.

**Clearance**—.007-.010" at each end of each shoe or .015" at both ends of secondary shoe with primary shoe forced out against drum.

**Braking Power**—55.8% Front, 44.2% Rear (60S, 61, 62, 75); 50% Front, 50% Rear (86 Comm'l).

**Hand (Parking) Brake:** See Service Brakes above.

### MISC. MECHANICAL

**Power Operated Convertible Tops, Windows, & Front Seat:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See *Miscellaneous Section* for complete data.

**Windshield Wiper:** Cable Operated—Vacuum type.

See *Miscellaneous Section* for complete data.

## CHEVROLET 1949 SPECIAL DATA & SHOP NOTES

### FOR ALL MODELS

### TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

#### ALL MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews	75-80	900-960
Main Bearing Bolts	100-110	1200-1320
Con. Rod Nuts	40-50	480-600
Rocker Arm Support Bolts	25-30	300-360
Crankcase Frt. End Plate	15-20	180-240
Timing Gear Cover Screws	6-7½	72-90
Manifold Clamp Bolts	15-20	180-240
Manifold Stud Nuts	25-30	300-360
Clutch Mounting Bolts	25-30	300-360
Clutch Housing Bolts	45-55	540-660
Flywheel Bolts	50-65	600-780
Oil Pan Flange Bolts	6-7½	72-90
Oil Pan Corner Bolts	12½-15	150-180
Oil Distr. Cover Screws	6-7½	72-90
Water Pump Mtg. Bolts	25-30	300-360
Fuel Pump Mtg. Bolts	15-20	180-240
Spark Plugs	20-25	240-300
Pitman Arm Bushing Nuts	30-40	360-480
Prop. Shaft Flange Nut	160-280	1920-3360
Axle Flange Bolts (Trucks)	85-95	1020-1140

### FRONT END SHEET METAL

#### 1949 PASSENGER CARS

**FRONT END SHEET METAL REMOVAL:** Front Fenders, Radiator, and Grille can be removed as a unit as follows: **CAUTION**—Where adjusting shims found, make certain same number replaced to maintain sheet metal alignment. Drain radiator. Cover fenders and cowl, prop hood in open position, remove hood springs (use Tool J-3181), take out two hinge support arm-to-hood bolts at each side (hold hood to prevent dropping down when bolts removed), remove hood. Remove sill mouldings (bolted to fender, clipped to body). Remove battery, and positive cable

from fender skirt. Remove wiring harness from junction blocks, pull harness out of radiator support tie bar and front skirt hole. Take off horn relay and voltage regulator. Remove wiring harness and hood lock cable from left fender skirt. Remove clamp from front end of hood lock cable, loosen nut and bolt attachment of cable bracket to lower hood lock plate. Pull cable out. Turn back rubber connectors over air ducts. Remove radiator hoses and steering gear housing shield. At each side of car remove the following: fender skirt-to-dash leg nuts and bolts, rear baffle-to-cowl bolt, rear baffle extension, fender-to-frame brace, fender-to-lower baffle screws. Then disconnect radiator support to cross-member by removing nuts, lockplate, spacer and rubber cushion (bolts do not come out). Remove fender-to-cowl brace and fender-to-cowl side bolts at each side. Raise assembly at rear end (check so that assembly clears doors) until radiator support bolts free of cross-member and filler panel slips out from under top edge of bumper face bar, pull assembly toward front and remove from car.

**NOTE**—When re-installing assembly, tape rubber cushion and shims in place on radiator support over support bolts.

#### 1949 TRUCKS

**FRONT END REMOVAL (TRUCKS):** On conventional trucks, front end sheet metal assembly can be removed as a unit as follows: Remove hood assembly, drain radiator, disconnect radiator hoses. Disconnect horn wires and all electrical wiring at junction blocks on both fender skirts, remove wiring harness from retainer clips on fender skirts and radiator core support. Relieve fender brace rod tension by backing off front hexagonal nut as necessary, disconnect brace rods by taking out capscrews attaching brace rods to dash at each side, remove rods. Take out capscrews, plate, and spacer attaching radiator core support to front frame cross-member.

Remove screws on each side attaching rear of fender skirt to toeboard (accessible from inside cab by lifting floor mat). Remove bolts attaching rear of front fenders to cowl on each side (accessible from underneath). Raise front sheet metal assembly sufficiently to clear front bumper face bar and radiator grille filler panel, lift assembly out.

### CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature.

**Tightening Torque**—See Tightening (Torque Wrench) Specifications.

#### CHEVROLET

### ENGINE REMOVAL

#### 1949 PASSENGER CARS

**ENGINE REMOVAL:** Engine, clutch, and transmission can be removed as an assembly as follows: Drain radiator, block, oil pan, and transmission. Take off hood by disconnecting hood springs (use Tool J-3181) and removing two hinge support arm-to-hood bolts at each side (hold hood to prevent dropping down when bolts removed). Remove radiator (see Radiator Removal), battery with ground strap attached, and air cleaner. Disconnect wire harness at right junction block and pull harness through header bar. Remove header bar. Disconnect starter

and generator wires, coil lead, windshield wiper vacuum line, gas line at pump, choke and throttle cables at carburetor, line at temperature gauge and oil pressure gauge, exhaust pipe flange at manifold, accelerator pedal from rod, transmission control rods from levers on side of case (work through opening in floor), speedometer cable at transmission, and clutch link to pedal arm. Split universal joint by unbolting universal ball retainer, sliding collar and ball back, taking out bearing capscrews and removing trunnion bearings. Remove transmission-to-support bolts, engine side mounting-to-frame bracket bolts, and front engine mounting bolts. Take off rocker arm cover. Remove 4th cylinder head bolt from the rear on left side, 3rd from rear on right side and install engine lifting tool No. J-2967. Use a hoist and lift engine, clutch, and transmission assembly from car.

**NOTE**—When engine installed and torque tube connected, fill universal housing through speedometer connection (remove speedometer driven gear) with  $\frac{1}{2}$  pint SAE 90 transmission lubricant.

#### 1949 TRUCKS

**ENGINE REMOVAL (TRUCKS):** Drain radiator, cylinder block, and oil pan. Remove hood assembly. Remove front end sheet metal assembly (including radiator and fenders) as a unit (see Front End Removal above). Disconnect cables at starter switch terminal (tape battery cable), disconnect coil lead and lay coil on top of dash, disconnect engine ground strap, generator leads at generator, and horn wires. Disconnect fuel line at fuel pump, choke and throttle control cables at carburetor, and remove air cleaner. Disconnect oil gauge line at engine, remove temperature gauge engine unit from cylinder head, disconnect vacuum lines (windshield wiper and Hydovac) at manifold. Remove exhaust pipe-to-manifold bolts, remove starter pedal, disconnect accelerator pedal from rod. Remove transmission floor pan cover in cab, disconnect transmission control rods (models with steering column shift), or remove transmission cover and gearshift lever assembly and install temporary cardboard cover on case (models with floor-mounted gearshift). Remove hand brake lever, disconnect speedometer cable and clutch link to pedal arm. Drain transmission, disconnect prop. shaft. Take out bolts in rear engine mounting, remove front engine mounting. Remove third cylinder head bolt from rear on left side, install engine lifting eye bolt in this position, attach hoist. Remove engine, clutch, and transmission from the chassis as a unit. When re-installing engine, see Engine Mounting Adjustment instructions (following).

### ENGINE MOUNTINGS

#### 1949 PASSENGER CARS

**ENGINE MOUNTING REPLACEMENT: Front Mounting.** Remove engine front mount bolts from engine mounting plate and frame cross-member. Raise front end of engine until front mounts can be moved out from between plate and frame. With front support mounting surfaces clean (no oil, etc.), bolt new supports to frame, lower engine, install mounting plate, bolt support to engine.

**Side Mountings.** Unbolt mounting from clutch housing and frame brackets and remove mounting. Install new mounting with serrated face toward frame bracket. Bolt mounting to clutch housing

bracket first, then tighten mounting to frame bracket bolts (bolt hole in frame bracket slotted and serrated face of frame bracket and mounting permit proper positioning without use of shims).

**Transmission Mounting.** Remove mounting attaching bolts (tangs of lock plate must be bent back from bolt heads). Raise rear of engine until mounting can be moved out from between transmission and frame cross-member. Use new bolt lock plate and bolt new mounting to frame, lower engine, use new bolt lock plate and bolt mounting to transmission (transmission attaching bolt holes slotted permitting alignment between transmission and support).

#### 1949 TRUCKS

**ENGINE MOUNTINGS (Trucks):** Consist of insulated type front and rear mountings as follows:

**Front Mounting**—Engine mounting bushings are imbedded in rubber insulator assembled between lower retainer and upper plate with a shield on top of the assembly. This mounting should be checked for clearance when installed and periodically in service.

**Rear Mounting**—Two insulated units. Bolted to bracket on clutch housing and bracket on frame. No adjustment required (keep mounting bolts tight).

**Adjustment of Truck Engine Mountings:** Check new front engine mounting, and remove and check mounting in service, as follows: With mounting removed from engine, fit insulator into lower retainer and place upper plate on top. Hold parts firmly together and make certain that rubber insulator fits tightly between retainer and plate and that engine mounting bushings project above upper plate (necessary to prevent oil shield contacting upper plate). Replace insulators which do not pass this test. Check clearance between upper edge of lower retainer and lower face of upper plate. If clearance more than  $\frac{5}{64}$ ", replace lower retainer. If clearance less than  $\frac{3}{64}$ ", grind off top edge of lower retainer. (CAUTION—do not attempt to shim the support). When installing mounting, tighten engine-to-mounting bolts tightly, mounting-to-frame bolts securely but not excessively tight (self-locking type nuts). Rear engine mountings do not require adjustment and mounting bolts should be kept tight.

### PISTONS

#### 1949 MODELS

**REPLACEMENT PISTONS:** Finished pistons with fitted pins and bushings furnished as follows:

##### Part Numbers

216" Engine		235" Eng.	
Car	Truck	Truck	Size
605260.....	605276.....	605474.....	Standard
.....	.....	605489.....	.003" Oversize
609014.....	609015.....	.....	.005" Oversize
605262.....	605278.....	605490.....	.010" Oversize
605263.....	605279.....	605491.....	.020" Oversize
605264.....	605280.....	605492.....	.030" Oversize
605265.....	605281.....	605493.....	.040" Oversize

**CAUTION**—Service Pistons carry markings stamped on head. S1, S2, etc. (size symbol), letter H, etc. (weight symbol). Marks on all pistons installed should be alike to give smooth engine performance.

### CRANKSHAFT & MAIN BEARINGS

#### 1949 MODELS

**MAIN BEARING INSTALLATION (Without Removing Engine or Crankshaft from Chassis):** Upper bearing halves can be replaced by following procedure (bearings doweled in place and cannot be "rotated" out):

**Main Bearing Replacement (Pass. Cars):** Remove radiator (see Radiator removal), remove fan belt and vibration dampener (see Vibration Dampener removal). Loosen all rocker arm screws to relieve tension on camshaft. Remove spark plugs. Raise car and support securely on stands so car is level and approximately 8" off floor. Remove transmission floor pan cover. Remove clutch housing underpan. Remove transmission rear support-to-crossmember bolts. Disconnect shift rods from transmission levers. Raise rear of engine, place 1" square bar behind flywheel and under clutch housing with ends resting on second cross-member brace (this will support engine weight). Release clutch fork from ball. Remove transmission mounting bolts, slide transmission back approximately  $\frac{3}{4}$ ". Remove oil pan and timing gear cover. Remove oil pump and screen cover assembly. Rotate crankshaft to position allowing removal of all bearing caps. Mark timing gears to insure re-meshing gears in same relative position. Then install new bearings as follows:

**Bearing Installation—Loosen but do not remove all main bearing cap bolts sufficiently to allow crankshaft to drop down approximately  $\frac{3}{8}$ ". Remove front intermediate and rear main bearing caps (other bearing caps will support crankshaft), remove old bearings from bearing cap and crankcase (if old bearings do not drop down with crankshaft, tap bearings lightly to free dowel). Install new bearings, locating dowel on back of bearing shell in hole in crankcase, and pressing bearing up in place (bearing should snap into place and hold if it has correct spread). Re-install bearing cap, using .006" shim thickness (three .002" shims) on each side of cap, tighten bearing caps just enough to support crankshaft. Repeat above procedure at front and rear intermediate bearings (NOTE—Rear intermediate bearing is close fit in crankcase and may not go up into place until crankshaft lifted up). After all bearings replaced, place a jack under rear intermediate bearing cap and carefully raise crankshaft into position. Keep crankshaft horizontal during this operation (CAUTION—Make certain that timing gears meshed in accordance with marks made before crankshaft dropped). Tighten all bearing caps snugly, then adjust main bearings as directed on car model page.**

**Main Bearing Replacement (Trucks):** Remove radiator (see Radiator removal), remove fan belt and vibration dampener (see Vibration Dampener removal). Loosen all rocker arm screws to relieve tension on camshaft. Remove spark plugs. Take off transmission floor pan cover and clutch housing underpan and extension. Disconnect transmission control rods on side of transmission case ( $\frac{1}{2}$  &  $\frac{3}{4}$  Ton), remove hand brake lever from transmission mounting stud (Other Trucks). Remove transmission (see Transmission removal instructions for each model on car model page). Remove oil pan and timing gear cover. Remove oil pump and screen cover assembly. Rotate crankshaft to position allowing removal of

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDIN PAGE

all bearing caps. Mark timing gears to insure re-meshing of gears in same relative position. Then install new bearings as directed for Pass. Cars

## 1949 MODELS

**CRANKSHAFT OIL SEALS:** Rear Seal. Special rear main bearing cap (mounted on four bolts with two locating dowels) with wick type oil seal installed in groove in cap and crankcase used. Seal bears on outer rim of crankshaft flange (oil slinger and check valve in oil return hole in bearing cap have been discontinued). To install new seal in bearing cap, insert packing in groove and roll firmly in place with rounded tool (roll from both ends toward center). Use round block of wood (same diameter as crankshaft flange) to hold packing in place, cut both ends off evenly and flush with bearing cap face. Install upper half of seal in crankcase in same manner with engine out of car.

**Front (Timing Gear Cover) Oil Seal—**Spring-loaded leather type installed in pocket in timing gear cover. To install new seal, place seal on special Oil Seal Replacer J-995 with free end of leather toward end of tool, seat seal in cover with few light hammer blows on tool. NOTE—Timing gear cover must be centered on crankshaft when installed on engine to prevent balancer damaging oil seal. To install cover, coat seal with grease, install centering guide J-986 on crankshaft, install cover and tighten cover screws.

## VIBRATION DAMPENER

## 1949 MODELS

**HARMONIC BALANCER:** Furnished as a complete assembly. Part No. (216" Eng.) 605203 6 5/32" diam., (235" Engine) 605635 7 1/4" diameter.

**Removal (Passenger Cars)—**Remove radiator (see Radiator Removal), and Radiator Grille and Filler Panel Baffle as an assembly. Take off fan belt. Remove engine front mounting bolts, raise front end of engine approx. 1/2" (to permit balancer puller head to clear radiator support cross-member). Use puller J-1287, attach puller body to balancer by means of two capscrews screwed in tapped holes in balancer, pull balancer by turning puller screw.

**Removal (Trucks)—**Remove Front End Sheet Metal Assembly (see Front End Sheet Metal Assembly removal preceding). Then remove balancer with puller tool as described for Passenger Cars (above). **Installation—**Place drive adapter of puller tool J-1287 in starting crank jaws of balancer, install puller body (as above), line up keyway in balancer and key in crankshaft, turn puller screw down to contact driver, then use puller screw as driver and drive balancer in place until it bottoms against crankshaft gear.

## CAMSHAFT &amp; BEARINGS

## 1949 MODELS

**CAMSHAFT BEARINGS:** Installation. Oil groove extends 70° around bearing from oil hole. To insure proper alignment with oil hole in block, mark front of bore opposite oil hole. Align oil hole in bearing with mark (with groove toward bottom of engine away from oil hole in block), press bearings in, stake in place, and line-ream (see below).

**Reaming—**Special reamer with four cutters on one bar recommended by car manufacturer (for proper alignment). Insert reamer through #1, #2, and #3 bearings. Start reamer cutters in all four bearings

at the same time (wash metal cuttings away with liberal supply of kerosene while reaming), turn reamer slowly until cutters pass through bearings. Remove reamer by rotating in same direction as when reaming bearings and withdraw from engine. Bearing cuttings must be blown out with compressed air. Install camshaft and check bearing clearances with narrow feeler gauge. Clearance should be .002-.004". Install expansion plug to rear of rear bearing.

## TIMING GEARS

## 1949 MODELS

**TIMING GEAR ALIGNMENT:** Gear alignment controlled by gaskets installed between Camshaft Thrust Plate and Crankcase Front End Plate (Front End Plate now installed with one gasket between plate and block and this gasket thickness not varied for alignment adjustment). Check gear alignment as follows:

**Gear Alignment—**With Front End Plate installed on block, place a new Camshaft Thrust Plate and two Thrust Plate Gaskets, No. 839100, in position over camshaft hole in end plate. Check alignment by placing straightedge on thrust plate and noting if gear shoulder on crankshaft is in alignment. If straightedge strikes shoulder, add additional gasket under thrust plate. When correct gasket thickness determined for correct alignment, note number of gaskets and install these gaskets under thrust plate when camshaft assembly installed.

## 1949 MODELS

**TIMING GEAR INSTALLATION:** Gears are press fit on crankshaft and camshaft and must be removed and installed as follows:

**Crankshaft Gear—**To remove gear, attach Puller T126-R by threading puller screws in tapped holes in gear, pull gear off. When installing gear, make certain that two woodruff keys installed in crankshaft keyways, drive gear on shaft until it seats against shoulder on shaft.

**Camshaft Gear—**To remove gear, install Gear Remover J-971 on shaft in back of gear (remover consists of support sleeve), place camshaft assembly in arbor press (CAUTION—Thrust plate must be positioned so that it will not be damaged by woodruff key in shaft as shaft pressed out), press shaft out of gear. To install gear, place shaft in arbor press (support shaft securely directly back of front bearing journal), install thrust plate, place woodruff key in shaft keyway, press gear on shaft until thrust plate just turns freely (clearance between back of thrust plate and front bearing journal must not exceed .003"). This clearance will give correct camshaft endplay of Free to .003" maximum. When installing camshaft in engine, make certain that correct gasket thickness installed in back of thrust plate (see Gear Alignment data above), tighten thrust plate capscrews through hole in camshaft gear. CAUTION—Press on steel hub only when installing camshaft gear (pressure on composition or aluminum gears will cause damage).

## TAPPET CLEARANCE ADJUSTMENT

## 1949 MODELS

**ENGINE NORMALIZING PROCEDURE (For Valve Tappet Clearance Adjustment):** Clearance changes while engine is warming up. Adjust only after engine has been 'normalized' as follows: Run engine at 600 RPM and check oil temperature with ther-

mometer at overflow pipe on valve rocker shaft connector until no change noted in oil temperature for period of five minutes (oil temperature will become stabilized at some point between 150-225° F.). This normalizing period will be from 5 to 30 minutes depending on engine temperature when started.

## VALVE SYSTEM

## 1949 MODELS

**VALVE STEM OIL SEAL INSTALLATION:** Seal consists of a flat synthetic rubber ring installed in lower groove on valve stem (upper groove is for split type valve locks) and is retained by the valve cap (special longer type valve cap used—can be identified by 1/16" deep annular groove on top face). Install seals during valve assembly as follows: With valve in place in cylinder head, install lower spring seat, valve spring, valve cap. Compress spring and valve cap so that lower groove is exposed within cap, install seal ring in lower groove (CAUTION—seal must seat in groove and be flat), install split type locks, relieve spring tension and check to see that cap retains seal and locks properly. NOTE—Valve cap covers or "umbrellas" not used with these new type oil seals.

## 1949 MODELS

**VALVE GUIDE INSTALLATION:** Use special valve guide drivers J-1089 (Intake), J-1090 (Exhaust) to install guides. Drivers have stop-collars which correctly position guides so that distance from cylinder head to top of guide is 1 1/16" (Intake), 61/64" (Exhaust). After guides installed, finish ream to inside diameter of .343".

**Replacement Precision Valve Guide Note—**Service guides furnished for replacement are precision type and require only finish reaming after installation for straightening of guide bore (formerly guides unfinished and required rough reaming also). Guides furnished under following Part Numbers: Intake Guide No. 3688760. Exhaust Guide No. 3688761.

## 1949 MODELS

**ROCKER ARMS:** Diamond bored and "granodized" (no bushings) and fit directly on rocker arm shafts. Four different types of rocker arms are used (offset at an angle) as follows:

Part Number	Forge Number
Intake—Left Hand .....	839463.....839465
Intake—Right Hand .....	839464.....839466
Exhaust—Left Hand .....	839459.....839461
Exhaust—Right Hand .....	839460.....839462

**Identification—**Number cast on side of arm thus: Left Hand Exhaust (marked 1 or 9), Right Hand Exhaust (0 or 2), Left Hand Intake (3 or 5), Right Hand Intake (4 or 6). Number carried on side of each arm (also indicates manufacturing plant).

**Installation—**Install rocker arms in the following order (numbered from front to rear) on each shaft.

Front Shaft	Rear Shaft
1—L.H. Exhaust (1 or 9)	7 —L. H. Intake (3 or 5)
2—R.H. Intake (4 or 6)	8 —R.H. Exhaust (0 or 2)
3—L.H. Intake (3 or 5)	9 —L. H. Exhaust (1 or 9)
4—R.H. Exhaust (0 or 2)	10—R.H. Intake (4 or 6)
5—L.H. Exhaust (1 or 9)	11—L.H. Intake (3 or 5)
6—R.H. Intake (4 or 6)	12—R.H. Exhaust (0 or 2)

Rocker arms installed on tubular shafts and held against side of shaft brackets by spring installed on shaft between adjacent rocker arms and locked in position by hairpin spring installed in groove in plugged end of each shaft. Rocker shafts must be

removed and installed as an assembly. Shafts should be assembled as follows: Open end of each shaft must be toward the center, stamped steel baffle in open end of rear shaft must be in vertical position, connect shafts by slipping brass oil connector over open end of each shaft.

## OILING SYSTEM

### 1949 MODELS

**OIL DISTRIBUTOR:** Distributor is located in recess in left side of engine block (under cover plate).

**CAUTION**—Inner and outer gaskets used with valve assembly plate must not be interchanged.

**Removal**—To dismantle oil distributor, take out three screws in cover plate, remove cover plate, outer gasket, valve assembly plate, inner gasket.

**CAUTION**—Do not alter oil distributor valve spring tension (will upset proper oiling of engine). If trouble suspected in oil distributor, replace oil distributor valve assembly.

**Assembly**—Install cork gasket with two center holes between valve assembly plate and block, and use cork gasket with center cut out between valve assembly plate and cover, tighten cover screws.

### 1949 MODELS

**OIL LEAD TO VALVE ROCKER ARMS:** Installation. New assembly must be used whenever lead is removed from engine. To install proceed as follows: Insert pipe in block, coat threads of nipple with white lead and screw in block (on right side), install nipple and sleeve nut on lower end of pipe (left side of block) and secure in place, then bend pipe in upward loop and connect to oil distributor, bend pipe on right side of engine to clear push rod cover and bend upper end so that it passes through hole in cylinder head, connect pipe to valve rocker shaft coupling. Run engine and check for leaks.

### 1949 MODELS

**CHECKING OILING SYSTEM:** Oil nozzle height, oil trough height, aiming of oil nozzles, and connecting rod dipper height should be checked whenever oil pan removed. This check requires use of special gauges. **CAUTION**—Same oil pan used on both 216" and 235" engines but require different checking gauges.

**Oil Pan Trough Height**—Use combination Oil Trough Depth & Connecting Rod Dipper Height Gauge No. J-969-2A (216" Eng.), J-1541 (235" Eng.). With oil pan gasket removed, place gauge on pan flanges with center pin extending down toward troughs. Slide gauge along pan so that pin passes over edges of trough at center. Pin should clear edge of trough and clearance at this point should not exceed .015". If pin strikes trough, grind edge of trough down for clearance, if clearance greater than .015", reweld any loose trough welds or replace oil pan. Check each trough in this manner.

**Connecting Rod Dipper Height**—Use same gauge as for Oil Pan Trough Height check (above). Turn crankshaft until connecting rod is at bottom of stroke, place gauge over connecting rod with the two gauge side pins resting on the oil pan mounting face of the crankcase, slide gauge over dipper. Low "Go" step of gauge should pass over dipper and high "No Go" step should not. If low step does not pass over dipper, tap dipper down with light hammer, if high step of gauge clears dipper, install new higher dipper. Check all dippers in this manner.

**Oil Nozzle Height and Nozzle Aim**—To check, with Oil Pan Target Gauge J-696-1 (for regular and Heavy Duty Engines). Install gauge and position it with dowels engaging screw holes in oil pan. Install Water Nozzle J-793-3 in main oil line. Tilt oil pan 45° so that nozzles are not covered by water in troughs. Use enough water to just straighten water streams from nozzles. Nozzle streams must hit holes in gauge. Use Oil Nozzle Wrench J-793-5 to adjust nozzles so that each water stream passes through center of its target hole. Recheck oil nozzle height

## RADIATOR

### 1949 MODELS

**RADIATOR CORE REMOVAL:** Raise engine hood and block in open position. Drain cooling system by removing drain plug. Disconnect and remove inlet and outlet hoses. Remove radiator mounting bolts from radiator support, lift radiator up and out.

**NOTE**—On models with radiator shroud, push shroud back and down over fan blades for clearance.

## PROPELLER SHAFT

### 1949 TRUCK MODELS

**PROPELLER SHAFT SUPPORT BEARING:** 1 Ton, 1½ Ton, 2 Ton Trucks (except Cab-over-Engine Short WB. Model): Support bearing is new single row permanently lubricated ball bearing in new type mounting with "grease traps" packed with water proof grease to prevent entrance of dirt and water. Propeller shaft design unchanged.

**Removal & Installation:** Propeller shafts are removed and installed in same manner as on previous models. Support bearing should be serviced as follows:

**Removal**—Split intermediate universal joint by removing two trunnion bearing "U" bolts (tape or wire bearings in place). Remove bolts attaching bearing support bracket to frame cross-member. Remove universal flange retaining nut, remove flange, pull support assembly off rear end of front propeller shaft. Place support assembly in arbor press using a piece of tubing to apply pressure on rubber cushion (tubing should clear slinger and be snug fit in bracket), press bearing and cushion assembly out of bracket. Remove cushion and grease retainers from bearing.

**Servicing**—Clean rubber cushion with pure denatured alcohol, replace cushion if cracked, hardened, or distorted. Check bearing by rotating inner race slowly by hand. **CAUTION**—Do not attempt to remove oil seal retainers from bearing and do not clean bearing with gasoline or solvent which will wash lubricant out (requiring new bearing).

**Assembly & Installation**—See that grease deflectors on propeller shaft and universal joint yoke are tight (staked on shaft by prick punching at two points). Assemble grease slinger on outer bearing race (one at each side), force bearing and slinger assembly into rubber cushion. Coat outer surface of rubber cushion with brake fluid, place support bracket on arbor press with flanged side up, position bearing and cushion squarely in flanged end of bracket bore, use piece of tubing to press on rubber cushion only and press assembly in bracket until face of grease retainer is flush with flanged end of bracket (**CAUTION**—this position important to provide clearance between grease retainers and grease deflectors, if assembly pressed too far in bracket, turn bracket over and press assembly out

to correct position). Pack grease retainers on both sides of bearing with waterproof grease (grease used to keep out dirt and water—does not lubricate bearing). Install support bearing and bracket assembly on end of front propeller shaft making certain that grease slingers lined up with bearing hole and that flanged end of bracket is forward. Install intermediate universal joint yoke on end of shaft, tighten yoke retaining nut to 160-280 ft. lbs. Then check clearance between rear edge of propeller shaft dust shield and front face of bearing support bracket. This clearance should be ½" plus or minus 1/32". Install bolts, lockwashers, and nuts attaching bearing support to frame cross-member, tighten nuts.

## REAR AXLE NOTES

### 1949 PASS. CARS & ½ TON TRUCKS

**AXLE SHAFT:** Shafts are heavier construction on ½ Ton Trucks than Passenger Car.

**Installation**—Assemble new oil deflector, gasket (coat both sides with heavy shellac or paint), line up extra hole (center hole of closely grouped three holes) with notch in hub flange on axle shaft (oil pocket in oil deflector should also be aligned with this notch), install five (Pass. Cars) or six (½ Ton Trucks) special bolts, forcing heads down to deflector, andpeen shoulder on bolts into countersink around bolt holes in flange using Special Peening Tool and Anvil so that these parts are riveted together. Check endplay (below).

**Axle Shaft Note**—Shafts unequal in length (right shaft longer). Part numbers are as follows:

### 1949 Passenger Cars

Part No.	Length	Marking
Left Axle Shaft .....	3687767.....28 31/32"	
Right Axle Shaft .....	3687768.....29 31/32"	

### 1949 ½ Ton Trucks

Left Axle Shaft .....	3683161.....29½"	"GM-161"
Right Axle Shaft .....	3683162.....30½"	"GM-162"

**Endplay Adjustment**—When installing shaft, select correct spacer block (see below) so that with spacer installed on pinion shaft between inner ends of axle shafts, shaft endplay will be from a Free Fit to .014" maximum clearance.

### Passenger Car Spacer Blocks

Part No.	Type & Size
597251.....	Narrow (1.011-1.013")
597254.....	Medium (1.018-1.021" & 1.028-1.031")
473603.....	Wide (1.033-1.035")

### Half-Ton Spacer Blocks

370217.....	Narrow (1.1485")
372515.....	Wide (1.1575" & 1.1675")

These dimensions are taken across ground surfaces. **NOTE**—Install spacers with ground surface toward axle shaft end.

## CAB-OVER-ENGINE NOTES

### 1949 CAB-OVER-ENGINE MODELS

**GEARSHIFT LEVER REMOVAL:** Disconnect gearshift lever at top of engine cover, loosen wire on cloth boot, raise boot above transmission cover tower. Remove nut from stub gearshift lever and raise reverse latch Bowden cable support onto top of lever. Use gearshift lever removing tool K-353 to remove lever assembly from transmission cover.

**Installation**—When installing lever, see that end of reverse latch shift rod seats in upper part of "U" shaped bracket at end of reverse latch Bowden cable and that retaining nuts are tight so that rod anchored in bracket.

# FRONT END SHEET METAL ASSEMBLY REMOVAL:

See Chevrolet Special Data.

## MODEL IDENTIFICATION

Series	Serial Prefix	Model Designation
1500	GJ	Special Styleline & Fleetline
2000	GK	Deluxe Styleline & Fleetline
1508	GJ	Sedan Delivery

**SERIAL NUMBER:** Stamped on plate on left front body hinge pillar post.

**1949 Serial Numbers:** First number 1001 with model prefix as indicated in model identification above.

**ENGINE NUMBER:** Stamped on right side of crankcase to rear of distributor.

**Engine Number Prefix:** Indicates manufacturing plant as follows: GAA—Flint, GAM—Tonawanda.

**1949 Engine Numbers:** First number 1001 with engine plant prefix as indicated above.

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. minimum (with cylinders equal within 5-10 lbs.) at cranking speed.

**VACUUM READING:** Steady 17-21" at idling speed.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .035".

Plugs—AC No. 46-5. 14 mm.

► **CAUTION**—Tighten plugs to 20-25 ft. lbs. torque or finger tight plus one-half turn.

**DISTRIBUTOR: Breaker Gap**—.018" (limits .018-.022") standard setting, or .022-.024" for new points (to allow for seating).

**Cam Angle**—Closed 31° to 37° with .022" gap.

**Breaker Arm Spring Tension**—17-21 ozs.

**Automatic & Vacuum Advance**—See Ignition.

**Condenser Capacity**—.18-.23 microfarad.

**IGNITION TIMING:** 5° BTDC.

**Timing Procedure**—See Ignition Timing.

**Timing Mark**—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at "O". Then adjust Octane Selector as follows:

**Octane Selector Setting**—Set for slight ping when accelerating engine with wide open throttle.

## CARBURETION:

**Idle Setting**—(Carter) 1-2 turns, (Rochester) 1½ turns open. One screw—turning screw out gives richer mixture.

**Idle Speed**—450-500 RPM. with warm engine.

**Float Level (Carter)**—½" top of float to gasket seat (machined surface) on cover with valve seated (invert to check).

**Float Level (Rochester GM)**—1 5/16" from bottom of each float to gasket seat (machined surface) on cover with cover inverted (float pin and floats must be removed to take off gasket). Check float stop by turning cover right side up—distance from gasket seat to bottom of each float should be 1 3/4-1 27/32" with floats down (needle valve open). Stop adjustment made by bending tang on upper side of lever at pivot.

► **CAUTION**—When making float level adjustment on Rochester GM carburetor do not twist float arms—if arms twisted floats may contact sides of bowl.

**Accelerating Pump**—No seasonal adjustment.

**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. Distorted springs should be replaced.

► **VALVE TAPPET CLEARANCE:** **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Special Data.

**Setting (with Engine "Normalized")**—.006-.008" Intake, .013-.015" Exhaust.

**Valve Timing Check**—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Delco-Remy No. 1116452.

**Ignition Lock**—Chevrolet No. 3692503 less keys uncoded.

**Key Series**—No. 8000 to 9499. Groove—No. 15.

**COIL:** Delco-Remy No. 1115380. Above distributor.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

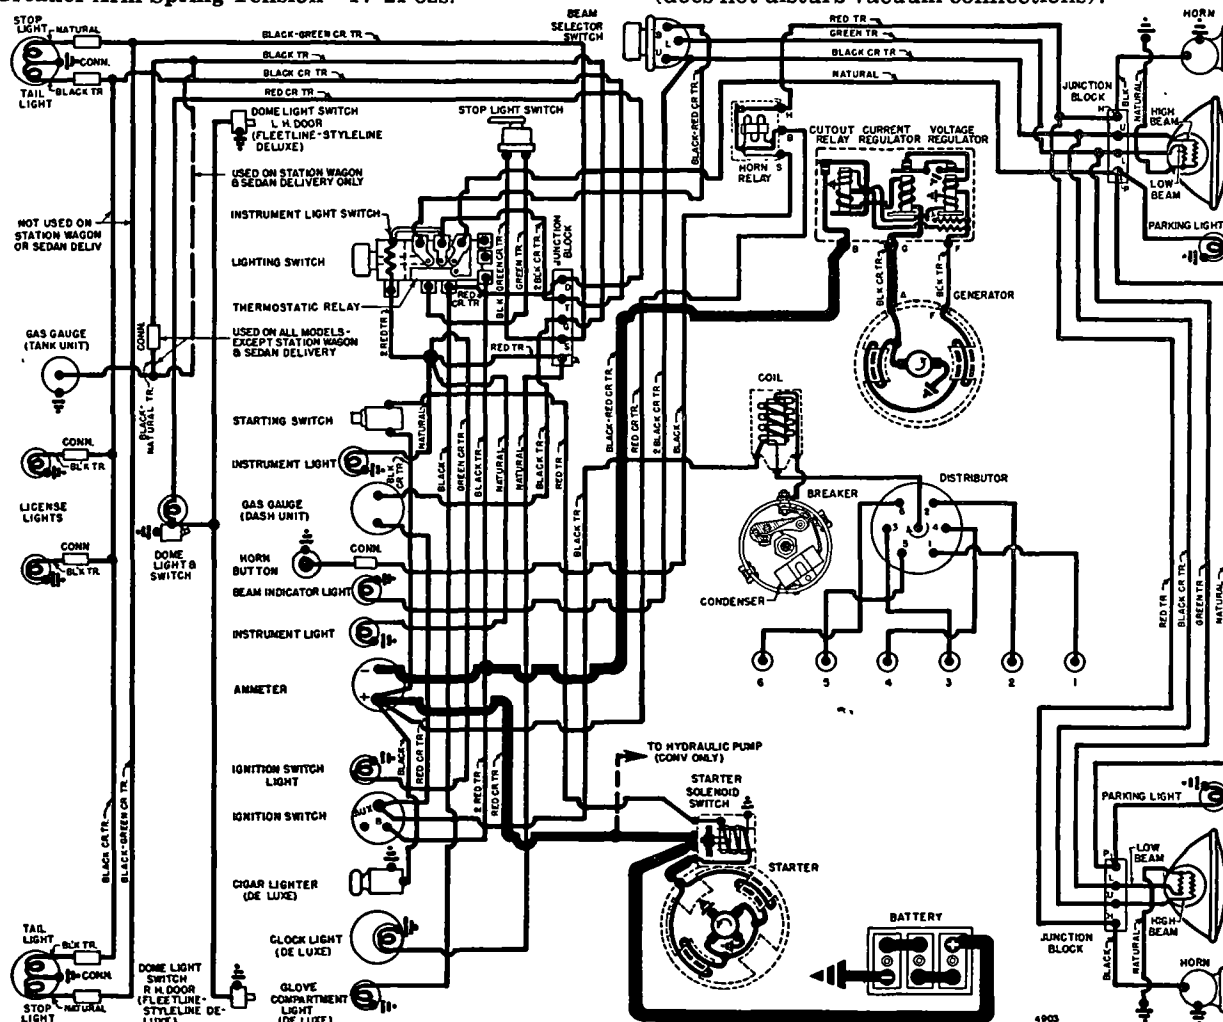

**Capacity**—.18-.23 microfarad.

**DISTRIBUTOR:** Delco-Remy 1112353. Automatic and vacuum advance with Octane Selector.

**Breaker Gap**—.018" standard setting, or .022-.024" for new points (to allow for seating).

**Cam Angle**—31° to 37° with .022" gap.

**Breaker Arm Spring Tension**—17-21 ozs.

**Rotation**—Clockwise viewed from above.

Distr. Degrees	Automatic R.P.M.	Advance Eng. Degrees	R.P.M.
Start	350	3	700
6.5	600	13	1200
12.0	1200	24	2400
19.0	1700	38	3400

**Octane Selector**—Adjustment on distributor provides 10° advance or retard from center "0" position. See Ignition Timing for adjustment instructions.

**Vacuum Spark Control:** Delco-Remy No. 1116043. On Octane Selector, linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

**Plunger Travel**—17/64".

## Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	16.5-18.5"

**Removal:** Distributor mounted on right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb vacuum connections).

**IGNITION TIMING**

**Flywheel Degrees Piston Position**  
**Std. Setting** ① 5° BTDC.....0091" BTDC.  
 ①—Adjust Octane Selector for grade of fuel being used. See Octane Selector Setting below.  
**Timing (Neon Light)**—Recommended method. Connect neon light to #1 spark plug, direct light in flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at "0". Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector Setting (see below).  
**Timing (without Neon Light)**—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center with ignition mark (steel ball insert in flywheel) at pointer in inspection hole in right front face of housing. Adjust distributor as directed above.  
**Octane Selector Setting**—Set for the grade of fuel being used to produce slight "ping" on acceleration.

**CARBURETOR****CARTER (CHEVROLET) W1**

Carter (Chevrolet) W1, No. 684S, 1¼" single barrel, downdraft type with manual choke control and new fast idle and accelerating pump design.  
**Casting No. on Flange**—603.  
 See Carburetor Section for complete data.  
**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up.  
**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section for complete data.  
**Fast Idle:** Linkage connected to choke and operates when choke closed to open throttle. No adjustment.

**CARBURETOR****ROCHESTER**

Rochester G.M. Model "B". Single barrel, downdraft type with concentric bowl and twin floats. Choke is manual type with throttle kicker and fast idle.  
 See Carburetor Section for complete data.  
**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up.  
**Throttle Kicker:** Operates by cam on choke lever—opens throttle when choke closed—no adjustment.

**CARB. EQUIPMENT**

**Air Cleaner:** AC No. 1544448 oil-wetted type (std.). 1544498 (or 1529264 with governor) oil bath types.  
**Filter Element**—AC #6 (std.), #22 (heavy duty), #2 (heavy duty with governor).  
**Servicing**—Clean and re-oil std. cleaner (use SAE 50 oil) every 2000 miles. On heavy duty, clean and refill oil reservoir with SAE 50 oil (1 pint) every 2000 miles.  
**Fuel Pump:** AC Type AF, No. 1523089. Diaphragm type.  
**Replacement Pump**—AC No. 429.  
**Pressure**—4 lbs. maximum.  
 See Carburetion Equipment Section for complete data.  
**Gasoline Gauge:** AC Electric type.  
**Dash Unit**—AC No. 1516931.  
**Tank Unit**—AC 1516280 (1517100 Sta. Wn., Sed. Del.).  
 See Carburetion Equipment Section for complete data.

**BATTERY**

Delco Type 15AA-4. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).  
**Starting Capacity**—120 amperes for 20 minutes.  
**Grounded Terminal**—Negative (—) terminal.  
**Dimensions**—Length 9". Width 7". Height 8 11/16".  
**Location**—In engine compartment on right side.

**STARTER**

Delco-Remy Model 1107075. Armature No. 1867897.

► **CAUTION**—Starter operates whenever pushbutton depressed.  
**Drive**—Overrunning clutch (solenoid pinion shift).  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24-28 ozs. each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.7	80①
12 " "	Lock	3.4	525

①—Includes current draw of starter switch.

**Removal:** Flange mounted on right front face of flywheel housing. To remove, take out mounting screws.

**Starting Switch:** Delco-Remy Solenoid Switch No. 1118135 (no relay used) mounted on starter and controlled by Pushbutton Switch No. 1996037.

► **CAUTION**—Overrunning clutch pinion clearance must be adjusted whenever solenoid removed from starter. See Electrical Equipment Section for data.

**GENERATOR****Generator—D-R Nos.—Armature**

Passenger Cars.....	1102710	1879002
Taxi .....	1102729	
Taxi & City Police.....	1106752 & 758	
State Police .....	1106751 & 757	

2 brush types with current and voltage regulation.  
**Charging Rate Adjustment**—None. See Regulator.  
**Maximum Charging Rate (Pass. Cars)**—32-40 amperes reached at car speed of 25 MPH. Actual charging rate controlled by regulator and dependent on battery condition.

**Performance Data—Cold**

	Amperes①	Volts	R.P.M.
1102710 .....	30	8.0	1750
1102729 .....	40	8.0	1900
1106751 & 757 .....	50	7.5	1410
1106752 & 758 .....	40	7.5	1165

①—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. (1102710 and 729, 1106751 and 757), 20 ozs. (1106752 and 758).

**Field Current**—1.75-1.9 amps. at 6 volts (1102710), 1.9-2.05 amps. at 6 volts (1102729), 1.70-1.95 amperes at 6.0 volts (1106751, 52, 57, 58).

**Removal:** Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

**REGULATOR****D-R Regulator**

Passenger Cars .....	1118301 (for 1102710 Gen.)
Taxi .....	1118300 (for 1102729 Gen.)
Taxi & City Police.....	1118343 (for 1106752, 8 Gen.)
State Police .....	1118334 (for 1106751, 7 Gen.)

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. See Electrical Equipment Section for complete data.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In**—5.9-6.8 volts hot (set to 6.4 volts hot).  
**Contact Gap**—.020" (same for both sets).  
**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjust'mt**—See Electrical Equip. Section.

**Current Regulator****Settings (hot): Set to Range**

1118301 .....	36 amps.	32-40 amps.
1118300 .....	42 amps.	40-46 amps.
1118334 .....	50 amps.	48-52 amps.
1118343 .....	40 amps.	37-41 amps.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjust'mt**—See Electrical Equip. Section.

**LIGHTING**

**Headlamps:** Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot 3" below lamp center height).

**Beam Indicator**—Red dot below 50 figure on speedometer. Lighted when upper beams in use.

**Direction Signal:** Optl. See Electrical Equipment Section.  
**Direction Signal Indicator**—Pilot light on switch case. Lighted when Right or Left Dir. Signal "on".

**Switches**

**Lighting**—Delco-Remy No. 1995031.

**Instrument**—Part of Lighting Switch (Rheostat operated by turning light switch knob).

**Beam Selector**—Delco-Remy No. 1997008.

**Glove Box**—Delco-Remy No. 1997840.

**Stop Light**—D-R No. 1997901 (mechanical type).

**MISC. ELECTRICAL**

► **DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENTS:** Located on left side under hood with removable door screwed to dash.

**THERMOSTATIC CIRCUIT BREAKER:** Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

**HORNS:** Delco-Remy No. 1999627 or 643 (Low Note, Right), No. 1999628 or 644 (High Note, Left). Vibrator types operated by relay.

**NOTE**—1999643 and 644 are welded.

Type	Current (at 6.0 volts)	Air Gap
1999627 (Low Note) .....	19-21 amperes	.044-.049"
1999628 (High Note) .....	17-19 amperes	.034-.039"

**Horn Relay:** Delco-Remy No. 1116775.

**Contact Gap**—.027". Air Gap—.014" (closed).

**Contacts Close**—2.75-4.0 volts (set to 3.5 volts).

**ENGINE**

**ENGINE SPECIFICATIONS:** Own 216". Six Cylinder, Valve-in-Head type.

**Bore**—3½" (3.4995-3.5015"). **Stroke**—3¾".

**Displacement**—216.5 cubic inches. **Rated HP**—29.4.

**Developed Horsepower**—90 at 3300 RPM.

**Compression Ratio**—6.6-1 Std. Cast Iron Head.

**Compression & Vacuum Reading**—See Tune-Up.

**ENGINE REMOVAL:** See Chevrolet Special Data.

**ENGINE MOUNTINGS (Installation & Adjustment):** See Chevrolet Special Data.

**TIGHTENING TORQUES:** See Chevrolet Special Data.

C NTINUED ON NEXT PAGE

## ENGINE

CONTINUED FROM PRECEDING PAGE

**CYLINDER HEAD INSTALLATION:** See *Chevrolet Special Data*.

**PISTONS:** Passenger Cars. Cast alloy iron, flat head, cam ground, tin plated type with slipper skirt.

**Truck Pistons.** Same as Pass. Cars except heavier. Truck pistons marked with small boss on underside of each pin boss. **CAUTION**—Do not interchange pistons (must be same type in one engine).

**Weight**—1.56 lbs. (Pass. Cars). **Length**—3.75" (min.). **Removal**—Pistons and rods removed from above.

**Clearance**—Top: .0155-.0235". Skirt: Selective Fit. See Fitting New Pistons below.

**Replacement Pistons:** See *Chevrolet Special Data*.

**NOTE**—To install new pistons, hone cylinder for .005" oversize, rebore and hone for other sizes (rebore .002" less than piston oversize, finish by honing for piston clearance—see fit below). Cylinder bore taper and out-of-round must not exceed .001".

**Fitting New Pistons:** Use feeler gauge between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore with light pressure on .002" feeler, and lock on .003" feeler.

**PISTON RINGS:** Two taper face compression rings (with greatest diameter at bottom), one slotted oil ring per piston, all above pin. Oil ring groove drilled for oil drainage.

Ring	Width	End Gap <sup>①</sup>	Side Clearance
Compr. ....	.1235-.1240"	.005-.015"	.0015-.003"
Oil Cont. ....	.1860-.1865"	.005-.015"	.002-.0035"

①—End Gap Worn Limit—1/32" max.  
②—Side Clearance Checking—smaller feeler should be free, larger feeler should give a heavy drag.

**Installing Compr. Rings**—Side marked "TOP" up.

**Replacement Rings:** Furnished Standard size and .005", .020", .030", .040" Oversize.

**Expander Type Rings**—Furnished for use in cylinder bores of indicated oversizes as follows: Standard (Bore Std. to .009" Oversize), .020" Oversize (Bore .010" to .029" Oversize—(ring gaps must be filed for bores less than .020" Oversize), .030" Oversize (Bore .030" to .039" OS.), .040" OS. (Bore .040" to .049" OS.).

**PISTON PIN:** Diameter—.8645-.8650". Length 3.135-3.165". Pin locked in rod (piston bronze bushed).

**Pin Fit in Piston**—Thumb push fit (at room temp.).

**Replacement Pins:** Std. & .003", .005", .010" oversize. **NOTE**—New pistons fitted with bushings and pins. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.

**CONNECTING ROD:** Length—6 13/16". Wgt. 30.7 ozs. Crankpin Journal Diameter—2.311-2.312".

**Lower Bearing**—Spun high-lead, thin-wall babbitt. Clearance—.0003-.0013" selective fit (see Bearing Adjustment following).

**Sideplay**—.004-.012" at lower end (rod to crankpin), .015" minimum at upper end (rod to piston pin boss).

**Bearing Adjustment:** Solid shims. Remove shims equally at both sides to secure 'snap fit' (rod tight to hand but should snap from one side to the other with light tap of 8 oz. hammer), then replace one .002" shim on one side for clearance (if unequal number, place extra shim on camshaft side). Bearing clearance correct when rod can be snapped back and forth on crankpin with one hand (grasp bearing cap between thumb and index finger to test). **Palnut Note**—Palnuts used to lock rod bolt nuts. Use new palnut (install with open side toward end

of bolt), turn palnut up finger tight against rod bolt nut, then tighten palnut 1/2 turn additional.

**Installing Rods:** Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rods with mouth toward camshaft side of engine. Check dipper height.

**Dipper Height Adjustment**—See "Oiling System" in *Chevrolet Special Data*.

**CRANKSHAFT:** Four-bearing type with integral counterweights and vibration dampener.

**Vibration Dampener**—See *Chevrolet Special Data*.

**Journal Diameters**—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".

**NOTE**—Journal taper or out-of-round limits .001". Run-out limits for #2 and #3 journals .002".

**Bearing Type**—Steel-backed "Precision" type thin-wall babbitt. Do not require line-boring or reaming.

► **CAUTION**—#1 (front) and #2 (front intermediate) bearings similar in appearance but must not be interchanged. #2 bearing marked by letter "I" in oil groove. Clearance—.0007-.0024" selective fit. See Bearing Adjustment (below).

► **NOTE**—Precision type bearings can be replaced singly.

**Bearing Adjustment:** Solid shims. Remove shims until slight drag secured when shaft turned by hand, then replace one .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side for all bearings).

**Replacement Bearings:** New "Precision" type bearings furnished for all engines Std. size and .002", .010", .020", .030" Undersize.

► **Bearing Installation**—Not necessary to remove crankshaft or engine from car. See "Crankshaft & Main Bearings" in *Chevrolet Special Data*.

**Bearing Cap Installation**—Intermediate (#2 & 3) bearing caps marked for identification. Install #2 cap with mark "FRONT" toward front of engine, #3 cap with mark "REAR" toward rear of engine.

► **CAUTION**—Rear intermediate (#3) bearing is special flanged type (takes end thrust).

**Crankshaft Oil Seal Servicing:** See *Chevrolet Special Data* for Front (Timing Gear Cover) and Rear Oil Seals.

**End Thrust:** Taken by #3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of #3 bearing. Adjust by replacing bearing. Endplay—.003-.009".

**CAMSHAFT:** Four bearing type. Helical gear drive.

**Journal Diameters**—#1, 2.0282-2.0292"; #2, 1.9657-1.9667"; #3, 1.9032-1.9042"; #4, 1.8407-1.8417".

**NOTE**—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).

**Bearing Type**—Steel-backed, babbitt-lined bushings (staked in place). **NOTE**—New bearings must be line-reamed. Clearance—.002-.004".

**Bearing Installation**—See *Chevrolet Special Data*.

**End Thrust:** Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).

**Endplay Adjustment**—See *Chevrolet Special Data*.

**Endplay**—Free fit to .003" maximum.

**Timing Gears:** Crankshaft gear steel. Camshaft gear Bakelite and Fabric composition.

**Max. Gear Runout**—.003" crankshaft, .004" camshaft.

► **235" Truck Engine Timing Gear Set**—Aluminum camshaft gear with bonded steel hub used with crankshaft gear having crowned teeth.

**Replacement Timing Gears, and Gear Installation & Alignment**—See *Chevrolet Special Data*.

**Timing Gear Backlash**—.003-.004".

**Camshaft Setting:** Gears punch marked. Punch marks on both gears must be lined up and directly opposite each other.

VALVES:	Head Diam.	Stem Diam.	Length
Intake .....	1 41/64"	.3410-.3417"	6.260-6.290"
Exhaust .....	1 15/32"	.3400-.3407"	4.839-4.869"

	Seat Angle	Lift	Stem Clearance
Intake .....	30°	.2941"	.001-.003"
Exhaust .....	30°	.3118"	.002-.004"

**NOTE**—Intake valves have flat head.

**Valve Installation (with rubber Valve Stem Oil Seals):** Special synthetic rubber oil seal ring installed in groove in valve stem directly below seat locks (retained by valve cap).

**NOTE**—Longer valve spring cap is used (interchangeable for intake & exhaust valves—may be identified by 1/16" annular groove on top surface). No cap covers used with this type assembly.

**Valve Stem Oil Seal Installation**—See "Valve System" in *Chevrolet Special Data*.

**Valve Guides:** New precision type. Pressed in head.

**Valve Guide Installation**—See "Valve System" in *Chevrolet Special Data*.

**Valve Springs:** Install springs with closed-coil end toward cylinder head. Check springs with KMO-607 Tester, replace if outside limits of 124-140 lbs. at 1 1/2". Spring free length 2 5/8".

	Spring Pressure	Length
Valve Closed .....	53-63 lbs.	1.821"
Valve Open .....	124-140 lbs.	1.505"

**Valve Lifters:** Barrel type with pushrod seat brazed on upper end. Lifter diameter .989-.990".

**Clearance**—.001" (selective free fit).

**Rocker Arm Assembly:** Armasteel type (no bushings).

Four types of rocker arms used as follows:

Intake—No. 839463 (Left), 839464 (Right).

Exhaust—No. 839459 (Left), 839460 (Right).

**Rocker Shaft Diameter**—.7910-.7917" (bore diameter in rocker arm .7925-.7935").

**Rocker Arm Assembly & Installation**—See "Valve System" in *Chevrolet Special Data*.

## VALVE TIMING

► **VALVE TAPPET CLEARANCE:** **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in *Chevrolet Special Data*.

**Setting (with Engine "Normalized")**—.006-.008" Intake, .013-.015" Exhaust.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 1° ATDC. Close 39° ALDC.

**Exhaust Valves**—Open 42° BLDC. Close 9° ATDC.

**Valve Timing Check**—Remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet clearance at correct running figure (above).

## LUBRICATION

**Engine Oiling System:** Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low

speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by Oil Distributor Valve on left side of engine.

**CAUTION**—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be checked each time the oil pan is removed (requires special gauges).

**Checking Oiling System**—See "Oiling System" in *Chevrolet Special Data*.

**Crankcase Capacity**—5½ qts. (dry), 5 qts. (refill)

**Normal Oil Pressure**—14 lbs. at 2000 RPM.

**Oil Pressure Regulator**—Located in oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

**Rocker Arm Oil Lead & Overflow Pipe Servicing**: See "Oiling System" in *Chevrolet Special Data*.

**Oil Pump**: Located in crankcase. Driven independently through short shaft by gear on camshaft.

**Oil Pump Installation**—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

**Oil Distributor**: See "Oiling System" in *Chevrolet Special Data*.

**Checking Oiling System**: Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.

See "Oiling System" in *Chevrolet Special Data*.

**Crankcase Ventilation**: Air intake through valve rocker cover (air cleaner on some models), outlet through pipe on right side of engine.

**Servicing**—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

## COOLING

**Cooling System**: Positive circulation with water pump on front of engine.

**Capacity**—16 quarts.

**Radiator Core Removal**: See *Chevrolet Special Data*.

**Water Pump**: Double-outlet, packless type with sealed ball bearing shaft.

See *Water Pump Section* for complete data.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat**: Harrison. In cylinder head outlet. Std.—No. 3121301 stamped "143". Starts to open at 140-147°F. Fully open at 170°F.

**Temperature Gauge**: AC No. 1511842. Not electric.

## CLUTCH

**Own Make**—Diaphragm spring, single plate, dry disc type. NOTE—9" clutch used on all cars. See *Clutch Section* for complete data.

**Facings**—Moulded Asbestos, 2 required as follows: 6½" I.D., 9½" O.D. .132-.138" thick.

**Adjustment**: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

**Removal**: Remove transmission (see *Transmission Removal* below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

## TRANSMISSION

**Own Make**. Three-speed, all helical gear type, Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). Similar to 1948 3-Spd. Truck. See *Transmission Section* for complete data.

**Transmission Control**: New mechanical type with shift lever mounted on steering column. NOTE—Similar to 1948 ½ & ¾ Ton 3-Speed Truck type. See *Transmission Section* for complete data.

► **Gearshift Control Lever Rattle Correction**—New spring released to correct this condition. See "Chevrolet Pass. Car Transmission" in *Transmission Section*.

**Removal**: Remove floor mat and floor cover over transmission. Disconnect speedometer cable, and shifter rods from levers on transmission. Drain lubricant. Disconnect hand brake pull back spring, and hand brake cable clevis from idler lever, remove idler lever. Remove universal joint collar-to-support capscrews and slide ball back on propeller shaft housing. Place jack under propeller shaft, remove 4 capscrews securing front trunnion bearings to front yoke, split joint and lower front end of propeller shaft. Remove rear transmission support-to-frame cross member bolts, install support under rear of engine. Remove two upper transmission-to-clutch housing capscrews and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing capscrews. Slide transmission back and lift out through opening in floor.

**Convertible Note**—Transmission support must be removed and transmission turned for removal.

## UNIVERSALS

**Own Make**. No. 591642. Cross type with surface treated trunnions and bearings. One used (in torque ball behind transmission rear support).

See *Universals Section* for complete data.

## REAR AXLE

**Own Make**. Semi-floating, hypoid gear type with Torque Tube drive. "Revacycle" differential side gears and pinions used.

See *Rear Axle Section* for complete data.

**Ratio**—4.11-1 standard. 3.73-1 optional.

► **Axle Ratio Identification**—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratio as follows:

4.11-1—GA Detroit, GB Tonawanda.

3.73-1—GC Detroit, GD Tonawanda.

**Backlash**—.005-.007". Screw adjustment.

**Removal**: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate.

Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly.

**Axle Shaft Removal**: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.

**Axle Shaft Endplay**—Free fit to .014" maximum.

**Axle Shaft Installation & Endplay Adjustment**: See "Rear Axle Notes" in *Chevrolet Special Data*.

## SHOCK ABSORBERS

**Delco**. Chevrolet No. 5383591 (front), 5394330 (rear). Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension**: New linked parallelogram type with direct acting shock within each coil spring. See *Front Suspension Section* for complete data.

► **Lower Control Arm Production Change**—Two types used. See "1949 Chevrolet" in *Front Susp. Section*.

**Kingpin Inclination**—4° ± ½° crosswise.

**Caster**—Pos. ½° ± ½°. Adjustable.

**Camber**—Pos. ½° ± ½°. Adjustable.

**Toe In**—0-⅛". Loosen clamp bolts at each end of left hand tie-rod and turn rod, tighten clamp bolts.

**CAUTION**—Align tie rod ends before tightening clamp bolts (ball studs will bind if not aligned).

**Steering Geometry (toe-out on turns)**—Outer wheel turned 20°. Inner wheel turned 24° ± 2°.

## STEERING GEAR

**Saginaw**. Chevrolet No. 5660113. New worm-and-roller type with push-pull lash adjustment. See *Steering Gear Section* for complete data.

## BRAKES

**Service Brakes**: Own Make, hydraulic type. Hand lever applies rear wheel service brakes.

NOTE—Bonded brake lining used.

See *Brake Section* for complete data.

**Wheel Cylinder Bore**—Front wheels 1 5/16", Rear 1 1/8". Sizes stamped under adjusting cup lock spring on wheel cylinder housing.

**Drums**—Cast iron rim, steel web. Diameter: 11".

**Lining**—Moulded type (bonded). Width 1¾". Thickness .187-.194". Length per wheel 22⅞".

**Clearance**—Adjusting cover (on wheel cylinder) backed off 4 Notches from slight drag position.

**Braking Power**—57.7% front wheels, 42.3% rear.

**Hand Brake**: See *Service Brakes* above.

## MISC. MECHANICAL

**Convertible Top Control**: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders). See *Miscellaneous Section* for complete data.

**Windshield Wiper**: Vacuum Link-&-Crank Arm type. See *Miscellaneous Section* for complete data.

## FRONT END SHEET METAL ASSEMBLY REMOVAL:

See Chevrolet Special Data.

## MODEL IDENTIFICATION

Series	Serial Prefix	Wheelbase	Type
3100	GP	116"	Half-Ton
3600	GR	125 1/4"	3/4-Ton
3742	GT	125 1/4"	Forward Control
3800	GS	137"	1-Ton
3942	GU	137"	Forward Control
4100	SJ	137"	1 1/2-Ton
4400	SK	161"	1 1/2-Ton
4502	SL	161"	School Bus
5100	SP	110"	C.O.E. 2-Ton
5400	SR	134"	C.O.E. 2-Ton
5700	SS	158"	C.O.E. 2-Ton
5100S	SPS	110"	C.O.E. 1 1/2-Ton
5400S	SRS	134"	C.O.E. 1 1/2-Ton
5700S	SSS	158"	C.O.E. 1 1/2-Ton
6100	SV	137"	2-Ton
6400	SW	161"	2-Ton
6702	SX	199"	School Bus
6100S	SVS	137"	1 1/2-Ton
6400S	SWS	161"	1 1/2-Ton

**SERIAL NUMBER:** Stamped on plate on cab left front hinge pillar (Flat Face Cowl models have plate on left hand cowl inner panel).

**1949 Serial Numbers:** First number 1001 with Serial Prefix for each Series as indicated in table above.

**ENGINE NUMBER:** Stamped on right side of crankcase to rear of distributor.

**1949 Engine Numbers:** First number 1001 with prefix indicating year, engine type & plant as follows:

## Truck Engine Number Prefixes

Engine Type	Flint	Tonawanda
Half-Ton Truck	GBA	GBM
3/4 & 1 Ton (216" Eng.)	AGCA	AGCM
1 1/2 Ton (216" Engine)	GCA	GCM
1 1/2 & 2 Ton (235" Eng.)	GEA	GEM
Cab-over-Engine Mdl.	GDA	GDM

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. minimum (with cylinders equal within 5-10 lbs.) at cranking speed.

**VACUUM READING:** Steady 17-21" at idling speed.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .035".

Plugs—AC No. 46-5. 14 mm.

► **CAUTION**—Tighten plugs to 20-25 ft. lbs. torque or finger tight plus one-half turn.

**DISTRIBUTOR:** Breaker Gap—.018" (limits .018-.022") standard setting, or .022-.024" for new points (to allow for seating).

Cam Angle—Closed 31° to 37° with .022" gap.

Breaker Arm Spring Tension—17-21 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—18-23 microfarad.

**IGNITION TIMING:** 5° BTDC.

Timing Procedure—See Ignition Timing.

**Timing Mark:** Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at "O". Then adjust Octane Selector as follows:

**Octane Selector Setting:** Set for slight ping when accelerating engine with wide open throttle.

► **CARBURETION** Downdraft Carburetors

## Conventional Trucks

**Idle Setting:**—(Carter) 1 1/4-2 1/4 turns, (Rochester) 1 1/2 turns open. One screw—turning screw out gives richer mixture.

**Idle Speed:**—450-500 RPM. with warm engine.

**Float Level (Carter)**—1/2" top of float to gasket seat (machined surface) on cover with valve seated (invert to check).

**Float Level (Rochester GM)**—1 5/16" from bottom of each float to gasket seat (machined surface) on cover with cover inverted (float pin and floats must be removed to take off gasket). Check float stop by turning cover right side up—distance from gasket seat to bottom of each float should be 1 3/4-1 27/32" with floats down (needle valve open). Stop adjustment made by bending tang on upper side of lever at pivot.

► **CAUTION**—When making float level adjustment on Rochester GM carburetor do not twist float arms—if arms twisted floats may contact sides of bowl.

**Accelerating Pump:** No seasonal adjustment.

**Fuel Pump Pressure:** 4 lbs. maximum.

► **CARBURETION:** Updraft Carburetor

**Cab-Over-Engine & Forward Control Trucks**

**Idle Setting:**—1/2-1 1/4 turns open. One screw—turning screw out gives richer mixture.

**Idle Speed:**—450-500 RPM. with warm engine.

**Float Level:**—Top of float 1/32-1/16" below top edge of bowl with valve seated.

**Accelerating Pump:** Inner hole Summer, Outer hole Winter.

**Fuel Pump Pressure:** 4 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Thermostatic type. Check for free operation when tuning engine. Spring should be wound up just enough to slip end over manifold pin (approximately 1/2 turn).

► **CAUTION**—Excessive spring tension may cause valve to stick (causes detonation and poor performance).

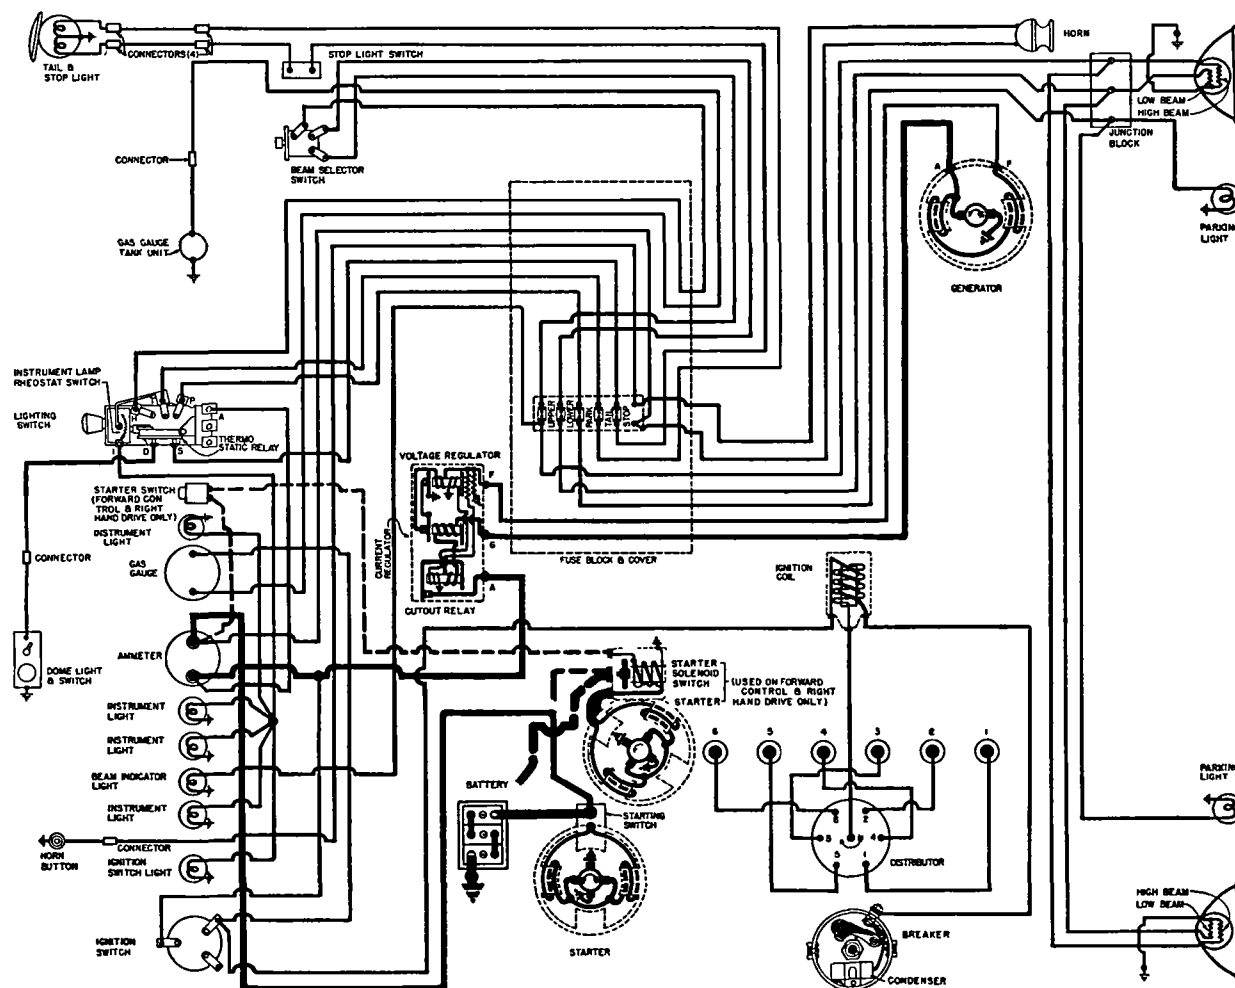

► **VALVE TAPPET CLEARANCE:** **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Special Data.

**Normal Operation:**—.006-.008" Intake. .013-.015" Exhaust, with engine "normalized."

**Heavy Duty (Full Throttle) Operation:**—.010" Intake, .020" Exhaust, with engine "normalized."

**Valve Timing Check:** See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## CONTINUED FROM PRECEDING PAGE

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See *Electrical Equipment Section*.

## LIGHTING

**Headlamps**: Guide "Sealed Beam" type.

See *Electrical Equipment Section* for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center  $4\frac{1}{2}$ " below lamp center height).

**Beam Indicator**—Red dot on lower edge of speedometer. Lighted when upper beams in use.

## Switches

**Lighting**—Delco-Remy No. 1995031.

**Instrument**—Part of Lighting Switch (Rheostat operated by turning light switch knob).

**Beam Selector**—Delco-Remy No. 1997008.

**Stop Light**—D-R No. 1997901 (mechanical type).

**NOTE**—Hydraulic switch used on some models.

## MISC. ELECTRICAL

**FUSES**: **Lighting**. Five 20-ampere fuses in fuse box on engine side of dash. Protects individual light circuits as follows:

Top Fuse Upper Beams	4th Fuse Tail Lights
2nd Fuse Lower Beams	5th Fuse Stop Lights
3rd Fuse Parking Lights	

**NOTE**—These fuses used together with circuit breaker.

**THERMOSTATIC CIRCUIT BREAKER**: Delco-Remy.

On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable. Protects lighting circuits together with fuses listed above.

**HORNS**: Delco-Remy No. 1999801. Vibrator type.

**Horn Current**—7-9 amperes at 6.0 volts.

**Air Gap**—.027-.033".

## ENGINE

## 216 CUBIC INCH ENGINE

(STD. ON  $\frac{1}{2}$ ,  $\frac{3}{4}$ , 1,  $1\frac{1}{2}$  TON TRUCKS)

**ENGINE SPECIFICATIONS**: Thriftmaster Model. Six cylinder, Valve-In-Head type.

**Bore**— $3\frac{1}{2}$ " (3.4995-3.5015"). **Stroke**— $3\frac{3}{4}$ ".

**Displacement**—216.5 cubic inches. **Rated HP**—29.4.

**Developed Horsepower**—90 at 3300 RPM.

**Compression Ratio**—6.6-1 Std. Cast Iron Head.

**Compression & Vacuum Reading**—See *Tune-Up*.

► See 1949 Chevrolet Passenger Car pages for all engine data (Pistons, Rings, Pins, Connecting Rods, Crankshaft & Bearings, Camshaft, and Valves).

## ENGINE

## 235 CUBIC INCH ENGINE

TRUCKS (INCLUDING CAB-OVER-ENGINE)

**TRUCK (235 CUBIC INCH) ENGINE**: This engine is same design as smaller 216" engine and all service operations and clearances are the same except as noted in 216" Engine Section data.

**Non-Interchangeable Parts**: Parts interchangeable between the 216" and 235" engines except as follows: Cylinder Block and Crankcase, Cylinder Block Assembly (Short Motor), Push Rods (approx.  $\frac{3}{4}$ " longer on 235" Engine and identified by shoulder just below cup at top end), Valve Lifters, Camshaft, Piston and Pin Assembly, Piston Rings, Crankshaft, Oil Pan Pipe Assembly, Oil Distributor to Valve

Rocker Shaft Pipe Assembly, Oil Pump Screen Cover Support Assembly.

**ENGINE SPECIFICATIONS**: Loadmaster Model. Six cylinder, Valve-In-Head type.

**Bore**— $3\frac{9}{16}$ " (3.5620-3.5640"). **Stroke**— $3\frac{15}{16}$ ".

**Displacement**—235.5 cubic inches. **Rated HP**—30.4.

**Developed HP (Conventional Trk)**—93 at 3100 RPM.

**Developed HP (Cab-Over-Engine)**—90 at 3100 RPM.

**Compression Ratio**—6.7-1 Std. Cast Iron Head.

**Compression & Vacuum Reading**—See *Tune-Up*.

► See 1949 Chevrolet Passenger Car page for all engine data (Pistons, Rings, Pins, Connecting Rods, Crankshaft & Bearings, Camshaft, and Valves).

## VALVE TIMING

► **VALVE TAPPET CLEARANCE**: **CAUTION**—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in *Chevrolet Special Data*.

**Normal Operation**—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized."

**Heavy Duty (Full Throttle) Operation**—.010" Intake, .020" Exhaust, with engine "normalized."

**VALVE TIMING**: See Camshaft Setting also (on 1949 Chevrolet Passenger Car pages).

**Intake Valves**—Open 1° ATDC. Close 39° ALDC.

**Exhaust Valves**—Open 42° BLDC. Close 9° ATDC.

**Valve Timing Check**—Remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet clearance at correct running figure (above).

## LUBRICATION

**Engine Oiling System**: Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by Oil Distributor Valve on left side of engine.

**CAUTION**—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be checked each time the oil pan is removed (requires special gauges).

**Checking Oiling System**—See "Oiling System" in *Chevrolet Special Data*.

**Crankcase Capacity**— $5\frac{1}{2}$  qts. (dry), 5 qts. (refill).

**Normal Oil Pressure**—14 lbs. at 2000 RPM.

**Oil Pressure Regulator**—Located in oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

**Rocker Arm Oil Lead & Overflow Pipe Servicing**: See "Oiling System" in *Chevrolet Special Data*.

**Oil Pump**: Located in crankcase. Driven independently through short shaft by gear on camshaft.

**Oil Pump Installation**—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

**Oil Distributor**: See "Oiling System" in *Chevrolet Special Data*.

**Checking Oiling System**: Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.

See "Oiling System" in *Chevrolet Special Data*.

**CAUTION**—Special checking gauges required for each type (216" & 235") engine.

**Crankcase Ventilation (All Trucks except Forward Control Models)**: Regular velocity type with air intake through valve rocker cover (air cleaner on some models) and outlet pipe on right side of engine. **Servicing**—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

► **Positive Crankcase Ventilation (Forward Control Truck Models only)**: Vacuum operated ventilator consisting of vacuum pipe from oil filler pipe to a ventilator valve in fitting on intake manifold. Valve is spring-loaded, variable opening type giving constant crankcase ventilation at all speeds. Valve must close at idling speed to maintain proper air fuel mixture.

**Servicing**. Every 5000 miles (or oftener if required), vacuum pipe and valve should be removed from engine and cleaned with solvent and blown dry with compressed air. Remove any sludge accumulation in filler pipe by taking off and burning out (all holes in baffle inside pipe must be open). Oil filler cap gasket must give tight seal, replace gasket if required. Test vacuum valve as follows:

**Vacuum Valve**. With valve disassembled, check spring tension—must be 7.5 ozs. with spring compressed to .418-.432". If spring not within limits, or spring tester not available, car manufacturer recommends new metering valve assembly, Part No. 1543979, be installed.

► **CAUTION**—When assembling valve, make certain end coil of spring engages groove under head of valve.

## COOLING

**Cooling System**: Positive circulation with water pump on front of engine. Pressure type (relief valve) radiator cap used on Cab-Over-Engine Trucks.

**Pressure Valve (C-O-E Trucks)**—AC No. 850501 (Radiator Filler Cap). Opens at 4 lbs.

**Capacity**—15 qts. (exc. 2-Ton, C-O-E, and special heavy duty radiator).

17 qts. 2-Ton, C-O-E, and heavy duty radiator.

**Radiator Core Removal**: See *Chevrolet Special Data*.

**Water Pump**: Double-outlet, packless type with sealed ball-bearing shaft.

See *Water Pump Section* for complete data.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat**. Harrison. In cylinder head water outlet. **Setting**—No. 3113995 stamped "143". Starts to open 140-147°F. Fully open 170°F.

**Temperature Gauge**: AC No. 1512148 (1512150 for C-O-E Trucks). Not electric.

## CLUTCH

**Own Make**. Diaphragm spring, single plate, dry disc type. **NOTE**—Half-Ton Trucks use 9" clutch, all other models  $10\frac{3}{4}$ " type.

See *Clutch Section* for complete data.

**Facings**—Moulded Asbestos, 2 required as follows:

	I. D.	O. D.	Thickness
9" type	6 $\frac{1}{8}$ "	9 $\frac{1}{8}$ "	132-138"
$10\frac{3}{4}$ " type	7"	$10\frac{3}{4}$ "	137-143"

**Adjustment:** Pedal free travel  $\frac{3}{4}$ -1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. **NOTE**—Use finger pressure only when checking pedal free travel.

**Removal:** Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use  $\frac{3}{4}$ " wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. **CAUTION**—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

## TRANSMISSION

### 3-SPEED TRUCK TYPE

**Own Make.** Three-speed, all helical gear type, Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

**Transmission Control:** Mechanical type with shift lever mounted on steering column.

**NOTE**—Control similar to 1949 Pass. Car type.

See Transmission Section for complete data.

**Removal (Half-Ton):** Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Remove battery. Remove four cap screws holding universal joint collar on rear bearing retainer, remove bolts holding transmission support on frame cross-member. Support propeller shaft with jack, slide universal joint ball and collar back on shaft, split front universal by removing cap screws retaining front trunnion bearings on front yoke. Raise propeller shaft as far as possible with jack to provide clearance. Remove two top transmission mounting screws, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove two lower transmission mounting screws, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven member, lift transmission up and remove through floor opening.

**Removal ( $\frac{3}{4}$  Ton):** Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split intermediate universal by removing trunnion bearing "U" bolts, lower rear propeller shaft to floor. Remove four cap screws holding universal joint collar on rear bearing retainer, slide ball collar and retainer back on housing. Remove two bolts and nuts mounting intermediate universal support bracket on frame cross-member, pull front propeller shaft assembly to rear and free of front universal joint. Remove transmission in same manner as on Half-Ton (above).

## TRANSMISSION

### 4-SPEED TRUCK TYPE

**Own Make.** Four-speed, constant-mesh, synchro-mesh, helical gear (2nd, 3rd, and 4th), sliding spur gear (Low & Reverse). Floor mounted gearshift.

See Transmission Section for complete data.

► **Locking in 3rd & 4th Gear Correction**—New design 3rd & 4th speed clutch hub and clutch keys used. See Chevrolet 4-Speed Helical Gear Transmission in Transmission Section.

**Transmission Control (Cab-Over-Engine):** See Chevrolet Special Data for Removal & Installation data.

**NOTE**—Floor-mtd. gearshift used on Other Trucks.

**Removal ( $\frac{1}{2}$  &  $\frac{3}{4}$  Ton):** See 3-speed Transmission data above. **NOTE**—On Forward Control Models gearshift lever and rear floor pan must also be removed.

**Removal (Other Trucks):** Free steering gear grommet from floor, remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split front universal joint by removing trunnion bearing "U" bolts (tape or wire trunnions together to prevent losing bearings), slide shaft down to one side to clear transmission. Remove two top transmission mounting cap screws, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove 2 lower transmission mounting cap screws, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven-member, remove transmission.

## UNIVERSALS

**Half-Ton:** Own Make. No. 591642 (3-Spd. Trans.), 605118 (4-Spd. Trans.). Same type as Pass. Car. One used (in torque ball back of transmission).

See Universal Section for complete data.

**$\frac{3}{4}$  Ton Truck: Front Universal**—Own Make. Chevrolet No. 591642 (3 Spd. Transmission), 605118 (4 Spd. Trans'n). Same type as used on  $\frac{1}{2}$  Ton (above).

**Intermediate & Rear Universal**—Spicer Model No. 1351-5107X (Intermediate—slip joint), 1358-5104X (rear—permanent joint). Needle bearing type.

See Universal Section for complete data.

**1, 1½, 2 Ton Trucks (Regular & C-O-E):** Spicer Needle bearing type. Slip-joint used at intermediate position, permanent type at transmission and rear axle.

**Spicer Model Nos. Front Intermediate Rear**  
C-O-E 110" WB 1351-5107X.....①.....1358-5105X  
Bus 199" WB.....1358-5104X.....②.....1358-5104X

All Others .....1358-5104X, 1351-5107X, 1358-5104X

①—No intermediate joint used (1 propeller shaft).

②—Two intermediate universals as follows: First—1358-5104X, Second 1351-5107X (3 section shaft).

See Universal Section for complete data.

**Propeller Shaft Intermediate Bearing & Support.** See "Propeller Shaft" in Chevrolet Special Data.

**NOTE**—Support Bearing is sealed single-row ball bearing with "grease traps" packed with waterproof grease to prevent entrance of dirt and water.

## REAR AXLE

### SEMI-FLOATING TRUCK TYPE (HALF-TON)

**Own Make.** Semi-floating, hypoid gear type with Torque Tube drive.

**NOTE**—This axle same design as passenger car type. See Rear Axle Section for complete data.

**Ratio**—4.11-1 Standard.

**Axle Identification**—Can be identified by prefix letter of axle serial number stamped on front face of carrier flange on right side as follows:

**Detroit Production**—GE. Tonawanda—GF.

**Backlash**—.005-.007". Screw adjustment.

**Removal:** Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate. Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.

**Axle Shaft Removal:** Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.

**Axle Shaft Endplay**—Free fit to .014" maximum.

**Axle Shaft Installation & Endplay Adjustment:** See "Rear Axle Notes" in Chevrolet Special Data.

## REAR AXLE

### FULL-FLOATING TRUCK TYPE (ALL EXCEPT HALF-TON)

**Own Make.** Full-floating, hypoid gear (straddle mounted pinion) with Hotchkiss Drive.

►  **$\frac{3}{4}$  & 1 Ton Note**—"Revacycle" differential side gears and pinions used.

► **1½ & 2 Ton Note**—Axle shaft splined to wheel hubs. See Rear Axle Section for complete data.

► **Axle Identification**—Axles can be identified by prefix letters of axle serial number stamped on top of carrier housing between reinforcing ribs as follows:

	Ratio	Marking①
$\frac{3}{4}$ Ton (exc. Fwd. Contr.)	4.57-1	GG or GH
① 1 Ton (Single Tires)	5.14-1	SAB or SB
② 1 Ton (Dual Tires)	5.14-1	SC or SD
1½ Ton	6.17-1	SE or SF
1½ Ton	5.43-1	SL or SM
② 2 Ton & C-O-E	6.17-1	SG or SH
①—First mark—Detroit, or Second—Tonawanda.		
②—¾ Ton Forward Control Models also.		
③—1½ Ton Special Model also.		

**Backlash**—.005-.008". Screw Adjustment.

**Removal:**—Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two U-bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

**Axle Shaft Removal ( $\frac{3}{4}$  & 1 Ton):** Remove 8 cap screws and lockwashers in axle shaft flange, install two ½" x 13 screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. **NOTE**—Use new gasket when re-installing shaft.

**CAUTION**—Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. Grease at this point will cause loosening of axle shaft flange cap screws.

C NTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Axle Shaft Removal (1½ & 2 Ton):** Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. **NOTE**—When re-installing shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

**Axle Shaft Note**—Shafts unequal length (right shaft longer) and may be identified by part number stamped on shaft or lengths as follows:

**¾ & 1 Ton Truck**

	Part No.	Length
Left Shaft	3680977	31 3/16"
Right Shaft	3680978	37 1/16"

**1½ Ton Truck (Splined Shaft)**

Left Shaft	3685191	34 3/32"
Right Shaft	3685192	40 15/32"

**2 Ton & C-O-E (Splined Shaft)**

Left Shaft	3685193	36 7/16"
Right Shaft	3685194	40 5/8"

**Wheel Bearing Adjustment:** Remove wheels and axle shafts (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight using special wrench J-2222 (¾ & 1 Ton), J-870 (1½ & 2 Ton) while turning hub by hand, then back nut off 45°, check for free turning, install adjusting nut lock (with lock tangs aligned with slots in adjusting nut), bend tang down into notch in adjusting nut, install locknut and tighten securely, bend tang of lock down into notch of locknut.

**REAR AXLE****TWO-SPEED TRUCK TYPE**

**Own Make (2 Ton Optl.).** Full-floating, Two-speed Double reduction type with Hypoid Gears (First reduction), Helical Gears (Second reduction) and new vacuum shift control.

**Identification Note**—Serial number prefix (on flat top of carrier on right side) is "SN" (Detroit), "SP" (Tonawanda).

**See Rear Axle Section for complete data.**

**Ratio**—6.13-1 (High), 8.10-1 (Low).

**Two-Speed Shift Control:** Vacuum power type with selector valve on instrument panel.

**See Rear Axle data in Rear Axle Section for data.**

**Removal:** Carrier Assembly can be removed (without disturbing axle housing) as follows: Remove axle shaft flange mounting bolts, pull both axle shafts

out of housing approximately 8" (to clear differential). Drain axle lubricant and remove inspection plate. Loosen hose clamps and slip hoses off vacuum cylinder hose connections. Disconnect rear universal joint by removing trunnion bearing "U" bolts from rear flange, slide propeller shaft assembly forward, tape universal bearing trunnions in place to prevent loss of needle bearing, swing propeller shaft out of the way (tie up to frame side rail). Remove capscrews mounting carrier on axle housing (support carrier by means of long punch inserted through one upper mounting screw hole in housing before removing last mounting screw). Place support jack under carrier assembly, roll assembly straight forward until differential clears housing, remove carrier assembly from beneath truck.

**Axle Shaft Removal & Wheel Bearing Adjustment:** Same as for regular rear axle (see above).

**SHOCK ABSORBERS**

**Delco.** Single or double acting, hydraulic types (Std. or Optl.) as follows:

**Single Acting Types**

**Front**—1430-CA, DA (½ & ¾ Ton).

**Rear**—1430-MA, LA (½ Ton), 1431-Y, X (¾ Ton).

**Double Acting Types**

**Front**—1730-B, A (exc. C-O-E), 1730-C, D (C-O-E).

**Rear**—1731-U, T (½ Ton), 1722-D, C (¾ Ton), 1722-F, E (1 & 1½ Ton), 2000-W, V (1½ Ton & School Bus).

**NOTE**—Model numbers indicate Left and Right Shock Absorbers thus: 1430-CA, DA is 1430-CA (Left), 1430-DA (Right).

**See Shock Absorber Section for complete data.**

**FRONT SUSPENSION**

**Front Suspension:** Conventional "I" beam section front axle with Reverse Elliott ends and semi-elliptic springs.

**Kingpin Inclination**—7°10'±1° crosswise (All).

**Camber**—1°±½° (All). Bend axle for corrections (when kingpin inclination is likewise off).

**Caster**—See table below. All specifications ±½°. Use wedge shims for minor corrections (up to 2°), bending tools for greater corrections.

	Caster	Toe-In
½ & ¾ Ton exc. Fwd. Contr.	1¾°	1/16-3/16"
¾ Ton Fwd. Control	3¼°	1/16-1/4"
1 Ton Fwd. Control	2¼°	1/16-1/4"
1, 1½, 2 Ton exc. C-O-E	2¾°	1/16-1/4"
C-O-E Trucks	3°	1/16-1/4"

**Toe-In**—See table above. Adjust by turning tie rod.

**CAUTION**—Tie rod ends must be aligned with studs.

**Steering Geometry**—Outer wheel turned 20°, inner wheel 23°±2° (All Models).

**STEERING GEAR**

**Saginaw Model.** Ball bearing (re-circulating ball) Worm-and-Nut. Chevrolet Part Nos. as follows: 270927 (½ Ton & ¾ Ton with 3-Spd. Transmission), 270221 (¾, 1, 1½ Ton with 4-Spd. Transmission), 270224 (2 Ton & School Bus), 270635 (C-O-E). **See Steering Gear Section for complete data.**

**BRAKES**

**Service Brakes:** Own Make. Hydraulic type. Hand Lever (Pedal type on ½ & ¾ Ton and all Forward Control Models) applies rear wheel service brakes.

**See Brake Section for complete data.**

**Wheel Cylinders**—Size stamped on housing under adjusting cup lock spring as follows:

	Front Wheels	Rear Wheels
Half-Ton	1 1/4"	1 3/16"
¾ Ton	1 1/4"	1 3/8"
1 Ton	1 3/8"	1 3/8"
All Others	1 1/4"	1 1/2"

**Drums**—Cast iron rim with steel web. Drum Diameters as follows: **Front—Drum Diam.**—Rear Half-Ton 11", 3/4 Ton 11", 1 Ton 12", All Others 14".

**Lining**—Moulded type (bonded type on ½ & ¾ Ton). Width: 1¾" (11" brakes), 2" (12", 14"), 3" (16"). Thickness: .187-.194" (11"), .265-.272" (Others).

**Clearance (½ & ¾ Ton)**—Adjusting cover on wheel cylinder backed off 4 Notches from slight drag position (All shoes—front and rear wheels).

**Clearance (All Others)—Front Wheels:** Adjusting cover on wheel cylinder backed off 4 Notches from slight drag position.

**Rear Wheels:** Adjusting pinion shaft backed off 2/3 turn from slight drag position.

**HAND BRAKE**

**Hand Brake (Pedal Type used on ½ Ton, ¾ Ton and Forward Control Models):** Pedal applies rear wheel service brakes. Release lever below instrument panel. **Adjustment**—This pedal-operated brake adjusted in same manner as other trucks (below) and release rod handle (under instrument panel) must be adjusted for ½" minimum clearance at support bracket.

**Hand Brake (Lever Type used on Other Models):** Place hand lever in fully released position, disconnect rear wheel cables at cross-shaft levers on frame by taking out clevis pin, loosen locknut, pull cable out of conduit by hand until a positive stop is felt, adjust clevis on cable end, tighten locknut and install clevis pin.

**HYDROVAC**

**Hydrovac Brake System:** Std. on 2 Ton, Cab-Over-Engine, and 1½ Ton Special Models. Consists of special power unit (vacuum power used to augment regular hydraulic brake actuation) in hydraulic line between master cylinder and wheel cylinders. **See Brake Section for complete data.**

## CYLINDER HEAD

## 1949 MODELS

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head bolt nuts and capscrews, tighten in correct sequence as shown in diagram for each car. Procedure for tightening Cast Iron and Aluminum Heads is as follows:

**Cast Iron Heads**—With engine cold, tighten screws or nuts to correct tension as shown in table below. Run engine until thoroughly warm, then check and retighten nuts (additional tightening necessary to bring them back to correct tension).

**Aluminum Heads**—With engine cold, tighten screws or nuts to correct tension as shown in table below. Run engine until thoroughly warm, then allow engine to cool off, check and retighten nuts after engine has become cool—do not tighten aluminum heads hot.

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

## ORIGINAL BORE &amp; PISTONS

## 1949 MODELS

**ORIGINAL PISTON & CYLINDER BORE SIZES:** Original production (new engine) piston and bore sizes indicated by letter located as follows:

**Piston Size**—Letter stamped on piston head (number following letter on Dodge pistons is weight).

**Bore Size**—Letter stamped on pad on distributor side of engine at top of block. Do not confuse this letter with "Special Standard" size letter indicating oversize bore.

"Special Standard" Size Bore—Letter "A" or "AB" following engine number indicates engine has .020" larger standard cylinder bore.

"Special Standard" Pistons and Bores (.020" oversize)—Original production (new engine) piston and bore sizes which are .020" oversize (see Engine Bore Size data above) are graded in same steps as for standard sizes but these pistons and bores are marked "P", "Q", "R", "S", "T".

## ORIGINAL BORE &amp; PISTON SIZES

## CHRYSLER 6 &amp; DE SOTO

Piston & Engine Mark①	Piston Diameter	Cylinder Diameter
A.....	3.43625-3.43675"	3.43725-3.43775"
B.....	3.43675-3.43725"	3.43775-3.43825"
C.....	3.43725-3.43775"	3.43825-3.43875"
D.....	3.43775-3.43825"	3.43875-3.43925"
E.....	3.43825-3.43875"	3.43925-3.43975"

## CHRYSLER 8 &amp; DODGE

A.....	3.24875-3.24925"	3.24975-3.25025"
B.....	3.24925-3.24975"	3.25025-3.25075"
C.....	3.24975-3.25025"	3.25075-3.25125"
D.....	3.25025-3.25075"	3.25125-3.25175"
E.....	3.25075-3.25125"	3.25175-3.25225"

## PLYMOUTH

A.....	3.2488-3.2493"	3.2500-3.2505"
B.....	3.2493-3.2498"	3.2505-3.2510"
C.....	3.2498-3.2503"	3.2510-3.2515"
D.....	3.2503-3.2508"	3.2515-3.2520"
E.....	3.2508-3.2513"	3.2520-3.2525"

①—Pistons marked AA are .0005" smaller than A pistons, EE pistons are .0005" larger than E pistons. Pistons marked P, Q, R, S, T are .020" oversize (see Note above).

## ORIGINAL BEARING SIZES

## 1949 MODELS

**ENGINE NUMBER LETTERS ('SPECIAL STANDARD' BORE & BEARING SIZES):**—Letters used with engine number (not in circular pads) denote following 'special standard' sizes: 'A'—.020" larger standard cylinder bore. 'B'—.010" smaller standard main and connecting rod bearings. 'AB'—Cylinder bore, main and connecting bearings 'special standard'.

## 1949 PLYMOUTH

►.001" THICKER WALL MAIN & CONNECTING ROD BEARINGS: When these bearings installed on production engines, machined surface of crankshaft center counterbalance marked as follows:

**Connecting Rods**—Shaft marked R1, R2, R3, R4, R5, or R6 depending on which connecting rod is fitted with a .001" thicker wall bearing.

**Main Bearings**—Shaft marked M1, M2, M3, or M4 depending on which journal fitted with a .001" thicker wall bearing.

►CAUTION: These bearings used only in positions indicated by marks (not necessarily in complete sets).

## OIL PUMP

## 1949 MODELS

**ROTOR TYPE OIL PUMP:** Removal—Take off distributor cap, turn engine over until #1 cylinder is at firing position (allow engine to remain in this position while pump off engine). Remove two oil pump Allen-head screws. Take pump off engine.

**Pump Servicing**—Disassemble pump by taking off cover and drive gear (drive out pin and press gear off shaft). Thoroughly clean parts and dry with compressed air. Check pump parts as follows: 1)—With rotors in pump body, turn shaft so that one lobe on inner rotor pushed into notch in outer rotor, check clearance between opposite lobe of inner rotor and inner face of outer rotor. If clearance greater than .010" replace both rotors. 2)—Height (or thickness) of both rotors should be at least .748". Diameter of outer rotor should be at least 2.245". Replace if measurements are less. 3)—With rotors in pump body, turn body up, place straightedge across face of body between screw holes. Clearance between straightedge and rotors should be .004" max. If greater, replace pump body. 4)—With outer rotor pressed to one side of body, clearance at opposite side should be .008" maximum. If greater, replace pump body. 5)—Check cover by placing straightedge across inner face and if .001" feeler can be inserted between cover and straightedge, or if face is scratched or marred, replace cover.

**Pump Assembly**—If new rotor installed on shaft, it must be installed with rotor square to shaft and pressed on until flush with end of shaft. Pin rotor to shaft after drilling 5/32" pin hole. Drive gear should be pressed on shaft to give .003-.010" clearance between underside of gear and pump body with rotor (on opposite end of shaft) seated in pump body. Install pin. If necessary, drill new 5/32" hole at right angles to old hole. With rotors in place, install new cover gasket on body and install cover.

**Pump Installation**—Oil pump must be installed on engine with #1 piston in firing position with rotor on distributor opposite #1 terminal in cap.

## BRAKE NOTES

## 1949 MODELS

**HAND BRAKE ADJUSTMENT:** The hand brake adjustments can be made from beneath car as follows: Fully release hand lever (cable length adjusted by means of clevis at lower end). Adjust anchor screw for .015-.020" band to drum clearance by bending back tab of anchor screw lock and turning screw (on lower right side of brake), then lock screw by bending tab against flat of screw. Loosen guide bolt locknut and adjust guide bolt adjusting nut for .015-.020" band to drum clearance (these two nuts located in front of release springs at left side), then tighten locknut. Turn large adjusting bolt nut (on lower end of bolt below springs) for .015-.020" band to drum clearance for upper half of band. Groove in upper end of this nut must contact ridge on band operating lever spacer above nut.

**NOTE**—Clearance between side of anchor bracket at center of band and anchor must not exceed .005" (if clearance excessive band may be distorted when brake applied). To correct, compress saddle in vise or place on block and tap lightly with a hammer.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On left front door hinge post.  
 1949 Numbers Detroit Los Angeles  
 Royal 70,041,001 Up.....65,002,001 Up  
 Windsor 70,725,001 Up.....67,005,001 Up

**ENGINE NUMBER:** Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

**TUNE-UP**

**COMPRESSION PRESSURE:** 120-150 lbs. at cranking speed of 150 RPM.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .038". Limits plus or minus .002".  
 Plugs—Auto-Lite Type A5 or AR5, 14 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.020".

Cam Angle—34½° to 38° Closed.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.25-.28 microfarad.

**IGNITION TIMING:** 4° or .007" ATDC.

Timing Procedure—See Ignition Timing.

Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with 4° graduation after DC mark at pointer on chain case, then set manual (octane selector) adjustment:

**Manual (Octane Selector) Adjustment:** Set for slight ping with 10-30 MPH, range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

**CARBURETION:**

**Idle Setting:** Set idle adjusting screw for smooth idling with warm engine (idle screw ½-1½ turns open), turn screw out for richer mixture.

**Idle Speed:** 6 MPH. (450-475 Eng. RPM. with Hyd. Trans.).

**Float Level:** Top of float (not soldered seam) 5/64", plus or minus 1/64", below top edge of bowl.

**Accelerating Pump:** Center Hole (med. stroke) Normal. Inner Hole—Summer, Outer Hole—Winter.

**Choke Setting:** Adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

**Fuel Pump Pressure:** 3½-5½ lbs.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. ¾ turn, not over one turn or under ½ turn, hook end on stop stud.

**VALVE TAPET CLEARANCE:** .008" Intake, .010" Exhaust, Hot.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

**COIL:** Auto-Lite No. CR-4001 (U.S.), IG-4809 (Early & Canada). On bracket above distributor.

Ignition Current—2.25 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite No. IG-3927G.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IAP-4102C-1 (U.S.), IAP-4102B-1 (Canada). Automatic advance type with Vacuum Spark Control.

**Breaker Plate Identification:** Maximum vacuum advance limited by slot in plate. Plate marked #9.

**Breaker Gap:**—.020".

**Cam Angle:**—34½° to 38° Closed.

**Breaker Arm Spring Tension:**—17-20 ozs.

**Rotation:**—Clockwise viewed from above.

**Automatic Advance—IAP-4102B-1**

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start		350	0		700
3		400	6		800
6		780	12		1560
9		1160	18		2320
12		1530	24		3060

**Automatic Advance—IAP-4102C-1**

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start		350	0		700
1		450	2		900
5		800	10		1600
10		1425	20		2850
11		1550	22		3100

**Vacuum Spark Control:** Auto-Lite Unit. Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle, spark retarded by return spring.

Vacuum Advance—IAP-4102B-1 & 4102C-1	Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start		0°	5"
2°		4°	7¼"
4°		8°	9¾"
6°		12°	11½"
9°		18°	15"

**Manual Adjustment:** Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal:** Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note:** Install distributor with #1 piston in firing position.

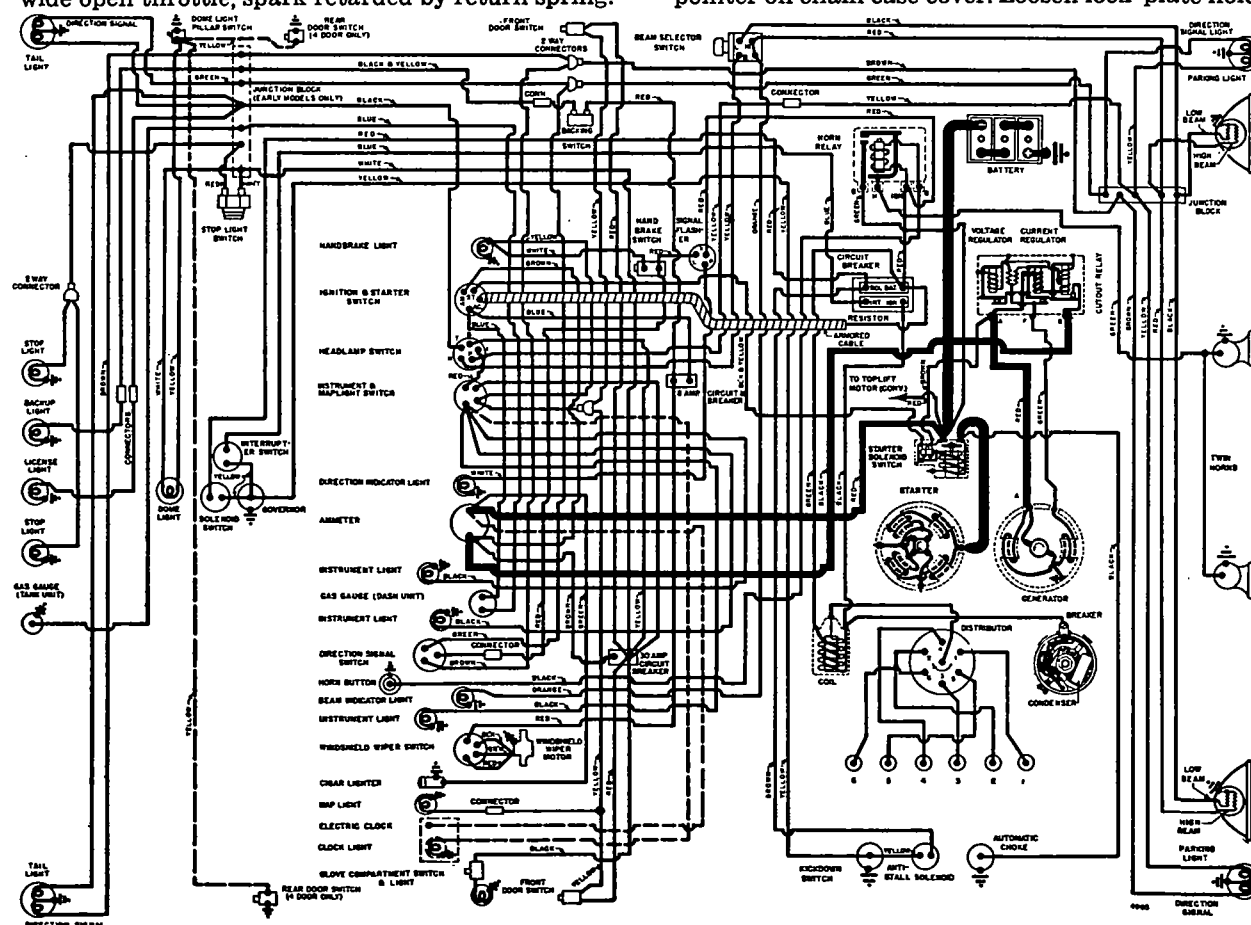

**IGNITION TIMING**

**Std. Setting:** Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

**Flywheel Degrees Piston Position**

All Engines .....4° ATDC......007" ATDC.  
**NOTE:**—Impulse neutralizer marked 'DC' at TDC, with 15 (1°) graduations on either side.

**Timing (Using Timing Light):** Connect timing light between distributor primary terminal and battery terminal on generator regulator Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-

down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

## CARBURETOR

**Carter (B&B) E7L1, L2, L3, or E7L4, 1½"** Single barrel, downdraft type with Sisson automatic choke control, Slow-closing Throttle and Step-down Switch for hydraulically operated transmission.

See Carburetor Section for complete data.

► **E7L1, L2, L3 Note**—To bring these carburetors up to latest E7L4 carburetor, see Carter (B&B) Carburetors in Carburetor Section.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Carter (B&B) Jet Table in Carburetor Section for complete data.

**Slow-closing Throttle:** Solenoid type. Non-adjustable. See Carburetion Equipment Section for complete data.

**Fast Idle:** Throttle stop screw stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

**Automatic Choke:** Sisson type.

See Carburetion Equipment Section for complete data.

**Setting**—With throttle 1/3 open, adjust by inserting gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is closed tightly.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544349 Heavy Duty Oil-bath type. Filter Element AC No. 21.

**Servicing**—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump is half filled with oil and dust sludge. NOTE—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

**Fuel Pump:** AC No. 1539042. Diaphragm type fuel pump.

**Replacement Pump**—AC No. 577 or 588.

**Pressure**—3½-5½ lbs.

See Carburetion Equipment Section for complete data.

**Fuel Tank Filter:** Oilite metal filter in tank.

**Servicing**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug; draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

**Gasoline Gauge:** Auto-Lite Electric type.

**Dash Unit**—Auto-Lite No. 11821A.

**Tank Unit**—Auto-Lite No. 11538A.

See Carburetion Equipment Section for complete data.

## BATTERY

**Willard or Auto-Lite**—17 Plate, 6 Volt, 120 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—152 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 5.0 minutes. Five second voltage 4.4 volts.

**Grounded Terminal**—Positive (+) to engine.

**Location**—Under hood in left fender shield.

## STARTER

**Auto-Lite Models MCL-6101 (US), MAX-4090 (Canada after Eng. Nos. C45-1-1268C and C45-2-1619C).**

**Armature**—Auto-Lite Nos. MCH-2039 (MCL-6101), MAW-2213 (MAX-4090).

**Drive**—Solenoid pinion shift & overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
2.75 "	1630	5.0	200
8.7 "	600	4.0	400
8.0 "	Lock	2.0	410

**Removal:** Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch:** Auto-Lite Solenoid Type SS-4707 controlled by turning ignition switch past "on" position.

See Electrical Equipment Section for complete data.

## GENERATOR

**Auto-Lite No.**

**Standard**—GGW-6001A

## C NTINUED FROM PRECEDING PAGE

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.

**Direction Signal**—On flasher behind instrument panel. Vibrating type. Protects direction signal.

**Auxiliary Circuit Breaker**—8 ampere. Protects the Windshield Wipers and Back-Up Light.

**Transmission Solenoid**—Vibrating type mounted as an assembly with resistor unit.

**FUSES:** Clock—2 ampere. In clock lead.

Clock—2 ampere. In clock lead wire.

Radio—14 ampere. In fuse connector at radio.

**HORNS:** Auto-Lite Models HT-4011 or HW-4201 (Low Pitch), HT-4012 or HW-4202 (High Pitch). Dual horns operated by relay.

**Horn Relay:** Auto-Lite Models HRL-4103 or 4104. Connected through ignition switch, operates only when ignition "on".

**Contacts Close**—1.5-3.0 volts (seal to core with 4.0 volts maximum).

**Contacts Open**—5 volt min. (open from seal).

**Contact Gap**—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

## ENGINE

**ENGINE SPECIFICATIONS:** Six cylinder, "L" head.

**Bore**—3 7/16". **Stroke**—4 1/2".

**Displacement**—250.6 cu. ins. **Rated H.P.**—28.36.

**Developed Horsepower**—116 at 3600 RPM.

**Compression Ratio**—7.0-1 Std. cast-iron head.

**Compression & Vacuum Reading**—See Tune-up data.

**ORIGINAL BORE & PISTONS:** See Chrysler Special Data.

**ORIGINAL BEARING SIZES:** See Chrysler Special Data.

**TIGHTENING TORQUES:** See Chrysler Special Data.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Chrysler Special Data.

**PISTONS:** Aluminum alloy, U-slot, cam ground type. **NOTE**—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0002-.0012" smaller diameter at top of skirt than at bottom).

**Length**—3 7/8". **Weight**—18.5 ozs. (stripped).

**Clearance**—.0008" on thrust face 3/4" from bottom of skirt. Ring land diameter .0305" larger than skirt.

**Removal**—Pistons and rods removed from above.

**Fitting New Pistons:** Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x 1/2" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70°F).

**Replacement Pistons:** .005", .020", .030", .040", .060" OS.

**NOTE**—Cylinder reconditioning limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

**Installing Pistons:** Slot away from camshaft.

**PISTON RINGS:** Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"

**Installing Rings**—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

**Replacement Rings:** .005", .020", .030", .040", .050", .060" OS.

**PISTON PIN:** Diameter—55/64". Length—27/8". Floating type with locking ring at each end.

**Pin Fit in Piston**——.0002" to +.0003". Thumb push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing**—.0001-.0004". Tight thumb push fit at normal room temperature.

**Replacement Pins:** Standard size and .0006", .003", .008" Oversize.

**CONNECTING ROD:** Length—7 7/8". Weight—32.4 ozs. with bolts less bearings. **NOTE**—Piston pin hole (upper bearing) bronze bushed.

**Lower Bearing Diameter**—2 1/8". See "Original Bearing Size" in Chrysler Special Data.

**Lower Bearing**—Removable, precision type, thin babbitt on steel. No shims.

**Clearance**—.0005-.0015". **Sideplay**—.006-.011".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:** .001", .002", .010", .012" U.S.

**Installing Rods:** Oil metering hole toward camshaft.

**CRANKSHAFT:** 4 bearings, 9 integral counterweights with vibration dampener on front end.

**Bearing Diameter**—2 1/2". See "Original Bearing Size" in Chrysler Special Data.

**Bearing Type**—Removable, precision type, thin babbitt on steel. No shims.

**Clearance**—.001-.0015".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** .001", .002", .010", .012" U.S.

**End Thrust:** Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007".

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive. **Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".

**Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

**Clearance**—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust:** Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

**Timing Chain:** Width 1". Pitch .500" (1/2"). Length 24" or 48 links.

**Camshaft Setting:** Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	3405-.3415"	4 25/32"
Exhaust	1 17/32"	3385-.3395"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.002-.004"

**Valve Guides:** Remove from above. Press new guides in (stepped end down) with upper end 7/8" below top of block (Tool CM-83), finish ream to .3425-.3435".

**Valve Springs:** Install with closely coiled end to top. Free Length 2".

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1 3/4"
Valve Open	107-115 lbs.	1 5/8"

**Valve Lifters:** Mushroom type (remove from below). Stem Diam. 5/8". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".

**Lifter Clearance in Block**—.000-.001".

## VALVE TIMING

**Tappet Clearance:** .008" Intake, .010" Exh. (hot and idling). **NOTE**—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check**—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

## LUBRICATION

**Engine Oiling System:** Pressure through new Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump used.

**Crankcase Capacity**—5 quarts (refill).

**Normal Oil Pressure**—45-60 lbs. at 45 MPH. with warm oil.

**Oil Pressure Relief Valve**—Under plug ahead of starter. Has bleed duct which connects with idle oil line to provide additional oil at idling speeds. Adjustable by replacing spring. 3 types: 1) Plain—unpainted. 2) Light—painted Red. 3) Heavy—painted Green. **CAUTION**—Install replacement spring of same color as original spring.

**Oil Pump:** "Rotor" type on right side of crankcase.

**Servicing**—See "Oil Pump" in Chrysler Special Data.

**Oil Filter:** "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.

**Servicing**—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. **Checking:** If oil pressure drops to 35-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 45-60 lbs. above 45 MPH.

**Oil Pressure Gauge:** Auto-Lite No. 11823A. Not electric.

## COOLING

**Cooling System:** Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump.

**Capacity**—17 quarts.

**Water Pump:** Packless type with grease fitting.

*See Water Pump Section for complete data.*

**Removal**—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

**Belt Adjustment**—*See Generator Belt Adjustment.*

**Thermostat:** By-pass type in cyl. head water outlet.

**Setting**—Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge:** Auto-Lite No. 11822A. Not elect.

## CLUTCH

**Borg & Beck Models 10A7 (Std.), 9A7 (With Fluid Drive), 11A6 (Taxicab).** Single plate, dry disc.

**Identification Note**—Cover stamped 953 (9A7), 930 (10A7), 931 (11A6).

*See Clutch Section for complete data.*

**Facings**—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9 1/4"	125" (1/8")
10A7	7"	10"	125" (1/8")
11A6	6 1/2"	11"	125" (1/8")

**Pedal Adjustment:** Should just clear toeboard (adjust stopscrew on lower end of pedal) and have 1" free travel (adjusting nut on connector link at fork).

**Removal:** Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

## FLUID DRIVE

**Chrysler**—Fluid coupling at rear of engine. Optl. *See Miscellaneous Section for complete data.*

**Oil Level:** Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

**Removal:** Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

## TRANSMISSION

### STANDARD

**Own Make**—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*

**Transmission Control:** Manual steering column shift. *See Transmission Section for complete data.*

**Removal:** Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Special Data for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods. Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car. NOTE—Use pilot studs when installing assembly.

## TRANSMISSION

### PTIONAL EQUIPMENT

**Hydraulically Operated Type (with Fluid Drive).** Semi-automatic, four-speed transmission with hydraulic actuation and electrical control.

*See Transmission Section for complete data.*

**Transmission Oil**—3 pints, 10-W engine oil.

**Transmission Control:** See Transmission article for adjustment instructions.

*See Transmission Section for complete data.*

**Kickdown Solenoid**—Auto-Lite No. SSS-4003.

**Governor**—Auto-Lite No. TG-4205R.

**Kickdown Switch**—Part of carburetor assembly.

**Ignition Interrupter Switch**—On right side of transmission above Governor.

**Removal:** Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.

► **INSTALLATION CAUTION**—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

## UNIVERSALS

**Detroit Universal Series 7200 (C-45-1), 7300 (C-45-2).** Cross type with roller bearings.

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:** Used on 7 Passenger.

## REAR AXLE

**Own Make**—Semi-floating, hypoid gear type with Hotchkiss Drive.

*See Rear Axle Section for complete data.*

**Axle Ratio** Std. Trans. Hydr. Trans.

Royal & Windsor ..... 3.9-1 (39:10) ..... 3.73-1 (41:11)①

Station Wagon ..... 4.1-1 (41:10) ..... 3.91-1 (43:11)

Long Wheelbase ..... 4.3-1 (43:10) ..... 3.91-1 (43:11)

①—Optl. ratio 3.54-1 (39:11).

**Backlash**—.006-.010". Screw adjustment.

**Removal:** Disconnect rear universal, remove axle shafts (see below) and carrier assembly capscrews. **Axle Shaft Removal**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

**Axle Shaft Outer Oil Seal:** New leather type mounted on brake support (backing plate).

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

## SHOCK ABSORBERS

New "Hydra-Lizer" hydraulic, direct-acting, non-adjustable type.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4 3/4° to 6° crosswise.

**Camber**—0° to Pos. 3/4°. (1/4-1/2° higher on left).

**Caster**—Neg. 2° preferred. Limits Neg. 1° to Neg. 3°.

**Toe In**—0° preferred. Limits 0° to 1/16". Adjust both tie rods equally.

**Steering Geometry**—Inner wheel 21 1/2° plus or minus 1°. Outer 20°.

## STEERING GEAR

**Own Make**—3 tooth Worm-and-Roller. Similar to Gemmer model 335.

NOTE—See Gemmer 305, 335 & 375 article for data.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Chrysler "Safe-guard" Lockheed Hydraulic.

**Front Wheels**—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels**—Double anchor type with single double-acting wheel cylinder.

*See Brake Section for complete data.*

**Wheel Cylinders**—1 1/8" bore. Single acting (front), double acting (rear wheels).

**Drums**—Centrifuge. Diameter 11".

**Lining**—Molded Asbestos. 2" wide, 13/64" thick. Length per wheel 23" (front wheels), 20 3/8" (rear wheels).

**Clearance**—.006" at each end of all shoes.

**Braking Power**—60% (front wheels), 40% (rear).

**Hand Brake:** On drum at rear of transmission.

**Adjustment**—*See "Hand Brake Notes" in Chrysler Special Data.*

**Drum**—Cast-iron. 6" (7" on cars with Hydraulic transmission).

**Lining**—Width 2" (2 1/2" on 7" type). Thickness 5/32". Length 15 3/8" (20" on 7" type).

**Clearance**—.015-.020" around band.

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWJ-4001, EWJ-4003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

*See Miscellaneous Section for complete data.*

**CONVERTIBLE TOP CONTROL:** Auto-Lite Model EWM-4001. Electric type.

*See Miscellaneous Section for complete data.*

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On left front door hinge post.  
1949 Numbers—6,772,001 Up (Saratoga), 7,094,001 Up (New Yorker).

**ENGINE NUMBER:** Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

**TUNE-UP**

**COMPRESSION PRESSURE:** 120-150 lbs. at cranking speed of 150 RPM.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAPS:** .038". Limits plus or minus .002".  
Plugs—Auto-Lite AR-5. 14 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.018".

Cam Angle—27° to 30½° (closed).

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.25-.28 microfarad.

**IGNITION TIMING:** 2° or .002" ATDC.

Timing Procedure—See Ignition Timing.

**Timing Mark:** Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with 2° graduation after DC mark at pointer on chain case cover, then set manual (octane selector) adjustment.  
**Manual (Octane Selector) Adjustment:** Set for slight ping in 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

**CARBURETION:**

**Idle Setting:** Set idle adjusting screw for smooth idling with warm engine (idle screw ½-1½ turns open), turn screw out for richer mixture.

**Idle Speed:** 450-475 RPM with warm engine.

**Float Level:** Top of float 5/64", ±1/64" below top surface of carburetor body casting.

**Accelerating Pump:** Center hole (med. stroke) Normal. Inner hole—Summer, Outer hole—Winter, for extreme temperatures.

**Choke Setting:** Remove Air Cleaner and choke cover. Line up hole in armature and magnet core with shank end of ¼" drill, holding armature tight against magnet (Tool AC-620 available for use in place of drill). Loosen automatic choke lever clamp-screw. Hold throttle open approx. 1/3 open, move choke lever to close choke tight, tighten screw.

**Fuel Pump Pressure:** 3½-5½ lbs.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. 1¼ turns, not over 1½ turns or under 1 turn, hook end over stop stud.

**VALVE TAPPET CLEARANCE:** .008" Intake, .010" Exhaust, Hot. NOTE—Self-locking tappet screws used.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock, Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

**COIL:** Auto-Lite No. CR-4001. Mounted directly above distributor on ignition bracket.

Ignition Current—2.25 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite No. IG-3927F.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IAP-4101-1. Automatic advance type with Vacuum Spark Control.

**Breaker Plate Identification:** Maximum vacuum advance limited by slot in plate. Plate marked #10.

**Breaker Gap:** .018".

**Cam Angle:** 27° to 30½° (closed).

**Breaker Arm Spring Tension:** 17-20 ounces.

**Rotation:** Clockwise viewed from the top.

**Automatic Advance**

5	.....	700	10	.....	1400
7	.....	1000	14	.....	2000

**Vacuum Spark Control: Auto-Lite Unit.** On distributor, linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	.....	0°
2°	.....	4°
5°	.....	10°
8°	.....	16°
10°	.....	20°

**Manual Adjustment:** Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal:** Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note:**—Install distributor with #1 piston in firing position and rotor opposite #1 segment in cap.

**IGNITION TIMING**

**Std. Setting:**—Initial setting (for regular non-premium fuel) as shown below. See Manual adjustment (following) for Final Setting.

**Flywheel Degrees Piston Position**

All Engines ..... 2° ATDC ..... .002" ATDC

**NOTE:**—Impulse neutralizer marked at TDC with 12 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #8 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor (as above).

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise to retard spark (if too severe).

### CARBURETOR

**Carter (B&B) E7J1, J2, J3 or E7J4.** 1½" Single barrel, downdraft type with Sisson automatic choke control, Slow-closing Throttle and Step-down Switch for hydraulically operated transmission. See Carburetor Section for complete data.

► **E7J1, J2, J3 Note**—To bring these carburetors up to latest E7J4 carburetor, see Carter (B&B) Carburetors in Carburetor Section.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Carburetor Section for Carter (B&B) Downdraft Carburetor Jet Specification Table.

**Slow-Closing Throttle:** Solenoid type. Non-adjustable. See Carburetion Equipment Section for complete data.

**Fast Idle:** Throttle stopscrew stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

**Automatic Choke:** Sisson type.

See Carburetion Equipment Section for complete data.  
**Setting**—Remove Air Cleaner and choke cover. Line up hole in armature and magnet core with shank end of ¼" drill, holding armature tight against magnet (Tool AC-620 available for use in place of drill). Loosen automatic choke lever clampscrew. Hold throttle open approx. 1/3 open, move choke lever to close choke valve tight, tighten clampscrew.

### CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544405 Heavy Duty oil-bath type. Filter Element AC No. 20.

**Servicing**—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump half-filled with oil and dust sludge. NOTE—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

**Fuel Pump:** AC No. 1539215. Diaphragm type.

**Replacement Pump**—AC No. 514 or 590.

**Pressure**—3½-5½ lbs.

See Carburetion Equipment Section for complete data.

**Fuel Tank Filter:** Oilite metal filter in tank.

**Servicing**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

**Gasoline Gauge:** Auto-Lite electric type.

**Dash Unit**—Auto-Lite No. 11821A.

**Tank Unit**—Auto-Lite No. 11539A.

See Carburetion Equipment Section for complete data.

### BATTERY

**Auto-Lite Type 2H-135RD.** 6 volt, 19 plate, 135 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—170 amperes for 20 minutes.

**Grounded Terminal**—Positive (+) to engine.

**Location**—Under hood in left fender shield.

### STARTER

**Auto-Lite Model MCL-6101.** Armature MCH-2039.  
**Drive**—Overrunning clutch (solenoid pinion shift).  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—42-53 ozs. (new brushes).  
**Cranking Engine**—150 RPM., 175 amperes, 5.4 volts.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
2.75 "	1630	5.0	200
8.7 "	600	4.0	400
8.0 "	Lock	2.0	410

**Removal:** Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch:** Auto-Lite Solenoid Type SS-4707 controlled by turning ignition switch past "on" position.

See Electrical Equipment Section for complete data.

### GENERATOR

**Auto-Lite No. Armature No.**  
**Standard (C-46)** ..... GGU-6001A ..... GGU-2006F  
**Standard (C-47)** ..... GGJ-6001A ..... GGJ-2101F  
**State Police (C-46)** ..... GGJ-6001B ..... GGJ-2101F  
**City Police (C-46)** ..... GGJ-6001A ..... GGJ-2101F  
**Cars without Hydr. Trs. GGU-6001A** ..... GGU-2006F  
**Two brush type current-voltage regulators.**  
**Maximum Charging Rate**—See table below.  
**Charging Rate Adjustment**—None. See Regulator.

#### Performance Data (GGU-6001A)

Amperes	Volts	Cold—R.P.M.—Hot
45	8.0	1550 Max.

#### Performance Data (GGJ-6001A, B)

50	8.0	1600 Max.
----	-----	-----------

#### Performance Data (GGW-6001A)

0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—(GGU, GGW) 35-53 ozs. (new brushes), (GGJ) 30-37 ozs. (new brushes).

**Field Current**—(GGU, GGW) 1.6-1.8 amps., (GGJ) 1.76-1.95 amps., all at 6.0 volts.

**Motoring Current**—(GGU) 5.5-6.5 amps., (GGJ) 4.3-4.8 amps., (GGW) 4.6-5.2 amps., all at 6.0 volts.

**Removal:** Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

### REGULATOR

**Auto-Lite Regulator No. for Auto-Lite Generator**

① **VBA-4101B** ..... GGU-6001A  
② **VBA-4101A or VAV-4404A** ..... GGJ-6001A, B  
**VRP-4503B** ..... GGW-6001A

①—VAV-4404B used on Early Cars, VBA-4104B for neg. grd.

②—VBA-4104A for negative ground.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

#### Cutout Relay

**Cuts In (VAV, VRP)**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts In (VBA)**—6.35-6.75 volts (set to 6.4-6.6 volts).

**Cuts Out (All)**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap (All)**—.015" minimum.

**Air Gap (All)**—.031-.034" with contacts open (check at hinge end of core).

#### Voltage Regulator

**Setting (VAV, VRP)**—7.2-7.5 volts at 70°F., (VBA) 7.0-7.2 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section.

**Contact Gap (VRP)**—.012" min. (armature against stop pin).

**Air Gap (All)**—.048-.052" with contacts just opening.

#### Current Regulator

► (Temperature Compensated Regulators)

**Nominal Setting**  
**VBA-4101B** ..... 45

**VBA-4101A, VAV-4404A** ..... 50

**VRP-4503B** ..... 40

► **CAUTION**—Nominal setting is approx. setting at 70°F. room temperature after regulator has been run (will be higher started cold). See Electrical Equipment Section for settings at various temperatures.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section.

**Contact Gap (VRP)**—.012" min. (arm against stop).

**Air Gap (All)**—.048-.052" with contacts just opening.

### LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type with new "Bull's-eye lens". Beam selector switch on toeboard controls upper and lower beams.

See Electrical Equipment Section for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).  
**Beam Indicator**—Lighted when Country (upper) beams in use. Located on lower right corner of speedometer face.

**Direction Signal Indicator**—In lower left corner of speedometer face.

**Direction Signal Flasher**—Chrysler No. 1257223.

#### Switches

**Beam Selector**—Chrysler No. 1253460.

**Map Light**—Chrysler No. 1244605.

**Direction Signal**—Chrysler No. 1235606.

### MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Lighting—30 ampere. Vibrating type, protects lighting circuits.

**Aux. Circuit Breaker**—8 ampere. Protects Windshield Wipers and Back-Up Light.

**Direction Signal**—On flasher behind instrument panel. Vibrating type. Protects dir. signal circuit.

**Transmission Solenoid**—Vibrating type mounted as an assembly with resistor unit.

**Window Lift**—Mounted on dash alongside Window Lift Motor.

**Convertible Top**—Mounted near control switch. Thermostatic type. Opens at 80 amperes in 1 minute or less.

**FUSES:** Clock—3 ampere. In clock lead.

Radio—14 ampere. In fuse connector at radio.

**HORNS:** Auto-Lite Model HW-4101 (Low Pitch), HW-4102 (High Pitch). Dual horns operated by relay.

**Horn Relay:** Auto-Lite Model HRL-4103 (Early), 4104 (Late). Connected through ignition switch, operated only with ignition "on".

**Contacts Close**—1.5-3.0 volts (seal to core with 4.0 volts maximum).

C NTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

Contacts Open—.5 volt min. (open from seal).

Contact Gap—.028". Air Gap—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

## ENGINE

ENGINE SPECIFICATIONS: 8 cyl., "L" head type.

Bore—3 1/4". Stroke—4 7/8".

Displacement—323.5 cu. ins. Rated H.P.—33.80.

Developed Horsepower—135 at 3200 RPM.

Compression Ratio—7.25-1 Std. cast-iron head.

Compression & Vacuum Reading—See Tune-Up data.

ORIGINAL BORE & PISTONS: See Chrysler Special Data.

ORIGINAL BEARING SIZES: See Chrysler Special Data.

TIGHTENING TORQUES: See Chrysler Special Data.

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—See Chrysler Special Data.

PISTONS: Aluminum alloy, U-slot, cam ground type.

NOTE—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).

Length—3 7/8". Weight—16.5 ozs. (stripped).

Removal—Pistons and rods removed from above.

Clearance—.0008" on thrust face 3/4" from bottom of skirt. Ring land diameter .0305" larger than skirt.

Fitting New Pistons: Measure piston size with micrometer across thrust faces (right angles to pin bosses) 3/4" from bottom of skirt. Fit piston in bore using .002" x 1/2" feeler, insert piston upside down in bore with feeler 90° from pin bosses on side opposite slot. Clearance correct when 5-7 lbs. pull required to withdraw feeler with bore and piston at 70°F.

NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

Replacement Pistons: .005", .020", .030", .040", .060" OS.

Installing Pistons: "U" slot away from valves.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	.5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

Replacement Rings: .005", .020", .030", .040", .050", .060" OS.

PISTON PIN: Diameter—55/64". Length—2 3/4". Floating type with locking ring at each end.

Pin Fit in Piston—.0002" to +.0003". Thumb push fit with piston heated to 160°F.

Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at normal room temperature.

Replacement Pins: Standard size and .0006", .003", .008" oversize.

CONNECTING ROD: Length—9". Weight—34 ozs. with bolts less bearings.

NOTE—Pin hole in rod bronze-bushed.

Lower Bearing Diameter—2 3/16". See "Original Bearing Size" in Chrysler Special Data.

Lower Bearing—Removable, precision type, thin babbitt on steel. No shims.

Clearance—.0005-.0015". Endplay—.006-.011".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings: .001", .002", .010", .012" U.S.

Installing Rods: Offset type. Wide side of bearing to rear for #1, 3, 5, 7; to front for #2, 4, 6, 8. Oil spray hole in rod toward camshaft on all rods.

CRANKSHAFT: 5 bearing, 8 integral counterweights with vibration dampener on front end.

Bearing Diameter—2 45/64". See "Original Bearing Size" in Chrysler Special Data.

Bearings—Removable, precision type, thin babbitt on steel. No shims.

Clearance—.001-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.

Replacement Bearings: .001", .002", .010", .012" U.S.

End Thrust: Taken by flange faces on rear (#5) main bearing. Endplay—.003-.007".

CAMSHAFT: 6 bearing. Non-adjustable chain drive.

Bearing Diameters—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1 3/8".

Bearings—Removable, steel-backed, babbitt-lined bushings (except #6—machined in crankcase).

Clearance—.001-.003" (#1), .0015-.0035" (all others). NOTE—Replacement bearings are finished (reaming, scraping, or burnishing not required).

End Thrust: Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

Timing Chain: Width 1 1/4". Pitch .500" (1/2"). Length 23 1/2" or 47 links.

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that "0" marks are adjacent and in line with a straightedge across shaft centers.

VALVES: Head Diameter Stem Diameter Length

Intake ..... 1 17/32" ..... 340-341" ..... 5 7/8"

Exhaust ..... 1 11/32" ..... 3395-3405 ..... 5 7/8"

Seat Angle Lift Stem Clearance

Intake ..... 45° ..... 3/8" ..... .0015-.0035"

Exhaust ..... 45° ..... 3/8" ..... .002-.004"

Valve Guides: Remove from above. Press new guides in with stepped end down and upper end 1" (Intake), 1 3/32" (Exhaust), below top of block. Ream guides to inside diameter of .3425-.3435" (Tool DD-849). Exhaust guides counterbored on upper end.

Valve Springs: Install springs with close-coil end to top. Spring Free Length 2".

Spring Pressure Spring Length

Valve Closed ..... 40-45 lbs. .... 1 3/4"

Valve Open ..... 107-115 lbs. .... 1 3/8"

Valve Lifters: Mushroom type (remove from below with camshaft out of engine). Stem diameter 5/8". Service by reaming lifter holes (work from above piloting reamer Tool C-265 in valve guide) and installing oversize lifters. Clearance—.000-.001".

Replacement Lifters—.001", .008", .030", .060" oversize.

## VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exhaust, Hot. Self-locking tappet screws used. NOTE—Remove right front wheel and lower wheel housing panel for access to valves.

Valve Timing: See Camshaft Setting above.

Intake Valves—Open 12° BTDC. Close 44° ALDC.

Exhaust Valves—Open 50° BLDC. Close 6° ATDC.

Valve Timing Check—With .014" tappet clearance (Cold), #8 intake valve should open with #8 piston 5° to 17° or .011" to .122" BTDC. with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to .008" Hot running clearance.

## LUBRICATION

Engine Oiling System: Pressure through Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump on right side of engine.

Crankcase Capacity—6 quarts (refill).

Normal Oil Pressure—45-60 lbs. above 45 MPH. with warm oil. CAUTION—Pressure of 40-45 lbs. at driving speeds indicates oil filter may be clogged and should be replaced.

Oil Pressure Relief Valve—Under cap on lower left side of crankcase. Has bleed duct which connects with new idle oil passage to provide additional oil at idling speeds. Valve has screw adjustment but factory setting seldom requires changing. Opens at 40-45 lbs.

Oil Pump: "Rotor" type on right side of crankcase.

Servicing—See "Oil Pump" in Chrysler Special Data.

Oil Filter: "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.

Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. Checking: If oil pressure drops to 40-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 45-60 lbs. above 45 MPH.

Oil Pressure Gauge: Auto-Lite No. 11823A. Not electric.

## COOLING

Cooling System: Pressure type with pressure valve (relief valve) in filler cap, and positive circulation with pump on front of engine, by-pass type thermostat, and water distribution tube in block.

Capacity—21 quarts.

Pressure Valve—In filler cap. Opens at 3 lbs.

Water Pump: Packless type with shaft mounted on 2 ball bearings with lubricant fitting for bearing lubrication and grease nipple for seal lubrication. See Water Pump Section for complete data.

Removal—Drain cooling system. Remove fan blade assembly, fan belt, by-pass hose and elbow, inlet hose, pump mounting cap screws. Take pump off. Spacer behind pump need not be taken off engine. Belt Adjustment—See Generator Belt Adjustment.

Thermostat: In cylinder head water outlet.

Setting—Starts to open 157-162°F. Fully open 183°F. INSTALLATION NOTE—Install thermostat with 2 ports facing front, 2 ports to rear. Some thermostats

equipped with heavy shield welded on bottom (for bellows protection at high speeds), this type thermostat cannot be installed on earlier cars.

**Temperature Gauge:** Auto-Lite No. 11822A. Not electric.

### CLUTCH

**Borg & Beck Model 10A6** with "Borglite" driven member. Single plate, dry disc type. NOTE—Cover Assembly No. 961 stamped on cover  
*See Clutch Section for complete data.*

**Facings**—Woven type, 2 used. Inside Diameter 6". Outside Diameter 10". Thickness .125" ( $\frac{1}{8}$ ").

**Pedal Adjustment:** Set pedal to just clear toeboard by loosening locknut and turning stopscrew at lower end of pedal arm above shaft. Set pedal for 1" free travel by turning clutch release fork adjusting nut on connector link at clutch release fork.  
**CAUTION**—Do not disturb turnbuckle on pedal link (controls pedal over-center spring tension).

**Removal:** Remove Transmission (see TRANSMISSION). Remove clutch housing underpan and clutch release bearing and sleeve. Mark clutch and fluid drive clutch driving plate for re-assembly. Remove all clutch cover mounting screws evenly, lower cover and driven member out through opening in housing.

### FLUID DRIVE

**Chrysler**—Fluid coupling at rear of engine.  
*See Miscellaneous Section for complete data.*

**Oil Level:** Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

**Removal:** Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

### TRANSMISSION

#### STANDARD MODEL C46

**Own Make**—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*

**Transmission Control:** Manual steering column shift.  
*See Transmission Section for complete data.*

**Removal:** Jack up front end of car. Disconnect front universal (loosen companion flange nut if transmission to be dismantled). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission. Remove transmission mounting screws and nuts at clutch housing, pull transmission straight back to free clutch shaft, lower transmission and remove from under car.

**NOTE**—When installing transmission, use pilot studs installed in upper mounting screw holes to maintain alignment and prevent springing clutch driven member.

### TRANSMISSION

#### STANDARD C47, OPTIONAL C46

**Hydraulically Operated Type (with Fluid Drive).** New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control.  
*See Transmission Section for complete data.*

**Transmission Control:** *See Transmission article for adjustment directions.*

**Kickdown Solenoid**—Auto-Lite No. SSS-4003.

**Governor**—Auto-Lite No. TG-4205R.

**Kickdown Switch**—Part of carburetor assembly.

**Ignition Interrupter Switch**—On right side of transmission above Governor.

**Transmission Oil**—3 pints, 10-W engine oil.

**Removal:** Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.

**INSTALLATION CAUTION**—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

### UNIVERSALS

**Detroit Universal Series 7300**—Cross type with roller bearings. Two used (3 with center bearing on C-47 and C-46 & C-47 7 passenger cars).

*See Universals Section for complete data.*

**Propeller Shaft Center Bearing:** Used on C-47 and C-46 & C-47 7 Passenger.

### REAR AXLE

#### MODEL C46

**Own Make**—Semi-floating, hypoid gear type with Hotchkiss Drive.

*See Rear Axle Section for complete data.*

**Ratio**—3.54-1 (39:11).

**Backlash**—.006-.010". Screw adjustment.

**Removal:** Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

**Axle Shaft Removal**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.

**Axle Shaft Outer Oil Seal:** New leather type mounted on brake support (backing plate).

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

### REAR AXLE

#### MODEL C47

**Own Make**—Semi-floating, hypoid gear type with Hotchkiss drive. Barrel type differential with adjustable ring gear thrust pad used.

*See Rear Axle Section for complete data.*

**Ratio**—3.58-1 (43:12).

**Ring Gear Thrust Pad Setting**—Loosen locknut on left side of carrier housing, tighten thrust pad screw finger tight, back screw off  $\frac{1}{8}$  turn, tighten locknut.

**ALL OTHER DATA SAME AS FOR C46 REAR AXLE.**

### SHOCK ABSORBERS

New "Hydra-Lizer" hydraulic, direct-acting, non-adjustable type.

*See Shock Absorber Section for complete data.*

### FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**— $4\frac{3}{4}^{\circ}$  to  $6^{\circ}$  crosswise.

**Camber**— $0^{\circ}$  to Pos.  $\frac{3}{4}^{\circ}$ . ( $\frac{1}{4}$ – $\frac{1}{2}^{\circ}$  higher on left).

**Caster**—Neg.  $2^{\circ}$  preferred. Limits Neg.  $1^{\circ}$  to Neg.  $3^{\circ}$ .

**Toe In**— $0^{\circ}$  preferred. Limits  $0^{\circ}$  to  $1/16^{\circ}$ . Adjust both tie rods equally.

**Steering Geometry**—Inner wheel  $21\frac{1}{2}^{\circ}$ , plus or minus  $1^{\circ}$ . Outer  $20^{\circ}$ .

### STEERING GEAR

**Own Make**—3 tooth Worm-and-Roller. Similar to Gemmer model 335.

**NOTE**—See Gemmer 305, 335 & 375 article for data.  
*See Steering Gear Section for complete data.*

### BRAKES

**Service:** Chrysler "Safe-guard" Lockheed Hydraulic.

**Front Wheels**—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels**—Double anchor type with single double-acting wheel cylinder.

*See Brake Section for complete data.*

**Wheel Cylinders**— $1\frac{1}{4}$ " bore (front wheel front shoe—top cylinder),  $1\frac{1}{8}$ " bore (all others). Single acting (front), double acting (rear wheels).

**Drums**—Centrifuge. Diameter 12".

**Lining**—Molded asbestos. Width 2". Thickness  $13/64$ ". Length per wheel 23" (front wheels),  $20\frac{3}{8}$ " (rear wheels).

**Clearance**—.006" at each end of all shoes.

**Braking Power**—60% front wheels, 40% rear.

**Power Brake Unit (C47):** Diaphragm type with internal valve.

*See Brake Section for complete data.*

**Hand Brake:** On drum at rear of transmission.

**Adjustment**—*See "Hand Brake Notes" in Chrysler Special Data.*

**Drum**—Cast-iron. Diameter 7".

**Lining**—Molded asbestos. Width  $2\frac{1}{2}$ ". Thickness  $5/32$ ". Length 20".

**Clearance**—.015-.020" around band.

### MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWJ-4001, EWJ-4003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

*See Miscellaneous Section for complete data.*

**CONVERTIBLE TOP CONTROL:** Auto-Lite Model EWM-4001. Electric type.

*See Miscellaneous Section for complete data.*

**WINDOW REGULATORS:** Hydro-electric type.

*See Miscellaneous Section for complete data.*

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

### 1949 MODELS

Spark Plugs .....	225-250
Cyl. Block Hold-down Stud Nuts.....	125-165
Main Bearing Cap Stud Nuts.....	150-180
Connecting Rod Cap Stud Nuts.....	200-280
Camshaft Bearing Capscrew (#1 only).....	90-100
Camshaft Bearing Capscrew (exc. #1).....	75-100
Flywheel Mounting Capscrew .....	225-285
Flywheel Housing Capscrews .....	225-285
Clutch Mounting Capscrews .....	150-180
Oil Pump Housing Capscrews .....	50-80
Oil Pump Mounting Capscrews .....	125-165
Intake & Exhaust Manifold Capscrews.....	225-285
Carburetor Mounting Stud Nuts .....	125-165
Generator Bracket Bolts (5/16") .....	125-165
Generator Bracket Bolts (3/8") .....	200-250
Generator Mounting Band Bolts .....	200-225
Water Pump Mounting Bolts .....	125-165
Fan Shaft Nut .....	225-285
Spring Shackles .....	180-200

## ENGINE REMOVAL

### 1949 MODELS

**ENGINE REMOVAL (FOR SERVICING):** Engine should be removed from chassis as follows:

Remove hood, drain radiator. Disconnect battery cable at battery, disconnect and remove starting switch-to-starter cable. Disconnect all ignition leads at distributor, fuel line at fuel pump, throttle and choke cables at carburetor, oil pressure gauge line at right rear corner of engine, windshield wiper hose at manifold, generator wire at Cutout Relay, hose connections at engine block outlet and water pump, exhaust pipe at manifold connection, engine ground strap at flywheel housing, clutch release cable at release lever under flywheel housing, temperature indicator cable and bulb at engine outlet connection. Remove radiator brace rod connected to top of radiator, take out two base bolts under radiator and carefully lift radiator out of engine compartment. Remove hood latch cable. Slack off fan drive belt, remove fan assembly and belt. Place support jack under engine, split front & rear flywheel housing by taking out 5 bolts, remove nut and lock washer on right front engine mounting stud (goes through frame), remove left front engine mounting bolt. Attach lifting sling to engine (loop sling under oil pan), support engine weight with sling and hoist, move engine straight forward approximately 4" (to clear clutch shaft), lift engine out tilting the front end up slightly for clearance.

### 1949 MODELS

**CYLINDER BLOCK REMOVAL (FOR VALVE SERVICING):** With the engine out of the car (see Engine Removal), remove water pump, fuel pump, carburetor, manifolds, and spark plugs. Remove camshaft cover, take out mounting bolts in all camshaft bearings and lift off camshaft and bearings (oil metering tube in upper end of towershaft at front of camshaft will come out with camshaft). Unscrew and remove towershaft adjuster, lift out towershaft upper bevel gear. Remove oil pan, connecting rod caps, and oil pump. Turn crankshaft to top center. Remove 11 elastic stopnuts holding cylinder block on crankcase, lift off cylinder block and piston assembly.

**Cylinder Block Installation:** Install pistons (with ring gaps staggered) and connecting rods (with upper halves of bearings in place and rod numbers on distributor side) in block. Turn crankshaft to top center. Place block on crankcase. Install 11 plain washers and elastic nuts. Install connecting rod caps (with numbers on rod on cap on distributor side of engine). Install oil pump and towershaft gear. See Towershaft Assembly Servicing following.

## CRANKSHAFT & MAIN BEARINGS

### 1949 MODELS

**CRANKSHAFT SERVICING: Crankshaft Removal—**With engine out of car (see Engine Removal), remove oil pan, remove oil pump (see Oil Pump Servicing), remove gear on lower end of distributor shaft, remove all crankshaft bearing caps, lift crankshaft out (not necessary to remove clutch—crankshaft, flywheel, and clutch removes as unit).

**Crankshaft Installation—**Reverse removal instructions (above), tighten bearing cap nuts evenly (see Tightening Torque Wrench data), use new lockwashers, pinnuts and gaskets. Replace oil seals

### 1949 MODELS

**CRANKSHAFT OIL SEALS: Front Seal.** Metal enclosed neoprene seal. To remove, take off oil pan and crankshaft pulley, slide seal off. Coat outside of new seal with Permatex No. 2, slide into position against shoulder at rear of its groove. Install crankshaft pulley, adjust lower gear backlash. Use new gaskets when installing oil pan.

**Rear Seal.** With crankshaft out of engine, remove old seal. Turn new one-piece seal on shaft with edge of internal lip to front. Use Permatex No. 3 in seal groove. Install crankshaft so that seal gap will be in the center of the rear bearing cap.

## CAMSHAFT & BEARINGS

### 1949 MODELS

**CAMSHAFT DRIVE (TOWERSHAFT) ASSEMBLY:** Towershaft is positioned by "towershaft adjuster" (hollow hexagonal headed capscrew) installed in upper end of towershaft above upper bevel gear.

**Towershaft Assembly Servicing:**

**Disassembly—**Towershaft and lower bevel gear (integral with shaft) can be withdrawn from below after towershaft adjuster has been unscrewed from upper end of shaft and upper bevel gear lifted out.

**NOTE—**Crankshaft must be removed to allow towershaft to be taken out (see Crankshaft Removal).

**Towershaft Assembly—**Insert bushing in crankcase from below, insert towershaft, install crankshaft and mesh bevel gears (see Camshaft Drive Gear Meshing Data below), check and adjust lower bevel gear backlash. After cylinder block installed on crankcase, see that upper bushing in place in upper end of towershaft housing, install towershaft upper bevel gear, install towershaft adjuster, tighten adjuster until clearance between shoulder on upper gear and face of upper bushing is .004" (measure with feeler gauge while prying upward on adjuster). Towershaft clearance in bushings should be .0005-.002" (lower bushing), .0005-.0015" (upper gear hub in upper bushing). Backlash in gears should be

.003-.005" (lower bevel gears—see Towershaft Gear Backlash Adjustment below), .003-.005" (upper bevel gears—see Camshaft Endplay Adjustment).

**Towershaft Lower Gear Backlash Adjustment:** To check backlash, push crankshaft forward until thrust flange is against rear main bearing. Mount dial indicator so as to measure movement of towershaft lower bevel gear, rock towershaft back and forth. Backlash .003-.005" and adjusted as follows: When installing towershaft assembly, screw the crankshaft adjuster (slotted stud in forward end of crankshaft) in until lower bevel gears are snug. Start the engine. If gears are noisy, stop engine, unscrew crankshaft adjuster slightly, repeat test. When gears run quietly, tighten nut on adjuster securely (hold adjuster with screwdriver to prevent change in adjustment).

**Towershaft Upper Gear Backlash Adjustment:** See Camshaft Endplay Adjustment (below).

### 1949 MODELS

**CAMSHAFT ENDPLOY ADJUSTMENT:** To check endplay with camshaft installed on engine, push camshaft forward as far as possible, measure clearance between rear face of camshaft gear hub and front bearing with a feeler gauge. Endplay should be .003-.005". Adjust camshaft endplay as follows: loosen front camshaft bearing capscrews, slip bearing strap up on capscrews for access to thrust washer, lift thrustwasher out and replace with washer of correct thickness.

**CAUTION—**Make certain that closed end of thrustwasher is upward (under bearing strap tab) and that bearing strap tab is forward so as to retain thrustwasher when bearing capscrews tightened.

### 1949 MODELS

**CAMSHAFT DRIVE GEAR MESHING MARKS:** With engine completely disassembled, install and mesh all gears of the valve system as follows:

**Crankshaft Gear—**Install gear on crankshaft splines with marked spline on shaft in line with punchmark on gear hub. **NOTE—**On first cars where gear hub not marked, marked spline on shaft should be on same side and in line with marked tooth on gear.

**Tower Shaft Lower Gear—**Gear is integral with shaft. The two punch-marked teeth on tower gear should straddle punch-marked tooth on crankshaft gear.

**Tower Shaft Upper Gear—**Install gear on shaft with punch marks in line. Mesh punch-marked tooth on gear between two punch-marked teeth of camshaft gear.

**Camshaft Gear—**Gear is keyed on shaft.

### 1949 MODELS

**CAMSHAFT OIL METERING HOUSING ASSEMBLY:** Install oil metering housing (90° fitting between upper end of towershaft and camshaft) in forward end of camshaft with camshaft off engine, then engage lower end of housing in upper end of towershaft as camshaft is placed in position on cylinder block. Housing clearance should be .0002-.0023" in camshaft and .0005-.0025" in towershaft gear adjuster. Backlash between camshaft and towershaft gears should be .003-.005".

**TAPPET CLEARANCE ADJUSTMENT****1949 MODELS****TAPPET CLEARANCE ADJUSTMENT PROCEDURE:**

Clearance must be checked with camshaft and cam follower assemblies installed on engine. Turn camshaft until heel of cam is directly over cam follower, press valve in so that it rests firmly on seat, check clearance with feeler gauge. Select adjusting shim pack of correct thickness for correct tappet clearance, insert shims through slot in head of cam follower (above spacer washer), lock shims in place by bending up ends. Shims furnished in following sizes:

Cam Follower Shims			
Thickness	Part No.	Thickness	Part No.
.010".....	W-206284-1	.016".....	W-206284-4
.012".....	W-206284-2	.018".....	W-206284-5
.014".....	W-206284-3	.020".....	W-206284-6
Tappet Clearance			
Intake—.004-.005"		Exhaust—.005-.007"	

**VALVE SYSTEM****1949 MODELS**

**VALVE SERVICING:** With engine removed from chassis, remove cylinder block (see Cylinder Block Removal above), lift out valve lifters (cam followers) and number these to insure re-installation in same positions (CAUTION—Do not lose tappet

clearance adjusting shims and spacer washers on later cars). Use special bar type valve lifter to compress valve springs, remove split locks, spring retainer, and spring from each valve, remove valve from inside cylinder. Reface valves in usual manner (see data below for refacing valve seats), re-install assemblies, check tappet clearance.

**Valve Seat Resurfacing—**Special tools must be used to avoid marring cylinder walls (valve seats must be serviced from within cylinder). Use special Blue Point Stone Carrier, VG-10-2B, turned down to 1" diameter, and 5/16" pilot with following stones: SE-400-R Valve Seat Stone (Roughing), SE-400-F (finishing). Stones must be turned to 1 3/16" diameter for Intake Valves, 1 1/16" for Exhaust.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** Stamped on plate on front face of dash panel in engine compartment.

**ENGINE NUMBER:** Stamped on pad on left side of crankcase.

1949 Numbers: 100,000 up.

## TUNE-UP

**COMPRESSION PRESSURE:** 125-135 lbs. max. (110 lbs. min. hot) at cranking speed of 260 RPM. All cylinders must be equal within 10 lbs.

**VACUUM READING:** Steady 18-20" idling at 7 MPH.

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUG GAPS:** .025".

Plugs—Auto-Lite Type AN-7E. 14 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.020". Limits .020-.024".

Cam Angle—46° (closed).

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.20-.25 microfarad.

**IGNITION TIMING:** 12° BTDC.

Timing Procedure—See Ignition Timing.

**Timing Mark:** First flywheel mark (second mark is TDC) in inspection hole in right front face of flywheel housing.

## CARBURETION:

**Initial Setting (to warm up Engine)**—Idle adjustment screw 1¼ turns open. Main (high speed) adjustment screw 2¾ turns open.

**Main (High Speed) Adjustment**—With engine warm and running at ½ throttle opening, turn screw in until engine begins to lose speed, then out until maximum speed and power secured (2-2½ turns open).

**Idle Adjustment**—After making Main Adjustment (above), close throttle and set stopscrew for slightly faster than normal idle speed, turn idle adjusting screw in until engine misses, then turn screw out until engine fires smoothly. Final setting 1 turn open.

**Idle Speed**—700 RPM or 7-8 MPH.

**Float Level**—Fuel level 23/32" below top edge of bowl or even with bottom of inspection plug hole on side of bowl.

► **CAUTION**—Remove idle adjusting screw, spring, and idle tube before removing air horn and float bowl cover assembly.

**Accelerating Pump**—None.

**Choke Setting:** Manual choke.

**Fuel Pump Pressure:** 1½-3¼ lbs.

**VALVE TAPPET CLEARANCE:** .004-.005" Intake, .006-.007" Exhaust, Cold.

**Tappet Clearance Adjustment Procedure**—See "Valve System" in Crosley Special Data.

**Valve Timing Check**—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Crosley No. 200102.

**COIL:** Auto-Lite Model IG-6001. On dash.

Service Coil—IG-4070 with IG-1944 Service Bracket. Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite No. IGB-1025E.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGW-4181-C. Single breaker, four lobe cam, full automatic advance type (no vacuum control).

**Breaker Gap**—.020". Limits .020-.024".

**Cam Angle**—46° (closed).

**Breaker Arm Spring Tension**—17-20 ozs.

**Rotation**—Counter-clockwise viewed from above.

## Automatic Advance

Distributor		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
15	1600	30	3200

**Removal:** Distributor mounted on crankcase at left front of engine. To remove distributor, drain engine oil, remove oil pan, remove distributor drive gear by removing palnut and regular nut on lower end of distributor shaft. (CAUTION—Do not lose Woodruff key in shaft). Then remove hold-down screw in advance arm, lift distributor out.

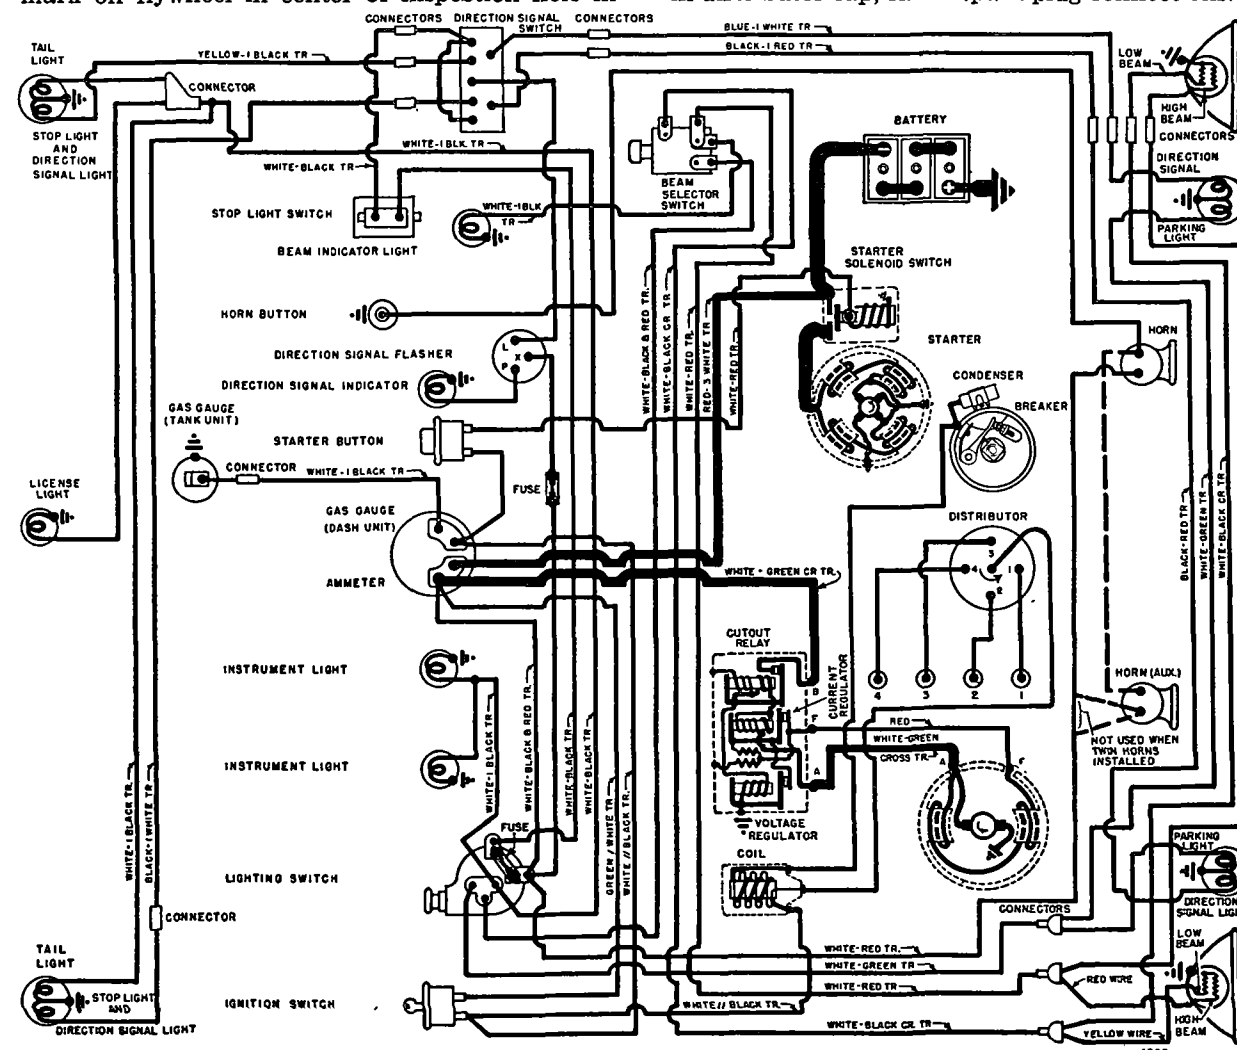

**Distributor Installation Note**—When installing distributor, first turn crankshaft to #1 cylinder firing position (#1 piston on compression, ignition timing mark on flywheel in center of inspection hole in

right front face of housing), turn distributor shaft until rotor is at #1 segment in distributor cap (see diagram) with contacts just opening, install distributor on engine and tighten hold-down screw in advance arm. With oil pan removed, install drive gear on lower end of distributor shaft. (CAUTION—make certain that Woodruff key in place), being careful not to disturb relative position of distributor shaft and crankshaft when meshing gears, install regular nut and palnut on distributor shaft. Check Ignition Timing.

## IGNITION TIMING

**Std. Setting**.....12° BTDC.

**To Set Timing**—With #1 piston on compression, turn engine over until piston reaches firing position when first timing mark on flywheel is in center of inspection hole in right front face of housing. Loosen advance arm clamp bolt, rotate distributor housing until contacts begin to open, tighten clamp bolt. Check rotor and make certain it is at #1 segment in distributor cap, check spark plug connections.

**To Check Timing (with Neon Timing Light)**—Attach neon timing light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Start engine and allow it to idle (speed must not exceed 700 RPM. to avoid automatic advance action). Loosen distributor clamp bolt in advance arm, rotate distributor until timing mark (located 12° before TDC mark) appears to be in center of inspection hole, tighten clamp bolt,

## CARBURETOR

**Tillotson Model DY-9C**— $\frac{7}{8}$ ", single barrel, plain tube, downdraft type with manual choke control. See Carburetor Section for complete data.

**NOTE**—This carburetor has Main (High Speed) adjustment as well as conventional Idling (Low Speed) adjustment.

**Adjustment & Float Level**—See Tune-up for data.

**Metering Jets**—See Tillotson DY-9C Carburetor article in Carburetor Section for complete data.

## CARB. EQUIPMENT

**Air Cleaner**: Oil-bath type.

**Servicing**—Remove and disassemble cleaner, wash out with gasoline (including filter), refill reservoir with light engine oil to indicated level (approx.  $\frac{1}{4}$  pint) every 5000 miles or more often if required (inspect every 1000 miles).

**Fuel Pump**: AC No. 1538923 (Crosley No. 300042).

See Carburetion Equipment Section for data.

**Pressure**— $1\frac{1}{2}$ - $3\frac{1}{4}$  lbs.

**Gasoline Gauge**: Stewart (Stewart-Warner) Electric. See Carburetion Equipment Section for data.

## BATTERY

**Auto-Lite Type 1M-80**—6 volt, 13 plate, 80 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—96 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 2.0 minutes. Five second voltage 3.8 volts.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left hand side in engine compartment. **NOTE**—Battery on Hotshot located under right front fender.

**Dimensions**—Length 9". Width 7". Height  $8\frac{5}{8}$ ".

## STARTER

**Auto-Lite Model MZ-4147**, Armature No. MZ-2053.

**Drive**—Bendix Drive No. A2920.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. with new brushes.

		Performance Data		
Torque		R.P.M.	Volts	Amperes
0 ft. lbs.		4300	5.5	70
2.55 "		1325	5.0	200
4.95 "		750	4.5	300
7.65 "		220	4.0	400
4.4 "		Lock	2.0	280

**Removal**: Starter flange mounted on left front face of flywheel housing. To remove, disconnect cable, take out capscrews.

**Starting Switch**: Auto-Lite Model SS-4007 Magnetic Switch and Pushbutton Model XA-456 or XA-456E. Switch is mounted on dash and controlled by pushbutton on instrument panel.

See Electrical Equipment Section for complete data.

## GENERATOR

**Auto-Lite Model GDZ-4806B**, Armature GDZ-2079F. Two brush type with current and voltage regulation.

**Maximum Charging Rate**—35 amperes at 8.0 volts.

**Charging Rate Adjustment**—None. See Regulator.

		Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.		
0	6.4	925	0	6.4	1000		
5	6.65	1060	5	6.65	1150		
10	6.85	1200	10	6.85	1290		
15	7.05	1340	15	7.05	1430		
20	7.3	1480	20	7.3	1590		
25	7.55	1620	25	7.55	1750		
30	7.8	1760	30	7.8	1980		
35①	8.0	1900	35	8.0	2250		

①—Current Regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.2-4.6 amperes at 6.0 volts.

**Removal**: Generator cradle mounted on right side of engine with fan belt drive (water pump driven by armature shaft extension). To remove generator, disconnect leads, slack off belt adjustment and remove fan belt, remove front bolt in water pump coupling. Remove two  $5/16$ " elastic stop nuts on generator mounting band, lift generator out.

**Belt Adjustment**: Loosen nuts on two bolts mounting fan shaft bracket on front of engine, move fan upward (right hand bolt hole slotted) until belt deflection is  $\frac{1}{2}$ " (thumb pressure) midway between generator and fan pulleys, tighten nuts and recheck. **NOTE**—Two holes provided in bracket for left hand fan mounting bolt. Additional range of adjustment can be secured by shifting bolt to upper hole.

## REGULATOR

**Auto-Lite Model VRP-4004F-2**, Voltage-current type. See Electrical Equipment Section for complete data.

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on cover).

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

## LIGHTING

**Headlamps**: "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on to-board.

**Adjustment**—Aim upper beams straight ahead with top of "hot spot" 3" below lamp center height at 25 feet.

### Switches

**Lighting**—Crosley No. 205936.

**Beam Selector**—Crosley No. 209446.

**Directional**—Crosley No. 209354.

**Stop Light**—Crosley No. 207800.

## MISC. ELECTRICAL

**FUSE**: Lighting—20 ampere. On lighting switch.

**HORN**: **Sparton** or **Auto-Lite** No. HA-4037, Vibrator type. Single horn standard, dual horns optional.

**Horn Current**—7 amperes each.

## ENGINE

**ENGINE SPECIFICATIONS**: New "CIBA" cast-iron block engine. Four cylinder, Overhead Valve type with Overhead Camshaft. Cylinder block (with integral Head) is bolted on separate crankcase.

**Bore**—2.5". **Stroke**—2.25".

**Displacement**—44 cu. ins. **Rated H.P.**—10.

**Developed Horsepower**—26.5 at 5400 RPM.

**Compression Ratio**—7.8-1.

**Compression & Vacuum Reading**—See Tune-up data.

► **ENGINE SERVICE NOTE**: Cylinder Heads are integral with cylinder barrels and cylinder block must be removed from crankcase for work on Valves, Pistons, Rings, etc.

**ENGINE REMOVAL and Cylinder Block Removal**: See Crosley Special Data.

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS**: See Crosley Special Data.

**PISTONS**: Aluminum alloy, four ring type, heat treated, cam ground, with aluminum oxide finish.

**Weight**—6.5 ozs. stripped. **Length**— $1\frac{29}{32}$ ".

**Clearance**—.0025-.0035" (skirt). See Fitting New Pistons.

**Removal**—Pistons and rods removed through lower end of cylinder when cylinder block removed from crankcase (cylinder head integral with block).

See Crosley Special Data for Cylinder Block Removal.

**Fitting New Pistons**: Use .002" feeler gauge,  $\frac{1}{2}$ " wide, to check clearance. Place feeler gauge 90° from pin holes in piston on maximum thrust side. Pull required to withdraw feeler should be 4-6 lbs.

**Replacement Pistons**: Furnished Std. Size and .0025", .005", .010", .020", .030" Oversize.

**PISTON RINGS**: Two compression, one oil control ring above pin, additional oil control ring below pin. Drain holes provided in both oil ring grooves.

Ring	Width	End Gap	Side Clearance
Compr. (#1,2)	.0620-.0625"	.007-.017"	.0025-.005"
Oil (#3,4)	.1545-.1550"	.007-.015"	.0015-.003"

**Installing Rings**—Inside bevel on compression rings

## ENGINE

## CONTINUED FROM PRECEDING PAGE

must be upward. Top compression ring chrome plated.

**Replacement Rings:** Furnished Std. Size and .010", .020", .030" Oversize.

**PISTON PIN:** Floating type with aluminum plug insert in each end of pin. Pin hole in rod has lead-bronze bushing.

**Pin Fit in Piston**—.0004" Loose to .0003" Tight at room temperature or 70°F.

**Diameter**—.6252". **Length**—2.260".

**CAUTION**—Heat piston to 160°F. when inserting pin to avoid distorting piston skirt.

**Pin Fit in Rod Bushing**—.000-.0005" clearance or tight thumb push fit at room temperature (70°F.).

► **NOTE**—Bushing is split leaded-bronze type and of size for press fit in connecting rod hole. Hone bushing for correct pin fit after installation (pressing bushing into place will close up gap and leave pin hole undersize).

**Piston Pin Plugs**—Must be snug fit in ends of pin.

**Replacement Piston Pins:** .001", .002", .003" Oversize.

**CONNECTING ROD:** Length—4.125-4.130". **Weight**—9.62 ozs. **NOTE**—Bearing cap bolts are forged integrally with the connecting rod.

**Crankpin Journal Diameter**—1.374-1.375".

**Lower Bearing Type**—Replaceable, precision type steel-backed, babbitt-lined. No shims.

► **NOTE**—Connecting rod bearings are interchangeable with the three intermediate lower main bearing halves (not interchangeable with crankshaft upper bearings).

**Clearance**—.0015-.003". **Sideplay**—.010-.025".

**Bearing Adjustment:** None (no shims). Replace bearings (precision type, no fitting required). Do not file bearing caps. **NOTE**—Palnuts used on connecting rod bolts. Always use new Palnuts.

**Replacement Bearings:** Furnished Std. Size and .001", .005", .010", .020" Undersize.

**Installing Rods:** Numerical marking on rod and bearing cap together on left side of engine (distributor side).

**CRANKSHAFT:** Five main bearing type with individually counterweighted crankpins.

**Journal Diameters**—1.374-1.375" (except rear bearing), 1.499-1.500" (rear bearing only).

**Bearing Type**—Replaceable, precision type, steel-backed, babbitt-lined. Rear bearing is flanged (for end thrust).

► **NOTE**—The three intermediate main bearings are interchangeable and these lower bearing halves are interchangeable with connecting rod bearings. Upper and lower bearing halves are not interchangeable (upper halves may be identified by oil holes which must register with oil channels in crankcase). **Clearance**—.0015-.003".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. Engine should be removed from chassis and crankshaft removed for main bearing work.

See *Crosley Special Data for Engine Removal and Crankshaft Removal Instructions.*

**CAUTION**—When installing bearings, make certain that oil holes in bearing upper halves register with oil channels in crankcase (see Bearing Note above). Bearing caps are numbered (1 to 5) on left side of engine and cannot be interchanged.

**Crankshaft Oil Seal**—Replace rear main bearing oil seal whenever rear main bearing is disturbed.

**Oil Seal Replacement**—See "Crankshaft & Main Bearings" in *Crosley Special Data.*

**Replacement Bearings:** Furnished Std. Size and .001", .005", .010", .020" Undersize.

**End Thrust:** Taken by flanges on #5 (rear bearing). Replace rear main bearing when endplay exceeds .008". **Endplay**—.003-.008".

**CAMSHAFT:** Five bearing type mounted on top of engine and driven through bevel gears by vertical tower shaft at front of engine.

**Bearing Type**—Consist of five split aluminum bearings bolted individually on pads on top of engine. Top of all bearing upper halves are machined flat and a separate bearing strap is assembled on top of bearing under bearing capscrews. These bearing straps have stud for camshaft cover retaining nuts (except rear #5 bearing strap which is plain type).

**Bearing Interchangeability**—All upper and lower bearing halves except front (#1) interchangeable on all engines. Bearing straps are interchangeable on intermediate bearings (#2, 3, 4). Rear bearing strap is plain type.

**Clearance**—.0015-.0027".

**Endplay**—Taken by thrust washer between camshaft gear and front camshaft bearing. With correct endplay, backlash between camshaft gear and upper tower shaft gear will be .003-.005".

**Endplay Adjustment**—See "Camshaft & Bearings" in *Crosley Special Data.*

**Camshaft Drive (Towershaft) Assembly:** See "Camshaft & Bearings" in *Crosley Special Data.*

**Camshaft Setting:** For correct valve timing, with camshaft out of engine, proceed as follows:

1) Turn engine over slowly until the following three conditions occur simultaneously: a) Top dead center mark on flywheel is in center of inspection hole in right front face of housing, b) Distributor rotor points toward #1 cylinder segment in distributor cap, c) Punch-marked tooth of upper tower gear (see below) points toward rear of engine and is in line with center-line of camshaft bearings.

2) With engine positioned as above, assemble the camshaft, pushing the oil metering housing into upper tower shaft gear and meshing punch-marked tooth of upper tower shaft gear between two punch-marked teeth of camshaft gear. Complete camshaft assembly by installing bearing caps.

3) Check camshaft endplay (see data above).

4) Turn engine over slowly by hand for at least two revolutions.

**VALVES:** Engine must be dismantled (removed from chassis, cylinder block taken off) for valve work.

**Valve Servicing**—See "Valve System" in *Crosley Special Data.*

	Head Diameter	Stem Diameter	Length
Intake	1 11/64"	.3135-.3140"	3.934"
Exhaust	1 3/64"	.3125-.3130"	3.934"
	Seat Angle	Lift	Stem Clearance
Intake	45°	.225"	.0015-.003"
Exhaust	45°	.225"	.0025-.0040"

► **VALVE INSTALLATION CAUTION**—Valve spring washer (intake valves), Thompson Roto Cap (exhaust valves) must be installed below valve springs with cupped side of washer and extruded lip on Roto Cap up toward camshaft.

**Valve Springs:** Free length 2". Install with tightly wound coil down.

	Spring Pressure	Length
Valve Closed	30 lbs.	1 1/2"
Valve Open (Intake)	46-51 lbs.	1 7/32"
Valve Open (Exhaust)	46-51 lbs.	① 1 5/64"

①—With Thompson Roto-Cap.

**Valve Guides:** Guides are pressed in cylinder head from above. To remove guides, invert cylinder block on arbor press, use a shoulder drift pin (max. O. D. 13/32") press guide out. Press new guides in place from above until 3/4" protrudes above bottom cam follower guide. Ream guides for correct valve stem clearance. **NOTE**—Reface valve seats using the new guide hole to pilot the facing tool, grind valves before installing.

**Valve Lifter (Cam Follower):** Consists of an inverted cup operating in guide hole in cylinder block directly above each valve assembly (cam follower spacer and tappet clearance adjusting shims located within cam follower above valve stem).

**Cam Follower Clearance**—.0005-.0015".

## VALVE TIMING

**Tappet Clearance:** .004-.005" Intake; .006-.007" Exhaust, Cold.

► **Tappet Clearance Adjustment Procedure**—See "Valve System" in *Crosley Special Data.*

**Valve Timing:** See Camshaft Setting (above).

**Intake Valves**—Open 5° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 5° ATDC.

**Valve Timing Check**—See Camshaft setting for assembly of valve gear.

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod bearings, camshaft bearings, and timing gear bearings (oil flow to camshaft bearings is through hollow towershaft and hollow camshaft). Oil pump in crankcase at forward end of engine.

**Crankcase Capacity**—2 qts. (refill), 2.8 qts. (when filter drained or filter element replaced).

**Normal Oil Pressure**—35-50 lbs. at 30 MPH. (hot oil). 7 lbs. minimum with engine idling.

**Oil Pressure Regulator**—Located under plug on right front corner of engine. Not adjustable.

**Oil Pump: Disassembly**—Take out center capscrew on lower cover, remove cover, gasket, and screen. Take out four capscrews in pump cover, remove cover and

gasket, lift out idler gear and shaft. To remove pump shaft and gear, file off end of pin in pump drive gear, drive pin out and remove gear.

**Reassembly**—Use new gaskets. Make certain that plain washer and lockwasher used on each cover screw and that lower cover (with oil inlet pipe) is tight. See Tightening Torque Wrench data for housing and mounting screw torques.

**Oil Filter:** Replace filter element at 8000-10000 mile intervals. **NOTE**—Add .8 qt. of oil in crankcase when oil filter drained or element replaced.

**Crankcase Ventilation:** Oil-wetted type filter element in oil filler cap (air intake). Outlet pipe located at rear of valve chamber.

**Servicing**—Wash filter element in kerosene and re-oil at 2000 mile intervals or more often if required by operating conditions.

## COOLING

**Cooling System:** Not pressurized (Pressure type Radiator Filler Cap available as accessory equipment).

**Capacity**—4 quarts (5 quarts with Heater).

**Water Pump (No. C-207187):** Adjustable Packing type. Mounted on right side of engine.

*See Water Pump Section for complete data.*

**Removal**—Disconnect drive coupling at water pump, drain cooling system by taking out drain plug at bottom of radiator, disconnect two water hoses, take out two mounting bolts in flange in front of pump, lift pump out.

**Belt Adjustment**—*See Generator Belt Adjustment.*

**Thermostat:** In engine outlet connection (blocker type). Opens at 170°F.

**Temperature Gauge:** Vapor pressure type (not electric).

## CLUTCH

**Rockford Model R-4608.** Single plate, dry disc.

*See Clutch Section for complete data.*

**Facings**—Molded type, I. D. 4". O. D. 6" Thickness 7/64" (flywheel side), 9/64" (pressure plate side).

**Pedal Adjustment:** Pedal free travel should be 1". To adjust, turn clevis end in or out on cable.

**Removal:** Remove transmission (see Transmission Removal below). Working from below through the housing opening, remove two bolts in each of three release lever brackets, remove pressure plate and driven member through opening.

## TRANSMISSION

**Warner Model AS1-T92.** Three-speed, sliding spur gear type with conventional shift lever mounted on transmission case cover.

*See Transmission Section for complete data.*

**Removal:** Raise rear of car until weight removed from rear springs, disconnect rear springs and shock absorbers from axle. Disconnect brake cable and conduit at each rear wheel backing plate (mechanical brakes) or disconnect brake line and parking brake cable (hydraulic brakes). Disconnect speedometer cable and clutch release cable clamp from bottom of transmission case. Support rear end of engine on blocks, remove rear engine mount (under transmission case at rear end). Remove floor transmission cover. Take out capscrews mounting torque tube on rear face of transmission adapter, pull rear wheels, rear axle, and propeller shaft assembly to

rear and clear of the transmission case (**CAUTION**—Do not lose spring and washer located between propeller shaft and speedometer gear). Remove four capscrews mounting transmission on flywheel housing, pull transmission straight back to clear clutch shaft and remove from car.

## UNIVERSALS

**New England Products.** One used. Plain bushing type. In ball housing at rear of transmission adapter. *See Universals Section for complete data.*

## REAR AXLE

**Spicer Salisbury Model 11.** Semi-floating, spiral bevel gear type with Torque Tube drive.

*See Rear Axle Section for complete data.*

**Ratio**—5.17-1 Std.

**Backlash**—.003-.008". Shim adjustment.

**Removal:** Disconnect brake cable clevis at brake cam lever and unfasten brake cable conduit at clamp on backing plate at each rear wheel (mechanical brakes), disconnect brake line and parking brake cable (hydraulic brakes). Raise rear of car until all weight removed from rear springs, disconnect rear springs and shock absorbers from axle. Take out capscrews mounting torque tube on rear face of transmission adapter, pull rear wheels, rear axle, and torque tube assembly to rear until free from transmission. **CAUTION**—Do not lose spring and washer located between universal joint and speedometer gear in transmission.

**Axle Shaft Removal**—Remove rear wheel hub cap, rear wheel, and wheel hub (use Puller M.T. 262). Disconnect brake cable from brake cam lever and free cable conduit from clamp on backing plate. Take out four capscrews mounting backing plate on axle housing, remove backing plate being careful not to lose bearing adjusting shims on housing flange. Pull axle shaft out of housing.

► **CAUTION**—On cars with hydraulic brakes, wheel brake unit must be disassembled before hub and brake disc can be removed. *See "Goodyear Hawley Hydraulic Brakes" in Brake Section.*

**Wheel Bearing Adjustment:** Check endplay at each wheel with dial indicator. Adjust by adding or removing shims located between backing plate and flange on axle housing (see Axle Shaft Removal for dismantling instructions).

**Endplay**—.002-.007" total for both wheels (between inner ends of shafts and thrust block in differential).

**TORQUE TUBE & PROPELLER SHAFT ASSEMBLY:** Spicer No. 98-1182X. Torque tube assembly has flanged end at rear (bolted to rear axle housing flange) and thrust ball at forward end (cap assembly bolted on adapter on rear end of transmission). Propeller shaft is splined on pinion shaft (rear end) and in universal joint (forward end) and is positioned by spring located between universal joint and speedometer gear in transmission case.

**NOTE**—A propeller shaft center bearing is located within the torque tube and is provided with a grease fitting on the tube at this point.

**Propeller Shaft Removal:** Remove Rear Axle and Torque Tube Assembly (see Rear Axle Removal above), withdraw propeller shaft through forward end of tube.

**CAUTION**—When installing assembly in car, make certain that spring and washer installed on transmission shaft ahead of universal joint. This spring takes up endplay in propeller shaft.

## SHOCK ABSORBERS

**Delco Model 1438-T, U (Front), 1438-V, W (Rear).** Single acting, hydraulic type.

► **NOTE**—Direct acting hydraulic shock absorbers used on Hotshot.

*See Shock Absorber Section for complete data.*

**Adjustment**—None (except by changing valves).

**Refilling**—Check fluid and fill to level of filler plug hole on cover plate (see Note) at 10000 mile intervals.

**NOTE**—If cover plate does not have filler plug, this coverplate can be replaced by cover having filler hole and plug (for filling on car) or shock absorber can be removed and refilled on the bench.

## FRONT SUSPENSION

**Front Suspension:** Conventional axle with semi-elliptic springs.

**Kingpin Inclination**—6½° crosswise.

**Camber**—2°. No adjustment (axle may be bent for minor adjustments).

**Caster**—7½°. Adjust by inserting wedge shims between spring and spring pad on axle.

**Toe In**—3/64-1/16". Adjust in usual manner by changing length of tie rod.

## STEERING GEAR

**Ross Model S-12.** Cam-and-Lever type.

*See Steering Gear Section for complete data.*

## BRAKES

### HAWLEY MECHANICAL

**Before Serial No. 106,039**

**Service:** Hawley. Four-wheel, mechanical, two-shoe type. Hand lever applies all four service brakes.

*See Brake Section for complete data.*

**Drums**—Cast Iron. Diameter 6".

**Clearance**—.006-.008" at both ends of each shoe (adjusting screw backed off approximately ¼ turn from point where wheels start to drag).

**Lining**—Molded type. Width 31/32". Thickness 3/16". Length per wheel 14".

**Hand Brake:** See Service Brakes (above).

**NOTE**—Hand brake handle (on floor ahead of seat) is linked directly to hand brake lever on cross-shaft.

## BRAKES

### GOODYEAR-HAWLEY HYDRAULIC

**Beginning Serial No. 106,039**

**Service:** Goodyear-Hawley hydraulic four-wheel disc type. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Disc Diameter**—7½".

► **CAUTION**—Disc integral with wheel hub. Wheel brake unit must be disassembled before wheel hub can be removed.

**Clearance**—Compensating screw backed off ¼ turn from point where wheel locked.

**Lining**—Molded circular discs (2 used).

**Hand Brake:** See Service Brakes (above).

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On left front door hinge post.

1949 Numbers	Detroit	Los Angeles
Custom	50,000,001 Up	62,004,001 Up
Deluxe	6,212,001 Up	60,002,001 Up

**ENGINE NUMBER:** Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

**TUNE-UP**

**COMPRESSION PRESSURE:** 120-150 lbs. at cranking speed of 150 RPM.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .038". Limits plus or minus .002".  
Plugs—Auto-Lite Type AR5. 14 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.020".

Cam Angle—34½° to 38° Closed.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.25-.28 microfarad.

**IGNITION TIMING:** 4° or .007" ATDC.

Timing Procedure—See Ignition Timing.

**Timing Mark:** Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with 4° graduation after DC mark at pointer on chain case, then set manual (octane selector) adjustment:

**Manual (Octane Selector) Adjustment:** Set for slight ping with 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

**CARBURETION:**

**Idle Setting:** Set idle adjusting screw for smooth idling with warm engine (idle screw ½-1½ turns open), turn screw out for richer mixture.

**Idle Speed:** 6 MPH. (450-475 Eng. RPM. with Tip-toe Shift Trans.).

**Float Level:** Top of float (not soldered seam) 5/64", plus or minus 1/64", below top edge of bowl.

**Accelerating Pump:** Center Hole (med. stroke) Normal, Inner Hole—Summer, Outer Hole—Winter, for extreme temperatures.

**Choke Setting:** Adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

**Fuel Pump Pressure:** 3½-5½ lbs.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. ¾ turn, not over one turn or under ½ turn, hook end on stop stud.

**VALVE TAPPET CLEARANCE:** .008" Intake, .010" Exhaust, Hot.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

**COIL:** Auto-Lite No. CR-4001 (U.S.), IG-4809 (Early & Canada). Mounted directly above distributor on ignition cable bracket.

Ignition Current—2.25 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite No. IG-3927G.

Capacity—.25-.28 microfarad.

**DISTRIBUTOR:** Auto-Lite No. IAP-4102C-1 (U.S.), IAP-4102A-1 (Canada). Automatic advance type with vacuum Spark Control.

**Breaker Plate Identification:** Maximum vacuum advance limited by a slot in plate. Plate marked #6 (IAP-4102A-1), #9 (IAP-4102C-1).

Breaker Gap—.020".

Cam Angle—34½° to 38° Closed.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Clockwise viewed from above.

Automatic Advance—IAP-4102A-1			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	770	12	1540
9	1150	18	2300
11	1400	22	2800

Automatic Advance—IAP-4102C-1			
Distributor	Engine	Distributor	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
1	450	2	900
5	800	10	1600
10	1425	20	2850
11	1550	22	3100

**Vacuum Spark Control:** Auto-Lite Unit. Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring).

**Vacuum Advance—IAP-4102C-1**

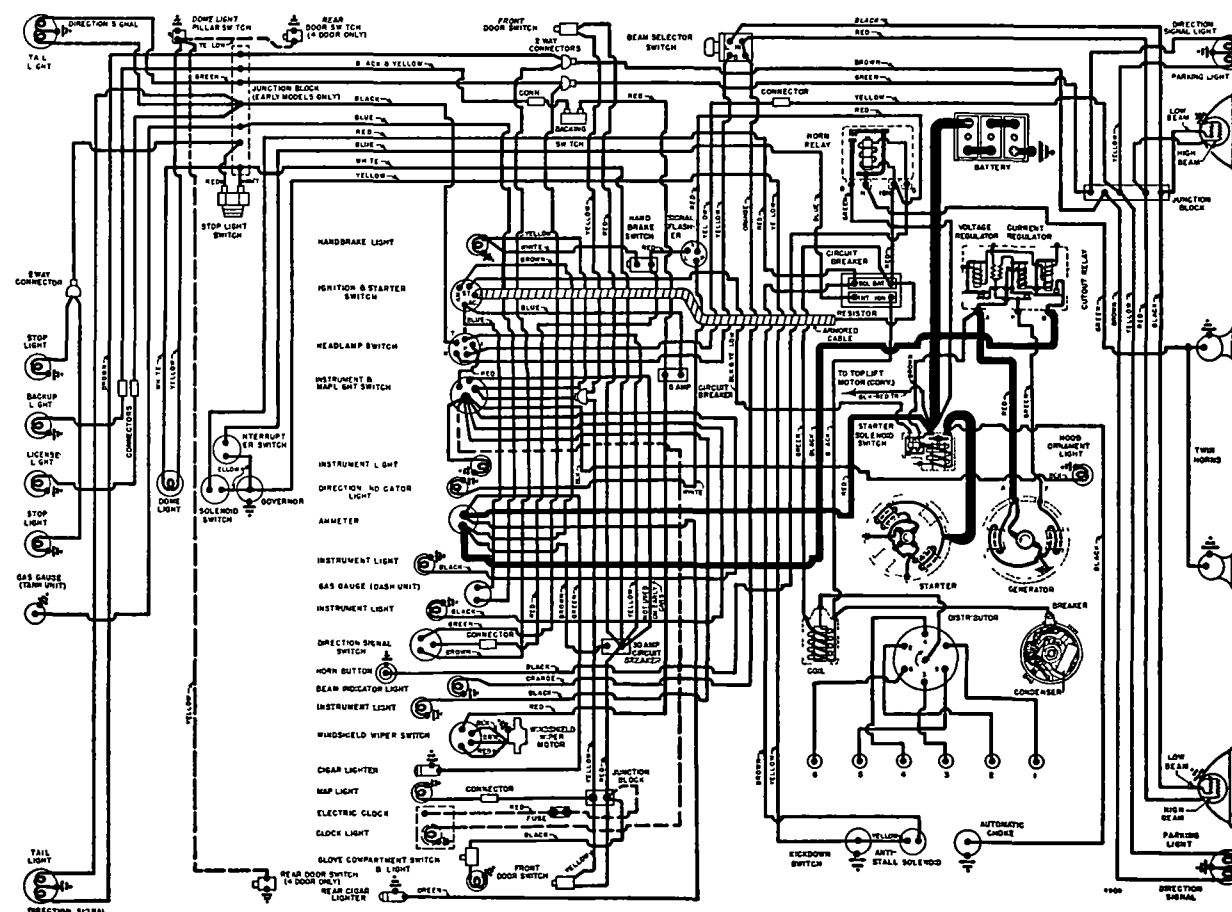

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7½"
4°	8°	9½"
6°	12°	11½"
9°	18°	15"

**Vacuum Advance—IAP-4102A-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5½"
1°	2°	6½"
3°	6°	9½"
5°	10°	12½"
6°	12°	14"

**Manual Adjustment:** Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal:** Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note:** Install distributor with #1 piston in firing position.

## IGNITION TIMING

**Std. Setting**—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

**Flywheel Degrees Piston Position**  
All Engines ..... 4° ATDC ..... 007" ATDC

**NOTE**—Impulse neutralizer marked 'DC' at TDC, with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor as directed above.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

## CARBURETOR

**Carter (B&B) E7V1 (City Traffic).....No Fluid Drive**  
**Carter (B&B) E7L1, L2, L3, L4.....Hydr. Trans.**  
1½" Single barrel, downdraft type with Sisson automatic choke control, Slow-closing Throttle and Step-down Switch for hydraulically operated transmission.

See Carburetor Section for complete data.

► **E7L1, L2, L3 Note**—To bring these carburetors up to latest E7L4 carburetor, see Carter (B&B) Carburetors in Carburetor Section.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Carter (B&B) Jet Table in Carburetor Section for complete data.

**NOTE**—If lean metering jet (High Altitude calibration) used at lower altitudes for increased economy, speed and power are reduced (not recommended).

**Slow-closing Throttle:** Solenoid type. Non-adjustable. See Carburetion Equipment Section for complete data.

**Fast Idle:** Throttle stop screw stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

**Automatic Choke:** Sisson type.

See Carburetion Equipment Section for complete data.

**Setting**—With throttle 1/3 open, adjust by inserting gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is closed tightly.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544349 Heavy Duty Oil-bath type. Filter Element AC No. 21.

**Servicing**—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump is half filled with oil and dust sludge. **NOTE**—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

**Fuel Pump:** AC No. 1539042. Diaphragm type fuel pump.

**Replacement Pump**—AC No. 577 or 588.

**Pressure**—3½-5½ lbs.

See Carburetion Equipment Section for complete data.

**Fuel Tank Filter:** Oilite metal filter in tank.

**Servicing**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaner. Flush tank with clean gasoline.

**Gasoline Gauge:** Auto-Lite Electric type.

**Dash Unit**—Auto-Lite No. 11607A.

**Tank Unit**—Auto-Lite No. 11538A.

See Carburetion Equipment Section for complete data.

## BATTERY

**Willard**—6 volt, 17 Plate, 110 Ampere Hour Capacity (20 hour rate).

**Grounded Terminal**—Positive (+) to engine.

**Location**—Under hood in left fender shield.

## STARTER

**Auto-Lite Models MCH-6102 (U.S.), MAW-4055 (Canada after Eng. Nos. S13-1543C).**

**Armature**—Auto-Lite Nos. MCH-2039 (MCH-6102), MAW-2213 (MAW-4055).

**Drive**—Solenoid pinion shift & overrunning clutch.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
8.50 "	400	4.0	400
6.0 "	Lock	2.0	335

**Removal:** Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch:** Auto-Lite Solenoid Type SS-4707 controlled by turning ignition switch past "on" position.

See Electrical Equipment Section for complete data.

## GENERATOR

	Auto-Lite No.	Armature No.
Standard.....	GGW-6001A	GGW-2006F
Early Cars.....	GDZ-4801R	GDZ-2006F
State Police.....	GGJ-6001B	GGJ-2101F
	GGU-6001E	GGU-2006F
City Police & Taxi.....	GGJ-6001A	GGJ-2101F
	GGU-6001A	GGU-2006F

Two brush type current-voltage regulators.

**Maximum Charging Rate**—See table below.

**Charging Rate Adjustment**—None. See Regulator.

### Performance Data (GGW-6001A)

Amperes	Volts	Cold—R.P.M.	Hot
0.....	6.4.....	870-970	950-1050
40.....	8.0.....	1800-2000	2150-2350

### Performance Data (GDZ-4801R)

0.....	6.4.....	870-970	950-1050
35.....	8.0.....	1800-2000	2150-2350

### Performance Data (GGJ-6001A, B)

50.....	8.0.....	1600 Max.	
---------	----------	-----------	--

### Performance Data (GGU-6001A, E)

45.....	8.0.....	1550 Max.	
---------	----------	-----------	--

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—(GGW, GDZ, GGU) 35-53 ozs. (new brushes); (GGJ) 30-37 ozs. (new brushes).

**Field Current**—(GGW, GDZ, GGU) 1.6-1.8 amps., (GGJ) 1.76-1.95 amps., all at 6.0 volts.

**Motoring Current**—(GGW) 4.6-5.2 amps., (GDZ) 4.2-4.6 amps., (GGJ) 4.3-4.8 amps., (GGU) 5.5-6.5 amps., all at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove take out pivot and clamp bolts.

**Belt Adjustment:** Loosen pivot and clamp bolts, pull out on generator until belt is snug (40-50 lbs. tension accrued on scale attached to field frame) or ¼" belt deflection between generator and pump.

## REGULATOR

**Auto-Lite Regulator No. for Auto-Lite Generator**

**VRP-4503B** ..... GGW-6001A

**VRP-4503A** ..... GDZ-4801R

① **VBA-4101A or VAV-4404A** ..... GGJ-6001A, B

② **VBA-4101B** ..... GGU-6001A, E

①—VBA-4104A for negative ground.

②—VAV-4404B used on Early Cars, VBA-4104B for neg. grd.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

### Cutout Relay

**Cuts In (VAV, VRP)**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts In (VBA)**—6.35-6.75 volts (set to 6.4-6.6 volts).

**Cuts Out (All)**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap (All)**—.015" minimum.

**Air Gap (All)**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting (VAV, VRP)**—7.2-7.5 volts at 70°F. (VBA)—7.0-7.2 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section.

**Contact Gap (VRP)**—.012" min. (armature against stop pin).

**Air Gap (All)**—.048-.052" with contacts just opening.

### Current Regulator

► (Temperature Compensated Regulators)

	Nominal Setting
VAV-4404-A, VBA-4101-A & 4-A	50
VAV-4404-B, VBA-4101-B & 4B	45
VRP-4503-A	35
VRP-4503-B	40

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDIN PA E

► **CAUTION**—Nominal setting is approx. setting at 70°F. room temperature after regulator has been run (will be higher started cold). See Electrical Equipment Section for settings at various temperatures.

**Checking (without breaking seals) & Adjustment**—See *Electrical Equipment Section*.

**Contact Gap (VRP)**—.012" min. (armature against stop pin).

**Air Gap (All)**—.048-.052" with contacts just opening.

## LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type with "Bull's-eye lens". Beam selector switch on toe-board controls upper and lower beams.

See *Electrical Equipment Section* for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—Lighted when Country (upper) beams in use. Located on lower right corner of speedometer face.

**Direction Signal Indicator**—In lower left corner of speedometer face.

**Direction Signal Flasher**—DeSoto No. 1257223.

## Switches

**Beam Selector**—De Soto No. 1253460.

**Map Light**—De Soto No. 1244605.

**Direction Signal**—De Soto No. 1235606.

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Lighting—30 ampere. Vibrating type, protects lighting circuit.

**Aux. Circuit Breaker**—8 ampere. Protects Windshield Wipers and Back-Up Light.

**Direction Signal**—On flasher behind instrument panel. Vibrating type. Protects direction signal circuit.

**Transmission Solenoid**—Vibrating type mounted as an assembly with resistor unit.

**FUSES:** Clock—3 ampere. In clock lead.

Radio—14 ampere. In fuse connector at radio.

**HORNS:** Auto-Lite Models HT-4011 or HW-4201 (Low Pitch), HT-4012 or HW-4202 (High Pitch). Dual horns operated by relay.

**Horn Relay:** Auto-Lite Models HRL-4103 or 4104. Connected through ignition switch, operates only when ignition "on".

**Contacts Close**—1.5-3.0 volts (seal to core with 4.0 volts maximum).

**Contacts Open**—.5 volt min. (open from seal).

**Contact Gap**—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

## ENGINE

**ENGINE SPECIFICATIONS:** Six cylinder, "L" head. Bore—3 7/16". Stroke—4 1/4".

**Displacement**—236.6 cu. ins. **Rated H.P.**—28.36.

**Developed Horsepower**—112 at 3600 RPM.

**Compression Ratio**—7.0-1 Std. cast-iron head.

**Compression & Vacuum Reading**—See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Chrysler Special Data*.

**ORIGINAL BEARING SIZES:** See *Chrysler Special Data*.

**TIGHTENING TORQUES:** See *Chrysler Special Data*.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See *Chrysler Special Data*.

**PISTONS:** Aluminum alloy, U-slot, cam ground type. **NOTE**—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0002-.0012" smaller diameter at top of skirt than at bottom).

**Length**—3 3/8". **Weight**—18.5 ozs. (stripped).

**Clearance**—.0008" on thrust face 3/4" from bottom of skirt. Ring land diameter .0305" larger than skirt.

**Removal**—Pistons and rods removed from above.

**Fitting New Pistons:** Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x 1/2" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70°F.).

**Replacement Pistons:** .005", .020", .030", .040", .060" OS. **NOTE**—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

**Installing Pistons:** Slot away from camshaft.

**PISTON RINGS:** Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	.5/32"	.007-.015"	.001-.0025"

**Installing Rings**—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

**Replacement Rings:** .005" .020" .030" .040" .050" .060" OS.

**PISTON PIN:** Diameter—55/64". Length 2 7/8". Floating type. Pin hole in rod bronze bushed.

**Pin Fit in Piston**— .0000" to +.0005". Thumb push fit with piston heated to 160°F.

**Pin Fit in Rod Bushing**—.0001-.0004". Tight thumb push fit at normal room temperature.

**Replacement Pins:** Standard size and .0006", .003", .008" oversize.

**CONNECTING ROD:** Length—8". Weight—34.1 ozs. with bolts less bearings.

**Lower Bearing Diameter**—2 1/8". See "Original Bearing Size" in *Chrysler Special Data*.

**Lower Bearing**—Removable, precision type, thin babbitt on steel.

**Clearance**—.0005-.0015". **Sideplay**—.003-.007".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:** .001", .002", .010", .012" U.S.

**Installing Rods:** Oil metering hole toward camshaft.

**CRANKSHAFT:** 4 bearing, 7 integral counterweights with vibration dampener on front end.

**Bearing Diameter**—2 1/2". See "Original Bearing Size" in *Chrysler Special Data*.

**Bearing Type**—Removable, precision type, thin babbitt on steel. No shims.

**Clearance**—.0005-.0015".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** .001", .002", .010", .012" U.S.

**End Thrust:** Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007".

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive. **Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".

**Bearing Type**—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).

**Clearance**—.001-.003" (#1), .0015-.0035" (all others).

**End Thrust:** Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

**Timing Chain:** Width 1". Pitch .500" (1/2"). Length 24" or 48 links.

**Camshaft Setting:** Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.002-.004"

**Valve Guides:** Remove from above. Press new guides in (stepped end down) with upper end 7/8" below top of block (Tool CM-83), finish ream to .3425-.3435".

**Valve Springs:** Install with closely coiled end to top. Free Length 2".

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1 3/4"
Valve Open	107-115 lbs.	1 3/8"

**Valve Lifters:** Mushroom type (remove from below). Stem diam. 5/8". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060". **Lifter Clearance in Block**—.000-.001".

## VALVE TIMING

**Tappet Clearance:** .008" Intake, .010" Exh. (hot and idling). **NOTE**—Tappet screws self-locking (no lock-nuts). Remove right front wheel and lower wheel housing panel for access to valves.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check**—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

## LUBRICATION

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump mounted externally on right side of crankcase.

**Crankcase Capacity**—5 quarts (refill).

**Normal Oil Pressure**—38-40 lbs.

**Oil Pressure Relief Valve**—Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

**Oil Pump:** "Rotor" type on right side of crankcase.

**Servicing**—See "Oil Pump" in *Chrysler Special Data*.

**Oil Filter:** On left side of engine above starter.

**Servicing**—Replace element at 8000 mile intervals.

**Oil Pressure Gauge:** Auto-Lite No. 11609A (not elec.).

## COOLING

**Cooling System:** Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump.  
**Capacity**—17 quarts.

**Water Pump:** Packless type with grease fitting. See *Water Pump Section* for complete data.

**Removal**—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** In cylinder head water outlet.

**INSTALLATION NOTE**—Install thermostat with 2 ports facing front, and 2 ports facing rear.

**Setting**—Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge:** Auto-Lite No. 11610A (not elec.).

## CLUTCH

**Borg & Beck Models 10A7 (Std.), 9A7 (With Fluid Drive), 11A6 (Taxicab).** Single plate, dry disc. Identification Note—Cover stamped 952 (9A7), 957 (10A7), 994 (11A6).

See *Clutch Section* for complete data.

**Facings**—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9 1/4"	.125" (1/8")
10A7	7"	10"	.125" (1/8")
11A6	6 1/2"	11"	.125" (1/8")

**Pedal Adjustment:** Should just clear toeboard (adjust stop screw on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).

**Removal:** Remove release fork pull-back spring, Transmission (see *Transmission*) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

## FLUID DRIVE

**DeSoto**—Fluid coupling at rear of engine. Optl. See *Miscellaneous Section* for complete data.

**Oil Level:** Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

**Removal:** Remove transmission and clutch (see *TRANSMISSION* and *CLUTCH*), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

## TRANSMISSION

### STANDARD

**Own Make**—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). See *Transmission Section* for complete data.

**Transmission Control:** Manual steering column shift. See *Transmission Section* for complete data.

**Removal:** Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see *Chrysler Special Data* for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods. Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car. **NOTE**—Use pilot studs when installing assembly.

## TRANSMISSION

### OPTIONAL EQUIPMENT

**Tip-Toe Shift Type (with Fluid Drive)**—Semi-automatic design, four-speed transmission with hydraulic actuation and electrical control.

See *Transmission Section* for complete data.

**Transmission Oil**—3 pints, 10-W engine oil.

**Transmission Control:** See *Transmission article* for adjustment instructions.

See *Transmission Section* for complete data.

**Kickdown Solenoid**—Auto-Lite No. SSS-4003.

**Governor**—Auto-Lite No. TG-4205R.

**Kickdown Switch**—Part of carburetor assembly.

**Ignition Interrupter Switch**—On right side of transmission above Governor.

**Removal:** Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.

► **INSTALLATION CAUTION**—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

## UNIVERSALS

**Detroit Universal Series 7200**—Cross type with roller bearings.

See *Universals Section* for complete data.

**Propeller Shaft Center Bearing:** Used on 7 Passenger.

## REAR AXLE

**Own Make**—Semi-floating, hypoid gear type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

Axle Ratio	Std. Trans.	Tip Toe Trans.
5-Passenger	3.9-1 (39:10) ①	②
Station Wagon	4.1-1 (41:10)	3.91-1 (43:11)
Long Wheelbase	4.3-1 (43:10)	③
①—4.1-1 (41:10) Optl.		
②—3.73-1 (41:11) or 3.9-1 (39:10) Optl.		
③—3.91-1 (43:11) or 4.1-1 (41:10) Optl.		

**Backlash**—.006-.010". Screw adjustment.

**Removal:** Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws.

**Axle Shaft Removal**—Remove wheel hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). **NOTE**—Use puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

**Axle Shaft Outer Oil Seal:** New leather type mounted on brake support (backing plate).

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

## SHOCK ABSORBERS

Direct-acting, hydraulic, non-adjustable type. See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—43/4° to 6° crosswise.

**Camber**—0° to Pos. 3/4°. (1/4-1/2° higher on left).

**Caster**—Neg. 2° preferred. Limits Neg. 1° to Neg. 3°.

**Toe In**—0" preferred. Limits 0" to 1/16". Adjust both tie rods equally.

**Steering Geometry**—Inner wheel 21 1/2° plus or minus 1°. Outer 20°.

## STEERING GEAR

**Own Make**—3 tooth Worm-and-Roller. Similar to Gemmer Model 335.

**NOTE**—See Gemmer 305, 335 & 375 article for data. See *Steering Gear Section* for complete data.

## BRAKES

**Service:** DeSoto "Safe-guard" Lockheed Hydraulic.

**Front Wheels**—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels**—Double anchor type with single double-acting wheel cylinder.

See *Brake Section* for complete data.

**Wheel Cylinders**—1 1/8" bore. Single acting (front), double acting (rear wheels).

**Drums**—Centrifuse. Diameter 11".

**Lining**—Molded Asbestos. 2" wide, 13/64" thick. Length per wheel 23" (front wheels), 20 3/8" (rear wheels).

**Clearance**—.006" at each end of all shoes.

**Braking Power**—60% (front wheels), 40% (rear).

**Hand Brake:** On drum at rear of transmission.

**Adjustment**—See "Hand Brake Notes" in *Chrysler Special Data*.

**Drum**—Cast-iron. 6" (7" on cars with Hydraulic transmission).

**Lining**—Width 2" (2 1/2" on 7" type). Thickness 5/32". Length 15 3/8" (20" on 7" type).

**Clearance**—.015-.020" around band.

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWJ-4001, EWJ-4003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

See *Miscellaneous Section* for complete data.

**CONVERTIBLE TOP CONTROL:** Auto-Lite Model EWM-4001. Electric type.

See *Miscellaneous Section* for complete data.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** Located on left front door hinge post.

1949 Numbers	Detroit	San Leandro
D-29	37,000,101 Up	48,000,101 Up
D-30	31,245,001 Up	45,050,001 Up

**ENGINE NUMBER:** Located on left side of cylinder block between #1 & #2 cylinders.  
1949 Numbers—D-30-1001 Up.

**TUNE-UP**

**COMPRESSION PRESSURE:** 120-150 lbs. at cranking speed of 150 RPM.

**VACUUM READING:** Steady 18-21" idling at 6 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .038" Limits plus or minus .002".

Plugs—Auto-Lite AR-5. 14mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.020".

Cam Angle—34½° to 38° (closed).

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Ignition.  
Condenser Capacity—.25-.28 microfarad.

**IGNITION TIMING:** 2° or .002" ATDC.

Timing Procedure—See Ignition Timing.

Timing Mark—Second graduation after "DC" mark on vibration dampener aligned with pointer on chain case cover. Vary as follows:

Octane Selector—Set for slight ping when accelerating with wide open throttle between 10-30 MPH.

**CARBURETION:**

**Idle Setting:** With engine warm, set throttle stop-screw. Adjust idle adjusting screw for smooth idle (½-1½ turns open for Carter).

**Idle Speed (Std. Trans.)**—6 MPH.

**Idle Speed (Gyro-Matic Drive)**—450-475 RPM.

**Float Level (Stromberg)**—Fuel level ⅝" below top surface of float chamber.

**Float Level (Carter)**—Top of float (not soldered seam) 5/64" ± 1/64" below top edge of bowl.

**Accelerating Pump**—Center hole (medium) Normal. Inner Hole—Summer, Outer Hole—Winter.

**Choke Setting:** The choke can be adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

**Fuel Pump Pressure:** 3-5 lbs.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type. See that valve operates freely. When installing coil, wind free end up approx. one turn.

**VALVE TAPPET CLEARANCE:** .008" Intake, .010" Exh. Hot.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

**COIL:** Auto-Lite CR-4001 (IG-4809 Early Cars). On ignition cable bracket above distributor.

Ignition Current—2¼ amperes idling, 5 stopped.

**DISTRIBUTOR:** Auto-Lite—Automatic advance type with Vacuum Spark Control as follows:

D-29 (Std.)	IGS-4207B-1
D-30 (Std.), D-29 (Spec. Equip.)	IAP-4103A-1
D-30 (Canada)	IAP-4102-1

**Breaker Plate Identification**—Maximum vacuum advance limited by a slot in plate. Plate marked #7 (IAP-4201-1), #8 (IAP-4103A-1, IGS-4207B-1).  
Breaker Gap—.020".

Cam Angle—34½° to 38° (closed).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

**Automatic Advance—IGS-4207B-1 & IAP-4103A-1**

Degrees Start	Distr.	R.P.M.	Degrees Eng.	R.P.M.
0		350	0	700
1		450	2	900
5		800	10	1600
10		1425	20	2850
11		1550	22	3100

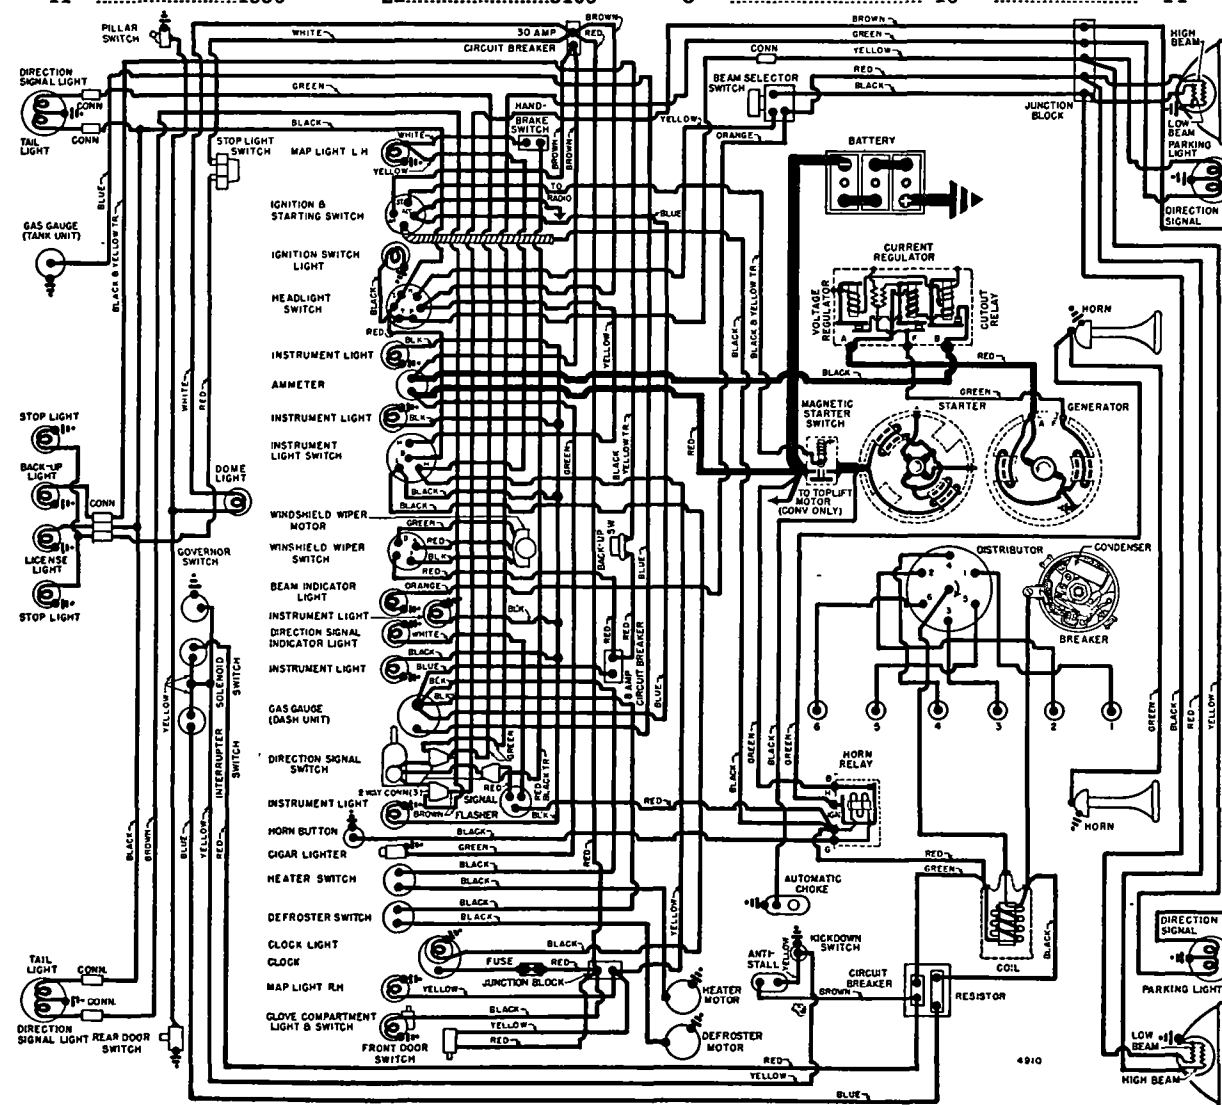

**Automatic Advance—IAP-4102-1**

Degrees Start	Distr.	R.P.M.	Degrees Eng.	R.P.M.
0		350	0	700
3		400	6	800
6		850	12	1700
9		1300	18	2600
12		1750	24	3500

**Vacuum Spark Control. Auto-Lite Units. Integral type** (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring).

**Vacuum Advance—IGS-4207B-1 & IAP-4103A-1**

Distr. Degrees Start	Eng. Degrees	Vacuum (" of HG)
0°	0°	4½"
1°	2°	5½"
4°	8°	9½"
7°	14°	12¾"
8°	16°	14"

**Vacuum Advance—IAP-4102-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
1°	2°	6 3/4"
3°	6°	9 1/4"
5°	10°	12 1/8"
7°	14°	15"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal:** Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position.

**IGNITION TIMING**

**Std. Setting**—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	<b>Flywheel Degrees</b>	<b>Piston Position</b>
All Engines	2° ATDC	.002" ATDC.

**NOTE**—Impulse neutralizer marked "DC" at TDC, with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see Setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until mark aligned with pointer on chain case cover.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH. accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

**CARBURETOR****STROMBERG**

**Stromberg Models BXVD-3 (with Fluid Drive), BXVES-3 (with Gyro-Matic Drive).** Stromberg No. 380249 (BXVD-3) marked with Code No. 3-93, Stromberg No. 380251 (BXVES-3) marked with Code No. 3-95-A. 1 1/2" Single barrel downdraft type with Sisson automatic choke.

**NOTE**—BXVES-3 type has Kick-down Switch for automatic transmission.

See Carburetion Equipment Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Carburetor Section for Stromberg Downdraft Carburetor Jet Specification Table.

**Slow-Closing Throttle:** Adjustable Dashpot type.

**Setting**—With all slack removed from linkage, set adjusting screw on dash pot lever under float bowl so that piston travel is 5/16-11/32" (measured on dash pot rod on bowl cover). Turn screw out to lengthen stroke, in to shorten.

See Carburetion Equipment Section for complete data.

**Fast Idle:** Throttle opened to fast idle position when choke valve closed. No adjustment required.

See Carburetion Equipment Section for complete data.

**CARBURETOR****CARTER (B&B)**

**Carter (B&B) Models D6P1 (with Fluid Drive), D6M1 (with Gyro-Matic Drive).** 1 1/2" Single barrel, downdraft type with Sisson Automatic Choke.

**NOTE**—D6M1 type has Kick-down Switch for automatic transmission.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Carburetor Section for Carter (B&B) Downdraft Carburetor Jet Specification Table.

**Slow-Closing Throttle:** (D6P1) Adjustable type, (D6M1) Non-adjustable Solenoid type.

**Setting (D6P1)**—Adjusting screw on top of bowl cover, open five (5) full turns from closed position.

See Carburetion Equipment Section for complete data.

**Fast Idle:** Throttle opened to fast idle position when choke valve closed. No adjustment required.

See Carburetion Equipment Section for complete data.

**Automatic Choke:** Sisson Type.

**Setting**—The choke can be adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

See Carburetion Equipment Section for complete data.

**CARB. EQUIPMENT**

**Air Cleaner:** AC No. 1544612 (Early), 1544714 (Late)

Heavy duty oil-bath type. Filter element AC No. 21. **Servicing**—Wash filter element in kerosene, drain and clean oil reservoir and refill to indicated level mark with 1 pint SAE No. 50 engine oil (SAE No. 20W for temperatures below freezing) at 1000 mile or 30 day intervals, or more often if required.

**Oil Filler Cap (crankcase Ventilator) Air Cleaner:** Wash filter element in cap in kerosene and re-oil by dipping in SAE No. 50 engine oil at 1000 mile or 30 day intervals or more often if required.

**Fuel Pump:** AC No. 1539042 or Auto-Lite No. FA-4001. Diaphragm type fuel pump.

**Replacement Pump**—AC No. 577 or 588 (for 1539042). Pressure—3-5 lbs.

See Carburetion Equipment Section for complete data.

**Fuel Tank Filter:** Oilite metal filter in tank.

**Servicing**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

**Gasoline Gauge:** Auto-Lite electric type.

**Dash Unit**—Auto-Lite No. 11728A.

**Tank Unit**—Auto-Lite No. 11538A.

See Carburetion Equipment Section for complete data.

**BATTERY**

**Auto-Lite Type 1H-105D**—6 volt, 15 plate, 105 ampere hour capacity (20 hour rate).

**Dimensions**—Length 9". Width 7 1/16". Hgt. 9 5/16".

**Grounded Terminal**—Positive (+) to engine.

**Location**—Under hood in left fender shield.

**STARTER**

**U. S.**—Auto-Lite MCH-6101, Arm. MCH-2028

**Canada**—Auto-Lite MAW-4041, Arm. MAW-2128

**Drive**—Outboard Barrel Type Bendix No. A-2991.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
8.50 "	400	4.0	400
6.0 "	Lock	2.0	335

**Removal:** Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch:** Auto-Lite Model SST-4001. Magnetic type mounted on left front fender shield and controlled by turning ignition switch past "on" position. See Electrical Equipment Section for complete data.

**GENERATOR**

**Auto-Lite No. Armature No.**

D-29, D-30 (Std.)	GGW-6001A	GGW-2006F
D-30 (Early)	GDZ-4801A	GDZ-2006F
D-30 (Early & Can.)	GDZ-4801R	GDZ-2006F
D-30 (St. Wg. & 7 Pass.)	GGW-6001D	GGW-2006F
City Police & Taxi	GGJ-6001A	GGJ-2101F
	GGU-6001A	GGU-2006F
State Police	GGJ-6001B	GGJ-2101F
	GGU-6001E	GGU-2006F

Two brush type current-voltage regulators.

**Maximum Charging Rate**—See table below.

**Charging Rate Adjustment**—None. See Regulator.

**Performance Data (GGW-6001A, D)**

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970
40	8.0	1800-2000

**Performance Data (GDZ-4801A, R)**

0	6.4	870-970	950-1050
35	8.0	1800-2000	2150-2350

**Performance Data (GGJ-6001A, B)**

----	-----	-----------	--

**Performance Data (GGU-6001A, E)**

45	8.0	1550 Max.	
----	-----	-----------	--

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—(GGW, GDZ, GGU) 35-53 ozs. (new brushes); (GGJ) 30-37 ozs. (new brushes).

**Field Current**—(GGW, GDZ, GGU) 1.6-1.8 amps., (GGJ) 1.76-1.95 amps., all at 6.0 volts.

**Motoring Current**—(GGW) 4.6-5.2 amps., (GDZ) 4.2-4.6 amps., (GGU) 5.5-6.5 amps., (GGJ) 4.3-4.8 amps., all at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Loosen pivot and clamp bolts, pull out on generator until belt is snug (40-50 lbs. tension secured on scale attached to field frame) or 1/4" belt deflection between generator and pump.

**REGULATOR**

**Auto-Lite Regulator No. for Auto-Lite Generator**

① VAV-4404A or VBA-4101A	GGJ-6001A, B
② VAV-4404B or VBA-4101B	GGU-6001A, E
VRP-4503A	GDZ-4801A, R
VRP-4503B	GGW-6001A, D
①—VBA-4104A for neg. grd. ②—VBA-4104B for neg. grd.	

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDIN PA E

## Cutout Relay

Cuts In (VAV, VRP)—6.4-7.0 volts (set to 6.4-6.6 volts).

Cuts In (VBA)—6.35-6.75 volts (set to 6.4-6.6 volts).  
Cuts Out (All)—4.1-4.8 volts (approx. 4-6 amps. disch.).

Contact Gap (All)—.015" minimum.

Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

## Voltage Regulator

Setting (VAV, VRP)—7.2-7.5 volts at 70°F. (VBA)—7.0-7.2 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

Checking (without breaking seals) & Adjustment—See Electrical Equipment Section.

Contact Gap (VRP)—.012" min. (armature against stop pin).

Air Gap (All)—.048-.052" with contacts just opening.

## Current Regulator

## ► (Temperature Compensated Regulators)

## Nominal Setting

VAV-4404-A, VBA-4101-A & 4-A	50
VAV-4404-B, VBA-4101-B & 4B	45
VRP-4503-A	35
VRP-4503-B	40

► **CAUTION**—Nominal setting is approx. setting at 70°F. room temp. after regulator has been run (will be higher started cold). See Electrical Equipment Section for settings at various temperatures.

Checking (without breaking seals) & Adjustment—See Electrical Equipment Section.

Contact Gap (VRP)—.012" min. (armature against stop pin).

Air Gap (All)—.048-.052" with contacts just opening.

## LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type with new "Bull's-eye lens".

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

Beam Indicator—Lighted when Country (upper beams in use. Located on lower face of speedometer.

Direction Signal Indicator—Located on lower face of speedometer.

## Switches

Lighting—Dodge No. 1300600.

Beam Selector—Dodge No. 1253460.

Instrument—Dodge No. 1308226.

Map Light—Dodge No. 1244600.

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Lighting—30 ampere. Vibrating type, protects lighting circuits.

Aux. Circuit Breaker—8 ampere. Protects Windshield Wipers and Back-Up Light.

Direction Signal—On flasher behind instrument panel. Vibrating type. Protects dir. signal circuit.

Transmission Solenoid—Vibrating type mounted as an assembly with resistor unit.

Convertible Top—Mounted near control switch. Thermostatic type. Opens at 80 amperes in 1 minute or less.

**FUSES:** Clock—3 ampere. In clock lead.

Radio—14 ampere. In fuse connector at radio.

**HORNS:** Auto-Lite Model HW-4201 (Low Pitch), HW-4202 (High Pitch). Dual horns operated by relay.

**Horn Relay:** Auto-Lite HRL-4103 or 4104. Connected through ignition switch, operates only with ignition on.

Contact Close—1.5-3.0 volts (seal to core with 4 V.).

Contacts Open—.5 volt min. (open from seal).

Contact Gap—.026". Air Gap—.016-.020" (armature air gap with contacts closed but not sealed, .015-.018" (gap between armature leg and yoke with armature sealed to core).

## ENGINE

**ENGINE SPECIFICATIONS:** 6 cylinder, "L" hd. type.

Bore—3¼". Stroke—4⅝".

Displacement—230.2 cu. ins. Rated H.P.—25.35.

Developed Horsepower—103 at 3600 RPM.

Compression Ratio—7.0-1 Std. Cast-iron Head.

Compression & Vacuum Reading—See Tune-up data.

**ORIGINAL BORE & PISTONS:** See Chrysler Special Data.

**ORIGINAL BEARING SIZES:** See Chrysler Special Data.

**TIGHTENING TORQUES:** See Chrysler Special Data.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Chrysler Special Data.

**PISTONS:** Aluminum alloy, "U" slot, cam ground type.

NOTE—Piston skirt is elliptical (.010-.012" smaller diameter across pin bosses than across thrust faces), and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).

Length—3 11/16". Weight—16.0 ozs. (stripped).

Removal—Pistons and rods removed from above.

Clearance—.0008" on thrust face ¾" from bottom of skirt. Ring land diameter .0305" larger than skirt.

**Fitting New Pistons:** Measure piston size with micrometer across thrust faces (right angles to pin bosses ¾" from bottom of skirt. Fit piston in bore using .002" x ½" feeler. Insert piston upside down in bore with feeler 90° from pin bosses on side opposite slot. Clearance correct when 5-7 lbs. pull required to withdraw feeler (bore & piston at 70°F.).

NOTE—Cylinder reconditioning limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

**Replacement Pistons:** .005", .020", .030", .040", .060" OS.

**Installing Pistons:** "U" slot away from valves.

**PISTON RINGS:** Two compression (top ring chrome-plated), two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"

**Installing Rings—#1 Compr.** with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge, install with step down.

**Replacement Rings:** .005" .020" .030" .040" .050" .060" OS.

**PISTON PIN:** Diameter—.55/64". Length—2 3/4". Pin floats in piston and rod, held by lock rings.

Pin Fit in Piston—.0000" to +.0005". Thumb push fit with piston at 70°F.

Pin Fit in Rod Bushing—+.0001" to +.0002". Thumb push fit at 70°F.

**Replacement Pins:** Std., .0006", .003", .008" Oversize.

**CONNECTING ROD:** Length—7 13/16". Weight—27.90 ozs. (with bolts less bearings).

NOTE—Pin hole in rod bronze bushed.

**Lower Bearing Diameter—2 1/16".** See "Original Bearing Size" in Chrysler Special Data.

**Lower Bearing—**Removable, precision type, steel-backed, thin babbitt-lined. No shims.

Clearance—.0005-.0015". Sideplay—.006-.011".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:** .001", .002", .010", .012" U.S.

**Installing Rods:** Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT:** 4 bearings, 7 integral counterweights, with vibration dampener on front end.

**Bearing Diameter—2 1/2".** See "Original Bearing Size" in Chrysler Special Data.

**Bearings—**Removable, precision type, steel-backed, thin babbitt-lined. No shims.

Clearance—.0005-.0015".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** .001", .002", .010", .012" U.S.

**End Thrust:** Taken by flanged faces of #4 (rear) main bearing. Endplay—.003-.007".

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive.

**Bearing Diameters—**#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".

**Bearings—**Removable, steel-backed, babbitt-lined bushings (except #4—machined in crankcase).

Clearance—.001-.003".

**End Thrust:** Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

**Timing Chain:** Width 1". Pitch .500" (½"). Length 24" or 48 links.

**Camshaft Setting:** Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:** Head Diameter Stem Diameter Length

Intake ..... 1 17/32" ..... 340-.341" ..... 4 25/32"

Exhaust ..... 1 13/32" ..... 340-.341" ..... 4 25/32"

Seat Angle Lift Stem Clearance

Intake ..... 45° ..... 23/64" ..... .001-.003"

Exhaust ..... 45° ..... 23/64" ..... .002-.004"

**Valve Guides:** Remove from above. Press new guides in with stepped end down and upper end ⅞" below top of block, ream guides to inside diameter of .342-.343" (Intake), .343-.344" (Exhaust).

**Valve Springs:** Install with close-coil end to top.

Free Length 2". Spring Pressure Length

Valve Closed ..... 40-45 lbs. .... 1 3/4"

Valve Open ..... 107-115 lbs. .... 1 3/8"

**Valve Lifters:** Mushroom type (remove from below with camshaft out of engine). Stem diameter ⅝".

Service by reaming lifter holes (work from above piloting reamer in valve guide) and installing oversize lifters furnished .001", .008", .030" Oversize.

**Lifter Clearance in Block—.000-.001".**

## VALVE TIMING

**Tappet Clearance:** .008" Intake, .010" Exhaust, Hot.

NOTE—Tappet screws self-locking type.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves—**Open 8° BTDC. Close 36° ALDC.

**Exhaust Valves—**Open 37° BLDC. Close 7° ATDC.

**Valve Timing Check—**With .014" tappet clearance (Cold), #6 intake valve should open with #6 piston 8° before top dead center with 8th graduation before "DC" mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to .008" Hot running clearance.

## LUBRICATION

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump.

**Crankcase Capacity**—5 qts. (refill).

**Normal Oil Pressure**—40-50 lbs. at 20 MPH.

**Oil Pressure Relief Valve**—Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

**Oil Pump:** "Rotor" type on right side of engine.

**Servicing**—See "Oil Pump" in *Chrysler Special Data*.

**Oil Filter:** On left side of engine above starter.

**Servicing**—Replace filter at 8000 mile intervals.

**Oil Pressure Gauge:** Auto-Lite No. 11727A (not elec.).

## COOLING

**Cooling System:** Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump.

**Capacity**—15 quarts.

**Water Pump:** Packless type with grease fitting.

See *Water Pump Section* for complete data.

**Removal**—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** In cylinder head water outlet.

**INSTALLATION NOTE**—Install thermostat with 2 ports facing front, and 2 ports facing rear.

**Setting**—Starts to open 157-162°F. Fully open 183-187°F.

**Temperature Gauge:** Auto-Lite No. 11729A. Not elec.

## CLUTCH

**Borg & Beck Models 10A7 (with Fluid Drive), 9A7 (with Gyro-Matic Drive), 11A6 (7 Passenger).** Single plate, dry disc type with "Borglite" driven member.

**NOTE**—Cover No. 952 (9A7), 957 (10A7), 931 (11A6). See *Clutch Section* for complete data.

**Facings**—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9 1/4"	.125" (1/8")
10A7	7"	10"	.125" (1/8")
11A7	6 1/2"	11"	.125" (1/8")

**Pedal Adjustment:** Set pedal to just clear toeboard (stop screw on lower end of pedal) and set for 1" free travel (adjust nut on connector link at fork).

**NOTE**—Do not disturb turnbuckle on pedal link.

**Removal:** Remove release fork pull-back spring, Transmission (see *Transmission*) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

## FLUID DRIVE

**Dodge**—Fluid coupling at rear of engine. Optl.

See *Miscellaneous Section* for complete data.

**Oil Level:** Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

**Removal:** Remove transmission and clutch (see *TRANSMISSION* and *CLUTCH*), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

## TRANSMISSION

### STANDARD

**Own Make**—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). See *Transmission Section* for complete data.

**Transmission Control:** Manual steering col. shift Std. See *Transmission Section* for complete data.

**Removal:** Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see *Chrysler Special Data* for Propeller Shaft Center Bearing Removal on 7 Pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to-clutch housing cap screws and nuts. Pull unit to rear, down and out of car.

**NOTE**—Use pilot studs when installing assembly.

## TRANSMISSION

### OPTIONAL EQUIPMENT

**Hydraulically Operated Type (with Fluid Drive).** New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control. See *Transmission Section* for complete data.

**Transmission Control:** See *Transmission* article for adjustment directions.

See *Transmission Section* for complete data.

**Kickdown Solenoid**—Auto-Lite No. SSS-4003.

**Governor**—Auto-Lite No. TG-4205R.

**Kickdown Switch**—Part of carburetor assembly.

**Ignition Interrupter Switch**—On right side of transmission above Governor.

**Transmission Oil**—3 pints, 10-W engine oil.

**Removal:** Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.

**INSTALLATION CAUTION**—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

## UNIVERSALS

**All exc. 7 Pass.**—Detroit Universal Series 4200.

**7 Pass. Models**—Detroit Universal Series 7200.

**Ball-and-Trunnion Type** (4200), cross type (7200).

See *Universals Section* for complete data.

**Propeller Shaft Center Bearing:** Used on 7 pass. sedan.

## REAR AXLE

**Own Make**—Semi-floating, hypoid gear type with Hotchkiss drive. See *Rear Axle Section* for data.

	No Fluid Drive	Fluid Drive	Gyromatic Trans.
D-29 3-Pass.	.....	3.73-1	.....
D-29 2-Door Sedan	4.1-1	3.9-1	.....
D-30	3.9-1	4.1-1	3.9-1
D-30 St. Wgn. & 7-Pass.	.....	4.3-1	4.1-1
<b>Backlash</b> —.006-.010". Screw adjustment.			

**Removal:** Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws. **Axle Shaft Removal**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool

C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). **NOTE**—Use Puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

**Axle Shaft Oil Seal:** New leather type mounted on brake support (backing plate).

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

## SHOCK ABSORBERS

Hydraulic, direct acting, non-adjustable.

See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—4 3/4° to 6° crosswise.

**Camber**—Pos. 1/4°. Limits 0° to Pos. 3/4° (1/4-1/2° higher on left).

**Caster**—0° preferred. Limits Neg. 1° to Pos. 1°. No adjustment.

**Toe In**—0" (0-1/16"). Adjust by turning both tie rods equally.

**Steering Geometry**—Inner wheel 22 1/2°. Outer 20°.

## STEERING GEAR

**Own Make**—(Gemmer design) Model 305 (exc. 7 pass.), 335 "3-tooth" type (7 passenger).

**NOTE**—See Gemmer 305 & 335 articles for data.

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Dodge "Safe-guard" Lockheed Hydraulic.

**Front Wheels**—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels**—Double anchor type with single double-acting wheel cylinder.

See *Brake Section* for complete data.

**Wheel Cylinders**—Single acting type (front), double acting type with straight (1 1/8") bore (rear).

**Drums**—Cast-iron, Diameter 10" (D-29), 11" (D-30).

**Lining**—Molded Asbestos, 2" Wide, 13/64" Thick.. Length per wheel: 21" (D-29), 23" (D-30) front;

18 1/2" (D-29), 20 3/8" (D-30) rear wheels.

**Clearance**—.006" at each end of all shoes.

**Braking Power**—60% front wheels, 40% rear.

**Hand Brake:** On drum at rear of transmission.

**Adjustment**—See "Hand Brake" in *Chrysler Special Data*.

**Drum**—Cast-iron, 6".

**Lining**—Width 2". Thickness 5/32". Lgth. 15 3/8".

**Clearance**—.015-.020" around band.

## MISC. MECHANICAL

**WINDSHIELD WIPER:** Auto-Lite Model EWJ-4001.

EWJ-4003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

See *Miscellaneous Section* for complete data.

**CONVERTIBLE TOP CONTROL:** Auto-Lite Model EWM-4001. Electric Type.

See *Miscellaneous Section* for complete data.

## HOOD ALIGNMENT

### 1949-50 FORD PASSENGER CARS

**HOOD ALIGNMENT: Fore-and-Aft Adjustment**—3 hood hinge bracket-to-hood screws at each hinge. Loosen screws just enough to allow hinge to hold hood in place when raised. Lower hood, shift hood fore or aft until correctly positioned. Raise hood without disturbing alignment, tighten screws. Check hood safety catch action (bend catch if necessary).

**Up-and-Down Adjustment**—Loosen locknut on top of latch dowel. Turn dowel with screwdriver down if hood fits too tight, up if hood loose on dowel or too much clearance at lower edge of hood. Tighten locknut.

## RADIATOR GRILLE

### 1949 FORD PASSENGER CARS

**RADIATOR GRILLE:** Chrome-plated or Stainless steel type grille assemblies used (parts not interchangeable except as unit) consisting of following parts:

- 1—Top Moulding. 3-piece radiator grille opening.
- 2—Center Moulding. Radiator grille assembly consisting of right and left center bars, ornament, and vertical reinforcement (on back side).

**NOTE**—Stainless steel type center moulding is a spot welded and riveted assembly and cannot be disassembled. Chrome plated type assembled with screws and tinnerman nuts and can be disassembled.

- 3—Lower Moulding. Mounted on stone deflector with nuts and fasteners. Not attached to grille.

**Grille Removal:** Take out hidden screws at each end of center moulding after removing parking lights. Remove screws at top and bottom of vertical grille reinforcement behind grille. Take off center moulding. Upper moulding can then be removed. Lower moulding on stone deflector can be removed without disturbing other grille parts.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

### 1949-50 MODELS

	Ft. Lbs.	In. Lbs.
Cyl. Hd. bolts	65-70	780-840
Cyl Hd. nuts	45-50	540-600
Con. Rod nuts (castellated)	35-40	420-480
Con. Rod nuts (self-locking)	40-45	480-540
Main B'g. nuts (self-locking)	80-90	960-1080
Main B'g. bolts (self-locking)	80-90	960-1080
Main B'g nuts (castellated) V8	80-90	960-1080
Main B'g. nuts (castellated) Six	75-80	900-960
Flywheel Screws (self-locking)	80	960
Flywheel Screws (lock wire)	65-70	780-840
Diff. Carrier Stud Nuts	30-35	360-420
Axle Shaft Retainer Nuts	30-35	360-420

## CYLINDER HEAD

### 1949-50 SIX CYL. "H" ENGINE

**6 CYLINDER HEAD BOLTS & STUDS:** Studs used on engines up to 7HA-61171, bolts used after this number. Both studs and bolts furnished for service but should not be mixed. Use all studs or bolts.

### 1949-50 SIX CYL. "H" ENGINE

**6 CYLINDER HEAD GASKET:** Gasket must be installed with large full flow passages at rear. Late type gaskets have left front corner cut off for identification.

If this type gasket with cutoff corner installed backwards, water leaks at the rear corner between head and block will occur.

### ALL MODELS

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench and tighten in following order:

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

## TIMING GEARS

### 1949-50 SIX CYL. "H" ENGINE

**NEW CAMSHAFT GEAR WITH INTEGRAL HUB:** This new gear (replaces bolted-on gear with hub pressed on camshaft) has two 5/16"-24 tapped holes in hub for removal from camshaft. End of camshaft tapped permitting use of 7/16"-14 stud and flat washer to turn gear on shaft.

**NOTE**—When installing camshaft gear, remove spark plugs to permit crankshaft gear to turn slightly as teeth mesh.

**Installing Integral Hub Gear on Engines with Bolted-On Gear.** Remove gear hub with puller 6269-N. Drill 3/8" hole, 3/4" deep in end of camshaft, and tap with 7/16"-14 bottom tap. Install gear as above.

## VALVE SYSTEM

### 1949-50 "V8" ENGINE

**Valve Grinding and Tappet Clearance Note** (for all V8 Models):—To perform these operations with minimum amount of hand cranking, note which valves are fully open (first column in table below), grind or check valves listed on same line of table—then turn shaft 'til next 'valve open' point reached.

Valves Open	Valves to Grind
1. 4X & 1N	3X, 8N, 6N, 7X, 3N, 2X
2. 3X & 8N	1X, 7N, 5X, 2N, 4X, 1N
3. 1X & 7N	8X, 5N, 6X, 4N

OR	
1. 8X & 5N	1X, 7N, 6N, 7X, 3N, 2X
2. 6N & 7X	5X, 2N, 4X, 1N, 8X, 5N
3. 5X & 2N	6X, 4N, 3X, 8N

**NOTE**—'X' Exhaust Valve. 'N' Intake Valve.

**Tappet Clearance Checking (All Engines):** Check tappet clearance when re-installing valves. Turn camshaft until lifter is on heel of cam, make certain that valve assembly is seated in block ("C" washer

engaging the valve guide), then check the tappet clearance between the end of the valve stem and the top surface of lifter with a feeler gauge. If clearance less than minimum (see table below), install a shorter valve or grind off end of valve stem, if clearance greater than maximum, install longer valve, or reface valve or valve seat to lower the valve in the block.

### Tappet Clearance (with 8BA-6250 camshaft)

Intake Valves	.....010" Min., .012" Max.
Exhaust Valves	.....014" Min., .016" Max.

### (with later 8BA-6250-B camshaft)①

Intake Valves	.....014" (.013-.015")
Exhaust Valves	.....018" (.017-.019")

①—Started part production with Eng. No. 8BA-622468. See "Tune-Up" or "Valve Timing" on 1949-50 Ford V8 car pages.

## OIL PUMP

### 1949-50 SIX CYL. "H" ENGINE

**6 CYLINDER ROTOR TYPE OIL PUMP:** Removal from 1949 Passenger Car. Remove distributor cap, turn engine over until #1 cylinder at firing position (rotor will point to oil hole in distributor), allow crankshaft to remain in this position while pump off engine. Remove front engine mounts-to-frame bolts. Loosen rear engine mounting. Raise front of engine 2" and move 1/2" to left. Remove distributor. Take out 3 pump mounting cap screws in pump cover, pull pump out.

**Pump Disassembly**—Remove cover and outer rotor (rotate drive gear to free rotor from pump body). Drive out pin in drive gear and press gear off shaft. Remove shaft and inner rotor. Clean all parts and check to specifications listed below.

**Pump Specifications and Clearances**—As follows:

**Outer Rotor.** Outside Diameter 2.249" (wear limit 2.245"). Clearance in Body .005-.010" (wear limit .012").

**Pump Body.** Inside Diameter 2.258" (wear limit 2.260").

**Inner Rotor.** Clearance in Outer Rotor .006" (wear limit .010").

**Shaft.** Outside Diameter .5175" (wear limit .5170"). Shaft Endplay .004-.008" (wear limit .010").

**Pump Assembly**—If new shaft installed, assemble shaft with inner rotor in pump. Press drive gear on end of shaft to obtain .004" clearance between gear and upper end of pump body. Drill pin hole in shaft. Install pin andpeen both ends. Place outer rotor in body, install cover being sure to use new cover gasket.

**Pump Installation**—Reverse removal instructions listed above making certain distributor correctly positioned for proper ignition timing.

### 1949-50 SIX CYL. "H" ENGINE

(before Pass. Car 8HA-107555, Truck 7H-219349)

**OIL PUMP DRIVEN GEAR:** After above nos. cast-iron gear (7HA-6652) used together with new flame-hardened camshaft (7HA-6250-C—this no. cast between second and fourth cam lobes from rear end of camshaft).

**Replacement of Oil Pump Driven Gear on Engines before Pass. Car No. 8HA-107555 and Truck No. 7H-219349.** Bronze gear used on these engines. If pump replaced or if gear failure encountered, manufacturer recommends installation of cast-iron gear no. 7HA-6652. If this cast-iron gear fails prematurely, new flame-hardened camshaft no. 7HA-6250-C and new cast-iron gear should be installed. **CAUTION**—If oil pump being replaced, 8HA-6600 pump will require re-working by installation of cast-iron driven gear 7HA-6652.

**Gear Installation Note.** Must be .004-.008" shaft endplay. See Oil Pump Installation above.

## CLUTCH NOTES

### 1949-50 FORD V8 PASS. CARS

**V8 PASS. CAR FLYWHEEL RUBBING ON HOUSING COVER WHEN CLUTCH DISENGAGED:** Due to distortion of cover on front side of flywheel housing being distorted at flywheel bolt circle. Correct by taking off cover (drops straight down after removing attaching bolts) and flattening. **COVER MUST BE FLAT.**

## OVERDRIVE NOTES

### 1949 FORD PASSENGER CARS

**OVERDRIVE NOISE (EARLY 1949 CARS):** Can be caused by Overdrive case interference at Rear Engine Support at two points as follows:

1)—**Rear Engine Support Bolt.** Head of bolt may be interfering with underside of Overdrive Case. Correct by grinding off head of bolt (do not grind head to less than  $\frac{1}{8}$ " thick). Thin head bolt No. 355519-S2 used on later cars in production.

2)—**Overdrive Case.** Grooves on underside of case at engine mounting too shallow so that flanges on engine support interferes with Overdrive case at this point. Correct by filing grooves in case and cleaning up ends of grooves if casting flash evident. Later cars used matched assemblies in production.

## BRAKE NOTES

### 1949 TRUCK SERIES F-4, F-5, F-6

**HAND BRAKE ADJUSTMENT:** For independent shaft brake at transmission. Set hand lever in fully released position and make certain that flat portion of cam is resting on rear of brake band upper end (if cam not flat, remove clevis pin in upper end of

cam, adjust clevis rod until cam is flat when rod re-connected). Remove locking wire from brake band anchor adjusting screw (left side), turn screw clockwise until clearance between band and drum is .010" at the anchor screw, install lock wire. Loosen locknut on adjusting screw for lower position of brake band (round screw on brake mounting bracket), turn screw until clearance between lower portion of brake band and drum is .010", tighten locknut. Tighten adjusting nut at lower end of main adjusting bolt (on which band positioning springs are located) until clearance between upper portion of band and drum is .010". This completes the brake adjustment.

## ELECTRICAL SYSTEM NOTES

### 1949-50 MODELS

**STARTER MOTOR RUSTING (PASSENGER CARS & TRUCKS):** Correct by enlarging drain hole to  $\frac{3}{8}$ " in endplate on underside. This can be done from underneath with starter on engine. If performed on bench all drill chips must be removed from starter. Drill  $\frac{3}{8}$ " hole  $\frac{1}{2}$ " deep (DO NOT DRILL DEEPER THAN  $\frac{1}{2}$ " OR FIELD COIL MAY BE DAMAGED).

**Timing**—With #1 piston at firing position and timing mark aligned with pointer on front of engine, loosen clamp screw on timing arm, rotate distributor until contacts begin to open, tighten clamp screw. Check spark plug connections (see diagram), see that rotor opposite #1 terminal in cap).

► **Timing (with Neon Timing Light)**—**CAUTION**—Vacuum line must be disconnected to avoid vacuum advance operating. Mark proper timing pointer (see Dampener Mark above) and dampener mark with white chalk. Connect timing light to #1 spark plug. Idle engine and adjust distributor (as directed above) until mark and pointer aligned when light flashes.

## CARBURETOR

Holley-Ford No. 8HA-9510-A. Single barrel down-draft type with new vacuum passages for distributor operation.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Jets—See Holley-Ford Jet Specification Table in Carburetor Section.

Fast Idle: Integral type. Operated by choke valve lever. No adjustment required.

## CARB. EQUIPMENT

Fuel Pump (std.): Ford No. 7HA-9350-B.

Optl. (Fuel-& Vacuum)—Ford No. 8HA-9350.

Pressure—4-5 lbs.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.

Dash Unit (Green Pointer)—Ford No. 8A-9280A.

Dash Unit (Red Pointer)—Ford No. 8A-9280B.

Tank Unit—No. 8A-9275 (Sta. Wg. 01A-9275A).

See Carburetion Equipment Section for complete data.

Air Cleaner (std.—oil-wetted): Ford No. 8HA-9600-A.

Optl. (oil bath)—Ford No. 8HA-9600-B1 (1 pint capacity), 8HA-9600-B4 (1 quart capacity).

Servicing (oil-wetted type)—Wash filter assembly in cleaning fluid and re-oil when dry every 1000 miles.

Servicing (oil bath type)—Clean and refill sump (to level mark) with same grade oil used in crankcase at 1000 mile intervals (CAUTION—Do not use lighter than SAE #30 oil in hot weather). Occasionally wash filter in cleaning fluid.

## BATTERY

Ford No. 81A-10655-A. 6 Volt, 17 Plate, 100 Amp. Hr. Zero Capacity—300 amperes for 3.3 minutes. Five

Second Voltage—4.2 volts.

Grounded Terminal—Positive (+).

Location—On left side in engine compartment.

Dimensions—L. 10½". W. 7⅞". H. 7¼".

## STARTER

Ford Model No. 7HA-11002. Armature No. 18-11005.

► **Starter Motor Rusting Correction**—See "Electrical System Notes" in Ford Shop Notes.

Drive—Ford No. 7HA-11350. New 9 tooth pinion type for use with 114 tooth flywheel ring gear.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—20-22 ounces.

Cranking Engine—100 RPM., 190-215 amperes.

Performance Data				
Torque	R.P.M.	Volts	Amperes	
4 ft. lbs.	1070	4.6	200	
8 "	660	4.3	340	
12 "	300	3.65	465	
14 "	Lock	3.5	550	

**Starting Switch**: Ford No. 21A-11450 Magnetic Switch mounted on left front fender apron and controlled by panel pushbutton switch Ford No. 6H-11500.

**Removal**: On right front face of flywheel housing cover. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

## GENERATOR

Ford No. 8BA-10002-A (less pulley and bracket).

Armature No.—Ford No. 8BA-10005-A.

2 brush type with current and voltage regulation. Charging Rate Adjustment—None. See Regulator.

Maximum Charging Rate—38 amperes, 7 volts, reached at approximately 20 MPH. Controlled by regulator and dependent on load and battery condition.

**To Check Generator Output**—Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

► **CAUTION**—Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

### Performance Data

Amperes	Engine R.P.M.
33	1500
Rotation—Counter-clockwise at commutator end.	
Brush Spring Tension—20-24 ozs.	

**Removal**: Separate generator mounting bracket mounted on engine bracket on left side of engine at front. To remove, slack off belt by loosening mounting bracket bolts, take out mounting strap bolt, lift off generator.

**Belt Adjustment**: ¼" deflection midway between generator and pump pulleys. To adjust, loosen 2 mounting bracket bolts under generator and capscrew in bracket slot behind generator.

## REGULATOR

Ford Numbers

Regulator	Generator	Amperes
51A-10505-A or C	8BA-10002-A (Std.)	30-33
8M-10505	8BA-10002-A (Std.)	34-38

Voltage-current 3-Unit types.

See Electrical Equipment Section for complete data.

NOTE—Separate ground wire extending to cowl must be in place when generator operated.

### Cutout Relay

Cuts In—6.0-6.4 volts COLD (will be slightly higher when warm).

Cuts Out—8 ampere discharge current (maximum).

Contact Gap—.010" (armature against upper stop).

Air Gap—.014" between armature and core with contacts open.

### Voltage Regulator

Voltage Setting—7.0-7.4 volts COLD (7.2-7.6 volts after 20 minutes run).

Checking & Adjustment—See Elec. Equip. Section.

Air Gap—.032-.035" between armature and core with contacts just closed.

► **CAUTION**—Make certain gauge contacts armature and not brass rivet on underside of armature.

Contact Spring Tension—5 ounces minimum with contacts just opening.

### Current Regulator

Current Setting (51A).....30-33 amperes COLD

Current Setting (8M).....34-38 amperes COLD

Checking & Adjustment—See Elec. Equip. Section.

Air Gap—.032-.035" between armature and core with contacts just closed.

Contact Spring Tension—5 ounces minimum with contacts just opening.

## LIGHTING

**Headlamps**: Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator**—Bulb between 50 and 60 on speedometer. Lighted with Upper Beam "on".

**Direction Signal**: Optl. See Electrical Equipment Section.

**Direction Indicators**—Right and Left indicators on lower edge of speedometer.

**Direction Signal Flasher**—Ford No. 8L-13350-B.

### Switches

**Lighting**—Ford ('49) 7RA-11654, ('50) 0A-11654.

**Instrument**—Ford ('49) 21C-13740, 1950—Part of Lighting Switch (operated by turning knob).

**Beam Selector**—Ford 7RA-13532 or 8A-13532.

**Dome Light**—Ford ('49) 8A-13752, ('50) 0A-13752.

**Dome Light (Sta. Wagon)**—Ford 8M-13752-A.

**Door Switch**—Ford ('49) 8M-13713, ('50) 0A-13713.

**Stop Light**—Ford No. 11A-13480.

## MISC. ELECTRICAL

**CIRCUIT BREAKERS**: Lighting (Headlights)—Ford ('49) 8A-12258-A, ('50) 0A-12258. Behind instrument panel together with two lighting fuses (see wiring diagram).

**Convertible Top**—Ford No. 51A-12250-A. 30 ampere. On hydraulic pump motor or on front of dash near convertible top control switch.

**FUSES**: Auxiliary Lights (Parking, Tail & Instrument)—14 ampere. On circuit breaker bracket behind instrument panel (see wiring diagram).

**Dome & Stop Lights**—14 ampere. Next to fuse listed above.

**Clock**—2 ampere. In clock feed wire.

**Overdrive**—30 ampere. On relay on dash under hood.

**Direction Signal**—15 ampere. In feed from ignition switch to flasher.

**HORNS**: Ford No. 51A-13832-A or B (High Pitch, Right Horn), No. 51A-13833-A or B (Low Pitch, Left Horn). Dual horns operated by relay. NOTE—"A" horns are 4.28" high, "B" horns are 4.14". Horns marked "HI" or "LO" on air columns.

Air Gap—.027-.029" for high pitch (right horn), .032-.034" for low pitch (left) for Sparks-Withington. NOTE—Air Gap for Auto-Lite type horns .040" HI, .050" LO.

Horn Current—13 amperes (high pitch), 14 (low).

Horn Relay: Ford No. 7RA-13853-B. On dash.

► **CAUTION**—Use only Ford type relay No. 7RA-13853-B with TAN plastic cover. If Mercury relay No. 7RA-13853-A with Black plastic cover installed, shock at button may result when blowing horn.

Contact Gap—.015-.025".

Contact Closing Voltage—4 volts max.

C NTINUED ON NEXT PA E

## CONTINUED FROM PRECEDING PAGE

## ENGINE

**ENGINE SPECIFICATIONS:** Own 8HA. Six cylinder, "L" head type.

Bore—3.30". Stroke—4.40".

Displacement—226 cu. ins. Rated HP—26.13.

Developed Horsepower—95 at 3300 RPM.

Compression Ratio—6.8-1 cast iron head.

Compression & Vacuum Reading—See Tune-Up.

**TIGHTENING TORQUES:** See Ford Shop Notes.

**CYLINDER HEAD AND GASKET INSTALLATION:**

See "Cylinder Head" in Ford Shop Notes.

► **CYLINDER HEAD STUD CHANGE:** See "Cylinder Head" in Ford Shop Notes.

**CYLINDER SLEEVE:** Cast iron dry type cylinder sleeves furnished for replacement service.

**PISTONS:** 4-ring (all above pin), flat head, aluminum alloy, steel strut, U-slot, cam ground type.

Weight—17.35 ozs.

Removal—Pistons and rods removed from above.

Clearance—See Fitting Pistons.

**Replacement Pistons:** Standard size and .0025", .005", .020", .030", .040", and .060" Oversize.

**Fitting Pistons:** Use 1/2" wide feeler inserted between piston and cylinder wall at right angles to pin. Feeler thickness .002" for New Piston in New Bore, .004" for New Piston in Worn Bore or Worn Piston in New or Worn Bore. Pull to withdraw feeler 6-10 lbs.

**PISTON RINGS:** 2 compression, 2 slotted oil rings, all above pin. Upper oil ring groove drilled with oil drain holes, lower ring groove slotted.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.093"	.012-.017"①	.0015-.0035"②
Compr. (#2)	.093"	.012-.017"①	.001-.004"③
Oil (#3, 4)	.186"	.012-.017"①	.001-.004"③
Worn Limits	① .035", ② .0045", ③ .005"		

**Replacement Rings:** Snap type ring sets furnished std. size and .020", .030", .040", .060" Oversize.

**PISTON PIN:** Diameter .8504" (maximum).

Floating type (lock ring in piston at each end). Pin hole in connecting rod bronze-bushed.

Pin Fit in Piston—.0003" (new), .0015" (worn limit).

Pin Fit in Rod Bushing—.0002-.0005" (new), .0015" (worn limit).

**Replacement Pins:** Sizes and paint marks: Std. (green), .001" Oversize (blue), .002" Oversize (yellow).

**CONNECTING ROD:** Length 8 1/4". Weight 29.0 ozs.

Crankpin Journal Diameter—2.2988". Maximum wear limits—Out-of-round .0015", Taper .001".

Lower Bearing—Removable, steel-backed, copper-lead alloy lined, locked in type. No shims. Upper and lower halves interchangeable.

Clearance—.000-.0025" (new), .005" (worn limit).

► **NOTE—Replace bearing shells less than .0593" thick.**

Sideplay—.006-.014" (new), .017" (worn limit).

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in rod and cap.

**PALNUT NOTE—Tighten finger tight plus 1/3 turn.**

**Replacement Bearings:** Standard size and .002", .010", .020", .030", .040" Undersize.

**CRANKSHAFT:** 4 bearing, integral counterweights.

Vibration Dampener—Viscous or rubber type.

Journal Diameters—2.8740" (all bearings). Max. wear limits—Out-of-round .0015", Taper .001".

**Bearings—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves alike.**

Clearance—.0009-.0032" (new), .0052" (worn limit).

► **NOTE—Replace main bearing shells less than .0938" thick.**

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in block and cap.

**Replacement Bearings:** Std., .002", .020", .030" U. S.

**End Thrust:** Taken by rear main bearing. Adjust by replacing bearing if endplay excessive.

Endplay—.003-.006" (new), .008" (worn limit).

**CAMSHAFT:** Four bearing with helical gear drive. Gear at center of shaft for oil pump & distributor drive.

► **NOTE—Camshaft has phosphate coating (shows black oxide) beginning Eng. No. 8HA-2401 (Passenger Cars), 7HT-98891 (Trucks).**

Bearing Diameter—1.9285" (replace bearing if diameter greater than worn limit 1.9315").

**Bearings—Steel-backed, babbitt lined bushings.**

Clearance—.001-.002".

**Replacement Bearings:** Three sizes as follows:

1—Std. size on both inside and outside diameter.

2—Std. on I.D., .080" Oversize on O.D.

3—.015" Undersize on I.D., std. size on O.D.

**End Thrust:** Thrust plate bolted to front of block behind camshaft hub (hub keyed on front end of shaft).

**Timing Gears: CAUTION—Two types camshaft gears used:** Aluminum type used before July '49. New Composition type released for "H" Series engines after July '49.

Crankshaft Gear—Cast Alloy Iron.

► **Installation of Integral Hub Type Camshaft Gear for Quieter Operation—See Ford Shop Notes.**

**Replacement Camshaft Gears—Std., .006", .012" OS.**

**Camshaft Setting:** Mesh marked tooth of crankshaft gear with marked space on camshaft gear.

VALVES:	Head Diam.	Stem Diam.	Stem Clearance
Intake	1.65"	.3410"①	.001-.0031"②
Exhaust	1.51"	.3405"③	.0015-.0035"④

	Seat Angle	Lift
All Valves	45°	.350"

Worn Limits (Stem Diam.)—① .3385", ③ .3375"

Worn Limits (Clearance)—② .0046", ④ .006"

► **NOTE—Valves are straight-stemmed type operating in one-piece valve guides.**

**Sticking Valve Correction—**If necessary to ream guides, use .001" oversize reamer for exhaust valve guides, .0005" oversize reamer for intake valve guides.

**Valve Seat Inserts—**Used for exhaust valves.

**Valve Guides:** One-piece type pressed in block.

**Removal:** Use special tool 6510-0 to remove guides.

**Installation—**Upper end of guide 1.18" Intake, 1.08" Exhaust below top face of block. Install with stepped end down. Use tool 6510-N to drive guides in place.

**Valve Lifters:** Mushroom type with self-locking adjusting screws. Removable from below with camshaft out.

Diameter—.6240" (replace if worn to less than wear limit of .6225").

Clearance—.0005-.0015" (new) .003" (worn limit).

**Valve Springs:** Coated springs used. Install springs with closely spaced coils toward top (against block).

**Spring Test—**47-53 lbs. at 2.109". Free length 2.50".

## VALVE TIMING

**Tappet Clearance:** .013-.015" Cold, All Valves.

► **High Speed Setting—.002" additional exhaust valve clearance recommended by car manufacturer.**

► **ADJUSTABLE SELF-LOCKING TAPPET SCREWS USED.**

**Valve Timing:** See Camshaft Setting above.

**Intake Valves—**Open 11° BTDC. Close 41° ALDC.

**Exhaust Valves—**Open 48° BLDC. Close 10° ATDC.

**Valve Timing Check—**Intake valve opens 11° BTDC.

Valve timing mark location on vibration dampener.

## LUBRICATION

**Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings. Timing gears lubricated by spray past camshaft thrust plate. Rotor type oil pump mounted externally on right side of engine.

**Crankcase Capacity—**4 quarts (5 quarts when changing filter).

**Normal Oil Pressure—**45 lbs. at 30 MPH.

**Oil Pressure Relief Valve:** In cylinder block just to rear of oil filter mounting. Not adjustable.

**Spring Tension—**12.62-12.88 ozs. at 1.14".

**Oil Pump:** Rotor type. Mounted externally on right side of engine with drive gear at center of camshaft.

► **Oil Pump Driven Gear Replacement before Eng. No. 8HA-107555—See Ford Shop Notes.**

**Oil Pump Removal and Installation—See Ford Shop Notes.**

**Oil Filter:** Mounted directly on block (no external oil lines) on left side. Replace cartridge each 5000 miles or more often if required.

**Oil Filter Cartridge—**Ford No. 7HA-6731A.

**Oil Pressure Gauge:** King-Seeley Electric.

**Dash Unit (Green Pointer)—**Ford No. 8A-9273A.

**Dash Unit (Red Pointer)—**Ford No. 8A-9273B.

**Engine Unit—**Ford No. 41A-9278.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Filter element in oil filler cap (inlet) with outlet pipe in rear valve chamber extending down on right side of engine.

**Servicing—**Wash screen in cleaning fluid and wet with engine oil when dry at oil change period (2500 miles).

## COOLING

**Cooling System:** Pressure type with relief valve in filler cap, one belt-driven pump, and by-pass.

**NOTE—**Water distributing tube not used.

**Capacity—**16 quarts.

**Pressure Valve—**In radiator filler cap. Ford No. 26H-8100-B (AC #846740). Opens at 3 1/2-4 1/2 lbs.

**Water Pump:** Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing.

See Water Pump Section for complete data.

**Belt Adjustment—**See Generator Belt Adjustment.

**Thermostat:** In head water outlet. Ford No. 7HA-8575-A or B. Two makes used Standard-Thompson or Fulton-Sylphon.

**Setting (7HA-8575-A)—**Starts to open 157-162°F.

**Setting (7HA-8575-B)—**Starts to open 148-153°F.

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit (Green Pointer)—**Ford No. 8A-10883A.

**Dash Unit (Red Pointer)—**Ford No. 8A-10883B.

**Engine Unit—**Ford No. 8A-10884.

See Miscellaneous Section for complete data.

## CLUTCH

Long Model 9½ CF-TS, Ford No. 8A-7563A. Single plate, semi-centrifugal, dry disc type.

- **DISC NOTE**—Softer damper springs used on cars with Overdrive (black colored springs). Cars without Overdrive have aluminum colored damper springs.

See *Clutch Section* for complete data.

Facings—Thickness .125". Outside diameter 9½".

Pedal Adjustment: 1" free travel. Lock nut and adjusting nut at release lever end of release rod.

Removal: Remove transmission (see TRANSMISSION Removal below). Take off flywheel housing. Install wooden wedges between each release lever and cover to hold clutch in released position, take out 6 cover capscrews, lift assembly out.

## TRANSMISSION

Own Make. 3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section* for complete data.

Transmission Control: Steering column mounted shift  
See *Transmission Section* for complete data.

Removal: Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission and speedometer linkage. Support rear of engine and disconnect rear engine mounting from frame. Take out 4 transmission-to-flywheel housing capscrews and remove transmission.

## OVERDRIVE

Warner Model AS1-R10E (exc. Conv. & Sta. Wagon). Optl. equipment. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down."

Warner Model AS3-R10E (Conv. & Sta. Wagon). Similar to AS1-R10E (above) except a special solenoid adapter plate used (re-locates solenoid under overdrive), "X" type frame used on these cars has insufficient clearance for solenoid in regular mounting position on side of overdrive.

See *Transmission Section* for complete data.

- **Overdrive Noise Correction on Early Cars**—See "Overdrive Notes" in *Ford Shop Notes*.

Solenoid—Ford No. 8M-6916A (8A-6916A or C, C is rubber coated, for Sta. Wag. & Convertible).

Control Relay—Ford No. 8M-6915. On dash.

Overdrive Fuse—30 ampere. On Control Relay.

Lock-out Switch—Ford No. 8M-6917A.

Throttle Kick-down Switch—Ford No. 8A-6918B.

Governor—Ford No. 8M-6943 (Assembly with gear).

Removal: Same as for Std. transmission (above) after disconnecting overdrive control cable and wiring.

## UNIVERSALS

Mechanics Type 2CR. Needle bearing type. 2 used.  
See *Universals Section* for complete data.

NOTE—Slip joint formed by splined yoke of front universal engaging transmission mainshaft (or overdrive shaft). One-piece propeller shaft used.

- **CAUTION (ALL CARS EXCEPT STATION WAGON)**—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See 1949 Ford Passenger Car Rear Axle for data.

## REAR AXLE

### PASSENGER CARS

Own Make. Semi-floating hypoid gear type with Hotchkiss drive with separate carrier. Axle ends flanged (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).  
See *Rear Axle Section* for complete data.

- **Excessive Axle Shaft Endplay Correction**—See "1949 Ford Passenger Car (except Station Wagon)" in *Rear Axle Section*.

Ratio—Standard: 3.73-1 (39-11). With overdrive: 4.10-1 (41-10). Optional: 3.54-1 (41-11).

Backlash—.005-.008". Screw adjustment.

- **NOTE**—Collapsible spacer used for pinion bearing "pre-load".

Removal: Disconnect rear universal. Remove axle shafts (see instructions below). Remove carrier from housing.

- **CAUTION**—Do not loosen universal joint companion flange nut (unless rear axle to be disassembled). This nut controls pinion bearing pre-load (must be adjusted whenever nut loosened).

Axle Shaft Removal: Remove wheel. Take off drum. Remove 4 axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-P and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure backing plate.

Wheel Bearing Adjustment: None (sealed ball-bearing).

## REAR AXLE

### STATION WAGON

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged —(no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).

- **NOTE**—AXLE NOT SAME AS FORD PASSENGER CAR, similar to Mercury.

See *Rear Axle Section* for complete data.

Ratio (Standard)—3.91-1 (43-11).

Ratio (with Overdrive)—4.27-1 (47-11).

Backlash—.003-.008". Shim adjustment.

Removal: Raise rear of car. Disconnect rear universal. Remove axle shafts (see instructions above). Disconnect brake line at "T" on left side of axle housing, and hand brake cable. Disconnect shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

Axle Shaft Removal: Same as for Ford Pass. Car Rear Axle (above).

## SHOCK ABSORBERS

Front—Delco Model 1037-F or Houdaille No. H-180, Ford No. 8A-18045-A (Pass. Cars), Houdaille H-210, Ford No. 8A-18045-B (Station Wagon).

Rear—Delco Model 1031-R or Houdaille No. H-190, Ford No. 8A-18080-A (Pass. Cars), Houdaille H-200, Ford No. 8A-18080-B (Station Wagon).

Direct acting, hydraulic types. Two makes are used and are interchangeable.

- **NOTE**—Shock absorbers are permanently sealed and cannot be refilled or repaired.

See *Shock Absorber Section* for complete data.

Rear Shock Absorber Installation—Lower tube has welded stone shield on lower end which must be installed toward front of car.

## FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs, direct acting shocks, and front stabilizer.

See *Front Suspension Section* for complete data.

- **Front Suspension Noise and Car Leveling Correction**—See "1949 Ford Passenger Cars, Lincoln & Mercury" in *Front Suspension Section*.

- **Pitman Arm and Idler Arm Bracket Change**—Requires 2 different Toe In Settings listed below. For identification of parts, see 1949 Ford in *Front Suspension Section*.

- **CAUTION**—Specifications listed below supersede earlier 1949 Ford Front End Specifications.

Kingpin Inclination—5¼° crosswise.

Caster (Pass. Cars)—Pos. ½° to Neg. 1°.

(Station Wagon)—Neg. ¼° preferred, Limits Neg. ¼° to Neg. 1¾°.

NOTE—½° max. variation between wheels.

Camber (All)—Pos. ¼° to Pos. ¾° preferred. Limits 0° to Pos. 1°.

NOTE—¼° max. variation between wheels.

- **Toe In—CAUTION: Two settings as follows:**

1)—1/8" toe out to 3/16" toe out for cars built before March 1, 1949.

2)—1/16" toe in to 1/8" toe in for cars built after March 1, 1949.

Adjustment—Adjusting sleeve on outer end of each tie rod. Adjust equally.

## STEERING GEAR

Gemmer design (Model 305), Ford Make—Worm-&-Roller type.

See *Steering Gear Section* for complete data.

## BRAKES

Service: Ford-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

Wheel Cylinders—Diameter: Front wheel 1.128" (hone limit 1.132"). Rear Wheel: .878" (hone limit .880").

Drums—Diameter 10" (11" Sta. Wagon rear drums).

Lining—Molded or Woven. Width 2¼" (front wheel), 1¾" (rear wheel). Thickness 3/16". Length per shoe: 11¾" (11 15/16" Sta. Wag. rear wheel shoes).

Clearance—.010" at each end of secondary shoe with primary shoe forced out against drum (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

Hand Brake: See *Service Brakes* (above).

- **Hand Brake Linkage Change (for easier application) and Cable Interference Correction**—See "Ford-Bendix Hydraulic" in *Brake Section*.

## MISC. MECHANICAL

Power Operated Convertible Top: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).  
See *Miscellaneous Section* for complete data.

Windshield Wipers: Vacuum Link & Crank Arm Type.  
See *Miscellaneous Section* for complete data.

## MODEL IDENTIFICATION

**VEHICLE NUMBER:** Stamped on plate attached to engine side of dash and on top of right frame side rail just to rear of front suspension upper arm.

**SERIAL NUMBER:** New 1950 designations as follows:

Engine Type	Model Year	Assembly Plant	Serial Number
*B	0	See below	100001 Up

### Assembly Plant Designations

AT—Atlanta	DA—Dearborn	MP—Memphis
BF—Buffalo	LU—Louisville	NR—Norfolk
CS—Chester	EG—Edgewater	RH—Richmond
CH—Chicago	KC—Kansas City	SR—Somerville
DL—Dallas	LB—Long Beach	SP—Twin City
HM—Highland Park		(St. Paul)

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. at cranking spd.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram.

**SPARK PLUG GAPS:** .030". Limits .029-.032".

**Plug Type:** Champion H-10, 14 mm.

**DISTRIBUTOR:** Breaker Gap—.014-.016".

**Cam Angle:** 27° closed, 18° open.

**Breaker Arm Spring Tension:** 17-20 ounces.

**Advance Performance:** See Ignition.

**Condenser Capacity:** 21-.25 microfarad.

**IGNITION TIMING:** 2° BTDC.

**Timing Procedure:** See Ignition Timing.

**Crankshaft Pulley Mark:** Circular boss aligned with timing pointer on right side of engine front cover.

## CARBURETION:

**Idle Setting:** Approx. 1 turn open. Two screws—turning screws out gives richer mixture.

**Idle Speed:** Approximately 500 RPM.

**Float Level:** 1.322-1.353" bottom of float to underside of bowl cover with needle valve seated (use Gauge No. 9550-A).

**Accelerating Pump:** Center hole average setting. Inner hole for hot weather, Outer for cold weather.

**Fuel Pump Pressure:** 3½-4½ lbs.

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve located between right end of exhaust pipe cross over and right exhaust manifold.

**VALVE TAPPET CLEARANCE:** CAUTION—Different settings required for each type camshaft.

► **First type Camshaft No. 8BA-6250①**  
(no markings on Engine or Camshaft)

**Intake—.010-.012", Exhaust—.014-.016", Cold.**

①—Before Eng. No. 8BA-622468—Partial production after this number.

► **Later type Camshaft No. 8BA-6250-B②**  
(Eng. marked—"GAP, in-.014", ex-.018") ③  
(Camshaft marked "B" on front end)

**Intake—.014" (.013-.015") Exhaust—.018" (.017-.019"), Cold.**

②—Partial production after Eng. No. 8BA-622468, and service replacement on all engines.

③—On top of block at center under valve cover.

► **CAUTION—Loss of power will result if correct tappet clearance not used on engines with "B" CAMSHAFT.**  
**Adjustment:** See "Valve System" in Ford Shop Notes for complete data.

**Valve Timing Check:** See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Ford No. 6A-11572-A (Mitchell type), No. 6A-11572-B (Briggs & Stratton type).

**Ignition Lock:** Ford No. 8A-11582-A.

**COIL:** Ford No. 7RA-12029-A or 8BA-12029.

**Location:** On front lower corner of right cyl. head.

**Ignition Current:** Approx. 5.2-5.7 amperes at 6 volts, stopped. Primary current resistance 1.05-1.15 ohms (75°F.).

**CONDENSER:** Ford No. 7RA-12300-B.

**Capacity:** 21-.25 microfarad.

**DISTRIBUTOR:** Ford No. 7RA-12127-C (less Cap and Rotor). New "Pressure" distributor with spark advance controlled by vacuum diaphragm moving breaker plate to advance spark against two breaker plate springs. Operating vacuum taken from 1 carburetor connection (2 passages inside carburetor, 1 at venturi, 1 at throttle valve). Full spark advance obtained at 18-35 MPH. with normal road load or for part throttle operation at any speed.

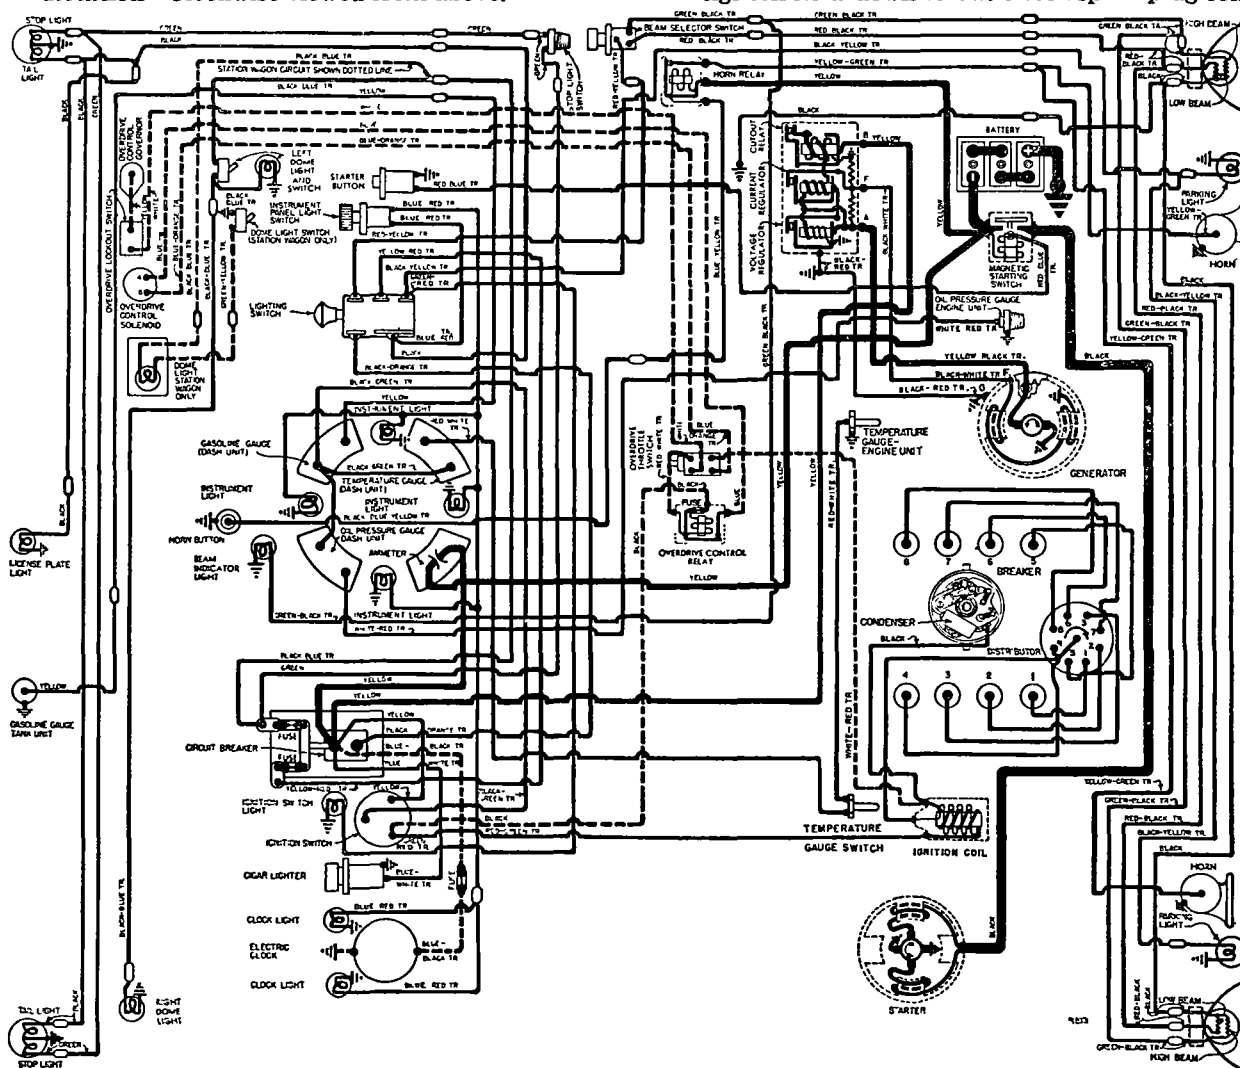

► **NOTE—Distributor is single contact type (no "coil loading" contacts are used).**

**Breaker Gap:** .014-.016".

**Cam Angle:** 27° closed, 18° open.

**Breaker Arm Spring Tension:** 17-20 ounces.

**Rotation:** Clockwise viewed from above.

## Advance Performance

► (at Wide Open Throttle)

Distributor	Engine
Degrees Vacuum R.P.M.	Degrees Vacuum R.P.M.
0° ..... 0" ..... 200	0° ..... 0" ..... 400
1¼-2¼ ..... 0.4" ..... 500	2½-4½ ..... 0.4" ..... 1000
4¼-5¼ ..... 1.7" ..... 1000	8½-10½ ..... 1.7" ..... 2000
6¼-7¼ ..... 2.85" ..... 1500	12½-14½ ..... 2.85" ..... 3000
7½-8½ ..... 3.7" ..... 2000	15-17 ..... 3.7" ..... 4000

**Distributor Removal:** Mounted at front of engine on right side. To remove, disconnect vacuum line, take out hold down screw, lift off.

## IGNITION TIMING

**Std. Setting:** 2° BTDC.

**Crankshaft Pulley Mark:** Circular boss on rear edge of pulley (timing pin on right front side of engine).

**Timing:** With #1 piston at firing position and timing mark on pulley aligned with timing pin on front of engine, loosen hold-down screw on distributor, rotate distributor until contacts begin to open, tighten hold-down screw. Check spark plug connec-

tions (see diagram), see that rotor opposite #1 terminal in cap.

- **Timing (with Neon Timing Light)**—**CAUTION**—Vacuum line must be disconnected to avoid vacuum advance operating. Mark timing pin and pulley mark with white chalk. Connect timing light to #1 spark plug. Idle engine and adjust distributor (as directed above) until mark and timing pin aligned.

### CARBURETOR

Holley-Ford No. 8BA-9510-A. Dual (double barrel) downdraft type with new vacuum passages for distributor operation.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Jets—See Holley-Ford Jet Specification Table in Carburetor Section.

Fast Idle: Integral type. Operated by choke valve lever. No adjustment required.

### CARB. EQUIPMENT

Fuel Pump (std.): Ford No. 7RA-9350-C.

Optl. (Fuel-& Vacuum)—Ford No. 7RA-9350-E.

Pressure— $3\frac{1}{2}$ – $4\frac{1}{2}$  lbs. (both types).

See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.

Dash Unit (Green Pointer)—Ford No. 8A-9280A.

Dash Unit (Red Pointer)—Ford No. 8A-9280B.

Tank Unit—No. 8A-9275 (Sta. Wg. 01A-9275A).

See Carburetion Equipment Section for complete data.

Air Cleaner (std.—oil-wetted): Ford No. 8BA-9600-A3.

Optl. (oil bath)—Ford No. 8BA-9600-A1 or A2 (1 pt. capacity), 8BA-9600-A6 (1 quart capacity).

### BATTERY

Ford No. 81A-10655-A. 6 Volt, 17 Plate, 100 Amp. Hr. Zero Capacity—300 amperes for 3.3 minutes. Five Second Voltage—4.2 volts.

Grounded Terminal—Positive (+).

Location—On left side in engine compartment.

Dimensions—L.  $10\frac{1}{2}$ " W.  $7\frac{7}{8}$ " H.  $7\frac{1}{4}$ ".

### STARTER

Ford Model No. 7RA-11002. Armature No. 18-11005.

- **Starter Motor Rusting Correction**—See "Electrical System Notes" in Ford Shop Notes.

Drive—Bendix No. A1472 (Ford No. B-11350).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—20-22 ounces.

Cranking Engine—100 RPM., 190-215 amperes.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	550

Starting Switch: Ford No. 21A-11450 Magnetic Switch mounted on left front fender apron and controlled by panel pushbutton switch Ford No. 6H-11500.

Removal: On right front face of flywheel housing cover. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

### GENERATOR

Ford No. 8BA-10002-A (less pulley and bracket).

Armature No.—Ford No. 8BA-10005-A.

2 brush type with current and voltage regulation.

Charging Rate Adjustment—None. See Regulator.

Maximum Charging Rate—36 amperes, 7 volts, reached at approximately 20 MPH. Controlled by regulator (dependent on load & battery condition).

**To Check Generator Output**—Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

- **CAUTION**—Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

Amperes Performance Data Engine R.P.M.  
33 ..... 1500

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—20-24 ozs.

Removal: On support secured to valve chamber cover by stud and nut, driven by belt in tandem with water pumps. To remove, loosen stud nut and disengage generator belt, take out capscrew in mounting strap, lift generator off support.

Generator Belt Adjustment: Loosen 2 bolts on fan mounting bracket, loosen generator support mounting stud nut, raise generator up until side movement on belt midway between generator and water pump pulleys is  $\frac{1}{2}$ " (thumb and finger pressure), tighten stud nut.

Fan Belt Adjustment—See COOLING.

### REGULATOR

Ford Numbers

Regulator	Generator	Amperes
51A-10505-A or C	8BA-10002-A (Std.)	30-33
8M-10505	8BA-10002-A (Std.)	34-38

Voltage-current 3-Unit types.

See Electrical Equipment Section for complete data.

NOTE—Separate ground wire extending to cowl must be in place when generator operated.

#### Cutout Relay

Cuts In—6.0-6.4 volts COLD (will be slightly higher when warm).

Cuts Out—8 ampere discharge current (maximum).

Contact Gap—.010" (armature against upper stop).

Air Gap—.014" between armature and core with contacts open.

#### Voltage Regulator

Voltage Setting—7.0-7.4 volts COLD (7.2-7.6 volts after 20 minutes run).

Checking & Adjustment—See Elec. Equip. Section.

Air Gap—.032-.035" between armature and core with contacts just closed.

- **CAUTION**—Make certain gauge contacts armature and not brass rivet on underside of armature.

Contact Spring Tension—5 ounces minimum with contacts just opening.

#### Current Regulator

Current Setting (51A).....30-33 amperes COLD

Current Setting (8M).....34-38 amperes COLD

Checking & Adjustment—See Elec. Equip. Section.

Air Gap—.032-.035" between armature and core with contacts just closed.

Contact Spring Tension—5 ounces minimum with contacts just opening.

### LIGHTING

Headlamps: Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

Beam Indicator—Bulb between 50 and 60 on speedometer. Lighted with Upper Beam "on".

Direction Signal: Optl. See Electrical Equipment Section.

Direction Indicators—Right and Left indicators on lower edge of speedometer.

Direction Signal Flasher—Ford No. 8L-13350-B.

#### Switches

Lighting—Ford ('49) 7RA-11654, ('50) 0A-11654.

Instrument—Ford ('49) 21C-13740, 1950—Part of

Lighting Switch (operated by turning knob).

Beam Selector—Ford 7RA-13532 or 8A-13532.

Dome Light—Ford ('49) 8A-13752, ('50) 0A-13752.

Dome Light (Sta. Wagon)—Ford 8M-13752-A.

Door Switch—Ford ('49) 8M-13713, ('50) 0A-13713.

Stop Light—Ford No. 11A-13480.

### MISC. ELECTRICAL

CIRCUIT BREAKERS, FUSES, AND HORNS: See 1949-50 Ford Six car pages for all data.

### ENGINE

ENGINE SPECIFICATIONS: Own 8BA. Eight cylinder, "L" head, 90° Vee type with both cylinder banks and crankcase cast Enbloc.

Bore—3.187". Stroke—3.75".

Displacement—239 cu. ins. Rated HP—32.5.

Developed Horsepower—100 at 3600 RPM.

Compression Ratio—6.8-1 cast-iron heads.

Compression & Vacuum Reading—See Tune-Up.

TIGHTENING TORQUES: See Ford Shop Notes.

CYLINDER SLEEVE: Cast iron dry type cylinder sleeves furnished for replacement service.

PISTONS: CAUTION—Two types used:

- **"49T"- PISTONS** (Before Pass. Car Eng. No. 8BA-641087, Truck 8R Eng. No. 195401)—4-ring (lower ring below pin), aluminum alloy, steel strut, U-slot, cam ground, dome head type.

CAUTION—49T pistons must be used in ALL steel sleeve engines. Use "29A" piston rings with this piston. Do not use 49T pistons to replace Autothermic pistons.

- **"8BA"- AUTOTHERMIC PISTONS** (After Pass. Car Eng. No. 8BA-641087, Truck 8R Eng. No. 195401)—4-ring (lower ring below pin), aluminum alloy, "Autothermic", closed type. Pin hole offset 1/16".

CAUTION—8BA Autothermic pistons must not be used on steel sleeve engines. Can be used to replace 49T pistons in sets on other engines. Use "8BA" piston rings with this piston (29T rings must not be used).

- **CAUTION**—1949 Ford and Mercury Pistons or Rings are not interchangeable.

Weight—13.12 ozs.

Removal—Pistons and rods removed from above.

Clearance—See Fitting Pistons.

Replacement Pistons ("49T-"): Std., .005", .020", .030", .040", .060" Oversize.

Replacement Pistons ("8BA-" Autothermic): Std. (4 grades with limits 3.1879-3.1891 in .0003" steps for selective fitting), .0025", .020", .030", .040", .060" OS.

Fitting Pistons ("49T-"): Use .50" wide feeler stock of correct thickness (as listed below) inserted between piston and cylinder wall at right angles to pin to check clearance. Pull to withdraw feeler 6-10 lbs.

Feeler Thickness—.002" New Piston in New Plain Bore, .003" New Piston in New Sleeve, .004" New Piston in Worn Bore, .005" Worn Piston in Worn Bore.

Fitting Pistons ("8BA-" Autothermic): Use feeler gauge .0015" x  $\frac{1}{2}$ " on thrust side of piston with 6-12 lb. pull.

Installing Pistons ("8BA-" Autothermic): Locating mark (small indentation) on head of piston above one piston pin hole, to front on all pistons.

- **CAUTION**—Necessary since pin offset 1/16" and must be located on thrust side of bore.

C NTINUED ON NEXT PAGE

## ENGINE

## C CONTINUED FROM PRECEDING PAGE

**PISTON RINGS:** 2 compression, 2 slotted oil rings (lower oil ring below pin). Upper oil ring groove drilled with oil drain holes, lower groove slotted.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.0915-.0920"	.012-.017"①	.0015-.0035"②
Compr. (#2)	.0915-.0920"	.012-.017"①	.001-.004"③
Oil (#3, 4)	.1545-.1550"	.012-.017"①	.001-.004"③
Worn Limits—	① .035" ② .0045" ③ .005"		

**Replacement Rings:** Snap type, Expander type, or Steel Section type ring sets furnished in the following sizes: Std., .020", .030", .040", .060" Oversize.

► **CAUTION—**Use "294" rings on first type 49T Pistons, "8BA" rings on 8BA Autothermic Pistons.

**PISTON PIN:** Diameter .7504" (maximum).

Floating type (lock ring in piston at each end). Pin hole in connecting rod bronze-bushed.

Pin Fit in Piston—.0005" (new), .0015" (worn limit).

Pin Fit in Rod Bushing—.0002-.0005" (new), .0015" (worn limit).

**Replacement Pins:** Sizes and paint marks: Std. (green), .001" Oversize (blue), .002" OS (yellow).

**CONNECTING ROD:** Length 7". Weight 18.7 ozs.

► **Connecting Rod CAUTION—**Beginning Engine No. 8BA-628866 through 8BA-629940 and all Engines after 8BA-641087, new type connecting rod used with 5/64" squirt hole drilled on an angle into the side of the bearing flange web meeting a 3/16" hole in connecting rod bearing flange.

► **CAUTION—**These new connecting rods should be used only on engines with neoprene seals on intake valve guides and increased capacity oil pump.

Crankpin Journal Diameter—2.1390". Maximum wear limits—Out-of-round .0015", Taper .001".

► **Lower Bearing—**Locked in (not floating type as used on earlier engines). Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves interchangeable.

Clearance—.0005-.003" (new), .005" (worn limit).

► **NOTE—**Replace bearing shells less than .0745" thick.

Sideplay—.006-.014" (new), .022" (worn limit).

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in rod and cap.

► **NOTE—**Self-locking connecting rod nuts used. Tighten to 40-45 ft. lbs. Palnuts not required.

**Replacement Bearings:** Standard size and .002", .010", .020", .030", .040" Undersize.

Installing Rods—Rods with squirt hole installed with squirt hole toward valve push rod assembly.

**CRANKSHAFT:** 3 bearing with integral counterweights.

► **SLUDGE TRAPS—**Crankpin throws equipped with sludge traps having removable plugs for cleaning. Always use new plugs if old plugs disturbed and peen or stake crankshaft to hold plugs in place securely.

Journal Diameters—2.4990" (all bearings). Max. wear limits—Out-of-round .0015", Taper .001".

Bearings—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves alike.

Clearance—.000-.003" (selective fit, crankshaft to turn free). Worn limit .005" maximum.

► **NOTE—**Replace main bearing shells less than .0835" thick.

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in block and cap.

**Replacement Bearings:** Standard size and .002", .010", .020", .030" Undersize. Rear mains also furnished

.015" Oversize in Overall Length for taking up end-play wear.

**End Thrust:** Taken by rear main bearing. Adjust by replacing bearing if endplay excessive.

Endplay—.002-.006" (new), .008" (worn limit).

**CAMSHAFT: CAUTION—PASSENGER CARS** use two types of camshafts (require different tappet clearance): 8BA-6250—All engines before No. 8BA-622468 and partial production after this number.

8BA-6250-B—Partial production beginning Eng. No. 8BA-622468 and service replacement of first type Camshaft. Has new cam contours for quieter valve operation.

► **CAMSHAFT IDENTIFICATION—**New 8BA-6250-B Camshaft stamped "B" on forward end (first type not marked), and engine marked "GAP, in-.014", ex-.018" on top of block under valve cover at center.

► **ENGINE MARKING CAUTION—**Gap mark (see above) must be added when "B" shaft installed on unmarked block, or removed if first type shaft installed on marked block.

Bearing Diameter—1.7985" (replace bearing if diameter greater than worn limit 1.8015").

Bearings—Steel-backed, babbitt lined bushings.

Clearance—.001-.002".

**Replacement Bearings:** Standard size and .010", .015" Undersize (US bearings require finish reaming).

**End Thrust:** Taken by front end of camshaft and thrust surface on inner face of cylinder front cover. Adjust by replacing cover. Endplay—.007-.016".

**Timing Gears: CAUTION—**Two types camshaft gears used: Aluminum (first), Fibre (later).

Crankshaft Gear—Cast Alloy Iron.

► **CAUTION—**Camshaft gear teeth REVERSE (L.H.) providing one-way thrust to camshaft for silencing backlash.

Replacement Camshaft Gears—Std. .008", .012" OS.

**Camshaft Setting:** Mesh marked tooth of crankshaft gear with marked space on camshaft gear.

**VALVES:** Head Diameter Stem Diameter Length

All Valves .....1.515" .....3410"① .....4.8140"

Seat Angle .....45° .....292" .....0015-.0035"②

Lift .....292" .....0015-.0035"②

Wear Limit—①—.3375" ②—.005" Int., .006" Exh.

► **NOTE—**Valves are straight-stemmed type operating in one-piece valve guides.

► **Sticking Valve Correction—**If necessary to ream guides, use .001" oversize reamer for exhaust valve guides, .0005" oversize reamer for intake valve guides.

Valve Seat Inserts—Used on all valves.

**Valve Guides:** One-piece type positioned and retained by "C" washer. Inside diameter .344", Outside diameter 1.031". Length 2.20". NOTE—Rubber seal used on intake guide.

**Valve Lifters:** Barrel type operating in guide holes in cylinder block.

Diameter—.9992" (replace if worn to less than .9977"). Length limit after resurfacing 1.700".

Clearance—.0007-.0016" (new), .003" (worn limit).

**Valve Springs:** Coated springs used.

Spring Pressure—37-40 lbs. (closed), 78-80 (open).

Spring Test—37-40 lbs. at 2.125". Free length 2.41".

## VALVE TIMING

**VALVE TAPPET CLEARANCE: CAUTION—**Different settings required for each type camshaft.

► **First type Camshaft No. 8BA-6250①**

(no markings on Engine or Camshaft)

Intake—.010-.012", Exhaust—.014-.016", Cold.

①—Before Eng. No. 8BA-622468—Partial production after this number.

► **Later type Camshaft No. 8BA-6250-B②**

(Eng. marked—"GAP, in-.014", ex-.018")③

(Camshaft marked "B" on front end)

Intake—.014" (.013-.015") Exhaust—.018" (.017-.019"), Cold.

②—Partial production after Eng. No. 8BA-622468, and service replacement on all engines.

③—On top of block at center under valve cover.

► **CAUTION—**Loss of power will result if correct tappet clearance not used on engines with "B" CAMSHAFT.

Adjustment—See "Valve System" in Ford Shop Notes for complete data.

**Valve Timing:** See Camshaft Setting above.

Intake Valves—Open at TDC. Close 44° ALDC.

Exhaust Valves—Open 48° BLDC. Close 6° ATDC.

Valve Timing Check—Intake valve opens at TDC.

Valve timing mark location on crankshaft pulley.

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, timing gears and distributor drive gear. Piston pins and valve lifters lubricated by splash. Oil pump mounted in crankcase at rear of engine.

Crankcase Capacity—4 quarts (5 quarts when changing oil filter).

Normal Oil Pressure—45 lbs. at 30 MPH.

**Oil Pressure Relief Valve:** In oil pump body. Not adjustable.

Spring Tension—15 lbs. 2 ozs. to 15 lbs. 6 ozs. at 1.14".

NOTE—Cylinder block oil relief valve not used.

**Oil Pump:** Gear type (two types: one equipped with spur gears, second helical gears). In crankcase at rear of engine.

**Oil Filter:** On left cylinder head. Replace cartridge each 5000 miles or more often if required.

Oil Filter Cartridge—Ford No. 7HA-6731A.

Oil Pressure Gauge: King-Seeley Electric.

Dash Unit (Green Pointer)—Ford No. 8A-9273A.

Dash Unit (Red Pointer)—Ford No. 8A-9273B.

Engine Unit—Ford No. 41A-9278.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Filter element in oil filler cap (inlet) with outlet pipe extending from top of engine down behind fan and out along left side.

Servicing—Wash screen in cleaning fluid and wet with engine oil when dry at oil change period (2500 miles).

## COOLING

**Cooling System:** Pressure type with relief valve in filler cap and two belt-driven pumps (one for each bank) with re-circulating by-pass.

Capacity—21 quarts.

**Pressure Valve—**In radiator filler cap. Ford No. 26H-8100-B (AC #846740). Opens at 3½-4½ lbs.

**Water Pumps:** Two used. Centrifugal, belt-driven packless type. Shaft mounted on pre-packed ball-bearing at front, and bushing next to seal. Oil cup provided for bushing lubrication.

► **CAUTION—WATER PUMP LUBRICATION:** Oil cup provided on each pump which should be filled with SAE #20 engine oil when new and every 1000 miles. Use length of wire inserted in oil cup if necessary when oiling.

See Water Pump Section for complete data.

**Fan Belt Adjustment—**Loosen 2 fan mounting bracket bolts, raise fan up until side movement of belt midway between fan and crankshaft pulleys is ½".

**Generator (& Water Pump) Belt Adjustment—**See GENERATOR.

**Thermostats:** Two used (one in each head water outlet). Ford No. 8BA-8575-B or 8RT-8575-A. Two makes used Standard-Thompson or Fulton-Sylphon. Setting (8BA-8575-B)—Starts to open 157-162°F. Setting (8RT-8575-A)—Starts to open 148-153°F.

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit (Green Pointer)**—Ford No. 8A-10883A.

**Dash Unit (Red Pointer)**—Ford No. 8A-10883B.

**Engine Unit**—Ford 8A-10990 (stamped 217 in right bank), 8A-10884 (stamped 224 in left bank).

See *Miscellaneous Section* for complete data.

## CLUTCH

**Long Model 9½ CF-TS**, Ford No. 8A-7563A. Single plate, semi-centrifugal, dry disc type.

See *Clutch Section* for complete data.

► **Flywheel Rubbing on Housing Cover when Clutch Disengaged Correction**—See "Clutch Notes" in *Ford Shop Notes*.

**Facings**—Thickness .125". Outside diameter 9½".

**Pedal Adjustment:** 1" free travel. Lock nut and adjusting nut at release lever end of release rod.

**Removal:** Remove transmission (see TRANSMISSION Removal below). Take off flywheel housing. Install wooden wedges between each release lever and cover to hold clutch in released position, take out 6 cover capscrews, lift assembly out.

## TRANSMISSION

**Own Make.** 3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section* for complete data.

**Transmission Control:** Steering column mounted shift. See *Transmission Section* for complete data.

**Removal:** Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission and speedometer linkage. Support rear of engine and disconnect rear engine mounting from frame. Take out 4 transmission-to-flywheel housing capscrews and remove transmission.

## OVERDRIVE

**Warner Model AS1-R10E** (exc. Conv. & Sta. Wagon). Optl. equipment. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down."

**Warner Model AS3-R10E** (Conv. & Sta. Wagon). Similar to AS1-R10E (above) except a special solenoid adapter plate used (re-locates solenoid under overdrive), "X" type frame used on these cars has insufficient clearance for solenoid in regular mounting position on side of overdrive.

See *Transmission Section* for complete data.

► **Overdrive Noise Correction on Early Cars**—See "Overdrive Notes" in *Ford Shop Notes*.

**Solenoid**—Ford No. 8M-6916A (8A-6916A or C, C is rubber coated, for Sta. Wag. & Convertible).

**Control Relay**—Ford No. 8M-6915. On dash.

**Overdrive Fuse**—30 ampere. On Control Relay.

**Lock-out Switch**—Ford No. 8M-6917A.

**Throttle Kick-down Switch**—Ford No. 8A-6918B.

**Governor**—Ford No. 8M-6943 (Assembly with gear).

**Removal:** Same as for Std. transmission (above) after disconnecting overdrive control cable and wiring.

## UNIVERSALS

**Mechanics Type 2CR.** Needle bearing type. 2 used. See *Universals Section* for complete data.

**NOTE**—Slipjoint formed by splined yoke of front

universal engaging transmission mainshaft (or overdrive shaft). One-piece propeller shaft used.

► **CAUTION (ALL CARS EXCEPT STATION WAGON)**—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See 1949 Ford Passenger Car Rear Axle for data.

## REAR AXLE PASSENGER CARS

**Own Make.** Semi-floating hypoid gear type with Hotchkiss drive with separate carrier. Axle ends flanged (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required). See *Rear Axle Section* for complete data.

► **Excessive Axle Shaft Endplay Correction**—See "1949 Ford Passenger Car (except Station Wagon)" in *Rear Axle Section*.

**Ratio**—Standard: 3.73-1 (39-11). With overdrive: 4.10-1 (41-10). Optional: 3.54-1 (41-11).

**Backlash**—.005-.008". Screw adjustment.

► **NOTE**—Collapsible spacer used for pinion bearing "pre-load".

**Removal:** Disconnect rear universal. Remove axle shafts (see instructions below). Remove carrier from housing.

► **CAUTION**—Do not loosen universal joint companion flange nut (unless rear axle to be disassembled). This nut controls pinion bearing pre-load (must be adjusted whenever nut loosened).

**Axle Shaft Removal:** Remove wheel. Take off drum. Remove 4 axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-P and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure backing plate.

**Wheel Bearing Adjustment:** None (sealed ball-bearing).

## REAR AXLE STATION WAGON

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged —(no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).

► **NOTE**—AXLE NOT SAME AS FORD PASSENGER CAR, similar to Mercury.

See *Rear Axle Section* for complete data.

**Ratio (Standard)**—3.91-1 (43-11).

**Ratio (with Overdrive)**—4.27-1 (47-11).

**Backlash**—.003-.008". Shim adjustment.

**Removal:** Raise rear of car. Disconnect rear universal. Remove axle shafts (see instructions above). Disconnect brake line at "T" on left side of axle housing, and hand brake cable. Disconnect shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

**Axle Shaft Removal:** Same as for Ford Pass. Car Rear Axle (above).

## SHOCK ABSORBERS

**Front**—Delco Model 1037-F or Houdaille No. H-180, Ford No. 8A-18045-A (Pass. Cars), Houdaille H-210, Ford No. 8A-18045-B (Station Wagon).

**Rear**—Delco Model 1031-R or Houdaille No. H-190, Ford No. 8A-18080-A (Pass. Cars), Houdaille H-200, Ford No. 8A-18080-B (Station Wagon).

Direct acting, hydraulic types. Two makes are used and are interchangeable.

► **NOTE**—Shock absorbers are permanently sealed and cannot be refilled or repaired.

See *Shock Absorber Section* for complete data.

**Rear Shock Absorber Installation**—Lower tube has welded stone shield on lower end which must be installed toward front of car.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs, direct acting shocks, and front stabilizer.

See *Front Suspension Section* for complete data.

► **Front Suspension Noise and Car Leveling Correction**—See "1949 Ford Passenger Cars, Lincoln & Mercury" in *Front Suspension Section*.

► **Pitman Arm and Idler Arm Bracket Change**—Requires 2 different Toe In Settings listed below. For identification of parts, see 1949 Ford in *Front Suspension Section*.

► **CAUTION**—Specifications listed below supersede earlier 1949 Ford Front End Specifications.

**Kingpin Inclination**—5¼° crosswise.

**Caster (Pass. Cars)**—Pos. ½° to Neg. 1°.

**(Station Wagon)**—Neg. ¼° preferred, Limits Neg. ¼° to Neg. 1¾°.

**NOTE**—½° max. variation between wheels.

**Camber (All)**—Pos. ¼° to Pos. ¾° preferred. Limits 0° to Pos. 1°.

**NOTE**—¼° max. variation between wheels.

► **Toe In**—**CAUTION:** Two settings as follows:

1)—1/8" toe out to 3/16" toe out for cars built before March 1, 1949.

2)—1/16" toe in to 1/8" toe in for cars built after March 1, 1949.

**Adjustment**—Adjusting sleeve on outer end of each tie rod. Adjust equally.

## STEERING GEAR

Gemmer design (Model 305), Ford Make—Worm-&-Roller type.

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Ford-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Wheel Cylinders**—Diameter: Front wheel 1.128" (hone limit 1.132"). Rear Wheel: .878" (hone limit .880").

**Drums**—Diameter 10" (11" Sta. Wagon rear drums). **Lining**—Molded or Woven. Width 2¼" (front wheel), 1¾" (rear wheel). Thickness 3/16". Length per shoe: 11¾" (11 15/16" Sta. Wag. rear wheel shoes).

**Clearance**—.010" at each end of secondary shoe with primary shoe forced out against drum (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

**Hand Brake:** See *Service Brakes* (above).

► **Hand Brake Linkage Change (for easier application) and Cable Interference Correction**—See "Ford-Bendix Hydraulic" in *Brake Section*.

## MISC. MECHANICAL

**Power Operated Convertible Top:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See *Miscellaneous Section* for complete data.

**Windshield Wipers:** Vacuum Link & Crank Arm Type. See *Miscellaneous Section* for complete data.

## MODEL IDENTIFICATION

SERIES	MODEL	“V8” <sup>①</sup>	“6 Cyl.” <sup>②</sup>	WHB.
F-1 1/2 Ton	8RC	8HC	114"	
F-2 3/4 Ton	8RD	8HD	122"

F-6 2 C-O-E	8RWH	8HWH	134"	
F-6 2 C-O-E	8R8WH	8H8WH	158"	

①—Rouge 239 Truck V8, 100 Horsepower.

②—Rouge 226 Truck Six, 95 Horsepower.

**ENGINE NUMBER:** On Rating Plate on dispatch compartment (glove box) door and on left side of frame near steering gear mounting bracket. **NOTE**—Engine Number is also Serial Number.

## TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. at cranking spd.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER (V8):** 1-5-4-8-6-3-7-2. See diagram.

**FIRING ORDER (6 CYL.):** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .025-.028".

**Plug Type**—Champion H-9 Comm. 14 mm.

**DISTRIBUTOR:**

**Breaker Gap**—(6 Cyl.) .024-.026" (V8) .014-.016"

**Cam Angle**—(6 Cyl.) 36° closed, (V8) 27° closed.

**Breaker Arm Spring Tension**—17-20 ounces.

**Advance Performance**—See Ignition.

**Condenser Capacity**—.21-.25 microfarad.

**IGNITION TIMING:** 2° BTDC (V8), TDC (6 Cyl.).

**Timing Procedure**—See Ignition Timing.

**V8**—Crankshaft Pulley Mark—Circular boss aligned with pointer on right side of engine front cover.

**6 Cyl.**—Dampener Mark—Circular boss or groove (depending on type of dampener used). 2 pointers on front engine cover. Use pointer nearest to outer circumference of dampener for proper 6 Cyl. Timing.

**CARBURETION:**

**Idle Setting**—Approx. 1 turn open. 2 screws used on V8—turning screws out gives richer mixture.

**Idle Speed**—Approximately 500 RPM.

**Float Level**—1.322-1.353" bottom of float to underside of bowl cover with needle valve seated (use Gauge No. 9550-A).

**Fuel Level (6 Cyl. C-O-E Trucks)**—1/2" ± 1/32" measured from top surface of main body to fuel.

**Accelerating Pump**—Center hole average setting. Inner hole for hot weather, Outer for cold weather.

**Fuel Pump Pressure:** (V8) 3 1/2-4 1/2 lbs., (6) 4-5 lbs.

**MANIFOLD HEAT CONTROL:** Automatic.

**V8 Engine**—Valve located between right end of exhaust pipe cross over and right exhaust manifold.  
**6 Cylinder**—At center of exhaust manifold just under intake manifold.

**SIX CYLINDER VALVE TAPPET CLEARANCE:**

All Valves—.013-.015" COLD.

►6 Cyl. High Speed Setting—.002" additional exhaust valve clearance recommended by manufacturer.

**SIX NOTE**—Adjustable, self-locking tappet screws used.

**“V8” VALVE TAPPET CLEARANCE: CAUTION**—Different settings required for each type camshaft:

►FIRST TYPE V8 CAMSHAFT NO. 8BA-6250-A

(no markings on Engine or Camshaft)

Intake—.010-.012" COLD. Exhaust—.014-.016" COLD

►SECOND TYPE V8 CAMSHAFT NO. 8BA-6250-B

(Engine Marked—“CAP, in-.014”, ex-.018”) ①

(Camshaft Marked—“B” on front end)

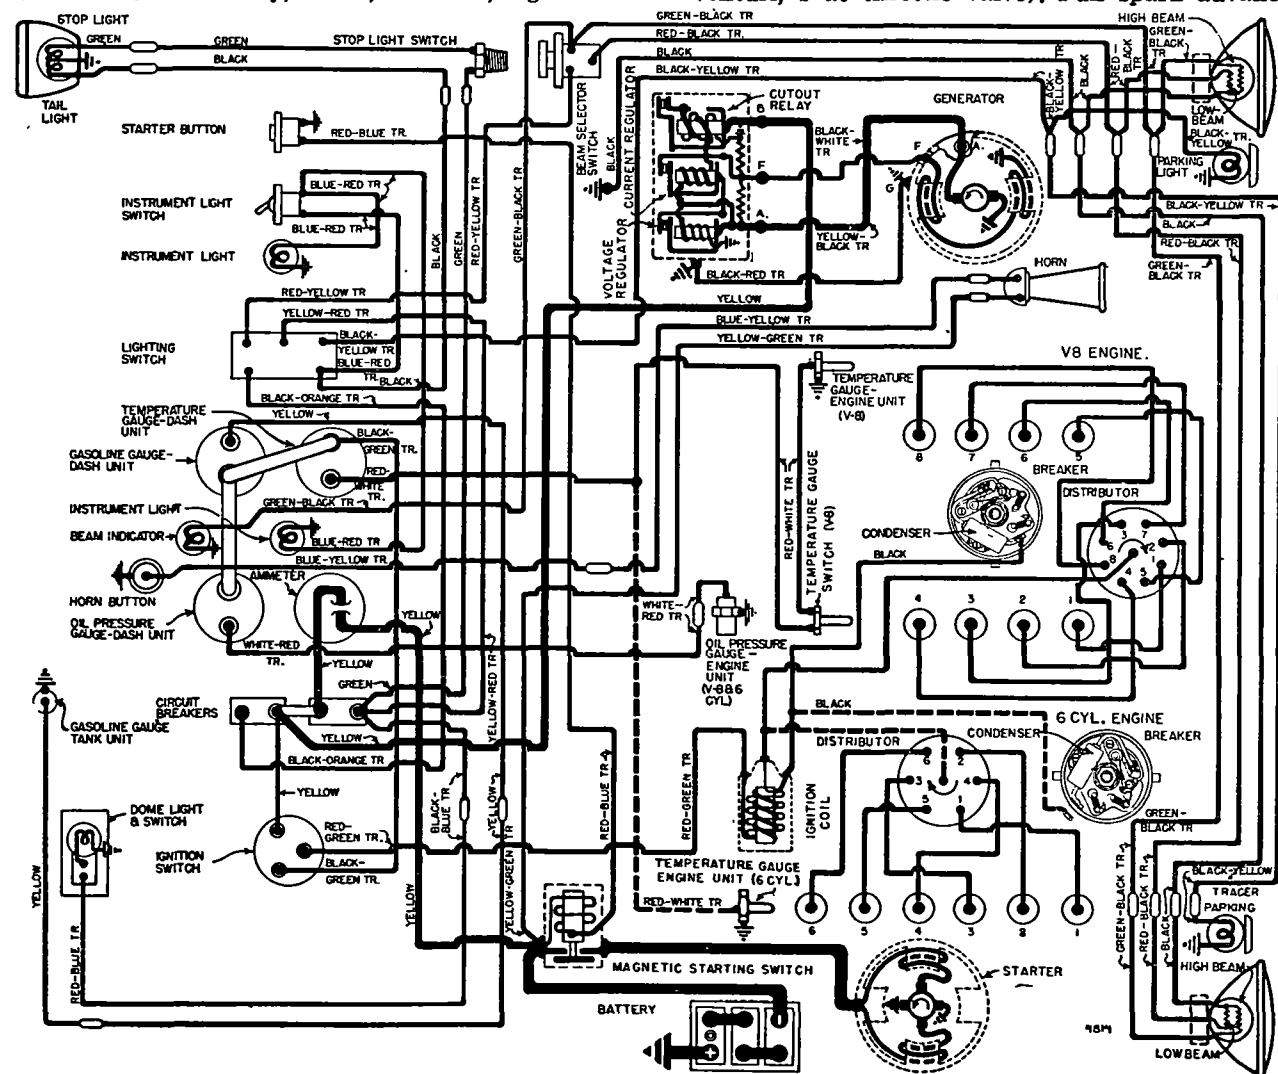

Intake Valves—.014" (.013-.015") COLD

Exhaust Valves—.018" (.017-.019") COLD

①—On top of block at center under valve cover.

**VALVE TIMING CHECK:** See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Ford No. 6A-11572-A (Mitchell type), No. 6A-11572-B (Briggs & Stratton type).

**Ignition Lock**—Ford No. 6A-11582-A.

**COIL:** Ford No. 7RA-12029-A. Metal can type.

**Location**—Next to distributor.

**Ignition Current**—Approx. 5.2-5.7 amperes at 6 volts, stopped. Primary resistance 1.05-1.15 ohms at 70°.

**CONDENSER:** Ford No. 7RA-12300-B.

**Capacity**—21-.25 microfarad.

**DISTRIBUTOR:** Less Distributor Cap and Rotor.

**V8 Eng.**—7RA-12127-C 6 Cyl.—7HA-12127

**Type**—New “Pressure” distributor with spark advance controlled by vacuum diaphragm moving breaker plate to advance spark against two breaker plate springs. Operating vacuum taken from 1 carburetor connection (2 passages inside carburetor, 1 at venturi, 1 at throttle valve). Full spark advance

obtained at 18-35 MPH. with normal road load or for part throttle operation at any speed.

► **NOTE**—Distributor is single contact type (no "coil loading" contacts are used). 6 Cylinder distributor angle-mounted on left side (shaft splined in drive gear).  
Breaker Gap—(6 Cyl.) .024-.026" (V8) .014-.016".  
Cam Angle—(6 Cyl.) 36° closed, (V8) 27° closed.  
Breaker Arm Spring Tension—17-20 ounces.  
Rotation—Clockwise viewed from above.

#### V8—Advance Performance (at Wide Open Throttle)

Distributor	Engine
Degrees Vacuum R.P.M.	Degrees Vacuum R.P.M.
0° ..... 0" ..... 200	0° ..... 0" ..... 400
1¼-2¼° ..... 0.4" ..... 500	2½-4½° ..... 0.4" ..... 1000
4¼-5¼° ..... 1.7" ..... 1000	8½-10½° ..... 1.7" ..... 2000
6¼-7¼° ..... 2.85" ..... 1500	12½-14½° ..... 2.85" ..... 3000
7½-8½° ..... 3.7" ..... 2000	15-17° ..... 3.7" ..... 4000

#### 6 Cyl.—Advance Performance (at Wide Open Throttle)

Distributor	Engine
Degrees Vacuum R.P.M.	Degrees Vacuum R.P.M.
0° ..... 0" ..... 200	0° ..... 0" ..... 400
1¾-3° ..... 0.4" ..... 500	3½-6° ..... 0.4" ..... 1000
5½-6¾° ..... 1.4" ..... 1000	11-13½° ..... 1.4" ..... 2000
11½-13° ..... 5.5" ..... 1000	23-26° ..... 5.5" ..... 2000

10½-11½° ..... 4.1" ..... 2000	21-23° ..... 4.1" ..... 4000

**Distributor Removal:** Disconnect vacuum line, take out hold-down screw, lift off. V8 distributor mounted at front of engine on right side. 6 Cylinder distributor mounted on left side of engine at center.

### IGNITION TIMING

V8 Engine ..... 2° BTDC.  
6 Cylinder ..... TDC.

**Timing Marks**—See Tune-Up data.

**Timing**—With #1 piston at firing position and timing mark aligned with pointer on front of engine, loosen distributor clamp screw, rotate distributor until contacts begin to open, tighten clamp screw. Check spark plug connections (see diagram), see that rotor opposite #1 terminal in cap.

**Timing (with Neon Timing Light)**—**CAUTION**—Vacuum line must be disconnected to avoid vacuum advance operating. Mark timing mark and pointer with white chalk (6 cylinder equipped with two pointers—See Dampener Mark above). Connect timing light to #1 spark plug. Idle engine and adjust distributor (as directed above) until mark and pointer aligned

### CARBURETOR

V8 Engine—Holley-Ford No. 7RT-9510-A

6 Cylinder—Holley-Ford No. 7HT-9510-A

Dual or double barrel (V8), single barrel (6 Cyl.) downdraft type with new vacuum passages for distributor operation.

See Carburetor Section for complete data.

**NOTE**—7HW-9510 Updraft Carburetor used on 6 Cyl. Parcel Delivery & Cab-Over-Engine Trucks. Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

**Metering Jets**—See Holley-Ford Jet Specification Table in Carburetor Section.

**Fast Idle:** Integral type. Operated by choke valve lever. No adjustment required.

### CARB. EQUIPMENT

**Fuel Pump (V8—std.):** Ford No. 7RA-9350-C.

6 Cyl. (std.)—Ford No. 7HA-9350-B.

V8 Optl. (fuel-&-vacuum)—Ford No. 7RA-9350-E.

**Pressure**—3½-4½ lbs. (V8), 4-5 lbs. (6 Cyl.).

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit**—Ford No. 7RC-9280 (all models).

**Tank Unit (All Closed Cabs)**—Ford No. 7RC-9275.

**Tank Unit (F-1, 2, 3 Panels)**—Ford No. 21C-9275B.

**Tank Unit (F-4, 5, 6 Panels & Bus)**—No. 7RT-9275.

See Carburetion Equipment Section for complete data.

**Air Cleaner V8, & 6Cyl. C-O-E (oil bath):** Ford No. 7RT-9600-C (1 quart capacity).

6 Cyl. exc. C-O-E (oil bath)—Ford No. 7HT-9600-A  
**Servicing (oil bath type)**—Clean and re-fill sump (to level mark) with same grade oil used in crankcase at 1000 mile intervals (**CAUTION**—Do not use lighter than SAE #30 oil in hot weather). Occasionally wash filter in cleaning fluid.

### BATTERY

**Std.**—Ford 81A-10655-A. 6 Volt, 17 Plate, 100 Amp. Hr.

**Grounded Terminal**—Positive (+) terminal.

**Dimensions**—L. 10½". W. 7¼". H. 7¼".

**Location**—At rear of engine on right side (V8), left side (6 Cyl.). On right running board under separate cover on Cab-Over-Engine trucks.

**School Bus (Spec. Equip. Other Models):** Ford No.

01A-10655-A. 6 Volt, 17 Plate, 120 Ampere Hour

**Grounded Terminal & Location**—As given above.

### STARTER

V8 Engine ..... Ford Model 7RA-11002

6 Cylinder (Early) ..... Ford Model 7HA-11002-A①

6 Cylinder (Late) ..... Ford Model 7HA-11002-B②

①—For use with B-11350 drive (10 tooth pinion).

②—For use with 7HA-11350 drive (9 tooth pinion).

**Armature No.**—Ford No. 18-11005.

► **Starter Motor Rusting Correction**—See "Electrical System Notes" in Ford Shop Notes.

**Drive—10 Tooth Pinion Type (All V8, Early 6 Cyl.)**  
Ford No. B-11350 (Bendix No. A1472) for use with 112 tooth flywheel ring gear.

**Drive—9 Tooth Pinion Type (Late 6 Cyl.) Ford Part No. 7HA-11350 (with 114 tooth flywheel ring gear).**

► **6 CYL. STARTER DRIVE CAUTION**—Use proper type drive. Both 9 and 10 tooth pinions used as listed above.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—20-22 ounces.

**Cranking Engine**—100 RPM., 190-215 amperes.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs. ....	1070	4.6	200
8 " ....	660	4.3	340
12 " ....	300	3.65	465
14 " ....	Lock	3.5	550

**Starting Switch:** Ford No. 21A-11450 Magnetic Switch mounted on front of dash next to battery (left side on 6 Cyl. Conventional Truck, right side all others) controlled by pushbutton, Ford No. 11C-11500.

**Removal:** On right front face of flywheel housing cover. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

### GENERATOR

**Ford Model No. 8BA-10002-A (less pulley & bracket.)**

**Armature No.**—Ford No. 8BA-10005-A.

2 brush type with current and voltage regulation.

**Charging Rate Adjustment**—None. See Regulator.  
**Maximum Charging Rate**—36 amperes, 7 volts. Controlled by regulator and dependent on load and battery condition.

**To Check Generator Output**—Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between

generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

► **CAUTION**—Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

#### Performance Data

**Amperes** ..... Engine R.P.M.  
33 ..... 1500

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—20-24 ozs.

**Removal (V8):** On support secured to valve chamber cover by stud and nut, driven by belt in tandem with water pumps. To remove, loosen stud nut and disengage generator belt, take out cap screw in mounting strap, lift generator off support.

**Removal (6 Cyl.):** Separate generator mounting bracket mounted on engine bracket on left side of engine at front. To remove, slack off belt by loosening mounting bracket bolts, take out mounting strap bolt, lift generator off mounting bracket.

**Belt Adjustment (V8):** Loosen 2 bolts on fan mounting bracket, loosen generator support mounting stud nut, raise generator up until side movement on belt midway between generator and water pump pulleys is ½" (thumb and finger pressure), tighten stud nut. Adjust fan belt in similar manner, tighten 2 fan bracket bolts.

**Belt Adjustment (6 Cyl.):** ½" deflection midway between generator and pump pulleys. To adjust, loosen 2 mounting bracket bolts under generator and cap screw in bracket slot behind generator.

### REGULATOR

**Regulator** ..... **Generator** ..... **Amperes**

51A-10505-A or C ..... 8BA-10002-A (Std.) ..... 30-33

8A-10505 ..... 8BA-10002-A (Std.) ..... 30-34

Voltage-current 3-Unit types.

See Electrical Equipment Section for complete data.

**NOTE**—Ground wire between generator and regulator must be in place.

#### Cutout Relay

**Cuts In**—6.0-6.4 volts COLD (will be slightly higher when warm).

**Cuts Out**—8 ampere discharge current (maximum).

**Contact Gap**—.010" (armature against upper stop).

**Air Gap**—.014" between armature and core with contacts open.

#### Voltage & Current Regulator

**Voltage Setting**—7.0-7.4 volts COLD (7.2-7.6 volts after 20 minutes run).

**Current Setting (51A)** ..... 30-33 amperes COLD

**Current Setting (8A)** ..... 30-34 amperes COLD

**Checking & Adjustment**—See Elec. Equip. Section.

**Air Gap**—.032-.035" between armature and core with contacts just closed.

► **CAUTION**—Make certain gauge contacts armature and not brass rivet on underside of voltage armature.  
**Contact Spring Tension**—5 ounces minimum with contacts just opening.

### LIGHTING

**Headlamps:** Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator**—Bulb between Fuel and Oil Gauges on panel. Lighted when Upper Beam in use.

C N TINUED ON NEXT PA E

## C NTINUED FROM PRECEDING PAGE

## Switches

Lighting—Ford No. 7RA-11654.  
Beam Selector—Ford No. 7RA-13532.  
Instrument—Ford No. 21C-13740.  
Stop Light—Ford No. 11A-13480.

## • MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Ford No. 51A-12258-A. Consists of two circuit breakers behind instrument panel:  
Top Unit Headlights. Lower Unit Auxiliary Lights.  
**HORNS:** Ford No. 7RC-13833. Single horn.

## ENGINE

## 6 CYLINDER 95 HORSEPOWER ROUGE 226

**ENGINE SPECIFICATIONS:** Own 7HT. Six cylinder, "L" head type.  
Bore—3.30". Stroke—4.40".  
Displacement—226 cu. ins. Rated HP—26.13.  
Developed Horsepower—95 at 3300 RPM.  
Compression Ratio—6.8-1 cast-iron head.  
Compression & Vacuum Reading—See Tune-Up data.  
**TIGHTENING TORQUES:** See Ford Shop Notes.  
**OTHER ENGINE DATA:** See 1949-50 FORD 6 CYL. PASSENGER CAR PAGES for Pistons, Piston Rings, Piston Pins, Connecting Rod, Crankshaft & Main Bearings, Camshaft, and Valves.

## ENGINE

## V8 100 HORSEPOWER ROUGE 239

**ENGINE SPECIFICATIONS:** Own 8R. Eight cylinder, "L" head, 90° Vee type with both cylinder banks and crankcase cast Enbloc.  
Bore—3.187". Stroke—3.75".  
Developed Horsepower—100 at 3600 RPM.  
Displacement—239 cu. ins. Rated HP—32.5.  
Compression Ratio—6.8-1 cast-iron heads.  
Compression & Vacuum Reading—See Tune-Up data.  
**TIGHTENING TORQUES:** See Ford Shop Notes.  
**OTHER ENGINE DATA:** See 1949-50 FORD V8 PASSENGER CAR PAGES for Pistons, Piston Rings, Piston Pins, Connecting Rod, Crankshaft & Main Bearings, Camshaft, and Valves.

## VALVE TIMING

## SIX CYLINDER VALVE TAPPET CLEARANCE:

All Valves—.013-.015" COLD.  
►6 Cyl. High Speed Setting—.002" additional exhaust valve clearance recommended by manufacturer.  
**SIX NOTE—Adjustable, self-locking tappet screws used.**  
"V8" VALVE TAPPET CLEARANCE: **CAUTION—Different settings required for each type camshaft:**

►FIRST TYPE V8 CAMSHAFT NO. 8BA-6250-A (no markings on Engine or Camshaft)

Intake—.010-.012" COLD. Exhaust—.014-.016" COLD

►SECOND TYPE V8 CAMSHAFT NO. 8BA-6250-B (Engine Marked—"CAP, in-.014", ex-.018")①

(Camshaft Marked—"B" on front end)  
Intake Valves .....014" (.013-.015") COLD  
Exhaust Valves .....018" (.017-.019") COLD

①—On top of block at center under valve cover.

**VALVE TIMING:** See Camshaft Setting on car pages.

## SIX CYL. "H" ENGINE

Intake Valves—Open 11° BTDC. Close 41° ALDC.  
Exhaust Valves—Open 48° BLDC. Close 10° ATDC.

## V8 "R" ENGINE

Intake Valves—Open at TDC. Close 44° ALDC.  
Exhaust Valves—Open 48° BLDC. Close 6° ATDC.  
Valve Timing Check—Intake valve opens at TDC (V8), 11° BTDC (6 Cyl.). Valve timing mark location on crankshaft pulley (V8), dampener (6 Cyl.).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings. Timing gears and distributor drive gear lubricated through drilled hole in front end of camshaft on V8. Timing gears lubricated by spray past camshaft thrust plate on 6 cylinder engine.

►OIL PAN CLEAN-OUT PLATE—On underside of oil pan, attached by 7 nuts. Remove to clean oil pump intake and screen, and oil pan.

Crankcase Capacity—5 quarts (6 quarts when changing filter).

Normal Oil Pressure—50 lbs. at 2000 RPM.

Oil Pressure Relief Valve (6 Cyl.): In cylinder block just to rear of oil filter mounting. Not adjustable. Spring Tension—12.62-12.88 ozs. at 1.14".

Oil Pressure Relief Valve (V8): In oil pump body.

Spring Tension—242-246 ozs. at 1.14".

V8 NOTE—Cylinder block oil relief valve not used.

Oil Pump (6 Cylinder): Rotor type. Mounted externally on right side of engine with drive gear at center of camshaft.

►Oil Pump Driven Gear Replacement before 6 Cylinder Engine No. 7H-219349—See Ford Shop Notes.

Oil Pump (V8 Engine): Gear type (two types: one equipped with spur gears, second helical gears). In crankcase at rear of engine.

Oil Filter: On 6 cylinder, mounted directly on block (no external oil lines) on left side at rear. On V8, mounted on left cylinder head. Replace cartridge every 5000 miles or more often if required.

Oil Filter Cartridge—Ford No. 7HA-6731-A.

Oil Pressure Gauge: King-Seeley Electric.

Dash Unit—Ford No. 7RC-9273 (K-S #41360).

Engine Unit—Ford No. 41A-9278 (K-S #9530).

See Miscellaneous Section for complete data.

Crankcase Ventilation: Filter element in oil filler cap (inlet) with outlet pipe in rear valve chamber extending down on right side of 6 cylinder engine, or from top of engine down behind fan and out along left side of V8 engine.

V8 NOTE—Outlet pipe may be equipped with filter element just below upper elbow.

Servicing—Wash screen in cleaning fluid and wet with engine oil when dry every 2500 miles.

## COOLING

**Cooling System:** Pressure type with relief valve in filler cap, by-pass in block, and belt-driven water pump (2 used on V8).

Capacity—18 quarts (6 Cyl.), 23 quarts (V8).

Pressure Valve—In radiator filler cap. Ford Nos. 41A-8100-B (with knurled edge) or 41A-8100-A (flange type grip—use with 51A-8138 radiator cap gasket). Opens at 3½-4½ lbs.

Water Pump (6 Cylinder): Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing. No lubrication required.

See Water Pump Section for complete data.

Belt Adjustment—See GENERATOR.

Water Pumps (V8 Engine): Two used. Centrifugal, belt-driven, packless type. Shaft mounted on pre-packed ball-bearing at front, and a bushing next to seal. Oil cup provided for bushing lubrication.

See Water Pump Section for complete data.

►CAUTION—V8 WATER PUMP LUBRICATION: Fill oil cup in pump with SAE #20 engine oil every 1000 miles. When oiling new pump insert piece of wire down alongside wick in oiler to permit air to escape from cavity.

Belt Adjustment—See GENERATOR.

**Thermostat:** In cylinder head water outlet (2 on V8). Ford No. 7HA-8575-A (6 Cyl.), 8RT-8575-A (V8). Two makes: Standard-Thompson or Fulton-Sylphon.

Setting (6 Cyl.)—Starts to open 157-162°F.

Setting (V8 Eng.)—Starts to open 148-153°F.

**Temperature Gauge:** King-Seeley Electric.

Dash Unit—Ford No. 7RC-10883 (K-S #41370).

Engine Unit—Ford No. 99A-10884 (K-S #7000).

Temp. Switch (V8 only)—Ford No. 01A-10990 (K-S No. 8355) in left cylinder head.

See Miscellaneous Section for complete data.

## CLUTCH

Long Model 10CF-TI (F-1 with 3 spd. Transmission). Long Model 11CF-CI (All Other Models).

Semi-centrifugal, single plate, dry disc types.

See Clutch Section for complete data.

Facings (10CF)—Moulded. 10" O.D. .125" thick.

Facings (11CF)—Woven (School Bus), Moulded (Others). Outside Diameter 11". Thickness .137".

Pedal Adjustment: 1-1¼" (F-1 with 3 spd. Trans.), 1½-1¾" (All Others) pedal free travel. Adjusting clevis provided at forward end of connector rod between pedal shaft and equalizer shaft.

Removal: Remove transmission (see TRANSMISSION Removal below). Install wooden wedges between each release lever and cover to hold clutch in released position, take out 6 cover cap screws, lift assembly out. NOTE—Flywheel housing may have to be removed on some models.

## TRANSMISSION

## 3-SPEED TYPE

Own Make. 3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

NOTE—This transmission standard on F-1 Series. Heavy Duty 3-speed or 4-speed transmissions Optl.

Removal: Remove propeller shaft by disconnecting rear universal and sliding shaft out of transmission. Disconnect clutch linkage and speedometer cable. Remove front floor plate. Remove nuts and washers from two engine rear support bolts. Raise rear end of engine (use block of wood on jack under engine) until rear support clears mounting bolts. Remove transmission mounting cap screws, pull transmission straight back until main drive gear shaft clears clutch, lift transmission out through floor opening.

## TRANSMISSION

## HEAVY DUTY 3-SPEED TYPE

Own Make. Heavy duty, 3-speed. Helical gear, constant-mesh, synchro-mesh (Second & High). Sliding spur gear (Low & Reverse).

See Transmission Section for complete data.

NOTE—This transmission standard on F-2, F-3 Series, optional on F-1, F-4, F-5.

Removal: Same as for 4-Speed type following.

## TRANSMISSION

## 4-SPEED TYPE

Own Make. 4-speed, sliding spur gear type.

See Transmission Section for complete data.

NOTE—This transmission standard on F-4, F-5, F-6 Series, optional on F-1, F-2, F-3.

Removal: Remove seat cushion, floor mat, and transmission cover on floor. Support engine with jack under flywheel housing (use wood block on jack), raise jack until engine weight is off rear mounting. Free coupling shaft support bearing from cross-member by removing nuts on two bolts, disconnect

front universal joint by taking out four bolts mounting universal joint flange at hand brake drum and disconnect intermediate universal joint at support bearing by removing nuts on "U" bolts (tape bearing caps in place to prevent losing needle bearings), remove front shaft. Remove clutch equalizer shaft by taking out pin in clutch shaft and clevis pin at lever and pulling equalizer shaft off the bracket (CAUTION—Do not lose spring and bushing halves). Remove two bolts in engine rear support. Disconnect speedometer shaft at transmission. Remove transmission cap screws from flywheel housing, pull transmission straight back until clutch (main drive gear) shaft clears, then lift transmission out through floor opening.

NOTE—To remove brake assembly, take out 2 cap screws in hand brake lever sector on transmission case and two cap screws in brake adjusting screw bracket, disconnect hand brake link from transmission and anchor adjusting screw from brake band, remove brake band assembly and hand brake lever.

### UNIVERSALS

Spicer. Needle bearing type, two used (Series F-1, and F-5, F-6 C-O-E 110"), three used with slip joint at forward end of rear shaft behind coupling shaft support bearing (All Others).

SERIES F-1 NOTE—Propeller shaft is one-piece type with slip joint provided by front universal yoke sliding on splined drive shaft in transmission.

See *Universals Section for complete data.*

Spicer Model Nos.			
Series	Front	Center	Rear
F-1①	1278-102X	None	1278-102X
F-1②	1311-102X	None	1318-105X
F-2, F-3	1318-103X	1311-102X	1318-103X
F-4, F-5, F-6	1358-54X	1351-5107X	1358-5104X
F-5, F-6 110"	1351-517X	None	1358-5104X
F-5 194"	1358-514X	1351-5107X	1358-5107X

①—3-Speed Transmission. ②—4-Speed Trans.

**Coupling Shaft Center Bearing:** Consists of cushion mounted ball bearing bolted to underside of frame intermediate cross-member. Bearing is mounted on end of coupling shaft in a sleeve with felt retainer sleeve on each end and bearing baffle on front end.

### REAR AXLE

#### F-1 SERIES—SEMI-FLOATING HYPOID TYPE

Own Make. Semi-floating, Hypoid Gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).

►NOTE—AXLE NOT SAME AS USED ON FORD CAR.

See *Rear Axle Section for complete data.*

Ratio (Standard)—3.73-1 (41-11).

Ratio (Optional)—4.27-1 (47-11).

Backlash—.003-.006". Shim adjustment.

**Removal:** Raise rear of truck. Disconnect rear universal. Remove axle shafts (see instructions below). Disconnect brake line at "T" on left side of axle housing, and hand brake cable. Remove nuts on rear spring "U" bolts, drive bolts up free of housing, lower axle assembly and remove from underneath.

**Axle Shaft Removal:** Remove wheel. Take off drum. Remove 4 axle retainer nuts (work through opening in axle shaft flange). Use Puller No. 4235 and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal).

**Wheel Bearing Adjustment:** None. Pre-lubricated sealed ball-bearings.

### REAR AXLE

#### F-2, 3, 4, 5 SERIES—FULL-FLOATING TYPE

Own Make. Full-floating, Spiral Bevel Gear type with Hotchkiss drive.

See *Rear Axle Section for complete data.*

Ratios: Standard		Optional
F-2, F-3	4.86-1 (34-7)	4.11-1 (37-9)
F-4	5.14-1 (36-7)	5.83-1 (35-6), 6.67-1 (33-5)
F-5	6.67-1 (33-5)	5.83-1 (35-6), 5.14-1 (36-7)

Backlash—.004-.018".

**Removal:** Raise rear end of frame, remove axle shafts (see below), wheel and drum assemblies. Disconnect hydraulic brake line at each wheel and hose at bracket (bleed brake lines when re-connected). Remove backing plate assemblies. Disconnect rear universal. Remove nuts on rear spring "U" bolts, drive bolts up free of housing, lower axle assembly and remove from underneath truck.

**Axle Shaft Removal:** Remove hub cap, remove nuts on 8 hub studs holding axle shaft flange in place, turn 2 special screws (in tapped holes in flange) up evenly to break flange loose from hub, back these screws out, strike axle shaft flange at center to loosen centering cones on studs, remove cones, pull axle shaft out (wheel not disturbed).

**Wheel Bearing Adjustment:** Remove axle shaft (see above), use special bearing adjustment wrench and remove bearing locknut (outer nut), and lockwasher. Adjust bearings by turning bearing adjusting nut (inner nut) up until tight and then backing nut off 1/8 turn. Install bearing lockwasher making certain that it fits over dowel pin on adjusting nut, install bearing locknut and turn this nut up tight. NOTE—When installing axle shaft make certain that gasket in place under shaft flange, cones in place on studs and that two loosening screws backed off sufficiently so that stud nuts can be tightened securely. Turn two loosening screws in just enough to prevent loosening in service.

### REAR AXLE

#### TWO-SPEED TYPE—STD. F-6 SERIES, OPTL. F-5 SERIES

Own Make. Vacuum Operated Shift, Two-speed, Full-floating, Spiral Bevel Gear (final drive), spur gear planetary unit (reduction gearing) with Hotchkiss drive.

See *Rear Axle Section for complete data.*

Ratio—5.83-1 (Direct Drive), 8.11-1 (2nd Speed).

Backlash—.004-.018".

**Removal:** Same as for standard axle (above) after disconnecting vacuum line at hose connection.

### SHOCK ABSORBERS

Houde (Houdaille). Direct acting, hydraulic type.

►Shocks are sealed (cannot be refilled or repaired).

F-1, F-2, F-3—Ford No. 7RC-18045-B, Houde No. H-160 (Front). 7RC-18080-B, Houde H-170 (Rear). F-4, F-5, F-6 NOTE—Houde rotary type shocks optional equipment for front end only (Ford No. 8T-18045 Right, No. 8T-18046 Left). These shocks are adjustable and can be refilled.

See *Shock Absorber Section for complete data.*

### FRONT SUSPENSION

Front Axle—Conventional "I" beam section with Reverse Elliott ends and semi-elliptic springs.

Kingpin Inclination—7° crosswise.

Caster—1° minimum, to 3 1/2° maximum. Both wheels should be equal within 1/2°.

NOTE—Caster angle controlled by wedge shims inserted between axle pads and springs. To increase caster, insert taper shims equally at both sides.

Camber—1/4° minimum, to 1° maximum. Right wheel must never exceed Left wheel. Axle may be bent cold to correct Camber providing proper tools used to prevent crushing axle flange.

Toe In—1/16". Set at 1-10 ratio to Camber. Toe In increases with load and should be set with truck empty. To adjust, loosen clamp bolts, turn tie rod.

### STEERING GEAR

F-1, F-2, F-3—Ford No. 7RC-3504.

F-4, F-5, F-6—Ford No. 7RT-3504.

Cab-Over-Eng. & Parcel Del.—Ford #7RW-3504-B.

Worm-and-Roller types with "push-pull" adjustment. Gemmer 305 & 335 design. See Gemmer.

See *Steering Gear Section for complete data.*

### BRAKES

#### F-1 SERIES

Service—F-1: Ford-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data.*

Wheel Cylinders—Diameter: Front wheel 1.0655" (hone limit 1.0675"). Rear 1.003" (hone limit 1.005").

Drums—11" composite (cast iron and steel).

Lining—Molded or woven. Width 2". Thickness 3/16".

Length per shoe: 11 29/32".

Clearance—.010" at each end of secondary shoe with primary shoe forced out against drum (adjusting screw in each wheel backed off 14 notches or "clicks" from point where shoes drag on drum).

Hand Brake: See Service Brakes (above).

### BRAKES

#### F-2, F-3, F-4, F-5, F-6 SERIES

Service—F-2 (All Wheels), F-3 (Front): Ford-Lockheed Hydraulic, self-centering, double anchor type. Hand lever applies rear wheel service brakes.

F-3 (Rear Wheels), F-4, 5, 6 (All Wheels)—Ford-Lockheed Hydraulic, double anchor type. Hand lever applies rear wheel service brakes (F-3), independent shaft brake at transmission (F-4, F-5, F-6).

►Parcel Delivery Note—Ford-Lockheed Hydraulic, double anchor, with 1 3/8" I.D. drums and independent shaft brake at transmission.

See *Brake Section for complete data.*

Wheel Cylinders—Diameters: F-2 All Wheels, F-3 Front 1.378" (hone limit 1.382") forward shoe, 1.003" (hone limit 1.005") reverse shoe. F-3 Rear Wheels;

F-4, F-5, F-6 Front Wheels 1.378" (hone limit 1.382").

F-4, F-5, F-6 Rear Wheels 1.503" (hone limit 1.507").

Drums—Diameters: 12" F-2 All, F-3 Front, 14" F-3

Rear, F-4, 5, 6 Front, 15" F-4, 5, 6 Rear Wheels.

Lining—Molded type (all shoes).

Wheels		Shoe Lgth.	
Front	Rear	Width Thick.	Pri. See.
F-2, 3	F-2	23/32" 3/16"	13 1/2" 10 3/8"
F-4, 5, 6	F-3	2" 1/4"	15 17/32" 10 3/4"
	F-4, 5, 6	3 1/2" 5/16"	16 21/32" 11 9/16"

Clearance—Least possible amount without drag.

Hand Brake (F-3): Hand lever applies rear wheel service brakes. See Service Brakes above.

Hand Brake (F-4, F-5, F-6): Independent external contracting band on drum at rear of transmission.

Adjustment—See *Ford Shop Notes.*

Drum Diameter—7.81".

Lining Woven. Lgth. 24.6". Width 2 1/2". Thick. 1/4".

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

### 1949 MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Bolts .....	30-35	360-420
Spark Plugs .....	30	360
Con. Rod Bearing Bolts .....	40-45	480-540
Main Bearing Cap Bolts .....	85-95	1020-1140
Flywheel Mounting Bolts .....	35-40	420-480
Camshaft Sprocket Nut .....	35-40	420-480
Camshaft Thrust Plate .....	12-15	144-180
Timing Gear Cover .....	12-15	144-180
Eng. Front End Plate 5/16" .....	12-15	144-180
Eng. Front End Plate 7/16" .....	40-50	480-600
Int. & Exh. Manifolds .....	30-35	360-420
Oil Pan Screws .....	12-15	144-180
Water Pump Mtg. Bolts .....	12-15	144-180
Vibration Dampener Bolt .....	100-130	1200-1560
Steering Wheel Nut .....	10-15	120-180
Steering Gear Mtg. Bolts .....	25-30	300-360
Pitman Arm Nut .....	110 min.	1320
Rear Spring "U" Bolt Nuts .....	45-55	540-660
Wheel Mtg. Nuts or Bolts .....	85-90	1020-1080
Differential Bearing Caps .....	38-42	456-504
Rear Axle Shaft Nut .....	160 min.	1920

**CAUTION**—Torque figures given are for clean and dry threads. If threads oiled, reduce torque approx. 10%.

## CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use a Torque Indicating Wrench to tighten cylinder head bolts, tighten in correct sequence as shown in diagram. Heads should be tightened cold and rechecked after engine temperature reaches 150°F. Tightening Torque: See Tightening Specifications.

KAISER-FRAZER

## ENGINE REMOVAL

### 1949 MODELS

**ENGINE REMOVAL:** Proceed as follows:

1. Remove Hood (see Hood Assembly above).
2. Drain cooling system.
3. Disconnect windshield wiper hose at manifold (or at vacuum pump), disconnect fuel line at point where fuel pump flexible line connected to tubing at frame, disconnect exhaust pipe at manifold.
4. Remove Radiator (see Radiator removal below).
5. Remove Battery. Disconnect cables, lift out.
6. Disconnect Wiring. Disconnect ground cable near left front engine mounting, disconnect wiring at starter, generator, and distributor.
7. Remove Air Cleaner.
8. Disconnect Temperature Gauge by removing bulb from cylinder head (Frazer), disconnecting lead (Kaiser). Disconnect oil gauge by disconnecting line at flexible hose connection on left side of engine (Frazer), disconnecting lead at engine unit (Kaiser).

9. Disconnect throttle linkage at carburetor.
10. Disconnect heater inlet and outlet hoses.
11. Remove transmission (and overdrive if used). See Transmission and Overdrive Removal on car pages.
12. Disconnect clutch throw-out linkage.
13. Install lifting bracket at #7 and #28 cylinder head bolts—see cylinder head diagram (remove distributor if required). Raise engine slightly with hoist.
14. Disconnect front engine mountings.
15. Hoist engine from car with engine turned at slight angle to frame with front end of engine raised to clear shroud. **CAUTION**—Do not damage engine accessories when lifting engine from car.

## ORIGINAL BORE & PISTONS

### 1949 MODELS

**BORE & PISTON SIZES:** Engines originally equipped at factory with special oversize pistons may be identified by code letter following engine number:

"N"—Pistons are .020" Oversize.

"AN"—Pistons .020" Oversize. Main and connecting rod bearings Undersize (See Original Bearing Sizes).

"NX"—Pistons .020" Oversize. Main bearings are Undersize (see Original Bearing Sizes following).

## PISTONS

### 1949 MODELS

**PISTON IDENTIFICATION:** Two types of aluminum alloy pistons used which can be identified as follows:

► **CAUTION**—Piston weight different on each type.

**Strut Type Piston**—Has wide strut embedded within skirt at each piston pin boss and drilled oil drain holes in both #3 and #4 ring grooves.

**T-Slot Type Piston**—Has horizontal slot in lower (#4) ring groove and short vertical slot on one side of piston skirt. #3 oil ring groove has drilled oil drain holes.

### 1949 MODELS

**REPLACEMENT PISTONS:** See "Piston Identification" for types used. Each type piston furnished in following sizes:

Kaiser-Frazer Part No.		
Piston Size	Strut Type	T-Slot Type
Standard .....	200108	201947
.005" Oversize .....	200357	201949
.010" Oversize .....	200358	201950
.020" Oversize .....	200359	201951
.025" Oversize .....	202484	202487
.030" Oversize .....	200360	201952
.040" Oversize .....		203751
.050" Oversize .....		203752
.060" Oversize .....		203753

► **CAUTION**—Piston weight different on each type.

## PISTON RINGS

### 1949 MODELS

**REPLACEMENT RINGS:** Rings furnished as single rings (12 Compression, 12 Oil Rings required), or in complete sets (1 Set per car) as follows:

Single Rings		
Ring Size	Compression—Part No.	Oil
Standard .....	200111	200112
.010" Oversize .....	200361	200364
.020" Oversize .....	200362	200365
.030" Oversize .....	200363	200366

### Ring Sets

Ring Size	Cyl. Size ①	Part No.
Standard .....	Std. to .009" OS	203145
.020" Oversize .....	.010" to .029" OS	203146
.040" Oversize .....	.030" to .049" OS	203147
.060" Oversize .....	.050" to .069" OS	203148

①—Use ring indicated for oversize cylinders within this range (check End Gap).

## ORIGINAL BEARING SIZES

### 1949 MODELS

**MAIN & CONNECTING ROD BEARING SIZES:** Engines originally equipped with special undersize main and connecting rod bearings may be identified by code letter following engine number:

"A"—Main & Connecting Rod Bearings .010" Undersize.

"X"—Main Bearings .002" Undersize.

"AN"—Main & Connecting Rod Bearings .010" Undersize and Pistons Oversize (see Original Bore and Pistons).

"NX"—Main Bearings .002" Undersize and Pistons Oversize (see Original Bore and Pistons).

## CRANKSHAFT & MAIN BEARINGS

### 1949 MODELS

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE:** Consists of plastic rod material supplied in envelope marked with scale which gives bearing clearance in thousandths of an inch when used to measure flattened plastigage in bearing cap. Use Plastigage as follows:

**Bearing Clearance Check**—Remove bearing cap, wipe all oil from bearing insert and shaft journal (**CAUTION**—When checking main bearings, keep all other bearing caps tight so that crankshaft weight will not cause incorrect reading). Place piece of Plastigage Rod (1/8" shorter than width of bearing) across bearing insert in cap, re-install bearing cap and tighten to recommended torque (see Tightening Specifications). Remove cap, match widest width of flattened Plastigage with correct graduation of scale on envelope (marking of this graduation is clearance).

### 1949 MODELS

**CRANKSHAFT ENDPLAY ADJUSTMENT:** Requires removal of radiator, vibration dampener, timing gear cover, timing gears and chain (remove as an assembly), thrustplate, and shims.

**NOTE**—Endplay can be checked at flywheel (with clutch pan off) without further disassembly.

**Endplay Adjustment:** **CAUTION**—Two thrust washers (1 at each side of front bearing) must be in place when checking endplay. With front end of crankshaft disassembled as described above, re-install thrust plate (do not install shims at this time), install checking sleeve No. KF-28 on end of shaft, secure sleeve on shaft with vibration dampener bolt and lockwasher. Mount dial indicator at front of engine with button against front end of shaft. Pry shaft to rear, set indicator at zero and then pry shaft forward, reading will be endplay. Select shim pack (shims furnished .002" and .008" thick) so that when installed, endplay will be .004-.006".

► **CAUTION**—Make certain that clearance exists between slinger on rear end of crankshaft and upper and lower filler blocks in rear end of crankcase.

## 1949 MODELS

**FRONT & REAR FILLER BLOCKS:** Lower filler blocks (front and rear) are bolted on lower face of crankcase to close oil pan opening (filler blocks must be removed to replace pan gasket). Rear filler blocks (additional upper filler block guard in crankcase) are grooved for cork oil seals which bear on polished surface of crankshaft directly behind oil slinger. Filler blocks can be removed and replaced without disturbing crankshaft as follows:

**Front Filler Block (Lower) Servicing:** Remove by taking out mounting capscrews and timing gear cover capscrews which enter the filler block. When installing filler block, first install oil pan side gaskets (No. 200266), install filler block (use Perma-tex), install new end gasket (No. 200267) on block.

**Rear Filler Block (Lower) Servicing:** Same as for the lower front block (above) except for crankshaft oil seal (square cork gasket or graphite impregnated seal). Remove and discard old gasket or seal. Install new seal (no. 204654) in same manner as described below for Rear Filler Block (Upper) Guard. Install lower filler block after upper filler block guard has been installed.

**Rear Filler Block (Upper) Guard Servicing:** Guard is seated in groove in crankcase and can be "rotated" out without disturbing crankshaft after lower filler block removed. Remove and discard old gasket or seal, clean out seal groove. Install new graphite impregnated seal (no. 204654), flatten seal slightly and use mandrel or rod to seat seal in groove by rolling from ends toward the center (ends must extend slightly above flat surface of guard). Do not use shellac or sealing compound in groove.

► **CAUTION**—Oil seal in both Upper Filler Block Guard and Rear Filler Block must be centered with crankshaft. If necessary, seal can be built up using 1/32" thick gasket material, 3/16" wide, as shims shellacked to groove in block or guard behind seal.

**CAMSHAFT & BEARINGS**

## 1949 MODELS

**CAMSHAFT REMOVAL:** Camshaft can be removed with radiator off and engine in car as follows:

1. Remove timing gears (remove both gears and chain as an assembly). This requires removal of vibration dampener and pulley, timing gear cover.
2. Remove cylinder head.
3. Remove fuel pump.
4. Remove oil pan, oil pan return tube & oil pump.
5. Lift valves, using valve spring lifter tool C-482 (see Note below), block valves up by inserting a clothespin or block of wood under each valve head.
6. Block up Valve Lifters (lift each lifter up by hand and fasten in upper position with a wire).
7. Remove Camshaft Thrustplate by taking out two screws retaining thrustplate on crankcase.
8. Pull camshaft out through front of engine.

**Camshaft Bearing Replacement Note**—Requires removal of engine from car for access to plug at rear of block which must be removed.

**TAPPET CLEARANCE ADJUSTMENT**

## 1949 MODELS

**TAPPET CLEARANCE ADJUSTMENT PROCEDURE:** Car manufacturer recommends valves be adjusted in order listed (see table below). Remove right front

wheel and access cover in fender splash shield for access to valve compartment. Remove spark plugs so that engine can be turned over by moving fan or fan belt. By setting valves in fully raised position (left hand column), valves in right hand column will be on "low" side of cam in position for tappet adjustment.

**Valve Tappet Adjustment Order**  
(numbered from FRONT of engine)

Fully Raise Valve	Then ADJUST Valve:
Nos. 1 and 3.....	Nos. 10 and 12
Nos. 8 and 9.....	Nos. 4 and 5
Nos. 2 and 6.....	Nos. 7 and 11
Nos. 10 and 12.....	Nos. 1 and 3
Nos. 4 and 5.....	Nos. 8 and 9
Nos. 7 and 11.....	Nos. 2 and 6

Tappet Clearance—.014" COLD, All Valves.

**OIL PAN REMOVAL**

## 1949 MODELS

**OIL PAN REMOVAL:** Raise front end of car and support it securely on stands. Disconnect steering drag link at idler arm on frame, turn wheels to right and work drag link clear of oil pan. Drain oil, remove oil pan capscrews and lockwashers, slide pan to rear.

► **INSTALLATION NOTE**—Lower Filler Blocks (front and rear) must be removed to install new oil pan side gaskets. See "Front & Rear Filler Blocks" under Crankshaft & Main Bearings (above) for data.

**OIL PUMP**

## 1949 MODELS

**OIL PUMP SERVICING:** Pump can be removed from engine (with oil pan off) by taking off retaining nut on stud on #3 main bearing cap and pulling pump straight down to disengage drive gear and distributor drive coupling. Service pump as follows:

**Disassembly**—Take out cotter pin and remove screen float assembly. Remove cover and gasket. Drive out pin holding upper drive gear on shaft (pin peened in place), drive out shaft from gear. Remove idler gear (remove idler shaft if required). Take off lower drive gear (press fit and keyed to shaft).

**Oil Pump Clearances**—Check as follows:

- 1) —Pump Body Bushing: if over .005" clearance between pump body and ends of lower drive gear teeth, replace bushing and ream to .500-.501".
- 2) —Pump Shaft: shaft diameter .4990-.4985".
- 3) —Lower Drive Gear: end of gear should be .001-.006" beyond gasket seat on pump body.
- 4) —Upper Drive Gear: .002-.004" clearance between underside of gear and upper end of pump body. Controlled by pressing lower drive gear on shaft until this clearance obtained.

**NOTE**—Cover plate should be replaced if worn from contact with gears, or if cracked.

**Oil Pump Bushing (in Cylinder Block)**—Replace if worn or loose (can restrict oil gallery if loose). Replace by using drift inserted in distributor drive shaft bore from top of block. Install new bushing from below (must be flush with bottom of block).

**Reassembly**—Press upper drive gear on shaft with pin hole at right angles to tongue on shaft. Insert new pin and peen ends flush with gear. Install shaft and gear in pump body. Press lower drive

gear on shaft (with key in place) until .002-.004" clearance obtained between upper drive gear and upper end of pump body. Press idler gear shaft in body, install idler gear. Install cover using new gasket and pin oil screen float assembly on cover. Check shaft and gears—must rotate freely when turned by hand.

**Oil Pump Installation**—Set #1 piston at top dead center. Insert distributor main drive shaft from top of block. Install pump with pump drive shaft tongue engaging slot in lower end of distributor main drive shaft and in such a position that when installed, slot in upper end of distributor main drive shaft will be approx. parallel to side of block (slot pointing fore-and-aft), install lock washer, tighten mounting nut. Remove distributor shaft for cyl. head installation.

► **CAUTION**—Check Ign. Timing after pump installed.

**RADIATOR**

## 1949 MODELS

**RADIATOR REMOVAL:** Drain water, disconnect hose connections. Take out radiator-to-shroud screws, 6 total (3 each side). Lift core out, tilting upper end to rear as core being raised.

**PROPELLER SHAFT**

## 1949 MODELS

**CENTER SUPPORT BEARING:** Consists of a ball bearing on rear end of front propeller shaft mounted in rubber in steel plate mounted on frame.

**Removal & Disassembly**—Disconnect front and intermediate universal joints, take off nuts on center support frame mounting bolts, remove front shaft and support bearing assembly. Clamp front shaft in a vise, remove bolt, lockwasher, and plain washer on rear end of shaft (in universal joint companion flange), pull companion flange using Puller C-452. Remove rear dust shield. Pull support plate off bearing insulator, remove bearing insulator. Use jaw type puller (KF-56) and pull bearing off shaft, remove front dust shield.

► **CAUTION**—Do not wash bearing in gasoline or solvent.

**Reassembly**—Install front dust shield and bearing (use driver KF-11) on splined end of front propeller shaft (bearing must support shield firmly). Place rubber insulator over bearing (small diameter to rear). Coat outer surface of insulator with liquid soap and slip support plate in place over insulator (flanged end of sleeve to front, insulator bottomed against bead on inside of sleeve). Install rear dust shield, companion flange, flat washer, lock washer, and bolt. Tighten bolt until flange and dust shield bottom against shaft shoulder (25-30 ft. lbs. torque).

**Bearing Support Installation:** When installing front propeller shaft and support bearing assembly in car, install washers and insulators on each support stud on frame cross-member in the following order: Spacer, Bushing, Front Support Insulator (fluted end to rear), Front Support Washer (has large hole), Support Bearing Plate, Rear Support Insulator (fluted end forward), Rear Support Washer (has small hole), and nut (tighten to 15-20 ft. lbs.).

► **CAUTION**—Install center bearing support on frame studs so that sleeve in which bearing seated slopes downward toward the rear to provide correct propeller shaft angularity.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On left front door hinge post.  
**1949 Numbers—**Frazer F-495—F-495-001000 and up,  
 Frazer Manhattan F-496—F-496-001000 and up.  
**Body Number Note—**Stamped on plate on right  
 front face of dash in engine compartment.

**ENGINE NUMBER:** Stamped on pad on left front upper  
 corner of engine block and on Engine Name  
 Plate on left side of crankcase.

**NOTE—**Numerals following Engine Model Designa-  
 tion (first part of Engine Number on Engine Name  
 Plate) indicates Engine Plant: 4—Detroit, 8—Mus-  
 kegon.

► **Engine Number Symbol (Special Bore & Bearing  
 Sizes) See "Original Bore & Pistons" & "Original Bear-  
 ing Sizes" in Frazer Special Data. NOTE—**Symbol  
 consists of 1 or 2 letters following engine number.

**TUNE-UP**

**COMPRESSION PRESSURE:** 120-130 lbs. (7.3-1 Heads)  
 at cranking speed of 70 RPM. (engine hot, all plugs  
 out, throttle wide open). All cylinders must be equal  
 within 10 lbs.

**NOTE—**7.3-1 Heads marked by "73" stamped on head  
 directly above engine number pad on block.

**VACUUM READING:** 17½" steady idling at 550 RPM.

**VIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .032".

**Plug Type—**Auto-Lite A-5.

**DISTRIBUTOR:** Breaker Gap—.022" (.018-.022").

**Cam Angle—**38° closed, 22° open.

**Breaker Arm Spring Tension—**17-20 ozs.

**Automatic & Vacuum Advance—**See Ignition.

**Condenser Capacity—**.20-.25 microfarad.

**IGNITION TIMING:** 4° BTDC.

**Timing Procedure—**See Ignition Timing.

**Timing Mark—**4th. graduation before top dead center  
 "0" mark on vibration dampener.

► **CAUTION—**Engine must be idling below 450 RPM  
 when setting timing.

**Octane Selector Setting—**Set for slight ping when  
 accelerating with wide open throttle.

**CARBURETION:**

**Idle Setting—**1-1½ turns open—2 screws. Turn  
 screws out for richer mixture.

**Idle Speed—**550 RPM.

**Float Level—**Flush to 1/32" from top of each float  
 to gasket seat on cover with valve closed (bowl cover  
 assembly inverted).

**Accelerating Pump—**Lower Hole (min.) Normal.

**Choke Setting:** Centered (coil housing at index mark).

**Fuel Pump Pressure:** 3-4¼ lbs.

► **CAUTION—**Pump pressure must not exceed 4½ lbs.

**MANIFOLD HEAT CONTROL:** Automatic thermo-  
 static type. See that valve operates freely.

**VALVE TAPPET CLEARANCE:** .014" All Valves, Cold.

► **Adjustment Procedure—**See Frazer Special Data.

**NOTE—**Remove splash shield under right front  
 fender for convenience in adjusting valves.

**Valve Timing Check—**See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Kaiser&Frazer No. 204485.

**Lock Cylinder—**Kaiser-Frazer No. 203885 (with key).

**COIL:** Auto-Lite IG-6001 or 9A. On left side of engine  
 opposite distributor.

**Ignition Current—**4.8 amperes at 6.3 volts (stopped).

**CONDENSER:** Auto-Lite Part No. IG-2671K.

**Capacity—**.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGS-4214. Full auto-  
 matic advance type with auxiliary vacuum spark  
 control and octane selector adjustment.

**Breaker Plate Identification—**Maximum vacuum  
 advance limited by slot in plate. Plate marked #5.

**Breaker Gap—**.022" (.018-.022").

**Cam Angle—**38° closed, 22° open.

**Breaker Arm Spring Tension—**17-20 ozs.

**Rotation—**Counter-clockwise viewed from above.

Degr.	Distr.	Automatic Advance	Eng.
Degr.	R.P.M.	Degr.	R.P.M.
Start	325	0	650
1	450	2	900
6.5	1200	13	2400
8	1475	16	2950
9	1675	18	3350

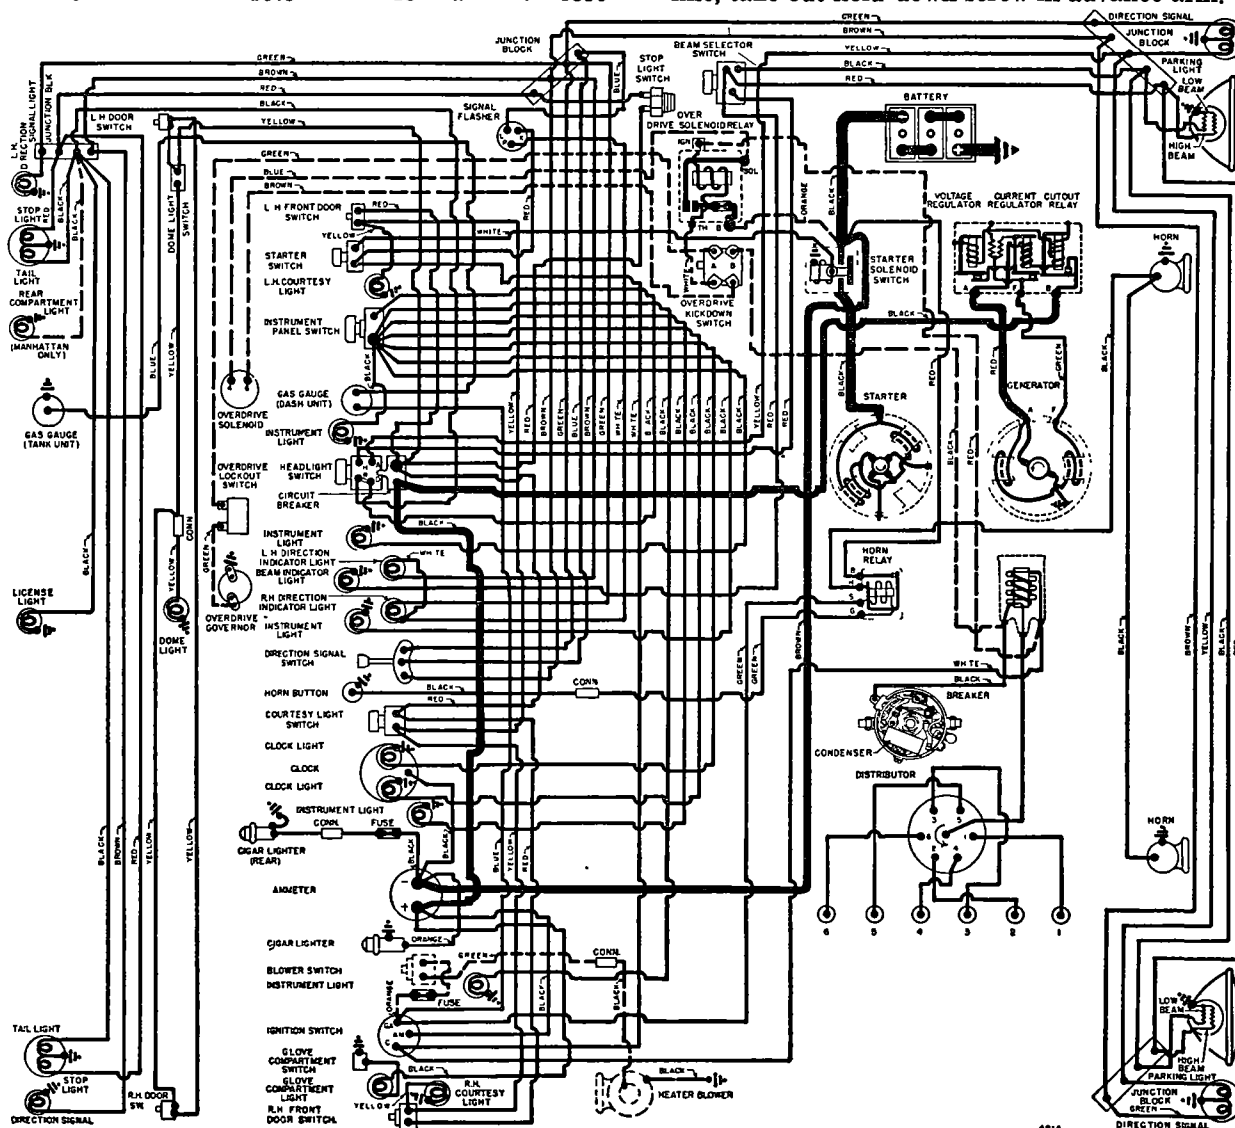

**Octane Selector—**Manual adjustment at distributor  
 providing advance and retard. See Ignition Timing.

**Vacuum Spark Control:** Auto-Lite (integral type).  
 Linked directly to breaker plate. Provides additional  
 advance at speeds above idling except when engine  
 accelerated or operated with wide open throttle  
 when spark retarded by return spring in unit.

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	10"
3	6°	13"
5	10°	15"

**Distributor Removal:** On cylinder head between #4  
 and #5 cylinders. To remove, disconnect vacuum  
 line, take out hold-down screw in advance arm.

1949 FRAZER MANHATTAN F-496 BODY WIRING SH WN AB VE

## IGNITION TIMING

Std. Setting ..... 4° BTDC.

**Timing Mark**—Timing mark located on vibration dampener. Consists of "0" mark at top dead center with 1° graduations before and after this point.

**Timing (with Timing Light C-693)**—Mark fourth degree mark before "0" top dead center mark on vibration dampener with chalk or white paint. Connect timing light to #1 spark plug terminal and direct light at timing mark. Idle engine below 450 RPM. (back off throttle stopscrew to decrease normal idle speed of 550 RPM). Loosen hold-down screw in advance arm, center screw in slot, tighten hold-down screw. Loosen cap screw in end of arm under distributor, rotate distributor until timing mark appears in line with pointer, tighten cap screw. Check octane selector setting.

► **CAUTION**—Reset engine idling speed at 550 RPM.

**Octane Selector Setting**—Set for slight ping when accelerating with wide-open throttle. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if no ping noted), counter-clockwise (if ping too severe).

## CARBURETOR

**Carter WCD Type 723S**, 1¼" Dual (double barrel), Downdraft type with Fast Idle and Climatic Control. Casting No. on Flange—550.

See *Carburetor Section for complete data.*

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See *Tune-Up data.*

**Metering Rods & Jets**—See *Carter Jet Table in Carburetor Section.*

**Fast Idle:** Carter Dual (WCD) type.

See *Carburetion Equipment Section for complete data.*

**Setting**—.018" throttle opening with choke valve held closed and throttle lever stopscrew backed off.

**Automatic Choke:** Carter Climatic Control (Dual Carburetor Type).

See *Carburetion Equipment Section for data.*

**Setting**—Centered (coil housing at index mark).

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544539 Oil-bath type.

**Element**—AC No. 22.

**Servicing**—Empty and clean reservoir, wash cleaner in kerosene, refill to indicator line with SAE No. 50 engine oil (No. 20 for below freezing temp.) at 2000 mile intervals or when engine tuned.

**Fuel Pump:** AC No. 1539074 combination Fuel-and-Vacuum Pump.

**Replacement Pump**—AC No. 582.

1949 FRAZER F-495 BODY WIRING

► **CAUTION**—Install pump with rocker arms **UNDER** camshaft eccentric.

See *Carburetion Equipment Section for data.*

**Pressure**—3-4¼ lbs.

**Gasoline Gauge:** Auto-Lite electric type.

**Dash Unit**—A-L No. 11586A.

**Tank Unit**—A-L No. 11571A.

See *Carburetion Equipment Section for data.*

## BATTERY

**Auto-Lite Type 1M-100D**, 6 Volt, 15 Plate, 105 Ampere Hour capacity (20 hour rate).

**Grounded Terminal**—Positive (+) terminal grounded at left front engine support. Engine ground cable connected at same point.

**Location**—In engine compartment, on left side.

## STARTER

**Auto-Lite Model MAW-4054**, Armature MAW-2128.

**Drive**—Barrel type Bendix Drive No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
8.50 "	400	4.0	400
6.0 "	Lock	2.0	335

**Starting Switch:** Magnetic switch K-F Part No. 204752 on splash shield near starter and controlled by push-button on instrument panel.

See *Electrical Equipment Section for complete data.*

**Removal:** Flange mounted on left front face of fly-wheel housing. To remove, disconnect cable, take out flange mounting screws.

## GENERATOR

**35 Amp.**—Auto-Lite GDZ-4818A, Arm. GDZ-2006F.

**45 Amp.**—Auto-Lite GGU-6001B, Arm. GGU-2006F.

Two brush type with voltage and current regulation.

**Charging Rate Adjustment**—None (see Regulator).

**Maximum Charging Rate**—As given below.

### Performance Data (GDZ-4818A)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970
35	8.0	1800-2000
		2150-2350

### Performance Data (GGU-6001B)

45	8.0	1550 Max.
----	-----	-----------

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—(GDZ) 1.60-1.78 amperes at 6.0 volts,

(GGU) 1.6-1.8—amperes at 6.0 volts.

**Motoring Current**—(GDZ) 4.16-4.60 amps. at 6.0 volts, (GGU) 5.5-6.5 amperes at 6.0 volts.

**Removal:** Pivot mounting at left front of engine. To remove, disconnect leads, take out clamp bolt and pivot bolts. NOTE—Remove battery for access.

**Belt Adjustment:** Adjust by pulling generator out with 15 lb. force in line with adjuster link with all mounting bolts loose. A 6 lb. adjustment for new belt is recommended.

## REGULATOR

**35 Amp.**—Auto-Lite VRP-4004F-2.....for GDZ Gen.

**45 Amp.**—Auto-Lite VAV-4002C.....for GGU Gen.

Vibrating type voltage and current regulators.

See *Electrical Equipment Section for complete data.*

NOTE—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See *Electrical Equipment Section for settings at other temperatures.*

**Checking (without breaking seal) & Adjustment**—See *Electrical Equipment Section.*

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—As follows:

**VAV-4002C** 44-46 amperes (marked '45' on cover).

**VRP-4004F-2** 34-36 amperes (marked '35' on cover).

**Checking (without breaking seal) & Adjustment**—See *Electrical Equipment Section.*

**Contact Gap & Air Gap**—Same as Voltage Regulator.

## LIGHTING

**Headlamps:** Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch.

See *Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red jewel at bottom of speedometer dial. Lighted when upper (country beams) in use.

**Direction Signal:** Mitchell (United Specialties) type. See *Electrical Equipment Section for complete data.*

**Direction Indicators**—Right and Left indicator lights on face of speedometer. Lighted when direction signal on same side of car in operation.

CONTINUED N NEXT PAGE

CONTINUED FR M PRECEDIN PA E

**ENGINE**

**ENGINE SPECIFICATIONS:** Own (Continental). Six Cylinder, "L" head type.

**Bore**—3 5/16" (3.3125-3.3145"). See "Original Bore & Pistons" in *Frazer Special Data*.

**Stroke**—4 3/8".

**Displacement**—226.2 cu. ins. **Rated HP.**—26.3.

**Developed Horsepower**—112 at 3600 RPM.

**Compression Ratio**—7.3-1.

**NOTE**—7.3-1 Heads marked by "73" stamped on left front directly above engine number on block.

**Compression & Vacuum Reading**—See *Tune-Up data*.

**ORIGINAL BORE & BEARING SIZES:** See *Frazer Special Data*.

**TIGHTENING TORQUES:** See *Frazer Special Data*.

**CYLINDER HEAD INSTALLATION:** See *Frazer Special Data*.

**ENGINE REMOVAL:** See *Frazer Special Data*.

**PISTONS:** Aluminum alloy, Cam-ground. Tin-plated, T-slot type. Length 3 9/16".

**Clearance**—See Fitting new pistons.

**Removal**—Pistons and rods removed from above.

► **CAUTION**—Mark piston and rod assemblies before removal to insure re-installation in same cylinder.

**Fitting New Pistons:** Use .0015" feeler stock 1/2" wide inserted on side opposite slot. Pull to withdraw feeler must be 5-10 lbs.

**Replacement Pistons:** See *Frazer Special Data*.

**Installing Pistons:** Slot in skirt toward left or away from camshaft.

**PISTON RINGS:** Two compression, two slotted oil rings, all above pin. Third ring groove drilled, fourth groove slotted for oil drainage.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	.0925-.0935"	.008-.016"	.0025-.004"
Comp. (#2)	.0925-.0935"	.008-.016"	.0015-.0035"
Oil (#3,4)	.1550-.1545"	.008-.016"	.001-.0025"

**Installing Rings:** Slide marked "TOP" (compression rings) upward.

**Replacement Rings:** See *Frazer Special Data*.

**PISTON PIN:** Diameter—.8591-.8593". Lgth.—2 13/16". Floating type with lock ring at each end.

**Pin Fit in Piston**—Push fit with piston heated to 212°F. (heat piston in water at 212°F. to install new pins).

**Pin Fit in Rod Bushing**—Light press fit. When installing new bushings, ream bushings with DD-82-2 Reamer to inside diameter of .8593-.8595" for new std. pins.

► **CAUTION**—Pin bushing must protrude 1/64" on each side of rod.

**Replacement Pins:** Std. size and .003", .005" Oversize.

**CONNECTING ROD:** Length—7". Weight—29.6 ozs.

**Crankpin Journal Diameter**—2.0619-2.0627".

► **CAUTION**—Special bearing size used in some engines. See "Original Bearing Sizes" in *Frazer Special Data*.

**Lower Bearing**—Removable steel-backed, babbit-lined type. No shims.

**Clearance**—.0005-.0015". **Sideplay**—.006-.010".

**Plastigage Note**—Can be used to check bearing clearance. See *Plastigage data* under "Crankshaft & Main Bearings" in *Frazer Special Data*.

**Bearing Adjustment:** None. Replace bearings. Do not file rods or bearing caps.

**Replacement Bearings:** Furnished Std. Size and .001", .002", .010", .012" Undersize.

**CAUTION**—Install bearings with tang engaging notch in rod and cap and oil hole aligned with oil spurt hole in rod.

**Installing Rods:** Mark rods and bearing caps. Install with marks together and toward camshaft in same order as when removed. Oil spray hole in lower end of rod toward camshaft. **NOTE**—Lower bearings offset with narrow side of rod toward nearest main bearing (#1, 3, 5 toward front; #2, 4, 6 toward rear of engine).

**CRANKSHAFT:** Four bearing, counterweighted type with vibration dampener on forward end.

**Journal Diameters**—2.3744-2.3752". **NOTE**—Allowable taper or out-of-round .001".

► **CAUTION**—Special bearing size used in some engines. See "Original Bearing Sizes" in *Frazer Special Data*.

**Bearings**—Removable, steel-backed babbit-lined.

**Clearance**—.0005-.0015".

**Plastigage Note**—Can be used to check bearing clearance. See *Plastigage data* under "Crankshaft & Main Bearings" in *Frazer Special Data*.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. Upper main bearing shells can be "rotated" out by installing tool KF-8 in crankshaft journal hole (lug on tool engages edge of bearing when crankshaft rotated).

**Filler Block (Front & Rear) Removal & Installation**—See "Crankshaft & Main Bearings" in *Frazer Special Data*.

**Replacement Bearings:** Furnished Std. size and .001", .002", .010", .012" Undersize.

**End Thrust:** Taken by front (#1) bearing (special thrustwasher used with unflanged bearings). Controlled by shims installed between front crankshaft thrust washer (ahead of #1 bearing) and crankshaft thrust plate (behind crankshaft sprocket).

**Endplay**—.004-.006".

**Endplay Adjustment**—See "Crankshaft & Main Bearings" in *Frazer Special Data*.

**CAMSHAFT:** Four bearing. Two-sprocket chain drive. **Journal Diameters**—#1, 1.8725-1.8735"; #2, 1.8095-1.8105"; #3, 1.7472-1.7485"; #4, 1.2475-1.2485".

**Bearing Diameters (I.D.)**—#1, 1.8745-1.8755"; #2, 1.8115-1.8125"; #3, 1.7495-1.7502"; #4, 1.2495-1.2505".

**Bearings**—Steel-backed, babbitted bushings.

**Clearance**—.002-.004".

**Bearing Adjustment:** None. Replace bushings with camshaft removed.

**Replacement Bushings:** Replace as set (furnished finished line-bored and do not require reaming after installation). Use KF-4 Camshaft Bearing Remover & Replacer.

► **CAUTION**—Align oil hole in bushings and block.

**End Thrust:** Taken by thrust plate on front of engine (between front bearing journal and camshaft sprocket **Endplay**—.003-.007".

**Camshaft Removal:** See "Camshaft & Bearings" in *Frazer Special Data*.

**Timing Chain:** Non-adjustable type. Width 1". Pitch .500", Length 23" or 46 links.

► **Timing Chain Caution**—Morse and Link Belt chains used. Interchangeable only as complete sets with both sprockets.

**Camshaft Setting:** Mesh chain with 9 links (or 10 link pins inclusive of pins opposite marks) between marks on sprockets with #6 piston at top dead center on compression stroke.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 33/64"	.3414-.3406"	5 3/16"
Exhaust	1 21/64"	.3382-.3390"	5 3/16"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.3481"	.0008-.0026"
Exhaust	45°	.3315"	.0032-.0050"

**Valve Guides:** Pressed in block. Replace when stem clearance exceeds maximum (above). Ream new guides for correct clearance using Reamer C-249.

**Valve Guide Installation**—Place guide (tapered end of guide toward top) in position in bore. Use Tool KF-27 when installing guides to correct position of 1 7/32" below top face of cylinder block.

**Valve Springs:** Check spring with tester C-647. Pressure should be 45 ± 2 1/2 lbs. at 1 21/32".

	Spring Pressure	Length
Valve Closed	51 lbs.	1 43/64"
Valve Open	113 lbs.	1 5/16"

**Valve Lifters:** Barrel type. Two types used and are interchangeable. One type using tappet adjusting screw with locknut, other type is self-locking.

**Clearance**—Selective fit. Lifter should rotate in bore with slight drag. Service by installing oversize lifter.

**Replacement Lifters**—Furnished Std. size and oversize. Oversize identified as follows: "A", .0005", "B", .001", "C", .0015", "D", .002", "K", .005", "S", .008".

**VALVE TIMING**

**Tappet Clearance:** .014" All Valves, Cold.

► **Adjustment Procedure**—See *Frazer Special Data*.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 10° BTDC. Close 60° ALDC.

**Exhaust Valves**—Open 55° BLDC. Close 10° ATDC.

**Valve Timing Check**—With .014" tappet clearance (running clearance), #1 exhaust valve should close with piston 10° or .045" after top dead center with ten-degree mark after dead center "0" mark on dampener aligned with pointer at front of engine.

**LUBRICATION**

**Lubrication System:** Pressure to crankshaft, connecting rod, camshaft bearings, exhaust valve lifters, timing chain. Oil pump located in oil pan.

**Crankcase Capacity**—5 qts. (refill), 5 1/2 (dry).

**Normal Oil Pressure**—35-40 lbs., 2000 RPM., 30 MPH.

**Oil Pressure Regulator**—Located in right side of cylinder block below the valve chamber and toward the rear of engine. Adjustable by replacing spring or install washers No. 200272 between end of spring and plug.

**Oil Pan Removal:** See *Frazer Special Data*.

**Crankcase Ventilation:** Filter element in oil filler cap (air intake). Outlet pipe located on front valve cover plate on right side of engine. **NOTE**—Two types of valve cover and outlet pipe assemblies used—can be identified by angle of cut-off at lower end of tube: (Early 1949 Cars) angular cut-off faces forward, (Later 1949 Cars) angular cut-off faces toward rear.

► **CAUTION**—Do not install later valve cover & outlet pipe assembly on early cars (may cause loss of oil through tube).

**Oil Pump:** Gear Type. In crankcase.

**Oil Pump Servicing**—See *Frazer Special Data*.

**Oil Filter:** Replace cartridge at 10,000 mile intervals or more often if required by operating conditions.

## COOLING

**Cooling System:** Sealed system (relief valve in filler cap) with positive circulation and thermostatic control.

**Capacity**—13½ qts. (13 qts. at driving level).

**Pressure Valve**—AC No. 850501 (Radiator Filler Cap). 3¼-4¼ lbs.

**Radiator:** No. 202906 (17" wide). Side mounted to shroud with six bolts.

**Radiator Removal**—See *Frazer Special Data*.

**Water Pump:** Centrifugal type with ball bearing shaft. See *Water Pump Section* for complete data.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** Kaiser-Frazer No. 200160 (Std.), No. 202349 (for Permanent Anti-freeze only). In water outlet elbow on cylinder head.

**Setting (Std. type)**—Begins to open at 149-156°F. Fully open at 176°F.

**Temperature Gauge:** Auto-Lite No. H-11103, Frazer No. 200453. Not electric.

## CLUTCH

**Auburn Model 9251-15 or Borg & Beck Model 9A7.**

► **Clutch Identification**—Types can be identified by number of pressure plate springs—3 (for Auburn), 9 (for Borg & Beck—cover marked "951").

See *Clutch Section* for complete data.

**Facings (Borg & Beck)**—Woven asbestos, 2 required. Inside Diam. 6". Outside Diam. 9¼". Thickness ⅛".

**Facings (Auburn)**—Moulded metallic or Raybestos, 2 required. I. D. 6". O. D. 9¼". Thickness .135".

**Pedal Adjustment:** Pedal free travel ⅝-¾". To adjust remove return spring, clevis pin and release clevis end of adjusting link from clutch pedal shaft bellcrank. Turn clevis end in or out to obtain correct pedal free movement. Install adjusting link clevis on bellcrank, insert clevis pin, cotter pin, and return spring.

**Removal:** Remove transmission (see *Transmission Removal* below), remove housing pan. Position of clutch on the flywheel must be marked before removal. Rotate flywheel, using Flywheel Turning Tool C-771 and loosen six bolts equally before removing. Remove clutch pressure plate and cover assembly and clutch disc.

## TRANSMISSION

**Warner Model AS23-T86E (Std.), Model AS24-T86E with new Type R10B Overdrive (Optl.)**—Constant-mesh, synchro-mesh (Second & High), sliding gear (Low and Reverse).

See *Transmission Section* for complete data.

**Transmission Control:** Remote control type with gear-shift lever mounted on steering column.

See *Transmission Section* for complete data.

**Removal:** Remove clutch pedal return spring, clevis pins at cross shaft coupling and slide coupling onto cross shaft. Disconnect gear shift rods at transmission levers. (If overdrive is installed disconnect overdrive shift rod at overdrive unit). Disconnect speedometer cable at transmission (plug hole in transmission to prevent loss of lubricant). Disconnect wiring to overdrive. Support rear of engine using Tool KF-47 or suitable jack under clutch housing, disconnect propeller shaft at front companion flange. Free engine rear support from cross-member by taking out two insulator bolts at transmission. Disconnect and remove master cylinder operating rod. Disconnect hand brake cable at equalizer and engine rear crossmember. Remove eight bolts at frame side rails and remove crossmember. Remove four bolts holding transmission to clutch housing and pull out the transmission. (If overdrive is installed it will be removed with transmission).

## OVERDRIVE

**Warner Type R10B (with special AS24-T86E Transmission).** Optl. Equipment. New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."

See *Transmission Section* for complete data.

**Overdrive Solenoid**—D-R 1118132, K-F No. 200911.

**Governor**—Kaiser-Frazer No. 200908.

**Control Relay**—Auto-Lite HRT-4001A, K-F Part No. 201636. Has 20-ampere fuse on BAT terminal.

**Kick-down Switch**—Kaiser-Frazer No. 203451.

**Lock-out Switch**—Kaiser-Frazer No. 200915.

**Removal:** Remove drain plug in overdrive housing and drain lubricant. Disconnect wiring at shift fork rail switch terminals. Disconnect speedometer cable at overdrive housing, control wire at control shaft lever on overdrive housing and the tie-down clips. Disconnect front propeller shaft at front companion flange and move shaft away from housing. Remove Overdrive and Transmission as a unit (see *Transmission Removal* above).

## UNIVERSALS

**Detroit Series 4200.** Ball-and-Trunnion. 3 used with intermediate universal at propeller shaft support.

See *Universals Section* for complete data.

**Propeller Shaft & Support Bearing:** Two shafts used with support bearing on frame crossmember at intermediate universal.

**Propeller Shaft & Support Bearing Servicing**—See "Propeller Shaft" in *Frazer Special Data*.

## REAR AXLE

**Spicer (Salisbury) Model 41-2.** Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

**Ratio (Without Overdrive)**—3.91-1 Std., 3.73-1 or 4.09-1 Optl.

**Ratio (With Overdrive)**—4.27-1 or 4.55-1.

**Backlash**—.003-.006". Shim adjustment.

**Removal:** Hoist rear end of car and place supports under frame. Remove rear wheels and drums (use Puller C-319). Disconnect propeller shaft at rear universal flange, disconnect hydraulic brake line at connector on axle housing, disconnect rear shock absorbers and sway eliminator links (when used) at spring seat, disconnect parking brake cables. Disconnect both springs at front hanger and rear shackle, remove axle and spring assembly from beneath car. NOTE—Axle can be removed without disturbing springs by taking out spring "U" bolts. **Axle Shaft Removal**—Remove rear wheel and drum using puller C-319. Disconnect hydraulic brake line at backing plate and brake cable. Remove outer oil seal and backing plate (CAUTION—do not lose adjusting shims between backing plate and housing flange). Pull axle shaft and bearing assembly out.

**Wheel Bearing Adjustment:** Adjust endplay by adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Make certain that shim thickness at right wheel is .060" (to center thrust block on differential shaft), adjust endplay at left wheel.

**Endplay**—.001-.006".

## SHOCK ABSORBERS

**Monroe**—Direct acting, hydraulic type. Serviced by replacement (mountings serviced separately).

See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—5½° preferred (4¾-5¾° cross-wise).

**Caster**—0° preferred (—1° to +1°).

**Camber**—¼° preferred (0° to ¾°).

**Toe In**—1/16". Adjust by turning both tie rods.

**Steering Geometry (Toe-out)**—Inner wheel 23°. Outer wheel 20°. No adjustment.

## STEERING GEAR

**Gemmer Model 305**—Worm-and-Roller type with "push-pull" adjustments.

See *Steering Gear Section* for complete data.

## BRAKES

**Service Brakes:** Bendix (Lockheed) Hydraulic type with floating self-centering shoes (no anchor pin adjustment). Hand lever applies rear service brakes. See *Brake Section* for complete data.

**Drums**—Composite (cast-iron & steel). Diameter 11"

**Lining**—Molded type. Width 2". Thickness 13/64". Length 12¼" (forward shoe—all wheels), 10 1/32" (rear shoe—all wheels).

**Clearance**—.008" at heel and toe of each shoe.

**Braking Power**—56% Front wheels, 44% Rear.

**Hand Brake:** See *Service Brake* data (above).

## MISC. MECHANICAL

**Windshield Wiper:** Vacuum type, cable operated. See *Miscellaneous Section* for complete data.

**CYLINDER HEAD****1949-50 MODELS**

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in correct sequence as shown in the diagrams. Procedure for tightening Cast Iron and Aluminum heads is as follows:

HUDSON 6

HUDSON 8

**Cast Iron Heads**—With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts.

**Aluminum Heads**—With the engine cold, tighten all nuts to correct tension. Run engine until thoroughly warm, allow engine to cool off, and then recheck all nuts. Do not tighten aluminum heads when warm.

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS****1949-50 MODELS**

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews (6).....	70-75	840-900
Cylinder Head Stud Nuts (8).....	45-50	540-600
Main Bearing Capscrews (6).....	75-80	900-960

Steering Gear to Frame.....	50-60	600-720

**ORIGINAL BORE****1949-50 MODELS**

**ORIGINAL BORE SIZE:** Original production (new engine) bore size indicated by code mark stamped on lower edge of valve chamber opposite cylinders. See table below for size and code marks.

**1949-50 SIX CYLINDER BORE SIZE**

Code Mark	Cylinder Diameter	Code Mark	Cylinder Diameter
Standard Size		.010" Oversize	
B .....	3.5625"	AO .....	3.572"
C .....	3.563"	BO .....	3.5725"
D .....	3.5635"	CO .....	3.573"
E .....	3.564"	DO .....	3.5735"
F .....	3.5645"	EO .....	3.574"
		FO .....	3.5745"
		BB .....	3.5825"
		DD .....	3.5835"
		FF .....	3.5845"

**1949 EIGHT CYLINDER BORE SIZE**

Code Mark	Cylinder Diameter	Code Mark	Cylinder Diameter
Standard Size		.010" Oversize	
A .....	3.000"	AO .....	3.010"
B .....	3.0005"	BO .....	3.0105"
C .....	3.001"	CO .....	3.011"
D .....	3.0015"	DO .....	3.0115"
E .....	3.002"	EO .....	3.012"

Note—Recondition cylinders to size for which replacement pistons and rings available (see below).

**Original Piston Size**—Sizes and markings for original pistons same as for Replacement Pistons. See Replacement Piston Table and Piston Markings.

**PISTONS****1949-50 MODELS**

**REPLACEMENT PISTONS:** Standard and oversize pistons marked by letter stamped on head and furnished for cylinder diameter sizes listed below. See Replacement Rings (following) for ring sizes.

**Piston Markings**—Code marks stamped on head of piston indicate the following: Letter indicates piston size and cylinder size for which piston to be fitted (see table below). Number indicates piston weight in ounces (if 2 numbers used, one over the other, top number indicates weight in ounces, lower number 1/4 ounces). All pistons in one engine should be of same weight (carry same weight marks on head). NOTE—Original factory installed pistons carry two additional numbers, one number indicates cylinder in which piston installed, second number indicates cylinder block number.

**1949-50 SIX CYLINDER PISTON SIZES**

Piston Mark	Piston Size	Cylinder Size
Std. Size		
B .....	3.560"	3.5625"
C .....	3.5605"	3.563"

**PISTON RINGS****1949-50 MODELS**

**REPLACEMENT RINGS:** Use Standard or Oversize rings for replacement pistons listed above. Ring size and pistons for each size as follows:

Six Cylinder		Eight Cylinder	
Ring Size	Piston Mark	Ring Size	Piston Mark
Standard	B,C,D	Standard	A,B,C,D,E,F
.003" OS	F	.003" OS	J
.005" OS	J,L	.005" OS	L,P
.010" OS	P,AO,BO	.010" OS	AO,BO,CO
.010" OS	CO,DO	.010" OS	DO,EO,FO
.015" OS	EO,FO,LO	.015" OS	JO,PO,LO
.020" OS	BB,DD,FF	.020" OS	BB,DD,FF
		.030" OS	BOOO,EOOO

**Piston Ring Sets**—Cast-iron or steel segment types furnished standard size, .010" and .020" oversize.

Note—If rings filed, keep clearance at pin uniform with end gap (.006-.014" desired on 6 cyl., .004-.009" on 8 cyl.).

**ORIGINAL BEARING SIZES****1949-50 MODELS**

**CRANKSHAFT SIZE CODE:** Engines built with undersize parts are identified by following marks stamped on bottom face of cylinder block to left front corner:

PU—.010" undersize connecting rod crank pins.

MU—undersize main bearing journals.

PMU—.010" undersize main and connecting rod pins.

**Crankshaft Mark**—Undersize dimension located on front face of #1 counterweight.

**Bearing Marks**—Undersize Main Bearings marked by green paint and part number stamped on back for Eight Cylinder engines, stamped on back of bearing shells only on Six Cylinder engines.

**CRANKSHAFT & MAIN BEARINGS****1949 EIGHT CYLINDER**

**LINE REAMING OF UN-FINISHED BEARINGS:** See *Main Bearing Line Reaming Data for 1948 Hudson Eight in previous release.*

**1949-50 SIX CYLINDER**

**FRONT AND REAR OIL SEALS:** (Front)—Install oil seal using Tool J-2776. Press seal tightly in place. (Rear)—Crowd seal material into outer groove of bearing cap by hand and with Installer J-2779, drive seal tightly into groove by tapping handle of tool with bronze hammer. Large diameter of tool cylinder should be to front of cap. After seal has been seated in cap and in the block, and while tool is still compressing seal, cut the seal off flush with top face of cap. **Do not cut seal too short.** Seal must entirely fill the groove.

**CAMSHAFT & BEARINGS****1949-50 MODELS**

**CAMSHAFT REMOVAL:** Remove radiator, cylinder head, right front wheel, fender side shield. Disconnect vacuum pump line, windshield wiper, hose and fuel pump. Remove distributor and oil pump. Remove grille center support cover, upper baffle and right hand moulding, remove grille intermediate baffle and moulding. Place block of wood between oil pan and head of jack, raise engine 1½". Remove vibration dampener, screw lock and dampener, dampener key and gear case cover. Remove coil and valve covers. Remove valve and valve springs (use Tool KMO-484). On Six Cyl. raise and secure tappets enough to permit camshaft removal. On Eight Cyl. remove tappet retainer screws, plates, washers, and lockwashers, tappets and guides. Align sprocket or gear markings and remove camshaft sprocket or gear. Remove camshaft and thrust washer.

**OILING SYSTEM****1949 EIGHT CYLINDER**

**CHECKING OILING SYSTEM:** See that oil lines securely in place and not bent or damaged. Drop oil reservoir and clean thoroughly every six months. When installing oil reservoir, check flapper valve

on rear main bearing oil return tube (soldered in rear of reservoir). Valve must work freely and should be slightly open with reservoir level. Holes in gaskets between crankcase and oil dipper tray and between tray and reservoir must align with oil return tube and register with hole in bearing cap. **NOTE**—Beginning with 1942 engines, oil suction pipe was redesigned and lower end extended into center of oil reservoir to insure constant supply of oil to oil pump.

**OIL PAN REMOVAL****1949-50 MODELS**

**OIL PAN REMOVAL:** Raise front end of the car. Drain the oil pan. Take out Center Steering Bracket bolts and move bracket aside. Remove oil pan bolts. Slide pan out to rear and down. **NOTE**—No special tools required.

**OIL PUMP****1949-50 SIX CYLINDER**

**OIL PUMP REMOVAL:** Lift off distributor cap and rotate crankshaft until distributor rotor is in firing position for #1 cylinder. Keep engine in this position while pump is removed. Remove three oil pump to block attaching studs and remove oil pump.

**Pump Inspection**—Disassemble pump by taking off cover and drive gear (drive out pin and press gear off shaft). Thoroughly clean parts and dry with compressed air. Check pump parts as follows:

- 1)—With rotors in pump body, turn shaft so that one lobe on inner rotor pushed into notch in outer rotor, check clearance between opposite lobe of inner rotor and inner face of outer rotor. If clearance greater than .010" replace both rotors.
- 2)—Height (or thickness) of both rotors should be at least .873". Diameter of outer rotor should be at least 2.746". Replace if measurements are less.
- 3)—With rotors in pump body, turn body up, place straightedge across face of body between screw holes. Clearance between straightedge and rotors should be .004" max. If greater, replace pump body.
- 4)—With outer rotor pressed to one side of body, clearance at opposite side should be .008" maximum. If greater, replace pump body.

5)—Check cover by placing straightedge across inner face and if .002" feeler can be inserted between cover and straightedge, or if face is scratched or marred, replace cover.

**Pump Assembly**—Install outer rotor in pump body, slide shaft and rotor assembly into pump body. Support pump body and shaft, and rotors assembly, and press drive gear on shaft. Endplay between hub of gear and pump body should be .004-.008". Install gear pin, peening over both ends securely. Make sure pump is clean, install cover gasket, cover and tighten screws evenly and securely.

**Pump Installation**—Oil pump must be installed on engine with #1 piston in firing position with rotor on distributor opposite #1 terminal in cap.

**CLUTCH NOTES****1949-50 MODELS**

**CLUTCH OIL SERVICING:** Hudsonite (oil) in clutch must be renewed every 5000 miles. Remove plug using socket wrench J-472. Crank engine slowly until star on flywheel is aligned with timing pointer at timing inspection hole. This will bring drain hole to bottom of flywheel and allow drainage. Crank engine until drain hole again appears at inspection hole and insert 1/3 pint Hudsonite (use J-485 gun), replace plug.

**Capacity & Oil**—1/3 pt. Hudsonite Clutch Compound.

**PROPELLER SHAFT****1949-50 MODELS**

**PROPELLER SHAFT CENTER BEARING REPLACEMENT:** Remove nuts, lock plates, and "U" bolts from universal joint at front end of rear shaft and lower shaft support. Remove nut and washer attaching flange to rear of front propeller shaft. Use puller J-820 to pull companion flange from splined shaft. Remove bolt attaching center bearing and housing assembly to cushion frame support, remove center bearing and housing assembly from shaft. Remove lock rings from either side of bearing and press bearing from housing.

**Installation**—Reverse procedure above.

**MODEL IDENTIFICATION**

**SERIAL & ENGINE NUMBER:** Stamped on plate on right front door hinge pillar post and stamped vertically on upper right front corner of block.

1949 Numbers—491101 Up (491), 492101 Up (492).

**Identification**—First three figures of number indicate model: 491101 Super 6, 492101 Commodore 6.

**TUNE-UP**

**COMPRESSION PRESSURE:** 119 lbs., min. at 125 RPM.

**VACUUM READING:** 18-21" idling at 540-560 RPM (Std.), 580-600 RPM (Vacumotive or Drive-Mstr.).

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .032".

Plugs for Cast-iron Head—Champion J-7, 14 mm.

Plugs for Aluminum Head—Champion H-10, 14 mm.

**DISTRIBUTOR:** Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ounces.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.25-.28 microfarad.

**IGNITION TIMING:** TDC (top dead center).

Timing Procedure—See Ignition Timing.

Flywheel Mark—"UDC-1-6/" aligned with lower edge of rear support plate opening behind starter.

**Fuel Compensator Setting**—Slight ping at 15 MPH. when accelerating from 10 MPH. in high gear.

**CARBURETION:**

**Idle Setting**—1¼-1¾ turns open. Two screws—turn screws out for richer mixture.

**Idle Speed (Std.)**—540-560 RPM. or 7½-8 MPH. (Vacumotive or Drive-Master)—580-600 RPM.

**Float Level**—3/16". Measured from top of float to gasket seat (machined surface) on bowl cover with needle valve seated.

**Accelerating Pump**—Outer hole, max. (Normal).

**Choke Setting:** Coil housing one mark lean.

**Fuel Pump Pressure:** 3½-4½ lbs. at carburetor.

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve must operate freely.

**VALVE TAPPET CLEARANCE:** .008" Int., .010" Exh. Hot.

► **CAUTION**—This figure supersedes earlier data.

**NOTE**—Self-locking tappet adjusting screws used. Remove apron in right front fender for access.

**Valve Timing Check**—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock. Hudson No. 300644.

Ignition Lock—Briggs & Stratton. B&S No. 50184.

Key Series—H601 to H1100. Groove No. 1.

**COIL:** Auto-Lite No. CE-6006-A.

**Location**—Left side of engine above distributor.

**Ignition Current**—2½ amperes idling, 4½ stopped.

**CONDENSER:** Auto-Lite Part No. IG-3927G.

**Capacity**—.25-.28 microfarad.

**DISTRIBUTOR:** Two types used as follows:

Auto-Lite IGS-4213-1.....below car no. 49133913

Auto-Lite IGS-4213A-1.....after car no. 49133913

Automatic advance type with Vacuum Spark Control and Fuel Compensator adjustment.

**Breaker Plate Identification**—(IGS-4213-1) 8.5

(IGS-4213A-1) 4, stamped on breaker plate.

**Breaker Gap**—.020". Limits .018-.022".

**Cam Angle**—38° Closed, 22° Open.

**Breaker Arm Spring Tension**—17-20 ounces.

**Rotation**—Clockwise viewed from above.

Automatic Advance—IGS-4213-1			
Degrees	Distr.	R.P.M.	Degrees Eng. R.P.M.
Start	.....	400	0.....800
3	.....	800	6.....1600
6	.....	1200	12.....2400
9	.....	1600	18.....3200
12	.....	2000	24.....4000

Automatic Advance—IGS-4213A-1

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out hold-down screw in advance arm. Lift off.

► **INSTALLATION CAUTION**—If oil pump removed, refer to Oil Pump Installation in Hudson Special Data.

### IGNITION TIMING

**Std. Setting**..... **At Top Dead Center**  
NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

**Flywheel Mark**—"UDC-1-6" (#1 and #6 piston top dead center position) with 4 short marks (¼" apart) ahead of this mark (opening behind starter).

**Timing**—With #1 piston at firing position and long line of "UDC-1-6/" flywheel mark aligned with lower edge of opening in rear engine support plate behind starter, loosen hold-down screw in Fuel Compensator. Rotate distributor until contacts begin to open, tighten hold-down screw. Check spark plug connections (see diagram), see that rotor at #1 segment in cap. Check Fuel Compensator setting.

**Timing (with Neon Timing Light)**—Mark long line of "UDC-1-6/" flywheel mark with white paint, connect timing light to #1 spark plug. Idle engine below 800 RPM., adjust distributor (as directed above) until mark lines up with lower edge of opening.

**Fuel Compensator Setting**—Set for slight ping at 15 MPH. when accelerating from 10 MPH. with wide open throttle. To adjust, loosen hold-down screw, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping). Final setting must not be more than 1" (4th short line) ahead of "UDC-1-6/" flywheel mark.

### CARBURETOR

Carter WDO No. 647S (early), 647SA (later). 1½" dual barrel downdraft with Carter Climatic Control. Casting No. on Flange—542.

See Carburetor Section for complete data.

► **Lean Condition at 20 MPH.** correction on 647S carburetors—See Carter WDO carburetors in Carburetor Section.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Carter Dual (WDO) Carburetor type. See Carburetion Equipment Section for complete data.

**Setting**—.054" throttle opening with choke valve closed. Adjust by turning fast idle screw on high step of cam.

**Automatic Choke:** Carter Climatic Control (Dual Carbs.).

See Carburetion Equipment Section for complete data.

**Setting**—Set coil housing 1 point lean.

### CARB. EQUIPMENT

**Air Cleaner (std.):** AC 1544265 (1544297 for Dr.-Mstr.). (Optl. oil bath)—1544266 (1544298 Drive-Master).

**Filter Element**—(std.) #5, (oil bath) #7-S.

**Servicing (oil-wetted type)**—Clean and re-oil filter element (use same grade engine oil used in crankcase) at 2000 mile intervals or more often if required by operating conditions.

**Servicing (oil-bath type)**—Service same as oil-

wetted type except that filter element not oiled and refill to level with engine oil.

**Fuel Pump (std.):** AC Type AH No. 1539109.

**Optl. (Fuel-& Vacuum)**—AC Type AJ No. 1539108.

**Replacement Pump**—No. 584 (for AH), 583 (AJ).

**Pressure**—3½-4½ lbs.

**RHD NOTE**—AC No. 1539255 (std.), No. 1539254 (comb. fuel-&-vacuum). Repl. No. 9255 (std.), 9254 (comb.).

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit**—K-S 42120 (Super), 42135 (Comdre.).

**Tank Unit**—K-S No. 41765.

See Carburetion Equipment Section for complete data.

### BATTERY

**National Type S17-2HF.** 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

**Grounded Terminal**—Positive (+) to frame and engine by a single strap.

**Dimensions**—Lgth. 10 9/16". W. 7 7/8". H. 9 1/16".

**Location**—On left side under engine hood.

### STARTER

**Auto-Lite Model MCL-6006.** Armature MCH-2023.

**Drive**—Bendix No. A-1806. Inboard Barrel type.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—Approx. 160 amperes at 150 RPM.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5300.....	5.5.....	65
8.0 ".....	Lock.....	2.0.....	410

**Removal:** On left front face of rear motor support.

To remove, take out flange mounting bolts.

**Starting Switch:** Auto-Lite Magnetic type SS-4001 on starter with pushbutton (Hudson No. 300646) on instrument panel. Operative only with ignition "on" (clutch disengaged on Vacuumotive or Drive-Mstr.).

See Electrical Equipment Section for complete data.

### GENERATOR

**Auto-Lite Model GEC-4801A.** Armature GDZ-2006F. Third brush control with voltage regulation.

**Maximum Charging Rate**—43 amperes (Cold), 37 amperes (Hot), at approx. 35 MPH. Ground "F" terminal when checking generator output.

**Charging Rate Adjustment**—See Regulator data. Third brush setting 1 commutator bar minimum, 1 commutator bar plus 1 mica strip maximum, from nearest (insulated) main brush. Adjust 3rd brush.

Cold				Hot			
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.	Amperes	Volts
0	6.4	960	0	6.4	1040	0	6.4
4	6.55	1060	4	6.6	1140	4	6.6
8	6.7	1160	8	6.8	1280	8	6.8
12	6.85	1280	12	6.95	1440	12	6.95
16	7.0	1400	16	7.15	1600	16	7.15
20	7.15	1550	20	7.35	1820	20	7.35
24	7.25	1700	24	7.55	2090	24	7.55
28	7.5	1890	28	7.75	2440	28	7.75
32	7.65	2100	32	7.9	3000	32	7.9
36	7.8	2375	34	8.0	3800	34	8.0
41	8.0	3350					

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.85-5.4 amps. at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove, take out pivot and clamp screws and nuts.

**Belt Adjustment:** ¾" belt deflection between generator and pump. Loosen clamp, swing generator out.

### REGULATOR

**Auto-Lite Model VRR-4001A.** Voltage type.

**NOTE**—Cutout Relay has extra set of contacts for Generator "Teleflash" Indicator control.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

#### Cutout Relay

**Cuts In**—6.4-6.6 volts.

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" min., ground contacts closed

(ground contacts open when main contacts close).

**Air Gap**—.031-.034" at hinge end of core with contacts open (ground contacts closed).

#### Voltage Regulator

**Voltage Setting**—7.1-7.4 volts at 70°F.

**Contact Gap**—.012" Min. (armature against stop).

**Air Gap**—.048-.052" with contacts just opening.

**Checking (without breaking seals) & Adjustment**—

See Electrical Equipment Section for complete data.

### LIGHTING

**Headlamps:** Hall "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red pilot bulb at lower center of speedometer dial. Lights when Upper Beam "on".

**Direction Signal:** Optl. See Electrical Equipment Section.

**Direction Signal Indicator**—At left end of instrument panel. Flashes when Signal in use.

**Direction Signal Flasher**—Hudson No. 300877.

#### Switches

**Lighting**—Hudson No. 300641 (with Circuit Breaker), No. 300642 (switch only).

**Beam Selector**—Hudson No. 300799.

**Instrument (Commodore)**—Hudson No. 160092.

**Door Switch**—Hudson No. 300796.

**Front Dome Light**—Hudson No. 211312.

**Rear Quarter Pillar**—Hudson No. 160091.

**Stop Light**—Auto-Lite 100810K.

**Direction Signal**—Hudson No. 300875 (with wires).

### MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Vibrating thermostatic types.

**Lighting**—Hudson 300643. 30 amp. On light switch.

**Misc. Lighting**—Hudson No. 301853. 20 ampere. On

steering support bracket behind instrument panel.

**Convertible Top & Hydraulic Window Regulators**

—Hudson No. 300626. 30 ampere. On steering sup-

port bracket behind instrument panel.

**FUSES:** Electric Clock—3 ampere. Behind clock.

**Direction Signal**—10 ampere. On Direction Signal

Harness behind instrument panel.

**Drive-Master**—10 ampere. On Drive-Master Switch.

**Weather Control**—14 ampere. On heater.

**GENERATOR CHARGE SIGNAL:** Red indicator on

instrument panel (to right of temperature gauge).

Should light when ignition turned on and should

go out when generator begins to charge.

See Electrical Equipment Section for complete data.

**OIL PRESSURE SIGNAL:** Red indicator on instru-

ment panel (to left of gas gauge). Should light with

ignition on, go out as soon as engine started.

**Oil Pressure Warning Switch**—Carter No. A658S.

Hudson No. 300828. On right side of engine above oil

pump. Contacts open at 11-15 lbs. Switch sealed. Not

adjustable. See Electrical Equip. Section for data.

**HORNS:** See 1949 Hudson Eight car pages for data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**ENGINE****ENGINE SPECIFICATIONS:** Own Make. Six cylinder, "L" head type.**Bore**—3 9/16". See "Original Bore & Pistons" in Hudson Special Data.**Stroke**—4 3/4".**Displacement**—262 cu. ins. **Rated HP**—30.4.**Developed Horsepower**—121 at 4000 RPM.**Compression Ratio (std.)**—6.50-1 cast-iron head.**Compression Ratio (optl.)**—7.00-1 aluminum head.**Compression & Vacuum Reading**—See Tune-Up.**ORIGINAL BORE & PISTONS:** See Hudson Shop Notes.**ORIGINAL BEARING SIZES:** See Hudson Shop Notes.**TIGHTENING TORQUES:** See Hudson Shop Notes.**CYLINDER HEAD DIAGRAM:** See Hudson Shop Notes.**OIL PAN REMOVAL:** See Hudson Shop Notes.**PISTONS:** Aluminum alloy, Cam ground, T-slot type.► **CAUTION**—DIFFERENT PISTONS used starting car no. 491-95958. Change required due to change in finishing cylinder top face.**Weight**—18 ± 1/8 ozs. (stripped). **Length**—3 3/4".**Removal**—Pistons and rods removed from above.**Clearance**—.0015 to .002" (skirt).

See "Original Bore &amp; Pistons" in Hudson Special Data.

**Piston Fitting**—Insert piston in cylinder with .0015" feeler gauge. Pull to withdraw feeler 3 to 4 lbs.**Replacement Pistons:** **CAUTION**—Two different types required. See Hudson Special Data.**Installing Pistons:** Slot away from camshaft.**PISTON RINGS:** Two compression, two oil rings (one above pin, one below pin) per piston. Rings are square end type. Rings pinned to prevent rotation. Rings cut and notched to fit pin (clearance on pin equal to ring end gap).

Ring	Width	End Gap	Side Clearance
Compression	5/64"	.007-.012"	.001"
Oil (upper)	3/16"	.007-.012"	.001"
Oil (lower)	5/32"	.007-.012"	.001"

**Installing Rings**—Three top rings have offset pin notch (in relation to gap). Install rings so that alternate gaps offset.**Replacement Rings:** See Hudson Shop Notes.**PISTON PIN:** Diameter—31/32". Length—2 15/16".

Floating type with diamond-drilled pin holes in piston and rolled steel babbitt faced bearing in connecting rod. Pin retained by lock ring at each end.

**Pin Fit in Piston**—.0000-.0003" at 70°F. or hand push fit with piston at 200°F.**Pin Fit in Rod Bushing**—.0003" clearance. Hand push fit at 70°F.**Replacement Pins:** Std., .002", .005", .010" oversize. Select pin to fit piston. Do not ream pin hole in piston.**CONNECTING ROD:** Length—8 3/8".**Weight**—34.23 ozs. (without bearings).**Crankpin Journal Diameter**—2.1244-2.1254".

See "Original Bearing Size" in Hudson Special Data.

**Lower Bearing**—Steel-backed, babbitt-lined type with upper and lower halves alike. No shims.**Clearance**—.0005-.0015". **Sideplay**—.007-.013".**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or bearing caps.**NOTE**—Identifying notches on side of cap and rod must be together when cap installed on rod.**Palnuts**—Tighten finger tight, plus 1/3 turn.**Replacement Bearings:** Large std., small std., .010" US.**Installing Rods:** Not offset. Oil spit hole in lower end of rod must be toward valve side of engine.**CRANKSHAFT:** Four bearing type with integral counterweights. Vibrator dampener on front end.**Journal Diameter**—2.4988-2.4998".**Bearing Diameter**—2.4993-2.5013".

See "Original Bearing Size" in Hudson Special Data.

**Bearings**—Removable steel-backed, babbitt-lined Upper and lower halves of each bearing alike.**Clearance**—.0005-.0015".**Front & Rear Oil Seals**—See "Crankshaft & Main Bearings" in Hudson Special Data.**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.**NOTE**—Bearing shells positioned in cap and crankcase by tang on edge of shell. Can be rotated out without removing crankshaft with Tool KMO-734.**Palnuts**—Tighten finger tight, plus 1/3 turn.**Replacement Bearings:** Std., optl. std., .010" US.**End Thrust:** Taken by #3 bearing. Replace bearing if endplay excessive. Endplay—.003-.009".**CAMSHAFT:** 4 bearing type. Non-adjustable chain **Bearing Diameter**—#1, 2.375-2.3755"; #2, 1.997-1.9975"; #3, 1.965-1.9655"; #4, 1.497-1.4975".**Bearings**—Steel-backed, babbitt-lined bushings.**Clearance**—.001-.002".**Camshaft Removal**—See Hudson Special Data.**Replacement Bearings:** Furnished as follows:**Finished Reamed**—Will be proper dimension when pressed in place (.0026-.0055" press fit) and no reaming required.**Unfinished**—Press in place (.0026-.0055" press fit) and line ream to .001" larger than individual camshaft journals.► **CAUTION**—Install all bearings with notch at top.**End Thrust:** Steel thrust plate fitted between front end of camshaft and sprocket. Plate attached to crankcase by two capscrews and locks.**Timing Chain:** Morse, Hudson No. 300186. 60 links. 3/8" pitch. Width—1 1/4".**Chain Tension Shoe**—Fibre shoe backed by synthetic rubber plunger mounted inside timing chain cover at top. Holds chain in close mesh with sprockets and prevents whip.**Camshaft Setting:** Sprockets marked. Two chain guide links marked with center holes. Mesh chain with center hole in each link opposite "O" mark on each sprocket with #1 piston at top dead center (crankshaft sprocket keyway at top with #1 piston at TDC). **NOTE**—With this setting, there should be 6 full links plus two half-links between marks on sprockets (half-links opposite sprocket marks).**VALVES:**

	Head Diameter	Stem Diameter	Length
Intake	1 53/64"	.3417"	5 47/64"
Exhaust	1 9/16"	.3407"	5 47/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.003"
Exhaust	45°	11/32"	.002-.004"

**NOTE**—Stem clearance worn limit .005" max.**Valve Guides:** Removable, one-piece, cast-iron Exhaust guides counterbored at upper end. Install guides as follows:**Intake Guide**—Upper end 1 7/16" below top of valve seat. Finish ream to .3432-.3442".**Exhaust Guides**—Upper end 1 3/32" below top of valve seat. Finish ream to .3432-.3442". Counterbored 9/16" deep to diameter of 25/64".**Valve Springs:** Cadmium plated springs are used. Install springs with closely coiled end up.

	Spring Pressure	Length
Valve Closed	77 lbs.	2 3/16"

**NOTE**—Reject springs if pressure less than 60 lbs. Free length 2.500".**Valve Lifters:** Mushroom type fitted directly in crankcase. Removed from below with camshaft out.**VALVE TIMING****Tappet Clearance:** .008" Intake, .010" Exhaust, Hot.► **CAUTION**—This figure supersedes earlier data.

Self-locking tappet screws are used. Remove right front fender apron for access to valve compartment.

**Valve Timing:** See Camshaft Setting above.**Intake Valves**—Open 7°18' BTDC. Close 53°42' ALDC.**Exhaust Valves**—Open 53°18' BLDC. Close 7°42' ATDC. These figures correct with .010" tappet clear.**Valve Timing Check:** No. 1 intake valve opens 7°18' BTDC. with point on flywheel approximately 2 3/4 teeth before top dead center mark "UDC-1-6/" in line with lower edge of opening in rear engine support plate behind starter.**LUBRICATION****Engine Oiling System:** Pressure to crankshaft, connecting rod, and camshaft bearings, piston pins, valve lifters, and timing chain.**Crankcase Capacity**—7 qts. (refill), 7 1/2 qts. (dry).**Normal Oil Pressure**—40 lbs. at 30 MPH. No gauge used. See Oil Pressure Indicator below.**Oil Pressure Relief Valve**—Non-adjustable release valve and spring under plug on left side of engine ahead of starter.**Oil Pan Removal:** See Hudson Shop Notes.**Oil Pump:** Rotor type consisting of inner and outer rotor, shaft, body, and cover. Angle mounted on right side of crankcase and driven from camshaft.**Removal & Overhaul**—See "Oil Pump" in Hudson Special Data.**Oil Pressure Indicator:** Hudson Signal Light with new Oil Pressure Warning Switch. Consists of light on instrument panel operated by switch as follows:**Oil Pressure Warning Switch**—Carter No. A658S. Hudson No. 300828. On right side of engine above oil pump. Contacts open at 11-15 lbs. Switch sealed. No adjustment. See Electrical Equip. Section for data.**Crankcase Ventilation:** Oil-wetted type filter element in oil filler cap (air intake). Outlet pipe in rear valve compartment cover on right side of engine.**Servicing**—Wash filter element in gasoline and re-oil when changing oil.**COOLING****Cooling System:** Positive circulation with pump on front of engine, by-pass type thermostat, and brass water distribution tube in cylinder block.**Capacity**—17 quarts.**Water Pump:** Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing.

See Water Pump Section for complete data.

**Belt Adjustment**—See Generator Belt Adjustment.**Thermostat:** Hudson No. 166272. By-pass type in water outlet on cylinder head.**Setting**—Starts to open 150-155°F. Fully open 185°.**Temperature Gauge:** King-Seeley Electric.**Dash Unit**—K-S 42125 (Super), 42140 (Com'dre.).**Engine Unit**—K-S No. 41085.

See Miscellaneous Section for complete data.

**CLUTCH****Own Make.** Single plate, fluid cushioned type (cork insert type driven member operating in Hudsonite oil. 10" type used on all models.

See Clutch Section for complete data.

**Facings**—Cork insert type. Inside Diameter 6 3/8". Outside Diam. 10". 108 corks, .203" thick.**Pedal Adjustment:** Clearance between underside of toeboard and top face of pedal shank must be 1 1/2". To adjust, loosen locknut above clevis, remove clevis

pin, turn clevis in or out of link, tighten locknut after re-connecting clevis.

**Clutch Oil Servicing:** See *Hudson Shop Notes*.

**Removal:** Remove transmission (see Transmission Removal following). Drain clutch oil by turning engine over until plug on flywheel is accessible through timing inspection hole in rear engine support plate behind starter, remove plug, turn engine over  $\frac{1}{2}$  revolution until star on flywheel visible through timing hole (drain hole then at bottom), allow lubricant to be drained. Loosen mounting bolts in clutch cover rim to release spring tension, remove bolts and lift clutch assembly off car.

## VACUMOTIVE DRIVE

**Vacumotive Drive:** Automatic clutch control. Optl. See *Clutch Section* for complete data.

## TRANSMISSION

**Own Make.** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with remote (steering column) shift.

**Identification—**Metal tag attached by a cover bolt screw carries second speed ratio 1.65:1 (std.), 1.82:1 (cars with Drive-Master).

See *Transmission Section* for complete data.

**Transmission Control:** Handy-shift remote control type with shift lever mounted on steering column. See *Transmission Section* for complete data.

**Transmission Removal:** Remove front seat cushion, disconnect front seat from track, disconnect seat adjusting lever and remove seat back from car. Disconnect accelerator pedal at accelerator rod, brake pedal rod at lever. Remove floor mat, remove Weather Control blower unit (2 screws each side), disconnect bowden wire at control valve at cylinder head. Remove floor opening cover over transmission. Disconnect front universal joint at transmission (wire bearings on universal joint spider). Remove bolts attaching center bearing support bracket, move propeller shaft to rear to clear companion flange at transmission. Disconnect clutch pedal lever return spring, remove clutch cross-shaft and bracket, disconnect clutch control link clevis. Disconnect Handy Shift by removing shifter shaft outer lever, nut, and washer. Remove flywheel guard from bottom of clutch housing. Remove two engine rear mounting bolts and nuts, jack up rear end of engine about  $\frac{1}{2}$ " off frame cross-member (CAUTION—use block of wood on jack to prevent damage to oil pan). Disconnect speedometer cable at transmission case, plug hole with wood plug. Remove two top screws attaching clutch housing to engine, install guide studs (headless screws) in these holes to support transmission, remove remaining screws. Remove breather pipe bracket from clutch housing and bolt attaching breather pipe and rear valve cover. Pull transmission straight back on guide studs, lift transmission out through floor opening (NOTE—Hoist J-1502 can be used to lift transmission out).

## DRIVE-MASTER TRANSMISSION

**Drive-Master Transmission:** Optl. Conventional 3-speed transmission with automatic gear shifting between Second & High Gears. Used in conjunction with Vacumotive Drive (automatic clutch control). **Identification—**Metal tag attached by a cover bolt screw carries second speed ratio 1.82:1. See *Transmission Section* for complete data.

## OVERDRIVE

**Warner Model AS1-R10D.** Optl. equip. used with the Hudson Transmission. Overdrive is solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down". See *Transmission Section* for complete data.

**Overdrive Solenoid—**Hudson No. 301757.

**Lock-Out Switch—**Hudson No. 301755.

**Throttle Switch—**Hudson No. 164438.

**Governor—**Hudson No. 165829 (standard), Hudson No. 165831 (cars with Drive-Master).

**Relay—**Hudson No. 165826. On left fender shield.

**Removal:** Same as standard transmission removal (above) except that overdrive control cable and wiring must also be disconnected.

## UNIVERSALS

**Spicer No. 1268-111X**.....Front & Rear  
**Spicer No. 1268-102X**.....Intermediate  
Needle bearing types.

See *Universals Section* for complete data.

**Propeller Shaft & Center Bearing:** Two shafts used:

- 1) Front shaft supported by sealed ball-bearing just ahead of rear coupling flange (no slip joint).
- 2) Rear shaft with slip joint at forward end.

**Center Bearing—**Prelubricated sealed annular ball bearing fitted in cast steel housing bolted to support mounting which is secured to underside of frame cross members. Housing cradle mounted on two rubber supports and forward end of support mounting fitted with rubber cushion.

**Center Bearing Removal & Installation—**See *Hudson Special Data*.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive.

See *Rear Axle Section* for complete data.

**Ratio—**Std. or Drive-Master Cars: 4.1-1 standard, 4 5/9-1 Optl. Overdrive Cars: 4 5/9-1 std., 4.1-1 Optl.

**Backlash—**.004-.006". Screw adjustment.

**Removal:** Support car on stands under body frame just forward of rear springs, remove fender shields and rear wheels. Disconnect brake line at tee on axle housing, remove tee. Disconnect brake cables at equalizer bar clevis and unscrew end fittings, loosen nuts on cable conduit brackets, on cross-member and free conduits from brackets, disconnect cable conduit clips on rear springs, pull cables and conduits out through guides and clamps. Disconnect rear universal joint and lower propeller shaft. Disconnect lower end of shock absorbers, disconnect and remove rear stabilizer. Disconnect each rear spring at axle housing, and at rear shackle, lower rear end of springs, slide axle out toward rear.

**Axle Shaft Removal:** Hoist rear of car. Remove rear wheels. Remove axle shaft nut and washer. Remove hub and drum assembly using screw type wheel puller (Tool J-736—CAUTION—Car manufacturer recommends that screw type puller be used, if knock-out type puller is used serious damage to differential parts may result). Remove 4 nuts on bearing cap bolts, remove bearing cap and shims (without disturbing brake backing plate). Pull rear wheel bearing and axle shaft, using puller Tool J-352. Do not drag axle shaft on oil seal assembly

**Wheel Bearing Adjustment:** Controlled by shims (.003", .005", or .015" thick) under bearing cap. To adjust, remove bearing cap (see directions above under Axle Shaft Removal), add or remove shims equally at both wheels (necessary to keep thrust spacer centered on differential pinion shaft). Endplay—.001-.004".

## SHOCK ABSORBERS

**Delco or Monroe.** Direct acting, hydraulic types. Light Scale

Make	Front	Rear
Monroe	300350	300351
Delco	301240	301241

Make	Front	Rear
Monroe	301767	301768
Delco	301769	301770

Make	Front	Rear
Monroe	301767	301768
Delco	301769	301770

Make	Front	Rear
Monroe	301767	301768
Delco	301769	301770

See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and lateral stabilizer. See *Front Suspension Section* for complete data.

**Kingpin Inclination—**3°36' crosswise.

**Caster—** $\frac{1}{2}$ -1 $\frac{1}{2}$ ". Eccentric adjustment. Both wheels alike within  $\frac{1}{2}$ ".

**Camber—** $\frac{1}{2}$ -1 $\frac{1}{2}$ ". Eccentric adjustment. Both wheels alike within  $\frac{1}{2}$ ".

**Toe In—**1/32"  $\pm$  1/32". Center steering arm on frame must be at center of car. To adjust, loosen clamps at ends of each tie rod and adjust tubes equally (to increase toe-in turn rods in direction of wheel travel, to decrease, turn in opposite direction). **Steering Geometry—**Inner wheel 30°. Outer 25°.

## STEERING GEAR

**Gemmer Model 335.** "3-tooth" Worm-and-Roller type with "push-pull" adjustments.

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear wheel service brakes. See *Brake Section* for complete data.

**Wheel Cylinders—**Diameters: Front wheel 1 $\frac{1}{8}$ ", Rear wheel 15/16".

**Drums—**11" centrifuse type.

**Lining Molded.** Width 2 $\frac{1}{4}$ " (front whl.), 1 $\frac{3}{4}$ " (rear). Length per shoe 11" (exc. 11 1/16" rear secondary).

**Clearance—**.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Mechanical Follow-Up (Reserve):** Over-running linkage between brake pedal and parking (hand-brake) linkage which applies rear wheel brakes by pedal mechanically if hydraulic system not operating. See *Brake Section* for complete data.

**Setting—**1 $\frac{1}{4}$ " clearance between clevis pin and rear end of slot in pedal rod rear clevis.

**Hand Brake:** See *Service Brakes* above.

## MISC. MECHANICAL

**Power Operated Convertible Top & Windows:** Hydro-Lectric (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders. See *Miscellaneous Section* for complete data.

**Windshield Wiper:** Cable Operated—Vacuum type. See *Miscellaneous Section* for complete data.

**IGNITION TIMING**

**Std. Setting.**—At Top Dead Center  
**NOTE**—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.  
**Flywheel Mark**—"UDC-1-8/" (#1 and #8 piston top dead center position) with 4 short marks (¼" apart) ahead of this mark (opening behind starter).  
**Timing**—With #1 piston at firing position and long line of "UDC-1-8/" flywheel mark aligned with lower edge of opening in rear engine support plate behind starter, loosen hold-down screw in Fuel Compensator. Rotate distributor until contacts begin to open, tighten hold-down screw. Check spark plug connections (see diagram), see that rotor at #1 segment in cap. Check Fuel Compensator setting.  
**Timing (with Neon Timing Light)**—Mark long line of "UDC-1-8/" flywheel mark with white paint, connect timing light to #1 spark plug. Idle engine below 600 RPM., adjust distributor (as directed above) until mark lines up with lower edge of opening.  
**Fuel Compensator Setting**—Set for slight ping at 15 MPH. when accelerating from 10 MPH. with wide open throttle. To adjust, loosen hold-down screw, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping). Final setting must not be more than 1" (4th short line) ahead of "UDC-1-8/" flywheel mark.

**CARBURETOR**

**Carter WDO, No. 648S, 1½" dual barrel downdraft type with Carter Climatic Control.**  
**Casting No. on Flange**—542.  
*See Carburetor Section for complete data.*

**Settings (Idle Setting, Float Level, and Accelerating Pump: See Tune-Up data.**  
**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle: Carter Dual (WDO) Carburetor type.**  
*See Carburetion Equipment Section for complete data.*  
**Setting**—.054" throttle opening with choke valve closed. Adjust by turning fast idle screw on high step of cam.

**Automatic Choke: Carter Climatic Control (Dual Carbs.).**  
*See Carburetion Equipment Section for complete data.*  
**Setting**—Coil housing centered (at index).

**CARB. EQUIPMENT**

**Air Cleaner (std.): AC 1544265 (1544297 for Dr.-Mstr.).** (Optl. oil bath)—1544268 (1544298 Drive-Master).  
**Filter Element**—(std.) #5, (oil bath) #7-S.  
**Servicing (oil-wetted type)**—Clean and re-oil filter element (use same grade engine oil used in crankcase) at 2000 mile intervals or more often if required by operating conditions.  
**Servicing (oil-bath type)**—Service same as oil-wetted type except that filter element not oiled. Refill to level with engine oil.

**Fuel Pump (std.): AC Type AH No. 1539109.**  
 Optl. (Fuel-&-Vacuum)—AC Type AJ No. 1539108.  
**Replacement Pump**—No. 584 (for AH), 583 (AJ).  
**Pressure**—3½-4½ lbs.  
**RHD NOTE**—AC No. 1539255 (std.), No. 1539254 (comb. fuel-&-vacuum). Repl. No. 9255 (std.), 9254 (comb.).  
*See Carburetion Equipment Section for complete data.*

**Gasoline Gauge: King-Seeley Electric.**  
**Dash Unit**—K-S 42120 (Super), 42135 (Comdre.).  
**Tank Unit**—K-S No. 41765.  
*See Carburetion Equipment Section for complete data.*

**BATTERY**

**National Type S17-2HF, 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).**  
**Grounded Terminal**—Positive (+) to frame and engine by a single strap.  
**Dimensions**—Lgth. 10 9/16". W. 7½". H. 9 1/16".  
**Location**—On left side under engine hood.

**STARTER**

**Auto-Lite Model MCL-6006, Armature MCH-2023.**  
**Drive**—Bendix No. A-1806. Inboard Barrel type.  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—42-53 ozs. (new brushes).  
**Cranking Engine**—Approx. 160 amperes at 150 RPM.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
8.0 "	Lock	2.0	410

**Removal:** On left front face of rear motor support. To remove, take out flange mounting bolts.  
**Starting Switch:** Auto-Lite Magnetic type SS-4001 on starter with pushbutton (Hudson No. 300646) on instrument panel. Operative only with Ignition "on" (clutch disengaged on Vacuumotive or Drive-Mstr).  
*See Electrical Equipment Section for complete data.*

**GENERATOR**

**Auto-Lite Model GEC-4801A, Armature GDZ-2006F.**  
 Third brush control with voltage regulation.  
**Maximum Charging Rate**—43 amperes (Cold), 37 amperes (Hot), at approx. 35 MPH. Ground "F" terminal when checking generator output.  
**Charging Rate Adjustment**—See Regulator data.  
 Third brush setting 1 commutator bar minimum, 1 commutator bar plus 1 mica strip maximum, from nearest (insulated) main brush. Adjust 3rd brush.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	980	0	6.4	1040
4	6.55	1060	4	6.6	1140
8	6.7	1180	8	6.8	1280
12	6.85	1280	12	6.95	1440
16	7.0	1400	16	7.15	1600
20	7.15	1550	20	7.35	1820
24	7.25	1700	24	7.55	2090
28	7.5	1890	28	7.75	2440
32	7.65	2100	32	7.9	3000
36	7.8	2375	34	8.0	3800
41	8.0	3350			

**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—53 ozs. max. (new brushes).  
**Field Current**—1.60-1.78 amperes at 6.0 volts.  
**Motoring Current**—4.85-5.4 amps. at 6.0 volts.  
**Removal:** Pivot mounted at left front of engine. To remove, take out pivot and clamp screws and nuts.  
**Belt Adjustment:** ¾" belt deflection between generator and pump. Loosen clamp, swing generator out.

**REGULATOR**

**Auto-Lite Model VRR-4001A, Voltage type.**  
**NOTE**—Cutout Relay has extra set of contacts for Generator "Teleflash" Indicator control.  
*See Electrical Equipment Section for complete data.*  
**NOTE**—Regulator cover sealed. Warranty void if seals broken.

**Cutout Relay**

**Cuts In**—6.4-6.6 volts.  
**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).  
**Contact Gap**—.015" min., ground contacts closed (ground contacts open when main contacts close).  
**Air Gap**—.031-.034" at hing end of cor with con-

tacts open (ground contacts closed).

**Voltage Regulator**

**Voltage Setting**—7.1-7.4 volts at 70°F.  
**Contact Gap**—.012" Min. (armature against stop).  
**Air Gap**—.048-.052" with contacts just opening.  
**Checking (without breaking seals) & Adjustment**—  
*See Electrical Equipment Section for complete data.*

**LIGHTING**

**Headlamps: Hall "Sealed Beam" type.**

*See Electrical Equipment Section for complete data.*  
**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).  
**Beam Indicator**—Red pilot bulb at lower center of speedometer dial. Lights when Upper Beam "on".  
**Direction Signal: Optl. See Electrical Equipment Section.**  
**Direction Signal Indicator**—At left end of instrument panel. Flashes when Signal in use.  
**Direction Signal Flasher**—Hudson No. 300877.

**Switches**

**Lighting**—Hudson No. 300641 (with Circuit Breaker), No. 300642 (switch only).  
**Beam Selector**—Hudson No. 300799.  
**Instrument (Commodore)**—Hudson No. 160092.  
**Door Switch**—Hudson No. 300796.  
**Front Dome Light**—Hudson No. 211312.  
**Rear Quarter Pillar**—Hudson No. 160091.  
**Stop Light**—Auto-Lite 100810K.  
**Direction Signal**—Hudson No. 300875 (with wires).

**MISC. ELECTRICAL**

**CIRCUIT BREAKERS:** Vibrating thermostatic types.  
**Lighting** Hudson 300643, 30 amp. On light switch.  
**Misc. Lighting**—Hudson No. 301853, 20 ampere. On steering support bracket behind instrument panel.  
**Convertible Top & Hydraulic Window Regulators**—Hudson No. 300626, 30 ampere. On steering support bracket behind instrument panel.

**FUSES:** Electric Clock—3 ampere. Behind clock.  
**Direction Signal**—10 ampere. On Direction Signal Harness behind instrument panel.  
**Drive-Master**—10 ampere. On Drive-Master Switch.  
**Weather Control**—14 ampere. On heater.

**GENERATOR CHARGE SIGNAL:** Red indicator on instrument panel (to right of temperature gauge). Should light when ignition turned on and should go out when generator begins to charge.

*See Electrical Equipment Section for complete data.*  
**OIL PRESSURE SIGNAL:** Red indicator on instrument panel (to left of gas gauge). Should light with ignition on, go out as soon as engine started.

*See Electrical Equipment Section for complete data.*  
**HORNS:** Sparton or Auto-Lite Model HW-4021 (Low HW-4022 (High). Dual horns operated by relay.  
**Air Gap**—.027-.029" for high pitch (short horn), .032-.034" low pitch (long horn).

**Horn Relay:** Hudson No. 164401. On engine dash.  
**Contacts Close**—3 volts min., 4 volts max.  
**Open**—2 volts min. (relay upright, terminals down).

**ENGINE**

**ENGINE SPECIFICATIONS:** Own Make, 8 cylinder, "L" head type.  
**Bore**—3". See "Original Bore & Pistons" in Hudson Special Data.  
**Stroke**—4½".  
**Displacement**—254 cubic inches. Rated HP—28.8.  
**Developed Horsepower**—128 at 4200 RPM.  
**Compression Ratio (std.)**—6.50-1 cast-iron head.  
**Compression Ratio (optl.)**—7.00-1 aluminum head.  
**Compression & Vacuum Reading**—See Tune-Up.

C NTINUED N NEXT PAGE

## ENGINE

C NTINUED FR M PRECEDING PA E

ORIGINAL BORE &amp; PISTONS: See Hudson Shop Notes.

ORIGINAL BEARING SIZES: See Hudson Shop Notes.

TIGHTENING TORQUES: See Hudson Shop Notes.

CYLINDER HEAD DIAGRAM: See Hudson Shop Notes.

OIL PAN REMOVAL: See Hudson Shop Notes.

PISTONS: Aluminum alloy, Cam ground, T-slot type.

Weight—10¼ ozs. (stripped). Length—3 3/16".

Removal—Pistons and rods removed from above or below.

Clearance—.0015 to .002" (skirt).

See "Original Bore &amp; Pistons" in Hudson Special Data.

Replacement Pistons: See Hudson Shop Notes.

Fitting New Pistons: Use .0015" feeler ¼" wide inserted between piston and cylinder wall on side opposite slot at right angles to pin. Pull to withdraw feeler must be within 3-4 lbs. Use Tool J-888-A Piston Feeler Scale to measure pull.

Installing Pistons: Slot away from camshaft.

PISTON RINGS: Two compression, two oil rings (one above pin, one below pin) per piston. Rings are square end type. Rings pinned to prevent rotation. Rings cut and notched to fit pin (clearance on pin equal to ring end gap).

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.004-.009"	.001"
Oil (upper)	3/16"	.004-.009"	.001"
Oil (lower)	5/32"	.004-.009"	.001"

Installing Rings—Three top rings have offset pin notch (in relation to gap). Install rings so that alternate gaps offset.

Replacement Rings: See Hudson Shop Notes.

PISTON PIN: Diameter—¾". Length—2 7/16". Floating type with diamond-drilled pin holes in piston and bronze bushing (with oil grooves at sides) in connecting rod. Lock ring used at each end of pin. Pin Fit in Piston—.0000-.0003" at 70°F., or hand push fit with piston at 200°F. Pin Fit in Rod Bushing—.0003" clearance. Hand push fit at 70°F.

Replacement Pins: Std., .002", .005", .010" oversize. Select pin to fit piston. Do not ream pin hole in piston. CONNECTING ROD: Length—8 3/16".

Weight—31.36 ozs. (with bearings).

Crankpin Journal Diameter—1.935-1.936".

See "Original Bearing Size" in Hudson Special Data.

Lower Bearing—Babbitt-lined, spun type.

Clearance—.0003-.0006". Sideplay—.007-.013".

Bearing Adjustment: None (no shims). Install replacement rods furnished on exchange basis. Do not file rods or caps. Palnuts used on bolt nuts.

NOTE—Identifying notches on side of cap and rod must be together when cap installed on rod.

Palmuts—Tighten finger tight, plus 1/3 turn.

Replacement Rods: Std. size and .010" undersize.

Installing Rods: Offset. Install rods with widest half of bearing toward rear (#1, 3, 5, 7), toward front (#2, 4, 6, 8). Oil scoop on all rods toward camshaft.

CRANKSHAFT: Five bearing type with integral counterweights and vibration dampener on forward end.

►CAUTION—Crankshaft not interchangeable with earlier 8 cylinder shaft. 1948-49 shaft longer at rear end between oil slinger and flywheel flange.

Journal Diameter—#1, 2.279-2.280"; #2, 2.311-2.312"; #3, 2.341-2.342"; #4, 2.373-2.374"; #5, 2.404-2.405".

Bearing Diameter—#1, 2.2805-2.2815"; #2, 2.3125-2.3135"; #3, 2.3425-2.3435"; #4, 2.3745-2.3755"; #5, 2.4055-2.4065".

See "Original Bearing Size" in Hudson Special Data.

Bearings—Bronze backed, babbitt lined type. Bearings secured in cap and crankcase by brass screws. Clearance—.001".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.

►CAUTION—Replacement of main bearings requires removal of crankshaft. Bearing shells retained by brass screws.

Palmuts—Tighten finger tight, plus 1/3 turn.

Replacement Bearings: Reamed bearings furnished standard size and .010" Undersize. Unfinished bearings also supplied. For Line-Reaming of Unfinished Replacement Bearings, see "Crankshaft & Main Bearings" in Hudson Shop Notes.

End Thrust: Taken by center (#3) bearing. Replace bearing if endplay excessive.

Endplay—.006-.012".

CAMSHAFT: Five bearing type. Helical gear drive.

Bearing Diameter—#1, 2.028-2.030"; #2, 1.997-1.999"; #3, 1.965-1.967"; #4, 1.9345-1.9365"; #5, 1.497-1.499".

Bearings—Steel-backed, babbitt-lined bushings.

Clearance—.001-.002".

Camshaft Removal—See Hudson Special Data.

Replacement Bearings: Furnished as follows:

Finished Reamed—Will be proper dimension when pressed in place (.0026-.0055" press fit) and no reaming required.

Unfinished—Press in place (.0026-.0055" press fit and line ream to .001" larger than individual camshaft journals.

►CAUTION—Install all bearings with notch at top.

End Thrust: Bakelite thrust washer between gear and crankcase. Spring loaded button in front end of camshaft bears against hardened plate on gear cover.

Timing Gears: Crankshaft gear Cast-iron, camshaft gear Aluminum. Teeth have 20° pressure angle and are slightly crowned for quiet operation.

Identification of Gears—Figure "20" on front face of gears (crankshaft gear also marked "FRONT").

Replacement Gear Caution—Camshaft gear not furnished singly (set only). Crankshaft gear furnished singly or in matched set.

Backlash—.002-.004".

Camshaft Setting: Mesh marked crankshaft gear tooth between two marked teeth on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 1/2"	.3413"	5 3/32"
Exhaust	1 3/8"	.3397"	5 3/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.11/32"	.0015-.003"
Exhaust	45°	.11/32"	.003-.004"

NOTE—Stem clearance worn limit .005" max.

Valve Guides: Removable type pressed in block.

Guide Removal & Installation—Use Tool J-1188 to drive guides out. Install guides with Tool J-883-A with top of guide 15/16" below top of cylinder block. With guides installed, ream guides with Tool J-129-3 to .3437" (.11/32") which will provide proper valve stem-to-guide clearance. NOTE—Car manufacturer recommends that guides be cleaned with Tool KMO-122 to remove carbon and scale out of guides (pay particular attention to carbon in counterbore at top of exhaust guide).

Valve Springs: Cadmium plated springs are used. Install springs with closely coiled end up.

	Spring Pressure	Spring Length
--	-----------------	---------------

Valve Closed	40 lbs.	2"
--------------	---------	----

Valve Open	80 lbs.	1 21/32"
------------	---------	----------

NOTE—Reject springs if pressure less than 34 pounds. Free length 2.343".

Valve Lifters: Roller shoe type, fitted in removable guides in cylinder block.

## VALVE TIMING

Tappet Clearance: .006" Intake, .008" Exh. Hot.

NOTE—Removable apron in right front fender.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 10°40' BTDC. Close 60° ALDC.

Exhaust Valves—Open 50° BLDC. Close 18°44' ATDC.

Above figures correct with .010" tappet clearance.

Valve Timing Check—With .010" tappet clearance #1 intake valve should open with piston 10°40' or .0494" BTDC when a point on the flywheel approximately 3.97 teeth before 'UDC.1-8/' mark lines up with indicator in inspection hole above starter. Reset tappet clearance at .006" hot and idling.

## LUBRICATION

Engine Oiling System: Duo-flow (pressure and positive splash) system. Pump delivers oil to front and rear ends of upper tray in oil reservoir. Connecting rod bearings are lubricated by dippers on caps which dip into troughs in this upper tray and also splash oil inside crankcase. Part of this oil is caught in channels inside crankcase and fed into reservoirs directly over each camshaft and crankshaft bearing from which it flows into the bearings.

Crankcase Capacity—9 qts. (dry), 7 (refill).

Oil Filling Note—Whenever pan removed, install 2 qts. in upper tray before pan installed, then 7 qts. through oil filler after pan in place on engine.

Oil Pan Removal: See Hudson Shop Notes.

Normal Oil Pressure—4-12 lbs. with hot oil. No gauge used (see Oil Pressure indicator below).

Oil Check Valve:—Located on right side of crankcase at rear. Opens at 4-12 lbs. with hot oil. Operates dash signal to indicate oil flow.

Oil Pump:—Oscillating plunger type, gear driven by camshaft. Mounted on right side of crankcase.

Oil Pressure Indicator:—Hudson Teleflash Oil Pressure Indicator. See Electrical Equipment Section for complete data.

Checking Oiling System:—See Hudson Shop Notes.

Crankcase Ventilation: Outlet pipe in rear valve compartment cover on right side of engine.

## COOLING

Cooling System: Positive circulation with pump on front of engine and by-pass type thermostat. Capacity—18 quarts.

Water Pump: Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing.

See Water Pump Section for complete data.

Belt Adjustment—See Generator Belt Adjustment.

Thermostat: Hudson No. 166272. By-pass type in water outlet on cylinder head.

Setting—Starts to open 150-155°F. Fully open 185°.

Temperature Gauge: King-Seeley Electric.

Dash Unit—K-S 42125 (Super), 42140 (Com'dre.).

Engine Unit—K-S No. 41085.

See Miscellaneous Section for complete data.

## CLUTCH

**Own Make.** Single plate, fluid cushioned type (cork insert type driven member operating in Hudsonite oil, 10" type used on all models.

*See Clutch Section for complete data.*

**Facings**—Cork insert type. Inside Diameter  $6\frac{3}{8}$ ". Outside Diam, 10". 108 corks, .203" thick.

**Pedal Adjustment:** Clearance between underside of toeboard and top face of pedal shank must be  $1\frac{1}{2}$ ". To adjust, loosen locknut above clevis, remove clevis pin, turn clevis in or out of link, tighten locknut after re-connecting clevis.

**Clutch Oil Servicing:** *See Hudson Special Data.*

**Removal:** Remove transmission (see Transmission Removal following). Drain clutch oil by turning engine over until plug on flywheel is accessible through timing inspection hole in rear engine support plate behind starter, remove plug, turn engine over  $\frac{1}{2}$  revolution until star on flywheel visible through timing hole (drain hole then at bottom), allow lubricant to be drained. Loosen mounting bolts in clutch cover rim to release spring tension, remove bolts and lift clutch assembly off car.

## VACUMOTIVE DRIVE

**Vacumotive Drive:** Automatic clutch control. Optl. *See Clutch Section for complete data.*

## TRANSMISSION

**Own Make.** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with remote (steering column) shift.

**Identification**—Metal tag attached by a cover bolt screw carries second speed ratio 1.65:1 (std.), 1.82:1 (cars with Drive-Master).

*See Transmission Section for complete data.*

**Transmission Control:** Handy-shift remote control type with shift lever mounted on steering column. *See Transmission Section for complete data.*

**Transmission Removal:** Remove front seat cushion, disconnect front seat from track, disconnect seat adjusting lever and remove seat back from car. Disconnect accelerator pedal at accelerator rod, brake pedal rod at lever. Remove floor mat, remove Weather Control blower unit (2 screws each side), disconnect bowden wire at control valve at cylinder head. Remove floor opening cover over transmission. Disconnect front universal joint at transmission (wire bearings on universal joint spider). Remove bolts attaching center bearing support bracket, move propeller shaft to rear to clear companion flange at transmission. Disconnect clutch pedal lever return spring, remove clutch cross-shaft and bracket, disconnect clutch control link clevis. Disconnect Handy Shift by removing shifter shaft outer lever, nut, and washer. Remove flywheel guard from bottom of clutch housing. Remove two engine rear mounting bolts and nuts, jack up rear end of engine about  $\frac{1}{2}$ " off frame cross member (CAUTION—use block of wood on jack to prevent damage to oil pan). Disconnect speedometer cable at transmission case, plug hole with wood plug. Remove two top screws attaching clutch housing to engine, install guide studs (headless screws) in these holes to support transmission, remove remaining screws. Remove breather pipe bracket from clutch housing and bolt attaching breather pipe and rear valve cover. Pull transmission straight back on guide studs, lift transmission out through floor opening

## DRIVE-MASTER TRANSMISSION

**Drive-Master Transmission:** Optl. Conventional 3-speed transmission with automatic gear shifting between Second & High Gears. Used in conjunction with Vacumotive Drive (automatic clutch control). **Identification**—Metal tag attached by a cover bolt screw carries second speed ratio 1.82:1.

*See Transmission Section for complete data.*

## OVERDRIVE

**Warner Model AS1-R10D.** Optl. equip. used with the Hudson Transmission. Overdrive is solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down".

*See Transmission Section for complete data.*

**Overdrive Solenoid**—Hudson No. 301757.

**Lock-Out Switch**—Hudson No. 301755.

**Throttle Switch**—Hudson No. 164438.

**Governor**—Hudson No. 165829 (standard), Hudson No. 165831 (cars with Drive-Master).

**Relay**—Hudson No. 165826. On left fender shield.

**Removal:** Same as standard transmission removal (above) except that overdrive control cable and wiring must also be disconnected.

## UNIVERSALS

**Spicer No. 1268-111X**.....Front & Rear  
**Spicer No. 1268-102X**.....Intermediate  
Needle bearing types.

*See Universals Section for complete data.*

**Propeller Shaft & Center Bearing:** Two shafts used:  
1) Front shaft supported by sealed ball-bearing just ahead of rear coupling flange (no slip joint).  
2) Rear shaft with slip joint at forward end.

**Center Bearing**—Prelubricated sealed annular ball bearing fitted in cast steel housing bolted to support mounting which is secured to underside of frame cross members. Housing cradle mounted on two rubber supports and forward end of support mounting fitted with rubber cushion.

**Center Bearing Removal & Installation**—*See Hudson Special Data.*

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive.

*See Rear Axle Section for complete data.*

**Ratio**—Std. or Drive-Master Cars: 4.1-1 standard, 4 5/9-1 Optl. Overdrive Cars: 4 5/9-1 std., 4.1-1 Optl. **Backlash**—.004-.006". Screw adjustment.

**Removal:** Support car on stands under body frame just forward of rear springs, remove fender shields and rear wheels. Disconnect brake line at tee on axle housing, remove tee. Disconnect brake cables at equalizer bar clevis and unscrew end fittings, loosen nuts on cable conduit brackets on cross member and free conduits from brackets, disconnect cable conduit clips on rear springs, pull cables and conduits out through guides and clamps. Disconnect rear universal joint and lower propeller shaft. Disconnect lower end of shock absorbers, disconnect and remove rear stabilizer. Disconnect each rear end of springs, slide axle assembly out toward rear of car.

**Axle Shaft Removal:** Hoist rear of car. Remove rear wheels. Remove axle shaft nut and washer. Remove hub and drum assembly using screw type wheel puller (Tool J-736—CAUTION—Car manufacturer recommends that screw type puller be used, if knock-out type puller is used serious damage to differential parts may result). Remove 4 nuts on bearing cap bolts, remove bearing cap and shims

(without disturbing brake backing plate). Pull rear wheel bearing and axle shaft, using puller Tool J-352. Do not drag axle shaft on oil seal assembly. **Wheel Bearing Adjustment:** Controlled by shims (.003", .005", or .015" thick) under bearing cap. To adjust, remove bearing cap (see directions above under Axle Shaft Removal), add or remove shims equally at both wheels (necessary to keep thrust spacer centered on differential pinion shaft). **Endplay**—.001-.004".

## SHOCK ABSORBERS

**Delco or Monroe.** Direct acting, hydraulic types.

Make	Light Scale	
	Front	Rear
Monroe	300350	300351
Delco	301240	301241
Make	Heavy Scale	
	Front	Rear
Monroe	301767	301768
Delco	301769	301770
Make	Extra Heavy Scale	
	Front	Rear
Delco	301637	301638

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and lateral stabilizer.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—3°38' crosswise.

**Caster**— $\frac{1}{2}$ - $1\frac{1}{2}$ ". Eccentric adjustment. Both wheels alike within  $\frac{1}{2}$ ".

**Camber**— $\frac{1}{2}$ - $1\frac{1}{2}$ ". Eccentric adjustment. Both wheels alike within  $\frac{1}{2}$ ".

**Toe In**— $1/32"$   $\pm$   $1/32"$ . Center steering arm on frame must be at center of car. To adjust, loosen clamps at ends of each tie rod and adjust tubes equally (to increase toe-in turn rods in direction of wheel travel, to decrease, turn in opposite direction). **Steering Geometry**—Inner wheel 30°. Outer 25°.

## STEERING GEAR

**Gemmer Model 335.** "3-tooth" Worm-and-Roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear wheel service brakes. *See Brake Section for complete data.*

**Wheel Cylinders** Diam. front wh'l.  $1\frac{1}{8}$ ", rear  $1\frac{1}{16}$ ". **Drums**—11" centrifuse type.

**Lining** Molded. Width  $2\frac{1}{4}"$  (front wh'l.),  $1\frac{3}{4}"$  (rear). Length per shoe 11" (exc. 11  $1/16"$  rear secondary). **Clearance**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Mechanical Follow-Up (Reserve):** Over-running linkage between brake pedal and parking (hand-brake) linkage which applies rear wheel brakes by pedal mechanically if hydraulic system not operating. *See Brake Section for complete data.*

**Setting**— $1\frac{1}{4}"$  clearance between clevis pin and rear end of slot in pedal rod rear clevis.

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Top & Windows:** Hydro-Lectric (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders. *See Miscellaneous Section for complete data.*

**Windshield Wiper:** Cable Operated—Vacuum type. *See Miscellaneous Section for complete data.*

**MODEL IDENTIFICATION**

**SERIAL & ENGINE NUMBER:** Stamped on plate on right front door hinge pillar post and stamped vertically on right side of cylinder at upper front end.  
**1950 Numbers—500101 Up.**  
**Identification—**First three figures of number indicate Series and Model: 500101 Pacemaker Six.

**TUNE-UP**

**COMPRESSION PRESSURE:** 100 lbs. min. Compression between cylinders should not vary more than 10 lbs.

**VACUUM READING:** 17-18 idling at 540-560 RPM. (Std.), 580-600 RPM. (with Vacumotive, Drive-Master or Super-Matic).

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .032"

Plugs for Cast-iron Head—Champion J-7. 14 mm.

Plugs for Aluminum Head—Champion H-10. 14 mm.

**DISTRIBUTOR:** Breaker Gap—.020".

Cam Angle—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ounces.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.20-.25 microfarad.

**IGNITION TIMING:** TDC (top dead center).

Timing Procedure—See Ignition Timing.

Flywheel Mark—"UDC.1/" aligned with lower edge of rear engine support plate opening behind starter.

Fuel Compensator Setting—Slight ping at 15 MPH. when accelerating from 10 MPH. in high gear.

**CARBURETION:**

Idle Setting— $\frac{1}{2}$ - $1\frac{1}{2}$  turns open. Turn screw out for richer mixture.

Idle Speed (Std.)—540-560 RPM.

Idle Speed (with Vacumotive, Drive-Master or Super-Matic Drive)—580-600 RPM.

Float Level— $\frac{1}{2}$ " from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).

Accelerating Pump—Outer hole (Normal). Inner hole if less charge required.

Choke Setting: Centered at index.

Fuel Pump Pressure: (Carter)—4-5 lbs. at carburetor, (AC)—3-4 lbs.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type.

**VALVE TAPPET CLEARANCE:** .008" Int., .010" Exh., Hot.

NOTE—Self-locking tappet adjusting screws used. Remove apron in right front fender for access.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchelllock.

**COIL:** Auto-Lite No. CR-6012-A. Located on left side of engine above distributor.

Ignition Current—1.5-2.0 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IAT-4002. Automatic advance type with Vacuum Spark Control and Fuel Compensator adjustment.

Breaker Gap—.020".

Cam Angle—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

**Automatic Advance**

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start.....		300	0.....		600
1 .....		365	2.....		730
3 .....		400	6.....		800
9 .....		1090	18.....		2180
10 .....		1200	20.....		2400

**Fuel Compensator:** 10° advance or retard adjustment at distributor. See Ignition Timing.

**Vacuum Spark Control:** Auto-Lite. Integral type. Linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

**Vacuum Advance**

Distr. Degrees Start	Eng. Degrees	Vacuum (" of HG)
1°	2°	10"
3°	6°	11"
4°	8°	11½"
5°	10°	12"

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out hold-down screw in advance arm. Lift off.

► **INSTALLATION CAUTION—**If oil pump removed, refer to Oil Pump installation directions in Hudson Special Data.

**IGNITION TIMING**

**Std. Setting**.....At Top Dead Center  
**NOTE**—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

**Flywheel Mark**—"UDC.1/" (#1 and #6 piston top dead center position) with 4 short marks (¼" apart) ahead of this mark. Visible in opening behind starter.

**Timing**—With #1 piston on compression stroke, crank engine until long line of flywheel mark "UDC-1/" lines up with pointer in rear engine support plate behind starter. Loosen hold-down screw in quadrant, rotate distributor clockwise to limit of hold-down slot, then rotate distributor counter-clockwise until contacts open, tighten quadrant screw. Check Fuel Compensator setting.

**Timing (with Neon Timing Light)**—Mark long line on flywheel with white chalk and loosen hold-down screw in distributor quadrant. Operate the engine at idle speed with timing light aimed at flywheel opening and rotate distributor until chalk mark lines up with pointer. Tighten quadrant screw.

**Fuel Compensator Setting**—Set for slight ping at 12 MPH. when accelerating from 10 MPH. with wide open throttle. To adjust, loosen hold-down screw, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping). Final setting must not be more than 1" (1st short line) ahead of "UDC-1/" flywheel mark.

**CARBURETOR**

**Carter WA1-749S**. 1¼" single barrel downdraft type with Carter Climatic Control.

**Casting No. on Flange**—682.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump)**: See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle**: Carter Single Barrel Carburetor type.

See Carburetion Equipment Section for complete data.  
**Setting**—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

**Automatic Choke**: Carter Climatic Control (Single Barrel Carburetor).

See Carburetion Equipment Section for complete data.  
**Setting**—Center at index.

**CARB. EQUIPMENT**

**Air Cleaner**: AC. Oil-wetted Std., Oil-bath Optl.

**Servicing**—See 1949 Hudson Six.

**Fuel Pump (Std.)**: Carter Model M729SZ.

**Optl. (Fuel & Vacuum)**—AC type "AJ".

**Pressure**—(Carter) 4-5 lbs. at carb. (AC) 3-4 lbs.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge**: King-Seeley Electric type.

See Carburetion Equipment Section for complete data.

**BATTERY**

**National Type OE-2L-100**. 6 volt, 17 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Grounded Terminal**—Positive (+) to frame and engine by a single strap.

**Location**—On left side under engine hood.

**STARTER**

**Auto-Lite Model MZ-4159**.

**Drive**—Bendix No. A-1808. Inboard Barrel type.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—Approx. 160 amperes at 150 RPM.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
4.4 "	Lock	2.0	280

**Removal**: On left front face of rear motor support. To remove, take off Drivemaster mounting bracket bolts (on cars equipped with Drivemaster), disconnect linkage, and pull bracket out and forward, disconnect cables from solenoid switch, remove two starter mounting stud nuts and remove starter motor assembly.

**Starting Switch**: Auto-Lite No. SS-4001. On starter with pushbutton on instrument panel. Operative only with ignition "on" (and clutch disengaged on cars with Vacuum Drive, Drive-Master or Super-Matic).

See Electrical Equipment Section for complete data.

**GENERATOR**

**Auto-Lite Model GDZ-6001B**.

Two brush (shunt) type with voltage and current regulation. Ventilated.

**Maximum Charging Rate**—35 amperes at 8 volts.

**Charging Rate Adjustment**—None (see Regulator).

**Performance Data**

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970 950-1050
35	8.0	1800-2000 2150-2350

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—53 ozs. max. (new brushes).

**Field Current**—1.6-1.8 amperes at 6.0 volts.

**Motoring Current**—4.2-4.6 amps. at 6.0 volts.

**Removal**: Pivot mounted at left front of engine. To remove, take out pivot and clamp screws and nuts.  
**Belt Adjustment**: ¾" belt deflection between generator and pump pulleys. Loosen bolts, swing generator out.

**REGULATOR**

**Auto-Lite Model VRP-6002A**. Vibrating type Voltage and current regulators (with Cutout Relay).

**NOTE**—Cutout Relay has extra set of contacts for Generator "Teleflash" Indicator control.

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

**Cutout Relay**

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" min., ground contacts closed (ground contacts open when main contacts close).

**Air Gap**—.031-.034" at hinge end of core with contacts open (ground contacts closed).

**Voltage Regulator**

**Voltage Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Contact Gap**—.012" Min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

**Current Regulator**

**Setting**—34-36 amperes (marked '35' on the cover).

**Contact Gap**—.012" min. (armature against stop).

**Air Gap**—.048-.052" with contacts just opening.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

**LIGHTING**

See 1949 Hudson Six pages for Lighting data.

**MISC. ELECTRICAL**

See 1949 Hudson Six pages for Circuit Breakers, Generator Charge & Oil Pressure Signals, and Horns.

**ENGINE**

**ENGINE SPECIFICATIONS**: Own Make. Six cylinder, "L" head type.

**Bore**—3 9/16". See "Original Bore & Pistons" in Hudson Special Data.

**Stroke**—3 7/8".

**Displacement**—232 cu. ins. **Rated HP**—30.4.

**Developed Horsepower**—112 at 4200 RPM.

**Compression Ratio (Std.)**—6.70-1 cast-iron head.

**Compression Ratio (Optl.)**—7.20-1 aluminum head.

**Compression & Vacuum Reading**—See Tune-Up.

**ORIGINAL BORE & PISTONS**: See Hudson Special Data.

**ORIGINAL BEARING SIZES**: See Hudson Special Data.

**TIGHTENING TORQUES**: See Hudson Special Data.

**CYLINDER HEAD**: **CAUTION**—NOT INTERCHANGEABLE with other engines. Marked "500" to right of cylinder water outlet.

► **Head Diagram & Tightening Torques**—See Hudson Special Data.

**OIL PAN REMOVAL**: See Hudson Special Data.

**PISTONS**: Aluminum alloy, Cam ground, T-slot type.

► **CAUTION**—Pistons NOT INTERCHANGEABLE with other engines (greater height from pin hole to top—2.310-2.314" on "500", 2.060-2.064" other Sixes).

**Weight**—18½ ozs. (stripped). **Length**—3¾".

**Removal**—Pistons and rods removed from above.

**Clearance**—.0015" to .002" (skirt).

See "Original Bore & Pistons" in Hudson Special Data.

**Piston Fitting**—Insert piston in cylinder with .0015" feeler gauge. Pull to withdraw feeler 3 to 4 lbs.

**Replacement Pistons**: See Hudson Special Data.

**Installing Pistons**: Slot away from camshaft.

**PISTON RINGS**: Two compression, two oil rings (one above pin, one below pin) per piston. Rings are square end type. Rings pinned to prevent rotation. Rings cut and notched to fit pin (clearance on pin equal to ring end gap).

Ring	Width	End Gap	Side Clearance
Compression	5/64"	.006-.014"	.001"
Oil (upper)	3/16"	.006-.014"	.001"
Oil (lower)	5/32"	.006-.014"	.001"

**Installing Rings**—Three top rings have offset pin notch (in relation to gap). Install rings so that alternate gaps offset.

**Replacement Rings**: See Hudson Special Data.

**PISTON PIN**: **Diameter**—.9684-.9687". **Lgth.**—2.9375".

Floating type with diamond-drilled pin holes in piston and rolled steel babbitt faced bearing in connecting rod. Pin retained by lock ring at each end.  
**Pin Fit in Piston**—.0000-.0003" at 70°F. or hand push fit with piston at 200°F.

**Pin Fit in Rod Bushing**—Hand push fit at 70°F.

**Replacement Pins**: Std., .002", .005", .010" oversize. Select pin to fit piston. Do not ream pin hole in piston.

**CONNECTING ROD**: **Length**—8½".

**NOTE**—Connecting Rods are interchangeable with other Six Cylinder engines.

**Weight**—34.24 ozs. (without bearings).

**Crankpin Journal Diameter**—2.1244-2.1254".

See "Original Bearing Size" in Hudson Special Data.

CONTINUED N NEXT PA E

**ENGINE****CONTINUED FROM PRECEDING PAGE**

**Lower Bearing**—steel-backed, babbitt-lined type with upper and lower halves interchangeable. No shims.

**Clearance**—.0005-.0015". **Sideplay**—.007-.013".

**Bearing Adjustment**: None (no shims). Replace bearings. Do not file rods or bearing caps.

**NOTE**—Identifying notches on side of cap and rod must be together when cap installed on rod.

**Palnuts**—Tighten finger tight, plus 1/3 turn.

**Replacement Bearings**: Large std., small std., .010" US.

**Installing Rods**: Not offset. Oil spit hole in lower end of rod must be toward valve side of engine.

**CRANKSHAFT**: Four bearing type with integral counterweights. Vibration dampener on front end.

**NOTE**—Crankshaft not interchangeable with other Six Cylinder engines.

**Journal Diameter**—2.4988-2.4998".

**Bearing Diameter**—2.4993-2.5013".

See "Original Bearing Size" in *Hudson Special Data*.

**Bearings**—Removable steel-backed, babbitt-lined type. Upper and lower halves of each bearing are interchangeable.

**Clearance**—.0005-.0015".

**Front & Rear Oil Seals**—See "Crankshaft & Main Bearings" in *Hudson Special Data*.

**Bearing Adjustment**: None (no shims). Replace bearings. Do not file bearing caps.

**NOTE**—Bearing shells positioned in cap and crankcase by tang on edge of shell. Can be rotated out without removing crankshaft by using Tool KMO-734.

**Palnuts**—Tighten finger tight, plus 1/3 turn.

**Replacement Bearings**: Std., optl. std., .010" US.

**End Thrust**: Taken by #3 bearing. Replace bearing if endplay excessive.

**Endplay**: .003-.009".

**CAMSHAFT**: 4 bearing type. Non-adjustable chain.

**Bearing Diameter**—#1, 2.375-2.3755"; #2, 1.997-1.9975"; #3, 1.965-1.9655"; #4, 1.497-1.4975".

**Bearings**—Steel-backed, babbitt-lined bushings.

**Clearance**—.0015-.002".

**Camshaft Removal**—See *Hudson Special Data*.

**Replacement Bearings**: Finished-reamed or unfinished.

**Finished Reamed**—Will be proper dimension when pressed in place (.0026-.0055" press fit) and no reaming required.

**Unfinished**—Press in place (.0026-.0055" press fit) and line ream to .001" larger than individual camshaft journals.

► **CAUTION**—Install all bearings with notch at top.

**End Thrust**: Steel thrust plate fitted between front end of camshaft and sprocket. Plate attached to crankcase by two capscrews and locks.

**Timing Chain**: Morse. 60 links. 3/8" pitch. Width 1 1/4".

**Chain Tension Shoe**—Fibre shoe backed by synthetic rubber plunger mounted inside timing chain cover at top. Holds chain in close mesh with sprockets and prevents whip.

**Camshaft Setting**: Sprockets marked. Two chain guide links marked with center holes. Mesh chain with center hole in each link opposite "O" mark on each sprocket with #1 piston at top dead center (crankshaft sprocket keyway at top with #1 piston at TDC.) **NOTE**—With this setting, there should be 6 full links plus two half-links between marks on sprockets (half-links opposite sprocket marks).

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 53/64"	3402-.3412"	5.730"
Exhaust	1 9/16"	3402-.3412"	5.730"

	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.003"
Exhaust	45°	3/16"	.002-.004"

**NOTE**—Stem clearance worn limit .005" max.

**Valve Guides**: Removable, one-piece, cast-iron Exhaust guides counterbored at upper end. Install guides as follows:

**Intake Guide**—Upper end 1 7/16" below top of valve seat, Finish ream to .3432-.3442".

**Exhaust Guides**—Upper end 1 3/32" below top of valve seat, Finish ream to .3432-.3442". Counterbored 9/16" deep to diameter of 25/64".

**Valve Springs**: Cadmium plated springs are used. Install springs with closely coiled end up.

	Spring Pressure	Length
Valve Closed	77 lbs.	2 3/16"

**NOTE**—Reject springs if pressure less than 60 lbs. Free length 2.500".

**Valve Lifters**: Mushroom type fitted directly in crankcase. Removed from below with camshaft out.

**VALVE TIMING**

**Tappet Clearance**: .008" Intake, .010" Exhaust, Hot. Self-locking tappet screws are used. Remove right front fender apron for access to valve compartment.

**Valve Timing**: See Camshaft Setting above.

**Intake Valves**—Open 7°18' BTDC. Close 53°42' ALDC.

**Exhaust Valves**—Open 53°18' BLDC. Close 7°42' ATDC. These figures correct with .010" tappet clear.

**Valve Timing Check**: No. 1 intake valve opens 7°18' BTDC, with point on flywheel approximately 2 3/4 teeth before top dead center mark "UDC-1/" in line with lower edge of opening in rear engine support plate behind starter.

**LUBRICATION**

**Crankcase Capacity**—7 qts. (refill), 7 1/2 qts. (dry). **Normal Oil Pressure**—40 lbs. at 30 MPH. No gauge used.

See 1949 Hudson Six for all other Lubrication data.

**COOLING**

**Capacity**—17 quarts.

See 1949 Hudson Six for all other Cooling data.

**CLUTCH**

**Own Make**—Single plate, fluid cushioned type (cork insert type driven member operating in Hudsonite oil. 9" type used on standard models, 10" type used with Drive-Master.

See Clutch Section for complete data.

**Facings**—Cork insert type. Inside Diameter 6 3/4". Outside Diam. 9" (Std.), 10" (With Drive-Master), 90 corks (9"), 108 corks (10"), .203" thick.

**Pedal Adjustment, Clutch Oil Servicing, Removal**: See 1949 Hudson Six.

**VACUOTIVE DRIVE**

**Vacuotive Drive**: Automatic clutch control. Optl.

See Clutch Section for complete data.

**TRANSMISSION**

**Own Make**—All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with remote (steering column) shift. **Second Speed Ratio**—1.82:1.

See Transmission Section for complete data.

**Transmission Control & Transmission Removal**: See 1949 Hudson Six.

**DRIVE-MASTER TRANSMISSION**

**Drive-Master Transmission**: Optl. See 1949 Hudson Six.

**OVERDRIVE**

**Warner Type R10D**—Optl. (with Hudson Transmission). Part of Super-Matic Drive. Has simplified control (new Solenoid, Relay & Throttle kick-down switch). See Transmission Section for complete data.

**Removal**: See 1949 Hudson Six.

**SUPER-MATIC DRIVE**

**Own Make**—Four-speed automatic transmission (3-speed automatic shift plus ultra-low). Optl. See Transmission Section for complete data.

**UNIVERSALS**

**Spicer**—Needle bearing type. Three used with intermediate universal to rear of propeller shaft center bearing. See Universals Section for complete data.

**Propeller Shaft & Center Bearing**: See 1949 Hudson Six.

**REAR AXLE**

**Own Make**—Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratios	Std.	Optl.
Std. Transmission	4.1-1	4.55 or 3.82-1
With Drive-Master	4.1-1	4.55 or 3.82-1
With Overdrive	4.55-1	4.1-1
With Super-Matic	4.1-1	4.55-1

**Backlash**—.004-.006". Screw adjustment.

**Rear Axle Removal, Axle Shaft Removal & Wheel**

**Bearing Adjustment**: See 1949 Hudson Six for data.

**SHOCK ABSORBERS**

**Delco or Monroe**—Direct acting, hydraulic types.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension**: Independent, linked parallelogram type. See 1949 Hudson Six car pages for data.

**STEERING GEAR**

**Gemmer Model 335**—"3-tooth" Worm-and-Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES**

**Service**: Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Mechanical follow-up (pedal linked to hand brake cables) provided. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Wheel Cylinders**—Diameters: Front wheel 1 1/16", Rear wheel 15/16".

**Drums**—11" centrifuge type.

**Lining**—Molded. Width 1 3/4" (front & rear). Length per shoe 11" (except rear secondary 11 1/16").

**Clearance**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Mechanical Follow-Up (Reserve)**: Over-running linkage between brake pedal and parking (hand brake) linkage which causes rear wheel brakes to be applied mechanically by pedal if hydraulic system not operating.

**Setting**—1 1/4" clearance between clevis pin and rear end of slot in pedal rod rear clevis.

See Brake Section for complete data.

**Hand Brake**: See Service Brakes above.

**MISC. MECHANICAL**

**Power Operated Convertible Top & Windows and Windshield Wipers**: See 1949 Hudson Six for data.

## CONTINUED FROM PRECEDING PAGE

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	10"
3 .....	6°	13"
5 .....	10°	15"

**Distributor Removal:** On cylinder head between #4 and #5 cylinders. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

**IGNITION TIMING**

**Std. Setting:**.....4° BTDC.  
**Timing Mark:**—Timing mark located on vibration dampener. Consists of "0" mark at top dead center with 1° graduations before and after this point.

**Timing (with Timing Light C-693):**—Mark fourth degree mark before "0" top dead center mark on vibration dampener with chalk or white paint. Connect timing light to #1 spark plug terminal and direct light at timing mark. Idle engine below 450 RPM. (back off throttle stop screw to decrease normal idle speed of 550 RPM.). Loosen hold-down screw in advance arm, center screw in slot, tighten hold-down screw. Loosen cap screw in end of arm under distributor, rotate distributor until timing mark appears in line with pointer, tighten cap screw. Check octane selector setting.

► **CAUTION**—Reset engine idling speed at 550 RPM.

**Octane Selector Setting:**—Set for slight ping when accelerating with wide-open throttle. To adjust, loosen hold-down screw in advance arm, rotate distributor clockwise (if no ping noted), counter-clockwise (if ping too severe).

**CARBURETOR****CARTER WA-1**

**Carter WA1 Type 622SB.** (Special). 1¼" Single Barrel, Downdraft with Carter Climatic Control. Casting No. on Flange—309.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets:**—See Carter Jet Table in Carburetor Section.

**Fast Idle (WA1 Carburetors):** Carter Single Barrel.

See Carburetion Equipment Section for data.

**Setting:**—5/8" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stop screw against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

**Automatic Choke (WA1 Carburetors):** Carter Climatic Control (Single Carburetor Type).

See Carburetion Equipment Section for data.

**Setting:**—Centered (coil housing at index mark).

**CARBURETOR****CARTER WCD**

**Carter WCD Type 723S** (Deluxe)—1¼" Dual (Double barrel), Downdraft type with Fast Idle and Climatic Control.

Casting No. on Flange—550.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets:**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Carter Dual (WCD) type.

See Carburetion Equipment Section for complete data.

**Setting:**—0.18" throttle opening with choke valve held closed and throttle lever stop screw backed off.

**Automatic Choke:** Carter Climatic Control (Dual Carburetor Type).

See Carburetion Equipment Section for data.

**Setting:**—Centered (coil housing at index mark).

**CARB. EQUIPMENT**

**Air Cleaner:** (Special). AC #1544029 Oil-bath type. Element—AC No. 7-S.

**Servicing:**—Empty and clean reservoir, wash cleaner in kerosene, refill to indicator line with SAE No. 50 engine oil (No. 20 for below freezing temp.) at 2000 mile intervals or when engine tuned.

**Fuel Pump:** AC No. 1539074 combination Fuel-and-Vacuum Pump.

**Replacement Pump:**—AC No. 582.

► **CAUTION**—Install pump with rocker arms UNDER camshaft eccentric.

See Carburetion Equipment Section for data.

**Pressure:**—3-4½ lbs.

**Gasoline Gauge:** King-Seeley electric type.

**Dash Unit:**—K-S No. 42455.

**Tank Unit:**—K-S No. 7916.

See Carburetion Equipment Section for complete data.

**BATTERY**

**Auto-Lite Type 1M-100D**—6 Volt, 15 Plate, 105 Ampere Hour Capacity (20 hour rate).

**Grounded Terminal:**—Positive (+) terminal grounded at left front engine support. Engine ground cable connected at same point.

**Location:**—In engine compt. on left side.

**STARTER**

**Auto-Lite Model MAW-4054.** Armature MAW-2128.

**Drive:**—Barrel type Bendix Drive No. A1792.

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—42-53 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
8.50 "	400	4.0	400
6.0 "	Lock	2.0	335

**Starting Switch:** Magnetic switch K-F Part No. 204752 on splash shield near starter and controlled by push-button on instrument panel.

See Electrical Equipment Section for complete data.

**Removal:** Flange mounted on left front face of fly-wheel housing. To remove, disconnect cable, take out flange mounting screws.

**GENERATOR**

**35 Amp.**—Auto-Lite GDZ-4818A. Arm. GDZ-2006F.

**45 Amp.**—Auto-Lite GGU-6001B. Arm. GGU-2006F.

Two brush type with voltage and current regulation.

**Charging Rate Adjustment:**—None (see Regulator).

**Maximum Charging Rate:**—As given below.

**Performance Data (GDZ-4818A)**

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970
35	8.0	1800-2000
		2150-2350

**Performance Data (GGU-6001B)**

45	8.0	1550 Max.
----	-----	-----------

**Rotation:**—Counter-clockwise at commutator end.

**Brush Spring Tension:**—35-53 ozs. (new brushes).

**Field Current:**—(GDZ) 1.60-1.78 amperes at 6.0 volts, (GGU) 1.6-1.8—amperes at 6.0 volts.

**Motoring Current:**—(GDZ) 4.16-4.60 amps. at 6.0 volts, (GGU) 5.5-6.5 amperes at 6.0 volts.

**Removal:** Pivot mounting at left front of engine. To remove, disconnect leads, take out clamp bolt and pivot bolts. NOTE—Remove battery for access.

**Belt Adjustment:** Adjust by pulling generator out with 15 lb. force in line with adjuster link with all mounting bolts loose. A 6 lb. adjustment for new belt is recommended.

**REGULATOR**

**35 Amp.**—Auto-Lite VRP-4004F-2.....for GDZ Gen.

**45 Amp.**—Auto-Lite VAV-4002C.....for GGU Gen.

Vibrating type voltage and current regulators.

See Electrical Equipment Section for complete data.

NOTE—Regulator cover sealed. Warranty void if seals broken.

**Cutout Relay**

**Cuts In:**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out:**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap:**—.015" minimum.

**Air Gap:**—.031-.034" with contacts open (check at hinge end of core).

**Voltage Regulator**

**Setting:**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seal) & Adjustment:**—See Electrical Equipment Section.

**Contact Gap:**—.012" min. (armature against stop pin).

**Air Gap:**—.048-.052" with contacts just opening.

**Current Regulator**

**Setting:**—As follows:

VAV-4002C 44-46 amperes (marked '45' on cover).

VRP-4004F-2 34-36 amperes (marked '35' on cover).

**Checking (without breaking seal) & Adjustment:**—See Electrical Equipment Section.

**Contact Gap & Air Gap:**—Same as Voltage Regulator.

**LIGHTING**

**Headlamps:** Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch.

See Electrical Equipment Section for complete data.

**Adjustment:**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator:**—Red jewel at top of speedometer dial. Lighted when upper (country beams) in use.

**Direction Signal:** (Deluxe) Mitchell (United Specialties) type.

See Electrical Equipment Section for complete data.

**Direction Indicators:**—Right and Left indicator lights on lower face of speedometer. Lighted when direction signal on same side of car in operation.

**Switches**

**Lighting:**—Kaiser-Frazer No. 203830.

**Beam Selector:**—Kaiser-Frazer No. 204545.

**Instrument Panel:**—Kaiser-Frazer No. 203833.

**Courtesy (on Instrument Panel):**—K-F No. 203662.

**Door:**—Kaiser-Frazer No. 204229.

**Dome Lamp:**—Kaiser-Frazer No. 204779.

**Stop Lamp:**—Kaiser-Frazer No. 201466.

**Direction Signal:**—Kaiser-Frazer No. 204551.

**MISC. ELECTRICAL**

**LIGHTING CIRCUIT BREAKER:** Thermostatic type, 30 amperes. On back of lighting switch.

**FUSES:** Clock—2 ampere. In clock lead.

**Overdrive:**—20 amperes. On control relay.

**Cigar Lighter:**—30 amperes. In lead back of instrument panel.

**HORNS:** Auto-Lite or Sparton—A-L HW-4017 (Low Note), HW-4018 (High Note). Twin horns.

**Horn Current:**—Approximately 15 amperes each at 6.2 volts.

**Horn Relay:** Auto-Lite Model HRL-4101—Relay connected through ignition switch (horns operative only with ignition switch "on").  
**Contacts Close**—1.5-3.0 volts (seal to core with 4.0 volts maximum).  
**Contacts Open**—5 volt min. (open from seal).  
**Contact Gap**—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (between armature leg and yoke with armature sealed to core).

## ENGINE

**ENGINE SPECIFICATIONS:** Own (Continental). Six Cylinder, "L" head type.  
**Bore**—3 5/16" (3.3125-3.3145"). See "Original Bore & Pistons" in *Frazer-Kaiser Special Data*.  
**Stroke**—4 3/8".  
**Displacement**—226.2 cu. ins. **Rated HP**—26.3.  
**Developed Horsepower (with Single Carb.)**—100 at 3600 RPM.  
**Developed Horsepower (with Dual Carb.)**—112 at 3600 RPM.  
**Compression Ratio**—7.3-1.  
**NOTE**—7.3-1 Heads marked by "73" stamped on left front directly above engine number on block.  
**Compression & Vacuum Reading**—See *Tune-Up data*.

**ORIGINAL BORE & BEARING SIZES:** See *Frazer & Kaiser Special Data*.

**TIGHTENING TORQUES:** See *Frazer & Kaiser Special Data*.

**CYLINDER HEAD INSTALLATION:** See *Frazer & Kaiser Special Data*.

**ENGINE REMOVAL:** See *Frazer & Kaiser Special Data*.

**PISTONS:** Aluminum alloy, Cam-ground. Tin-plated, T-slot type. Length 3 9/16".  
**Clearance**—See Fitting new pistons.

► **CAUTION**—Mark piston and rod assemblies before removal to insure re-installation in same cylinder.

**Fitting New Pistons:** Use .0015" feeler stock 1/2" wide inserted on side opposite slot. Pull to withdraw feeler must be 5-10 lbs.

**Replacement Pistons:** See *Frazer & Kaiser Special Data*.

**Installing Pistons:** Slot in skirt toward left or away from camshaft.

**PISTON RINGS:** Two compression, two slotted oil rings, all above pin. Third ring groove drilled, fourth groove slotted for oil drainage.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	.0925-.0935"	.008-.016"	.0025-.004"
Comp. (#2)	.0925-.0935"	.008-.016"	.0015-.0035"
Oil (#3,4)	.1550-.1545"	.008-.016"	.001-.0025"

**Installing Rings:** Side marked "TOP" (compression rings) upward.

**Replacement Rings:** See *Frazer & Kaiser Special Data*.

**PISTON PIN:** Diameter—.8591-.8593". Lgth.—2 13/16". Floating type with lock ring at each end.

**Pin Fit in Piston**—Push fit with piston heated to 212°F. (heat piston in water at 212°F. to install new pins).

**Pin Fit in Rod Bushing**—Light press fit. When installing new bushings, ream bushings with DD-82-2 Reamer to inside diameter of .8593-.8595" for new std. pins.

► **CAUTION**—Pin bushing must protrude 1/64" in each side of rod.

**Replacement Pins:** Std. size and .003", .005" Oversize.

**CONNECTING ROD:** Length—7". Weight—29.6 ozs.

**Crankpin Journal Diameter**—2.0619-2.0627".

► **CAUTION**—Special bearing size used in some engines. See "Original Bearing Sizes" in *Frazer & Kaiser Special Data*.

**Lower Bearing**—Removable steel-backed, babbitt-lined type. No shims.

**Clearance**—.0005-.0015". **Sideplay**—.006-.010".

**Plastigage Note**—Can be used to check bearing clearance. See *Plastigage data* under "Crankshaft & Main Bearings" in *Frazer & Kaiser Special Data*.

**Bearing Adjustment:** None. Replace bearings. Do not file rods or bearing caps.

**Replacement Bearings:** Furnished Std. Size and .001", .002", .010", .012" Undersize.

**CAUTION**—Install bearings with tang engaging notch in rod and cap and oil hole aligned with oil spurt hole in rod.

**Installing Rods:** Mark rods and bearing caps. Install with marks together and toward camshaft in same order as when removed. Oil spray hole in lower end of rod toward camshaft. **NOTE**—Lower bearings offset with narrow side of rod toward nearest main bearing (#1, 3, 5 toward front; #2, 4, 6 toward rear of engine).

**CRANKSHAFT:** Four bearing, counterweighted type with vibration dampener on forward end.

**Journal Diameters**—2.3744-2.3752". **NOTE**—Allowable taper or out-of-round .001".

► **CAUTION**—Special bearing size used in some engines. See "Original Bearing Sizes" in *Frazer & Kaiser Special Data*.

**Bearings**—Removable, steel-backed, babbitt-lined. **Clearance**—.0005-.0015".

**Plastigage Note**—Can be used to check bearing clearance. See *Plastigage data* under "Crankshaft & Main Bearings" in *Frazer & Kaiser Special Data*.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps. Upper main bearing shells can be "rotated" out by installing tool KF-8 in crankshaft journal hole (lug on tool engages edge of bearing when crankshaft rotated).

**Filler Block (Front & Rear) Removal & Installation**—See "Crankshaft & Main Bearings" in *Frazer & Kaiser Special Data*.

**Replacement Bearings:** Furnished Std. size and .001", .002", .010", .012" Undersize.

**End Thrust:** Taken by front (#1) bearing (special thrustwasher used with unflanged bearings). Controlled by shims installed between front crankshaft thrust washer (ahead of #1 bearing) and crankshaft thrust plate (behind crankshaft sprocket).

**Endplay**—.004-.006".

**Endplay Adjustment**—See "Crankshaft & Main Bearings" in *Frazer & Kaiser Special Data*.

**CAMSHAFT:** Four bearing. Two-sprocket chain drive. **Journal Diameters**—#1, 1.8725-1.8735"; #2, 1.8095-1.8105"; #3, 1.7472-1.7485"; #4, 1.2475-1.2485".

**Bearing Diameters (I. D.)**—#1, 1.8745-1.8755"; #2, 1.8115-1.8125"; #3, 1.7495-1.7502"; #4, 1.2495-1.2505".

**Bearings**—Steel-backed, babbitted bushings. **Clearance**—.002-.004".

**Bearing Adjustment:** None. Replace bushings with camshaft removed.

**Replacement Bushings:** Replace as set (furnished finished line-bored and do not require reaming after installation). Use KF-4 Camshaft Bearing Remover & Replacer.

► **CAUTION**—Align oil hole in bushings and block.

**End Thrust:** Taken by thrust plate on front of engine (between front bearing journal and camshaft sprocket Endplay—.003-.007".

**Camshaft Removal:** See "Camshaft & Bearings" in *Frazer & Kaiser Special Data*.

**Timing Chain:** Non-adjustable type. Width 1". Pitch .500". Length 23" or 46 links.

► **Timing Chain Caution**—Morse and Link Belt chains used. Interchangeable only as complete sets with both sprockets.

**Camshaft Setting:** Mesh chain with 9 links (or 10 link pins inclusive of pins opposite marks) between marks on sprockets with #6 piston at top dead center on compression stroke.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 33/64"	.3414-.3406"	5 3/16"
Exhaust	1 21/64"	.3382-.3390"	5 3/16"
	Seat Angle	Lift	Stem Clearance
Intake	30°	.3481"	.0008-.0026"
Exhaust	45°	.3315"	.0032-.0050"

**Valve Guides:** Pressed in block. Replace when stem clearance exceeds maximum (above). Ream new guides for correct clearance using Reamer C-249.

**Valve Guide Installation**—Place guide (tapered end of guide toward top) in position in bore. Use Tool KF-27 when installing guides to correct position of 1 7/32" below top face of cylinder block.

**Valve Springs:** Check spring with tester C-647. Pressure should be 45 ± 2 1/2 lbs. at 1 21/32".

	Spring Pressure	Length
Valve Closed	51 lbs.	1 43/64"
Valve Open	113 lbs.	1 5/16"

**Valve Lifters:** Barrel type. Two types used and are interchangeable. One type using tappet adjusting screw with locknut, other type is self-locking.

**Clearance**—Selective fit. Lifter should rotate in bore with slight drag. Service by installing oversize lifter.

**Replacement Lifters**—Furnished Std. size and oversize. Oversize identified as follows: "A".0005", "B".001", "C".0015", "D".002", "K".005", "S".008".

## VALVE TIMING

**Tappet Clearance:** .014" All Valves, Cold.

**Adjustment Procedure**—See *Frazer & Kaiser Special Data*.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 10° BTDC. Close 60° ALDC.

**Exhaust Valves**—Open 55° BLDC. Close 10° ATDC.

**Valve Timing Check**—With .014" tappet clearance (running clearance), #1 exhaust valve should close with piston 10° or .045" after top dead center with ten-degree mark after dead center "0" mark on dampener aligned with pointer at front of engine.

## LUBRICATION

**Lubrication System:** Pressure to crankshaft, connecting rod, camshaft bearings, exhaust valve lifters, timing chain. Oil pump located in oil pan.

**Crankcase Capacity**—5 qts. (refill), 5 1/2 (dry).

**Normal Oil Pressure**—35-40 lbs., 2000 RPM., 30 MPH.

**Oil Pressure Regulator**—Located in right side of cylinder block below the valve chamber and toward the rear of engine. Adjustable by replacing spring or install washers No. 200272 between end of spring and plug.

**Oil Pan Removal:** See *Frazer & Kaiser Special Data*.

**Crankcase Ventilation:** Filter element in oil filler cap (air intake). Outlet pipe located on front valve cover

C N T I N U E D N N E X T P A E

## CONTINUED FR M PRECEDIN PAGE

plate on right side of engine. NOTE—Two types of valve cover and outlet pipe assemblies used—can be identified by angle of cut-off at lower end of tube: (Early 1949 Cars) angular cut-off faces forward. (Later 1949 Cars) angular cut-off faces toward rear.

► **CAUTION**—Do not install later valve cover & outlet pipe assembly on early cars (may cause loss of oil through tube).

**Oil Pump:** Gear type. In crankcase.

**Oil Pump Servicing**—See *Fraser & Kaiser Special Data*.

**Oil Filter:** Replace cartridge at 10,000 mile intervals or more often if required by operating conditions.

**Oil Pressure Gauge:** King-Seeley electric type.

**Dash Unit**—K-S No. 42460.

**Engine Unit**—K-S No. 40767.

See *Miscellaneous Section for complete data*.

## COOLING

**Cooling System:** Sealed system (relief valve in filler cap) with positive circulation and thermostatic control.

**Capacity**—13½ qts. (13 qts. at driving level).

**Pressure Valve**—AC No. 850501 (Radiator Filler Cap). 3¼-4¼ lbs.

**Radiator:** No. 202906 (17" wide). Side mounted to shroud with six bolts.

**Radiator Removal**—See *Fraser & Kaiser Special Data*.

**Water Pump:** Centrifugal type with ball bearing shaft. See *Water Pump Section for complete data*.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** Kaiser-Frazer No. 200160 (Std.), No. 202349 (for Permanent Anti-freeze only). In water outlet elbow on cylinder head.

**Setting (Std. type)**—Begins to open at 149-156°F. Fully open at 176°F.

**Temperature Gauge:** King-Seeley electric type.

**Dash Unit**—K-S No. 42465.

**Engine Unit**—K-S No. 40380.

See *Miscellaneous Section for complete data*.

## CLUTCH

**Pass. Cars**.....Auburn 9251-15 or Borg & Beck 9A7  
**Taxi**.....Borg & Beck 10A7

► **Clutch Identification**—Types can be identified by number of pressure plate springs—3 (for Auburn), 9 (Borg & Beck—cover marked 951 (9A7), 948 (10A7)). See *Clutch Section for complete data*.

**Facings (Auburn)**—Moulded metallic or Raybestos. 2 required. I. D. 6". O. D. 9¼". Thickness .135".

**Facings (Borg & Beck)**—Woven asbestos, 2 required. I. D. 6" (7" 10A7), O. D. 9¼" (10" 10A7). ⅛" thick.

**Pedal Adjustment:** Pedal free travel ⅝-¾". To adjust remove return spring, clevis pin and release clevis end of adjusting link from clutch pedal shaft bellcrank. Turn clevis end in or out to obtain correct pedal free movement. Install adjusting link clevis on bellcrank, insert clevis pin, cotter pin, and return spring.

**Removal:** Remove transmission (see Transmission Removal below), remove housing pan. Position of clutch on the flywheel must be marked before removal. Rotate flywheel, using Flywheel Turning Tool C-771 and loosen six bolts equally before removing. Remove clutch pressure plate and cover assembly and clutch disc.

## TRANSMISSION

**Warner Model AS23-T86E (Std.), Model AS24-T86E with new Type R10B Overdrive (Optl.)**—Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section for complete data*.

**Transmission Control:** Remote control type with gear-shift lever mounted on steering column.

See *Transmission Section for complete data*.

**Removal:** Remove clutch pedal return spring, clevis pins at cross shaft coupling and slide coupling onto cross shaft. Disconnect gear shift rods at transmission levers. (If overdrive is installed disconnect overdrive shift rod at overdrive unit). Disconnect speedometer cable at transmission (plug hole in transmission to prevent loss of lubricant). Disconnect wiring to overdrive. Support rear of engine using Tool KF-47 or suitable jack under clutch housing, disconnect propeller shaft at front companion flange. Free engine rear support from cross-member by taking out two insulator bolts at transmission. Disconnect and remove master cylinder operating rod. Disconnect hand brake cable at equalizer and engine rear crossmember. Remove eight bolts at frame side rails and remove cross-member. Remove four bolts holding transmission to clutch housing and pull out the transmission. (If overdrive is installed it will be removed with transmission).

## OVERDRIVE

**Warner Type R10B (with special AS24-T86E Transmission)**—Optl. Equipment. New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."

See *Transmission Section for complete data*.

**Overdrive Solenoid**—D-R 1118132, K-F No. 200911.

**Governor**—Kaiser-Frazer No. 200908.

**Control Relay**—Auto-Lite HRT-4001A, K-F Part No. 201636. Has 20-ampere fuse on BAT terminal.

**Kick-down Switch**—Kaiser-Frazer No. 203451.

**Lock-out Switch**—Kaiser-Frazer No. 200915.

**Removal:** Remove drain plug in overdrive housing and drain lubricant. Disconnect wiring at shift fork rail switch terminals. Disconnect speedometer cable at overdrive housing, control wire at control shaft lever on overdrive housing and the tie-down clips. Disconnect front propeller shaft at front companion flange and move shaft away from housing. Remove Overdrive and Transmission as a unit (see Transmission Removal above).

## UNIVERSALS

**Detroit Series 4200, Ball-and-Trunnion, 3** used with intermediate universal at propeller shaft support. See *Universals Section for complete data*.

**Propeller Shaft & Support Bearing:** Two shafts used with support bearing on frame cross member at intermediate universal.

**Propeller Shaft & Support Bearing Servicing**—See "Propeller Shaft" in *Fraser & Kaiser Special Data*.

## REAR AXLE

**Spicer (Salisbury) Model 41-2**—Semi-floating, Hypoid Gear type with Hotchkiss Drive. See *Rear Axle Section for complete data*.

**Ratio (491)**—4.09-1 Std., 3.73-1 or 3.91-1 Optl.

**Ratio (492)**—3.91-1 Std., 4.27-1 or 4.55-1 with O. D., 3.73-1 or 4.09-1 Optl.

**Backlash**—.003-.006". Shim adjustment.

**Removal:** Hoist rear end of car and place supports under frame. Remove rear wheels and drums (use Puller C-319). Disconnect propeller shaft at rear universal flange, disconnect hydraulic brake line at connector on axle housing, disconnect rear shock absorbers and sway eliminator links (when used) at spring seat, disconnect parking brake cables. Disconnect both springs at front hanger and rear shackle, remove axle and spring assembly from beneath car. NOTE—Axle can be removed without disturbing springs by taking out spring "U" bolts.

**Axle Shaft Removal**—Remove rear wheel and drum using puller C-319. Disconnect hydraulic brake line at backing plate and brake cable. Remove outer oil seal and backing plate (CAUTION—do not lose adjusting shims between backing plate and housing flange). Pull axle shaft and bearing assembly out.

**Wheel Bearing Adjustment:** Adjust endplay by adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Make certain that shim thickness at right wheel is .060" (to center thrust block on differential shaft), adjust endplay at left wheel.

**Endplay**—.001-.006".

## SHOCK ABSORBERS

**Monroe**—Direct acting, hydraulic type. Serviced by replacement (mountings serviced separately).

See *Shock Absorber Section for complete data*.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data*.

**Kingpin Inclination**—5½° preferred (4¾-5¾° cross-wise).

**Caster**—0° preferred (—1° to +1°).

**Camber**—¼° preferred (0° to ¾°).

**Toe-In**—1/16". Adjust by turning both tie rods.

**Steering Geometry (Toe-out)**—Inner wheel 23°. Outer wheel 20°. No adjustment.

## STEERING GEAR

**Gemmer Model 305**—Worm-and-Roller type with "push-pull" adjustments.

See *Steering Gear Section for complete data*.

## BRAKES

**Service Brakes:** Bendix (Lockheed) Hydraulic type with floating self-centering shoes (no anchor pin adjustment). Hand lever applies rear service brakes. See *Brake Section for complete data*.

**Drums**—Composite (cast-iron & steel). Diameter 11"

**Lining**—Molded type. Width 2". Thickness 13/64". Length 12¼" (forward shoe—all wheels), 10 1/32" (rear shoe—all wheels).

**Clearance**—.008" at heel and toe of each shoe.

**Braking Power**—56% Front wheels, 44% Rear.

**Hand Brake:** See Service brake data (above).

## MISC. MECHANICAL

**Windshield Wiper:** Vacuum type, cable operated.

See *Miscellaneous Section for complete data*.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

### 1949 LINCOLN & LINCOLN COSMOPOLITAN

ENGINE	Ft Lbs.	In. Lbs.
Cylinder Head Stud Nuts.....	50-55	600-660
Cylinder Head Capscrews.....	65-70	780-840
Main Bearing "Place Bolts".....	120-130	1440-1560
Connecting Rod Nuts.....	52-60	624-720
Flywheel to Crankshaft.....	75-85	900-1020
Vib. Damper to Crankshaft.....	120-130	1440-1560
Engine Front Support.....	65-70	780-840
Eng. Rear Support to Trans.....	55-60	660-720
Clutch Cover Mounting Screws.....	22-26	264-312
Flywheel Housing:		
To Cylinder Block.....	40-45	480-540
To Oil Pan Sump.....	45-50	540-600
To Engine Rear Plate.....	30-35	360-420
Trans. to Flywheel Housing.....	45-50	540-600
Exten. (or OvDr.) to Trans.....	55-60	660-720

### 1949-50 MERCURY

ENGINE	Ft Lbs.	In. Lbs.
Cylinder Head Capscrews.....	65-70	780-840
Main Bearing Capscrews.....	80-90	960-1080
Connecting Rod Nuts.....	45-50	540-600
Flywheel to Crankshaft.....	75-85	900-1020
Engine Front Support.....	65-70	780-840

### 1949 LINCOLN & COSMP., 1949-50 MERCURY

CHASSIS	Ft. Lbs.	In. Lbs.
Pitman Arm to Shaft.....	120-130	1440-1560
Steering Gear to Frame.....	30-35	360-420
Steering Idler Arm to Bracket.....	90-110	1080-1320
Idler Arm Bracket to Frame.....	40-45	480-540
Front Suspension:		
Upper Arm to Frame.....	75-80	900-960
Lower Arm to Frame.....	48-53	576-636
Upper Arm to Spindle.....	90-110	1080-1320
Lower Arm to Spindle.....	110-130	1320-1560
Front Brake Drum to Hub.....	13-15	156-180
Rear Brake Drum to Flange.....	12-17	144-204
Rear Shock Absorber.....	60-65	720-780
Rear Spring U-bolts.....	65-70	780-840
Rear Spring Shackles.....	35-40	420-480

## CYLINDER HEAD

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews in correct sequence as shown in diagram. Tighten all screws to correct tension and recheck after engine has been run and thoroughly warmed up.

LINCOLN

Tightening Torques—See Tightening (Torque Wrench) specifications.

## OIL PAN REMOVAL

### 1949 LINCOLN

► **OIL PAN REMOVAL (LINCOLN): CAUTION**—For access to oil pump and screen or for clean out, oil sump only can be removed. Oil sump secured by 4 lower capscrews on bell housing and 18 nuts to oil pan.

**Oil Pan Removal**—Car manufacturer recommends following method be used:

- 1)—Drain oil, set #2 piston at top dead center (2nd cylinder right hand bank), turn wheels to extreme right, take off exhaust cross-over pipe (secure manifold heat valve with one nut).
- 2)—Remove steering idler arm bracket from right frame rail and pull down. Take off starter and oil dip stick tube.
- 3)—Remove oil sump (4 lower capscrews on bell housing and 18 nuts to oil pan). Take off oil pan baffle (clipped to oil pan). Disconnect filter return line on left side of pan.
- 4)—Remove 20 oil pan-to-block capscrews using  $\frac{3}{8}$ " drive tools. Move outlet pipe to left after freeing bracket for access to front oil pan screws. Lower rear end of pan and slide out to rear.

### 1949 LINCOLN COSMOPOLITAN

**OIL PAN REMOVAL (LINCOLN COSMOPOLITAN):** Same as given for LINCOLN above except that front end of engine must be raised as follows:

- 1)—Drain radiator and remove lower radiator hoses.
- 2)—Turn fan so that wide angle between blades up.
- 3)—Remove fuel & vacuum pump from adapter.
- 4)—Take off 2 nuts from front engine mounts, raise front of engine  $2\frac{1}{4}$ - $2\frac{3}{8}$ ", block engine up by inserting blocks between brackets and engine mounts.
- 5)—When removing oil pan, pan should be turned so front oil seal will pass over left capscrew of front main bearing cap.

### 1949-50 MERCURY

**OIL PAN REMOVAL (MERCURY):** Car manufacturer recommends following method be used (pan can be removed without draining oil):

- 1)—Take off exhaust pipe cross-over (secure manifold heat valve with one nut).
- 2)—Remove steering idler arm bracket from right frame rail and pull down.
- 3)—Remove starter.
- 4)—Take off flywheel housing lower front cover (cover drops straight down after removing nuts and bolts). Remove oil dip stick tube from pan.
- 5)—Remove 16 oil pan-to-block capscrews using  $\frac{3}{8}$ " drive tools. Lower rear end of pan and slide out to rear.

**NOTE**—Front end of engine does not have to be raised to remove pan.

## CAMSHAFT & BEARINGS

### 1949 MERCURY

**CAMSHAFT PRODUCTION CHANGE (1949 MERCURY VEHICLE NO. 9CM-826 UP):** Change to REVERSE helix timing gears giving forward thrust at front end of camshaft for silencing backlash (was toward rear on early engines with normal gears). Oiling at front end modified with a change in front camshaft bearing position (same bearing used). Parts for both types are as follows:

### CAMSHAFT PRODUCTION PARTS CHANGES

	Early Type	9CM-826 UP Type
Camshaft.....	8CM-6250	8CM-6250-B
Camshaft Gear.....	7RA-6256	8BA-6256-A
Crankshaft Gear.....	48-6306	8BA-6306
Oil Line Plug.....	8BA-6026	7HA-6026

Following modifications made for use of new REVERSE helix timing gears:

- 1)—Timing Gears. Reverse helical gears (L.H. teeth on camshaft gear, R.H. teeth on crankshaft gear).
- 2)—Camshaft. Oil hole in front bearing journal moved  $1/16$ " (center of hole .440-.450" to rear of flange on shaft, was .507-.512" on early shafts). Inside diameter increased to  $3/16$ " (was  $1/8$ " on early shafts). Outer end of hole is at front of shaft on both types of camshafts.

► 3)—Camshaft Front Bearing Position—CAUTION—Same bearing used but position in block different for each type camshaft. This is important to provide correct lubrication for front end of camshaft (alignment of upper oil hole in bearing with oil hole in camshaft front bearing journal). Bearing positioned as follows:

**Bearing Position for Late (8CM-6250-B) Camshaft**—Installed with front edge flush with front face of block to align upper oil hole in bearing with relocated hole in camshaft front bearing journal (see No. 2 above).

**Bearing Position for Early (8CM-6250) Camshaft**—Installed with front edge  $1/16$ " back from face of block for oil hole alignment.

4)—Cylinder Block Front Oil Line Plug. Solid plug in oil line (above camshaft). Early type plug equipped with oil hole for front end gear lubrication. With this new plug front end gears and thrust surfaces lubricated from front end of camshaft (oil fed from main oil line lead at front camshaft bearing into oil lead in shaft and out through front end of shaft).

## COOLING SYSTEM

### 1949 LINCOLN & LINCOLN COSMOPOLITAN

► **PRODUCTION CHANGE FOR IMPROVED COOLING:** New Cylinder Head Gasket No. 8EL-6051-D. This gasket required for new water holes added during production, 4 holes in block (1 in upper corners of each bank) with matching holes in each cylinder head. This gasket furnished for service on all engines (can be used on early engines without the additional holes).

**Drilling of Additional Water Passage Holes on Early Cylinder Blocks and Heads for Improved Circulation**—Allowed by car manufacturer where overheating conditions cannot be corrected by regular methods. Use new gasket No. 8EL-6051-D as template, drill  $5/16$ " additional holes as follows: 4 in cylinder block (1 in upper corner front and rear of each bank), 2 in each cylinder head (1 in upper corner front and rear).

► **CAUTION**—Holes in cylinder block should not be drilled deeper than  $\frac{3}{8}$ ".

**HOOD LOCK:** Pull T-handle under edge of instrument panel on left side, push back on safety catch under front edge of hood, raise hood.

### MODEL IDENTIFICATION

**VEHICLE NUMBER:** Stamped on plate attached to engine side of dash and on top of right frame side rail to rear of front suspension upper control arm.

### TUNE-UP

**COMPRESSION PRESSURE:** 110 lbs. at cranking speed. Maximum compression pressure 175 lbs.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram.

**SPARK PLUG GAPS:** .030". Limits .029-.032".

**Plug Type—Champion H-10, 14 mm.**

**DISTRIBUTOR:** Breaker Gap—.015-.018".

**Cam Angle—28-30° (closed).**

**Breaker Arm Spring Tension—17-20 ounces.**

**Automatic & Vacuum Advance—See Ignition.**

**Condenser Capacity—20-25 microfarad.**

**IGNITION TIMING:** 4° BTDC.

**Timing Procedure—See Ignition Timing.**

**Dampener Mark—"/" mark aligned with timing pin on front engine cover above top of dampener.**

### CARBURETION:

**Idle Setting—Set for highest steady vacuum reading. 2 screws (turning out gives richer mixture).**

**Idle Speed (standard)—Approx. 500 RPM.**

**Idle Speed (Hydra-Matic)—375-400 RPM.**

**Float Level—Fuel level  $\frac{1}{2}$ "  $\pm$  1/32" below top edge of bowl. Use Fuel Level Gauge No. 9550-B.**

**Accelerating Pump—Center hole average setting. Inner hole for Hot weather, outer for cold weather.**

**Fuel Pump Pressure:** 3½-4½ lbs.

**Choke Setting:** Index mark on coil cover aligned with center mark on housing (maximum variation one division either side).

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve located between right end of exhaust pipe cross over and right exhaust manifold.

**VALVE TAPPET CLEARANCE:** None in service (Hydraulic type lifters).

**Valve Timing Check—See Valve Timing.**

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Lincoln No. 6A-11572-A.

**Ignition Lock—Lincoln No. 8H-11582-A.**

**COIL:** Lincoln No. 7RA-12029-A. Can type.

**Location—On engine side of dash.**

**Ignition Current—5 amperes stopped, 3 amperes idling.**

**CONDENSER:** Lincoln No. 8EL-12300-A.

**Capacity—20-25 microfarad.**

**DISTRIBUTOR:** Auto-Lite Model No. IGT-4302-1, Lincoln No. 8EL-12100. Automatic advance type with Vacuum Spark Control and Fuel Compensator Breaker Plate Identification—No. 7 stamped on plate (vacuum advance limiting slot size).

**Breaker Gap—.015-.018".**

**Cam Angle—28-30° (closed).**

**Breaker Arm Spring Tension—17-20 ounces.**

**Rotation—Clockwise viewed from above.**

Automatic Advance			
Degrees	Distr.	R.P.M.	Degrees Eng. R.P.M.
Start	1	275	0
	2	340	2
	7	400	4
	12	1000	14
		1600	24
			3200

**Fuel Compensator:** Slot in distributor timing arm permits minor timing variation adjustment. See Ignition Timing.

**Vacuum Spark Control:** Integral type (advances breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring).

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	9"
2°	4°	10⅞"
4°	8°	11⅞"
6°	12°	13¼"
7°	14°	14"

**Distributor Removal:** Mounted at rear of engine on left side. To remove, disconnect vacuum line, take out hold-down screw in timing arm.

### IGNITION TIMING

**Std. Setting** ..... 4° BTDC.  
**Dampener Mark—"/"** groove mark on edge of dampener with timing pin on front of engine.

**Timing—With #1 piston at firing position and "/" groove mark on dampener aligned with timing pin on front of engine, loosen clamp screw in timing arm, rotate distributor until contacts begin to open, tighten clamp screw. Check spark plug connections (see diagram), see that rotor at #1 cap terminal.**

**Timing (with Neon Timing Light)—Mark timing pin and "/" groove mark on dampener with white chalk. Connect timing light to #1 spark plug. Idle engine below 550 RPM., adjust distributor (as directed above) until mark and timing pin aligned when light flashes.**

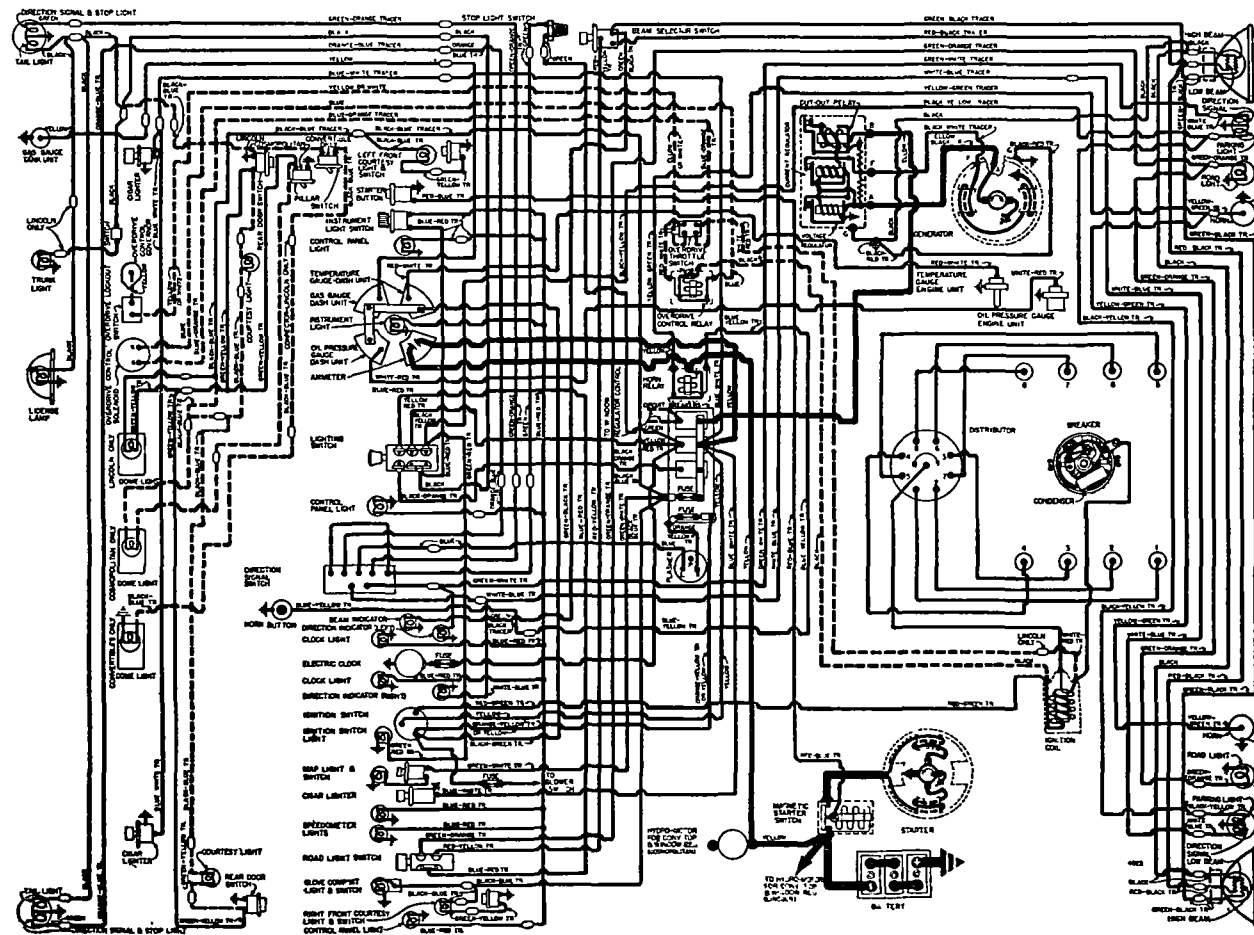

### CARBURETOR

**Std. before 10/48** ..... Holley-Ford 8EL-9510-A

**Std. after 10/48** ..... Holley-Ford 8EL-9510-D

**Hydra-Matic 6/49 Up** ..... Holley-Ford 8EL-9510-G

**Dual concentric downdraft with Automatic Choke. See Carburetor Section for complete data.**

►New Float and Float Spring change for stabilizing float level—See 1949 Lincoln in Carburetor Section.

Settings (Idle Setting, Float Level, and Accelerating Pump): See Tune-Up data.

Metering Jets—See Holley-Ford Jet Specification Table in Carburetor Section.

Hydra-Matic Throttle Adjustment: See "Lincoln Hydra-Matic Drive" in Transmission Section.

Fast Idle: Holley-Ford Carburetor type.

See Carburetion Equipment Section for complete data.

Automatic Choke: Holley-Ford Carburetor type.

See Carburetion Equipment Section for complete data.

Setting—Index mark on coil cover aligned with center mark on housing (maximum variation one division either side).

## CARB. EQUIPMENT

Fuel Pump (Fuel-& Vacuum): Lincoln 8EL-9350-A.

Pressure—3½-4½ lbs.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.

Dash Unit—Lincoln 8L-9280 (K-S #42235).

Tank Unit (Lincoln)—99A-9275B (K-S #7540).

Tank Unit (Cosmopolitan)—Lincoln No. 21C-9275A.

See Carburetion Equipment Section for complete data.

Air Cleaner (Oil Bath): Lincoln No. 8EL-9600.

Servicing (Oil Bath type)—Clean and re-fill sump (to level mark) with same grade oil used in crankcase at 2500 mile intervals (when crankcase drained). Occasionally wash filter in cleaning fluid.

## BATTERY

Lincoln No. 06H-10655-A. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).

Starting Capacity—150 amperes for 20 minutes.

Zero Capacity—300 amperes for 4.3 minutes. Five Second Voltage—4.4 volts.

Grounded Terminal—Positive (+) terminal.

Location—On right side in engine compartment.

Dimensions—L. 10½". W. 7 5/16". H. 9 3/16".

## STARTER

Standard.....Lincoln 7EH-11002-B. Arm. 18-11005

Hydra-Matic.....Lincoln 8EL-11002. Arm. 52-11005

Drive—(7EH) B-11350, (8EL) 29B-11350.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—20-22 ounces.

Cranking Engine—100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	550

Starting Switch: Lincoln No. 21A-11450 Magnetic Switch mounted on right front fender apron and controlled by panel pushbutton switch Lincoln No. 6H-11500 (and 8L-15812 Neutral Safety Switch on Hydra-Matic Drive cars).

Hydra-Matic Neutral Safety Switch Adjustment—See "Hydra-Matic Drive" in Transmission Section.

Removal: On right front face of engine rear plate. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

## GENERATOR

Lincoln No. 8EL-10002 (less pulley & bracket).

Armature No.—Lincoln No. 8EH-10005. Two brush type with current and voltage regulation.

Maximum Charging Rate—42 amperes, 7 volts, reached at approximately 19.5 MPH. Controlled by regulator and dependent on load and battery condition.

To Check Generator Output—Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

►CAUTION—Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

### Performance Data

Amperes	Engine R.P.M.
40	1500
Rotation	Counter-clockwise at commutator end.
Brush Spring Tension	20-24 ozs.

Removal: On support secured to intake manifold by stud nut, driven by belt in tandem with water pumps. To remove, loosen stud nut and disengage generator belt, take out capscrews in mounting strap, lift generator off support.

Generator Belt Adjustment: Loosen nut on support mounting stud, raise generator up until side movement on belt midway between generator and water pump pulley is ¼" (thumb and finger pressure).

Fan Belt Adjustment: See COOLING.

## REGULATOR

Lincoln 5EH-10505-C or E, or 8L-10505. Voltage-Current, 3-unit type.

See Electrical Equipment Section for complete data.

NOTE—Separate ground wire extending to cowl must be in place when generator operated.

### Cutout Relay

Cuts In—6.0-6.4 volts COLD (will be slightly higher when warm).

Cuts Out—8 ampere discharge current (maximum).

Contact Gap—.010" (armature against upper stop).

Air Gap—.014" between armature and core with contacts open.

### Voltage Regulator

Voltage Setting—7.0-7.4 volts COLD (7.2-7.6 volts after 20 minutes run).

Air Gap—.032-.035" between armature and core with contacts just closed.

►CAUTION—Make certain gauge contacts armature and not brass rivet on underside of armature.

Contact Spring Tension—5 ounces minimum with contacts just opening.

Checking & Adjustment—See Electrical Equip. Section.

### Current Regulator

Current Setting—38-42 amperes COLD.

Air Gap—.032-.035" between armature and core with contacts just closed.

Contact Spring Tension—5 ounces minimum with contacts just opening.

Checking & Adjustment—See Electrical Equip. Section.

## LIGHTING

Headlamps: Ford "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

Beam Indicator—Bulb above Left Direction Indicator on face of clock. Lights with Upper Beam "n"

Direction Signal: Std. See Electrical Equipment Section.

Direction Indicators—Right and Left indicators on lower edge of clock face.

Direction Signal Flasher—Lincoln No. 8L-13350-B.

### Switches

Lighting—Lincoln No. 7RA-11654.

Beam Selector—Lincoln No. 7RA-13532.

Instrument—Lincoln No. 8L-13740.

Map Light—Lincoln No. 8L-15653.

Glove Box—Lincoln No. 8L-14413.

Dome Light (exc. Conv.)—Lincoln No. 8M-13752-A.

Dome (Convertible only)—Lincoln No. 8M-13754.

Door Switches—Lincoln No. 8M-13713.

Stop Light—Lincoln No. 91A-13480.

Trunk (with wire assy)—Lincoln No. 8M-13546.

Road Light—Lincoln No. 8L-15224.

Direction Signal—Lincoln No. 8L-13335 (for service use part No. 8L-14486—includes wire assy.).

## MISC. ELECTRICAL

CIRCUIT BREAKERS: Lincoln No. 8L-12258-A (Lincoln), No. 8H-12258-A (Lincoln Cosmopolitan, Lincoln Convertible). Three used on one mounting, located on dash behind instrument panel together with two fuses (see wiring diagram for positions on bracket).

30 Ampere CB. Protects main lighting system.

15 Ampere CB. Protects speedometer light, control panel light, instrument cluster light, electric clock and clock light.

15 Ampere CB. Protects hydraulic equipment.

FUSES: Courtesy, Dome, Glove Box and Map Lights—14 ampere. Located on circuit breaker behind instrument panel (see wiring diagram).

Direction Signal—14 Ampere. Located on circuit breaker behind instrument panel (see wiring diagram).

Clock—3 ampere. In clock feed wire.

Overdrive—30 ampere. On "IGN" terminal of over-drive relay (on dash under hood).

Heater—20 ampere. In lead to heater switch.

HORNS: Lincoln No. 51A-13832-A or B (High Pitch, Right Horn), No. 51A-13833-A or B (Low Pitch, Left Horn). Dual horns operated by relay.

Air Gap—.027-.029" for high pitch (right horn), .032-.034" for low pitch (left horn).

Horn Current—13 amperes (High Pitch), 14 (Low).

Horn Relay: Lincoln No. 7RA-13853-A. On dash.

Contact Gap—.015-.025".

Contact Closing Voltage—4 volts max.

## ENGINE

ENGINE SPECIFICATIONS: Own Make. Eight cylinder, "L" head, 90° Vee type with both cylinder banks and crankcase cast Enbloc.

Bore—3½". Stroke—4¾".

Displacement—336.7 cu. ins. Rated HP—39.2.

Developed Horsepower—152 at 3600 RPM.

Compression Ratio—7.0-1 cast-iron head.

Compression & Vacuum Reading—See Tune-Up.

OIL PAN REMOVAL: See Lincoln Shop Notes.

TIGHTENING TORQUES: See Lincoln Shop Notes.

CYLINDER HEAD INSTALLATION: See Lincoln Special Data.

►PRODUCTION CHANGE FOR IMPROVED COOLING: New Cylinder Head Gasket No. 8EL-6051-D—Two additional water passage holes (one at each corner on upper edge of gasket) used to match new holes added to latest production engines. This gasket used for service on

## ENGINE

CONTINUED FR M PRECEDIN PA E

*all engines. These additional water passage holes can be added on earlier engines as described under COOLING in Lincoln Shop Notes.*

**CYLINDER SLEEVES:** Not used.

**PISTONS:** Aluminum alloy, steel strut, flat head, split skirt, cam ground type.

**Weight**—548 grams. **Length**—3.84".

**Removal**—Pistons and rods removed from above.

**Clearance**—.0005-.001". See Fitting Pistons.

**Replacement Pistons:** Std. .0025", .020", .030", .040" OS.

**Fitting Pistons:** Use ½" wide feeler inserted between piston (on side opposite slot) and cylinder wall at right angles to pin. Follower thickness .0015" for New Piston in New Bore, .003" for New Piston in Worn Bore or Worn Piston in New Bore, .004" for Worn Piston in Worn Bore. Pull to withdraw feeler 6 to 12 pounds.

**Cyl. Bore Max. Wear Limits:** Out-of-round, .003", Taper .006".

**PISTON RINGS:** Two types have been used:

(Early Cars)—Top Compression, Chrome plated; Lower Compression, Black ferrox-coated (Both rings counterbored on upper inner edge). Oil rings narrow "wedge channel" slotted type.

(Later Cars)—Top Compression, Black ferrox-coated; Lower Compression, plain. (Upper ring chamfered on upper inner edge, Lower taper face). Oil Rings wide channel slotted type.

Ring	Width	End Gap	Side Clearance
Compr. #1	.165"	.008-.016"	.002-.0035"②
Compr. #2	.165"	.008-.016"	.0015-.003"③
Oil #3 & 4	.152"	.008-.016"	.0015-.003"③

**Worn Limit**—①—.035", ②—.0045", ③—.004".

**Ring Thickness**—Compression .0933", Oil .186".

**Replacement Rings:** Perfect Circle ring sets (same type as used on early cars) furnished Std., .020", .030", .040", .060" Oversize. NOTE—Expander used with lower oil ring.

**Installing Rings (Early Cars)**—Compression rings assembled with counterbore to top.

(Later Cars)—Compression rings assembled with side marked "TOP" to face top of piston.

**PISTON PIN:** Diameter—.8503". Length—3.118". Floating type (lock ring in piston at each end). Pin hole in connecting rod bronze bushed.

**Pin Fit in Piston**—.0001-.00005" clearance (new), .001" (worn limit).

**Pin Fit in Rod Bushing**—.0001-.0002" clearance (new), .0012" (worn limit).

**Replacement Pins:** Std. size & .001", .002" Oversize.

**CONNECTING ROD:** Length—8.062".

**Weight**—773 grams (less bearings).

**Crankpin Journal Diameter**—2.400". Maximum wear limits—out-of-round .0015", taper .001".

**Lower Bearing**—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves are interchangeable.

**Clearance**—.0005-.003" (new), .005" (worn limit).

**Sideplay**—.007-.013" (new), .022" (worn limit).

►NOTE—Replace rod bearings less than .0745" thick.

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in rod and cap.

►PALNUT NOTE—Tighten finger tight plus 1/3 turn.

**Replacement Bearings:** Standard size and .002", .010", .020", .030", .040" Undersize.

**CRANKSHAFT:** 3 bearing with 6 integral counterweights and vibration dampener on front end.

►SLUDGE TRAPS—Crankpin throws equipped with sludge traps having removable plugs for cleaning.

**Vibration Dampener**—Viscous type (Inertia ring floats in Dow-Corning fluid in damper housing). Sealed unit. Serviced by replacement only.

**Main Journal Diameter**—#1 & #2, 2.8740"; #3, 2.8735". Max. wear limits—out-of-round .0015", taper .001".

**Bearings**—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves alike.

**Clearance**—Zero-.0025" (selective fit, crankshaft to turn free). Worn limit .0044" (#1, 2), .005" (#3).

►NOTE—Replace main bearings less than .0938" thick.

**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in block and cap.

►NOTE—Self-locking bearing cap bolts used.

**Replacement Bearings:** Standard size and .002", .010", .020", .030", .040" Undersize.

**End Thrust:** Taken by rear main bearings. Adjust by replacing bearings if clearance excessive.

**Endplay**—.002-.006" (new), .010" (worn limit).

**CAMSHAFT:** CAUTION—Two types used and have different valve timing (see Valve Timing).

**Before Engine No. 9EL-43603**—Camshaft not marked.

**Beginning Engine No. 9EL-43603**—Camshaft No. 8EL-6251-B marked "P" on gear attaching flange at front end. This Camshaft provides better idling characteristics.

**Bearing Diameter**—1.9285" (replace bearing if diameter greater than worn limit of 1.9315").

**Replacement Bearings:** Three sizes as follows:

1—Std. size on both inside and outside diameter.

2—Std. on I. D., .080" Oversize on O. D.

3—.015" Undersize on I. D., Std. on O. D. (must be finished reamed in assembly).

**End Thrust:** Thrust plate bolted on front of block.

**Timing Gears:** Helical cast aluminum camshaft gear bolted on camshaft, cast alloy iron crankshaft gear.

**Camshaft Setting:** Mesh marked tooth of crankshaft gear with space marked by line on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.800"	.3417"	5.7145"
Exhaust	1.515"	.3410"	5.7145"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.350"③	.0015-.003"①
Exhaust	45°	.350"③	.0022-.0037"②

**Wear Limit**—①—.005", ②—.006".

③—.357" Intake, .340 Exhaust with 1st. type camshaft before Engine No. 9EL-43603.

**Valve Seat Inserts**—On exhaust only.

►Oversize Replacement Intake Valve—No. 8EL-6507-B (.070" Oversize) valve should be installed if valve seat bearing line of original valve is at extreme outer edge of head or if seat width under .065-.080" limits.

►CAUTION—Top of valve must not be more than .030" above top face of block for head clearance.

**Valve Guides:** One piece type pressed in block. Inside diameter .344". Length 2.66".

**Guide Installation**—Press in block from above with small diameter end down. Distance from top of valve seat to upper end of valve guide 1.30".

**Valve Lifters:** Mushroom type, hydraulic tappet take-up (Wilcox-Rich Zero-Lash type).

**Body Diameter**—.7177" (new), .7167" (wear limit).

**Clearance in Block**—.0003-.0018" (new), .003" (worn). See Miscellaneous Section for complete data.

**Valve Springs:** Coated springs used.

**Spring Pressure**—62-68 lbs. (closed), 140-152 (open).

**Spring Test**—63-69 lbs. at 1.680". Free length 2.08".

## VALVE TIMING

**Tappet Clearance:** None in service (hydraulic lifter).

**Valve Timing:** CAUTION—Two Camshafts used and have different valve timing.

►Before Engine No. 9EL-43603

(Camshaft not marked)

**Intake Valves**—Open 14° BTDC. Close 60° ALDC.

**Exhaust Valves**—Open 62° BLDC. Close 16° ATDC.

►After Engine No. 9EL-43603

(Camshaft stamped "P" on front end)

**Intake Valves**—Open 5° BTDC. Close 52° ALDC.

**Exhaust Valves**—Open 49° BLDC. Close 8° ATDC.

**Valve Timing Check**—Intake valve opens 14° BTDC. (before Eng. No. 9EL-43603), 5° BTDC. (after 43603).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, valve lifters (hydraulic type) and timing gears. Oil pump mounted in crankcase at rear of engine.

**Crankcase Capacity**—6½ quarts.

**Normal Oil Pressure**—50 lbs. at 2000 RPM.

**Oil Pressure Relief Valves:** Two used as follows:

1—Oil Pump Relief Valve—In oil pump body and regulates pressure to 50 lbs. for engine lubrication. Spring tension 199 ozs. at 2.18".

2—Cylinder Block Oil Relief Valve—At front end of valve chamber and regulates pressure to 15 lbs. for hydraulic valve lifters.

**Oil Pump:** Gear type. In crankcase at rear of engine.

►NOTE—Removable sump attached to oil pan for access to oil pump and screen.

**Oil Filter:** On left cylinder head. Replace cartridge every 5000 miles or more often if required.

**Oil Filter Cartridge**—Lincoln No. 8CM-6731A Kit.

**Oil Pressure Gauge:** King-Seeley Electric.

**Dash Unit**—Lincoln No. 8L-9273.

**Engine Unit**—Lincoln No. 41A-9278.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Filter element in oil filler breather cap (inlet), and in upper end of outlet pipe at elbow connection just below generator on left side.

**Servicing**—Wash screen in cleaning fluid and wet with engine oil when dry at oil change period (2500 miles).

**Outlet Pipe Air Filter Cartridge**—Lincoln No. 8EL-6841.

## COOLING

►PRODUCTION CHANGE FOR IMPROVED COOLING: New Cylinder Head Gasket No. 8EL-6051-D—Two additional water passage holes (one at each corner on upper edge of gasket) used to match new holes added to latest production engines. This gasket used for service on

*all engines. These additional water passage holes can be added on earlier engines as described under COOLING in Lincoln Shop Notes.*

**Cooling System:** Pressure type with relief valve in filler cap and two belt-driven pumps (one for each bank) with re-circulating by-pass.

**Capacity**—34½ quarts.

**Pressure Valve**—In radiator filler cap. Lincoln No. 26H-8100-B (AC #846740). Opens at 3½-4 lbs.

**Water Pumps:** Two used. Centrifugal, belt-driven, packless type. Shaft mounted on sealed duplex ball bearing.

**NOTE**—Bottom bolt must be installed prior to installing water pump pulley.

*See Water Pump Section for complete data.*

**Fan Belt Adjustment**—Loosen fan mounting bracket bolts, raise fan up until side movement on belt midway between fan and crankshaft pulleys is ½". **Generator (& Water Pump) Belt Adjustment**—See GENERATOR.

**Thermostats:** Two used (one in each cylinder head water outlet). Lincoln No. 8EL-8575-A (std.), B & C (optl.).

**Setting (std.)**—148-170° maximum.

**Settings (Optl.)**—158-180° (B), 178-200° (C), max.

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit**—Lincoln No. 8L-10883.

**Engine Unit**—Lincoln No. 8A-10884 in left head.

**Engine Switch**—No. 8A-10990 in right hand head.

*See Miscellaneous Section for complete data.*

## CLUTCH

**Long Model 11CF-10½TI, Lincoln No. 8EL-7563.** Semi-centrifugal, single plate, dry disc type.

*See Clutch Section for complete data.*

**Facings**—Moulded or Woven. Inside Diameter 7". Outside Diameter 10½". Thickness .125".

**Pedal Adjustment:** 1-1¼" free travel. Adjust by loosening locknut and turning adjusting screw on adjusting rod.

**Removal:** Remove transmission (see TRANSMISSION Removal below). Remove flywheel housing inspection cover. Remove transmission from flywheel housing, detach clutch release spring first, remove flywheel housing from engine plate and cylinder block. Take off clutch release bearing and hub. Prick punch flywheel and pressure plate so that these parts may be placed in original positions when re-assembling. Use Tool 7563 to compress pressure plate. Take off 6 capscrews holding pressure plate assembly to flywheel.

## TRANSMISSION

### STANDARD

**Warner Model AS1-T85B (Std.), AS2-T85B (with Overdrive).** All helical gear type, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

*See Transmission Section for complete data.*

**Transmission Control:** Steering column mounted shift. *See Transmission Section for complete data.*

**Removal:** Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission and speedometer linkage. Support rear of engine and disconnect rear engine mounting from frame. Take out four transmission-to-flywheel housing capscrews and remove transmission.

## OVERDRIVE

**Warner Model AS2-T85B (Transmission & Overdrive).** Optl. equipment. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down".

*See Transmission Section for complete data.*

**Solenoid**—Lincoln No. 8M-6916.

**Control Relay**—Lincoln No. 8M-6915. On engine side of dash. 30 ampere fuse at IGN terminal of relay.

**Lock-Out Switch**—Lincoln No. 8M-6917-A.

**Throttle Kick-down Switch**—Lincoln No. 8A-6918.

**Governor**—Lincoln No. 8M-6919.

**Removal:** Same as for Std. transmission (above) after disconnecting overdrive control cable and wiring.

## HYDRA-MATIC DRIVE

### OPTIONAL EQUIPMENT

**Description**—Four-speed planetary type automatic transmission and fluid coupling. Similar to other Hydra-Matic Drive installations.

*See Transmission Section for complete data.*

**Lubrication**—Check fluid level every 1000 miles. Add fluid, as required, to maintain level at "F" mark on dip stick. Drain and refill every 15,000 miles. Use Automatic Transmission Fluid Type "A", furnished under Lincoln Part No. 8L-19582.

**Capacity**—12 qts. (Drain oil pan and torus cover and refill).

**Checking Fluid Level**—Set hand brake, place selector lever in "N" position, start engine and allow it to idle until normal operating temperature is reached. Roll back front floor mat on right side, remove inspection cover in floor pan, clean all dirt and lint from floor and around oil indicator. Place selector lever in "DR" position and idle engine with lever in this position while checking level. Oil level should be between "L" and "F" marks on dip stick. If below "L", add oil as required to bring level up to "F" mark.

► **CAUTION**—Do not check oil level when transmission temperature excessively high and do not fill above "F" on dip stick (will cause foaming when warm).

**Draining & Refilling**—See "Hydra-Matic Drive" in Transmission Section.

**Hydra-Matic Linkage Adjustment**—See "Lincoln Hydra-Matic Drive" in Transmission Section.

**Removal:** See "Lincoln Hydra-Matic Drive" in Transmission Section.

## UNIVERSALS

**Spicer 1310.** Needle bearing type. Two used.

*See Universals Section for complete data.*

► **NOTE**—Slip joint formed by splined slip yoke of front universal engaging transmission mainshaft (or overdrive shaft). One-piece propeller shaft used.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged (no separate hub). Wheel bearings are sealed ball, pre-lubricated (no lubrication required).

*See Rear Axle Section for complete data.*

**Ratio**—3.9-1 (43:11—Std.), 4.27-1 (47:11—with O.D.).

**Ratio (Hydra-Matic)**—3.31-1.

**Backlash**—.005-.008". Shim adjustment.

**Removal:** Raise rear of car. Remove axle shafts, and drive shaft. Take off hydraulic line clips from axle housing and free line from differential housing clip. Disconnect shock absorbers, spring U-bolts. Remove axle housing assembly from car.

**Axle Shaft Removal:** Remove rear wheels. Take out 3 capscrews holding brake drum to axle shaft flange. Remove hydraulic lines from brake backing plate. Take out 4 axle retainer nuts (work through opening in axle shaft flange). Use Tool 4235-A to remove axle shaft and bearing assembly from housing. Take off gasket and backing plate. Do not damage oil seal when removing axle shaft.

## SHOCK ABSORBERS

**Std.**—Lincoln 8M-18045-A (front), 8M-18080-A (rear).

**Heavy Duty (special equip.)**—Lincoln No. 8M-18045-D (front), 8M-18080-D (rear).

Direct acting, hydraulic types. Two makes are used and are interchangeable.

► **NOTE**—Shock absorbers are permanently sealed and cannot be refilled or repaired.

*See Shock Absorber Section for complete data.*

► **Rear Shock Absorber Installation**—Lower tube has welded stone shield on lower end which must be installed toward front of car.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs, direct acting shocks, and front stabilizer.

*See Front Suspension Section for complete data.*

► **CAUTION**—Specifications listed below supersede earlier 1949 Lincoln Front End Specifications.

**Kinpin Inclination**—5° crosswise with ¾° Camber. **Caster**—Pos. ½° to Neg. 1°. Threaded bushing adjustment at lower pivot pin.

**Camber**—0° to +¾°. Eccentric adjustment at upper pivot pin.

**Toe In**—3/32-5/32". Adjusting sleeve on outer end of each tie rod. Adjust equally.

**Steering Geometry (toe out on turns)**—Inner wheel turned 23½° ± ½°, outer wheel 20°.

## STEERING GEAR

**Gemmer Model 335.** "3-tooth" Worm-and-Roller type with "push-pull" adjustment.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Lincoln-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders**—Diameter: Front wheel 1.128" (hone limit 1.132"). Rear wheel .940" (hone limit .942").

**Drums**—Diameter 12".

**Lining**—Molded or Woven. Width 2¼" (front wheel), 2" (rear wheel). Thickness 3/16". Length per shoe 12 15/16".

**Clearance**—.010" at each end of each shoe.

**Braking Power**—59% front wheels, 41% rear.

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Tops, Windows & Front Seat:** Hydro-Letric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

*See Miscellaneous Section for complete data.*

**Windshield Wipers:** Two types used:

**Lincoln 9EL**—Vacuum Link and Crank Arm type.

**Cosmopolitan 9EH**—Vacuum Cable Operated type. *See Miscellaneous Section for complete data.*

**MODEL IDENTIFICATION**

**VEHICLE NUMBER:** Stamped on plate attached to engine side of dash and on top of right frame side rail to rear of front suspension upper control arm.

**TUNE-UP**

**COMPRESSION PRESSURE:** 115 lbs. at cranking speed. Maximum compression pressure 170 lbs.

**VACUUM READING:** Steady 18-21" idling at 500 RPM.

**FIRING ORDER:** 1-5-4-8-6-3-7-2. See diagram.

**SPARK PLUG GAPS:** .030" Limits .029-.032".

Plug Type—Champion H-10, 14 mm.

**DISTRIBUTOR:** Breaker Gap—.014-.016".

Cam Angle—28-30° (closed).

Breaker Arm Spring Tension—17-20 ounces.

Advance Performance—See Ignition.

Condenser Capacity—.21-.25 microfarad.

**IGNITION TIMING:** 2° BTDC.

Timing Procedure—See Ignition Timing.

**Crankshaft Pulley Mark:** Circular boss aligned with timing pin on right side of engine front cover.

**CARBURETION:**

**Idle Setting:** Approx. 1 turn open. Two screws—turning screws out gives richer mixture.

**Idle Speed:** Approximately 500 RPM.

**Float Level:** Fuel level  $\frac{1}{2}$ "  $\pm$   $\frac{1}{32}$ " below top edge of bowl. Use Fuel Level Gauge No. 9550-B.

**Accelerating Pump:** Center Hole average setting. Inner Hole for hot weather, Outer for cold weather.

**Choke Setting:** Index mark on coil cover aligned with center mark on housing (maximum variation one division either side).

**Fuel Pump Pressure:**  $3\frac{1}{2}$ - $4\frac{1}{2}$  lbs.

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve located between right end of exhaust pipe cross over and right exhaust manifold.

**VALVE TAPPET CLEARANCE:** .010-.012" Intake valves, .014-.016" Exhaust, Cold. No adjustment.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mercury No. 6A-11572-A.

Ignition Lock—Mercury No. 8H-11582-A.

**COIL:** Mercury No. 7RA-12029-A. Can type.

Location—On front lower corner of right cyl. hd. Ignition Current—3 amps. idling, 4.85 stopped.

**CONDENSER:** Mercury No. 7RA-12300-B.

Capacity—.21-.25 microfarad.

**DISTRIBUTOR:** Mercury No. 7RA-12127-C (less Cap and Rotor). New "Pressure" Distributor with spark advance controlled by vacuum diaphragm moving breaker plate to advance spark against two breaker plate springs. Operating vacuum taken from 1 carburetor connection (2 passages inside carburetor, 1 at venturi, 1 at throttle valve). Full spark advance obtained at 18-35 MPH. with normal road load or for part throttle operation at any speed.

► **NOTE**—Distributor is single contact type (no "coil load" contacts are used).

Breaker Gap—.014-.016".

Cam Angle—28-30° (closed).

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

**Advance Performance  
(at Wide Open Throttle)**

Distributor			Engine		
Degrees	Vacuum	R.P.M.	Degrees	Vacuum	R.P.M.
0°	0"	200	0°	0"	400
$1\frac{1}{4}$ - $2\frac{1}{4}$	0.4"	500	$2\frac{1}{2}$ - $4\frac{1}{2}$	0.4"	1000
$4\frac{1}{4}$ - $5\frac{1}{4}$	1.7"	1000	$8\frac{1}{2}$ - $10\frac{1}{2}$	1.7"	2000
$6\frac{1}{4}$ - $7\frac{1}{4}$	2.85"	1500	$12\frac{1}{2}$ - $14\frac{1}{2}$	2.85"	3000
$7\frac{1}{2}$ - $8\frac{1}{2}$	3.7"	2000	15-17°	3.7"	4000

**Distributor Removal:** Mounted at front of engine on right side. To remove, disconnect vacuum line, take out hold down screw, lift off.

**IGNITION TIMING**

**Std. Setting** ..... 2° BTDC.  
**Crankshaft Pulley Mark:** Circular boss on rear edge of pulley (timing pin above pulley on right side).

**Timing:** With #1 piston at firing position and timing mark on pulley aligned with timing pin on front of engine, loosen hold down screw on distributor, rotate distributor until contacts begin to open,

tighten hold down screw. Check spark plug connections (see diagram), see that rotor at #1 in cap.

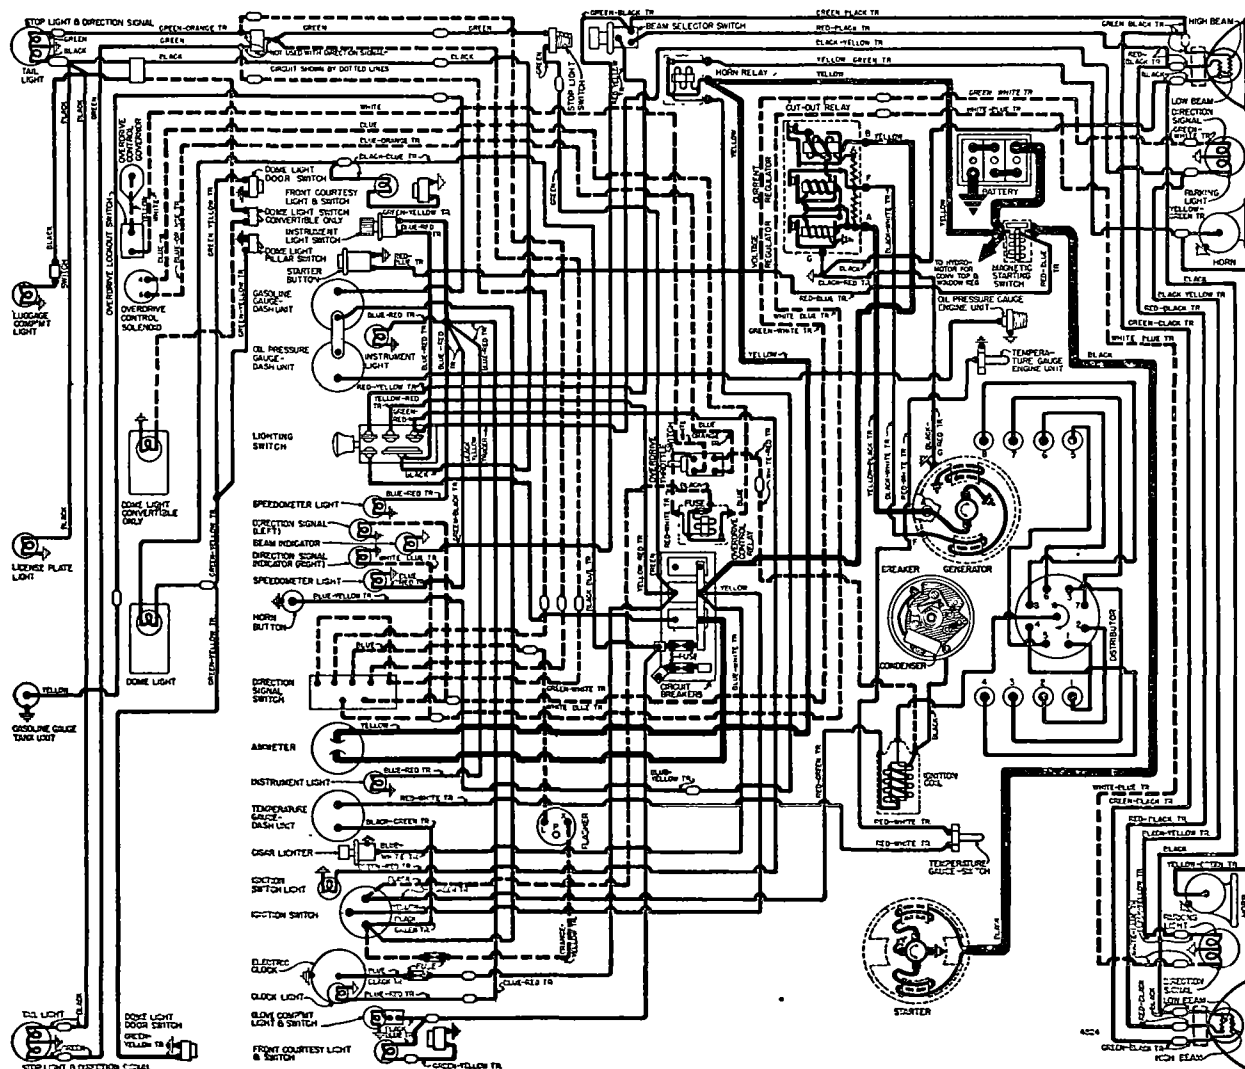

► **Timing (with Neon Timing Light)**—**CAUTION**—Vacuum line must be disconnected to avoid vacuum advance operating. Mark timing pin and pulley mark with white chalk. Connect timing light to #1 spark plug. Idle engine and adjust distributor (as directed above) until mark aligned with timing pin.

**CARBURETOR**

Holley-Ford—Mercury No. 8CM-9510-A (before Sept. 48), 8CM-9510-D (After Sept. 48). Dual concentric (double barrel) downdraft with Automatic Choke. See Carburetor Section for complete data.

► **New Float & Float Spring** change for stabilizing float level—See 1949 Mercury in Carburetor Section.

► **New Main Tubes and Main Jet** change to correct flat spots or stumble on acceleration—See 1949 Mercury in Carburetor Section.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See *Tune-Up* data.  
**Metering Jets**—See *Holley-Ford Jet Specification Table in Carburetor Section*.

**Fast Idle:** Holley-Ford Carburetor type.

See *Carburetion Equipment Section for complete data*.

**Automatic Choke:** Holley-Ford Carburetor type.

See *Carburetion Equipment Section for complete data*.

**Setting**—Index mark on coil cover aligned with center mark on housing (maximum variation one division either side).

## CARB. EQUIPMENT

**Air Cleaner (Oil Wetted):** Mercury No. 8CM-9600-B.

**Air Cleaner (Oil Bath):** Mercury No. 8CM-9600-A.

**Servicing (Oil Wetted type)**—Wash element in solvent and drain, saturate element with engine oil every 2500 miles.

**Servicing (Oil Bath type)**—Clean and re-fill sump (to level mark) with same grade oil used in crankcase at 2500 miles (when crankcase drained). Occasionally wash filter in cleaning fluid.

► **CAUTION**—Oil Bath Air Cleaners stamped "HH" on underside should be serviced with ½ pint of engine oil only. Disregard level mark or 1 pint specifications.

**Fuel Pump (std.):** Mercury No. 7RA-9350-C.

**Optl. (Fuel-&-Vacuum)**—Mercury No. 8CM-9350.

**Pressure**—3½-4½ lbs. (both types).

See *Carburetion Equipment Section for complete data*.

**Gasoline Gauge:** King-Seeley Electric.

**Dash Unit**—Mercury No. 8M-9280 (K-S #42180).

**Tank Unit (exc. Sta. Wgn.)**—Mercury 99A-9275-B.

**Tank Unit (Sta. Wagon)**—Mercury No. 01A-9275-A.

See *Carburetion Equipment Section for complete data*.

## BATTERY

**Mercury No. 8M-10655-A.** 6 volt, 17 plate, 100 A. H. Zero Capacity—300 amperes for 3.3 minutes. Five Second Voltage—4.2 volts.

**Grounded Terminal**—Positive (+) terminal.

**Location**—On left side in engine compartment.

**Dimensions**—L. 10 9/16". W. 7¼". H. 8 1/16".

## STARTER

**Mercury No. 7RA-11002.** Armature No. 18-11005.

**Drive**—Bendix No. A1472 (Mercury No. B-11350).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—20-22 ounces.

**Cranking Engine**—100 RPM., 190-215 amperes.

### Performance Data

Torque	R.P.M.	Volts	Amperes
4 ft. lbs.	1070	4.6	200
8 "	660	4.3	340
12 "	300	3.65	465
14 "	Lock	3.5	550

**Starting Switch:** Mercury No. 21A-11450 Magnetic Switch mounted on left front fender apron and controlled by panel pushbutton switch 6H-11500.

**Removal:** On right front face of flywheel housing cover. To remove, take off right engine splash pan (if used), free starter-to-oil pan bracket, take out 2 starter through bolts.

## GENERATOR

**Mercury No. 8BA-10002-A** (less pulley & bracket).

**Armature No.**—Mercury No. 8BA-10005.

**2 brush type** with current and voltage regulation.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—36 amperes, 7 volts, reached at approximately 18.5 MPH. Controlled by regulator (dependent on load & battery condition).

**To Check Generator Output**—Connect ammeter in series with charging line at regulator "ARM" terminal, connect short insulated jumper between generator "A" and "F" terminals (to short out regulator). Run engine at approximately 1500 RPM. and note ammeter reading. If generator output equals or exceeds rate output (below) generator performance is satisfactory. Remove jumper.

► **CAUTION**—Do not operate generator at higher speeds or in service with jumper connected between generator armature and field terminals. This jumper eliminates all regulator action.

### Performance Data

Amperes	Engine R.P.M.
33	1500

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—20-24 ozs.

**Removal:** On support secured to valve chamber cover by stud and nut, driven by belt in tandem with water pumps. To remove, loosen stud nut and disengage generator belt, take out capscrew in mounting strap, lift generator off support.

**Generator Belt Adjustment:** Loosen 2 bolts on fan mounting bracket, loosen generator support mounting stud nut, raise generator up until side movement on belt midway between generator and water pump pulley is ¾" (thumb and finger pressure), tighten stud nut.

**Fan Belt Adjustment:** See *COOLING*.

## REGULATOR

### Mercury Numbers

Regulator	Generator	Amperes
51A-10505-A or C	8BA-10002-A (Std.)	30-33
8M-10505	8BA-10002-A (Std.)	34-38

Voltage-current 3-Unit types.

See *Electrical Equipment Section for complete data*.

**NOTE**—Separate ground wire extending to cowl must be in place when generator operated.

### Cutout Relay

**Cuts In**—6.0-6.4 volts COLD (will be slightly higher when warm).

**Cuts Out**—8 ampere discharge current (maximum).

**Contact Gap**—.010" (armature against upper stop).

**Air Gap**—.014" between armature and core with contacts open.

### Voltage Regulator

**Voltage Setting**—7.0-7.4 volts COLD (7.2-7.6 volts after 20 minutes run).

**Checking & Adjustment**—See *Electrical Equip. Section*.

**Air Gap**—.032-.035" between armature and core with contacts just closed.

► **CAUTION**—Make certain gauge contacts armature and not brass rivet on underside of armature.  
**Contact Spring Tension**—5 ounces minimum with contacts just opening.

### Current Regulator

**Current Setting (51A)**—30-33 amperes COLD

**Current Setting (8M)**—34-38 amperes COLD

**Checking & Adjustment**—See *Electrical Equip. Section*.

**Air Gap**—.032-.035" between armature and core with contacts just closed.

**Contact Spring Tension**—5 ounces minimum with contacts just opening.

## LIGHTING

**Headlamps:** Ford "Sealed Beam" type.

See *Electrical Equipment Section for complete data*.

**Adjustment**—Aim upper beams straight ahead (hot spot centers 3" below lamp center height at 25 ft.).

**Beam Indicator**—Bulb between 50 and 60 on speedometer. Lighted with Upper Beam "on".

**Direction Signal:** Std. See *Electrical Equipment Section*.

**Direction Indicators**—Right and Left indicators on lower edge of speedometer.

**Direction Signal Flasher**—Mercury No. 8L-13350-B.

### Switches

**Lighting**—Mercury No. 7RA-11654.

**Beam Selector**—Mercury No. 7RA-13532.

**Instrument**—Mercury No. 5EH-13740-B.

**Glove Box**—Mercury No. 8L-14413.

**Dome Light**—Mercury No. 8M-13752-A.

**Dome Light (Convertible)**—Mercury No. 8H-13754.

**Dome Light (Sta. Wagon)**—Mercury No. 5EH-13752-A.

**Door Switches**—Mercury No. 8M-13713.

**Stop Light**—Mercury No. 11A-13480.

**Trunk (with wire assy.)**—Mercury No. 8M-13546.

**Direction Signal**—Mercury No. 8L-13335 (for service use Part No. 8L-14486—includes wire assy.).

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Mercury No. 8M-12258-A, No. 8H-12258-A (Convertible). Three used on one mounting, located on dash behind instrument panel together with two fuses (see wiring diagram for positions on bracket).

**30 Ampere CB**—Protects main lighting system.

**15 Ampere CB**—Protects speedometer light, control panel light, instrument cluster light, electric clock and clock light.

**15 Ampere CB**—Protects hydraulic equipment.

**FUSES:** Courtesy, Dome, Glove Box and Map Lights—14 ampere. Located on circuit breaker behind instrument panel (see wiring diagram).

**Direction Signal**—14 ampere. Located on circuit breaker behind instrument panel (see wiring diagram).

**Clock**—3 ampere. In clock feed wire.

**Overdrive**—30 ampere. On IGN terminal of overdrive relay (on dash under hood).

**Heater**—20 ampere. In lead to heater switch.

**HORNS:** Mercury No. 51A-13832-A (High Pitch, Right Horn), No. 51A-13833-A (Low Pitch, Left Horn).

Dual horns operated by relay.

**Air Gap**—.027-.029" for high pitch (right horn), .032-.034" for low pitch (left horn).

**Horn Current**—13 amperes (high pitch), 14 (low).

**Horn Relay:** Mercury No. 7RA-13853-A. On dash.

**Contact Gap**—.015-.025".

**Contact Closing Voltage**—4 volts max.

## ENGINE

**ENGINE SPECIFICATIONS:** Own Make. Eight cylinder "L" head, 90° Vee type with both cylinder banks and crankcase cast Enbloc.

**Bore**—3 3/16". **Stroke**—4".

**Displacement**—255.4 cu. ins. **Rated HP**—32.5.

**Developed Horsepower**—110 at 3600 RPM.

**Compression Ratio**—6.8-1 cast-iron head.

**Compression & Vacuum Reading**—See *Tune-Up*.

## ENGINE

CONTINUED FR M PRECEDING PA E

**TIGHTENING TORQUES:** See Mercury Shop Notes.**CYLINDER HEAD INSTALLATION:** See Mercury Special Data.**OIL PAN REMOVAL:** See Mercury Shop Notes.**CYLINDER SLEEVES:** Not used.**PISTONS:** Aluminum alloy, steel strut, dome head, U-slot, cam ground type.► **CAUTION**—1949 Mercury and Ford Pistons or Rings are not interchangeable.**Weight**—370 grams. **Length**—2.89" (exclud. dome).**Removal**—Pistons and rods removed from above.**Clearance**—.0005-.001". See Fitting Pistons.**Cyl. Bore Wear Limits**—Out-of-round .003", Taper .006".**Replacement Pistons:** Std., .0025", .020", .030", .040" OS.**Fitting Pistons:** Use ½" wide feeler inserted between piston and cylinder wall at right angles to pin. Feeler thickness .0015" for New Piston in New Bore, .003" for New Piston in Worn Bore or Worn Piston in New Bore, .004" for Worn Piston in Worn Bore. Pull to withdraw feeler 6 to 12 lbs.**PISTON RINGS:** Two compression, two slotted oil rings per piston (lower oil ring below pin). Rings are taper faced. Upper oil ring groove slotted, lower ring groove drilled for oil drainage.**NOTE**—Top compression ring Chrome plated.► **CAUTION**—1949 Mercury and Ford Piston Rings are not interchangeable (heavier rings used on Mercury).

Ring	Width	End Gap <sup>①</sup>	Side Clearance
Compr. #1	154"	.012-.020"	.0015-.0030"②
Compr. #2	154"	.012-.020"	.0010-.0025"③
Oil #3 & 4	142"	.008-.020"	.0015-.0030"②
Worn Limit—①	.035", ②	.0040", ③	.0035"
Ring Thickness	Compression .0933", Oil .186".		

**Installing Rings:** Top compression ring assembled with counterbore to top. Lower compression ring assembled with side marked "TOP" to face top of piston.**Replacement Rings:** Ring sets furnished standard size and .020", .030", .040" Oversize.**NOTE**—Service Rings have expander behind top oil ring, not the bottom.**PISTON PIN:** Diameter—.7503". Length—2.847". Floating type (lock ring in piston at each end). Pin hole in connecting rod bronze bushed.**Pin Fit in Piston and Rod Bushing**—.0005" clearance (new), .0015" (worn limit).**Replacement Pins:** Std. size & .001", .002" Oversize.**CONNECTING ROD:** Length—7".**Weight**—524 grams (less bearings).**Crankpin Journal Diameter**—2.1385". Maximum wear limits—Out-of-round .0015", taper .001".► **Lower Bearing**—Locked in (not floating type as used on earlier engines), steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves interchangeable.**Clearance**—.0005-.003" (new), .005" (worn limit).**Sideplay**—.006-.014" (new), .022" (worn limit).► **NOTE**—Replace bearing shells less than .0745" thick.**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in rod and cap.► **PALNUT NOTE**—Tighten finger tight plus 1/3 turn.**Replacement Bearings:** Standard size and .002", .010", .020", .030", .040" Undersize.**CRANKSHAFT:** 3 bearing, 6 integral counterweights.► **SLUDGE TRAPS**—Crankpin throws equipped with sludge traps having removable plugs for cleaning.**Journal Diameters**—2.4990" (all main bearings).**Wear Limits:** .0015" Out-of-round, .001" Taper.**Bearings**—Steel-backed, copper-lead alloy lined, replaceable shells. Upper and lower halves alike.**Clearance**—Zero-.0025" (selective fit, crankshaft to turn free). Worn limit .005" maximum.► **NOTE**—Replace main bearing shells when less than .0835" thick.**Bearing Adjustment:** None (no shims). Do not file caps. Replace bearings. Tang on bearing must engage groove in block and cap.**Replacement Bearings:** Standard size and .002", .010", .020", .030" Undersize. Rear mains also furnished .015" Oversize in Overall length for taking up end-play wear.**End Thrust:** Taken by rear main bearing. Adjust by replacing bearing if endplay excessive.**Endplay**—.002-.006" (new), .008" (worn).**CAMSHAFT:** Three bearing. Helical gear drive. Distributor drive gear pressed on front end of shaft, oil pump drive gear on rear end.► **CAMSHAFT PRODUCTION CHANGE VEHICLE NO. 9CM-826 UP**—Change to REVERSE helix timing gears to give forward thrust at front end of camshaft (was to rear on early engines) providing one-way thrust to camshaft for silencing backlash. Oiling at front end of shaft modified (new front camshaft bearing position, new camshaft, and new cylinder block oil line plug). See Mercury Shop Notes for data.**Bearing Diameter**—1.7985" (replace bearing if diameter greater than worn limit of 1.8015").**Replacement Bearings:** Standard size and .010", .015" Undersize. Undersize bearings require finish reaming.**End Thrust:** Taken by front end of camshaft and thrust surface on inner face of cylinder front cover. Adjust by replacing cover. Endplay—.007-.016".**Timing Gears:** **CAUTION**—Two types Camshaft Gears used: Aluminum type used before Vehicle No. 145832. New type Fibre Gear used after Vehicle No. 145832.► **CAUTION**—Camshaft gear teeth REVERSE (L. H.) starting with Vehicle No. 9CM-826 (R. H. teeth used before this number).**Replacement Camshaft Gears**—As follows:**Aluminum Type**—Standard and .006" OS (L. H. and R. H. teeth), .010" (R. H. teeth), .012" (L. H. teeth).**Fibre Type**—Standard and .006", .012" OS.**Camshaft Setting:** Mesh marked tooth of crankshaft gear with marked space on camshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.515"	.3410"①	4.8175"
Exhaust	1.515"	.3410"①	4.8140"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	.338"	.0015-.0035"②
Wear Limit—①	.3375". ②	.005" Int., .006" Exh.	

► **REPLACEMENT VALVES**—Exhaust valves furnished for replacement to be used for ALL VALVES.**Valve Seat Inserts**—Used on all valves.**Valve Guides:** One piece type positioned and retained by "C" washer. Inside diameter .344". Outside diameter 1.031". Distance from top of valve seat to upper end of guide 1.116".► **NEW VALVE GUIDE BUSHINGS:** New type rubber seal around outer diameter of Intake valve guide bushings, beginning with Vehicle No. 116,518.**Valve Lifters:** Barrel type operating in guide holes in cylinder block.**Diameter**—.9992" (replace if worn to less than .9977"). Length limit after resurfacing end 1.728".**Clearance**—.0007-.0016" (new), .003" (worn limit).**Valve Springs:** Coated springs used.**Spring Pressure**—37-40 lbs. (closed), 76-80 (open).**Spring Test**—37-40 lbs. at 2.125". Free length 2.41".

## VALVE TIMING

**Tappet Clearance:** .010-.012" Intake, .014-.016" Exhaust, Cold. No adjustment.**Valve Timing:** See Camshaft Setting above.**Intake Valves**—Open 10° BTDC. Close 50° ALDC.**Exhaust Valves**—Open 50° BLDC. Close 10° ATDC.**NOTE**—Clearance for checking timing .015".**Valve Timing Check**—Intake valve opens 10° BTDC.**Valve timing mark** location on crankshaft pulley.

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings, connecting rod lower bearings, camshaft bearings, timing gears and distributor drive gear. Piston pins and valve lifters lubricated by splash. Oil pump mounted in crankcase at rear of engine.► **CAUTION**—Vehicle No. 9CM-826 and Up use solid Cylinder Block Front Oil Line plug (plug with oil hole used on early engines). See CAMSHAFT PRODUCTION CHANGE in Mercury Shop Notes for complete data.**Crankcase Capacity**—6 quarts (refill).**Normal Oil Pressure**—50 lbs. at 2000 RPM.**Oil Pressure Relief Valve:** In oil pump body. Not adjustable.**Spring Tension**—15 lbs. 2 ozs. to 15 lbs. 6 ozs. at 1.14".**NOTE**—Cylinder block oil relief valve not used.**Oil Pump:** Gear type (two types: spur gear or helical gear types). In crankcase at rear of engine.**Oil Filter:** On left cylinder head. Replace cartridge each 5000 miles or more often if required.**Oil Filter Cartridge**—Mercury No. 8CM-18662.**Oil Pressure Gauge:** King-Seeley Electric.**Dash Unit**—Mercury No. 8M-9273.**Engine Unit**—Mercury No. 41A-9278.**See Miscellaneous Section** for complete data.**Crankcase Ventilation:** Filter element in oil filler breather cap (inlet), and in outlet pipe below fan. **Servicing**—Wash screen in cleaning fluid and wet with engine oil when dry at oil change period (2500 miles).**Outlet Pipe Air Filter Cartridge**—Mercury No. 8CM-6841.

## COOLING

**Cooling System:** Pressure type with relief valve in filler cap and two belt-driven pumps (one for each bank) with re-circulating by-pass.

**Capacity**—22.25 quarts.

**Pressure Valve**—In radiator filler cap. Mercury No. 26H-8100-B (AC #846740). Opens at 3½-4 lbs.

**Water Pumps:** Two used. Centrifugal, belt-driven packless type. Shaft mounted on pre-packed ball-bearing at front, and bushing next to seal. Oil cup provided for bushing lubrication.

**NOTE**—Bottom bolt must be installed prior to installing water pump pulley.

*See Water Pump Section for complete data.*

► **CAUTION—WATER PUMP LUBRICATION:** Oil cup provided on each pump which should be filled with SAE #20 engine oil when new and every 1000 miles. Use length of wire inserted in oil cup when oiling (ordinary oil can does not reach).

**Fan Belt Adjustment**—Loosen 2 fan mounting bracket bolt nuts, raise fan up until side movement of belt midway between fan and crankshaft pulleys is ½".

**Generator (& Water Pump) Belt Adjustment**—See GENERATOR.

**Thermostats:** Two used (one in each cylinder head water outlet). Mercury No. 8RT-8575-A.

**Setting**—Starts to open 148-153°F. Fully open 168-173°F.

**Temperature Gauge:** King-Seeley Electric.

**Dash Unit**—Mercury No. 8M-10883.

**Engine Unit**—Mercury No. 8A-10990 (switch in right bank), No. 8A-10884 (reg. unit left bank).

*See Miscellaneous Section for complete data.*

## CLUTCH

**Borg & Beck Model 10A7,** Mercury No. 8CM-7563. Single plate, dry disc type with Borglite driven member.

**Cover Number**—988 stamped on cover.

*See Clutch Section for complete data.*

**Facings**—Moulded. Inside diameter 6¾". Outside diameter 10". Thickness .125".

**Pedal Adjustment:** 1-1¼" free travel. Adjust by loosening locknut and turning adjusting screw on adjusting rod.

**Removal:** Remove transmission (see TRANSMISSION Removal below). Remove flywheel housing. Prick punch flywheel and pressure plate so that these parts may be placed in original positions when re-assembling. Compress pressure plate assembly with Tool 7563 and remove capscrews. Take off clutch assembly.

## TRANSMISSION

**Own Make.** 3-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

*See Transmission Section for complete data.*

**Transmission Control:** Steering column mounted shift.

*See Transmission Section for complete data.*

**Removal:** Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission and speedometer linkage. Support rear of engine and disconnect rear engine mounting from frame. Take out eight transmission-to-flywheel housing capscrews and remove transmission.

## OVERDRIVE

**Warner Model AS1-R10C (Overdrive only).** Optl. equipment. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down."

*See Transmission Section for complete data.*

**Solenoid**—Mercury No. 8M-6916.

**Control Relay**—Mercury No. 8M-6915. On engine of dash. 30 ampere fuse at IGN terminal of relay.

**Lock-Out Switch**—Mercury No. 8M-6917-A.

**Throttle Kick-down Switch**—Mercury No. 8A-6918.

**Governor**—Mercury No. 8M-6919.

**Removal:** Same as for Std. transmission (above) after disconnecting overdrive control cable and wiring.

## UNIVERSALS

**Mechanics Type 2CR.** Needle bearing type. 2 used.

*See Universals Section for complete data.*

► **NOTE**—Slip joint formed by splined yoke of front universal engaging transmission mainshaft (or overdrive shaft). One-piece propeller shaft used.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive (separate carrier not used). Axle ends flanged (no separate hub). Wheel bearings are sealed-ball pre-lubricated (no lubrication required).

*See Rear Axle Section for complete data.*

**Ratio**—Standard: 3.9-1 (43-11). With Overdrive: 4.27-1 (47-11). Station Wagon: 4.55-1 (50-11).

**Backlash**—.003-.008". Shim adjustment.

**Removal:** Raise rear of car. Remove axle shafts, and drive shaft. Take off hydraulic line clips from axle housing and free line from differential housing clip. Disconnect shock absorbers, spring U-bolts. Remove axle housing assembly from car.

**Axle Shaft Removal:** Remove rear wheels. Take out 3 capscrews holding brake drum to axle shaft flange. Remove hydraulic lines from brake backing plate. Take out 4 axle retainer nuts (work through opening in axle shaft flange). Use Tool 4235-A to remove axle shaft and bearing assembly from housing. Take off gasket and backing plate. Do not damage oil seal when removing axle shaft.

## SHOCK ABSORBERS

**Std.**—Mercury 8M-18045-A1, A2 (front), 8M-18080-A1, A2 (rear).

**Heavy Duty (special equip.)**—Mercury 8M-18045-C1, C2, D (front), 8M-18080-C1, C2, D (rear).

Direct acting, hydraulic types. Two makes are used and are interchangeable except station wagon.  
*See Shock Absorber Section for complete data.*

► **NOTE**—Shock absorbers are permanently sealed and cannot be refilled or repaired.

**Rear Shock Absorber Installation**—Lower tube has welded stone shield on lower end which must be installed toward front of car.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs, direct acting shocks, and front stabilizer.

*See Front Suspension Section for complete data.*

► **CAUTION**—Specifications listed below supersede earlier 1949 Mercury Front End Specifications.

**Kingpin Inclination**—5° crosswise with ¾° Camber.

**Caster**—Pos. ½° to Neg. 1°. Threaded bushing adjustment at lower pivot pin.

**Camber**—0° to +¾°. Eccentric adjustment at upper pivot pin.

**Toe In**—3/32-5/32". Adjusting sleeve on outer end of each tie rod. Adjust equally.

**Steering Geometry (toe out on turns)**—Inner wheel turned 23½° ± ½°, outer wheel 20°.

## STEERING GEAR

**Gemmer Model 305**—"3-tooth" Worm-and-roller type with "push-pull" adjustment.

*See Steering Gear Section for complete data.*

## BRAKES

**Service:** Mercury-Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders**—Diameter: Front wheel 1.128" (hone limit 1.132"). Rear wheel 1.003" (hone limit 1.005").

**Drums**—Diameter 11".

**Lining**—Molded or woven. Width 2" (front wheel), 1¾" (rear wheel). Thickness 3/16". Length per shoe 11 15/16".

**Clearance**—.010" at each end of each shoe.

**Braking Power**—56% front wheels, 44% rear.

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**Power Operated Convertible Tops, Windows, & Front Seat:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

*See Miscellaneous Section for complete data.*

**Windshield Wipers:** Vacuum Link & Crank Arm Type.  
*See Miscellaneous Section for complete data.*

## CYLINDER HEAD

### 1949-50 MODELS

**INSTALLING CYLINDER HEAD:** Use a Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in correct sequence as shown in the diagrams. Cast Iron heads could be tightened cold and rechecked after the engine has been run and thoroughly warmed up.

**Cylinder Head Gasket—**Always use new gasket. Coat gasket with very light application of Perfect Seal Gasket Paste to insure tight seal between head and block.

NASH '600'

NASH 6

**Tightening Torque—**See Tightening (Torque Wrench) Specifications below.

## TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

### 1949-50 MODELS

Cylinder Head Stud Nuts:	Ft. Lbs.	In. Lbs.
'600'—Dry.....	61-64	732-768
'600'—Oiled.....	57-60	684-720
Amb. 6 & 8—Dry.....	65-70	780-840
Amb. 6 & 8—Oiled.....	60-65	720-780
Main Bearing Capscrews (Sixes).....	66-70	792-840
Main Bearing Capscrews (Eights).....	70-73	840-876
Connecting Rod Bolt Nuts ('600').....	27-30	324-360
Con. Rod Bolt Nuts (Amb.).....	50-55	600-660
Tappet Screw '600'.....	4 1/8	50 min.

## ORIGINAL BORE & PISTONS

### 1949-50 MODELS

**ORIGINAL BORE SIZE (ENGINE CODE)** Engines factory equipped with .010" oversize bore (or undersize bearings) are marked with a three-letter code for identification. Standard size engines do not have this code mark.

**Code Mark Location—**Code mark consists of three letters stamped near water temperature gauge engine unit mounting ("600" Models), on engine number pad (Amb. Models).

**Letter Position—**Bore (and piston) size is indicated by first letter of the three-letter code.

**Size Identification—**Letters indicate following:

"A"—Standard size Bore and Pistons.

"C"—.010" Oversize Bore and Pistons.

**NOTE—**The other two letters of the three-letter code designate main and connecting rod journal and bearing sizes (see Original Bearing Sizes).

### 1949-50 MODELS

**ORIGINAL BORE AND PISTON SIZES:** Original cylinder bore and piston sizes (standard size and .010" Oversize) are graded in steps listed in table below and are marked by letters. Bore and piston carry same mark. Difference in diameter between piston and cylinder bore gives the desired .0003-.0009" clearance. Marks located as follows:

**Piston Mark—**Letter stamped on piston head.

**Cylinder Bore Mark—**Letter stamped on exhaust pipe bosses on side of block (#1, 3, and 5 ahead of stud hole in bosses, #2, 4, 6 to rear of stud hole).

Standard Size Bore & Piston		.010" Oversize Bore & Piston	
Mark	Size	Mark	Size
A	0—	CA	+10—
B	0	CB	+10
C	0+	CC	+10+
D	+1—	CD	+11—
E	+1	CE	+11
F	+1+	CF	+11+
G	+2—	CG	+12—
H	+2	CH	+12
I	+2+	CI	+12+

**Model "600" Note—**Cylinder Bore & Piston dimensions for standard 'B' and 'CB' sizes are as follows:

**Piston Diam.—**3.1244-3.1247" (B), 3.1344-3.1347" (CB).

**Cylinder Bore—**3.125-3.1253" (B), 3.135-3.1353" (CB).

## ORIGINAL BEARING SIZES

### 1949-50 MODELS

**ORIGINAL BEARING SIZES (ENGINE CODE NOTE):**—Engines factory-equipped with oversize bores or undersize main or connecting rod bearings carry a three letter code for identification. Standard engines carry no code mark.

**Code Mark Location—**Three letter code stamped on machined surface near water temperature gauge engine unit mounting ("600" Models), on engine number pad on upper right corner of engine block (Amb. Models).

**Letter Position—**Three letter code used. Position of letter indicates the following:

1st Letter—Original Bore Size.

2nd Letter—Main Bearing Journal Size.

3rd Letter—Crankpin Journal Size.

**Size Identification—**Letters indicate following:

"A"—Standard size (bore or bearing sizes).

"B"—.010" Undersize (main or con rod bearings).

"C"—.010" Oversize (bore size with .010" OS Pistons).

**NOTE—**.010" Undersize bearings fitted to .010" Undersize main bearing and crankpin journals. .010" Oversize pistons fitted to .010" oversize bores.

## CRANKSHAFT & MAIN BEARINGS

### 1949-50 MODELS

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE:** Consists of plastic rod material supplied in envelope marked with scale which gives bearing clearance in thousandths of an inch when used to measure flattened plastigage in bearing cap. Use Plastigage as follows:

**Bearing Clearance Check—**Remove bearing cap, wipe oil from bearing insert and journal (CAUTION—When checking main bearings, keep all other bearing caps tight so that crankshaft weight will not cause incorrect reading). Place piece of Plastigage rod across full width of bearing insert in cap, re-install bearing cap and tighten bolts to recommended torque (see Tightening Specifications). Remove cap, match widest width of flattened Plastigage with correct graduation of scale on envelope (marking of this graduation is clearance).

### 1949-50 MODELS

**CRANKSHAFT REAR OIL SEALS:** Install new seals with rear main bearing cap off (and crankshaft out of engine when replacing upper half) as follows:

**Rear Main Bearing Oil Seal ('600')—**Hemp packing fitted in groove in crankcase and cap behind oil slinger on crankshaft. Cap sealed with rubber plugs in groove on each side where cap fitted in recess in block. Use Tool J-1610 to install packing in groove in cap and block. Place packing in groove (with bearing shell removed), place small diameter of tool over packing, hit end of tool with lead hammer to seat packing, cut ends of packing flush with bearing cap seat, remove tool. Repeat operation for groove in block. Install rubber seal plugs on each side of bearing cap (where angle seal used, make certain that seal also seated in horizontal groove in block).

**Rear Main Bearing Oil Seal (Amb. Six)—**New type steel-backed, synthetic rubber seal. Install upper half in block, lower half in bearing cap, making certain that seal fits snugly over edge of rear bearing oil-return groove. See that surface on crankshaft to rear of oil slinger (on which seal bears) is clean and smooth. Install rubber seal key strips on either side of bearing cap (these strips overlap bearing cap and seal sides and mating surfaces of bearing cap in crankcase).

### 1949-50 MODELS

**CRANKSHAFT END THRUST PLATE ('600'):** Crankshaft end thrust taken by flanged edges of front bearing. A steel thrust plate is assembled between rear face of timing chain sprocket and flanged face of front bearing. Plate keyed to shaft by woodruff key which also secures sprocket on shaft. When plate installed, chamfered edge on inner diameter should face toward the rear for tight fit against bearing journal.

**Adjustment—**If endplay not correct with all parts correctly assembled, replace front main bearings or thrust plate.

## CAMSHAFT & BEARINGS

### 1949-50 MODELS

**CAMSHAFT REMOVAL:** Amb. "600". Special valve tappet retaining clips (supplied in sets of 16—Tool No. J-1612) available for camshaft removal without necessity of removing valves or cylinder head. Clips should be installed on upper ends of valve lifters and will hold lifters up out of the way while the camshaft is being withdrawn.

**CAMSHAFT REMOVAL:** Amb. Six. Remove pushrods. Remove valve cover on side of engine, lift up each valve lifter and use rubber band to hold lifters up out of the way while the camshaft is being withdrawn.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On plate on right side of dash under engine hood.

1949 Numbers—K-260501 Up (Kenosha, Wis.), KC-1001 Up (El Segundo, Calif.), KT-1001 Up (Canada).  
1950 Numbers—K-340001 Up (Kenosha, Wis.), KC-9501 Up (El Segundo, Calif.), KT-1001 Up (Canada).

**ENGINE NUMBER:** Stamped on right side of engine block above exhaust pipe.

1949 Numbers—S-1001 Up. 1950 Nos.—S-92001 Up.

**TUNE-UP**

**COMPRESSION PRESSURE:** 120 lbs. at cranking spd.

**VACUUM READING:** Steady 18-21", 450-500 RPM idle.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** (1949) .025", (1950) .030"  $\pm$  .002".

Plugs—Auto-Lite Type A5. 14 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.018-.024".

Cam Angle—Closed 31° to 37° with .022" gap.

Breaker Arm Spring Tension—17-21 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.18-23 microfarad.

**IGNITION TIMING:** TDC. (At Top Dead Center).

Timing Procedure—See Ignition Timing.

Timing Mark—"/" mark on dampener aligned with pointer on chain cover above dampener.

Octane Selector—Set to give slight ping when accelerating with wide open throttle at 10-15 MPH.

**CARBURETION:**

**Idle Setting:** Idle screw  $\frac{3}{4}$ -1 $\frac{1}{4}$  turns open. One screw—turning screw out gives richer mixture.

**Idle Speed:** 450-500 RPM.

**Float Level:**  $\frac{1}{2}$ " from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).

**Accelerating Pump:** Medium stroke (lower, outer hole) Normal. Inner hole (min.). Upper (max.).

**Choke Setting:** 2 points rich.

**Fuel Pump Pressure:** 3-4 $\frac{1}{2}$  lbs. (5 lbs. maximum).

**VALVE TAPPET CLEARANCE:** .015" All Valves, Hot.

NOTE—Tappet adjusting screws self-locking type.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Nash No. 3125645. (1949) on underside of steering column. (1950) on instrument panel.

**COIL:** Delco-Remy No. 1115328. Mounted on engine. Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-23 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1112351. Full automatic advance type with separate vacuum spark control and octane selector adjustment.

Breaker Gap—.018-.024".

Cam Angle—Closed 31° to 37° with .022" gap.

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Counter-clockwise viewed from above.

**Automatic Advance**

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start	.....	300	2	.....	600
5 $\frac{1}{2}$	.....	400	11	.....	800
12	.....	1400	24	.....	2800

**Vacuum Spark Control:** Delco-Remy No. 1116045. Separate unit mounted on hold-down plate and linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Plunger Travel 23/64".

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	.....	0° ..... 3.5"
8 $\frac{1}{2}$ °	.....	17° ..... 13-17"

**Distributor Removal:** On left side of engine. To remove, disconnect vacuum line, take out hold-down screw, lift distributor off.

**IGNITION TIMING**

Std. Setting ..... At TDC.

NOTE—Car manufacturer recommends using Neon Timing Light to set Ignition Timing.

**Timing (Using Neon Timing Light)**—Align  $\frac{1}{8}$ " holes in clamp arm and distributor support and insert pin. Loosen distributor hold-down screw and center octane selector scale, tighten screw. Clip Neon Timing Light to #1 spark plug, direct light at vibration dampener at timing chain cover pointer. Idle engine at 450-500 RPM., loosen clamp arm bolt, rotate distributor until "/" mark on dampener aligned with pointer, tighten clamp bolt, remove  $\frac{1}{8}$ " pin in support. Check Octane Selector Setting.

**Octane Selector Setting**—Loosen hold-down screw in distributor, adjust scale so that slight ping secured at 10-15 MPH. with wide open throttle.

CONTINUED N NEXT PAGE

1949 NASH "600" 4940 SERIES

## 1950 NASH STATESMAN 5040 SERIES

## LIGHTING

**Headlamps:** Hall "Sealed Beam". Upper and lower beams controlled by selector switch on toeboard. See *Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red jewel located on right side of instrument cluster face.

### Switches

**Lighting (1949)**—Rotary type on steering column.

**Lighting (1950)**—Push-pull type on instr. panel. Instrument lights controlled by turning light switch knob.

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Two used, side-by-side mounting (30 amp. CB to front) on left body sill brace under hood.

**15 Ampere CB.** Protects Stop Light Switch, Heater and Defroster Switch, and Direction Signal Flasher.

**30 Ampere CB.** Protects Dome Light, Pillar Light, Courtesy Light, and Main Lighting Switches.

**FUSES:** Electric Clock. 3 ampere in clock feed.

**Overdrive**—20 ampere. On overdrive relay on left body sill brace under hood.

**HORNS:** Auto-Lite. Model HW-4013 or HW-4025 (low note), HW-4014 or HW-4026 (high note). Twin horns.

**Horn Current**—15 amps. at 6.2 volts.

**Horn Relay:** Auto-Lite Model HRC-4001.

**Contact Gap**—.026".

**Air Gap**—.016-.020" with contacts closed but not sealed. .015-.018" air gap between armature leg and yoke with armature sealed to core.

**Contacts Close**—1.5-3.0 volts. Armature seals to core at 4.0 volts maximum.

**Contacts Open**—.5 volts minimum (open from seal).

## ENGINE

**ENGINE SPECIFICATIONS:** 6 cylinder, "L" head type. Cylinder cast Enbloc with intake manifold cast in block (Iso-thermal fuel intake system).

**Bore**—3 1/8". See "Original Bore & Pistons" in *Nash Special Data.*

**Stroke**—(1949) 3 3/4". (1950) 4".

**Displacement**—(1949) 172.6 cu. ins. (1950) 184 cu. ins.

**Rated Horsepower**—23.44.

**Developed Horsepower (1949)**—82 at 3800 RPM.

**Developed Horsepower (1950)**—85 at 3800 RPM.

**Compression Ratio**—7.0-1 std. cast-iron head.

**Compression & Vacuum Reading**—See *Tune-Up.*

**TIGHTENING TORQUES:** See *Nash Special Data.*

**CYLINDER HEAD INSTALLATION:** See *Nash Special Data.*

**OIL PAN REMOVAL:** Raise front of engine for access to front pan bolt just below generator.

**PISTONS:** Aluminum alloy, Cam Ground, Tin plated, strut type with solid skirt. Length—3 3/8".

**Weight**—13 1/2 ozs. stripped.

**Removal**—Pistons and rods removed from above.

**Clearance**—.001-.002". See *Fitting New Pistons.*

**NOTE**—Cylinder out-of-round and taper limits .004"

**Original Piston & Bore Sizes:** See *Nash Special Data.*

**Fitting New Pistons:** With all parts clean and dry, fit pistons so that piston will support its own weight in any portion of cylinder. If feeler gauge used, insert .002" x 1/2" feeler at right angles to pin bosses, pull to withdraw feeler must be 12-18 lbs.

**Replacement Pistons:** Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**PISTON RINGS:** 2 compression, 2 slotted oil rings (expander behind lower oil ring), per piston all above pin. Oil ring grooves drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Compression	3/32"①	.015 ± .005"	.002-.004"
Oil Control	5/32"②	.015 ± .005"	.002-.004"
①—.0930" ± .0005".	②—.15475" ± .00025".		

**1950 Note**—#4 Oil ring is Thompson U-Flex type.

**Installing Rings**—Stepped inner edge of both compression rings must be UP.

**PISTON PIN:** Diameter—.8593-.8595". Length—2 3/4". Floating type with lock ring at each end.

**Pin Fit in Piston**—Thumb press fit or .0003" max. loose fit at room temperature (70°F.).

**Pin Fit in Rod Bushing**—Light thumb push fit at room temperature.

**Replacement Pins:** Standard & .001", .003" oversize.

**CONNECTING ROD:** Length—6 5/8" (6.623-6.627").

**Weight**—25 ozs.

**Crankpin Journal Diameter**—2 3/32" (2.094-2.095"). See "Original Bearing Sizes" in *Nash Special Data.*

**Lower Bearing**—Removable steel-backed, babbitt lined type. No shims.

**Clearance**—.001-.0025". Sideplay—.006-.014".

► **PLASTIGAGE** for checking bearing clearance—See "Crankshaft & Main Bearings" in *Nash Special Data.*

**Bearing Adjustment:** None. Replace bearings.

**NOTE**—Tangs on bearing shells must engage slots in rod and cap. Palnuts used on rod bolt nuts.

**Replacement Bearings:** Std. & .002", .010" Undersize.

**Installing Rods:** Oil squirt hole in lower end of rod toward right (camshaft side) of engine.

**NOTE**—Rods and bearing caps should be marked before removal and replaced in same cylinder and in same relative positions.

**CRANKSHAFT:** Four bearing, counterweighted type with vibration dampener mounted on front end.

**Journal Diameters**—2 31/64" (2.479"). See "Original Bearing Sizes" in *Nash Special Data.*

**Bearings**—Removable, steel-backed, micro-babbitt. Clearance—.002".

► **PLASTIGAGE** for checking bearing clearance—See "Crankshaft & Main Bearings" in *Nash Special Data.*

**Bearing Adjustment:** None. Replace bearings.

**NOTE**—Upper bearing halves can be rotated in and out without removing crankshaft.

**Replacement Bearings:** Std. & .002", .010" Undersize.

**Crankshaft Oil Seal:** See "Crankshaft & Main Bearings" in *Nash Special Data.*

**End Thrust:** Taken by front (#1) bearing (thrust plate on shaft ahead of flanged bearing).

**Endplay Adjustment**—See "Crankshaft & Main Bearings" in *Nash Special Data.*

**Endplay**—.006-.008".

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive.

**Camshaft Removal**—See *Nash Special Data.*

**Bearings**—Steel-backed, babbitted bushings.

**Clearance**—.002".

**End Thrust:** Thrust plate assembled on front face of engine between #1 bearing and camshaft sprocket. Endplay controlled by position of timing chain sprocket (press fit on shaft).

**Endplay**—.004-.006".

**CAUTION**—Thrust plate has long oil groove on rear face which provides valve tappet lubrication from #1 camshaft bearing. Short groove on front face of plate lubricates timing chain and sprockets.

**Timing Chain:** Morse. Non-adjustable type. Width 1". Pitch 3/8". Length 22 1/2" or 60 links.

**Camshaft Setting:** Install chain with punch mark on camshaft sprocket and inverted "V" mark on crankshaft sprocket adjacent and in line with straight-edge across shaft centers. Check setting as follows: turn engine over until punch mark on camshaft sprocket at one o'clock position with crankshaft sprocket mark just beginning to mesh with chain—there should be 9 1/2 links or 19 pins (2 pins to each link) between marks.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 15/32"	3407-.3412"	4 25/32"
Exhaust	1 9/32"	3407-.3412"	4 25/32"

	Seat Angle	Lift	Stem Clearanc
All Valves	①	5/16"	.0013-.0028"
①—Valve face angle 44°. Valve angle in block 45°.			

**Valve Guides:** Pressed in block. Remove guides using Tool J-2814. Install guides using Tool J-1429-A with adapter J-1429-4.

**Valve Springs:** Install springs with closed-coil end up against cylinder block and seated in counterbore in block. Spring free length 2 3/32".

► **CAUTION**—Excessive wear of valve stems and guides will result if springs not properly seated in counterbore.

	Spring Pressure	Length
Valve Closed	37-41 lbs.	1 3/4"
Valve Open	80-86 lbs.	1 7/16"

**Valve Lifters:** Mushroom type operating in reamed holes in block. Lifters removed from below with camshaft out of engine. See "Camshaft & Bearing" in *Nash Special Data for Camshaft Removal.*

## VALVE TIMING

**Tappet Clearance:** .015" Hot, running clearance.

**NOTE**—Tappet adjusting screws are self-locking.

**Valve Timing:** See *Camshaft Setting* above.

**Intake Valves**—Open 6° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 46° BLDC. Close 10° ATDC.

**Valve Timing Check**—With tappet clearance set at .019", #1 exhaust valve should close with piston 10° after top dead center and "DC" mark on vibration dampener 3/8" past pointer on timing chain cover. Reset tappet clearance at .015" Hot.

CONTINUED FROM PRECEDING PAGE

**LUBRICATION**

**Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings, valve tappets, and timing chain. Oil pump mounted on right side of crankcase.

**Crankcase Capacity**—5 quarts.

**Normal Oil Pressure**—50 lbs. at 30 MPH.

**Oil Pressure Regulator**—Spring-loaded release valve under plug to rear of oil pump on lower edge of crankcase. Non-adjustable. Opens at 50-58 lbs.

**Oil Pump:** Gear type pump mounted on right side of engine, driven by inclined shaft.

**Oil Filter:** Optional. Replace cartridge at 8000 mile intervals or more often if necessary.

**Oil Pressure Gauge:** Auto-Lite Electric.

**Dash Unit**—Auto-Lite No. 11577-A.

**Engine Unit**—Auto-Lite No. 11527-A.

See Miscellaneous Section for complete data.

**COOLING**

**Cooling System:** Pressure type with pressure valve and vacuum valve (relief valves) in filler cap, and positive circulation with water pump.

**Capacity**—14 quarts (15 quarts with heater).

**Pressure Valve**—AC #850501 Filler Cap. Opens 4 lbs.

**Water Pump:** New sealed-in, non-adjustable seal assembly. Grease fitting for bushing lubrication. Centrifugal pump driven by flexible coupling from generator.

See Water Pump Section for complete data.

**Belt Adjustment**—See Generator Belt Adjustment.

**Removal**—Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove two pump mounting capscrews.

**Thermostat:** Dole. In cylinder head water outlet.

**Setting**—Starts to open 162-168°F. and should be fully open 20° above opening point.

**Temperature Gauge:** Auto-Lite Electric.

**Dash Unit**—Auto-Lite No. 11579-A.

**Engine Unit**—Auto-Lite No. 11528-A.

See Miscellaneous Section for complete data.

**CLUTCH**

**Borg & Beck Model 8A7**—Single plate, dry disc type.

**Identification Note**—Cover stamped "987".

See Clutch Section for complete data.

**Facings**—Woven (flywheel side). Moulded (pressure plate side). I. D. 5 $\frac{3}{8}$ ". O. D. 8". Thickness  $\frac{1}{8}$ ".

**Adjustment:** Pedal free travel  $\frac{1}{2}$ - $\frac{3}{4}$ ". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.

► **CAUTION**—Do not disturb adjustment of clutch beam lever-to-pedal rod.

**Removal:** Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange. Remove clutch assembly.

**TRANSMISSION**

**Own Make.** Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear.

See Transmission Section for complete data.

**Transmission Control:** Mech. steering column shift. See Transmission Section for complete data.

**Removal:** Remove Rear Axle (see REAR AXLE below), disconnect transmission shift rods at levers on left side of case and speedometer cable. Support engine at rear, free rear engine mounting, take out transmission upper mounting bolts, install special guide bolts in these holes, remove lower mounting bolts, slide transmission back on guide bolts, remove from below.

**OVERDRIVE**

**Warner Type AS6-R10B.** Optional. Governor controlled type with electrical solenoid operation and throttle operated "kick-down" switch.

See Transmission Section for complete data.

**Overdrive Solenoid**—Delco-Remy No. 1118132.

**Governor**—Warner No. AR10B-72E.

**Control Relay**—Auto-Lite No. HRT-4101.

**Overdrive Fuse**—20 ampere. On BAT terminal of overdrive relay (on left body sill under hood).

**Removal:** Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal (above).

**UNIVERSALS**

**Mechanics 1 $\frac{1}{2}$ CR or Saginaw.** One used (in torque tube adapter at rear of transmission). Tapered coil spring is installed ahead of joint to properly locate joint on driveshaft. NOTE—Universal is slip fit on transmission end, slight press fit on driveshaft.

See Universals Section for complete data.

**Propeller Shaft:** One-piece with pre-lubricated, rubber mounted center bearing installed in torque tube. Shaft splined at both ends, universal light press fit on forward end, coupling at rear end is a tight press fit.

► **CAUTION**—When connecting propeller shaft coupling to pinion shaft, coupling nut must be tightened to 300 ft. lbs. to prevent loosening in service.

See Nash Rear Axle in the Rear Axle Section for Propeller Shaft Data.

**REAR AXLE**

**Own Make.** Semi-floating, hypoid gear type with Torque Tube Drive.

See Rear Axle Section for complete data.

**Ratio (without Overdrive)**—4.4-1 (35:8) std.

**Ratio (with Overdrive)**—4.9-1 (39:8) std.

**Backlash**—.004-.006". Shim adjustment.

**Removal:** Jack up and support rear end of body. Disconnect rear brake cable at equalizer, torque tube at rear of transmission, brake hose and shock absorbers at axle end (allow shocks and brake hose to hang from body). Roll axle assembly out from under car. For Torque Tube Trunnion Bracket Adjustment, see Nash Rear Axle in Rear Axle Section.

**Axle Shaft Removal**—Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolts nuts, take off oil seal retainer, backing plate, and wheel bearing adjusting shims (check thickness of shims, replace same amount when re-assembling). Withdraw axle shaft using Puller J-2498, do not drag shaft on inner oil seal.

**Wheel Bearing Adjustment**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. Endplay—.002-.004".

**Rear Suspension:** Coil spring type with conventional rear axle.

See Rear Axle Section for complete data.

**SHOCK ABSORBERS**

**Delco or Monroe.** Direct acting, Hydraulic.

See Shock Absorber Section for complete data.

**FRONT SUSPENSION**

**Front Suspension:** New design, parallelogram type with coil springs and direct acting shock absorbers. NOTE—Entire assembly mounted on box-section pressed steel cross-member attached to frame and body through 4 rubber-bushed bolts.

See Front Suspension Section for complete data.

**Kingpin Inclination**—8 $\frac{1}{2}$ ° crosswise.

**Caster**—0° desired. Limits 0° to Pos.  $\frac{1}{2}$ °. Shim adjustment ("C" washers) between upper control arm inner pivot and frame bracket.

**Camber**—0° desired. Limits Neg.  $\frac{1}{4}$ ° to Pos.  $\frac{1}{4}$ °. Shim adjustment as for Caster (above).

**Toe In**—1/8-3/16". Loosen clamps at both ends of adjustable tubes in each tie rod. Turn tubes equally.

**Steering Geometry**—Inner wheel 23 $\frac{1}{2}$ ° +  $\frac{1}{2}$ ° — 0°. Outer wheel 20°.

**STEERING GEAR**

**Gemmer Model 305.** Worm-and-roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

**BRAKES**

**Service Brakes:** Bendix (Lockheed) Hydraulic, self-centering (floating shoe) type. Hand lever applies rear wheel service brakes.

NOTE—No anchor pin adjustment on these brakes. See Brake Section for complete data.

**Wheel Cylinders**—Diam.: Front wheels 1", Rear  $\frac{7}{8}$ ".

**Drums**—Cast-iron, Diameter 9".

► **Lining**—CAUTION—Different width and length used on each shoe in each wheel as follows:

Brake Shoe	Width	Length	Thickness
Forward (Primary)	2"	10"	3/16"
Rear (Secondary)	1 3/4"	7 1/2"	3/16"

Lining is moulded type.

**Clearance**—All shoes just free of drag with brakes centralized (by hard brake application and releasing pedal). Eccentric adjustment for each shoe.

**Braking Power**—57.6% front wheels, 43.4% rear.

**Hand Brake:** See Service Brakes (above).

**MISC. MECHANICAL**

**Windshield Wiper:** Cable Operated—vacuum type. See Miscellaneous Section for complete data.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** On plate on right side of dash under engine hood.

1949 Numbers—R-515501 Up (Kenosha, Wis.), RC-1001 Up (El Segundo, Calif.), RT-1001 Up (Canada).  
1950 Numbers—R-556001 (Kenosha, Wisconsin), RC-3501 (El Segundo, Calif.).

**ENGINE NUMBER:** Stamped on pad on right side of engine block at upper front corner.

1949 Numbers—A-1001 Up (Kenosha, Wis.), A-1072 Up (El Segundo, Calif.).

1950 Numbers—A-46001 Up.

**TUNE-UP**

**COMPRESSION PRESSURE:** ('49) 125 lbs., ('50) 130 lbs. at cranking speed.

**VACUUM READING:** Steady 18-21", 450-500 RPM, idle. (375 RPM, on Hydra-Matic Drive cars).

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** (1949) .025", (1950) .030"  $\pm$  .002".  
Plugs—Auto-Lite A5, or AC 44, 14 mm.

**DISTRIBUTOR:** Breaker Gap—.018-.024".

Cam Angle—Closed 31° to 37° with .022" gap.

Breaker Arm Spring Tension—17-21 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.18-.23 microfarad.

**IGNITION TIMING:** TDC. (At Top Dead Center).

Timing Procedure—See Ignition Timing.

Timing Mark—"/" mark on dampener aligned with pointer on chain cover above dampener.

**CARBURETION:**

**Idle Setting:** Set idle adjusting screw  $\frac{1}{2}$ -1 $\frac{1}{2}$  turns open. Turn out for richer mixture.

**Idle Speed (standard):** 450-500 RPM.

**Idle Speed (Hydra-Matic):** 375 RPM.

**Float Level:**  $\frac{1}{2}$ " from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).

**Accelerating Pump:** Inner Hole (med. stroke) Normal, Lower Hole (max.) winter, Upper (min.) Summer.

**Choke Setting:** Centered (coil housing at index).

**Fuel Pump Pressure:** 3-4 $\frac{1}{2}$  lbs. 5 lbs. Maximum.

**VALVE TAPPET CLEARANCE:** .015" Intake Valves, .018" Exhaust Valves, Hot.

**Valve Timing Check:** See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Nash No. 3125645. (1949) on underside of steering column. (1950) on instrument panel.

**COIL:** Delco-Remy No. 1115380. Mounted on engine.

Ignition Current—2 amperes idling, 5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.18-.23 microfarad.

**DISTRIBUTOR:** Delco-Remy No. 1110216. Full automatic advance type with auxiliary vacuum spark control.

**Breaker Gap:**—.018-.024".

**Cam Angle:** Closed 31° to 37° with .022" gap.

**Breaker Arm Spring Tension:** 17-21 ozs.

**Rotation:** Clockwise viewed from above.

**Automatic Advance**

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start.....	300	2.....	600
8.....	650	16.....	1300
15.....	1350	30.....	2700

**Vacuum Spark Control:** Delco-Remy No. 1116044. Integral type linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Total plunger travel 7/64".

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	4-6"
6°.....	12°	14-16"

**Distributor Removal:** On right side of engine. To remove, disconnect vacuum line, take out hold-down screw, lift distributor off engine.

**IGNITION TIMING**

**Std. Setting** ..... **At TDC.**  
**NOTE:**—Car manufacturer recommends using Neon Timing Light to set Ignition Timing.

**Timing:** Clip Neon Timing Light to #1 spark plug, direct light at vibration dampener at timing chain cover pointer. Idle engine at 450-500 RPM., loosen clamp arm bolt, rotate distributor until "/" mark on dampener aligned with pointer, tighten clamp bolt.

**CARBURETOR**

**Carter WA-1, Model 683S**.....1949-50

**Carter WA-1, Model 746S**.....1950①

①—After 3700 1950 cars with std. transmission.

1 $\frac{1}{4}$ " single barrel, downdraft with Climatic Control.

Casting No. on Flange—(683S) 290.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets:** See Carter Jet Table in the Carburetor Section.

CONTINUED N NEXT PA E

1949 NASH AMBASSAD R 4960 SERIES

## CONTINUED FROM PRECEDING PAGE

**Hydra-Matic Throttle Linkage Adjustment:** See Nash Hydra-Matic Drive in Transmission Section.

**Fast Idle:** Carter Single Barrel Carburetor type.

See Carburetion Equipment Section for complete data.  
**Setting**— $\frac{5}{8}$ " clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stop screw against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

**Automatic Choke:** Carter Climatic Control (Single Barrel Carburetor).

See Carburetion Equipment Section for complete data.  
**Setting**—Centered (coil housing at index).

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544443 Oil-wetted type (Std.), Filter Element #3. Oil-bath Cleaner AC No. 1544393, Element #7-S.

**Servicing (Oil-wetted type)**—Wash filter element and re-oil with heavy engine oil every 2000 miles.

**Servicing (Oil-bath type)**—Wash filter element, clean out and refill oil reservoir with 1 pint SAE No. 50 engine oil (summer), No. 20 (winter) every 5000 miles.

**Fuel Pump (Std.):** AC Type W, No. 1537389 or No. 1539412.

(Opt. & Overdrive Cars)—AC Type AJ, No. 1539216 combination fuel-and-vacuum pump.

**Replacement Pump**—AC No. 533 (for W), 585 (for AD).

► **CAUTION**—Install pumps with rocker arm ABOVE (W), or UNDER (AJ) eccentric on camshaft.

See Carburetion Equipment Section for complete data.  
**Pressure**—3-4½ lbs. (5 lbs. maximum).

**Gasoline Gauge:** Auto-Lite electric type.

**Dash Unit**—Auto-Lite No. 11578-A.

**Tank Unit**—Auto-Lite No. 11529-A.

See Carburetion Equipment Section for complete data.

## BATTERY

**Auto-Lite Type CT-1-15**—6 volt, 15 plate, 105 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—133 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five second voltage—4.2 volts.

**Dimensions**—L. 9 1/16". W. 7 1/16". H. 9 1/16".

**Grounded Terminal**—Positive (+) grounded to wheelhouse (engine grounded at same point).

**Location**—Left side of engine compartment under hood.

## STARTER

**Standard**.....Delco-Remy 1107950. Arm. 1911832

**Hydra-Matic**.....Delco-Remy 1107965. Arm. 1867897

**RHD Cars**.....Delco-Remy 1107959. Arm. 1911832

**Drive (1107950 & 959)**—Bendix No. A-2033.

**Drive (1107965)**—Overrunning clutch with solenoid pinion shift.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs.

## Performance Data—1107950 &amp; 959

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	65
16 "	Lock	3.0	600

## Performance Data—1107965

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	80①
14 "	Lock	3.0	600

①—Includes current draw of starter switch.

**Starting Switch (Std.):** Delco-Remy No. 1996478. On toeboard, actuated by fully depressing clutch pedal.

**Starting Switch (Hydra-Matic):** Delco-Remy Solenoid No. 1118136 (no relay) used mounted on starter. Neutral Safety Switch provided so that starter operative only with Hydra-Matic lever at "N".

► **CAUTION**—Overrunning clutch pinion clearance must be adjusted whenever solenoid removed from starter.

See Electrical Equipment Section for complete data.

**Neutral Safety Switch Adjustment**—See Nash Hydra-Matic Drive in Transmission Section.

**Removal:** Flange mounted on left front face of fly-wheel housing. To remove, disconnect cable, take out flange mounting screws.

## GENERATOR

**Delco-Remy Model 1102702.** Armature No. 1911454. Two-brush with voltage and current regulation.  
**Maximum Charging Rate**—30 amperes, 8.0 volts.  
**Charging Rate Adjustment**—None (see Regulator).

## Performance Data

Amperes	Volts	R.P.M.
30①	8.0	1750

①—Not maximum output. See Current Regulator.

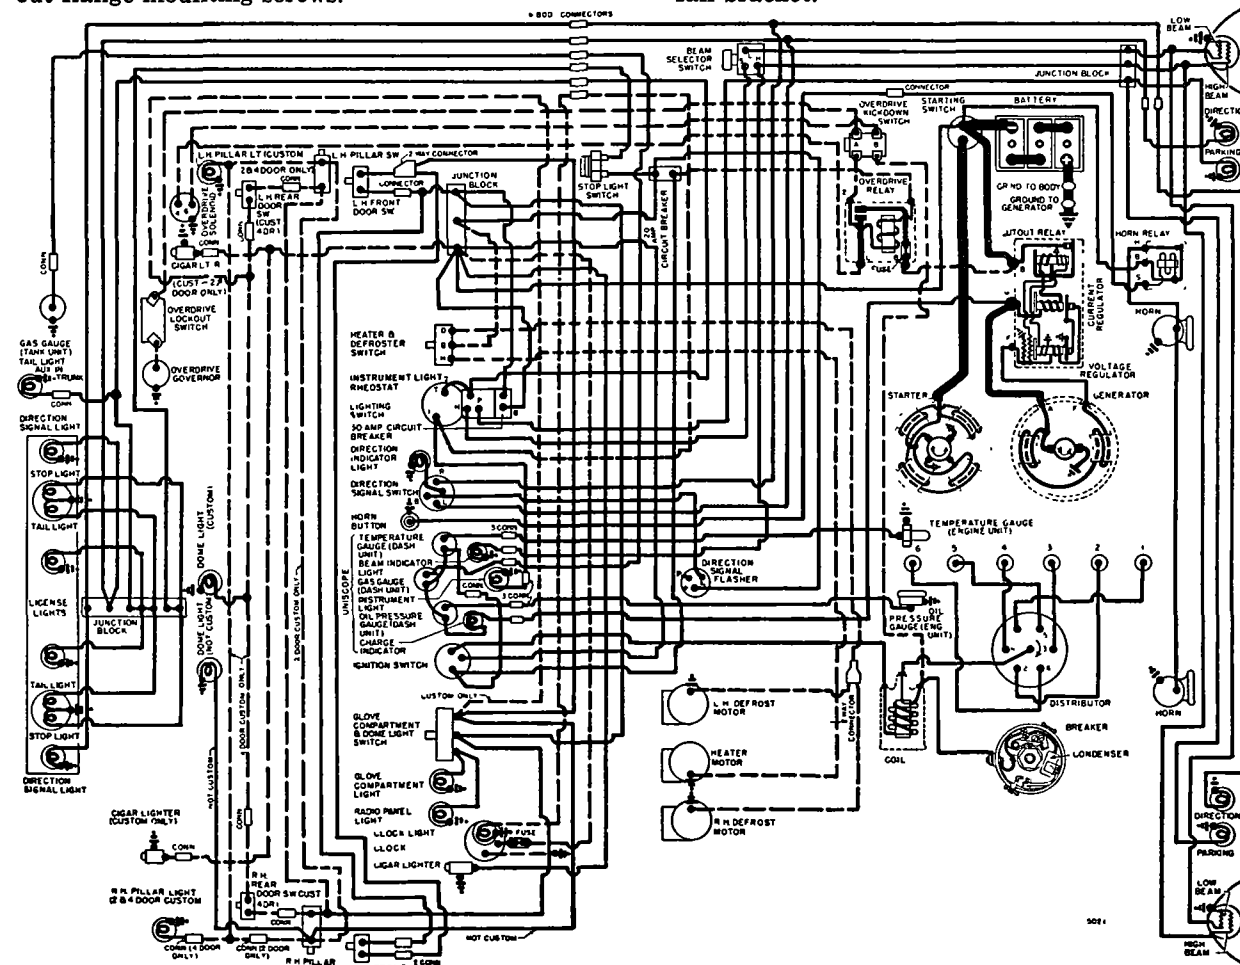

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Removal:** Generator cradle mounted at left side of engine with fan belt drive (water pump driven by flexible coupling from generator). To remove, disconnect water pump, loosen fan belt, remove generator clamp band, lift out generator.

**Belt Adjustment:** Adjust whenever belt deflection exceeds  $\frac{1}{2}$ " either way between the fan and generator shaft pulleys. To adjust, loosen fan mounting bracket screws (pivots on one screw, other screw hole slotted), raise fan, tighten screws. Belt misalignment can be corrected by installing shims behind fan bracket.

1950 NASH AMBASSADOR 5060 SERIES

**REGULATOR**

**Delco-Remy 1118302. Voltage & Current Regulator.**

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. See *Electrical Equipment Section* for complete data.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In**—5.9-6.8 volts hot (set to 6.4 volts hot).

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See *Electrical Equipment Section*.

**Current Regulator**

**Setting**—32-40 amperes hot (set to 36 hot).

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See *Electrical Equipment Section*.

**LIGHTING**

**Headlamps:** Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch on toe-board.

See *Electrical Equipment Section* for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Red jewel located on right side of instrument cluster face.

**Switches**

**Lighting (1949)**—Rotary type on steering column.

**Lighting (1950)**—Push-pull type on instr. panel. Instrument lights controlled by turning light switch knob.

**MISC. ELECTRICAL**

**CIRCUIT BREAKERS:** Two used, side-by-side mounting (30 amp. CB to front) on left body sill brace under hood.

**15 Ampere CB.** Protects Stop Light Switch, Heater and Defroster Switch, and Direction Signal Flasher.

**30 Ampere CB.** Protects Dome Light, Pillar Light, and Courtesy Light Switches and Main Lighting Switch.

**FUSES:** Electric Clock. 3 ampere in clock feed.

**Overdrive**—20 ampere. On overdrive relay on left body sill brace under hood.

**HORNS:** Auto-Lite. Model HW-4013 or HW-4025 (low note), HW-4014 or HW-4026 (high note). Twin horns.

**Horn Current**—15 amps. at 6.2 volts.

**Horn Relay:** Auto-Lite Model HRC-4001.

**Contact Gap**—.026".

**Air Gap**—.016-.020" with contacts closed but not sealed. .015-.018" air gap between armature leg and yoke with armature sealed to core.

**Contacts Close**—1.5-3.0 volts. Armature seals to core at 4.0 volts maximum.

**Contacts Open**—5 volts minimum (open from seal).

**ENGINE**

**ENGINE SPECIFICATIONS:** 6 cylinder, valve-in-head type. Cylinders cast Enbloc with intake manifold cast in block. (Iso-thermal fuel intake system).

**Bore**—3 $\frac{3}{8}$ ". See "Original Bore & Pistons" in *Nash Special Data*.

**Stroke**—4 $\frac{3}{8}$ ". **Displacement**—234.8 cu. ins.

**Rated Horsepower**—27.34.

**Developed Horsepower** ('49) 112, ('50) 115 at 3400 RPM.

**Compression Ratio**—('49) 7.02-1, ('50) 7.3-1 iron hd. 7.52-1 ratio optional.

**Compression & Vacuum Reading**—See *Tune-Up data*.

**TIGHTENING TORQUES:** See *Nash Special Data*.

**CYLINDER HEAD INSTALLATION:** See *Nash Special Data*.

**OIL PAN REMOVAL:** Raise front of engine approx. 3" for access to front pan bolts and to provide clearance at #1 and #2 crank throws when withdrawing pan.

**PISTONS:** Aluminum alloy, Cam Ground, Tin plated, strut type with split skirt. **Length**—3 $\frac{7}{8}$ ".

**Weight**—12 $\frac{1}{2}$  ozs. (stripped).

**Clearance**—.001-.002". See *Fitting New Pistons*.

**NOTE**—Cylinder out-of-round and taper limits .004".

**Removal**—Pistons and rods removed from above.

**Original Piston & Bore Sizes:** See *Nash Special Data*.

**Fitting New Pistons:** With all parts clean and dry, fit pistons so that piston will support its own weight in any portion of cylinder. If feeler gauge used, insert .002" x  $\frac{1}{2}$ " feeler at right angles to pin bosses on side opposite slot, pull to withdraw feeler must be 12-18 lbs.

**Replacement Pistons:** Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

**Installing Pistons:** Piston slot toward left side (opposite side from oil squirt hole in rod).

**PISTON RINGS:** 2 compression, 2 slotted oil rings per piston, all above pin. Drilled oil drain holes in oil ring grooves. Expander behind lower oil ring.

**Ring**                      **Width**      **End Gap**      **Side Clearance**

Comp. ....0930±.0005" ....015±.005" ....002-.004"

Oil Control ....15475" ....015±.005" ....002-.004"

**1950 Note**—#4 Oil ring is Thompson U-Flex type.

**Installing Rings**—Top compression ring inner groove up, lower compression ring outer groove down.

**PISTON PIN:** Diameter—.8746". **Length**—2.824".

Floating type, with lock ring at each end.

**NOTE**—Pin hole in piston offset toward camshaft. **Pin Fit in Piston**—Palm push fit with piston heated (heat piston in boiling water).

**Pin Fit in Rod Bushing**—Light thumb push fit at room temperature.

**Replacement Pins:** Standard & .001", .003" oversize.

**CONNECTING ROD:** Length—8 $\frac{3}{4}$ ". **Weight**—36 $\frac{1}{4}$  ozs.

**NOTE**—Pin hole in rod bronze-bushed.

**Crankpin Journal Diameter**—2.000-2.001". See "Original Bearing Sizes" in *Nash Special Data*.

**Lower Bearing**—Removable steel-backed, babbitt lined type. No shims.

**Clearance**—.001-.002". **Sideplay**—.008-.014".

► **PLASTIGAGE** for checking bearing clearance—See "Crankshaft & Main Bearings" in *Nash Special Data*.

**Bearing Adjustment:** None. Replace bearings.

**NOTE**—Tangs on bearing shells must engage slots in rod and cap. Palnuts used on rod bolt nuts.

**Replacement Bearings:** Std. & .002", .010" Undersize.

**Installing Rods:** Oil spray hole in lower end of rod must be toward camshaft (right) side of engine. **NOTE**—Rods and bearing caps should be marked before removal and replaced in same cylinder and in same relative position.

**CRANKSHAFT:** Seven bearing, counterweighted type with vibration dampener mounted on front end.

**Journal Diameters**—2 31/64" (2.479"). See "Original Bearing Sizes" in *Nash Special Data*.

**Bearings**—Removable, steel-backed, micro-babbitt. **Clearance**—.0018".

► **PLASTIGAGE** for checking bearing clearance—See "Crankshaft & Main Bearings" in *Nash Special Data*.

**Bearing Adjustment:** None. Replace bearings.

**NOTE**—Upper bearing halves can be rotated in and out without removing crankshaft.

**Replacement Bearings:** Std. & .002", .010" Undersize.

**Crankshaft Rear Oil Seal:** Rear Oil Seal is metal-backed, neoprene-lined seal. Slinger on rear journal. Seals serviced in pairs.

**Oil Seal Servicing**—See "Crankshaft & Main Bearings" in *Nash Special Data*.

**End Thrust:** Taken by Center (#4) bearing.

**Endplay**—.0055±.002".

**CAMSHAFT:** Non-adjustable 2 sprocket chain drive.

**Camshaft Removal**—See *Nash Special Data*.

**Bearings**—Steel-backed, babbitted bushings.

**Clearance**—.002".

**End Thrust:** Taken by front bearing, controlled by position of timing chain sprocket (press fit on shaft).

**Endplay**—.004-.006".

**Timing Chain:** Morse. Non-adjustable type. Width 1". Pitch  $\frac{3}{8}$ ". Length 22 $\frac{1}{2}$ " or 60 links.

**Camshaft Setting:** Install chain with punch mark on camshaft sprocket and inverted "V" mark on camshaft sprocket adjacent and in line with straight-edge across shaft centers. Check setting as follows: turn engine over until punch mark on camshaft sprocket at one o'clock position with crankshaft sprocket mark just beginning to mesh with chain—there should be 9 $\frac{1}{2}$  links or 19 pins (2 pins to each link) between marks.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 3/4"	3725-.3730"	5 17/32"
Exhaust	1 15/32"	3725-.3730"	5 17/32"
	Seat Angle	Lift	Stem Clearance
Intake	①	11/32"	.0015-.003"
Exhaust	①	11/32"	.002-.0035"
①—Valve face angle 44°. Valve angle in block 45°.			

► **1950 Note**—Valve length—5 31/64".

**Valve Guides:** Press fit in head (positioned by shoulder on guide.) Tops of guides should be  $\frac{1}{8}$ " from face of cylinder head. Ream new guides for correct stem clearance.

C NTINUED ON NEXT PA E

## ENGINE

## CONTINUED FROM PRECEDING PAGE

**Valve Springs:** Single springs used. To remove springs without disturbing cylinder head, maintain pressure in cylinder at 90 lbs.

**Free Length—**(1949) 2 3/32", (1950) 2 1/16".

## ►1949 Valve Spring Specifications

	Spring Pressure	Spring Length
Valve Closed	53 ± 5 lbs.	1 11/16"
Valve Open	146 ± 5 lbs.	1 11/32"

## ►1950 Valve Spring Specifications

Valve Closed	53-58 lbs.	1 13/16"
Valve Open	141-151 lbs.	1 7/16"

**Installing Springs—**Closely coiled end of springs should be installed toward the valve seat.

**Valve Lifters:** Mushroom type. Lifter guide holes in block. Remove from below with camshaft out.

## VALVE TIMING

**Tappet Clearance:** .015" Intake, .018" Exhaust, HOT.

**Valve Timing:** See Camshaft Setting above.

## ►1949 Valve Timing

**Intake Valves—**Open 4°32' BTDC. Close 61°28' ALDC.  
**Exhaust Valves—**Open 49°28' BLDC. Close 16°32' ATDC.

## ►1950 Valve Timing

**Intake Valves—**Open 8°30' BTDC. Close 55°30' ALDC.  
**Exhaust Valves—**Open 53°30' BLDC. Close 10°30' ATDC.

**Valve Timing Check—**With tappet clearance set at .025", #1 exhaust valve should close with #1 piston ('49) 16½°, ('50) 10½° after top dead center and "DC" mark on vibration dampener slightly past pointer on timing chain cover. Reset exhaust tappet clearance to running clearance of .018" Hot.

## LUBRICATION

**Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings, piston pins, and timing chain.

**Crankcase Capacity—**6 quarts.

**Normal Oil Pressure—**50 lbs. at 30 MPH.

**Oil Pressure Regulator—**Located in body of pump. Not adjustable. Opens at 50-58 lbs.

**Oil Pump:** Gear type in crankcase mounted on center main bearing cap.

**Oil Pump Servicing—**See Nash Special Data.

**Cylinder Cover Vent:** Vent located on front of cover just behind water outlet elbow to allow escape of vapors inside cover. Turn to open position at all times, especially winter, except for hot dusty driving.

**Oil Filter:** Replace cartridge at 8000 mile intervals or more often if necessary.

**Oil Pressure Gauge:** Auto-Lite Electric.

**Dash Unit—**Auto-Lite No. 11577-A.

**Engine Unit—**Auto-Lite No. 11527-A.

See Miscellaneous Section for complete data.

## COOLING

**Cooling System:** Pressure type with pressure valve and vacuum valve (relief valves) in filler cap, and positive circulation with water pump.

**Capacity—**17 quarts (18 quarts heater).

**Pressure Valve—**AC 850501 (Filler Cap). Opens at 4 lbs.

**Water Pump:** New sealed-in, non-adjustable seal assembly. Grease fitting for bushing lubrication. Centrifugal pump driven by flexible coupling from generator.

See Water Pump Section for complete data.

**Removal—**Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove pump mounting capscrews.

**Belt Adjustment:** See Generator Belt Adjustment.

**Thermostat:** Dole. In water outlet on cylinder head.

**Setting—**Starts to open at 162-168°F. and should be fully open 20° above starting point.

**Temperature Gauge:** Auto-Lite Electric.

**Dash Unit—**Auto-Lite No. 11579-A.

**Engine Unit—**Auto-Lite No. 11528-A.

See Miscellaneous Section for complete data.

## CLUTCH

**Borg & Beck Model 10A7—**Assembly No. 950 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

**Facings—**Woven type, 2 used. Inside Diameter 7". Outside Diameter 10". Thickness 1/8".

**Adjustment:** Pedal free travel 1/2-3/4". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.

►CAUTION—Do not disturb adjustment of clutch beam lever-to-pedal rod.

**Removal:** Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange. Remove clutch assembly.

## TRANSMISSION

## STANDARD

**Warner Model AS25-T86E (Std.), Model AS26-T86E with type R10B Overdrive (Optl.).** Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

►Early 1949 Note—Nash Transmission with Warner AS5-R10B Overdrive used.

**Transmission Control:** Mechanical steering col. shift. See Transmission Section for complete data.

**Removal:** Remove Rear Axle (see REAR AXLE below), disconnect transmission shift rods at levers on left side of case and speedometer cable. Support engine at rear, free rear engine mounting, take out transmission upper mounting bolts, install special guide bolts in these holes, remove lower mounting bolts, slide transmission back on guide bolts, remove from below.

## OVERDRIVE

**Warner Type AS6-R10B (part of AS26-T86E Transmission).** Optional. Governor controlled type with electrical solenoid operation and throttle operated "kick-down" switch.

►Early 1949 Note—Warner AS5-R10B Overdrive used with Nash Transmission.

See Transmission Section for complete data.

**Overdrive Solenoid—**Delco-Remy No. 1118132.

**Governor—**Warner AR10B-72 (AR10B-72J used on Early 1949 cars with AS5-R10B Overdrive).

**Control Relay—**Auto-Lite No. HRT-4101.

**Overdrive Fuse—**20 ampere. On BAT terminal of overdrive relay (on left body sill under hood).

**Removal:** Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal (above).

## HYDRA-MATIC DRIVE

## OPTIONAL EQUIPMENT

**Description—**Four-speed planetary type automatic transmission and fluid coupling. Similar to other Hydra-Matic Drive installations.

See Transmission Section for complete data.

**Lubrication—**Check fluid level every 1000 miles. Add fluid, as required, to maintain level at "F" mark on dip stick. Drain and refill every 15,000 miles. Use Hydra-Matic Fluid (Automatic Transmission Fluid Type "A") as furnished in containers marked with approval symbol "AQ-ATF" followed by serial number in "100" series.

**Capacity—**Approx. 11 qts. (refilling after draining). 12 qts. (when transmission disassembled).

**Checking Fluid Level—**Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of two minutes after transmission has reached operating temperature. Roll back front floor mat on right side, remove inspection cover in floor pan, clean all dirt and lint from floor and around oil level indicator on left side of transmission case. Place selector lever in "D" position and idle engine with lever in this position while checking fluid level. Fluid level should be at "F" mark on dip stick, add fluid as required to bring level up to "F" mark.

►CAUTION—Do not fill above "F" mark on dip stick.

**Draining & Refilling—**See "Hydra-Matic Drive" in Transmission Section.

**Hydra-Matic Linkage Adjustment—**See "Nash Hydra-Matic Drive" in Transmission Section.

**Removal:** See "Nash Hydra-Matic Drive" in Transmission Section.

## UNIVERSALS

**Mechanics or Saginaw—**Roller bearing type, 1 used. See Universals Section for complete data.

**Propeller Shaft:** One piece with pre-lubricated, rubber mounted center bearing installed in torque tube. Shaft splined at both ends, universal light press fit on forward end, coupling at rear end is a tight press fit.

See Nash Rear Axle in the Rear Axle Section for Propeller Shaft Data.

**REAR AXLE**

**Own Make.** Semi-floating, hypoid gear type with torque tube drive.

*See Rear Axle Section for complete data.*

**Ratio**—4.1-1 (41:10) Std., 4.4-1 (40:9) with Over-drive.

**Backlash**—.004-.006". Shim adjustment.

**Removal:** Raise and support rear end of car. Disconnect rear brake cable at center equalizer. Disconnect torque tube at rear of transmission. Disconnect brake hose and shock absorbers at the axle end, permitting them to hang from the body. Roll axle free from car.

**Axle Shaft Removal**—Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolts nuts, take off oil seal retainer, backing plate, and wheel bearing adjusting shims (check thickness of shims, replace same amount when re-assembling). Withdraw axle shaft using Puller J-2498, do not drag shaft on inner oil seal.

**Wheel Bearing Adjustment**—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. **Endplay**—.002-.004".

**SHOCK ABSORBERS**

**Delco or Monroe**—Direct acting, hydraulic type.

*See Shock Absorber Section for complete data.*

**FRONT SUSPENSION**

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

*See Front Suspension for complete data.*

**Kingpin Inclination**— $8\frac{1}{2}^{\circ}$  crosswise.

**Caster**— $0^{\circ}$  desired. Limits  $0^{\circ}$  to Pos.  $\frac{1}{2}^{\circ}$ . Shim adjustment ("C" washers) between upper control arm inner pivot and frame bracket.

**Camber**— $0^{\circ}$  desired. Limits Neg.  $\frac{1}{4}^{\circ}$  to Pos.  $\frac{1}{4}^{\circ}$ . Shim adjustment as for Caster (above).

**Toe-In**— $1/8$ - $3/16$ ". Loosen clamps at both ends of adjustable tubes in each tie rod. Turn tubes equally.

**Steering Geometry**—Inner wheel  $23^{\circ}$  plus  $\frac{1}{2}^{\circ}$ , minus  $0^{\circ}$ . Outer wheel  $20^{\circ}$ .

**STEERING GEAR**

**Gemmer Model 305**—Worm-and-roller type with "push-pull" adjustments.

*See Steering Gear Section for complete data.*

**BRAKES**

**Service Brakes:** Bendix hydraulic, duo-servo, single anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinders**—Diam.: Front wheels  $1\frac{1}{16}$ ", Rear  $7/8$ ".

**Drums**—Cast-iron. Diameter 10".

**Lining**—Moulded type. Width 2". Thickness  $3/16$ ". Length 22" per wheel.

**Clearance**—.015" at each end of secondary (rear) shoes with primary shoes forced out against drums.

**Braking Power**—53% front wheels, 47% rear.

**Hand Brakes:** See Service Brake data (above).

**MISC. MECHANICAL**

**Windshield Wiper:** Cable Operated—vacuum type.

*See Miscellaneous Section for complete data.*

**HOOD ASSEMBLY**

1949 "76" &amp; "88" MODELS

**HOOD REMOVAL:** Disconnect under-hood lamp wire and 2 hood hinge bracket-to-hood support springs (mark hood hinge support bracket location to facilitate re-installation). Remove 2 hood hinge-to-body bracket bolts at each side. Lower hood and take out one hood hinge-to-body bracket bolt from inside body at each side. See Hood Alignment below when re-installing hood.

1949 "98" MODELS

**HOOD REMOVAL:** Disconnect under-hood lamp wire and 2 body-to-hinge springs. Remove 2 hood prop pins. Take out hood hinge brace-to-hood hinge bracket bolt at each side. Remove 2 hood hinge-to-body bracket bolts from inside body at each side. See Hood Alignment below when re-installing hood.

ALL 1949 MODELS

**HOOD ALIGNMENT:** Hood-to-dash clearance should be  $\frac{1}{8}$ " and must be even across rear edge of hood. Adjustments provided at hinges by means of enlarged mounting bolt holes (permits fore-and-aft or up-and-down alignment). At front end of hood, self-aligning bolt and latch spring and lower latch assembly also provided with enlarged holes for alignment.

"98" Note—Adjustable support in middle of lock support between hood hinges should be adjusted to contact hood panel with tension, but not enough tension to move panel away from cowl. Prevents hood distortion when hood raised or lowered (adjusting support does not affect hood fit).

**FRONT END SHEET METAL**

ALL 1949 MODELS

**FRONT END SHEET METAL ASSEMBLY REMOVAL:** Front fenders, radiator grille, and radiator can be removed as an assembly as follows: Drain cooling system, disconnect radiator hoses. Remove battery. Disconnect wiring harness from junction blocks and from clips on radiator tie bar. Disconnect hood latch operating cable from latch plate and from clips on baffle and left filler plate. Detach flexible air tubes at front of dash on each side. Disconnect fresh air inlet pulls (left side "76" & "88", right side "98"). Disconnect heater hose from right fender, heater motor wire, windshield washer hose from bottle and fender, antenna wire at radio and pull wire out through left side of body (antenna is not removed). Remove front bumper. Disconnect radiator dust shield and lower fender-to-frame dust shields at each side. Remove fender-to-body bolts (2 center, 1 upper, and 1 lower on "76" & "88", 2 lower on "98") at each side. Take out nut from center bolt in front frame cross-member. Remove front radiator support bolt. Remove front end assembly as a unit.

**FRONT FENDERS**

ALL 1949 MODELS

**FRONT FENDER REMOVAL:** Raise hood. Disconnect battery cables and hood latch cable from latch and baffle. Remove radiator to grille upper baffle. Remove headlight wiring from junction block on side to be removed. Detach flexible fresh air tube from dash. Disconnect fresh air inlet pulls (for left on "76" & "88", for right on "98"). Remove front wheel. Then for left or right side also detach the following:

**Left Fender.** Disconnect hood latch cable from fender, remove battery, and disconnect all wiring from voltage regulator, horn relay, and fender plate.

**Right Fender.** Remove windshield washer hose from fender and disconnect heater wire.

**CYLINDER HEAD**

1949 SIX CYLINDER

**CYLINDER HEAD INSTALLATION:** Use new head gasket coated on both sides with POB sealer. Apply sealer at room temperature (approx. 70°). Edges at cylinder holes must be wiped clean of all sealer. Use a Torque Wrench for head bolts (see Tightening Specifications) and tighten in order shown in head diagram.

OLDSMOBILE SIX

1949 ROCKET V8 ENGINE

**CYLINDER HEAD REMOVAL:** Drain cooling system, disconnect upper radiator hose from water outlet. Remove air cleaner, generator, and spark plug wire retainers (name plates on valve covers). Disconnect wires at spark plugs, throttle linkage, and spark plug wire and air cleaner supports from cyl. heads. Take off distributor cap, lift off cap, high tension wire assembly and supports off engine as an assembly. Remove carburetor fuel and vacuum lines, external water by-pass (tube around lower end of oil filler pipe), valve covers, intake manifold with coil and carburetor attached. Disconnect exhaust pipe from exhaust manifold. Remove rocker arm shaft assembly, push rods. Remove cylinder head with exhaust manifold by taking out 14 cylinder head bolts.

1949 ROCKET V8 ENGINE

**CYLINDER HEAD INSTALLATION:** Reverse removal instructions given above and note following:

**Gaskets.** Use all new gaskets. Use POB No. 3 sealer and coat both sides of head and intake gaskets. Cement cover gaskets to valve covers. *Install head gaskets with crimped side UP.*

**Cylinder Head Bolts.** 7/16" bolts used as follows: Four 6" bolts at rocker arm supports. Ten 4½" bolts through center of head. Four 2½" bolts at bottom. Use a Torque Wrench (see Tightening Specifications) and tighten in order shown in head diagram.

OLDSMOBILE ROCKET V8

**Intake Manifold. CAUTION—Manifold must be centered between cylinder heads.** Dip threads of six manifold bolts (two  $\frac{3}{8}$ " x 1½" at front, and four  $\frac{3}{8}$ " x 1½" at sides) in POB No. 3 sealer. Use large flat washers under manifold nuts, small flat washers on bolts. Use a Torque Wrench (see Tightening Specifications) and tighten in order shown below.

ROCKET V8 INTAKE MANIFOLD

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS**

1949 SIX &amp; ROCKET V8 ENGINES

	Ft. Lbs.	In. Lbs.
Con. Rod Nuts (self-locking)	45-50	540-600
Crankshaft Front End Bolt	130-140	1560-1680
Cylinder Head Capscrews	60-70	720-840
Exh. & Int. Manifold Nuts (V8)	22-26	264-312
Exh. to Int. Manifold Bolts (6)	22-26	264-312
Flywheel to Crankshaft (6)	55-60	660-720
Flywheel to Crankshaft (V8)	65-70	780-840
Flywheel Housing to Block	50-55	600-660
Front Cover to Block (V8)	30-35	360-420
Front Plate to Block (6)	22-26	264-312
Main Bearing Capscrews (Rear)	140	1680
" " (All Others)	100	1200
Oil Filter or Pad to Block (V8)	30-35	360-420
Oil Pan Capscrews	9-11	108-132
Oil Pump to Block (6)	30-35	360-420
Oil Pump to Bearing Cap (V8)	11-14	132-168
Rocker Shaft Sup. to Block (V8)	18-22	216-264
Spark Plugs (14 MM.)	28-35	336-420
Torus Cover (H-M) to Flywheel	30-35	360-420
Transmission to Housing	60-70	720-840

1949 CHASSIS

	Ft. Lbs.	In. Lbs.
Body Bolts (7/16")	25-30	300-360
Body Bolts (1/2")	45-50	540-600
Differential to Axle Housing	40-45	480-540
Front & Rear Eng. Mtg. to Frame	25-30	300-360
Front Shock to Frame	55-60	660-720
Pitman Arm Nut	100-110	1200-1320
Rear Axle Insulator Bolt	110-120	1320-1440
Rear Shock to Backing Plate	120-130	1440-1560
Starter to Housing	45-50	540-600
Steering Gear to Frame	25-30	300-360
Tie Rod Clamp Bolt	11-14	132-168
Track Bar Nuts (both ends)	135-140	1620-1680
Wheel Nuts	65-70	780-840

## ENGINE FRONT COVER

### 1949 ROCKET V8 ENGINE

**ENGINE FRONT COVER REMOVAL:** Drain cooling system. Disconnect lower radiator hose and heater hose from front cover, external water by-pass (tube at base of oil filler pipe), and generator link at generator. Remove oil pan (see Oil Pan Removal). Take out two front motor mount-to-frame bolts. Use Tool Set BT-29 and support engine with motor mount clear of frame front cross-member. Remove radiator core and shroud, fan blades and pulleys, lower pulley and harmonic balancer, and fuel-&-vacuum pump. Take out front cover attaching screws (five 1 $\frac{3}{4}$ " screws on outside of cover, two 4" screws through water pump housing—one each side at center, use 9/16" wrench).

### 1949 ROCKET V8 ENGINE

**ENGINE FRONT COVER INSTALLATION:** Reverse removal data given above and seal as follows: Use new front cover gasket and cement to cover with V.G. 1000 cement. Apply Fiske lubriplate to fuel pump mounting pad and to front oil seal. Coat threads of cover screws and water by-pass fittings with POB No. 3 sealer.

## PISTON PINS

### 1949 SIX CYLINDER

**PISTON PIN:** Removal. Take out lock screw, use Tool HM-535 and tap pin out (hold piston in hand). Replacement Pins—Std. and .001", .003" oversize.

**Installing Pins.** Fit pins to specifications listed on car page. If reaming required to fit oversize pins, use Reamer HM-536 for piston bosses and rod bushing. Rod bushing can be removed and replaced with Tool J-1674 and Support Tool J-1649. To install piston pin, heat piston (not pin) in boiling water, coat inside of pin boss with graphite, insert split end of pin in piston boss (mark "V-S" on piston head and oil spit hole in lower end of rod must be on same side), use Tool HM-535 and tap pin in place, install lock screw and tighten to 9-11 ft. lbs.

## CRANKSHAFT & MAIN BEARINGS

### 1949 SIX CYLINDER

**MAIN BEARING REMOVAL:** With bearing cap removed upper half of bearing can be removed by inserting Tool HM-J-173 in oil hole in shaft, and with tang on tool engaging plain edge of bearing, rotate crankshaft in usual direction and turn bearing out. Crankshaft will not have to be removed.

**Installation—**Remove sharp edge from plain end of bearing, insert this end at indented side of support and rotate in place using pin in oil hole in shaft.

### 1949 SIX CYLINDER

**CRANKSHAFT END THRUST:** Taken through front (#1) main bearing. Bronze thrust plate assembled on each end of bearing with a steel thrust collar between front bronze thrust plate and sprocket.

**1949 Six Note—**Rear bronze thrust plate .124" thick. Front bronze thrust plate (behind steel collar) is a selective fit to obtain proper endplay (.124" thick or one of two other thicknesses).

### 1949 ROCKET V8 ENGINE

**CRANKSHAFT FRONT OIL SEAL INSTALLATION:** Remove Engine Front Cover (see removal instructions above). Drive seal out towards front of cover. Coat outer diameter of new seal with POB No. 3 sealer. Install new seal using Timing Chain Cover Seal Driver BT-20. Install Engine Front Cover.

### ALL 1949 ENGINES

**REAR MAIN BEARING OIL SEAL:** Asbestos covered wiper seal installed in rear groove in bearing cap and block (oil slinger operates in front groove). **Six Cyl. Note—**Cork strips used to seal vertical joints between bearing cap and block.

**Oil Seal Installation—**With crankshaft out of engine and bearing cap off, use new seal coated with graphite grease, crowd seal by hand into rear groove in cap and block. Use Compressor Tool No. J-955 (for Six Cyl. Engine), No. BT-12 (for Rocket V8 Engine), and drive seal into place. With tool resting on seal, cut ends flush at each end (for both cap and block). *Seal must entirely fill groove and be trimmed flush to prevent oil leaks.* When installing cap on all but Rocket V8 Engines, seal vertical joints with new cork seals.

## FLYWHEEL

### 1949 SIX CYLINDER

**FLYWHEEL INSTALLATION:** Cast-iron flywheel used on cars with synchro-mesh transmission, pressed steel flywheel on Hydra-Matic. Ring gear shrunk on both flywheels. Replacement flywheels supplied with only two mounting holes requiring reaming of four additional holes (7/16") after flywheel attached to crankshaft.

### 1949 ROCKET V8 ENGINE

**FLYWHEEL INSTALLATION:** Pressed steel flywheel with integral ring gear. Flywheels supplied with all mounting holes finished (no reaming required as on six cylinder flywheels).

## CAMSHAFT & BEARINGS

### 1949 ROCKET V8 ENGINE

**CAMSHAFT REMOVAL:** Drain radiator. Remove radiator hoses, heater hoses, air cleaner, fuel and vacuum lines, distributor, throttle linkage from carburetor, fan, fan pulleys, fan belts, generator, generator belt, generator bracket, spark plug wire support, external water by-pass tube, valve covers, rocker arm assembly, push rods, intake manifold, cylinder block cover, valve lifters (keep clean and in order for re-installation in same position), upper radiator baffle, radiator core, harmonic balancer and pulley as an assembly, fuel pump, exhaust pipe cross-over, steering idler arm, oil pan, front engine mounting (use Tool Set BT-29 to support engine), engine front cover, fuel pump eccentric, timing chain and sprocket, thrust plate, and camshaft.

► **CAUTION—**Withdraw camshaft carefully to prevent bearing damage as follows: Slide camshaft through each bearing while slowly rotating shaft, hold shaft at front end and guide it from the rear.

## VALVE SYSTEM

### 1949 ROCKET V8 ENGINE

**VALVE LIFTER REMOVAL:** Remove intake manifold, cylinder block cover, valve covers, rocker arm shaft assemblies, push rods, and valve lifters.

► **CAUTION—**Valve lifters must be re-installed in same bores from which removed.

### 1949 ROCKET V8 ENGINE

**ROCKER ARM SHAFT ASSEMBLIES:** Identical hollow steel tube shafts (ends plugged) are used. Four removable supports for each shaft, one support doweled to shaft for oil feed (at oil line from #2 camshaft bearing on left side, from #4 camshaft bearing on right side). Three springs used to position center rocker arms against supports. End rocker arms retained by wave washer, flat washer, and cotter key.

**Rocker Arm Shaft Disassembly:** With assembly off engine, remove cotter key and washers from end of shaft. Remove rocker arms, supports (except doweled support which should not be removed from shaft), and springs.

► **CAUTION—**Rocker arms should be stored so that they can be reassembled in their original position.

**Rocker Arm Shaft Reassembly:** Assemble supports in proper position as to doweled support (oil supply). Push rod end of rocker arms must be on same side as large cylinder head bolt hole in each support.

## OIL PAN REMOVAL

### 1949 SIX CYLINDER

**OIL PAN REMOVAL:** Disconnect steering idler arm from frame and drop steering relay assembly. Drain radiator, disconnect radiator hoses. Remove two front engine mounting-to-frame bolts, raise engine approx.  $\frac{3}{4}$ ". For access to pan bolts at front end, unhook fasteners on splash guard between cross-member and radiator baffle and work through openings in cross-member. Front bolts on each side of pan must be removed with an end wrench. With pan bolts removed, rotate crankshaft to place counterweights up for clearance, remove oil pan.

**Installation—**Use new gasket coated with cement. Allow cement to dry for easier installation.

### 1949 ROCKET V8 ENGINE

**OIL PAN REMOVAL:** Remove starter and exhaust cross-over pipe. Disconnect idler arm from frame and drop steering relay rod. Remove oil pan cap screws and withdraw pan.

## OIL PUMP

### 1949 SIX CYLINDER

**OIL PUMP:** Disassembly. With pump off engine, use an arbor press and Tool J-959 and press drive gear off shaft and take out woodruff key. Disassemble pump, take off cover, oil pump gears and shaft.

**Assembling Pump.** With pump gear on flat surface and woodruff key in place on shaft, press shaft through gear until flush with outer end of gear. Put idler gear on stub shaft in pump body, slide pump shaft and gear assembly into place in pump housing. Place woodruff key on upper end of shaft and press pump drive gear on shaft with Tool J-954-1 between inner face of gear hub and pump body (gives proper end clearance of pump shaft assembly). Install piston, relief spring and nut in pump cover, bolt cover to body. Use new gaskets between pump cover and body, and between pump body and cylinder block.

**Installation.** Set engine in firing position for #1 cylinder with rotor opposite #1 segment in distributor cap. Note position of distributor shaft tongue for proper oil pump drive gear mesh, then raise distributor and mesh pump drive gear with camshaft gear. Replace distributor in position and reset ignition timing.

## RADIATOR

### 1949 SIX CYLINDER

**RADIATOR CORE REMOVAL:** Drain radiator, disconnect radiator hoses and hood latch cable. Take off upper radiator baffle. At each side, remove one shroud-to-core self-tapping screw and four core-to-core support self-tapping screws. Lift core out (rotate fan as required).

### 1949 ROCKET V8 ENGINE

**RADIATOR CORE REMOVAL:** Drain radiator, disconnect radiator hoses. Remove radiator upper baffle, radiator shroud and lift core out.

**FRONT END SHEET METAL ASSEMBLY REMOVAL, HOOD REMOVAL AND ALIGNMENT, FRONT FENDER REMOVAL:** See Oldsmobile Special Data.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On left front door hinge post. 1949 Numbers—First number 1001 with prefix 496M, A, etc. as follows:

**Serial No. Prefix Identification.** First two numbers 49 indicate year, third number 6 indicates 76 Series, letter indicates assembly plant: M—Lansing, A—Atlanta, B—Framingham, K—Kansas City, C—South Gate, W—Wilmington.

**ENGINE NUMBER:** On left front top corner of block. 1949 Numbers—6A1001 up.

**Hydra-Matic Cars.** Engine number marked with letter "H" following number: 6A1001H.

### TUNE-UP

**COMPRESSION PRESSURE:** 125 lbs. at cranking speed.

**VACUUM READING:** Steady 17" min. at idling speed.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .040".

Plugs—AC No. 45, 14 mm.

**DISTRIBUTOR:** Breaker Gap—.021-.026" (new). .018-.024" or .020" preferred (used points).

► **CAUTION—Set new points at .021-.026" to allow for wearing in of rubbing block.**

**Cam Angle—Closed 31° to 37° with .022" gap.**

**Breaker Arm Spring Tension—17-21 ozs.**

**Automatic & Vacuum Advance—See Ignition.**

**Condenser Capacity—.18-.23 microfarad.**

**IGNITION TIMING:** Synchro-Mesh Trans.....TDC.  
Hydra-Matic Drive...0005" BTDC.

**Timing Procedure—See Ignition Timing.**

**Flywheel Mark—Steel ball insert aligned with pointer in inspection hole in housing beside starter.**

**Octane Selector—Set to give slight ping accelerating with wide open throttle below 15 MPH.**

### CARBURETION:

**Idle Setting— $\frac{1}{2}$ -2 turns open.** One screw—turning screw out gives richer mixture.

**Idle Speed (Standard)—425 RPM, or 6 MPH.**

**Idle Speed (Hydra-Matic)—375 RPM.**

**Float Level— $\frac{1}{2}$ " from machined projection on cover to top of soldered seam at free end (invert to check).**

**Accelerating Pump—No seasonal adjustment.**

**Choke Setting:** Centered (housing centered on scale).

**Fuel Pump Pressure:** 4-5 lbs.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type.

**Setting—Coil wind-up should be 125° (approx. 1/3 turn) at room temperature. NOTE—To check valve for correct position on shaft, use feeler gauge in slot on rear end of shaft. With valve closed, gauge should contact stop pin (slot 6° to left or toward engine from up-and-down position) with 1/8" clearance between valve tip and manifold. Valve welded to shaft in this position.**

**VALVE TAPPET CLEARANCE:** Intake Valves .008", Exhaust Valves .011", HOT.

**Valve Timing Check—See Valve Timing.**

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

**IGNITION SWITCH:** Delco-Remy No. 1116453.

**Ignition Lock—Briggs & Stratton or Delco.**

**COIL:** Delco-Remy 1115380. On side of engine.

**Ignition Current—2.0 amperes idling, 4.5 stopped.**

**CONDENSER:** Delco-Remy Part No. 1869704.

**Capacity—.18-.23 microfarad.**

**DISTRIBUTOR:** Delco-Remy 1110214 or 1110221. Automatic and vacuum advance with Octane Selector. 1110221 Note—Has new "center-bearing" breaker plate.

► **Breaker Plate Bearing Assembly—Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 oz. min., 16 oz. max. with breaker plate assembly out of housing.**

**See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.**

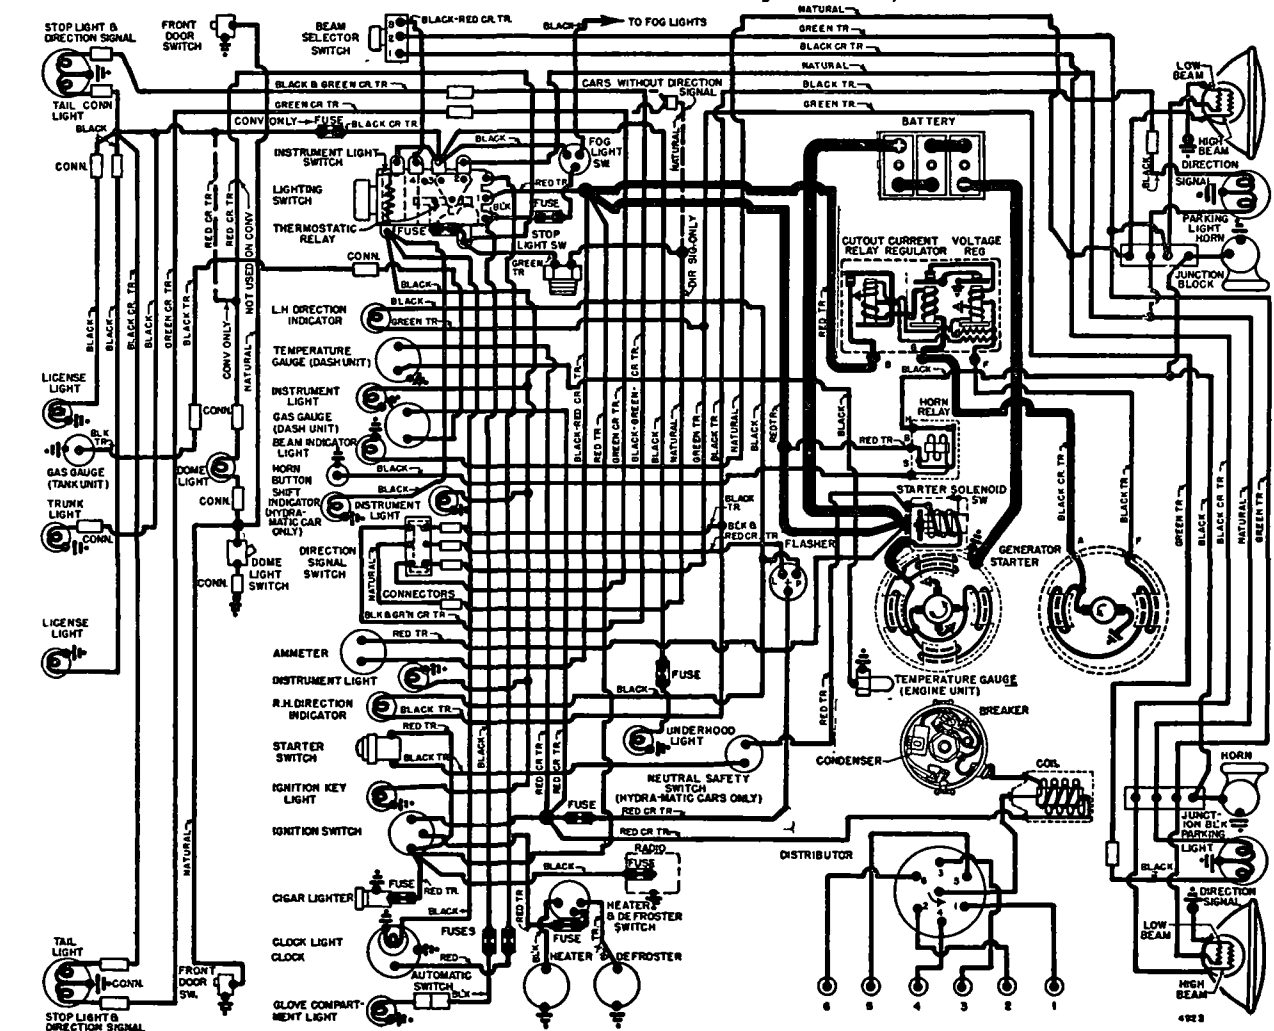

**Breaker Gap—.021-.026" (new points), .018-.024" or .020" preferred (used points).**

► **CAUTION—Set new points at .021-.026" to allow for wearing in of rubbing block.**

**Cam Angle—Closed 31° to 37° with .022" gap.**

**Breaker Arm Spring Tension—17-21 ozs.**

**Rotation—Counter-clockwise viewed from above.**

Distributor Automatic Advance		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	250	2.0.....	500
12.0 .....	1600	24.0.....	3200

**Vacuum Spark Control:** Delco-Remy No. 1116039 (for 1110214 distributor), 1116053 (for 1110221). Integral type linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

**Plunger Travel—5/32".**

### Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
8° .....	16°	(1116039) 16½-18½"
8° .....	16°	(1116053) 16-20"

**Octane Selector—Hold-down plate permits 10° advance or retard. See Ignition Timing.**

**Removal:** Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down plate screw, lift out distributor.

**IGNITION TIMING**

Std. Setting  
Synchro-Mesh Transmission.....TDC.  
Hydra-Matic Drive......0005" BTDC.

**NOTE**—Modify this setting for special fuel and altitude conditions. See Octane Selector Setting.  
**Flywheel Mark**—Steel ball on flywheel (#1 and #6 piston top dead center position). Inspection hole in left front face of flywheel housing above starter.  
**Timing (with Synchroscope)**—Use Tool HMO-161. Loosen distributor hold-down plate bolt, center hold-down plate scale ("0" at indicator line), tighten hold-down bolt. Clip synchroscope lead to #1 spark plug, direct light on flywheel through inspection hole in housing above starter. With engine idling, loosen hold-down plate clamp screw, rotate distributor until ignition mark (steel ball insert) lines up with pointer, tighten clamp screw, check Octane selector setting (below).

► **Hydra-Matic Drive Note**—Set distributor so contacts open with piston .0005" before top dead center.  
**Timing (without Synchroscope)**—Turn engine over to firing position for #1 cylinder (steel ball on flywheel aligned with pointer in inspection hole in housing above starter). Loosen distributor hold-down plate bolt, center hold-down plate scale ("0" at indicator line), tighten hold-down bolt. Loosen hold-down plate clamp screw, rotate distributor until contacts begin to open, tighten clamp screw, check Octane Selector Setting below.

**Octane Selector Setting:** Set for slight ping when accelerating with wide open throttle in high gear below 15 MPH. To adjust, loosen hold-down plate bolt, move plate toward RET end of scale if no ping noted, toward ADV end if ping too severe, tighten bolt.

**CARBURETOR**

Carter WA-1, No. 710S.....Synchro-Mesh Trans.  
Carter WA-1, No. 709S.....Hydra-Matic Drive  
1½" single barrel downdraft, Carter Climatic Contr.  
Casting No. on Flange—538.  
See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.  
**Metering Rods & Jets**—See Carter Downdraft Jet Specification Table in Carburetor Section.

**Hydra-Matic Throttle Linkage Adjustment:** See Oldsmobile Hydra-Matic Drive in Transmission Section.

**Throttle Cracker Adjustment:** .0625 to .0851" (1/16") clearance between throttle stopscrew and highest step of fast idle cam with starter button fully depressed. Adjust by loosening locknut and turning adjusting screw on accelerator bellcrank.

**Fast Idle:** Carter Single Barrel Carburetor type.  
See Carburetion Equipment Section for complete data.  
**Setting**—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (use Tool T109-41).

**Automatic Choke:** Carter Climatic Control (single barrel carbs).  
See Carburetion Equipment Section for complete data.  
**Setting**—Centered (coil housing at index mark).

**CARB. EQUIPMENT**

**Air Cleaner:** AC No. 1544458 oil-wetted type (std.). No. 1544456 heavy duty oil-bath type (optl.).

**Filter Element**—AC #6 (std.), #21 (hvy. duty).  
**Servicing**—Clean and re-oil std. cleaner every 2000 miles. On heavy duty types clean and refill reservoir with 1 pint SAE 50 (40 in winter) oil every 2500-5000 miles.

**Fuel Pump:** AC type AJ #1539297 fuel-&-vacuum pump.

**Replacement Pump**—AC No. 9297.

**Pressure**—4-5 lbs.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** AC Electric type.

**Dash Unit**—AC No. 1517011.

**Tank Unit**—AC No. 1517086.

See Carburetion Equipment Section for complete data.

**BATTERY**

**Delco Type 15AA-4.** 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.6 minutes. Five second voltage—4.2 volts.

**Grounded Terminal**—Negative (—) to Starter.

**Location**—In engine compartment on left side.

**STARTER**

**Delco-Remy Model 1107955.** Armature No. 1867897.

► **CAUTION**—Starter operates whenever pushbutton depressed (and shift lever in neutral on Hydra-Matic) regardless of ignition switch position.

**Drive**—Overrunning clutch (solenoid pinion shift).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	80①
14 "	Lock	3.0	600

①—Includes current draw of starter switch.

**Removal:** Flange mounted on left front face of flywheel housing. To remove, take out mounting screws.

**Starting Switch:** Delco-Remy Solenoid Switch No. 1118136 (no relay used) mounted on starter and controlled by Pushbutton Switch No. 1996038 (and Neutral Safety Switch No. 1997849 on Hydra-Matic).

► **CAUTION**—Overrunning clutch pinion clearance must be adjusted whenever solenoid removed from starter.

See Electrical Equipment Section for complete data.

**Neutral Safety Switch Adjustment**—See Oldsmobile Hydra-Matic Drive in Transmission Section.

**GENERATOR**

**Delco-Remy 1102706 (Std.), 1102707 (Hydra-Matic).** Armature No. 1880550. Two brush (shunt) types with voltage and current regulation. Ventilated by fan.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—40 amperes min. reached at car speed of 22 MPH. Actual charging rate controlled by regulator and dependent on battery condition.

**Performance Data**

Amperes	Volts	R.P.M.
40①	8.0	1900

①—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.9-2.05 amperes at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Check with straightedge across pulleys. Belt deflection should be ¾".

**REGULATOR**

**Delco-Remy 1118300.** Voltage & Current Regulator.

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. See Electrical Equipment Section for complete data.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In**—5.9-6.8 volts hot (set to 6.4 volts hot).

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

**Voltage Regulator**

**Setting**—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Elec. Equip. Section.

**Current Regulator**

**Setting**—40-46 amperes hot (set to 42 amps. hot).

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Elec. Equip. Section.

**LIGHTING**

**Headlamps:** Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

**Beam Indicator**—Small red indicator in upper edge of speedometer. Lighted when Upper Beams in use.

**Direction Signal:** See Electrical Equipment Section.

**Direction Signal Indicators**—Left & Right Turn Indicator located at either end of instrument cluster. Lights when direction signal on same side of car operating (Stop Light flashes at rear).

**Switches**

**Lighting**—Delco-Remy No. 1995030.

**Instrument**—Part of Lighting Switch (Rheostat operated by turning light switch knob).

**Beam Selector**—Delco-Remy No. 1997008.

**Direction Signal**—Delco-Remy No. 1995542.

**Stop Light**—Delco-Remy No. 1997725.

**MISC. ELECTRICAL**

**THERMOSTATIC CIRCUIT BREAKER:** Delco-Remy. On back of light switch (part of switch assy.).

Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

**FUSES:** Dome & Stop—SFE 14 amp. On light switch.

**Dome & Tail (Convertible only)**—AGC 20 ampere.

In body feed wire to dome and tail lights.

**Glove Box & Under-hood Light**—AGA 5 amp. each.

**Direction Signal**—SFE 9 ampere. In Flasher to Ignition Switch wire behind instrument panel.

**Electric Clock**—AGA 2 ampere. In feed wire,

**Cigar Lighter**—AGC 30 ampere.

**HORNS:** Delco-Remy No. 1999617 or 1999647 (Low Note), 1999618 or 1999648 (High Note). Vibrator types operated by relay.

**NOTE**—1999647 & 8 horns are welded.

Type	Current (at 6 volts)	Air Gap
1999617 (Low Note)	19-21 amperes	.047-.052"
1999618 (High Note)	18-20 amperes	.039-.044"

**Horn Relay:** Delco-Remy No. 1116775.

**Contact Gap**—.027". **Air Gap**—.014" (closed).

**Contacts Close**—2.75-4.0 volts (set to 3.5 volts).

C NTINUED FR M PRECEDING PA E

**ENGINE****ENGINE SPECIFICATIONS:** Big Six, 6 cylinder, "L" head.**Bore**—3 17/32". **Stroke**—4 3/8".**Displacement**—257 cubic ins. **Rated HP.**—29.9.**Developed Horsepower**—105 at 3400 RPM.**Compression Ratio**—6.5-1 cast-iron head.**Compression & Vacuum Reading**—See *Tune-Up*.**TIGHTENING TORQUES:** See *Oldsmobile Special Data*.**CYLINDER HEAD INSTALLATION:** See *Oldsmobile Special Data*.**OIL PAN REMOVAL:** See *Oldsmobile Special Data*.**PISTONS:** Aluminum alloy, T-slot, cam ground, oxalic sulphuric acid coated type.**Weight**—18.24 ozs. (stripped). **Length**—4 1/32".**Removal**—Pistons and rods removed from above.**Clearance**—Top Land .023-.028". Skirt clearance Top .0025", Bottom .00075". Fitted for .0125-.00175" clearance on thrust surface. See *Fitting New Pistons* following.**Replacement Pistons:** Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize.**Fitting New Pistons:** Check piston for size with micrometer (pin removed) 90° from pin bosses 3/8" below lower ring groove and also 3/8" from bottom of skirt. Taper should be .0004" max. (larger diameter at the bottom). Then check clearance by inserting .0015 x 1/2" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler should be 7 to 20 lbs.**Installing Pistons:** Mark "V-S" on piston head toward valves.**PISTON RINGS:** 2 coated compression (install with mark TOP up), 2 oil control rings, all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (#1,2)	.0925-.0935"	.007-.017"	.001-.003"
Oil (#3,4)	.1860-.1865"	.007-.016"	.001-.0025"

**Replacement Rings:** .010", .020", .030" oversize.**PISTON PIN:** Diameter .8554-.8557". Length 3 5/32". Pin locked in one piston boss by lock screw (opposite end slotted). Piston bosses may be reamed for installation of oversize pins.**Pin Fit in Piston**—.0001" tight to .0002" loose (plain boss end), .0003-.0006" tight (lock boss end), or a tight wring fit (with solid end of pin in boss, pin should just be able to be turned with 6" drift in pin lock screw hole—test each boss).**Pin Fit in Rod Bushing**—.0003-.0006" clearance, or suck fit (pin holds on own weight but can be pushed through with slight thumb pressure).**Replacement Pins:** Std., .001", .003" oversize.**Piston Pin Removal and Installation**—See *"Piston Pins"* in *Oldsmobile Special Data*.**CONNECTING ROD:** Length 7 13/16". Wgt. 30.72 oz.**Crankpin Journal Diameter**—2.353-2.354".**Lower Bearing Diameter**—2.3570-2.3575".**Lower Bearing**—Removable steel-backed, Durex-babbitt overlay. No shims.**Clearance**—.0005-.0025". **Sideplay**—.0055-.0105".**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.**Installing Rods:** Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used. Tighten to 45-50 ft. lbs.**CRANKSHAFT:** 4 bearing, 7 integral counterweights. **Journal Diameters**—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.6855-2.6865".**Bearings**—Removable, steel-backed, Durex-babbitt overlay bearing shells. Front bearing has oil groove (to front) for thrust plate lubrication.**Clearance**—.0005-.002" (rear), .001-.003" (others).**Bearing Adjustment:** None (no shims). Replace bearings. Do not file caps. **NOTE**—9/16" cap bolts used on rear bearing, 1/2" on others (heads are alike).**Bearing Removal**—See *"Crankshaft & Main Bearings"* in *Oldsmobile Special Data*.**End Thrust:** At No. 1 bearing. **Endplay**—.004-.008". See *"Crankshaft & Main Bearings"* in *Oldsmobile Special Data* for thrust collar and plate data.**Rear Main Bearing Oil Seal Installation:** See *"Crankshaft & Main Bearings"* in *Oldsmobile Special Data*.**FLYWHEEL:** Removal & Installation—See *Oldsmobile Special Data*.**CAMSHAFT:** 4 bearing. Non-adjustable chain drive. **Journal Diameters**—#1, 1.9974-1.9981"; #2, 1.9349-1.9351"; #3, 1.8724-1.8731"; #4, 1.8099-1.8106".**Reamed Bushing Diameters**—#1, 1.9995-2.001"; #2, 1.937-1.9385"; #3, 1.8745-1.876"; #4, 1.812-1.8135".**Bearings**—Steel backed copper lead bronze bushings. **Clearance**—.0014-.0036".**End Thrust:** Forward thrust taken by flange on front engine support plate, rear thrust by flange on shaft bearing against front of engine block.**Timing Chain:** Link-Belt. Width 15/16". Pitch .500". Length 47 links or 23 1/2".**Camshaft Setting:** Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

VALVES	Head Diam.	Stem Diam.	Length
Intake	1.745-1.755"	3415-.3425"	5.7695-5.8095"
Exhaust	1 27/64"	3410-.3418"	5 51/64"

	Seat Angle	Lift	Stem Clearance
Intake	30°	310"	.00175-.00375"
Exhaust	45°	308"	.00245-.00425"

**Valve Guides:** Intake and exhaust guides same. Press guides in until top end 7/8" below top of block, Tool J-952 positions guide correctly in block. Ream to .34425-.34525" inside diameter (not tapered). **Length**—3 7/32".**Valve Springs:** Intake and exhaust springs the same. Damper installed on top of each spring. Free length 2 5/8".

	Spring Pressure	Spring Length
Valve Closed	55 lbs.	2 1/4"
Valve Open	100 lbs.	1 15/16"

**Valve Lifters:** Mushroom type with self-locking screws. Body Diameter .6235-.6240". Head Diam. 1.125-1.140". **Clearance**—.0005-.0008".**Replacement Lifters**—.001", .002", .005", .010" O. S. **NOTE**—Lifter holes in block have "Bearingized" finish. If holes worn, fit oversize lifter without reaming hole when possible to preserve finish.**VALVE TIMING****Tappet Clearance:** .008" INT., .011" EXH. Hot & idling. **NOTE**—Self-locking tappet screws used.**Valve Timing:** See camshaft setting above.**Intake Valves**—Open 5° BTDC. Close 45° ALDC.**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.**Valve Timing Check**—With .0125" tappet clearance #1 intake valve should open with piston 5° (.010") BTDC. with flywheel steel ball insert (TDC mark) approx. 2 teeth before indicator (hole on left front face of housing). Reset tappet clearance at .008" hot.**LUBRICATION****Engine Oiling System:** Pressure to main, connecting rod, and camshaft bearings, piston pins and chain.**Crankcase Capacity**—5 quarts.**Normal Oil Pressure**—28-33 lbs.**Oil Pressure Regulator**—On oil pump. Opens at 30 lbs. Non-adjustable.**Oil Pump:** Gear type on right side of crankcase.**Oil Pump Assembly & Installation**—See *"Oil Pump"* in *Oldsmobile Special Data*.**Oil Pressure Gauge:** AC No. 1507124. Not electric.**Crankcase Ventilation:** Filter element in oil filler cap (inlet breather). Outlet pipe on right side of engine. **Servicing**—Wash and re-oil filter element every 2000 miles or oftener as required in dusty areas.**COOLING****Cooling System:** Pressure type with pressure valve and vacuum valve (relief valve) in filler cap. Water distribution tube installed in block. Re-circulation of water through engine (with thermostat closed) permitted by fixed by-pass from cylinder head through block to pump inlet.**Capacity**—18 1/2 quarts.**Pressure Valve**—AC No. 850501 Filler Cap. Opens at 4 lbs. (3 1/4-4 1/4 lbs.).**Radiator Core Removal:** See *Oldsmobile Special Data*.**Water Pump:** Packless, sealed ball-bearing shaft. See *Water Pump Section* for complete data.**Thermostat:** Harrison. In cylinder head water outlet. **Setting**—Starts to open 152°F. Fully open 173°F.**Temperature Gauge:** AC Electric.**Dash Unit**—AC No. 1512168.**Engine Unit**—AC No. 1512015.See *Miscellaneous Section* for complete data.**CLUTCH****Borg & Beck Model 10A7** (Borglite driven member). Single plate, dry disc type with pressure plate oil baffle and release bearing lubrication fitting.**Clutch Cover No.**—927 stamped on cover.See *Clutch Section* for complete data.**Clutch Release Bearing Lubrication**—See *Oldsmobile Special Data*.**Facings**—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 7". O. D. 10". 1/8" thick.

**Pedal Adjustment:** Free travel  $\frac{7}{8}$ - $1\frac{1}{4}$ ". Turn link at fork in or out of clevis on auxiliary shaft.

**Removal:** Remove transmission (see data below), clutch underpan and take out 6 mounting screws in clutch cover (when installing, use 2 long shank mounting screws in 2nd hole on each side of locating dowel), lower clutch assembly out.

### TRANSMISSION STANDARD

**Own Make.** All helical gear, constant-mesh, synchro-mesh (2nd & high), sliding gear (low & reverse).

See *Transmission Section* for complete data.

**Transmission Control:** Oldsmobile "Handi-shift".  
See *Transmission Section* for complete data.

**Removal:** Disconnect shift and selector rods from levers at transmission, speedometer cable, rear universal and slide slip yoke and propeller shaft to rear. Remove 4 transmission mounting cap screws, pull transmission straight back and remove.

### HYDRA-MATIC DRIVE OPTIONAL EQUIPMENT

**Own Make.** Consists of Fluid Coupling and automatic self-shifting four-speed transmission.

► **Hydra-Matic Trans.** Serial Number—Carries prefix "08" (ahead of number) stamped on BLACK serial plate on right side of transmission case.

► **CAUTION—NOT INTERCHANGEABLE WITH 1949 ROCKET 8 HYDRA-MATIC UNIT.** '49 Six Hydra-Matic same as 1948 and can be installed on all 1946-48 models.

See *Transmission Section* for complete data.

**Lubrication**—Check fluid level in transmission every 2000 miles. Drain and refill after first 15000 miles and every 15000 miles thereafter. Use only "Oldsmobile Hydra-Matic Drive Fluid."

**Draining & Refilling**—See "Hydra-Matic Drive" in *Transmission Section*.

**Capacity**—11 qts. (when drained and refilled with unit in car). Approximately  $11\frac{1}{2}$  qts. (when refilling after unit removed and rebuilt, and reinstalled in car).

**Checking Fluid Level**—Raise front floor mat at right side, remove sheet metal cover in floor, clean opening of lint, sand, etc. Set hand brake, start engine and let engine idle; move control lever to "DR" position. Take out dip stick, wipe dry and replace stick, remove stick quickly and check level. Level should be at "FULL" mark, add fluid to bring up to "FULL" if required with engine idling.

► **CAUTION**—Engine must be idling and selector lever in "Drive" position when checking fluid level.

**Linkage Adjustment**—See "Hydra-Matic Drive" in *Transmission Section*.

**Removal:** See "Hydra-Matic Drive" in *Transmission Section*.

### UNIVERSALS

**Mechanics 2C or 2CR.** Roller bearing types.

See *Universals Section* for complete data.

**NOTE**—Slip joint formed at rear of transmission ahead of front U-joint (one-piece driveshaft used).

► **CAUTION**—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See *Oldsmobile Rear Axle* in *Rear Axle Section* for complete data.

### REAR AXLE

**Own Make.** Hypoid gear, semi-floating type with pinion mounted on two taper roller bearings.

► **CAUTION**—Do not use "76" series carrier and axle housing on "88" and "98" series cars. New support used on "88" and "98" series rear axles.

► **NOTE**—Rear universal companion nut controls pinion bearing "pre-load."  
See *Rear Axle Section* for complete data.

#### Standard Ratios

41:10 (4.1)—Std. exc. Convertible & Sta. Wagon.

43:10 (4.3)—Std. on Convertible & Station Wagon. Optional Hilly Ratio Domestic Cars, & Export Cars.

39:10 (3.9)—Optional on Export Cars.

#### Hydra-Matic Ratios

40:11 (3.64)—Std. exc. Convertible & Station Wagon. Optional on Export Cars.

39:10 (3.9)—Std. on Convertible and Station Wagon. Optional on Export Cars.

41:12 (3.42)—Optional on Export Cars.

**Rear Axle Ratio Marking**—Ring and pinion gear ratio (39:10, etc.) and date stamped on underside of carrier right horizontal rib.

**Backlash**—.004-.008". Screw adjustment.

**Removal:** Disconnect driveshaft at rear universal (wire trunnions to avoid losing rollers), mark joint (reassemble to mark when reassembling). Remove axle shafts (see data below) and carrier cap screws.

► **CAUTION**—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

**Axle Shaft Removal:** Remove wheel. Take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be re-used, if nuts damaged new nuts must be

used). Remove backing plate mounting nuts, and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one backing plate nut.

**Wheel Bearing Adjustment**—None.

**Rear Suspension:** Coil spring type with support arms.  
See *Rear Axle Section* for complete data.

### SHOCK ABSORBERS

**Delco.** Double acting (parallel cyl. rear), hydraulic.  
**FRONT**—Model 1947-J (right), 1947-K (left).  
**REAR**—Model 2105-N (right), 2105-P (left).  
See *Shock Absorber Section* for complete data.

### FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**— $4^{\circ}29'47''$ .

**Caster**— $0^{\circ}$  to Neg.  $\frac{3}{4}^{\circ}$ . Adjustable.

**Camber**—Neg.  $\frac{3}{4}^{\circ}$  to Pos.  $\frac{3}{4}^{\circ}$  (Service Limits), Neg.  $\frac{1}{4}^{\circ}$  to Pos.  $\frac{3}{4}^{\circ}$  (New Car Specification).

**Toe-In**— $1/16$ - $1/8$ ". Adjust each tie rod equally.

**Steering Geometry** Inner wheel  $23^{\circ} \pm \frac{1}{2}^{\circ}$ . Outer  $20^{\circ}$ .

### STEERING GEAR

**Steering Gear**—Saginaw Worm-and-Roller type.  
See *Steering Gear Section* for complete data.

### BRAKES

**Service Brakes:** Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.  
See *Brake Section* for complete data.

**Wheel Cylinder Bore**—Front wheels  $1\frac{1}{8}$ ", Rear 1".  
**Drums**—Cast-iron. Diameter 11". Max. rebore .060" (or .030" cut).

**Lining**—Moulded. Width 2" (front wheels),  $1\frac{3}{4}$ " (rear). Thickness  $3/16$ ". Length per shoe:  $9\frac{11}{32}$ " (primary),  $11\frac{31}{32}$ " (secondary).

**Clearance**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Braking Power**—56% front wheels, 44% rear.

**Hand Brake:** See Service Brakes above.

### MISC. MECHANICAL

**Convertible Top Control:** Hydro-lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).  
See *Miscellaneous Section* for complete data.

**Windshield Wiper:** Vacuum Link-&-Crank Arm type.  
See *Miscellaneous Section* for complete data.

**Removal:** Remove distributor cap, disconnect breaker lead and vacuum line, take out 2 distributor clamp-to-block capscrews, lift distributor straight up.

**Installation—**Turn engine over to place #1 cylinder in firing position (#1 piston on compression and two balls on dampener midway between pin on front of engine—left side). Install distributor with flat in distributor drive gear aligned with flat on oil pump shaft, push distributor down just enough to engage oil pump shaft—drive gear must not engage camshaft gear. Align distributor clamp with holes in engine. Turn rotor and align it with breaker terminal (low tension connection). Push distributor down to engage camshaft gear (rotor will turn to No. 1 terminal). Install hold-down plate by raising distributor slightly, install 2 capscrews in plate. Connect low tension lead and vacuum line, install cap.

## IGNITION TIMING

**Flywheel Degrees Piston Position**

**Std. Setting**① ..... 2½° BTDC ..... 002° BTDC.  
①—For premium gasolines.

**Dampener Mark—**Two steel balls on dampener. Pointer on left front side of engine should be midway between the two steel balls.

**Timing (with Synchroscope)—**Use Tool HMO-161. Loosen hold-down plate and center scale "0" mark on center line, tighten hold-down plate. Clip synchroscope lead to #1 spark plug, direct light on dampener at timing pointer on left side of engine. With engine idling, loosen clamp bolt, rotate distributor until point on dampener midway between two steel balls line up with pointer, tighten bolt. **Timing (without Synchroscope)—**Turn engine over to firing position for #1 cylinder (midpoint between two steel balls on dampener aligned with timing pointer on left front of engine). Loosen hold-down plate and center scale "0" mark on center line, tighten hold-down plate. Loosen clamp bolt, rotate distributor until contacts open, tighten bolt.

**Octane Selector Setting:** Normal setting, "0" mark on scale at center line. Timing should not be retarded more than to eliminate spark ping if required.

## CARBURETOR

**CARTER WGD**

**Carter WGD No. 714S.** 1¼" dual downdraft, horizontal air intake type.

**Casting No.—**604 on face of flange.

**Carter Installation Unit No. 195-43U—**Required when installing 714S carburetor on 1949 Oldsmobile 8 engines not originally Carter equipped.

*See Carburetor Section for complete data.*

**Settings (Idle Setting, Float Level, and Accelerating Pump):** *See Tune-Up data.*

**Hydra-Matic Throttle Linkage Adjustment:** *See "Oldsmobile Hydra-Matic Drive" in Transmission Section.*

**Metering Rods & Jets—***See "Carter Downdraft Carburetor Jet Specifications" in Carburetor Section.*

**Fast Idle:** Carter Dual (WGD) Carburetor type.

*See Carburetion Equipment Section for complete data.*

► **Setting—CAUTION—**Two separate adjustments:

1)—**Fast Idle Linkage.** Back off fast idle screw until fast idle cam can be revolved freely. Loosen choke lever clampscrew. Insert .015" flat feeler (Gauge T109-72) between lip of fast idle cam and boss on carburetor casting, hold choke valve tightly closed, remove all slack from linkage by pressing choke lever toward closed position, tighten clampscrew while holding lever in this position.

2)—**Fast Idle Screw.** Back off throttle lever set screw closing throttle valves. Turn fast idle cam until ear on cam opposite fast idle screw (choke valve wide open). Adjust fast idle screw until it just touches ear on cam.

**Automatic Choke:** Carter Climatic Control (Dual Carburetor).

*See Carburetion Equipment Section for complete data.*

**Setting—**Centered (housing centered on scale).

## CARBURETOR

**ROCHESTER**

**Rochester GM Carburetor—**Oldsmobile No. 7001570.

Dual downdraft, concentric bowl, horizontal air intake type with diaphragm accelerating pump.

*See Carburetor Section for complete data.*

**Settings (Idle Setting, Float Level, and Accelerating Pump):** *See Tune-Up data.*

**Hydra-Matic Throttle Linkage Adjustment:** *See "Oldsmobile Hydra-Matic Drive" in Transmission Section.*

**Fast Idle:** Rochester GM Dual Carburetor type.

*See Carburetion Equipment Section for complete data.*

**Setting—**500 RPM, engine idling speed with engine and transmission warm. Adjusted by opening throttle slightly, rotating fast idle cam by hand until fast idle screw rests on first (low) step of fast idle cam and turning screw for 500 RPM, idle speed.

**Automatic Choke:** Rochester GM Automatic Choke.

*See Carburetion Equipment Section for complete data.*

**Setting—**Centered (index marks aligned).

## CARB. EQUIPMENT

**Air Cleaner:** AC types as follows:

**Carter Carburetor.** AC No. 1544656 (standard), No. 1544657 (optl. oil bath type).

**Rochester Carburetor.** AC No. 1544505 (standard), No. 1544506 (optl. oil bath type).

**Filter Element—**AC No. 5 (std.), 21 (hvy. duty).

**Servicing—**Clean and re-oil std. cleaner every 2000 miles (500-1000 miles for dusty operation). On heavy duty types clean and refill reservoir with 1 pint SAE 50 (40 in winter) oil every 5000 miles (2500 miles for dusty operation).

**Fuel Pump:** AC No. 1539294 fuel- & vacuum pump.

**Replacement Pump—**AC No. 9294.

**Pressure—**4-5 lbs.

► **CAUTION—**When installing fuel pump, tip pump up to place arm under fuel pump eccentric.

*See Carburetion Equipment Section for complete data.*

**Gasoline Gauge:** AC Electric type.

**Dash Unit—**AC 1517011. **Tank Unit—**AC 1517086.

*See Carburetion Equipment Section for complete data.*

## BATTERY

**Delco Type 17K4.** 6 Volt, 17 Plate, 115 Ampere Hour

**Grounded Terminal—**Negative (—) to cyl. block.

**Location—**In engine compartment on left side.

## STARTER

**Delco-Remy Model 1107956.** Armature No. 1867897. Drive—Overrunning clutch (solenoid pinion shift).

► **CAUTION—**Overrunning clutch pinion clearance must be adjusted whenever solenoid removed from starter.

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**24-28 ozs. each.

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	80①
14 "	Lock	3.0	600

①—Includes current draw of starter switch.

**Removal:** Flange mounted on left front face of fly-wheel housing. To remove, take out mounting screws.

**Starting Switch:** Delco-Remy Solenoid Switch No. 1118136 (no relay used) mounted on starter and controlled by Pushbutton Switch No. 1996038 and Hydra-Matic Neutral Safety Switch No. 1997849.

**Neutral Safety Switch Adjustment—***See "Oldsmobile Hydra-Matic Drive" in Transmission Section.*

► **CAUTION—**Starter operates whenever pushbutton depressed with shift lever in Neutral regardless of ignition switch position.

## GENERATOR

**Delco-Remy Model 1102704.** Armature No. 1880550.

Two brush type with voltage and current regulation.

**Charging Rate Adjustment—**None. *See Regulator.*

**Maximum Charging Rate—**40 amperes min. reached at car speed of 22 MPH. (88), 21 MPH. (98). Actual charging rate controlled by regulator and dependent on battery condition.

**Performance Data**

	Amperes	Volts	R.P.M.
Cold	40①	8.0	1900

①—Not maximum output. *See Current Regulator.*

**Rotation—**Counter-clockwise at commutator end.

**Brush Spring Tension—**25 ozs. each.

**Field Current—**1.9-2.05 amperes at 6.0 volts.

**Removal:** Pivot mounted on manifold above left cyl. bank at front of engine. To remove, disconnect leads, take out 2 pivot and 1 clampscrew.

**Generator Belt Adjustment:** ¾" belt deflection midway between generator and fan pulley with 25 lbs. push against belt. To adjust, loosen screw on adj. link.

**Fan Belt Adjustment:** *See COOLING.*

## REGULATOR

**Delco-Remy 1118300.** Voltage & Current Regulator.

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. *See Electrical Equipment Section for complete data.*

**CAUTION—**Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

**Cutout Relay**

**Cuts In—**5.9-6.8 volts hot (set to 6.4 volts hot).

**Contact Gap—**.020" (same for both sets).

**Air Gap—**.020" (with contacts just closed).

**Voltage Regulator**

**Setting—**7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.

**Air Gap—**.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment—***See Elec. Equip. Section.*

**Current Regulator**

**Setting—**40-46 amperes hot (set to 42 amps. hot).

**Air Gap—**.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment—***See Elec. Equip. Section.*

## LIGHTING

**Headlamps, Direction Signal, and Lighting Switches:** *See 1949 Oldsmobile Six car pages.*

## MISC. ELECTRICAL

**THERMOSTATIC CIRCUIT BREAKER:** Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**FUSES: Dome & Stop**—SFE 14 amp. On light switch.  
**Dome & Tail (Convertible only)**—AGC 20 ampere.  
 In body feed wire to dome and tail lights.  
**Glove Box & Under-hood Light**—AGA 5 amp. each.  
**Direction Signal**—SFE 9 ampere. In Flasher to Ignition Switch wire behind instrument panel.  
**Electric Clock**—AGA 2 ampere. In feed wire.  
**Cigar Lighter**—AGC 30 ampere.

**HORNS: Delco-Remy No. 1999617 or 1999647 (Low Note)**, 1999618 or 1999648 (High Note). Vibrator types operated by relay.

**NOTE**—1999647 & 8 horns are welded.

Type	Current (at 6 volts)	Air Gap
1999617 (Low Note)	19-21 amperes	.047-.052"
1999618 (High Note)	18-20 amperes	.039-.044"

**Horn Relay: Delco-Remy No. 1116775.**  
**Contact Gap**—.027". **Air Gap**—.014" (closed).  
**Contacts Close**—2.75-4.0 volts (set to 3.5 volts).

## ENGINE

**ENGINE SPECIFICATIONS: Rocket Engine.** New 90° V8 with Overhead Valves. Both cylinder blocks and crankcase cast Enbloc.

**Bore**—3¼". **Stroke**—37/16".

**Displacement**—303 cubic inches. **Rated HP**—45.

**Developed Horsepower**—135 at 3600 RPM.

**Compression Ratio**—7.25-1 cast iron heads.

**Compression & Vacuum Reading**—See Tune-Up.

**TIGHTENING TORQUES: See Oldsmobile Special Data.**  
**CYLINDER HEAD REMOVAL & INSTALLATION: See Oldsmobile Special Data.**

**OIL PAN REMOVAL: See Oldsmobile Special Data.**

**PISTONS: Aluminum alloy, three-ring, auto-thermic steel-strut, slipper skirt, cam ground, tin plated.**  
**Length**—4". **Weight**—19.88 ozs. (stripped).  
**Removal**—Pistons and rods removed from above.

► **CAUTION**—When removing more than one piston assembly, stamp cylinder number on piston, connecting rod, and cap, before loosening assembly. Re-install to these marks.

**Clearance**—Top land .032-.036". Skirt clearance .0005-.001" measured ⅛" from bottom of skirt with piston pin removed.

**Fitting New Pistons: Insert .0015" x ½" x 12" feeler between piston (pin removed) and cylinder wall at right angles to pin hole. Pull to withdraw feeler should be 10 to 18 lbs.**

► **CAUTION**—Allow rebored cylinders to cool to normal room temperature before fitting pistons.

**Installing Pistons: Mark "F"** cast on each side of pin hole on front side of piston. Install pistons 1, 3, 5, 7 in left bank, 2, 4, 6, 8 in right bank with letter "F" toward front on all pistons.

**PISTON RINGS: Two coated compression rings, one slotted oil ring, all above pin. Oil ring groove drilled with oil drain holes.**

Ring	Width	End Gap	Side Clearance
Comp. (#1,2)	.077-.078"	.008-.020"	.001-.003"
Oil (#3)	.1860-.1865"	.008-.020"	.0018-.0033"

**Installing Rings**—Compression rings installed with step on inner edge UP. Oil rings marked TOP installed with mark UP, unmarked rings with either side up.

**PISTON PIN: Diameter**—.9803-.9807". **Length**—3". Floating type with lock ring at each end. Rods rifle drilled for pin lubrication.

► **CAUTION**—Discard old lock rings and install new service type lock rings when installing pins.  
**Pin Fit in Piston**—.0000-.0002" loose. Pin should NOT fall through piston of own weight. Pin can be tapped

in place using brass drift. Pin hole out-of-round .0005" max. Hone pin hole and install oversize pin. **Pin Fit in Rod Bushing**—.0003-.0005" loose.

► **CAUTION**—If rod bushing replaced, align oil hole in bushing and rod for pin lubrication, finish to size with Piston Pin Bushing Honing Tool No. KMO-754. Standard bushing diameter .9807-.9811".

**Replacement Pins: Std. size, and .001", .003", oversize.**

**CONNECTING ROD: Length 6.625". Weight 29.54 ozs.**  
 ► **CAUTION**—Use Guide Tool No. BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.

**Crankpin Journal Diameter**—2.2488-2.2499".

**Lower Bearing Diameter**—2.3745-2.3750".

**Lower Bearing**—Removable, steel-backed, Durex-babbitt overlay. No shims.

**Clearance**—.0009-.0029". **Sideplay**—.002-.011".

**Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.**

**NOTE**—Tang on bearing insert must seat in notches in cap and rod.

► **Installing Rods: CAUTION**—Rods have plain side and boss side (two machined bosses at lower end). Install rods #1, 3, 5, 7, with plain side to front, and #2, 4, 6, 8, with boss side to front (**NOTE**—Pistons marked "F" on front side). Caps offset and cannot be installed incorrectly. Groove on rod and cap and pads for numbering caps and rods are on same side. Tighten self-locking nuts to 45-50 ft. lbs.

► **CAUTION**—Misaligned rods must be replaced, straightening rods in field not recommended by manufacturer.

**NOTE**—Oil spit hole for lubrication of opposite cylinder wall provided in rod above cap joint.

**CRANKSHAFT: 5 bearing, 6 integral counterweights. Journal Diameters #1, 2, 3, 4, 2.498-2.499"; #5, 2.623-2.624".**

**Bearings**—Removable, steel-backed, Durex-babbitt overlay bearing shells. Rear bearing flanged. **Clearance**—.002-.0035" (rear), .0005-.003" (others).

► **REAR BEARING SHELLS**—Marked with letter on backside of bearing tang. Use same size bearing (indicated by letter on tang) when replacing bearing. Rear bearings are selective fit during manufacture, 3 sizes used: "M" Medium, "T" Thin, "H" Heavy.

**Bearing Adjustment: None (no shims). Replace bearings. Do not file caps.**

**NOTE**—#1, 2, 3, 4, bearing caps numbered. Install with numbers toward right hand cylinder bank.

**Bearing Removal**—Bearing shells can be removed and installed without removing crankshaft. Lower flywheel housing and pan must be removed to remove rear main bearing cap.

**End Thrust: Taken by flanges on rear main bearing. Endplay**—.004-.008".

**Crankshaft Front Oil Seal and Rear Main Bearing Oil Seal Installation: See "Crankshaft & Main Bearings" in Oldsmobile Special Data.**

**FLYWHEEL: Removal & Installation—See Oldsmobile Special Data.**

**CAMSHAFT: 5 bearing, coated (Parco-Lubrited) shaft with non-adjustable chain drive.**

**Camshaft Removal & Installation—See Oldsmobile Special Data.**

**Journal Diameters**—1.8724-1.8731" (all).

**Reamed Bushing Diameters**—1.8745-1.8760" (all).

**Bearings**—Steel-backed, babbitt bushings.

**Clearance**—.0014-.0036".

**End Thrust: Forward thrust taken by thrust plate on front of engine, rear thrust at front of cyl. block.**

► **CAUTION**—Thrust plate seals off two oil galleries and must be installed flat to prevent low oil pressure at idling speeds. 1/16" hole in plate at right gallery provides lubrication for chain, sprockets, fuel pump lever and eccentric.

**Timing Chain: Link-Belt. Width 11/16". Pitch .500". Length 48 links or 24".**

**Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool BT-11).**

**NOTE**—Fuel pump eccentric bolted to front end of camshaft ahead of sprocket. Assemble with "0" mark to front, machined step against sprocket.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 3/4"	.3417-.3425"	.4907-.4927"
Exhaust	1.432-1.442"	.3930-.3938"	.4931-.4951"
	Seat Angle	Lift	Stem Clearance
Intake	45°	.330"	.00175-.00355"
Exhaust	45°	.330"	.00225-.00405"

► **Intake Valve Rubber Seals**—Installed in second groove from end of valve stem between lock retainer and valve stem. Always use new rubber seals.

**Valve Guides: Intake guides tapered on lower end. Press guides in head until top end 53/64-27/32" above face of valve spring seat (Tool BT-13 positions guide correctly in head). Inside ream diameter .34425-.34525" Intake, .39605-.39705" Exhaust. Length—2 11/16".**

**Valve Springs: Intake and exhaust springs are alike. Dampers used on lower end of all springs.**

**Free Length—2 3/32".**

	Spring Pressure	Spring Length
Valve Closed	62-68 lbs.	1.777"
Valve Open	136-146 lbs.	1.447"

► **CAUTION**—Lower end of damper and spring must seat in recess in head.

**Valve Lifters: New hydraulic type maintaining zero tappet clearance in service. Production lifters fitted in four sizes: standard, .001", .002", or .003" oversize with identification number (except standard which is unmarked) etched on lifter body and cylinder block carries size mark on rail under push rod cover. Use proper size lifter when replacing valve lifters. See Miscellaneous Section for complete data.**

**Valve Lifter Removal—See Oldsmobile Special Data.**

**Rocker Arms: New rocker arm and shaft assemblies mounted on each cylinder head. Intake rocker arms identified by brass pin in oil lead.**

**Rocker Arm Shaft Disassembly and Reassembly—See Oldsmobile Special Data.**

► **CAUTION**—Steel plain finish push rods (alike for all valves) used on domestic engines. Longer copper finish push rods (for thicker head gaskets) used on export engines only.

## VALVE TIMING

**Tappet Clearance: None in service (hydraulic type lifters which maintain zero clearance).**

**Valve Timing: See Camshaft Setting above.**

**Intake Valves**—Open 14° BTDC. Close 50° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 14° ATDC.

**Valve Timing Check**—#1 intake valve opens 14° before top dead center (#1 piston .060" before top dead center) with zero tappet clearance.

## LUBRICATION

**Engine Oiling System: Pressure to main bearings, camshaft bearings, connecting rod lower bearings, piston pins, hydraulic valve lifters (right bank from**

main oil galley on right side, left bank from left oil galley from front main bearing); and to rocker arms (hollow shafts, left shaft fed from #2 camshaft bearing, right shaft from #4 camshaft bearing. Timing chain, sprockets, fuel pump lever and eccentric lubricated by metered hole in camshaft thrust plate over front end of right main oil galley. Distributor drive gear lubricated by metered hole in plug in rear end of left oil galley.

► **CAUTION**—If oil filter (or pad cover if filter not used) replaced, use a new gasket (coat both sides with POB No. 5 Sealer) and tighten bolts to 35-40 ft. lbs. Oil filter (or pad) mounted externally on lower right side of crankcase at rear. Oil filter is full flow type (all oil from pump delivered to oil filter) requires pad when filter not used to return oil to main oil galley.

**Crankcase Capacity**—5 quarts.

**Normal Oil Pressure**—40 lbs. at 30 MPH.

**Oil Pressure Regulator**—Located on oil pump. Opens at 40 lbs. Non-adjustable.

**Oil Pump**: Gear type. Located in crankcase and attached to rear main bearing cap by three bolts.

**NOTE**—Pump can be removed and installed without disturbing distributor drive (flat on upper end of oil pump shaft engages flat on distributor drive gear).

**Oil Filter**: AC PF-122 full-flow type optional. On lower right side of crankcase at rear.

**Oil Pressure Gauge**: AC No. 1507124. Not electrical.

**Crankcase Ventilation**: Air intake in oil filler cap (oil-wetted type cleaner) with outlet connection to a ventilating baffle at rear of block above right bank. Outlet pipe push fit at ventilator and extends down below right rear corner of engine.

**Servicing**—Wash and re-oil filter element in cap every 2000 miles (oftener in dusty areas).

## COOLING

**Cooling System**: Pressure type with pressure valve and vacuum valve (relief valves) in filler cap. Two by-passes for water re-circulation with thermostat closed: 1) internal passage from cylinder head through block to pump inlet; 2) external tube from water outlet (cast as part of intake manifold) to pump inlet.

**Capacity**—21½ qts.

**Pressure Valve**—AC No. 850549 Radiator Cap. Opens at 7 lbs.

**Radiator Core Removal**: See *Oldsmobile Special Data*.

**Water Pump**: Packless, sealed ball-bearing shaft. Pump mounted in front engine cover casting.

See *Water Pump Section for complete data*.

**Removal**—Take off fan and two fan pulleys. Remove six pump mounting bolts (4 to engine cover, 2 to block). Remove pump. **NOTE**—When installing pump, coat one side of pump housing gasket with gasket cement, dip four housing bolts in CP No. 9 Sealer.

**Fan Belt Adjustment**—Idler pulley mounted on slotted arm attached to engine front cover on right side above fuel pump. Adjust fan belt for ½" belt deflection midway between fan and idler pulley with 25 lbs. push against belt.

**Generator Belt Adjustment**—See *GENERATOR*.

**Thermostat**: Harrison. In water outlet (integral with intake manifold casting).

**Setting**—Starts to open 152°F. Fully open 173°F.

**Temperature Gauge**: AC Electric.

**Dash Unit**—AC No. 1512168.

**Engine Unit**—AC No. 1512015.

See *Miscellaneous Section for complete data*.

## HYDRA-MATIC DRIVE

**Own Make**. Consists of Fluid Coupling and an automatic self-shifting four-speed transmission.

► **Hydra-Matic Trans.** Serial Number—Carries prefix "09" (ahead of number) stamped on YELLOW serial plate on right side of transmission case.

► **CAUTION**—This unit not interchangeable with six cylinder type. Has greater torque capacity. See *Transmission Section for complete data*.

**Lubrication**—Check fluid level in transmission every 2000 miles. Drain and refill after first 15000 miles and every 15000 miles thereafter. Use only "Oldsmobile Hydra-Matic Drive Fluid."

**Draining & Refilling**—See "Hydra-Matic Drive" in *Transmission Section*.

**Capacity**—11 qts. (when drained and refilled with unit in car). Approximately 11½ qts. (when refilling after unit rebuilt, and reinstalled in car).

**Checking Fluid Level**—Raise front floor mat at right side, remove sheet metal cover in floor, clean opening of lint, sand, etc. Set hand brake, start engine and let engine idle, move control lever to "DR" position. Take out dip stick, wipe dry and replace stick, remove stick quickly and check level. Level should be at "FULL" mark, add fluid to bring up to "FULL" if required with engine idling.

► **CAUTION**—Engine must be idling and selector lever in "Drive" position when checking fluid level.

**Linkage Adjustment**—See "Hydra-Matic Drive" in *Transmission Section*.

**Removal**: See "Hydra-Matic Drive" in *Transmission Section*.

## UNIVERSALS

**Mechanics 2C or 2CR**. Roller bearing types.

See *Universals Section for complete data*.

**NOTE**—Slip joint formed at rear of transmission ahead of front U-joint (one-piece driveshaft used).

► **CAUTION**—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See *Oldsmobile Rear Axle in Rear Axle Section for complete data*.

## REAR AXLE

**Own Make**. Hypoid gear, semi-floating type with pinion mounted on two tapered roller bearings.

► **CAUTION**—New carriers (with machined surfaces on differential side bearing caps) and axle housings (with 2 welded support plates—supports bearing caps to take care of increased torque of new Rocket engine) are used. Not interchangeable with "76" Series carrier and axle housing. Use only carriers and axle housings described above on 1949 "88" and "98" ► **NOTE**—Rear universal companion nut controls pinion bearing "pre-load."

See *Rear Axle Section for complete data*.

### "88" Series Ratios

42:13 (3.23)—Std. exc. Convertible & Sta. Wagon.

41:12 (3.42)—Std. on Convertible & Station Wagon, Optional on all other models.

39:10 (3.9)—Optl. on Export models.

### "98" Series Ratios

40:11 (3.64)—Std. exc. Conv., Optl. on Export.

39:10 (3.9)—Std. on Conv., Optl. on Export

41:12 (3.42)—Optl. on Export models.

**Rear Axle Ratio Marking**—Ring and pinion gear ratio (39:10, etc.) and date stamped on underside of carrier right horizontal rib.

**Backlash**—.004-.008". Screw adjustment.

**Removal**: Disconnect driveshaft at rear universal (wire trunnions to avoid losing rollers), mark joint

(reassemble to mark when reassembling). Remove axle shafts (see data below) and carrier cap screws.

► **CARRIER INSTALLATION CAUTION**—Due to close fit between carrier pedestal caps and support plates in housing, special carrier installation procedure must be used. See *Oldsmobile Rear Axle in Rear Axle Section*.

► **CAUTION**—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

**Axle Shaft Removal**: Remove wheel. Take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be re-used, if nuts damaged new nuts must be used). Remove backing plate mounting nuts, and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one backing plate nut.

**Wheel Bearing Adjustment**—None.

**Rear Suspension**: Coil spring type with support arms.

See *Rear Axle Section for complete data*.

## SHOCK ABSORBERS

**Delco**. Double acting (parallel cyl. rear), hydraulic.

"88" FRONT—Model 1947-K (left), 1947-J (right).

"88" REAR—Model 2105-H (left), 2105-N (right).

"98" FRONT—Model 1947-D (left), 1947-C (right).

"98" REAR—Model 2105-F (left), 2105-E (right).

See *Shock Absorber Section for complete data*.

## FRONT SUSPENSION

**Front Suspension**: Independent, linked parallelogram type with coil springs.

See *Front Suspension Section for complete data*.

**Kingspin Inclination**—4°29'47".

**Caster**—0° to Neg. ¾°. Adjustable.

**Camber**—Neg. ¾° to Pos. ¾° (Service Limits), Neg. ¼° to Pos. ¾° (New Car Specification).

**Toe-In**—1/16-1/8". Adjust each tie rod equally.

**Steering Geometry** Inner wheel 23° ± ½°. Outer 20°.

## STEERING GEAR

**Steering Gear**—Saginaw Worm-and-Roller type.

See *Steering Gear Section for complete data*.

## BRAKES

**Service Brakes**: Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section for complete data*.

**Wheel Cyl. Bore** (88) Front whl. 1 3/32", rear 15/16".

**Wheel Cylinder Bore** (98) Front wheel 1 1/8", rear 1".

**Drums**—Cast-iron. Diameter 11". Max. rebore .060"

**Lining**—Molded. Width: Front wheel 2 1/2", Rear wh. 2". Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary shoes).

**Clearance**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Braking Power** (88)—58% front wheels, 42% rear.

**Braking Power** (98)—56% front wheels, 44% rear.

**Hand Brake**: See *Service Brakes* above.

## MISC. MECHANICAL

**Power Operated Convertible Tops, Windows, & Front Seat**: Hydro-Lectric type (motor driven pump).

**98 Sedan Note**—Power operated windows and front seat adjustment optional on 2-Door & 4-Door.

See *Miscellaneous Section for complete data*.

**Windshield Wiper**: (88) Vacuum Link-&-Crank Arm.

(98) Vacuum Cable Operated type.

See *Miscellaneous Section for complete data*.

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS**

	<b>Ft. Lbs.</b>	<b>In. Lbs.</b>
Cylinder Head Stud Nuts	60-62	720-744

► .020" Oversize Bore Engines—Marked by ★ following engine serial number.

**PISTONS****1949 MODELS**

**REPLACEMENT PISTONS:** Piston Oversizes—Furnished standard size and .005", .020", .030" and .040" oversize and carries this nominal size marking on head of piston.

**Piston Letter Mark on Piston Head—**Indicates size variation (in .00025" steps) over or under nominal size (.005", etc.) as follows:

AA - - -	.00025" under	CC - - -	.00075" over
A - - -	No variation	C - - -	.001" over
BB - - -	.00025" over	DD - - -	.00125" over
B - - -	.0005" over	D - - -	.0015" over

**PISTON PINS****1949 MODELS**

**PISTON PIN BUSHING INSTALLATION:** Two-piece bushing used in rod. Use Piston Pin Bushing Replacement Set J-2555 (consists of: Remover, Replacer, Plate, Burnisher), and Piston Pin Bushing Reamer J-874-18. Press old bushings out with Remover and arbor press. (CAUTION—Each half of bushing must be installed and burnished separately so that oil channel formed between inner ends of bushing halves will not close up). Install one half of bushing flush with outer end of rod, then using Plate of tool under end of rod, push Burnisher through from inner end of bushing. Install second half of bushing and burnish in place from inner end working through bushing half already in place. Ream bushing for size-to-size fit with piston pin using Reamer J-784-18. Check pin fit as follows:

**Piston Pin Fit in Rod Bushing—**With lower bearing inserts and cap installed on rod, insert piston pin in rod, clamp pin in vise with lead jaws placing rod in horizontal position. Rod should hold in this position, but should fall down of own weight when tapped down by hand.

**CRANKSHAFT & MAIN BEARINGS**

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE:** Consists of plastic rod material supplied in envelope marked with scale which gives bearing clearance in thousandths of an inch when used to measure flattened plastigage in bearing cap. Use Plastigage as follows:

**Bearing Clearance Check—**Remove bearing cap, wipe oil from bearing insert and journal (CAUTION—When checking main bearings, keep all other bearing caps tight so that crankshaft weight will not cause incorrect reading). Place piece of Plastigage rod across full width of bearing insert in cap, re-install bearing cap and tighten bolts to recommended torque (see Tightening Specifications). Remove cap, match widest width of flattened Plastigage with correct graduation of scale on envelope (marking of this graduation is bearing clearance).

**1949 MODELS**

**CRANKSHAFT FRONT OIL SEAL:** Installed on front end of crankshaft behind timing chain cover. To replace seal, remove radiator core (see Radiator Core Removal), vibration dampener (use Puller J-2582 for Friction Disc type dampener, J-2636 for Fluid type dampener), and timing chain cover. Remove old seal and install new seal over end of shaft. Place Cover Aligning Arbor J-2572 over end of shaft, install cover and tighten cover screws. Insert feeler gauge between arbor and hole in cover, run gauge around arbor, if clearance not uniform, loosen cover screws and shift cover until clearance uniform.

**VALVE SYSTEM****1949 CUSTOM EIGHT**

**HYDRAULIC VALVE LIFTER CHECK:** When valves ground or new valves installed, mechanical clearance at valve lifters should be checked as follows. With valves out, lift out hydraulic take-up assemblies from tappet bodies (keep assemblies in order so that they can be re-installed in same position). Install valves without springs, set #1 piston at top of compression stroke placing tappets for this cylinder on heel of cam. Check valves for #1 cylinder by inserting Plug Gauge of Hydraulic Tappet Gauge

Set J-2553 in tappet body. Check clearance between Gauge Plug and valve stem (with valve held down on seat) using feeler gauge supplied with Gauge Set. Clearance should be .030" to .070". If under .030", grind off end of valve stem with valve refacer.

**CAUTION—**When checking other valves, make certain piston for that cylinder at top of compression stroke.

**Hydraulic Valve Lifter Cleaning & Testing—**After making check above, hydraulic take-up assemblies should be cleaned and tested before re-installing. See Wilcox-Rich "Zero-Lash" Valve Lifters in Miscellaneous Section.

**OIL PAN REMOVAL****1949 MODELS**

**OIL PAN REMOVAL:** Place car to position hoist over engine. Disconnect steering idler lever support from frame side rail and lower steering linkage. Remove flywheel housing lower cover and take out oil pan screws. Lower oil pan and if necessary, rotate crankshaft to place counterweights up for clearance (use pry bar at flywheel housing engaging teeth on flywheel). If pan requires additional clearance, attach hoist to front of engine (do not disturb front engine support bolts), raise engine just enough to relieve load on support, pan should then come out.

**OIL PUMP****1949 MODELS**

**OIL PUMP: Removal—**Set engine in firing position for #1 cylinder (6° BTDC.), remove distributor cap and mark rotor position on distributor housing. With pump cover off, mark pump driving gear position on pump body (check to this mark when re-assembling since pump must be rotated 180° on some cars to clear frame when removing pump from engine).

**Oil Pump Installation:** Correct engaging position of pump drive is with driving blade in pump drive gear parallel to camshaft and punch mark on end of drive gear at top. Re-assemble to marks made when removing pump (see above—engine in firing position for #1 cylinder). If pump does not engage slot in distributor shaft, remove pump and turn pump drive gear one tooth and re-install (making certain distributor rotor at #1 firing position).

**CLUTCH NOTES****1949 "2300" SERIES**

**CLUTCH PEDAL OVER-CENTER SPRING:** New adjustable type over-center (booster) spring. Adjustment provided at spring eye-bolt nut (front end of spring) and by turn buckle type pedal-to-relay lever link (controls over-center point). To adjust, proceed as follows:

**Clutch Pedal Linkage Adjustment:** Check over-center eye bolt (should be 1 5/8" from end of bolt to head of nut—adjust if necessary). Back off locknut and adjusting nut on rod at throwout lever and unhook pedal retracting spring from throwout lever. Adjust pedal-to-relay lever link turnbuckle so that over-center spring will pull pedal down after pedal moved down one inch from toeboard (make certain throwout lever does not contact adjusting nut and locknut backed off above). Hook pedal retracting spring to throwout lever. Adjust pedal for 1 1/4-1 3/8" free play at pedal pad. Check over-center spring hold-in position by pulling pedal to floor and hooking spring at bend in pedal arm. Adjust eye bolt nut to hold pedal down with seven lbs. pull on scale.

**ELECTRICAL EQUIPMENT NOTE:** Both Auto-Lite and Delco-Remy electrical equipment are used.

### MODEL IDENTIFICATION

**SERIAL NUMBER:** On left side of cowl (use Eng. No.).  
**ENGINE NUMBER:** Stamped on upper left side of cylinder block between #3 and #4 cylinders.

►1949 Numbers "2200-9" Series—Continuation of 1948 numbers—1948 starting numbers: Eight—G-200001 Up, Super Eight—G-400001 Up.

►1949 Numbers "2300" Series—(Eight) H-200001 and Up, (Super Eight) H-400001 and Up.

►ENGINE NUMBER CODE: Marks following no. indicate:  
★—Engine Bore, .020" Oversize.

### TUNE-UP

**COMPRESSION PRESSURE:** 120 lbs. at cranking spd.  
**VACUUM READING:** Steady 18-20" idling at 6 MPH.  
**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAP:** .028". Limits .025-.030".

Plug Types—Auto-Lite F-4, AC No. 104, or Champion Y4A, 10 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.017". Limits .013-.018".

Cam Angle—(Auto-Lite)—Closed 27°, Open 18°.

Cam Angle—(Delco-Remy)—21-30° with .017" gap.

Breaker Arm Spring Tension—17-20 ounces.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—20-25 microfarad.

**IGNITION TIMING:** 6° BTDC.

Timing Procedure—See Ignition Timing.

Vibration Dampener Mark—"#1UPDC" with fifteen 1° graduations ahead of this point. Set ignition contacts to open at 6th graduation before "DC".

**Fuel Compensator Setting:** Slight ping accelerating with wide open throttle.

### CARBURETION:

Idle Setting—(Eight—WDO)  $\frac{5}{8}$ -1 $\frac{1}{8}$  turns open,

(8—WGD) 1-1 $\frac{1}{2}$  turns open, (Super 8)  $\frac{3}{4}$ -1 $\frac{1}{4}$  turns open. Two screws—turning out gives richer mixture.

Idle Speed (standard)—6 MPH.

Idle Speed (Ultramatic Drive)—400 RPM.

Float Level—(WDO)  $\frac{5}{32}$ ", (WGD)  $\frac{13}{64}$ " from top of float to cover with valve seated (Inverted, gasket off).

Accelerating Pump (644SA only)—Inner Hole (minimum) Normal. Outer hole if more charge needed.

Choke Setting (643SA, 644SA): Centered (at index).

Choke Setting (728S & SA): One point lean.

Fuel Pump Pressure: 4-4 $\frac{3}{4}$  lbs.

**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve must operate freely.

**VALVE TAPPET CLEARANCE:** .007" Intake, .010" Exhaust, Hot.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

### IGNITION

#### AUTO-LITE

**IGNITION SWITCH:** Mitchelllock Type 24.

**COIL:** Auto-Lite Model CE-4033.

Location—Left side of engine above distributor.

Ignition Current—2.75 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671K.

Capacity—20-25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGP-4502B, Automatic advance type with Vacuum Spark Control and Fuel Compensator Adjustment.

Breaker Gap—.017". Limits .013-.018".

Cam Angle—Closed 27°, Open 18°.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

### Automatic Advance (Auto-Lite)

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start.....		300	0.....		600
1.....		400	2.....		800
3.....		600	6.....		1200
6.....		1200	12.....		2400
8.....		1600	16.....		3200

**Fuel Compensator:** 40° range of adjustment on quadrant at vacuum link connection. See Ignition Timing.

**Vacuum Spark Control:** Auto-Lite. Mounted on hold-down plate and linked to adjusting quadrant on distributor. Provides additional advance at speeds

above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

### Vacuum Advance (Auto-Lite)

Distr. Degrees Start	Eng. Degrees	Vacuum (" of HG)
0°	0°	6"
2°	4°	8 $\frac{3}{8}$ "
4°	8°	10 $\frac{1}{2}$ "
6°	12°	12 $\frac{7}{8}$ "
7°	14°	14"

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out hold-down plate screw, lift off.

CONTINUED ON NEXT PAGE

CARS WITH AUTO-LITE EQUIPMENT

CONTINUED FROM PRECEDING PAGE

**IGNITION****DELCO-REMY****IGNITION SWITCH:** Mitchelllock Type 24.**COIL:** Delco-Remy No. 1115376.

Location—Left side of engine above distributor.

Ignition Current—2.75 amperes idling, 4.5 stopped.

**CONDENSER:** Delco-Remy Part No. 1869704.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Delco-Remy Model 1110811. Automatic advance type with Vacuum Spark Control and Fuel Compensator.

Breaker Gap—.017". Limits .013-.018".

Cam Angle—21-30° with .017" gap.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance (Delco-Remy)

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start.....	300	2.....	600
4.....	600	8.....	1200
9.....	1600	18.....	3200

**Fuel Compensator:** 10° advance or retard adjustment at distributor. See Ignition Timing.**Vacuum Spark Control:** Delco-Remy 1116041. Integral type mounted on distributor and linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger Travel—5/32" max.

Vacuum Advance (Delco-Remy)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5-7"
7°	14°	13.0-15.0"

**Distributor Removal:** Same as for Auto-Lite (above)**IGNITION TIMING****Std. Setting**.....6° BTDC.

NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

**Vibration Dampener Mark**—"#1UPDC" with fifteen 1° graduations ahead of mark.**Timing**—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover, (see table above). Loosen vacuum unit link screw in distributor quadrant. (Auto-Lite distributors), or hold-down screw in advance arm (Delco-Remy distributors), rotate distributor until contacts begin to open, tighten screw.**Timing (with Neon Timing Light)**—Mark 6th line ahead of "#1UPDC" mark on vibration dampener with white paint, clip timing light to #1 spark plug. Idle engine below 600 RPM., adjust distributor (as directed above) until mark lines up with pointer.**Fuel Compensator Setting**—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.**CARBURETOR**

Eight (First Cars).....Carter WDO, No. 644SA.

Eight (Later Cars).....Carter WGD, No. 728S &amp; SA

Super Eight.....Carter WDO, No. 643SA.

1¼" dual barrel downdraft types with Carter Climatic Control.

Casting No. on Flange—(WDO) 561, (WGD) 615.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.**Fast Idle (WDO):** Carter Dual (WDO) Carburetor.

See Carburetion Equipment Section for complete data.

Setting—.026" (643SA), .020" (644SA) throttle opening with choke valve closed. Adjust by turning fast idle screw on high step of fast idle cam.

**Fast Idle (WGD):** Carter Dual (WGD) Carburetor.

See Carburetion Equipment Section for complete data.

Setting—.026" throttle opening with choke valve closed (throttle must be opened first). Adjust by bending choke connector rod at lower angle.

**Automatic Choke:** Carter Climatic Control (Dual Carburetors).

See Carburetion Equipment Section for complete data.

Setting—(WDO) Centered, (WGD) One Point Lean.

**CARB. EQUIPMENT****Air Cleaner (std.—oil-wetted):** AC No. 1544276 (Type #6 element).**Optl. (oil bath)**—AC. 1544277 (Type #7-S element).**Servicing (oil-wetted type)**—Wash and re-oil filter element every 1000 to 2000 miles whenever crankcase oil is changed.

CARS WITH DELCO-REMY EQUIPMENT

**Servicing (oil bath type)**—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), No. 30 (Winter) to level of indicator line on case (approx. 1 pint) every 5000 miles or oftener if required.

**Fuel Pump (Fuel-&Vacuum):** AC Type AJ, No. 1523867.

**Replacement Pump**—AC No. 508.

**Pressure**—4-4 $\frac{3}{4}$  lbs.

*See Carburetion Equipment Section for complete data.*

**Gasoline Gauge:** King-Seeley Electric.

"2200" Series

**Dash Unit**—K-S No. 41635.

**Tank Unit**—K-S No. 41676 (Eight), 41678 (Super 8).

*See Carburetion Equipment Section for complete data.*

## BATTERY

**Auto-Lite Type PN-15ZR or Willard SW-1D-100.**

6 volt, 15 plate, 100 amp. hr. capacity (20 hr. rate).

**Starting Capacity**—120 amperes (Auto-Lite), 122 amperes (Willard) for 20 minutes.

**Zero Capacity**—300 amperes for 3.3 minutes, Five second voltage—4.2 volts.

**Grounded Terminal**—Positive (+) to frame.

**Dimensions**—Length 19 $\frac{1}{4}$ ", Width 4", Hgt. 8 29/32".

**Location**—Left side in engine compartment.

## STARTER

### AUTO-LITE

**Auto-Lite Model MCL-6003.** Armature No. MCH-2021

**Drive**—Outboard Barrel Type Bendix No. A-1915.

**Rotation**—Counter-clockwise at commutator end.

**Cranking Engine**—175-225 amperes.

**Brush Spring Tension**—42-53 ozs. (new brushes).

### Performance Data (Auto-Lite)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
8.0 "	Lock	2.0	410

**Removal:** On left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:** Auto-Lite Model SS-4017 Magnetic Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).

*See Electrical Equipment Section for complete data.*

► **Ultramatic Drive Starter Safety Switch**—Packard No. 421319. On left side of transmission case. Connected in starter control circuit so that starter operative only with lever in "N" Neutral or "P" Parking.

## STARTER

### DELCO-REMY

**Delco-Remy Model 1107943.** Armature No. 1910938.

**Drive**—Outboard Barrel Type Bendix No. A-1792.

**Rotation**—Counter-clockwise at commutator end.

**Cranking Engine**—175-225 amperes.

**Brush Spring Tension**—24-28 ozs. each.

### Performance Data (Delco-Remy)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	65
16 "	Lock	3.0	600

**Removal:** Same as Auto-Lite data (above).

**Starting Switch:** Delco-Remy Model 1452 Magnetic Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).

*See Electrical Equipment Section for complete data.*

► **Ultramatic Drive Starter Safety Switch**—Packard No. 421319. On left side of transmission case. Connected in starter control circuit so that starter operative only with lever in "N" Neutral or "P" Parking.

## GENERATOR

### AUTO-LITE

**Early**.....Auto-Lite GDZ-4801T. Arm. GDZ-2006F.

**Later**.....Auto-Lite GGW-6001E. Arm. GGW-2006F.

**Conv't**.....Auto-Lite GGU-6001C. Arm. GGU-2006F.

Two brush types with current and voltage regulation.

**Maximum Charging Rate**—See table below.

**Charging Rate Adjustment**—None. See Regulator.

### Performance Data (Auto-Lite GDZ-4801T)

Amperes	Volts	Cold—R.P.M.	Hot
0	6.4	870-970	950-1050
35	8.0	1800-2000	2150-2350

### Performance Data (Auto-Lite GGU-6001C)

45	8.0	1550 Max.	
----	-----	-----------	--

### Performance Data (Auto-Lite GGW-6001E)

0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.6-1.8 amperes at 6.0 volts.

**Motoring Current**—(GDZ) 4.2-4.6 amps., (GGU) 5.5-6.5 amps., (GGW) 4.6-5.2 amperes, all at 6.0 volts.

**Removal:** Pivot mounted at left front of engine To remove, take out strap screw and mounting bolts.

**Belt Adjustment:**  $\frac{1}{2}$ " belt deflection between fan and generator. Loosen adjusting strap screw, pry the generator out for  $\frac{1}{2}$ " setting, tighten screw.

## GENERATOR

### DELCO-REMY

"2200-9".....Delco-Remy 1102705. Arm. No. 1879002

"2300".....Delco-Remy 1102715. Arm. No. 1912599

Two brush types with current and voltage regulation.

**Maximum Charging Rate**—See tables below.

**Charging Rate Adjustment**—None. See Regulator.

### Performance Data (Delco-Remy)

	Amperes	Volts	R.P.M.
1102705 (Cold)	30	8.0	1750
1102715 (Cold)	40	8.0	1900

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ounces each.

**Field Current**—(1102705) 1.75-1.9 amps. at 6.0 volts. (1102715) 1.90-2.05 amperes at 6.0 volts.

**Removal & Belt Adjustment:** See Auto-Lite above.

## REGULATOR

### AUTO-LITE

**Auto-Lite VAV-4401B**.....for GGU-6001C Generator

**Auto-Lite VRP-4402A**.....for GDZ-4801T Generator

**Auto-Lite VRP-4402C**.....for GGW-6001E Generator

All are current-voltage types.

*See Electrical Equipment Section for complete data.*

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts, (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. *See Electrical Equipment Section for settings at other temperatures.*

**Checking (without breaking seals) & Adjustment**—*See Electrical Equipment Section for complete data.*

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—As follows:

VAV-4401B 44-46 amperes (marked '45' on cover).

VRP-4402A 34-36 amperes (marked '35' on cover).

VRP-4402C 39-41 amperes (marked '40' on cover).

**Checking (without breaking seals) & Adjustment**—*See Electrical Equipment Section for complete data.*

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

## REGULATOR

### DELCO-REMY

**Delco-Remy 1118331**.....for 1102705 Generator

**Delco-Remy 1118360**.....for 1102715 Generator

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. *See Electrical Equipment Section for complete data.*

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

### Cutout Relay

**Cuts In**—5.9-6.8 volts hot (set to 6.4 volts hot).

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

### Voltage Regulator

**Setting**—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—*See Electrical Equipment Section.*

### Current Regulator

**Setting**—As follows:

1118331.....32-40 amperes hot (set to 36 hot)

1118360.....40-46 amperes hot (set to 42 hot)

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—*See Electrical Equipment Section.*

## LIGHTING

**Headlamps:** Hall "Sealed Beam" type.

*See Electrical Equipment Section for complete data.*

**Adjustment**—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Light at top of speedometer dial. Lighted when Upper Beams "on".

**Direction Signal:** Std. *See Electrical Equipment Section.*

**Direction Signal Indicator**—Light at top of clock. Flashes when Signal in use.

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Vibrating, thermostatic types.

**Lighting**—30 ampere. On lighting switch.

**Accessory (Stop & Body Lamps)**—30 ampere. Behind instrument panel below gauges. Protects Glove Box Lamp, Courtesy Lamps, Map Lamp, Stop Lamps, Dome Lamp, and Rear Cigar Lighter.

**Hydro-Lectric Power (Convertible)**—On engine side of dash on pump upper bracket.

## CONTINUED FROM PRECEDING PAGE

**FUSES:** Clock—SFE 3 ampere in lead below Clock.  
Direction Signal—SFE 9 ampere. In Flasher feed wire above Ash Tray.  
Overdrive—SFE 30 ampere. On Overdrive Relay (at BAT terminal) on engine side of dash.  
Electromatic Clutch—9 ampere. In lead from Ignition Switch to Electromatic Clutch Switch.  
Heater—SFE 30 ampere. In cable near Ign. Switch.

**HORNS:** Sparton. Dual horns operated by relay.  
Horn Current—22-25 amperes.

**Horn Relay:** Delco-Remy No. 1116775.  
Contacts Close—2.75-4.0 volts (set to 3.5 volts).  
Contact Gap—.027". Air Gap .014" (contacts closed).

## ENGINE

**ENGINE SPECIFICATIONS:** 8 cylinder, "L" head type.

	Eight	Super 8
Bore	3 1/2" ①	3 1/2" ①
Stroke	3 3/4"	4 1/4"
Displacement	288 cu. ins.	327 cu. ins.
Rated HP.	39.2	39.2
Developed HP.	135 at 3600.	150 at 3600
Compression Ratio	7.0-1 std. cast iron head.	
Compression & Vacuum Reading	—See Tune-Up data.	
①—For Original Bore Sizes, see Packard Special Data.		

►.020" OVERSIZE BORE ENGINES: Marked by star following engine number.

**OIL PAN REMOVAL:** See Packard Special Data.

**TIGHTENING TORQUES:** See Packard Special Data.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Packard Special Data.

**PISTONS:** Aluminum alloy, autothermic strut type. Original Piston Sizes & Markings, See Packard Special Data.

Length—3 7/8".

Weight—19 1/2 ozs. (stripped), 25 1/2 (with rings & pin)

►Cyl. Bore Taper Note—Car manufacturer recommends cylinders be re-bored and new pistons installed if cylinder taper exceeds .007-.010". If necessary, new rings only can be installed (without re-boring) for taper up to .014".

**Removal—**Pistons and rods removed from above.  
**Clearance—**.0005-.001". See Fitting New Pistons.

►Piston Skirt Expander Note—Car manufacturer recommends skirt expanders be installed if cylinder diameter over .006" greater than piston skirt diameter (measured alongside upper end of piston skirt slot).

**Replacement Pistons:** See Packard Special Data.

**NOTE—**Check ring grooves for wear by installing new piston ring in groove—if .006" feeler can be inserted 1/16", wear excessive and piston should be replaced. Check top groove when testing.

**Fitting New Pistons:** Insert .0015" feeler 1/2" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

**NOTE—**Piston should hold in any portion of bore of own weight, but should move when one or two finger pressure applied to piston with cyl. bore vertical.

**Install Pistons:** Slot toward camshaft.

**PISTON RINGS:** Two compression rings (No. 200 top groove, No. 200 second groove), one oil control ring (No. 85) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (#1, 2)	.0930-.0935"	.0054-.0233"	.0025-.003"
Oil (#3)	.186-.1865"	.0054-.0213"	.0025-.003"

**Installing Rings—**End gaps must be between pin holes with #2 ring on same side as skirt slot, #1 and #3 ring on side opposite slot.

**Replacement Rings:** Std., .020", .030", .040" oversize.

**PISTON PIN Diameter—**7/8". Length—3 1/64".

Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.

**Pin Fit in Piston—**Palm push fit with piston at 160°F. (heat piston in water only).

**Pin Fit in Rod Bushing—**Finger push fit at 70°F.

**Piston Pin (Connecting Rod) Bushing Installation—**See "Piston Pins" in Packard Special Data.

**Replacement Pins:** Std. and .003", .006" oversize.

**CONNECTING ROD:** Length 7 15/16" (8), 7 11/16" (Super 8).

Weight—35.8 ozs. (Eight), 35.4 ozs. (Super 8).

**Crankpin Journal Diameter—**2.250".

**Lower Bearing—**Shimless, precision, steel backed, Moraine Durex or Federal Mogul H-24.

**Clearance—**.0005-.0025". Endplay—.003-.011".

**NOTE—**Plastigage can be used for checking bearing clearance. See "Crankshaft & Main Bearings" in Packard Special Data.

**Bearing Adjustment:** None (no shims). Replace bearings. Self-locking nuts used on cap bolts (tighten to 60-65 ft. lbs.).

**Replacement Bearings:** Std., .001", .002", .020" US.

**Installing Rods:** Oil squirt hole toward camshaft.

**CRANKSHAFT:** 5 bearing type with integral counterweights.

**Vibration Damper—**Houde with Silicone fluid (8), Rubber Friction Disc (Super 8).

**Damper Removal Note—**Use a Puller Tool No. J-2582 for Friction Disc Dampeners, or J-2636 for Fluid type Dampeners.

**Journal Diameter—**2.7465".

**Bearings—**Interchangeable, shimless, precision, steel-backed Moraine Durex or Federal Mogul H-24.

**Clearance—**.001-.003".

**NOTE—**Plastigage can be used for checking bearing clearance. See "Crankshaft & Main Bearings" in Packard Special Data.

**Bearing Adjustment:** None (no shims). Replace bearings (upper halves can be rotated in and out).

**Replacement Bearings:** Std., .001", .002", .020" US.

**Crankshaft Front Oil Seal:** See "Crankshaft & Main Bearings" in Packard Special Data.

**End Thrust:** At #3 bearing. Endplay—.0035-.0085".

**CAMSHAFT:** 5 bearing. Non-adjustable chain drive.

**Bearings—**Steel-backed, babbitt-lined bushings.

**Clearance—**.001-.003".

**End Thrust:** Taken by thrust plate in back of camshaft sprocket. Endplay—.004-.006".

**Timing Chain:** Morse. Width 1 1/4". Pitch .375". Length 21 3/4" or 58 links.

**Camshaft Setting:** Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 43/64"	.3417"	5 7/8"
Exhaust	1 7/16"	.3398"	5 7/8"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.002"
Exhaust	45°	.342"	.004"

**Valve Guides:** Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Use Valve Guide Driver and Depth Gauge No. J-2577—properly positions guides when gauge seats on block. Ream guides after installation with 11/32" (.3437") reamer. Upper end of exhaust guide counterbored.

**Valve Guide Removal Note—**If guides to be removed with tappets in engine, use Valve Guide Remover Tool J-2580 to drive guide down to just clear tappet (with tappet on heel of cam). Score guide with chisel inserted through valve ports, then break off lower end, finally drive remainder of guide out. If tappets out, guide can be driven down and out without breaking.

**Valve Springs:** Intake and exhaust springs interchangeable. Anti-rotation serrated cup washers installed on top of spring and seats in recess in block.

**Spring Pressure**      **Spring Length**

Valve Closed ..... 60-66 lbs. .... 1 3/4"

Valve Open ..... 135-145 lbs. .... 1 13/32"

**Valve Lifters:** Mushroom type. Remove from below.

**Diameter—**.6235-.6240". **Clearance—**.0003-.0012".

**Replacement Lifters—**.001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.

## VALVE TIMING

**Tappet Clearance:** .007" Intake, .010" Exhaust, Hot.

**Valve Timing:** See Camshaft setting above.

**Intake Valves—**Open 15° BTDC. Close 45° ALDC.

**Exhaust Valves—**Open 50° BLDC. Close 9° ATDC. Above figures for .01267" Intake, .015" Exhaust tappet clearance.

**Valve Timing Check—**With .01267" tappet clearance #1 intake valve should open with #1 piston 10° BTDC. with 10th graduation before top dead center mark "1UP.DC" on vibration damper aligned with pointer. Reset tappet clearance .007" Hot.

**CAUTION—**If valve over 8° before or after this point in opening, camshaft setting incorrect.

## LUBRICATION

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain.

**Crankcase Capacity—**7 quarts.

**Normal Oil Pressure—**40 lbs. Normal Driving.

**Oil Pressure Regulator—**On oil pump cover. Not adjustable. Pressure regulator spring tension should be 14 lbs. ±2 ozs. at 1 7/8".

**Oil Pump:** Gear Type. On right side of crankcase.

**Oil Pump Installation—**See Packard Special Data.

**Oil Filter:** Optl. Replace cartridge at 8000-10000 miles or when oil shows signs of being dirty.

**Oil Pressure Gauge:** King-Seeley Electric.

"2200" Series

**Dash Unit—**K-S No. 41640.

**Engine Unit—**K-S No. 40767.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Oil-wetted type filter element in oil filler cap air intake). Outlet pipe in valve compartment cover at rear.

**COOLING**

**Cooling System:** Pressure type with pressure relief valve in filler cap and fan belt driven pump.

**Capacity**—18 qts. (Eight), 19 qts. (Super 8), with ½ quart additional for heater and defroster.

**Pressure Valve**—AC 850005 Filler Cap. Opens 7 lbs.

**Water Pump:** Centrifugal, belt-driven, packless type. See *Water Pump Section* for complete data.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** In cylinder head outlet.

**Setting (std.)**—Starts to open 148-150°F.

**Setting (Optl. High Reading)**—Starts to open 157-165°F. or 175-184°F.

**Temperature Gauge:** King-Seeley Electric. "2200" Series

**Dash Unit**—K-S No. 41645.

**Engine Unit**—K-S No. 41085.

See *Miscellaneous Section* for complete data.

**CLUTCH**

**Long (Eight) 10CF-T1, (Super Eight) 11CF-10½T1.** Single plate, semi-centrifugal, dry disc type.

See *Clutch Section* for complete data.

**Facings**—Woven (U.S. Asbestos). Thickness .125".

**Inside Diameter (Eight) 6¾", (Super Eight) 7".**

**Outside Diameter (Eight) 10", (Super Eight) 10½".**

**Pedal Adjustment:** 1¼-1¾" free travel. Adjusting nut on rod at throwout lever.

► **Clutch Pedal Over-Center Spring:** New adjustable type. See *"Clutch Notes" in Packard Special Data* for adjustment.

**Removal:** Remove transmission (see *Transmission Removal* following) and flywheel housing lower cover. Disconnect throwout linkage and remove throwout bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

**ELECTROMATIC CLUTCH**

**Electromatic Clutch:** Vacuum type clutch actuation with electrical control. Optional equipment.

See *Clutch Section* for complete data.

**TRANSMISSION**

**Own Make.** Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.

See *Transmission Section* for complete data.

**Transmission Control:** Steering column type.

See *Transmission Section* for complete data.

**Removal:** Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross-member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission.

**OVERDRIVE**

**Warner Model (Eight) AS3-R11, (Super Eight) AS4-R11.** Optl. equipment used with Packard transmission. New simplified solenoid operated overdrive with Governor Control and throttle operated "kick-down".

► **Series 2200 Note**—Started part production with Engine Serial No. G-272006 (Eight), G-424978 (Super 8). Started full production with Engine Serial No. G-285157 (Eight), G-427710 (Super Eight). See *Transmission Section* for complete data.

► **Early R11 Overdrive Failure to Engage Correction**—See *"Warner R11 Overdrive" in Transmission Section*.

**Overdrive Solenoid**—Packard No. 403942.

**Governor**—Packard No. 418447.

**Control Relay**—Packard No. 403940.

**Kick-down Switch**—Packard No. 403945.

**Lock-out Switch**—Packard No. 354820.

**Removal:** Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see *Transmission Removal* above).

**ULTRAMATIC DRIVE****OPTIONAL EQUIPMENT**

**Own Make.** Torque Converter (with hydraulically operated Direct Speed Clutch) and hydraulically operated planetary unit with manual control. See *Transmission Section* for complete data.

**Linkage Adjustment on Ultramatic Drive Cars:** See *Packard "Ultramatic Drive" in Transmission Section*.

**Lubrication**—Check fluid level every 1000 miles, drain and refill every 10,000 miles.

**Recommended Fluid.** Packard Ultramatic Drive or any Type "A" Automatic Transmission Fluid which has an AQ-ATF number embossed on container.

**Capacity.** Approximately 12 quarts.

**Draining & Refilling.** See *Packard "Ultramatic Drive" in Transmission Section*.

**Checking Fluid Level.** CAUTION—Fluid must only be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute with selector lever in "N" position. Stop the engine, check level by removing dipstick from filler hole on left side of transmission (accessible from under car—release cap by turning ½ turn counter-clockwise). Add fluid as required to bring level up to FULL mark on dipstick.

**Removal:** See *"Packard Ultramatic Drive" in Transmission Section*.

**UNIVERSALS**

**Mechanics 3CR or Spicer.** Needle bearing types.

**2301 Model (without Overdrive)**—Use Spicer Number 1288-5101X u-joints front and rear.

**NOTE**—Cars without Overdrive use one-piece shaft. See *Universals Section* for complete data.

► **CAUTION**—Rear universal flange nut controls rear axle pinion bearing pre-load which must be adjusted whenever nut is loosened. See *"Packard Rear Axle" in Rear Axle Section* for complete data.

**REAR AXLE**

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss Drive.

**Model 2222-9 & 2322 (141" WB. 7-Pass. Sedan) Note**—Axle is Custom 8 type with Ring Gear Idler Roller.

See *Rear Axle Section* for complete data.

**Ratio**—Std.: 3.9-1 (39-10). OD.: 4.1-1 (41-10).

**2222-9 & 2322 NOTE**—Std. Ratio 4.09-1 (45-11).

**Backlash**—.003-.005". Screw adjustment.

**Removal:** Remove axle shafts (see *Removal* below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2 x 4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier lock nuts, lift carrier out.

**Axle Shaft Removal:** Remove wheel, brake drum (use screw type puller J-4153—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner oil seal). Use Tool J-943-B to remove inner oil seal.

**Wheel Bearing Adjustment:** Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel for .050" or under, at both wheels if over .050" to secure .004-.007" endplay. Endplay—.004-.007".

**SHOCK ABSORBERS**

**Delco Model 1946-J, K (front), Delco or Monroe (rear).** Double acting (front), direct acting (rear). See *Shock Absorber Section* for complete data.

**Fifth Shock Absorber (Stabilizer) Super 8:** Monroe direct acting, hydraulic (built-in rear stabilizer). See *Shock Absorber Section* for complete data.

**FRONT SUSPENSION**

**Front Suspension:** Packard Clipper Safe-T-Flex, independent, linked parallelogram type with coil springs and double acting shock absorbers. See *Front Suspension Section* for complete data.

**Kingpin Inclination**—5°50' crosswise.

**Caster**—Neg. 1° ± ½°. Eccentric adjustment.

**Model 2222-9 & 2322:** Neg. 2° ± ½°.

**Camber**—0° ± ¼°. Eccentric adjustment.

**Toe In**—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

**STEERING GEAR**

**Packard—Gemmer Model 335.** "3-tooth" Worm-and-Roller with "push-pull" adjustment. See *Gemmer Steering Gear Section* for complete data.

**BRAKES**

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Wheel Cylinder**—Diam. Front 1 1/16" (1" 7-Pass.), Rear wheels 15/16".

**Drums**—12" centrifuse type.

**Lining**—Marshall 4112 (primary shoe), Marshall 9051 (secondary). Width 1 3/4". Thickness 3/16". Length per shoe 11½" (primary), 13" (secondary).

**Model 2222-9 & 2322 7-Pass. Note**—Lining width 2¼" front wheel shoes, 2" rear wheel shoes.

**Clearance**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:** See *Service Brakes* above.

**MISC. MECHANICAL**

**Power Operated Convertible Tops, Windows & Front Seat:** Hydro-Letric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See *Miscellaneous Section* for complete data.

**Windshield Wiper:** Vacuum type, cable operated. See *Miscellaneous Section* for complete data.

**MODEL IDENTIFICATION****SERIAL NUMBER:** On left side of cowl (use Eng. No.).**ENGINE NUMBER:** Stamped on upper left side of cylinder block between #3 and #4 cylinders.

▶1949 Numbers "2200-9" Series—Continuation of 1948 numbers—1948 starting number—G-600001 Up.

▶1949 Numbers "2300" Series—H-600001 Up.

▶**ENGINE NUMBER CODE:** Code marks following engine number indicate changes or differences over unmarked engines as follows:

★—Engine Bore .020" Oversize.

**TUNE-UP****COMPRESSION PRESSURE:** 135 lbs. at 300 RPM.**VACUUM READING:** Steady 18-20" idling at 6 MPH.**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.**Plug Types—**Auto-Lite P-4, AC No. 104, or Champion Y4A, 10 mm, Metric.**CAUTION—**Tighten plugs with plug wrench snugly with fingers. Avoid overtightening.**DISTRIBUTOR:** Breaker Gap—Set at .017". Limits .013-.018".

Cam Angle—27° closed, 18° open (with .017" gap).

Breaker Arm Spring Tension—19-23 ounces.

Automatic &amp; Vacuum Advance—See Ignition.

Condenser Capacity—.20-.25 microfarad.

**IGNITION TIMING:** 6° BTDC.

Timing Procedure—See Ignition Timing.

**Vibration Dampener Mark—**"#1UPDC" with fifteen 1° graduations ahead of this point. Set ignition contacts to open at 6th graduation before "DC" mark.**Fuel Compensator Setting—**Slight ping accelerating with wide open throttle.**CARBURATION:****Idle Setting—**1½-2 turns open. Two screws—turn out for richer mixture.**Idle Speed (standard)—**6 MPH.**Idle Speed (Ultramatic Drive)—**400 RPM.**Float Level—**5/32" from top of float to cover with valve seated (remove gasket and invert to check).**Accelerating Pump—**Not adjustable.**Choke Setting:** Centered (at index).**Fuel Pump Pressure:** 4-4¾ lbs.**MANIFOLD HEAT CONTROL:** Automatic. No adjustment. Valve must operate freely.**VALVE TAPPET CLEARANCE:** None in service (hydraulic type lifters).

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.**IGNITION****IGNITION SWITCH:** Mitchellock Type 24.**COIL:** Auto-Lite Model CE-4033.

Location—Left side of engine above distributor.

Ignition Current—2.75 amperes idling, 4.5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671J.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGT-4203. Automatic advance type with Vacuum Spark Control and Fuel Compensator Adjustment.**Breaker Plate Identification—**Maximum vacuum advance limited by slot (marked 5½) on plate.**Breaker Gap—**Set at .017". Limits .013-.018".

Cam Angle—27° closed, 18° open (with .017" gap).

**Breaker Arm Spring Tension—**19-23 ounces.**Rotation—**Counter-clockwise viewed from above.**Automatic Advance**

Degrees Start	Distr. R.P.M.	Degrees Eng. R.P.M.
0	250	0
3	475	6
6	700	12
9	1300	18
11½	1800	23

**Fuel Compensator:** 10° advance or retard manual adjustment at distributor. See Ignition Timing.**Vacuum Spark Control:** Auto-Lite. On distributor, linked directly to breaker plate. Provides additional

advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7"
1° .....	2°	8 5/8"
3° .....	6°	12"
4° .....	8°	13 1/2"
5 1/2° .....	11°	16"

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out hold-down screw, lift off.

## IGNITION TIMING

**Std. Setting:**.....6° BTDC.  
NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

**Vibration Dampener Mark**—"#1UP.DC" with fifteen 1° graduations ahead of mark.

**Timing**—Set Fuel Compensator at "0". With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. Check spark plug connections (see diagram), see that rotor opposite #1 segment in cap. Check Fuel Compensator Setting.

**Timing (with Neon Timing Light)**—Mark 6th line ahead of "#1UP.DC" mark on vibration dampener with white paint, clip timing light to #1 spark plug. Idle engine below 500 RPM., adjust distributor (as directed above) until mark lines up with pointer.

**Fuel Compensator Setting**—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

## CARBURETOR

**Carter WDO, No. 531SA, 1 1/4" Dual barrel downdraft type with Carter Climatic Control.**  
**Casting No. on Flange**—564.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Carter Dual (WDO) Carburetor type.

See Carburetion Equipment Section for complete data.

**Setting**—Adjust fast idle screw for .023-.028" throttle opening (Gauge T109-189) with choke closed.

**Automatic Choke:** Carter Climatic Control (Dual Carburetors).

See Carburetion Equipment Section for complete data.

**Setting**—Centered (at index).

## CARB. EQUIPMENT

**Air Cleaner (std.—oil bath):** AC No. 1542318.

**Element**—AC No. 14.

**Servicing (oil bath type)**—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), No. 30 (Winter) to level of indicator line on case (approx. 1 pint) every 5000 miles or oftener if required.

**Fuel Pump (Fuel-&-Vacuum):** AC Type AH. No. 1539116.

**Replacement Pump**—AC No. 9116.

**Pressure**—4-4 3/4 lbs.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** King-Seeley Electric.

"2200" Series

**Dash Unit**—K-S No. 41635.

**Tank Unit**—K-S No. 41678.

See Carburetion Equipment Section for complete data.

## BATTERY

**Auto-Lite Type PN-17ZR, 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).**

**Starting Capacity**—138 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 4.1 minutes. Five second voltage—4.3 volts.

**Grounded Terminal**—Positive (+) to frame.

**Dimensions**—Length 19 1/4". Width 4". Hgt. 8 29/32".

**Location**—On left side in engine compartment.

## STARTER

**Auto-Lite Model MAX-4052, Armature MAW-2069.**

**Drive**—Overrunning clutch (solenoid pinion shift) through reduction gears.

**Rotation**—Clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—200-250 amperes.

### Performance Data

Torque	RPM①	Volts	Amperes
0 ft. lbs.	2560	5.5	70
13.0 "	Lock	2.0	410

①—Pinion Shaft RPM. (reduction gear drive).

**Removal:** On left front face of flywheel housing. To remove, take out flange mounting screws.

**Starting Switch:** Auto-Lite Model SS-4205 Solenoid Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).

See Electrical Equipment Section for complete data.

► **Ultramatic Drive Starter Safety Switch**—Packard No. 421319. On left side of transmission case. Connected in starter control circuit so that starter operative only with lever in "N" Neutral or "P" Parking.

## GENERATOR

**Early**.....Auto-Lite GDZ-4801V. Arm. GDZ-2006F.

**Later**.....Auto-Lite GGW-6001F. Arm. GGW-2006F.

**Conv.**.....Auto-Lite GGU-6001D. Arm. GGU-2006F.

Two brush types with current and voltage regulation.

**Maximum Charging Rate**—See table below.

**Charging Rate Adjustment**—None. See Regulator.

### Performance Data (Auto-Lite GDZ-4801V)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970
35	8.0	1800-2000

### Performance Data (Auto-Lite GGU-6001D)

45	8.0	1550 Max.
----	-----	-----------

### Performance Data (Auto-Lite GGW-6001F)

0	6.4	870-970
40	8.0	1800-2000

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.6-1.8 amperes at 6.0 volts.

**Motoring Current**—(GDZ) 4.2-4.6 amps., (GGU) 5.5-6.5 amps., (GGW) 4.6-5.2 amperes, all at 6.0 volts.

**Removal:** Pivot mounted at left front of engine to remove, take out strap screw and mounting bolts.

**Belt Adjustment:** 1/2" belt deflection between fan and generator. Loosen adjusting strap screw, pry the generator out for 1/2" setting, tighten screw.

## REGULATOR

**Auto-Lite VAV-4401B**.....for GGU-6001D Generator

**Auto-Lite VRP-4402A**.....for GDZ-4801V Generator

**Auto-Lite VRP-4402C**.....for GGW-6001F Generator

All are current-voltage types.

See Electrical Equipment Section for complete data.

NOTE—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts, (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—As follows:

**VAV-4401B** 44-46 amperes (marked '45' on cover).

**VRP-4402A** 34-36 amperes (marked '35' on cover).

**VRP-4402C** 39-41 amperes (marked '40' on cover).

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section for complete data.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

## LIGHTING

**Headlamps:** Hall "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—Light at top of speedometer dial. Lighted when Upper Beams "on".

**Direction Signal:** Std. See Electrical Equipment Section.

**Direction Signal Indicator**—Light at top of clock. Flashes when Signal in use.

## MISC. ELECTRICAL

**CIRCUIT BREAKERS:** Vibrating, thermostatic types. **Lighting**—30 ampere. On lighting switch.

**Accessory (Stop & Body Lamps)**—30 ampere. Behind instrument panel below gauges. Protects Glove Box Lamp, Courtesy Lamps, Map Lamp, Stop Lamps, Dome Lamp, and Rear Cigar Lighter.

**Hydro-Lectric Power (Convertible)**—On engine side of dash on pump upper bracket.

CONTINUED ON NEXT PAGE

**C NTINUED FR M PRECEDING PAGE**

**FUSES:** Clock—SFE 3 ampere in lead below Clock.

Direction Signal—SFE 9 ampere. In Flasher feed wire above Ash Tray.

Overdrive—SFE 30 ampere. On Overdrive Relay (at BAT terminal) on engine side of dash.

Electromatic Clutch—9 ampere. In lead from Ignition Switch to Electromatic Clutch Switch.

Heater—SFE 30 ampere. In cable near Ign. Switch.

**HORNS:** Sparton. Dual horns operated by relay.

Horn Current—22-25 amperes.

Horn Relay: Delco-Remy No. 1116775.

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

Contact Gap—.027". Air Gap .014" (contacts closed).

**ENGINE**

**ENGINE SPECIFICATIONS:** 8 cylinder, "L" head type. Bore—3½"①. Stroke—4½".

①—For Original Bore Sizes, See Packard Special Data.

►.020" OVERSIZE BORE ENGINES: Marked by star following engine number.

Displacement—356 cubic inches. Rated HP.—39.2.

Developed Horsepower—160 at 3600 RPM.

Compression Ratio—7.0-1 std. cast iron head.

Compression & Vacuum Reading—See Tune-Up data.

**OIL PAN REMOVAL:** See Packard Special Data.

**TIGHTENING TORQUES:** See Packard Special Data.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Packard Special Data.

**PISTONS:** Aluminum alloy, autothermic strut type. Original Piston Sizes & Markings, see Packard Special Data.

Length—3⅞".

Weight—19½ ozs. (stripped), 25½ (with rings & pin).

►Cyl. Bore Taper Note—Car manufacturer recommends cylinders be re-bored and new pistons installed if cylinder taper exceeds .007-.010". If necessary, new rings only can be installed (without re-boring) for taper up to .014".

Removal—Pistons and rods removed from above.

Clearance—.0005-.001". See Fitting New Pistons.

►Piston Skirt Expander Note—Car manufacturer recommends skirt expanders be installed if cylinder diameter over .006" greater than piston skirt diameter (measured alongside upper end of piston skirt slot).

**Replacement Pistons:** See Packard Special Data.

NOTE—Check ring grooves for wear by installing new piston ring in groove—if .006" feeler can be inserted 1/16", wear excessive and piston should be replaced. Check top groove when testing.

**Fitting New Pistons:** Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

NOTE—Piston should hold in any portion of bore of own weight, but should move when one or two finger pressure applied to piston with cyl. bore vertical.

**Install Pistons:** Slot toward camshaft.

**PISTON RINGS:** Two compression rings (No. 200 top and second groove), one oil control ring (No. 85) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (#1, 2)	.0930-.0935"	.0054-.0233"	.0025-.003"
Oil (#3)	.186-.1865"	.0054-.0213"	.0025-.003"

**Installing Rings—**End gaps must be between pin holes with #2 ring on same side as skirt slot, #1 and #3 ring on side opposite slot.

**Replacement Rings:** Std., .020", .030", .040" oversize.

**PISTON PIN Diameter—**7/8". Length—3 1/64". Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.

**Pin Fit in Piston—**Palm push fit with piston at 160°F. (heat piston in water only).

**Pin Fit in Rod Bushing—**Finger push fit at 70°F.

**Piston Pin (Connecting Rod) Bushing Installation—**See "Piston Pins" in Packard Special Data.

**Replacement Pins:** Std. and .003", .008" oversize.

**CONNECTING ROD:** Length 9¼". Weight—38.9 ozs.

**Crankpin Journal Diameter—**2.250".

**Lower Bearing—**Shimless, precision, steel backed, Moraine Durex or Federal Mogul H-24.

**Clearance—**.0005-.003". **Endplay—**.004-.012".

NOTE—Plastigage can be used for checking bearing clearance. See "Crankshaft & Main Bearings" in Packard Special Data.

**Bearing Adjustment:** None (no shims). Replace bearings. Self-locking nuts used on cap bolts (tighten to 60-65 ft. lbs.).

**Replacement Bearings:** Std., .001", .002", .020" US.

**Installing Rods:** Oil squirt hole toward camshaft.

**CRANKSHAFT:** 9 bearing with bolted-on counterweights. Rubber friction disc dampener on front end.

**Journal Diameter—**2.7465".

**Bearings—**Interchangeable, shimless, precision, steel-backed Moraine Durex or Federal Mogul H-24.

**Clearance—**.001-.003".

NOTE—Plastigage can be used for checking bearing clearance. See "Crankshaft & Main Bearings" in Packard Special Data.

**Bearing Adjustment:** None (no shims). Replace bearings (upper halves can be rotated in and out).

**Replacement Bearings:** Std., .001", .002", .020" US.

**Crankshaft Front Oil Seal:** See "Crankshaft & Main Bearings" in Packard Special Data.

**End Thrust:** At #5 bearing. **Endplay—**.003-.008".

**CAMSHAFT:** 8 bearing. Non-adjustable chain drive. Bearings—Steel-backed, babbitt-lined bushings. **Clearance—**.001-.003".

**End Thrust:** Taken by thrust plate in back of camshaft sprocket. **Endplay—**.004-.006".

**Timing Chain:** Morse. Width 1¼". Pitch .375" (⅜"). Length 23¼" or 62 links.

**Camshaft Setting:** Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 43/64"	3417"	6 7/32"
Exhaust	1 7/16"	3398"	6 7/32"

	Seat Angle	Lift	Stem Clearance
Intake	30°	342"	.002"
Exhaust	45°	342"	.004"

**Valve Guides:** Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Use Valve Guide Driver and Depth Gauge No. J-2577—properly positions guides when gauge seats on block. Ream guides after installation with 11/32" (.3437") reamer. Upper end of exhaust guide counterbored.

**Valve Guide Removal Note—**If guides to be removed with tappets in engine, use Valve Guide Remover Tool J-2580 to drive guide down to just clear tappet (with tappet on heel of cam). Score guide with chisel inserted through valve ports, then break off lower end, finally drive remainder of guide out. If tappets out, guide can be driven down and out without breaking.

**Valve Springs:** Intake and exhaust springs interchangeable. Anti-rotation serrated cup washers installed on top of spring and seats in recess in block.

	Spring Pressure	Spring Length
Valve Closed	60-66 lbs.	1 3/4"
Valve Open	135-145 lbs.	1 13/32"

**Valve Lifters:** Wilcox-Rich "Zero-lash" type hydraulic lifters (mushroom type). Remove from below with camshaft out of engine.

**Diameter—**.7177-.7182". **Clearance—**.0002" selective. See Miscellaneous Section for complete data.

**Replacement Lifters—**.001", .002", .005" oversize. Use Tool S.T. 5101 (piloted in valve guide) and ream for .005" oversize lifters.

**Valve Lifter Clearance Check when Grinding Valves—**See "Valve System" in Packard Special Data.

**VALVE TIMING**

**Tappet Clearance:** None in service (hydraulic type lifters). See Valve Lifters above.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves—**Open 4° BTDC. Close 51° ALDC.

**Exhaust Valves—**Open 49° BLDC. Close 10° ATDC.

**Valve Timing Check—**Check by turning tappet plunger for No. 8 exhaust valve with fingers. Turn engine over until this valve fully open, turn engine further until valve nearly closed (plunger should not turn), continue turning engine while attempting to turn plunger, until plunger "breaks loose" or turns. This should be 10° after top dead center—check at timing mark on vibration dampener. **CAUTION—**If valve over 8° before or after this point in closing, camshaft setting incorrect.

**LUBRICATION**

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain. Oil pump mounted externally on right side of engine.

**Crankcase Capacity—**7 quarts.

**Normal Oil Pressure—**50 lbs. Normal Driving.

**Oil Pressure Regulator—**On oil pump cover. Not adjustable. Pressure regulator spring tension should be 17½-18½ lbs. at 1⅞".

**Oil Pump:** Gear type. On right side of crankcase.

**Oil Pump Installation—**See Packard Special Data.

**Oil Pressure Gauge:** King-Seeley Electric.

"2200" Series

**Dash Unit—**K-S No. 41640.

**Engine Unit—**K-S No. 40767.

See Miscellaneous Section for complete data.

**Crankcase Ventilation:** Oil-wetted type filter element in oil filler cap, air intake). Outlet pipe in valve compartment cover at rear.

**Servicing—**Wash filter element in gasoline and re-oil when changing oil (1000-2000 miles).

**COOLING**

**Cooling System:** Pressure type with pressure relief valve in filler cap and fan belt driven pump.

**Capacity**—19 qts.

**Pressure Valve**—AC No. 850005 pressure cap. Opens at 7 lbs.

**Water Pump:** Centrifugal, belt-driven, packless type. See *Water Pump Section* for complete data.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** In cylinder head outlet.

**Setting (std.)**—Starts to open 145-150°F.

**Setting (Optl. High Reading)**—Starts to open 160-165°F. or 175-180°F.

**Temperature Gauge:** King-Seeley Electric. "2200" Series

**Dash Unit**—K-S No. 41645.

**Engine Unit**—K-S No. 41085.

See *Miscellaneous Section* for complete data.

**CLUTCH**

**Long Model 11CF-T1.** Single plate, semi-centrifugal, dry disc type.

See *Clutch Section* for complete data.

**Facings**—Woven (U.S. Asbestos). Thickness .125". Inside Diameter 7". Outside Diameter 11".

**Pedal Adjustment:** 1¼-1⅜" free travel. Adjusting nut on rod at throwout lever.

► **Clutch Pedal Over-Center Spring:** New adjustable type. See "Clutch Notes" in *Packard Special Data* for adjustment.

**Removal:** Remove transmission (see *Transmission Removal* following) and flywheel housing lower cover. Disconnect throwout linkage and remove throwout bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

**ELECTROMATIC CLUTCH**

**Electromatic Clutch:** Vacuum type clutch actuation with electrical control. Optional equipment.

See *Clutch Section* for complete data.

**TRANSMISSION**

**Own Make.** Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.

See *Transmission Section* for complete data.

**Transmission Control:** Steering column type. See *Transmission Section* for complete data.

**Removal:** Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross-member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission.

**OVERDRIVE**

**Warner Model AS4-R11.** Optl. equipment used with Packard transmission. New simplified solenoid operated overdrive with Governor Control and throttle operated "kick-down".

► **Series 2200 Note**—Started part production with Engine Serial No. G-610359, full production G-611500. See *Transmission Section* for complete data.

► **Early R11 Overdrive Failure to Engage Correction**—See "Warner R11 Overdrive" in *Transmission Section*.

**Overdrive Solenoid**—Packard No. 403942.

**Governor**—Packard No. 418447.

**Control Relay**—Packard No. 403940.

**Kick-down Switch**—Packard No. 403945.

**Lock-out Switch**—Packard No. 354820.

**Removal:** Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see *Transmission Removal* above).

**ULTRAMATIC DRIVE****STD. EQUIPMENT ON SERIES 2306 & 2333**

**Own Make.** Torque Converter (with hydraulically operated Direct Speed Clutch) and hydraulically operated planetary unit with manual control.

See *Transmission Section* for complete data.

**Linkage Adjustment on Ultramatic Drive Cars:** See *Packard "Ultramatic Drive" in Transmission Section*.

**Lubrication**—Check fluid level every 1000 miles, drain and refill every 10,000 miles.

**Recommended Fluid.** Packard Ultramatic Drive or any Type "A" Automatic Transmission Fluid which has an AQ-ATF number embossed on container.

**Capacity.** Approximately 12 quarts.

**Draining & Refilling.** See *Packard "Ultramatic Drive" in Transmission Section*.

**Checking Fluid Level.** CAUTION—Fluid must only be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute with selector lever in "N" position. Stop the engine, check level by removing dipstick from filler hole on left side of transmission (accessible from under car—release cap by turning ½ turn counter-clockwise). Add fluid as required to bring level up to FULL mark on dipstick.

**Removal:** See "Packard Ultramatic Drive" in *Transmission Section*.

**UNIVERSALS**

**Mechanics 3CR or Spicer.** Needle bearing types.

**NOTE**—Cars without Overdrive use one-piece shaft.

See *Universals Section* for complete data.

► **CAUTION**—Rear universal flange nut controls rear axle pinion bearing pre-load which must be adjusted whenever nut is loosened. See "Packard Rear Axle" in *Rear Axle Section* for complete data.

**REAR AXLE**

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss drive and Ring Gear Idler Roller.

See *Rear Axle Section* for complete data.

**Ratios**—As follows:

"2200": Std. 3.92-1 (47-12). Ovdr. 4.09-1 (45-11).

"2226" 148" WB.: 4.09-1 (45-11).

"2300" Ultramatic: 3.54-1 (39-11).

"2313" 156" WB. Hearse: 4.54-1 (50-11).

**Backlash**—.004-.006". Screw adjustment.

**Removal:** Remove axle shafts (see *Removal* below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2 x 4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier lock nuts, lift carrier out.

**Axle Shaft Removal:** Remove wheel, brake drum (use screw type puller J-4153—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner oil seal). Use Tool J-943-B to remove inner oil seal.

**Wheel Bearing Adjustment:** Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel for .050" or under, at both wheels if over .050" to secure .004-.007" endplay. Endplay—.004-.007".

**SHOCK ABSORBERS**

**Delco Model 1946-J, K (front), Delco or Monroe (rear).** Double acting (front), direct acting (rear).

See *Shock Absorber Section* for complete data.

**Fifth Shock Absorber (Stabilizer) Super 8:** Monroe direct acting, hydraulic (built-in rear stabilizer).

See *Shock Absorber Section* for complete data.

**FRONT SUSPENSION**

**Front Suspension:** Packard Clipper Safe-T-Flex, independent, linked parallelogram type with coil springs and double acting shock absorbers.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—5°50' crosswise (2°30' on 156" wheelbase hearse).

**Caster**—Neg. 2° ± ½°. Eccentric adjustment.

**Camber**—0° ± ¼°. Eccentric adjustment.

**Toe In**—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

**STEERING GEAR**

**Packard**—Gemmer Model 335. "3-tooth" Worm-and-Roller with "push-pull" adjustment. See *Gemmer. See Steering Gear Section* for complete data.

**BRAKES**

**Service:** Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Wheel Cylinder**—Front 1⅜". Rear 1" (1⅜" 156" WB.).

**Drums:** 12" centrifuse type.

**Lining**—Marshall 4112 (primary shoe). Marshall 9051 (secondary). Width 2¼" (front wheel), 2" (rear). Length per shoe 11½" (primary), 13" (secondary). Thickness 3/16".

**156" WB. Hearse Note**—Bonded lining used. All shoes 13" long, 2½" wide, 3/16" thick.

**Clearance**—.015" at both ends of secondary shoe with primary shoe forced out against drum.

**Hand Brake:** See *Service Brakes* above.

**MISC. MECHANICAL**

**Power Operated Convertible Tops, Windows & Front Seat:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See *Miscellaneous Section* for complete data.

**Windshield Wiper:** Vacuum type, cable operated. See *Miscellaneous Section* for complete data.

**Vacuum Advance—IAP-4102-1**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	5"
1°.....	2°	6 3/4"
3°.....	6°	9 1/4"
5°.....	10°	12 1/8"
7°.....	14°	15"

**Vacuum Advance—IGS-4207B-1 & IAP-4103A-1**

Start.....	0°	4 1/2"
1°.....	2°	5 1/2"
4°.....	8°	9 1/8"
7°.....	14°	12 3/4"
8°.....	16°	14"

**Manual Adjustment**—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

**Distributor Removal:** Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position.

**IGNITION TIMING**

**Std. Setting**—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

**Flywheel Degrees Piston Position**

All Engines ..... 2° ATDC ..... .002" ATDC.  
NOTE—Impulse neutralizer marked 'DC' at TDC, with 15 (1°) graduations on either side.

**Timing (Using Timing Light)**—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see Setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment for final setting.

**Timing (Using Synchroscope)**—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until mark aligned with pointer on chain case cover.

**Manual Adjustment**—Set to give slight ping from 10-30 MPH, accelerating with wide open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

**CARBURETOR**

**Carter (B&B) Model D6H1 (Std.), D6N1 (City Traffic)**—1 1/2" single barrel, downdraft type with Sisson automatic choke control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jet**—See Carter (B&B) Jet Table in Carburetor Section for complete data.

**Automatic Choke:** Sisson Type.

**Setting**—Choke can be adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

**Fast Idle:** Throttle opened to fast idle position when choke valve closed.

**Automatic Choke:** Sisson type Optl.

See Carburetion Equipment Section for data.

**CARB. EQUIPMENT**

**Air Cleaner:** AC No. 1544640 Heavy duty oil-bath type. Filter Element AC No. 21.

**Servicing**—Wash filter element in kerosene, drain and clean oil reservoir and refill to indicated level mark with 1 pint SAE No. 50 engine oil (SAE No. 20W for temperatures below freezing) at 1000 mile or 30 day intervals, or more often if required.

**Oil Filler Cap (Crankcase Ventilator) Air Cleaner:** Wash filter element in cap in kerosene and re-oil by dipping in SAE No. 50 engine oil at 1000 mile or 30 day intervals or more often if required.

**Crankcase Ventilator Outlet Air Cleaner**—Special equipment for cars operating in dusty regions. Servicing same as given for Oil Filler Cap Cleaner.

**Fuel Pump:** AC No. 1539042 (Std.), AC No. 1539418 (Optl.). Diaphragm type fuel pump.

**Replacement Pump**—AC No. 577 (for 1539042), AC No. 9418 (for 1539418).

**Pressure**—3-5 lbs.

See Carburetion Equipment Section for data.

**Fuel Tank Filter:** Oilite metal filter in tank.

**Servicing**—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

**Gasoline Gauge:** Auto-Lite Electric type. Dash Unit No. 11679A, Tank Unit No. 11538A (NG-11816T on Suburban).

See Carburetion Equipment Section for data.

**BATTERY**

**Auto-Lite Type 1M-100D.** 6 volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes. Five second voltage 4.15 volts.

**Grounded Terminal**—Positive (+) to engine.

**Location**—In left fender shield under engine hood.

**Dimensions**—Length 9 3/32". Width 7 1/8". Height 8 5/8".

**STARTER**

**U.S. Cars**.....Auto-Lite MCH-6101, Arm. MCH-2028

**Canada**.....Auto-Lite MAW-4041, Arm. MAW-2128

**Drive**—Outboard Barrel Type Bendix No. A-2991.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Performance Data**

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	4900.....	5.5.....	65
2.75 ".....	1480.....	5.0.....	200
8.50 ".....	400.....	4.0.....	400
6.0 ".....	Lock.....	2.0.....	335

**Removal:** Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

**Starting Switch:** Auto-Lite Model SST-4001. Magnetic type mounted on left front fender shield and controlled by turning ignition switch past "on" position. See Electrical Equipment Section for complete data.

**GENERATOR**

	Auto-Lite No.	Armature No.

40.....	8.0.....	1800-2000 ..... 2150-2350

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—(GDZ, GGU, GGW) 35-53 ozs. (new brushes); (GGJ) 30-37 ozs. (new brushes); (GEG) 64-68 ozs. (new brushes).

**Field Current**—(GDZ, GGU, GGW) 1.6-1.8 amps., (GEG) 1.60-1.78 amps., (GGJ) 1.76-1.95 amps., all at 6.0 volts.

**Motoring Current**—(GDZ) 4.2-4.6 amps., (GEG) 4.7-5.2 amps., (GGJ) 4.3-4.8 amps., (GGU) 5.5-6.5 amps., (GGW) 4.6-5.2 amps., all at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Loosen pivot and clamp bolts, pull out on generator until belt is snug (40-50 lbs. tension secured on scale attached to field frame) or 1/4" belt deflection between generator and pump).

**REGULATOR**

**Auto-Lite Regulator No.** for Auto-Lite Generator

① VAV-4404A or VBA-4101A	GGJ-6001A, B
② VAV-4404B or VBA-4101B	GGU-6001A, E
③ VRP-4401B	GEG-4823B
VRP-4503A	GDZ-4801A
VRP-4503B	GGW-6001B

**VRP-4503-B** ..... 40

► **CAUTION**—Nominal setting is approx. setting at 70°F. room temperature after regulator has been run (will be higher started cold). See Electrical Equip. Section for settings at various temperatures.

**Checking (without breaking seals) & Adjustment**—See Electrical Equipment Section.

**Contact Gap (VRP)**—.012" min. (arm against stop).

**Air Gap (All)**—.048-.052" with contacts just opening.

**LIGHTING**

**Headlamps:** Corcoran-Brown "Sealed Beam" type with new "Bull's-eye lens."

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—On speedometer dial. Lighted when upper beams "on."

**Direction Signal Indicator**—On speedometer dial. Flashes when direction signal operating.

**Switches**

**Lighting**—Plymouth No. 1300600.

**Beam Selector**—Plymouth No. 1253460.

**Instrument**—Plymouth No. 1244997.

**Map Light**—Plymouth No. 625616.

**MISC. ELECTRICAL**

**CIRCUIT BREAKER:** 30 ampere. On back of instrument panel above headlight switch.

**FUSES:** Clock—2 ampere. In clock lead connector.

**Radio**—14 ampere. In fuse connector at radio.

**HORNS:** Auto-Lite Model HW-4201 (Low Pitch), HW-4202 (High Pitch). Dual horns operated by relay.

**Horn Relay:** Auto-Lite HRL-4103 or 4104. Connected thru ignition switch, operates only with ignition on.

**Contact Close**—1.5-3.0 volts (seal to core with 4 V).

**Contacts Open**—.5 volt min. (open from seal).

**Contact Gap**—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

**ENGINE**

**ENGINE SPECIFICATIONS:** 6 cylinder, "L" hd. type.

**Bore**—3¼". **Stroke**—4¾".

**Displacement**—217.8 cu. ins. **Rated H.P.**—25.35.

**Developed Horsepower**—97 at 3600 RPM.

**Compression Ratio**—7.0-1 Std. Cast Iron Head.

**Compression & Vacuum Reading**—See Tune-up data.

**ORIGINAL BORE & PISTONS:** See Chrysler Special Data.

**ORIGINAL BEARING SIZES:** See Chrysler Special Data.

**TIGHTENING TORQUES:** See Chrysler Special Data.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Chrysler Special Data.

**PISTONS:** Aluminum alloy, "U" slot, cam ground type. NOTE—Piston skirt is elliptical (.010-.012" smaller diameter across pin bosses than across thrust faces), and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).

**Length**—3 11/16". **Weight**—16.0 ozs. (stripped).

**Removal**—Pistons and rods removed from above.

**Clearance**—.028-.032" (Head & Ring Lands), .0002-.0012" (Skirt—across thrust faces and ¾" up from bottom). See Fitting New Pistons.

**Fitting New Pistons:** Measure piston size with micrometer across thrust faces (right angles to pin bosses) ¾" up from bottom of skirt with piston at 70°F. To fit pistons, with cylinder wall and piston dry and clean and at 70°F., invert piston in cylinder bore. Piston should have slight drag but should pass slowly through bore of own weight.

**Replacement Pistons:** .005", .020", .030", .040", .060" OS.

**Installing Pistons:** "U" slot away from valves.

**PISTON RINGS:** Two compression (top ring chrome-plated), two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"

**Installing Rings**—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge, install with step down.

**Replacement Rings:** .005" .020" .030" .040" .050" .060" OS.

**PISTON PIN:** Diameter—55/64". Length—2¾". Pin floats in piston and rod, held by lock rings.

**Pin Fit in Piston**—Thumb push fit (piston at 130°F.)

**Pin Fit in Rod Bushing**—Tight thumb push fit at 70°F.

**Replacement Pins:** Std., .0006", .003", .008" Oversize.

**CONNECTING ROD:** Length—7 15/16". Weight—1.941 lbs. with bolts less bearings.

NOTE—Pin hole in rod bronze bushed.

**Lower Bearing Diameter**—2 1/16". See "Original Bearing Size" in Chrysler Special Data.

**Lower Bearing**—Removable, precision type, steel-backed, thin babbitt-lined. No shims.

**Clearance**—.0005-.0015". **Sideplay**—.0055-.0115".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.

**Replacement Bearings:** .001", .002", .010", .012" U.S.

**Installing Rods:** Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

**CRANKSHAFT:** 4 bearings, 7 integral counterweights, with vibration dampener on front end.

**Bearing Diameter**—2½". See "Original Bearing Size" in Chrysler Special Data.

**Bearings**—Removable, precision type, steel-backed, thin babbitt-lined. No shims.

**Clearance**—.005-.0015".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** .001", .002", .010", .012" U.S.

**End Thrust:** Taken by flanged faces of #4 (rear) main bearing. **Endplay**—.003-.007".

**CAMSHAFT:** 4 bearing. Non-adjustable chain drive. **Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".

**Bearings**—Removable, steel-backed, babbitt-lined bushings (except #4—machined in crankcase).

**Clearance**—.001-.003".

**End Thrust:** Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

**Timing Chain:** Width 1". Pitch .500" (½"). Length 24" or 48 links.

**Camshaft Setting:** Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	4 25/32"
Exhaust	1 13/32"	.340-.341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.002-.004"

**Valve Guides:** Remove from above. Press new guides in with stepped end down and upper end 7/8" below top of block, ream guides to inside diameter of .342-.343" (Intake), .344-.345" (Exhaust).

**Valve Springs:** Install with close-coll end to top.

**Free Length 2". Spring Pressure Spring Length**

**Valve Closed** ..... 40-45 lbs. .... 1¾"

**Valve Open** ..... 107-115 lbs. .... 1¾"

**Valve Lifters:** Mushroom type (remove from below with camshaft out of engine). Stem diameter 5/8". Service by reaming lifter holes (work from above piloting reamer in valve guide) and installing oversize lifters furnished .001", .008", .030" Oversize.

**VALVE TIMING**

**Tappet Clearance:** .008" Intake, .010" Exhaust, Hot. NOTE—Tappet screws self-locking type.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 12° BTDC. Close 44° ALDC.

**Exhaust Valves**—Open 50° BLDC. Close 6° ATDC.

**Valve Timing Check**—With .014" tappet clearance (Cold), #6 intake valve should open with #6 piston 5° to 17° or .011" to .0125" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

## LUBRICATION

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump.

**Crankcase Capacity**—5 qts. (refill).

**Normal Oil Pressure**—40-45 lbs. above 30 MPH.

**Oil Pressure Regulator**—Under plug on left side of crankcase (below starter). Opens at 40-45 lbs. Adjustable by replacing spring (Std. spring Unpainted, Lighter spring—Red, Heavier spring—Green).

**CAUTION**—Install replacement spring of same color as original spring.

**Oil Pump:** "Rotor" type on right side of engine.

**Servicing**—See "Oil Pump" in *Chrysler Special Data*.

**Oil Filter:** On left side of engine above starter.

**Servicing**—Replace filter at 8000 mile intervals.

**Oil Pressure Gauge:** Auto-Lite No. 11678A (not elec.).

## COOLING

**Cooling System:** Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump.

**Capacity**—15 quarts.

**Water Pump:** Packless type with grease fitting.

See *Water Pump Section* for complete data.

**Removal**—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** In cylinder head water outlet.

**INSTALLATION NOTE**—Install thermostat with 2 ports facing front, and 2 ports facing rear.

**Setting**—Starts to open 157-162°F. Fully open 183°F.

**Temperature Gauge:** Auto-Lite No. 11680A. Not elect..

## CLUTCH

**Borg & Beck 9A7 Cover Assem.** 926 (Std.), 984 (Spec)

**Auburn** ..... 9251-17

Single plate, dry disc type.

See *Clutch Section* for complete data.

**Facings**—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9 1/4"	.125" (1/8")
9251-17	6"	9 1/4"	.125" (1/8")

**Pedal Adjustment:** Set pedal to just clear toeboard (stop screw on lower end of pedal) and set for 1" free travel (adjust nut on connector link at fork). **NOTE**—Do not disturb turnbuckle on pedal link.

**Removal:** Remove Transmission (see Transmission Removal below), remove release fork pull-back spring and clutch housing underpan. Disconnect release fork from pivot, withdraw release bearing and sleeve from housing. Mark clutch and flywheel (to insure correct re-installation), remove all clutch cover mounting screws evenly, remove clutch cover assembly and driven member through opening at bottom of housing.

## TRANSMISSION

**Own Make.** All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section* for complete data.

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

See *Transmission Section* for complete data.

**Removal:** Jack up front end of car. Disconnect front universal by taking out bolts in shaft flange (if transmission to be dismantled, loosen flange retaining nut), and rear universal by removing bearing caps on rear axle yoke (wire bearing cups in place to prevent loss of bearing rollers). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission case. Remove transmission mounting screws in clutch housing, pull transmission straight back to free clutch shaft, then lower transmission and remove from beneath car.

**NOTE**—When installing transmission, use pilot studs installed in upper mounting screw holes to maintain alignment and prevent springing clutch driven member.

## UNIVERSALS

**Detroit Universal Series 4200**—Ball-and-Trunnion type (front & rear).

See *Universals Section* for complete data.

## REAR AXLE

**Own Make.** Semi-floating, hypoid gear type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

**Ratio (P17 Std.)**—3.73-1, (P18 Std. exc. Sta. Wgn.) 3.9-1, (Sta. Wgn.) 4.1-1.

**Ratio (P17 Optl.)**—3.9-1, (P18 Optl.) 4.1-1.

**Backlash**—.006-.010". Screw adjustment.

**Removal:** Hoist rear end of car. Remove rear wheels. Disconnect brake hose at frame bracket, disconnect lower end of shock absorbers. Disconnect propeller shaft by removing capscrews from bearing caps on rear axle yoke (wire bearing caps in place to prevent loss of bearing rollers). Support axle housing, remove rear spring "U" bolts, lower axle assembly and remove from beneath car.

**NOTE**—Carrier assembly can be removed without disturbing axle housing by removing axle shafts and taking out carrier-to-housing mounting screws.

**Axle Shaft Removal**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). **NOTE**—Use Puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

**Axle Shaft Oil Seal:** New leather type mounted on brake support (backing plate).

**Wheel Bearing Adjustment:** Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

## SHOCK ABSORBERS

Hydraulic, direct acting, non-adjustable.

See *Shock Absorber Section* for complete data.

## FRONT SUSPENSION

**Front Suspension:** Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—4 3/4° to 6° crosswise.

**Camber**—Pos. 1/4°. Limits 0° to Pos. 3/4° (1/4-1/2° higher on left).

**Caster**—0° preferred. Limits Neg. 1° to Pos. 1°. No adjustment.

**Toe In**—0" (0-1/16"). Adjust by turning both tie rods equally.

**Steering Geometry**—Inner wheel 22 1/2°. Outer 20°.

## STEERING GEAR

**Own Make.** Worm-and-roller type with "push-pull" adjustments. Same as Gemmer design Model 305.

**NOTE**—See Gemmer Model 305 article for data.

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Chrysler "Safe-guard" Lockheed Hydraulic type as follows:

**Front Wheels**—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

**Rear Wheels**—Double anchor type with a single double-acting wheel cylinder.

See *Brake Section* for complete data.

**Wheel Cylinders**—Single acting type (front), double acting type with straight (1 1/8") bore (rear).

**Drums**—Centrifuse type. Diameter 10".

**Lining**—Molded Asbestos. Width 2". Thick. 13/64". Length per wheel 21" (front wheels), 18 1/2" (rear wheels).

**Clearance**—.006" at each end of all brake shoes.

**Hand Brake:** Independent type. Hand lever actuates band on drum at rear of transmission.

**Drum Diameter**—6". Cast-iron.

**Lining**—Width 2". Thickness 5/32". Lgth. 16 11/16".

**Clearance**—.015-.020" around band.

**Adjustment**—See *Chrysler Special Data*.

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Hydro-Lectric type.

See *Miscellaneous Section* for complete data.

**Windshield Wipers:** (Exc. Conv't. & Sta. Wgn.)—Vacuum controlled Link-and-Crank Arm type; (Conv't. & Sta. Wgn.)—Vacuum Link-and-Chain type.

See *Miscellaneous Section* for complete data.

**CYLINDER HEAD****ALL MODELS**

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature.

**Tightening Torque—**See Tightening (Torque Wrench) Specifications below.

PONTIAC 6

PONTIAC 8

**TIGHTENING (TORQUE WRENCH) SPECIFICATIONS****ALL MODELS**

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews .....	60	720
Main Bearing Cap Screws.....	85	1020
Connecting Rod Bolts.....	45	540
Flywheel to Crankshaft Bolts (8)	105	1280①
Flywheel to Crankshaft Bolts (8)	70	840①
Lower Control Arm Pin & Bar		
Bushings .....	200	2400

①—On 1949-50 models with self-locking bolts (no lockwashers), torque should be 100 ft. lbs. or 1200 in. lbs.

**ORIGINAL BORE & PISTONS****1949-50 MODELS**

**ORIGINAL BORE & PISTON SIZES:** Original bore sizes, and size of pistons installed in each cylinder bore, may be determined by letter stamped on piston head and on top face of cylinder block. Piston sizes graduated in .0005" steps as follows:

**Six (1949-50), Eight (1949)**

Piston & Engine Mark	Six	Eight
'A' .....	3.5605"	3.247"
'B' .....	3.561"	3.2475"
'C' .....	3.5615"	3.248"
'D' .....	3.562"	3.2485"
'E' .....	3.5625"	3.249"

**PISTONS****1949-50 MODELS**

**REPLACEMENT PISTONS:** Standard Size. Furnished in following sizes for replacement of Standard Production Pistons listed above. Sizes and part numbers for each model as follows:

**Six (1949-50), Eight (1949)**

Part No. — Six — Size	Part No. — Eight — Size
507554.....3.5605"	503048.....3.247"
507555.....3.5615"	503049.....3.248"
507556.....3.5635"	503050.....3.249"

First size covers 'A' and Low Limit 'B' production pistons. Second size covers High Limit 'B', all 'C', and Low Limit 'D' pistons. Third size covers High Limit 'D' and all 'E' pistons.

**Overize Replacement Pistons:**—Finished pistons furnished in following oversizes: .005", .010", .020", .030". NOTE—All factory replacement pistons held to uniform weight within 1/16 oz. and all overize pistons up to .030" overize are same weight as standard pistons.

**CAUTION—**Factory replacement pistons electroplated after being finished to size and must not be ground.

**PISTON PINS****1949-50 MODELS**

**PISTON PIN FITTING:** Pin case-hardened & ground (out-of-round .0002" max.). To install pins, coat inside of piston bosses with graphite grease, insert slotted end of pin in lock screw boss and press in place. Pressure to install pin in piston should be 200-300 lbs. If necessary, pin holes in piston can be sized with expansion reamer to secure this fit. **CAUTION—**Pins will be noisy if fit in piston is too loose, and pin bosses may be fractured when installing pin if fit in piston is too tight.

**NOTE—**Car manufacturer recommends use of the following tools (in conjunction with arbor press): hydraulic cylinder & gauge (J-1325-SA-1), piston rest block (J-1325-1), piston pin remover (J-1325-2), piston skirt plug (J-1325-3).

**1949-50 MODELS**

**PISTON PIN BUSHING:** New Type Service Bushings. New type aluminum bronze bushings which are more resistant to corrosion furnished for service as follows: Part No. 505320 (6), 505321 (8). May be distinguished from previous bronze type by lighter color and less coppery appearance (bushings darken and may require polishing or buffing to bring out difference in color).

**Installation—**Press bushings in place, making sure that 3/32" groove between bushings aligned with oil hole in rod. Burnish bushings securely in place with bar. Hone bushings for .0004-.0006" clearance. Car manufacturer recommends use of following tools for servicing pin bushings: J-540-1—Bushings Remover. J-540-2—Bushings Replacer (tool fitted with shoulder which prevents bushings from being pressed too far in or from collapsing while being installed), J-516 Burnisher Bar, and J-526 Burnisher Block. **NOTE—**These tools are used in conjunction with an arbor press using the J-526 Burnisher Block as a support for the rod on the press.

**CRANKSHAFT & MAIN BEARINGS****1949-50 MODELS**

**PLASTIGAGE FOR CHECKING BEARING CLEARANCE:** Consists of plastic rod material supplied in envelope marked with scale which gives bearing clearance in thousandths of an inch when used to measure flattened plastigage in bearing cap. Use Plastigage as follows:

**Bearing Clearance Check—**Remove bearing cap, wipe all oil from bearing insert and shaft journal (**CAUTION—**When checking main bearings, keep all other bearing caps tight so that crankshaft weight will not cause incorrect reading). Place piece of Plastigage Rod across full width of bearing insert in cap, re-install bearing cap and tighten to recommended torque (see Tightening Specifications). Remove cap, match widest width of flattened Plastigage with correct graduation of scale on envelope (marking of this graduation is clearance).

**Bearing Size Check—**If reading under 2½ use standard bearing, if over 2½ use .001" undersize bearing. .002" undersize bearings available where .001" undersize do not fall with 2½ reading.

**1949-50 MODELS**

**MAIN BEARINGS:** Removal. Remove the bearings with caps removed and crankshaft in place by inserting suitable tool (see NOTE following) in oil hole in shaft and rotating shaft in usual direction. **NOTE—**Bearing Removal Tool can be made from ⅝"x1½" cotter key. Bend each end of key up 5/16" to make ⅝" long base. With this as a base, bend key to form 59° angle. With this tool inserted in place end will just protrude far enough to engage bearing.

**Installation—**Insert plain edge of bearing in indented side of bearing support, slowly rotate crankshaft until bearing seated.

**1949-50 SIX CYL. MODELS**

**REAR MAIN BEARING OIL SEAL:** Seal consists of oil slinger on crankshaft to rear of rear main bearing operating in groove formed in block and cap (drain hole in cap returns oil to crankcase) with asbestos seal fitted in separate groove at rear.

**Seal Note—**Edges of seal groove in cylinder block and rear main bearing cap are chamfered to reduce pressure between seal and crankshaft and prevent pinching of the seal. One end of the groove in the bearing cap is recessed and a portion of the seal should be worked into this recess to prevent the seal turning in service.

**Installation—**With crankshaft out of engine and bearing shells removed, press packing in rear groove in block, seat packing using Tool J-1045 (large diameter to front of engine) by tapping tool with lead or rawhide hammer. With tool in place, cut each end of seal flush with bearing cap seat. Repeat operation for cap. Install crankshaft & bearings.

**CAMSHAFT & BEARINGS****1949-50 MODELS**

**CAMSHAFT BEARINGS:** Use tool No. J-550 to remove and install camshaft bearings (rear bearing on Eight must be pulled out toward front as expansion plug at rear prevents driving on bearing from rear). Use driver to install all bearings making certain that oil hole in bearings is lined up with hole in block (holes are at bottom of bearings). Then line ream all bearings to finished sizes as follows:

Bearing Finished Size:	Six	Eight
#1 (Front).....	1.9950-1.9955"	1.9950-1.9955"
#2 .....	1.9637-1.9642"	1.9637-1.9642"
#3 .....	1.9325-1.9330"	1.9325-1.9330"
#4 .....	1.9012-1.9017"	1.9012-1.9017"
#5 .....	1.8700-1.8705"	

**TIMING CHAIN****1949-50 MODELS**

**TIMING CHAIN COVER & OIL SEAL:** Consists of cork seal and spring assembled on the crankshaft in front of the chain sprocket so that the cork bears against the inner face of the timing chain cover.

**Installing New Cork Seal—**Coat seal with graphite lubricant, rubbing lubricant well into the face of the cork, before installing seal in engine. This lubrication necessary to prevent noise at this point.

**Installing Timing Chain Cover—**Use J-546 tool to center timing chain cover before screws tightened.

**OIL PUMP****1949-50 MODELS**

**OIL PUMP SERVICING:** Pump Removal & Installation—Turn crankshaft so that #1 piston on top dead center of compression stroke with distributor rotor at #1 firing position. Remove steering idler arm and right hand engine side pan. Take out pump mounting bolts and remove pump. When installing pump, see that prick punch mark on pump is down, install pump without disturbing distributor shaft position, recheck Ignition Timing.

**Pump Specifications—**Pump shaft bearing clearance .0005-.002". Shaft and body end clearance .002-.006". Idler gear bearing clearance .0005-.002". Driving gear backlash .003-.004". Driving gear and idler gear backlash .006-.008". Driving gear and idler gear clearance .002-.006".

**Oil Pressure Relief Valve—**Assembly consists of spring loaded disc valve located in the pump body beneath the idler gear. When pressure exceeds 40 lbs., disc is forced off its seat and oil is by-passed back to inlet side. Valve is not adjustable.

**OILING SYSTEM****1949-50 MODELS**

**CRANKCASE OIL CLEANER:** Pontiac type 'Controlled flow' design consisting of settling chamber in oil inlet and filter screen housing in crankcase. **Servicing—**No servicing required but Oil Cleaner should be removed and settling chamber cleaned out when oil pan removed for other work, or if car has been upset or turned over.

**Cleaner Removal and Installation.** To remove oil cleaner with oil pan off engine, disconnect oil suction pipe and remove oil cleaner assembly from engine. Remove screen assembly bottom cover by taking out 2 screws in bottom plate. Remove 12 screws which mount cleaner head in housing shell, remove settling chamber from housing shell. Wash all parts in gasoline and scrape sediment from settling chamber. When re-assembling cleaner, see that all gaskets in good condition or use new gaskets, turn head and housing shell upside down, insert 2 screws and place gasket inside shell, then set settling chamber in plate and start screw threads, turn assembly right side up and install remainder of

screws, tighten all screws securely, assemble all other parts. Fill cleaner with fresh oil and install **CAUTION—**Fill cleaner with oil before assembling to crankcase (avoids running bearings without oil when engine first started).

**CLUTCH NOTES****1949-50 MODELS**

**CLUTCH RELEASE BEARING & SUPPORT:** Release bearing is new factory lubricated and sealed ball bearing type. Bearing is piloted on tubular support mounted in clutch housing and entirely enclosing transmission main drive gear shaft. This tubular support is installed and removed through rear face of clutch housing (with transmission off car) and a paper gasket is used between the support flange and the face of the housing. An oil slinger is provided on the main drive shaft ahead of the bearing in the transmission and a felt oil seal is installed against shoulder ahead of oil slinger retaining ring (in 1946 seal originally installed in groove on shaft).

**Release Bearing Support Removal—**When removing support, do not pry on flange in clutch housing, tap support out of housing from inside (do not strike tubular portion of support, tap bell end of support at rear lightly with soft hammer).

**Bearing Servicing—**Do not wash bearing in solvent or attempt to remove grease (bearing is factory-lubricated and sealed). Check fit of bearing on tubular support. Bearing should not bind or have excessive clearance.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On left front door hinge post.

1949 Numbers—P6RS-1001 Up.....Synchro-Mesh Tr.  
P6RH-1001 Up.....with Hydra-Matic Drive  
1950 Numbers—P6TS-1001 Up.....Synchro-Mesh Tr.  
P6TH-1001 Up.....with Hydra-Matic Drive  
Prefix letter indicates Assembly Plant (below).

► **Assembly Plant Prefix Letter.** P—Pontiac, Mich.,  
C—South Gate, L—Linden, W—Wilmington, K—  
Kansas City, A—Atlanta, F—Framingham.

**ENGINE NUMBER:** Same as Serial Number. Stamped  
on boss on left upper front corner of engine block.

## TUNE-UP

**COMPRESSION PRESSURE:** 160 lbs. at 1000 RPM. or  
118-120 lbs. at cranking speed (Std. 6.5-1 Head).  
191 lbs. at 1000 RPM. (Optl. 7.5-1 Head).

**VACUUM READING:** 18-20" steady idling at 7-8 MPH.  
or 365-385 RPM. on Hydra-Matic cars.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .025". Limits .023-.028".  
Plugs—AC No. 45, 14 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.022" (new points),  
.020" (used points).

► **CAUTION**—Dial indicator for setting point gap  
recommended by car manufacturer. *Do not use feeler  
gauge for setting used points.*

**Cam Angle**—Closed 31° to 37° with .022" gap.

**NOTE**—If dial indicator not available when setting  
Breaker Gap on Used Points, car manufacturer  
recommends gap be set by cam angle at 35° closed.

**Breaker Arm Spring Tension**—17-21 ounces.

**Automatic & Vacuum Advance**—See Ignition.

**Condenser Capacity**—.18-.23 microfarad.

**IGNITION TIMING:** 6° BTDC.

**Timing Procedure**—See Ignition Timing.

**Timing Mark**—First line of vibration dampener  
mark "IGN. ONE/" aligned with pointer on chain  
cover at front of engine on left side.

**Gaselector Setting**—Set for barely audible ping  
when accelerating at 20-30 MPH., full throttle.

**CARBURETION:**

**Idle Setting**—Set idle adjusting screw 1-1¼ turns  
open. Turning screw out gives richer mixture.

**Idle Speed (standard)**—450-475 RPM. or 7-8 MPH.

**Idle Speed (Hydra-Matic)**—365-385 RPM.

**Float Level**—7/16" from machined projection on  
cover (inverted) to top of soldered seam at free end.

**Accelerating Pump**—Lower hole Normal Setting,  
Upper hole max. charge, Inner hole min. charge.

**Choke Setting:** Coil housing 3 Points Rich.

**Fuel Pump Pressure:** 4-4¾ lbs.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type,  
non-adjustable (fixed anchor pin). Counterweight  
should be securely clamped to shaft in vertical po-  
sition with valve closed (cold position).

**NOTE**—Valve shaft bushings are Stainless Steel.

**VALVE TAPPET CLEARANCE:** .011" to .013", Hot. .011"  
"Go" gauge, .013" "No Go" gauge.

**High Speed Setting**—.013" EXH. Hot.

► **Cold Setting with Engine Stopped**—.012" to .014"  
Cold (room temperature). **CAUTION**—Check setting  
after engine warmed-up for limits of .011" to .013".  
**Valve Timing Check**—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

## IGNITION

**IGNITION SWITCH:** Delco-Remy No. 1116461.

**Ignition Lock**—Briggs & Stratton or Delco-Remy.

**COIL:** Delco-Remy No. ('49) 1115380, ('50) 1115378.  
Mounted on engine.

**Ignition Current**—2.5 amperes idling, 4.5 stopped.

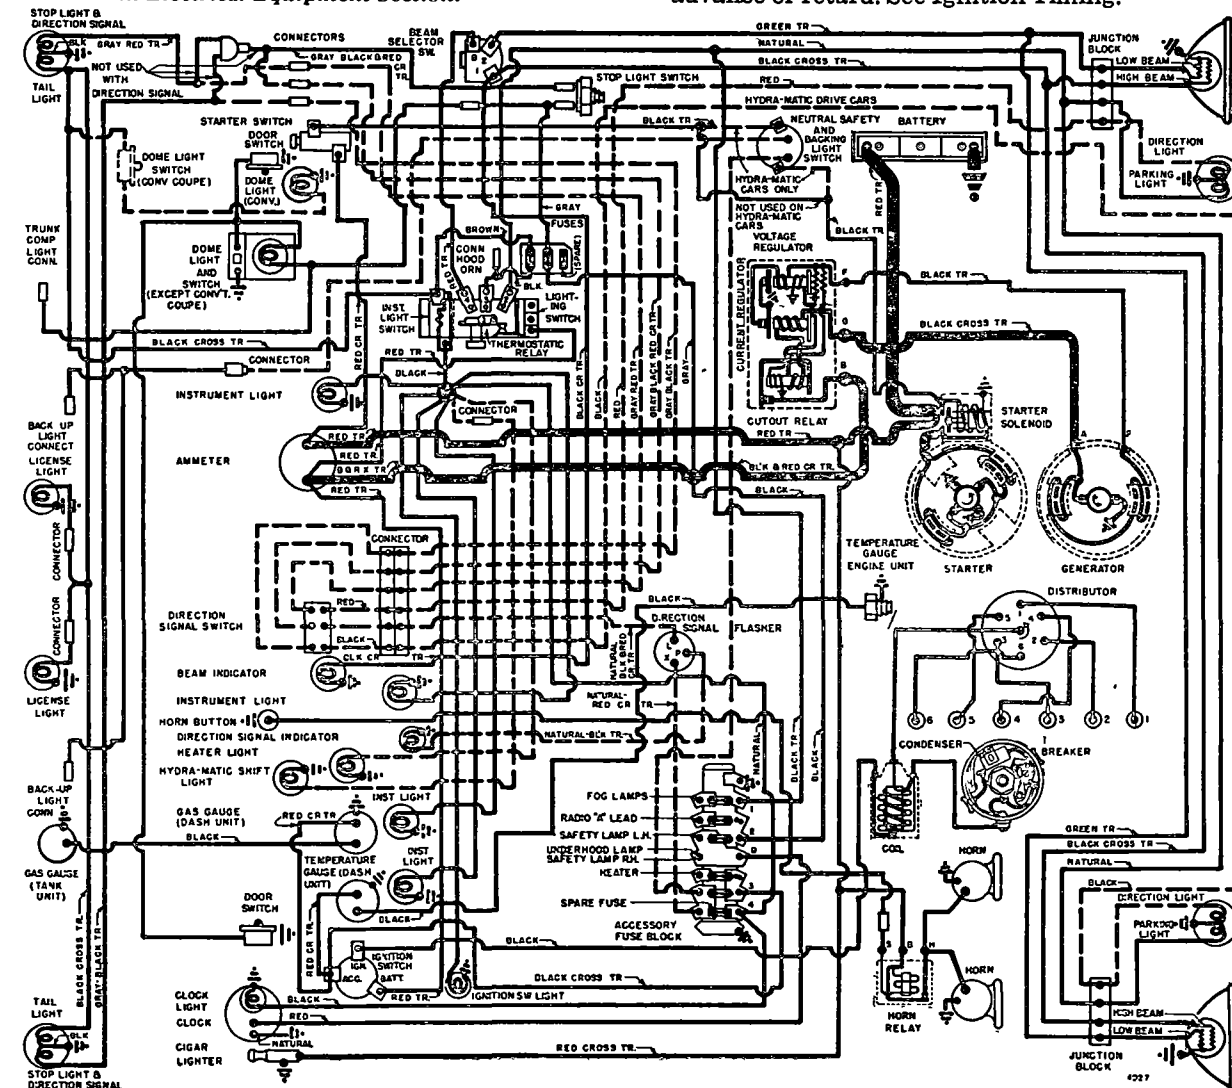

**CONDENSER:** Delco-Remy No. 1869704.

**Capacity**—.18-.23 microfarad.

**DISTRIBUTOR:** Delco-Remy Model (1949) 1110219,  
(1950) 1110222. Automatic and vacuum advance type  
with new "center-bearing" breaker plate.

► **Breaker Plate Bearing Assembly**—Plate rotates on  
3 bakelite buttons on support plate with spring ten-  
sion adjustment (shim washers) on underside of  
support plate. Pull required to move plate should be  
8 oz. min., 16 oz. max. with breaker plate assembly  
out of housing.

See "Delco-Remy Center-Bearing Breaker Plate Dis-  
tributor" in Electrical Equipment Section.

**Breaker Gap**—.022" (new points), .020" (used pts.).

► **CAUTION**—Dial indicator for setting point gap  
recommended by car manufacturer. *Do not use feeler  
gauge for setting used points.*

**Cam Angle**—Closed 31° to 37° with .022" gap.

**NOTE**—If dial indicator not available when setting  
Breaker Gap on Used Points, car manufacturer  
recommends gap be set by cam angle at 35° closed.

**Breaker Arm Spring Tension**—17-21 ounces.

**Rotation**—Counter-clockwise viewed from above.

### Automatic Advance

Degrees Start	Distr. R.P.M.	Degrees Eng. R.P.M.
8.25	1100	16.5
8.5	1400	17
14	2050	28

**Gaselector**—Manual adjustment at distributor. 10°  
advance or retard. See Ignition Timing.

**Vacuum Spark Control:** Delco-Remy (part of distr.). Integral type linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7-9"
6.5°.....	13°	13-16"

NOTE—Max. 17° engine, with full vacuum.

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out Gaselector screw, lift out.

## IGNITION TIMING

**Std. Setting** Flywheel Degrees Piston Pos.  
All Engines①.....6° BTDC.....0138" BTDC.  
①—Regular Fuel—Std. Hd. Ethyl Fuel—7.5-1 Hd.

**Timing Mark**—"/IGN.ONE/" on vibration dampener. Two straight lines of mark indicates timing range of 4°. Use first (6°) line when setting ignition timing.  
**NOTE**—Manufacturer recommends use of KMO-318 Timing Light or J-578 Synchroscope for Timing.

**Timing (with Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0138" before top dead center with first line of ignition mark "/IGN.ONE/" aligned with pointer on chain cover at front of engine on left side. Loosen Gaselector screw, center pointer scale ("0" mark at reference line), tighten screw. Loosen advance arm clamp bolt, rotate distributor until timing light lights (contacts just opening), tighten clamp bolt. Check Gaselector Setting (see below).

**Timing (with Synchroscope)**—Connect at #1 spark plug. Mark first line of ignition mark with white chalk or paint, idle engine and adjust distributor as directed above until pointer and white line are aligned. Check Gaselector Setting (see below).  
**Gaselector Setting**—Set to give best performance without spark knock or ping for fuel used. Marked "ADV" and "RET", adjust according to these marks.

## CARBURETOR

Carter WA-1, No. 717S.....Synchro-Mesh Trans.  
Carter WA-1, No. 718S.....Hydra-Matic Drive  
1¼" single barrel downdraft types with Carter Climatic Control.

**Casting No. on Flange**—(717S) 388, (718S) 592.  
See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up.

**Metering Rod & Jet**—See Carter Jet Table in Carburetor Section.

**NOTE**—No "throttle cracker" used.

**Hydra-Matic Throttle Linkage Adjustment:** See Pontiac Hydra-Matic Drive in Transmission Section.

**Fast Idle:** Carter Single Barrel Carburetor type.  
See Carburetion Equipment Section for complete data.  
**Setting**—5/8" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (use Tool T109-41).

**Automatic Choke:** Carter Climatic Control (single barrel carburetors).  
See Carburetion Equipment Section for complete data.  
**Setting**—3 Points Rich.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1529871 oil-wetted type (std.), No. 1544486 heavy duty oil-bath type (optional).  
**Filter Element**—AC #1 (std.), #21 (heavy duty).  
**Servicing**—Clean and re-oil std. cleaner, or on heavy duty clean and refill reservoir with 1 pint SAE 50 (20W below freezing) oil, at 10,000 mile intervals (twice yearly) or more often if required.

**Fuel Pump (std.):** AC No. 1537342.

**Optl. (fuel-&-vacuum)**—AC No. 1537317.

**Replacement Pump**—AC 7342 (std.), 539 (optl.).

**Pressure**—4-4¾ lbs.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** AC Electric type.

**Dash Unit**—AC 1517117. **Tank Unit**—AC 1517083.

See Carburetion Equipment Section for complete data.

## BATTERY

**Delco Type 15E-4.** 6 Volt, 15 Plate, 100 Ampere Hour Grounded Terminal—Negative (—) to engine.

**Location**—On left side of engine compartment.

**Police Battery Delco Type 19E-4.** 6 Volt, 19 Plate, 130 Ampere Hour Capacity (20 hour rate).

**Grounded Ter. & Location**—Same as 15E-4 above.

## STARTER

**LHD**.....Delco-Remy 1107079. Arm. No. 1867897.

**RHD**.....Delco-Remy 1107934. Arm. No. 1867897.

► **CAUTION**—LHD starter operates whenever pushbutton depressed (and shift lever in neutral on Hydra-Matic).  
**Drive**—Overrunning clutch (solenoid pinion shift).  
**Rotation**—Counter-clockwise at commutator end.  
**Brush Spring Tension**—24-28 ozs. each.

Performance Data—1107079			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.7	80①
12 "	Lock	3.4	525

Performance Data—1107934			
Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	80①
14 "	Lock	3.0	600

①—Includes current draw of starter switch.

**Removal:** Flange mounted at left front of flywheel housing. To remove, take out mounting screws.

**Starting Switch (1107079):** Delco-Remy Solenoid 1118140 (no relay used) mounted on starter and controlled by Pushbutton Switch No. 1996037 (and Neutral Safety Switch No. 1997846 on Hydra-Matic).  
**CAUTION**—Overrunning clutch pinion clearance must be adjusted if solenoid removed from starter. See Electrical Equipment Section for complete data.  
(1107934)—Delco-Remy Solenoid 1118102 on starter and controlled by Relay No. 269-G and Pushbutton Switch No. 1996039 (and Neutral Safety Switch 1997846 on Hydra-Matic Drive cars).  
See Electrical Equipment Section for complete data.  
**Neutral Safety Switch Adjustment**—See Pontiac Hydra-Matic Drive in Transmission Section.

## GENERATOR

**Standard**.....Delco-Remy 1102711. Arm. No. 1879002  
**Police**.....Delco-Remy 1106403. Arm. No. 1880252

Two brush types with current and voltage regulation  
**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—36 amperes cold, at 2040 Gen. RPM, or 19-23 MPH. Actual charging rate set by regulator (dependent on battery condition).

## Performance Data—Cold

	Amperes	Volts	R.P.M.
1102711	30①	8.0	1750
1106403	35	8.0	1040

①—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—(1102711) 1.75-1.9 amperes at 6 volts, (1106403) 1.77-2.0 amperes at 6.0 volts.

**Removal:** Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Belt deflection or sideplay midway between generator & pump pulley should be 1½".

## REGULATOR

**Standard**.....Delco-Remy 1118301 (for 1102711 Gen.)

**Police**.....Delco-Remy 1118352 (for 1106403 Gen.)

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. See Electrical Equipment Section for complete data.  
**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate of High Voltage.

### Cutout Relay

**Cuts In**—5.9-6.8 volts hot (set to 6.4 volts hot).

**Contact Gap**—.020" (same for both contacts).

**Air Gap**—.020" (with contacts just closed).

### Voltage Regulator

**Setting**—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Elec. Equip. Section.

### Current Regulator

**Setting (1118301)**.....32-40 amps. hot (set at 36 hot).

**Setting (1118352)**.....33-37 amps. hot (set at 35 hot).

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Elec. Equip. Section.

## LIGHTING

**Headlamps, Direction Signal, and Switches:** See 1949-50 Pontiac Eight car pages for data.

## MISC. ELECTRICAL

**THERMOSTATIC CIRCUIT BREAKER:** Delco-Remy.

On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

**MAIN FUSE BLOCK:** On left hand engine side of dash. Two fuses (plus 1 spare) as follows:

**Tail Lamp**—SFE 14 ampere. In gold colored fuse holder. Protects rear license, instrument, ignition key, and clock lamps (dome on convertible).

**Stop Lamp**—SFE 14 ampere. In gray colored fuse holder. Protects trunk light and dome light (except on Convertible).

**ACCESSORY FUSE BLOCK:** On dash behind instrument panel. Five fuses (plus 1 spare) as follows:

**Top Fuse**—SFE 20 amp. Fog Lights.

**2nd Fuse**—SFE 14 amp. Radio.

**3rd Fuse**—SFE 20 amp. Clock power, Glove Box Light, Underhood Light, Safety (Spot) Light.

**4th Fuse**—SFE 20 amp. Heater blower motor.

**5th Fuse**—SFE 20 amp. Dir. Signal & Backup.

**6th Fuse**—SFE 20 amp. Spare fuse.

**HORNS:** See 1949-50 Pontiac Eight car pages for data.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## ENGINE

**ENGINE SPECIFICATIONS:** Own, Six Cyl., "L" head. Bore—3 9/16". For Original Bore Sizes and Markings, see "Original Bore & Pistons" in Pontiac Special Data. Stroke—4". Displ.—239.2 cu. ins. Rated HP—30.4. Developed Horsepower—90 at 3400 RPM. Compression Ratio—Std. 6.5-1, Optl. 7.5-1, iron hds. Compression & Vacuum Reading—See Tune-Up.

**TIGHTENING TORQUES:** See Pontiac Special Data.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Pontiac Special Data.

**PISTONS:** Chrome nickel alloy, electro-plated type. Pistons have 20 oil drain holes in oil ring groove. Length ('49) 3 19/32", ('50) 3 37/64". Wt. 27.1 oz. Removal—Pistons and rods removed from above. Clearance—Top Land .015-.027". Skirt .002".

**Fitting New Pistons:**—Insert .0015" x 1/2" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. Taper and out-of-round limits—Piston .0005", Cylinder .0005" max. new.

**Replacement Pistons:** See Pontiac Special Data.

**PISTON RINGS:** Two tapered-face compression rings above pin, one slotted oil control ring below pin. Oil ring groove has 20 oil drain holes. NOTE—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1,2)	3/32"	.006-.013"	.0015-.003"
Oil (#3)	3/16"	.006-.013"	.001-.0025"

Installing Compression Rings—Mark "TOP" up.

**Replacement Rings:** .005", .010", .020", .030" Oversize.

**PISTON PIN:** Diameter 15/16". Length 3 1/16". Pin is shot-peened type (shot-peened before final grinding and lapping). Pin is locked in one piston boss by self-locking lock screw and opposite boss is slotted to permit pin movement.

**Pin Fit in Piston:**—See Pontiac Special Data.

**Pin Fit in Rod Bushing:**—.0004-.0006" clearance.

**Pin Removal & Installation:** See Pontiac Special Data.

**Replacement Pins:**—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

**CONNECTING ROD:** Weight 37 ozs. Length 7 9/16".

**Piston Pin Bushing (Upper Bearing):** Split aluminum bronze bushings. See Pontiac Special Data.

**Lower Bearing Diameter:**—2 1/8".

**NOTE—Plastigage can be used for checking bearing clearance.** See "Crankshaft & Main Bearings" in Pontiac Special Data.

**Lower Bearing:**—Thin type, interchangeable, steel-backed, babbitt-lined type.

**Clearance:**—.0001-.0021". Sideplay—.007-.012".

**NOTE—Plastigage can be used for checking bearing clearance.** See "Crankshaft & Main Bearings" in Pontiac Special Data.

**Bearing Adjustment:**—None (no shims).

**Replacement Bearings:** Standard size & .001" Under-size. NOTE—Bearings have small tongue which must engage groove in rod and cap.

**Installing Rods:** Not offset (install either way).

**NOTE—Rods and bearing caps marked to insure correct reassembly (marks must be together).** These marks do not indicate cylinder in which rod used. CAUTION—Keep each connecting rod and its bearing cap together.

**CRANKSHAFT:** Four bearing type with integral counterweights and vibration dampener on forward end.

► **Flywheel to Crankshaft Bolts (Synchro-Mesh Transmission)**—3/4" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. Either type

can be used for replacement but head sizes must be alike on all bolts or engine balance will be destroyed.

**Bearing Diameters**—#1, 2 1/2"; #2, 2 17/32"; #3, 2 19/32"; #4, 2 5/8".

**Bearings**—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike. Clearance—.0003-.0023".

**NOTE—Plastigage can be used for checking bearing clearance.** See "Crankshaft & Main Bearings" in Pontiac Special Data.

**Bearing Adjustment:**—None (no shims). See Pontiac Special Data for Removal and Fitting of Bearings.

**Rear Main Bearing Oil Seal Renewal:**—See Pontiac Special Data.

**Replacement Bearings:** Standard & .001" Undersize.

**End Thrust:** At #3 (rear intermediate) bearing. Endplay—.003-.008".

**CAMSHAFT:** Four bearing, non-adjustable chain.

► **CAUTION**—New camshaft used with redesigned fuel pump drive eccentric. 1949 Six Cylinder Camshaft not interchangeable with 1948 and earlier camshaft.

**Timing Chain Cover Oil Seal Installation:**—See "Timing Chain" in Pontiac Special Data.

**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32". For Bearing Finished Sizes, see "Camshaft & Bearings" in Pontiac Special Data.

**Clearance:**—.0015-.0025" (new).

**End Thrust:**—Steel thrust plate behind camshaft sprocket. Replace if worn. Endplay—.002-.005".

**Timing Chain:** Morse. Width 1". Pitch 3/8". Length 21" or 56 links.

**Chain Installation:**—See Pontiac Special Data.

**Camshaft Setting:**—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

**VALVES:**

	Head Diam.	Stem Diam.	Length
Intake	1 19/32"	310-311"	5.718"
Exhaust	1 15/32"	310-311"	5.718"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"①
Exhaust	45°	19/64"	Free fit to .0006"①

① Guides tapered (.0006" max. clearance at bottom).

**Valve Guides:**—Removable, tapered guides (.001" taper to the inch with greatest clearance at top). Use Tool J-2542 for removing valve guides.

**Exhaust Guide Counterbore:**—Exhaust guides are counterbored to a depth of 3/4". Use Tool Number J-2122 to clean out counterbore.

**IMPORTANT**—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. NOTE—Guides should be cleaned with Tool KMO-122 valve guide cleaner (blade type). Service guides straight cut, install guides and ream to provide proper stem clearance with P.R. 131 Reamer.

**Valve Springs:**—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. Free Length—2 9/16".

	Spring Pressure	Spring Length
Valve Closed	59 1/2 lbs.	1 29/32"
Valve Open	101 lbs.	1 19/32"

**Valve Lifters:**—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

**Clearance:**—Free fit. Lifter should just move freely with finger touch.

## VALVE TIMING

**Tappet Clearance:** .011" to .013", All Valves, Hot. .011" "Go" gauge, .013" "No Go" gauge.

**High Speed Setting:**—.013" EXH. Hot.

**Cold Setting with Engine Stopped:**—.012" to .014"

Cold (room temperature). CAUTION—Check setting after engine warmed-up for limits of .011" to .013".

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves:**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves:**—Open 45° BLDC. Close 5° ATDC.

**Valve Timing Check:**—With .015" tappet clearance #6 intake valve should open with #6 piston 5° or .0096" before top dead center with first straight line of dampener mark 'IGN.ONE/' slightly past pointer on left front face of chain cover. Reset tappet clearance .011-.013" (warm).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and chain.

**Crankcase Capacity:**—5 qts. (refill), 6 qts. (dry).

**Normal Oil Pressure:**—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

**Oil Pressure Regulator:**—On oil pump. Opens at 40 lbs. Non-adjustable. NOTE—Replace regulator spring if free length less than 2 5/16".

**Oil Pump:** Gear type. On right side of crankcase.

**Removal & Installation:**—See Pontiac Special Data.

**Oil Cleaner:** Pontiac precipitation type (mounted in crankcase).

**Removal & Installation:**—See Pontiac Special Data.

**Oil Pressure Gauge:** AC No. 1507350. Not electric.

**Crankcase Ventilation:** Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner use 3-piece outlet pipe containing filter element).

**Oil Filler (Crankcase Ventilator) Cap Cleaning:** Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

**CAUTION**—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

**Crankcase Ventilator Outlet Pipe:**—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used which has copper gauze type air cleaner in container section. Wash and re-oil filter element when servicing air cleaner.

## COOLING

**Cooling System:** Pressure type with pressure valve and vacuum valve (relief valves) in filler cap. Water distribution tube installed in block.

**Capacity:**—(1949) 18 qts., (1950) 18 1/2 qts.

**Pressure Valve:**—AC No. 850501 Filler Cap. Opens at 4 lbs. (3 1/4-4 1/4 lbs.).

**Water Pump:** Packless, sealed ball-bearing shaft.

**NOTE**—Fan flange reversed over previous models. Pump Body Plate and Cylinder Block-to-Pump Gasket changed during 1949 production.

See Water Pump Section for complete data.

**Removal:**—Drain cooling system, remove hose connection at pump, remove belt, take out water pump mounting bolts and lift pump out.

**Belt Adjustment:**—See Generator Belt Adjustment.

**Thermostat:**—Harrison. In cylinder head outlet.

**Setting:**—Starts to open 151°F. Fully open 173°F.

**Temperature Gauge:** AC Electric type.

**Dash Unit:**—AC No. 1512126.

**Engine Unit:**—AC No. 1512015.

See Miscellaneous Section for complete data.

## CLUTCH

**Inland.** Single Plate, "Diaphragm", dry disc type with Long Driven Member Model 9½CF-TS (except Taxicab), Model 10CF-CS (Taxicab).

See Clutch Section for complete data.

► **NOTE**—Driven Members on 6 & 1949 8 Cyl. cars are same size but must not be interchanged. May be identified by stenciled notation on facings and color marking of torsional springs in hub as follows:

	Facing Mark	Spring Color
1949-50 6 Cyl.	41-42 6 Cyl.	Orange & Dark Blue
1949 8 Cyl.	41-42 8 Cyl.	Brown & Blue

**Facings:**—Molded type, 2 required. I. D. 6" (All Models); O. D. 9½" (except Taxicab), 10" (Taxicab); Thickness ⅛".

**Pedal Adjustment:**—Free travel ⅞-1½" (adjusting nut on link at clutch fork).

**Removal:** Remove Transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing (**CAUTION**—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure reinstallation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw Driven Member, lower cover assembly and withdraw it through bottom of housing.

► **Removal of Excess Release Bearing Lubricant to correct clutch sticking:**—If recess in bore on release bearing over-lubricated when clutch assembly installed, excess lubricant may be found causing clutch sticking. Clean out excess lubricant found at the following points: transmission drive gear, driven plate hub, clutch facings, pressure plate and cover assembly, release bearing support tube, fulcrum points of release fork, and recess in bore on release bearing (do not wash bearing, bearing is "sealed" type). Lubricate clutch parts exactly as described under Installation Note following to avoid above condition.

**Clutch Installation Note:**—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

**CAUTION:**—Make certain that correct type Driven Member is used (see Note above).

**Clutch Release Bearing & Support:** See Pontiac Special Data for description.

## TRANSMISSION

**Own Make.** All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse). See Transmission Section for data.

**Transmission Control:** Pontiac "Safety-shift" remote control type with gearshift lever on steering column. See Transmission Section for complete data.

**Removal:**—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.

**Installation Note:**—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support). **NOTE:**—These guide pins may be made from ½-13 American National Thread bolts by cutting heads off and reducing over-all length to 4¼".

## HYDRA-MATIC DRIVE

### OPTIONAL EQUIPMENT

**Own Make.** Consists of Fluid Coupling and automatic self-shifting 4-speed planetary transmission.

► **Hydra-Matic Transmission Serial Number:**—P9-1 UP. On plate on right side of transmission.

► **Hydra-Matic Neutral Switch Replacement on First 1949 Cars to correct Inoperative Starter:**—See "Pontiac Hydra-Matic Drive" in Transmission Section.

**Lubrication:**—Check fluid level in transmission every 2000 miles (at lubrication period). Drain and refill every 15000 miles. Use only GM Hydra-Matic Fluid.

**Draining & Refilling:**—See "Hydra-Matic Drive" in Transmission Section.

**Checking Fluid Level:**—Roll back right side of front floor mat. Clean all sand, lint, and dirt away from sheet metal cover in floor, remove cover, clean any dirt away from dipstick cover on transmission. **Set Hand Brake.** Run engine for approx. 1½ minutes at speed equivalent to 20 MPH, with selector lever in "Neutral." Reduce engine speed to slow idle and move selector lever to "Drive" position, measure level with dipstick, add fluid until level is at "FULL" mark with engine idling.

► **CAUTION:**—Engine must be idling slow and selector lever in "Drive" position when checking fluid level.

**Linkage Adjustment:**—See "Hydra-Matic Drive" in Transmission Section.

**Removal:** See "Hydra-Matic Drive" in Transmission Section.

## UNIVERSALS

**Mechanics Model 2CR** lock ring retainer type or Saginaw clamp plate retainer type.

See Universals Section for complete data.

► **CAUTION:**—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). See Pontiac Rear Axle in Rear Axle Section.

**NOTE:**—Driveshaft is one-piece type (slip joint on transmission mainshaft ahead of front universal).

## REAR AXLE

**Own Make.** Hypoid gear, semi-floating type with pinion mounted on two taper roller bearings.

**CAUTION:**—Rear Universal companion nut controls pinion bearing "pre-load."

See Rear Axle Section for complete data.

► **Filler Plug Production Change:**—Moved from axle cover at rear to front face of carrier on right side on late cars.

Model	Ratio	Paint Mark
Hydra-Matic (All)	3.63-1	Violet
Synchro-Mesh (Std.)	4.1-1	Green
Synchro-Mesh (Economy)	3.9-1	Red
Synchro-Mesh (Mt.)	4.3-1	White
Synchro-Mesh (Hvy. Dty.)	4.55-1	Yellow

①—On outer end of axle shafts.

**Backlash:**—.003-.012" (new), slightly over .012" (worn).

**Removal:**—Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts and carrier flange cap screws. Withdraw carrier assembly from housing.

► **CAUTION:**—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

**Axle Shaft Removal:**—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 —(do not drag axle shaft on oil seal).

**Wheel Bearing Adjustment:**—None.

## SHOCK ABSORBERS

**Delco.** Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

See Shock Absorber Section for complete data.

## FRONT SUSPENSION

**Front Suspension:** New linked parallelogram type with direct acting shock absorber mounted within each coil spring.

See Front Suspension Section for complete data.

**Kingpin Inclination:**—4¾° to 5¼° crosswise.

**Caster:**—Neg. ¾°. Limits Neg. ½° to Neg. 1°. Adjustable.

**Camber:**—0°. Limits Neg. ¼° to Pos. ¼°. Adjustable.

**Toe In:**—0-1/16". Adjust rod sleeves equally.

## STEERING GEAR

**Saginaw.** Worm-and-Roller type.

See Steering Gear Section for complete data.

## BRAKES

**Service Brakes:** Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

**Wheel Cylinder Bore:**—Front wheels 1 1/16". Rear 7/8".

**Drums:**—Steel & cast-iron. Diameter 11".

**Lining:**—Molded. Width 2¼" (front wheels), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary).

**Clearance:**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Braking Power:**—60% front wheels, 40% rear.

**Hand Brake:** See Service Brakes above.

## MISC. MECHANICAL

**Convertible Top Control:** Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See Miscellaneous Section for complete data.

**Windshield Wiper:** Vacuum Link-&-Crank Arm type. See Miscellaneous Section for complete data.

## MODEL IDENTIFICATION

**SERIAL NUMBER:** On left front door hinge post.  
**1949 Numbers—P8RS-1001 Up.....**Synchro-Mesh Tr.  
**P8RH-1001 Up.....**with Hydra-Matic Drive  
**1950 Numbers—P8TS-1001 Up.....**Synchro-Mesh Tr.  
**P8TH-1001 Up.....**with Hydra-Matic Drive  
 Prefix letter indicates Assembly Plant (below).  
**►Assembly Plant Prefix Letter.** P—Pontiac, Mich.,  
 C—South Gate, L—Linden, W—Wilmington, K—  
 Kansas City, A—Atlanta, F—Framingham.  
**ENGINE NUMBER:** Same as Serial Number. Stamped  
 on boss on left upper front corner of engine block.

## TUNE-UP

**COMPRESSION PRESSURE:** 158 lbs. at 1000 RPM. or 118-120 lbs. at cranking speed (Std. 6.5-1 Head), 189 lbs. at 1000 RPM. (Optl. 7.5-1 Head).

**VACUUM READING:** 18-20" steady idling at 7-8 MPH. or 365-385 RPM. on Hydra-Matic cars.

**FIRING ORDER:** 1-6-2-5-8-3-7-4. See diagram.

**SPARK PLUG GAPS:** .025". Limits .023-.028".

Plugs—AC No. 45. 14 mm. Metric.

**DISTRIBUTOR:** Breaker Gap—.016" (new points), .015" (used points).

► **CAUTION**—Dial indicator for setting point gap recommended by car manufacturer. *Do not use feeler gauge for setting used points.*

Cam Angle—Closed 21° to 30° with .016" gap.

**NOTE**—If dial indicator not available when setting Breaker Gap on Used Points, car manufacturer recommends gap be set by cam angle at 28° closed.

**Breaker Arm Spring Tension**—19-23 ounces.

**Automatic & Vacuum Advance**—See Ignition.

**Condenser Capacity**—18-23 microfarad.

**IGNITION TIMING: 6 °BTDC.**

**Timing Procedure—See Ignition Timing.**

**Timing Mark**—First line of vibration dampener mark "IGN.ONE/" aligned with pointer on chain cover at front of engine on left side.

**Gaselector Setting**—Set for barely audible ping when accelerating at 20-30 MPH. full throttle.

**CARBURETION:**

**Idle Setting**— $\frac{3}{4}$ – $1\frac{1}{4}$  turns open. Two screws—turning screws out gives richer mixture.  
**Idle Speed (standard)**—450–475 RPM, or 7–8 MPH.  
**Idle Speed (Hydra-Matic)**—365–385 RPM.  
**Float Level**— $3\frac{1}{16}$ " from top of floats to gasket seat on bowl cover (Gauge T109-162). Sides of floats should barely touch vertical uprights on gauge (to avoid floats binding on sides of bowl).  
**Accelerating Pump**—Lower Hole (minimum) Normal. Upper Hole (max.)—if more charge required.

**Choke Setting:** Centered at Index.

**Fuel Pump Pressure:** 4-4 $\frac{3}{4}$  lbs.

**MANIFOLD HEAT CONTROL:** Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position).  
NOTE—Valve shaft bushings are Stainless Steel.

**VALVE TAPPET CLEARANCE:** .011" to .013", Hot. .011"  
 "Go" gauge, .013" "No Go" gauge.  
**High Speed Setting—.013" EXH. Hot.**

► **Cold Setting with Engine Stopped**—.012" to .014" Cold (room temperature). **CAUTION**—Check setting after engine warmed-up for limits of .011" to .013".  
**Valve Timing Check**—See *Valve Timing*.

**STARTING:** See *Battery, Starter, Generator, Regulator.*

## IGNITION

**IGNITION SWITCH:** Delco-Remy No. 1116461.  
**Ignition Lock**—Briggs & Stratton or Delco-Remy.  
**COIL:** Delco-Remy No. ('49) 1115380, ('50) 1115378.  
 Mounted on engine.  
**Ignition Current**—2.5 amperes idling, 4.5 stopped.  
**CONDENSER:** Delco-Remy No. 1869704.  
**Capacity**—.18-.23 microfarad.  
**DISTRIBUTOR:** Delco-Remy Model (1949) 1110816,  
 (1950) 1110818. Automatic and vacuum advance type  
 with new "center-bearing" breaker plate.  
**►Breaker Plate Bearing Assembly**—Plate rotates on  
 3 bakelite buttons on support plate with spring ten-  
 sion adjustment (shim washers) on underside of  
 support plate. Pull required to move plate should be  
 8 oz. min., 16 oz. max. with breaker plate assembly  
 out of housing.  
*See "Delco-Remy Center-Bearing Breaker Plate Dis-  
 tributor" in Electrical Equipment Section.*

**Breaker Gap**—.016" (new points), .015" (used pts.).

► **CAUTION**—Dial indicator for setting point gap recommended by car manufacturer. *Do not use feeler gauge for setting used points.*

**Cam Angle**—Closed  $21^{\circ}$  to  $30^{\circ}$  with .016" gap.

**NOTE**—If dial indicator not available when setting Breaker Gap on Used Points, car manufacturer recommends gap be set by cam angle at 28° closed.

**Breaker Arm Spring Tension—19-23 ounces.**

**Rotation**—Counter-clockwise viewed from above.

### Automatic Advance

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start		250	2		500
7.5		1200	15		2400
8.25		1500	16.5		3000
13.5		2100	27		4200

**Gaselector**—Manual adjustment at distributor, 10° advance or retard. See Ignition Timing.

**Vacuum Spark Control:** Delco-Remy No. 1116050.

Integral type linked directly to breaker plate. Pro-

vides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel**—7/32".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	7-9"
10°.....	20°	17.5-19.5"

**NOTE**—Max. 22° engine, with full vacuum.

**Distributor Removal:** On left side of engine. Disconnect vacuum line, take out Gaselector screw, lift out.

## IGNITION TIMING

**Std. Setting** Flywheel Degrees **Piston Pos.**  
All Engines①.....6° BTDC.....0128" BTDC.  
①—Regular Fuel—Std. Hd. Ethyl Fuel—7.5-1 Hd.  
**Timing Mark**—"IGN.ONE/" on vibration dampener. Two straight lines of mark indicates timing range of 4°. Use first (6°) line when setting ignition timing.  
**NOTE**—Manufacturer recommends use of KMO-318 Timing Light or J-578 Synchroscope for Timing.  
**Timing (with Timing Light)**—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0128" before top dead center with first line of ignition mark "IGN.ONE/" aligned with pointer on chain cover at front of engine on left side. Loosen Gaselector screw, center pointer scale ("0" mark at reference line), tighten screw. Loosen advance arm clamp bolt, rotate distributor until timing light lights (contacts just opening), tighten bolt. Check Gaselector Setting.  
**Timing (with Synchroscope)**—Connect at #1 spark plug. Mark first line of ignition mark with white chalk or paint, idle engine and adjust distributor as directed above until pointer and white line are aligned. Check Gaselector Setting (see below).  
**Gaselector Setting**—Set to give best performance without spark knock or ping for fuel used. Marked "ADV" and "RET", adjust according to these marks.

## CARBURETOR

**Carter WCD, No. 719S**.....Synchro-Mesh Trans.  
**Carter WCD, No. 720S**.....Hydra-Matic Drive  
1¼" dual barrel downdraft types with Carter Climatic Control.

**Casting No. on Flange**—(719S) 550, (720S) 558.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up.

**Metering Rod & Jet**—See Carter Jet Table in Carburetor Section.

**Hydra-Matic Throttle Linkage Adjustment:** See Pontiac Hydra-Matic Drive in Transmission Section.

**Fast Idle:** Carter Dual (WCD) Carburetor type.

See Carburetion Equipment Section for complete data.  
**Setting**—.026" throttle opening (Gauge No. T109-189) with choke valve tightly closed. Adjust by turning fast idle screw.

**Automatic Choke:** Carter Climatic Control (Dual Carburetor).

See Carburetion Equipment Section for complete data.  
**Setting**—Centered at Index.

## CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544256 oil-wetted type (standard), No. 1544530 heavy duty oil-bath type (optl.).  
**Filter Element**—AC #6 (std.), #7-S (heavy duty).  
**Servicing**—Clean and re-oil std. cleaner, or on heavy duty clean and refill reservoir with 1 pint

SAE 50 (20W below freezing) oil, at 10,000 mile intervals (twice yearly) or more often if required.

**Fuel Pump (Fuel-& Vacuum):** AC Type AJ, 1537317.

**Replacement Pump**—AC No. 539.

**Pressure**—4-4¾ lbs.

See Carburetion Equipment Section for complete data.

**Gasoline Gauge:** AC Electric type.

**Dash Unit**—AC 1517117. **Tank Unit**—AC 1517083.

See Carburetion Equipment Section for complete data.

## BATTERY

**Delco Type 15E-4.** 6 Volt, 15 Plate, 100 Ampere Hour  
**Grounded Terminal**—Negative (—) to engine.

**Location**—On left side of engine compartment.

**Police Battery Delco Type 19E-4.** 6 Volt, 19 Plate, 130 Ampere Hour Capacity (20 hour rate).

**Grounded Ter. & Location**—Same as 15E-4 above.

## STARTER

**LHD**.....Delco-Remy 1107957. Arm. No. 1867897.

**RHD**.....Delco-Remy 1107934. Arm. No. 1867897.

► **CAUTION**—LHD starter operates whenever pushbutton depressed (and shift lever in neutral on Hydra-Matic)  
**Drive**—Overrunning clutch (solenoid pinion shift).  
**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs. each.

**Performance Data**—1107934 & 957

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	5500.....	5.7.....	80①
14 ".....	Lock.....	3.0.....	600

①—Includes current draw of starter switch.

**Removal:** Flange mounted at left front of flywheel housing. To remove, take out mounting screws.

**Starting Switch (1107957):** Delco-Remy Solenoid 1118140 (no relay used) mounted on starter and controlled by Pushbutton Switch No. 1996037 (and Neutral Safety Switch No. 1997846 on Hydra-Matic).  
**CAUTION**—Overrunning clutch pinion clearance must be adjusted if solenoid removed from starter. See Electrical Equipment Section for complete data.  
(1107934)—Delco-Remy Solenoid 1118102 on starter and controlled by Relay No. 269-G and Pushbutton Switch No. 1996039 (and Neutral Safety Switch 1997846 on Hydra-Matic Drive cars).

See Electrical Equipment Section for complete data.

**Neutral Safety Switch Adjustment**—See Pontiac Hydra-Matic Drive in Transmission Section.

## GENERATOR

**Standard**.....Delco-Remy 1102711. Arm. No. 1879002

**Police**.....Delco-Remy 1106403. Arm. No. 1880252

Two brush types with current and voltage regulation  
**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—36 amperes cold, at 2040 Gen. RPM, or 21-23 MPH. Actual charging rate set by regulator (dependent on battery condition).

**Performance Data**—Cold

	Amperes	Volts	R.P.M.
1102711.....	30①.....	8.0.....	1750
1106403.....	35.....	8.0.....	1040

①—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—(1102711) 1.75-1.9 amperes at 6 volts, (1106403) 1.77-2.0 amperes at 6.0 volts.

**Removal:** Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Belt deflection or sideplay midway between generator & pump pulley should be 1½".

## REGULATOR

**Standard**.....Delco-Remy 1118301 (for 1102711 Gen.)

**Police**.....Delco-Remy 1118352 (for 1106403 Gen.)

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. See Electrical Equipment Section for complete data.  
**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate of High Voltage.

### Cutout Relay

**Cuts In**—5.9-6.8 volts hot (set to 6.4 volts hot).

**Contact Gap**—.020" (same for both contacts).

**Air Gap**—.020" (with contacts just closed).

### Voltage Regulator

**Setting**—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Elec. Equip. Section.

### Current Regulator

**Setting (1118301)**.....32-40 amps. hot (set at 36 hot).

**Setting (1118352)**.....33-37 amps. hot (set at 35 hot).

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Elec. Equip. Section.

## LIGHTING

**Headlamps:** Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).  
**Beam Indicator**—At speedometer. Lighted when upper beams in use.

**Directional Signal:** See Electrical Equipment Section.

**Direction Signal Indicator**—Red pilot light on speedometer dial between 60 & 70. Flashes when signal in use.

### Switches

**Lighting**—Delco-Remy No. 1995032.

**Instrument**—Part of Lighting Switch. Rheostat operated by turning Light Switch Knob.

**Beam Selector**—Delco-Remy No. 1997008.

**Stop Light**—Delco-Remy No. 1997725.

## MISC. ELECTRICAL

**THERMOSTATIC CIRCUIT BREAKER:** Delco-Remy.

On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

**MAIN FUSE BLOCK:** On left hand engine side of dash. Two fuses (plus 1 spare) as follows:

**Tail Lamp**—SFE 14 ampere. In gold colored fuse holder. Protects rear license, instrument, ignition key, and clock lamps (dome on convertible).

**Stop Lamp**—SFE 14 ampere. In gray colored fuse holder. Protects trunk light and dome light (except on Convertible).

**ACCESSORY FUSE BLOCK:** On dash behind instrument panel. Five fuses (plus 1 spare) as follows:

**Top Fuse**—SFE 20 amp. Fog Lights.

**2nd Fuse**—SFE 14 amp. Radio.

**3rd Fuse**—SFE 20 amp. Clock power, Glove Box Light, Underhood Light, Safety (Spot) Light.

**4th Fuse**—SFE 20 amp. Heater blower motor.

**5th Fuse**—SFE 20 amp. Dir. Signal & Backup.

**6th Fuse**—SFE 20 amp. Spare fuse.

CONTINUED ON NEXT PAGE

## C NTINUED FR M PRECEDIN PAGE

**HORNS:** Delco-Remy No. 1999613 or 1999645 (Low Note), 1999614 or 1999646 (High Note). Vibrator types operated by relay.

**NOTE**—1999645 & 6 horns are welded.

Type	Current (at 6 volts)	Air Gap
Low Note	19-21 amperes	.047-.052"
High Note	18-20 amperes	.039-.044"

**Horn Relay:** Delco-Remy No. 1116775.

**Contact Gap**—.027". **Air Gap**—.014" (closed).

**Contacts Close**—2.75-4.0 volts (set to 3.5 volts).

## ENGINE

**ENGINE SPECIFICATIONS:** 8 cylinder, "L" head type.

	1949	1950
① Bore	3 1/4"	3 3/8"
Stroke	3 3/4"	3 3/4"
Displacement	248.9 cu. ins.	268.2 cu. ins.
Rated Horsepower	33.8	36.4
Developed HP	104 at 3800	108 at 3600
Compression Ratio	Std. 6.5-1. Optl. 7.5-1, iron hds.	
Compression & Vacuum Reading	See Tune-Up.	

①—For Original Bore Sizes, see Pontiac Special Data.

**TIGHTENING TORQUES:** See Pontiac Special Data.

**CYLINDER HEAD:** Tightening Torque & Cylinder Head Diagram—See Pontiac Special Data.

**PISTONS:** Chrome nickel alloy, electro-plated type. Pistons have 20 oil drain holes in oil ring groove. Length—3 19/32".

Weight—(1949) 24.64 ozs., (1950) 26.7 ozs.

**Removal**—Pistons and rods removed from above.

**Clearance**—Top Land .0165-.0284". Skirt—See Fitting New Pistons.

**Fitting New Pistons:**—Insert .0015" x 1/2" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. Taper and out-of-round limits—Piston .0005", Cylinder .0005" max. new.

**Replacement Pistons:** See Pontiac Special Data.

**PISTON RINGS:** Two tapered-face compression rings above pin, one slotted oil control ring below pin. Oil ring groove has 20 oil drain holes.

**NOTE**—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1,2)	3/32"	.008-.015"	.0015-.003"
Oil (#3)	3/16"	.007-.017"	.001-.0025"

**Installing Compression Rings**—Mark "TOP" up.

**Replacement Rings:** .005", .010", .020", .030" Oversize.

**PISTON PIN:** Diameter 15/16". Length 2 7/8".

Pin is shot-peened type (shot-peened before final grinding and lapping). Pin is locked in one piston boss by self-locking lock screw and opposite boss is slotted to permit pin movement.

**Pin Fit in Piston**—See Pontiac Special Data.

**Pin Fit in Rod Bushing**—.0004-.0006" clearance.

**Pin Removal & Installation:** See Pontiac Special Data.

**Replacement Pins:**—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

**CONNECTING ROD:** Weight 32 ozs. Length 7 9/16".

**Piston Pin Bushing (Upper Bearing)**—Split aluminum bronze bushings. See Pontiac Special Data.

**Lower Bearing Diameter**—2".

**NOTE**—Plastigage can be used for checking bearing clearance. See "Crankshaft & Main Bearings" in Pontiac Special Data.

**Lower Bearing**—Thin type, interchangeable, steel-backed, babbit-lined type.

**Clearance**—.0001-.0021". **Sideplay**—.007-.012".

**NOTE**—Plastigage can be used for checking bearing clearance. See "Crankshaft & Main Bearings" in Pontiac Special Data.

**Bearing Adjustment:**—None (no shims).

**Replacement Bearings:** Standard size & .001" Undersize. **NOTE**—Bearings have small tongue which must engage groove in rod and cap.

**Installing Rods:** Not offset (install either way).

**NOTE**—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used. **CAUTION**—Keep each connecting rod and its bearing cap together.

**CRANKSHAFT:** Five bearing type with integral counterweights and vibration dampener on forward end. **Bearing Diameters**—#1, 2 3/8"; #2, 2 13/32"; #3, 2 7/16"; #4, 2 15/32"; #5, ('49) 2 1/2", ('50) 2 5/8". **Bearings**—Thin type, removable, steel-backed, babbit-lined. Upper and lower bearing halves alike. **Clearance**—.0003-.0023".

**NOTE**—Plastigage can be used for checking bearing clearance. See "Crankshaft & Main Bearings" in Pontiac Special Data.

**Bearing Adjustment:**—None (no shims). See Pontiac Special Data for Removal and Fitting of Bearings.

**Rear Main Bearing Oil Seal Renewal**—See Pontiac Special Data.

**Replacement Bearings:** Standard & .001" Undersize. **End Thrust:** Taken by #4 (rear intermediate) bearing. **Endplay**—.003-.008".

**CAMSHAFT:** Five bearing, non-adjustable chain.

**Timing Chain Cover Oil Seal Installation**—See "Timing Chain" in Pontiac Special Data.

**Bearing Diameters**—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1 7/8". **For Bearing Finished Sizes**, see "Camshaft & Bearings" in Pontiac Special Data.

**Bearings**—Steel-backed, babbit-lined bushings.

**Clearance**—.0015-.0025" (new).

**End Thrust:** Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.002-.005".

**Timing Chain:** Morse. Width ('49) 3/4", ('50) 27/32". Pitch 3/8". Length 21" or 56 links.

**Chain Installation**—See Pontiac Special Data.

**Camshaft Setting:** Sprockets marked. Mesh chain with sprockets turned so that "0" marks are adjacent and in line with straightedge across shaft centers.

**VALVES:** Head Diameter Stem Diameter Length

Intake	1 15/32"	310-311"	5.53"
Exhaust	1 11/32"	310-311"	5.53"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"①
Exhaust	45°	19/64"	Free fit to .0006"①

① Guides tapered (.0006" max. clearance at bottom).

**Valve Guides:**—Removable, tapered guides (.001" taper to the inch with greatest clearance at top). Use Tool J-2542 for removing valve guides.

**Exhaust Guide Counterbore**—Exhaust guides are counterbored to a depth of 3/4". Use Tool Number J-2122 to clean out counterbore.

**IMPORTANT**—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. **NOTE**—Guides should be cleaned with Tool KMO-122 valve guide cleaner (blade type). Service guides straight cut. Install guides and ream to provide proper stem clearance with P R. 131 Reamer.

**Valve Springs:**—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 9/16".

## 1949 Valve Spring Specifications

	Spring Pressure	Spring Length
Valve Closed	59 1/2 lbs.	1 29/32"
Valve Open	101 lbs.	1 19/32"

## 1950 Valve Spring Specifications

Valve Closed	62 1/2 lbs.	1 23/32"
Valve Open	105 lbs.	1 13/32"

**Valve Lifters:**—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

**Clearance**—Free fit. Lifter should just move freely with finger touch.

## VALVE TIMING

**Tappet Clearance:** .011" to .013", All Valves, Hot. .011" "Go" gauge, .013" "No Go" gauge.

**High Speed Setting**—.013" EXH. Hot.

**Cold Setting with Engine Stopped**—.012" to .014" Cold (room temperature). **CAUTION**—Check setting after engine warmed-up for limits of .011" to .013".

**Valve Timing:**—See Camshaft Setting above.

**Intake Valves**—Open 5° BTDC. Close 39° ALDC.

**Exhaust Valves**—Open 45° BLDC. Close 5° ATDC.

**Valve Timing Check**—With .015" tappet clearance #6 intake valve should open with #6 piston 5° or .0089" before top dead center with first straight line of dampener mark 'IGN.ONE' slightly past pointer on left front face of chain cover. Reset tappet clearance .011-.013" (warm).

## LUBRICATION

**Engine Oiling System:** Pressure to main bearings connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and chain. **Crankcase Capacity**—3 qts. (refill), 6 qts. (dry). **Normal Oil Pressure**—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

**Oil Pressure Regulator**—On oil pump. Opens at 40 lbs. Non-adjustable. **NOTE**—Replace regulator spring if free length less than 2 5/16".

**Oil Pump:** Gear type. On right side of crankcase.

**Removal & Installation**—See Pontiac Special Data.

**Oil Cleaner:** Pontiac precipitation type (mounted in crankcase).

**Removal & Installation**—See Pontiac Special Data.

**Oil Pressure Gauge:** AC No. 1507350. Not electric.

**Crankcase Ventilation:** Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner use 3-piece outlet pipe containing filter element).

**Oil Filler (Crankcase Ventilator) Cap Cleaning**—Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

**CAUTION**—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

**Crankcase Ventilator Outlet Pipe**—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used which has copper gauze type air cleaner in container section. Wash and re-oil filter element when servicing air cleaner.

## COOLING

**Cooling System:** Pressure type with pressure valve and vacuum valve (relief valves) in filler cap. Water distribution tube installed in block.

**Capacity**—20 quarts.

**Pressure Valve**—AC No. 850501 Filler Cap. Opens at 4 lbs. (3¼-4¼ lbs.).

**Water Pump**: Packless, sealed ball-bearing shaft. **NOTE**—Fan flange reversed over previous models. Pump Body Plate and Cylinder Block-to-Pump Gasket changed during 1949 production.

*See Water Pump Section for complete data.*

**Removal**—Drain cooling system, remove hose connection at pump, remove belt, take out water pump mounting bolts and lift pump out.

**Belt Adjustment**—*See Generator Belt Adjustment.*

**Thermostat**:—Harrison. In cylinder head outlet.

**Setting**—Starts to open 151°F. Fully open 173°F.

**Temperature Gauge**: AC Electric type.

**Dash Unit**—AC No. 1512126.

**Engine Unit**—AC No. 1512015.

*See Miscellaneous Section for complete data.*

## CLUTCH

**Inland**. Single Plate, "Diaphragm", dry disc type with Long Driven Member Model 9½CF-TS (1949 exc. Taxi), Model 10CF-CS (1950, and '49 Taxi).

*See Clutch Section for complete data.*

► **1949 NOTE**—Driven Member same size as Six Cyl. but must not be interchanged. Can be identified by stenciled notation on facings and color markings of torsional springs in hub as follows:

	Facing Mark	Spring Color
1949 8 Cyl. ....	41-42 8 Cyl. ....	Brown & Blue
<b>Facings</b> —Molded type, 2 required. Inside Diameter 6" ('49 & Taxi), 6¾" (1950). Outside Diameter 9½" (1949), 10" (1950 & Taxi). ½" thick.		

**Pedal Adjustment**:—Free travel ⅞-1⅛" (adjusting nut on link at clutch fork).

**Removal**: Remove Transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing (**CAUTION**—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure reinstallation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw Driven Member, lower cover assembly and withdraw it through bottom of housing.

► **Removal of Excess Release Bearing Lubricant to correct clutch sticking.** *See 1949-50 Pontiac 6 pages.*

**Clutch Installation Note**—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

**CAUTION**—Make certain that correct type Driven Member is used (see Note above).

**Clutch Release Bearing & Support**: *See Pontiac Special Data for description.*

## TRANSMISSION

**Own Make**. All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for data.*

**Transmission Control**: Pontiac "Safety-shift" remote control type with gearshift lever on steering column. *See Transmission Section for complete data.*

**Removal**:—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.

**Installation Note**—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support). **NOTE**—These guide pins may be made from ½-13 American National Thread bolts by cutting heads off and reducing over-all length to ¼".

## HYDRA-MATIC DRIVE

### OPTIONAL EQUIPMENT

**Own Make**. Consists of Fluid Coupling and automatic self-shifting 4-speed planetary transmission.

► **Hydra-Matic Transmission Serial Number**—P9-1 UP. On plate on right side of transmission.

► **Hydra-Matic Neutral Switch Replacement on First 1949 Cars to correct Inoperative Starter**—*See "Pontiac Hydra-Matic Drive" in Transmission Section.*

**Lubrication**—Check fluid level in transmission every 2000 miles (at lubrication period). Drain and refill every 15000 miles. Use only GM Hydra-Matic Fluid.

**Draining & Refilling**—*See "Hydra-Matic Drive" in Transmission Section.*

**Checking Fluid Level**—Roll back right side of front floor mat. Clean all sand, lint, and dirt away from sheet metal cover in floor, remove cover, clean any dirt away from dipstick cover on transmission. **Set Hand Brake**. Run engine for approx. 1½ minutes at speed equivalent to 20 MPH. with selector lever in "Neutral." Reduce engine speed to slow idle and move selector lever to "Drive" position, measure level with dipstick, add fluid until level is at "FULL" mark with engine idling.

► **CAUTION**—Engine must be idling slow and selector lever in "Drive" position when checking fluid level.

**Linkage Adjustment**—*See "Hydra-Matic Drive" in Transmission Section.*

**Removal**: *See "Hydra-Matic Drive" in Transmission Section.*

## UNIVERSALS

**Mechanics Model 2CR** lock ring retainer type or Saginaw clamp plate retainer type.

*See Universals Section for complete data.*

► **CAUTION**—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Pontiac Rear Axle in Rear Axle Section.*

**NOTE**—Driveshaft is one-piece type (slip joint on transmission mainshaft ahead of front universal).

## REAR AXLE

**Own Make**. Hypoid gear, semi-floating type with pinion mounted on two taper roller bearings.

**CAUTION**—Rear Universal companion nut controls pinion bearing "pre-load."

*See Rear Axle Section for complete data.*

► **Filler Plug Production Change**—Moved from axle cover at rear to front face of carrier on right side on late cars.

Model	Ratio	Paint Mark①
Hydra-Matic (All) .....	3.63-1 .....	Violet
Synchro-Mesh ('49 Std.) .....	4.1-1 .....	Green
Synchro-Mesh ('50 Std.) .....	3.9-1 .....	Red
Synchro-Mesh (Mt.) .....	4.3-1 .....	White
Synchro-Mesh (Hvy. Dty.) .....	4.55-1 .....	Yellow

①—On outer end of axle shafts.

**Backlash**—.003-.012" (new), slightly over .012" (worn).

**Removal**:—Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts and carrier flange cap-screws. Withdraw carrier assembly from housing.

► **CAUTION**—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

**Axle Shaft Removal**:—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 —(do not drag axle shaft on oil seal).

**Wheel Bearing Adjustment**—None.

## SHOCK ABSORBERS

**Delco**. Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

*See Shock Absorber Section for complete data.*

## FRONT SUSPENSION

**Front Suspension**: New linked parallelogram type with direct acting shock absorber mounted within each coil spring.

*See Front Suspension Section for complete data.*

**Kingpin Inclination**—4¾° to 5¼° crosswise.

**Caster**—Neg. ¾°. Limits Neg. ½° to Neg. 1°. Adjustable.

**Camber**—0°. Limits Neg. ¼° to Pos. ¼°. Adjustable.

**Toe In**—0-1/16". Adjust rod sleeves equally.

## STEERING GEAR

**Saginaw**. Worm-and-Roller type.

*See Steering Gear Section for complete data.*

## BRAKES

**Service Brakes**: Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

*See Brake Section for complete data.*

**Wheel Cylinder Bore**—Front wheels 1 1/16". Rear ⅞"

**Drums**—Steel & cast-iron. Diameter 11".

**Lining**—Molded. Width 2¼" (front wheels), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary).

**Clearance**—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

**Braking Power**—60% front wheels, 40% rear.

**Hand Brake**: *See Service Brakes above.*

## MISC. MECHANICAL

**Convertible Top Control**: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

*See Miscellaneous Section for complete data.*

**Windshield Wiper**: Vacuum Link-&-Crank Arm type. *See Miscellaneous Section for complete data.*

**ENGINE REMOVAL****ALL 1949 MODELS**

See Engine Removal data for 1947-48 Champion and 1947-48 Commander in previous release.

**CYLINDER HEAD****ALL 1949-50 MODELS**

**CYLINDER HEAD INSTALLATION:** Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagrams. Tighten heads as follows:

**Cast Iron Heads—**With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts (additional tightening may be necessary for correct tension).

**Tightening Torque—**See Tightening (Torque Wrench) Specifications below.

**STUDEBAKER CHAMPION****STUDEBAKER COMMANDER****TIGHTENING (TORQUE WRENCH) SPECIFICATIONS****1949-50 CHAMPION**

**ORIGINAL BORE & PISTONS****ALL 1949-50 MODELS**

**ORIGINAL BORE & PISTON SIZES:** Bore Sizes. Marked by figure stamped on top face of cylinder block next to each cylinder bore as follows:

Champion	Size	Commander	Size
0.....	3.000"	25.....	3.3125"
05.....	3.0005"	3.....	3.313"
1.....	3.001"	35.....	3.3135"
15.....	3.0015"	4.....	3.314"
2.....	3.002"	45.....	3.3145"
25.....	3.0025"	5.....	3.315"

**Original Pistons—**Stamped with size of cylinder bore in which pistons are installed.

**Replacement Pistons—**Stamped figure on top indicates actual size of piston. Pistons furnished std. and .010", .020", .030", .040" Oversize.

**PISTONS****ALL 1949-50 MODELS**

**REPLACEMENT PISTONS:** Finished aluminum alloy pistons (with fitted piston pins) are furnished for replacement in the sizes listed below.

**NOTE—**Commander engine pistons are provided with a groove in the second land to reduce blow-by. Groove must be cleaned when pistons removed.

**1949-50 CHAMPION**

**CONNECTING ROD & BEARINGS****ALL 1949-50 MODELS**

**CONNECTING ROD 'PALNUT' INSTALLATION:** Used on all models. Consists of a special patented locknut installed on top of regular nut instead of cotter pin. To install Palnut, tighten regular nut properly (see Torque table), install Palnut with open face out (away from regular nut), tighten Palnut until it just contacts regular nut, then tighten Palnut 1/2 turn additional to lock it in place.

**VIBRATION DAMPENER****ALL 1949-50 MODELS**

**VIBRATION DAMPENER:** Dampener consists of a flywheel mounted on two rubber discs (discs have insulating buttons at pilot rivet holes) mounted on the crankshaft pulley hub at the forward end of the crankshaft and retained by a large nut on the end of the crankshaft. Compression of rubber discs is limited by length of crankshaft pulley hub (when retaining nut drawn up securely) and no adjustment required. If dampener does not operate correctly, replace rubber discs.

**CAMSHAFT & BEARINGS****ALL 1949-50 MODELS**

**CAMSHAFT REMOVAL (With Engine out of Car):** Remove vibration dampener (Puller HM-925), remove timing gear cover, pull crankshaft gear (Puller HM-925). Remove cylinder head, valves,

valve springs, and oil pump. Invert engine so that valve lifters will not interfere with camshaft removal. Remove two capscrews and lockwashers in timing gear thrust plate, pull camshaft straight out through front of engine.

**ALL 1949-50 MODELS**

**CAMSHAFT BUSHING INSTALLATION:** Use Tool J-2036-A to remove old bushings and to install new bushings.

**ALL 1949-50 MODELS**

**CAMSHAFT ENDPLAY:** Endplay regulated by thickness of spacer installed on camshaft directly behind timing gear and is equal to amount by which thickness of spacer exceeds thickness of thrust plate bolted on cylinder block. When installing new parts, measure both thrust plate and spacer with a micrometer, select parts so that endplay is .003-.006" (spacer must be .004-.006" thicker than thrust plate).

**TIMING GEARS****ALL 1949-50 MODELS**

**TIMING GEARS:** Camshaft Gears (All Models). Holes provided in gears for puller HM-925 installation to remove the gears. See Replacement Camshaft Gear Sizes (below) for size selection when replacing gears. Use gear pusher tool HM-861Y (all models) to install gears. **CAUTION—**Do not drive gears on with a hammer which will loosen gear at hub.

**Replacement Camshaft Gear Sizes:**—Furnished in three sizes: 'S'—Standard, 'H'—High Limit, 'L'—Low Limit. When replacing gear on engine with considerable service, install next largest camshaft gear size. For reconditioned engine with new camshaft and main bearings use same size gear. Crankshaft gear furnished in standard size only.

**Crankshaft Gear (All Models):**—Tapped holes provided in all gears for puller. Use Puller HM-925 to remove gear, Pusher HM-861Y to install gear.

**VALVE SYSTEM****ALL 1949-50 MODELS**

**VALVE SPRING INSTALLATION:** Springs should be installed with closed-coil end of spring upward.

**Valve Lifter Tension Spring:** Consists of "U" shaped flat spring installed so as to engage lower end of valve stem and upper end of lifter (spring tension keeps lifter on cam lobe). Make certain that tension springs in place when valves and springs installed.

**ALL 1949-50 MODELS**

**SELF-LOCKING TAPPETS:** Tappet screws slotted on lower end and require no locknuts. When tappet screws replaced, car manufacturer recommends that screws must check as follows: Pull required to move tappet screw must be 25 in. lbs. minimum (4 lbs. pull on 6" wrench).

**ALL 1949-50 MODELS**

**VALVE CHAMBER BAFFLES:** Oil baffle plates are provided to prevent excessive oil splash in valve spring chamber. One baffle is used in each half of the chamber. Baffles straddle lifters. Champion baffles are same for both halves of the chamber and are interchangeable. Commander baffles are marked front and rear (install as marked).

**Installation—**Insert baffle so curved portion is upward, with notch aligned with cover plate screw hole. Install cover plate, making sure notches straddle cover plate screws. With cover installed, baffle is held tightly in place against cover and cover plate screws.

**OIL PUMP****1949-50 CHAMPION**

**OIL PUMP REMOVAL:** Oil pump must be disassembled as follows for removal from engine: Remove 4 cover screws and washers, take off cover, gasket, idler gear, and drive gear. Remove woodruff key and "C" washer from driveshaft which allows pump body to be taken off engine (driveshaft stays in engine). Oil pan must be removed in order to take out oil pump driveshaft.

**Oil Pump Re-Assembly and Installation:** Turn engine over until #1 piston at TDC entering power stroke, and "UDC.1-6" mark aligned with pointer. Engage pump shaft with key-way in end of shaft pointing down (key way will rotate to rear when gears meshed). Install new body gasket and pump body over shaft, insert "C" washer and woodruff key on shaft, install pump drive gear and idler gear. Install cover using a new cover gasket and tighten screws securely. Prime pump with engine oil by disconnecting oil pressure gauge line fitting at pump.

**1949-50 COMMANDER**

**OIL PUMP REMOVAL:** Disconnect battery, turn crankshaft to #1 piston firing position with mark "UDC.1-6" at timing pointer. Proceed as follows:

- 1)—Take out starter mounting capscrews, tie starter up out of the way (not necessary to disconnect cables and wires).
- 2)—Use jack to raise rear end of engine just enough to remove weight from rear engine mountings, remove support mountings from cross-member, remove clutch operating shaft bracket-to-crossmember bolts.
- 3)—Place hydraulic jack between right frame side rail and base of engine block with ram of jack just to rear of breather tube, move rear of engine about 2" to left.
- 4)—Disconnect oil pressure gauge line at oil pump cover elbow.
- 5)—Take out four capscrews in pump cover which mount pump body on engine, remove cover and pump body assembly.

**Disassembly of Pump:** With pump cover off, remove cover gasket, lift out idler gear, drive out pin in pump driveshaft gear, press shaft and gear out of driving gear in an arbor press. Then press pump gear off shaft, remove thrust "C" washer and woodruff key from shaft.

**Reassembly of Pump:** Install thrust "C" washer on shaft and woodruff key in slot adjacent to "C" washer groove, press oil pump drive gear on shaft. Install shaft with gear in pump body. Press driveshaft gear on opposite end of shaft with pin hole in shaft and gear in alignment. Use new 3/16" pin to lock gear to shaft (peen pin securely). If new driveshaft and driveshaft gear installed, proper endplay secured by pressing shaft on gear with .003" feeler inserted between gear and upper end of pump body, drill hole in shaft using hole in gear as a guide, ream hole to 3/16", use new 3/16" pin to lock gear (peen pin securely). Use new gaskets throughout. Install pump on engine, prime pump with engine oil by disconnecting oil gauge line at elbow on pump.

**Installation:** Use new pump body gasket. Turn pump shaft so that pump drive gear keyway faces toward rear of car, make certain that crankshaft turned to #1 piston firing position with mark "UDC.1-6" at timing pointer, engage pump drive shaft gear with camshaft gear. With pump in position against

engine block, keyway should point almost straight downward. Use new cover gasket when installing cover, reassemble all parts disconnected when removing pump.

**OIL PAN REMOVAL****ALL 1949 MODELS**

**OIL PAN REMOVAL:** Car manufacturer recommends that engine be removed from chassis. See **ENGINE REMOVAL** (preceding).

**1949 CHAMPION**

**OIL PAN INSTALLATION:** Check engine front plate gasket and replace if required. Install side pan gaskets with tight fit against front plate gasket. Next install oil pan filler block gasket (use only iron filler blocks on these cars). Do not tighten timing cover to block screws. Install rear oil pan gasket and guide oil pan into place using pilot screws. Tighten oil pan screws. Finally tighten oil pan filler block screws on timing gear cover.

**1950 CHAMPION**

**►OIL PAN REMOVAL & INSTALLATION—Not necessary to remove engine from car.**

**Removal:** Drain oil, remove oil level gauge stick. Disconnect center auxiliary tie rod from steering gear pitman arm and idler arm, remove tie rod. Remove lower exhaust pipe bracket-to-clutch housing bolt to provide clearance. Remove engine front splash pans. Remove engine front support-to-crossmember bolts. Place hydraulic jack under oil pan mounting flanges at each side of engine and as far forward as possible (CAUTION—do not place jack under center of pan), raise engine so that front support cushion is 1½" from top of front crossmember and insert a block of wood to hold engine in this position. Remove both jacks. Take out four lower timing gear cover screws to permit removal of oil pan filler block. Take out oil pan screws and remove pan.

**Installation:** Install side gaskets on block flanges, and new gasket in rear main bearing cap channel. Position filler block at front engine plate and align holes in block and timing gear cover, install timing gear cover screws loosely. Place filler block gasket on oil pan, place pan in position and install all screws. After pan screws tightened, tighten timing gear cover screws securely. Raise engine just enough to remove wood support block, then lower engine and reassemble disconnected parts.

**1950 COMMANDER**

**►OIL PAN REMOVAL & INSTALLATION—Not necessary to remove engine from car.**

**Removal:** Drain oil, remove oil level gauge stick. Disconnect and remove front stabilizer shaft by disassembling link assembly at each side and taking off shaft bushing retainer at each frame side rail. Disconnect both tie rods at steering knuckle arms, remove steering bell crank shaft and bracket assembly by loosening clamp bolt holding bellcrank on shaft and taking out bracket mounting bolts. Swing bellcrank and tie rods toward left side of car and tie up out of the way. Remove lower right clutch housing bolt for clearance in removing pan. Remove engine front support-to-crossmember bolts. Place hydraulic jack under oil pan mounting flanges at each side of engine and as far forward as possible (CAUTION—do not place jack under center of pan), raise engine so that front support is 1½" from top of front crossmember and insert a block of wood to hold engine in this position. Remove jacks. Take out oil pan screws and remove pan.

**Installation:** After installing oil pan, raise engine just enough to remove wood block, then lower engine and reassemble all disconnected parts.

**PROPELLER SHAFT****ALL 1949-50 MODELS**

**PROPELLER SHAFT & SUPPORT BEARING ASSEMBLY:** New type two-unit propeller shaft (separate Front and Rear Propeller Shafts) with intermediate Universal Joint in Support Bearing Assembly on cross-member.

**Front Propeller Shaft—**One piece type (no slip joint) with intermediate universal joint yoke splined on rear end and retained by capscrew in end of shaft. See Support Bearing Assembly.

**Rear Propeller Shaft—**Conventional type with slip joint at forward end.

**Universal Joints—**Spicer needle bearing type. Bearing cups are retained on yokes by "U" bolts and universals are dismantled by removing nuts from these bolts. See *Universals Section* for complete Universal Joint data.

**Propeller Shaft & Support Bearing Removal:** Disconnect rear propeller shaft by taking out "U" bolts mounting intermediate universal joint on rear flange of front shaft (behind support bearing assembly) and sliding universal joint and stub shaft back on slip-joint. Remove capscrew and washers retaining universal joint flange on rear of front shaft, punchmark flange and shaft to insure correct re-installation, remove flange using Puller J-2046. Remove nuts and washers on forward end of studs mounting support assembly on frame cross-member, pull assembly off splines of front propeller shaft. To dismantle support cushions, remove nuts and washers on rear end of frame mounting studs. Studs have shoulder at each end to position rubber cushion and prevent excessive compression of the cushion when stud nuts are tightened.

**Installation—**Re-install support bearing assembly and propeller shafts by reversing removal instruction.

**Support Bearing Servicing:** Bearing is sealed type (pre-packed with lubricant) and must never be washed in gasoline or other solvents.

**CAUTION—**Do not re-install support bearing which has been washed in gasoline or other liquids which will remove lubricant.

**Bearing Removal & Installation—**To remove bearing from support bracket, press bearing out using a piece of tubing of sufficient size to engage outer bearing race. Install new bearing in same manner and press bearing in until outer bearing race is just flush with front edge of support bracket. With front propeller shaft in place in car, install dust shield on the shaft, then install support bearing assembly, secure support to cross-member with lockwashers and nuts on forward ends of studs, make certain that plain washer and lockwasher installed on rear end of studs. Tighten nuts securely.

**BRAKE NOTES****ALL 1949-50 MODELS**

**HILL-HOLDER ADJUSTMENT:** On cars with Hill-Holder (optional equipment), check action whenever clutch adjusted to make certain that brakes release just before clutch engages.

**Adjustment—**Loosen locknut on end of Hill-holder control rod, shorten rod for earlier brake release, lengthen rod for later release, tighten locknut.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** Stamped on plate on left front door lock pillar post.

1949 Numbers—G-400510 Up (South Bend), G-839701 Up (Los Angeles), G-703101 Up (Hamilton).

**Body Symbol Letter**—Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan.

**ENGINE NUMBER:** Stamped on pad on upper front left corner of engine block.

1949 Numbers—441,001 Up (South Bend & Los Angeles), C-4101 Up (Hamilton).

**NOTE**—Letter "A" following engine number indicates crankshaft main bearing journals .005" Undersize.

**TUNE-UP**

**COMPRESSION PRESSURE:** 105 lbs. at 150 RPM.

**VACUUM READING:** Steady 17-18" idling at 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .025" Limits .0225-.0275".

Plug Type—Champion Type J7 or J9. 14 mm.

**DISTRIBUTOR:** Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.20-.25 microfarad.

**IGNITION TIMING:** 2° BTDC.

Timing Procedure—See Ignition Timing.

**Timing Mark**—Vibration dampener mark "IGN/" aligned with pointer on left side of engine. **NOTE**—Insert .020" feeler between modifier control arm and clamp arm before tightening clampscrew.

**Octane Selector Setting**—Set to just eliminate ping when engine hot and pulling hard.

**CARBURETION:**

**Idle Setting**— $\frac{1}{2}$ - $1\frac{1}{2}$  turns open. Turn screw out for richer mixture.

**Idle Speed**—8-10 MPH. at normal operating temp.

**Float Level**— $\frac{3}{8}$ ". Measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover assembly inverted.

**Accelerating Pump**—No seasonal adjustment.

**Choke Setting:** Centered (at index).

**Fuel Pump Pressure:** 4-5 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type operating in stainless steel bushings.

**Setting**—To test coil tension, free outer end of coil from anchor post. With valve closed (counterweight up), hooked end of coil should be approx. 90° from anchor post with coil at 70°F. **NOTE**—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings (do not ream bushings).

**VALVE TAPPET CLEARANCE:** .016" All Valves, Cold.

Valve Timing Check—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchelllock Switch Model 42-R. No. E-10336 (for Y & T lock) or E-10522.

Ignition Lock—Yale & Towne.

**COIL:** Auto-Lite No. CE-6007. Mounted on the engine above distributor (under spark plug cable bracket).

Ignition Current— $\frac{1}{2}$ - $1\frac{1}{2}$  amps. idling. 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671.

Capacity—.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Model IGC-4805. Full automatic advance type with vacuum spark control.

Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

Distributor Automatic Advance Engine			
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
2	680	4	1360
4	975	8	1950
6	1265	12	2530
7	1400	14	2800

**Vacuum Spark Control:** Auto-Lite Model VC-4011. Unit mounted on hold-down plate and linked to advance plate. Provides additional advance at speeds

above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

**Vacuum Advance**

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4"
2°	4°	5½"
5°	10°	7½"
7°	14°	11¼"
9°	18°	14¼"

**Octane Selector**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note**—When installing distributor, crank engine to firing position for #1 cylinder (dampener mark "IGN" in line with pointer on the timing gear cover, sight down distributor shaft

hole (distributor out) and see that distributor drive tongue in oil pump drive gear is parallel to and narrow half of offset toward camshaft, turn rotor to #1 segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening the clamp, to prevent binding).

### IGNITION TIMING

**Std. Setting** Flywheel Degrees Piston Pos.  
All Engines ..... 2° BTDC ..... .0016" BTDC  
This setting correct for regular fuel (See Octane Selector Setting for service and fuel modification).  
**NOTE**—Ignition marks now located on vibration dampener at front of engine.

**Timing (With Neon Timing Light)**—Clip timing light lead in series with #1 spark plug, direct light on vibration dampener at front of engine. Loosen hold-down plate screw, center octane selector pointer on scale, tighten hold-down screw. Run engine at idle speed, loosen clamp arm, rotate distributor until "IGN/" mark on dampener appears in line with pointer on left side of timing gear cover, tighten clamp screw. Check Octane Selector setting. **CAUTION**—Insert .020" feeler between modifier arm and clamp arm when tightening clamp arm.

**Timing (Without Neon Timing Light)**—With #1 piston on compression, turn engine over until "IGN/" mark on vibration dampener lines up with pointer on left side of timing gear case. Adjust distributor as directed above.

**Octane Selector Setting**—After setting timing (above), loosen selector hold-down screw, advance timing by turning distributor clockwise (move pointer toward "A" end of scale) until engine "pings" when hot and pulling hard, then retard timing by turning distributor counter-clockwise (move pointer toward "R") until ping disappears.

### CARBURETOR

Carter WE-715S—1¼" single barrel, downdraft, with Carter Climatic Control.  
Casting No. on Flange—620.  
See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, & Accelerating Pump):** See Tune-Up.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Carter Single Barrel Carburetor type.

See Carburetion Equipment Section for data.

**Setting**—.046" between throttle valve and bore of carburetor. To check, remove thermostatic coil housing, gasket and baffle plate. Crack throttle valve and hold choke valve closed. Close throttle. Adjust by bending connector rod at lower angle.

**Automatic Choke:** Carter Climatic Control (Single Carburetor type).

See Carburetion Equipment Section for data.

**Setting**—Centered (at index).

### CARB. EQUIPMENT

**Air Cleaner:** AC No. 1543970 Oil-wetted type Std. Filter Element AC #1. Oil-bath Air Cleaner Optl.

**Servicing (Oil-wetted type)**—Clean and re-oil filter element at 1000 mile intervals.

**Servicing (Oil-bath type)**—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

**Fuel Pump (Std.):** AC #1539092 or AC #1539416.

Optl. (Fuel & Vacuum): AC #1539218.

Exchange Pump—AC No. 576 (Std.), 9218 (Optl.).

Pressure—4-5 lbs. maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge:** Stewart-Warner Electric type.

**Dash Unit**—Studebaker No. 522177.

**Tank Unit**—Studebaker No. 525548.

See Carburetion Equipment Section for data.

### BATTERY

**Willard Type HW-1-100.** 6 volt, 15 plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five Second Voltage 4.3 volts.

**Grounded Terminal**—Positive (+) to cyl. head.

**Dimensions**—L. 9 3/64". W. 6 13/16". H. 8 5/8".

**Location**—In engine compartment on left side.

### STARTER

**Auto-Lite Model MZ-4151.** Armature No. MZ-2111.

**Drive**—Barrel type Bendix Drive No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 amperes, 5.2 volts, 150 RPM.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Starting Switch:** Magnetic switch mounted on starter and controlled by Auto-Lite Model SW-4016 manual switch on toeboard operated by clutch pedal.

**Removal:**—Flange mounted on engine rear plate at left side. To remove, take out flange mounting screws, take off starter and switch assembly.

### GENERATOR

**Auto-Lite Model GDZ-4804A.** Armature No. GDZ-2006F. Two brush type with current-voltage control. Charging Rate Adjustment—None. See Regulator. Maximum Charging Rate—35 amperes, 8.0 volts, 2250 Gen. RPM (hot), at car speed of 24 MPH & above with load or discharged battery (regulator setting).

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, move generator out until 3/8-1/2" belt deflection mid-way between generator and fan pulleys is obtained

### REGULATOR

**Auto-Lite Model VRP-4004F.** Voltage & Current Type. Consists of Cutout Relay and vibrating type Voltage & Current Regulators in case on dash.

See Electrical Equipment Section for complete data.  
**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

#### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts), 10.4 MPH.

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

#### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

#### Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover).

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

### LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—At center of speedometer dial. Lighted whenever Country (upper) beams in use.

**Direction Signal:** See Electrical Equipment Section.

**Direction Signal Indicators**—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

#### Switches

**Lighting**—Douglas. Studebaker No. 519798.

**Beam Selector**—Delco-Remy No. 1997008, Studebaker No. 519248.

**Stop Light**—Studebaker No. 666858.

**Direction Signal**—Studebaker No. 520304.

### MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER (On Light Switch):** Studebaker No. 522014. 30-ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.

**Auxiliary Circuit Breaker (On Panel):** No. 523056. 15-ampere thermostatic type. Protects Body & Stop Lamps by vibrating to limit current.

**ACCESSORY CIRCUIT BREAKER:** One 15-ampere type used on cars with Climatizer and Defroster.

**FUSES:** Clock—3 ampere. In clock lead.

**Direction Signal**—14 ampere. In Flasher lead.

**Overdrive**—20 ampere. On Overdrive Relay.

**Glove Compt. Light**—5 ampere. In lamp lead.

**Under Hood Light**—5 ampere. In lamp lead.

**Fog Lights**—20 ampere. On Fog Light Switch.

**HORNS:** Sparton or Delco-Remy No. 1999610 (High Note), 1999611 (Low Note). Twin Airtone type horns operated by relay. Horn Current—12-15 ams. (each).

**Horn Relay:** Delco-Remy No. 1116775.

**Contacts Close**—2.75-4.0 volts.

**Contact Gap**—.025". Air Gap—.015" (closed).

C NTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PA E

## ENGINE

**ENGINE REMOVAL** for Oil Pan Removal and all major engine work: See *Studebaker Shop Notes*.

**ENGINE SPECIFICATIONS:** Six cylinder, "L" Head. Bore—3". Stroke—4". Displacement—170 cu. ins. Rated H.P.—21.6. Developed Horsepower—80 at 4000 RPM. Compression Ratio—6.5-1 Std. 7.0-1 Optl. iron hds. NOTE—7.0-1 Head for 5000 ft. & higher altitudes. Compression & Vacuum Reading—See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Studebaker Shop Notes*.

**TIGHTENING TORQUES:** See *Studebaker Shop Notes*.

**CYLINDER HEAD INSTALLATION:** See *Studebaker Shop Notes*.

**PISTONS:** Lynite aluminum alloy, Cam ground, T-slot, bearing-metal plated type. Length—2 29/32". Weight—8.48 ozs. (without rings or pin). Clearance—Selective fit (see *Fitting Pistons*).

Removal—Pistons and rods removed from above.

**Fitting New Pistons:** Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 11-16 lbs.

**Replacement Pistons:** See *Studebaker Shop Notes*.

**Installing Pistons:** T-slot away from camshaft.

**PISTON RINGS:** Two compression (Perfect Circle #200 Top, #70 —2nd), one Oil Control (#85).

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	.0015-.002"
Compr. #2	1/2"	.007-.017"	.0015-.002"
Oil Contr. (#3)	5/32"	.007-.017"	.0015-.002"

**Installing Rings:** Step up top ring, step down 2nd ring.

**Replacement Rings:** Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

**PISTON PIN:** Diameter .7491-.7495". Length 2 3/8". Pin is locked in rod by tapered pin and locknut.

**Pin Fit in Piston:** .0001-.0003" clearance or light finger-push fit at room temperature (70°F).

**Installing Pins:** Use Pin Assembly Tool J-1293. Install clamp bolt nut and star washer on heavy boss side of rod. NOTE—Threads on opposite end of clamp bolt used only to remove bolt from rod (install nut on this end, tighten nut to pull bolt out of rod).

**Replacement Pins:** Std. & .0025", .005" oversize. Use Hone No. PH-1 to obtain proper piston pin fit. NOTE—Replacement pistons fitted with pins.

**CONNECTING ROD:** Length 6 3/8". Weight 20.48 ozs. Crankpin Journal Diameter—1.81175-1.81275"

**Lower Bearing:** Interchangeable steel-backed, micro-babbitt lined type. No shims. Clearance—.0005-.002" Sideplay—.005-.009".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or bearing caps.

NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.

**Palnut Installation:** See *Studebaker Shop Notes*.

**Replacement Bearings:** Bearings furnished Std. Size and .001", .005", .010", .020" Undersize.

**Installing Rods:** Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and in-

stalled in same numbered cylinder with number and oil hole in lower end of rod toward camshaft side.

**CRANKSHAFT:** Four bearing type with integral counterweights. Vibration dampener on front end. Vibration Dampener—See *Studebaker Shop Notes*.

**Journal Diameters:**—2.4370-2.4375" (All) Std.

► **CAUTION**—Journals are .005" Undersize on engines with letter "A" following Engine Number.

**Bearing Type:** Removable type, steel-backed, micro-babbitt lined. No shims. Clearance—.0005-.0025".

**Rear Bearing Oil Seals:** Consist of rubber ring, Studebaker No. 521544 (After Eng. No. 284200), on crankshaft; two rubber seal strips, Studebaker No. 522144, in grooves on top of bearing cap; and two specially treated wood strips, Studebaker No. 197178, in grooves on sides of bearing cap.

► **CAUTION**—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

NOTE—Front oil pan seal block may be removed for access to front main bearing cap by removing four lower timing gear cover retaining screws. Use only malleable iron type filler block on these cars.

► **CAUTION**—Do not securely tighten timing gear cover to-filler block screws until after oil pan screws tightened uniformly and securely.

**Replacement Bearings:** Furnished as sets or single bearings Std. & .001", .005", .010", .020", .030" U. S.

**End Thrust:** Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal. Adjust by changing shims (.003", .005", .007" thick). Endplay—.003-.006".

**CAMSHAFT:** Four bearing type. Helical gear drive. **Journal Diameters:**—#1, 1.7475-1.7480"; #2, 1.7162-1.7170"; #3, 1.6857-1.6865"; #4, 1.6232-1.6240".

**Bearings:** Split, steel-backed, babbitted bushings. Clearance—.0007-.0022" (#1), .0010-.0027" (others).

**Bearing Adjustment:** None. Replace bushings with camshaft removed. NOTE - Align bushing oil hole with oil hole in block.

**Camshaft Removal:** See "Camshaft & Bearings" in *Studebaker Shop Notes*.

**End Thrust:** Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub).

Endplay—.003-.006". Tighten cap screws alternately a few turns at a time to prevent distortion of plate.

**Timing Gears:** Crankshaft gear Cast Iron, Camshaft gear Celoron with steel hub.

Backlash—.001-.003".

**Replacement Gears:** Camshaft gear furnished in three sizes: Standard (marked "S"), High Limit (marked "H"), Low Limit (marked "L"). Crankshaft gear furnished Standard size only.

**Timing Gear Removal & Installation:**—See "Timing Gears" in *Studebaker Shop Notes*.

**Camshaft Setting:** Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"
	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.0015-.0035"

**Valve Guides:** Pressed in block from above with top of guide 1 3/16" below top of block. Finish ream guides to inside diameter of .312-.3125". Use Valve Stem Guide Remover and Replacer Tool J-2034. Replace worn guides if clearance greater than .0035".

**Valve Springs:** Install with closed coil end up. Replace springs if more than 10% weaker than test pressure of 77-85 lbs. at 1 7/16" (U-15 or other accredited tester). Spring free length 2 3/32".

	Spring Pressure	Spring Length
Valve Closed	52-56 lbs.	1 21/32"
Valve Open	93-103 lbs.	1 5/16"

NOTE—Install valve spring retainer with flange engaging flat surface on lower coil and tongue on inner diameter engaging groove in spring lock.

**Valve Lifters:** Mushroom type. Remove from below with camshaft out of engine. For *Camshaft Removal directions*, refer to *Studebaker Shop Notes*.

**Valve Lifter Tension Spring:**—See "Valve System" in *Studebaker Shop Notes*.

Clearance—.0005-.00175".

**Replacement Lifters:**—Furnished Std. size and .0005", .001" Oversize.

## VALVE TIMING

**Tappet Clearance:** .016" All Valves, Engine cold.

NOTE - Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.

**Valve Timing:** See *Camshaft Setting* above.

**Intake Valves:**—Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves:**—Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check:**—With .020" tappet clearance, #1 intake valve should open with #1 piston 15° or .0893" BTDC. with vibration dampener mark "IN. OP 1-6/" in line with pointer on left side of timing gear cover. Reset tappet clearance to .016" Cold

## LUBRICATION

**Lubrication System:** Pressure to crankshaft, connecting rod, and camshaft bearings and to valve lifters. Timing gears lubricated by oil by-passed by pump.

**Crankcase Capacity:** - 5 qts. ("Add Oil" point on oil level indicator stick is 3 qt. level).

**Normal Oil Pressure:**—20-40 lbs. at 40 MPH.

**Oil Pressure Relief Valve:**—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

**Oil Pan Removal:** See *Engine Removal in Studebaker Shop Notes* (recommended for pan removal).

**Oil Pump:** Helical gear type. Mounted externally on right hand side of crankcase.

**Oil Pump Removal & Installation:**—See "Oil Pump" in *Studebaker Shop Notes*.

**Oil Filter (Optl.):** Fram Model F3-P2 (Std. Service), F4-P2 (Heavy Duty). Replacement Cartridge Kit Studebaker No. 520829 (F3-P2), 520830 (F4-P2).

**Oil Pressure Gauge:** Stewart-Warner Bourden tube (not electric) type. Studebaker No. 522179.

**Crankcase Ventilation:** Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).

**Servicing:**—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—Filter in outlet pipe removed by taking out cotter pin.

## COOLING

**Cooling System:** Positive circulation with water pump mounted on front of block with fan.  
Capacity—11 quarts.

**Water Pump:** Packless, sealed ball bearing type.  
See *Water Pump Section* for complete data.

**Removal:** Slack off drive belt, take out capscrews in the fan pulley hub & remove fan blades. Disconnect hose connection, take out mounting screws in pump body flange, withdraw pump from engine.  
**Belt Adjustment:**—See *Generator Belt Adjustment*.

**Thermostat:** Bishop & Babcock. In water outlet on cylinder head.

**Setting:**—Starts to open at 151-155°F.

**Temperature Gauge:** Stewart-Warner Bourden tube type (not electric). Studebaker No. 522180.

## CLUTCH

**Borg & Beck Model 8A7 with Borglite Driven Member.** Single plate, dry disc type. NOTE—Clutch assembly marked by number 980 stamped on cover.  
See *Clutch Section* for complete data.

**Facings:**—Moulded Metallic type, 2 required, I.D. 5 $\frac{3}{8}$ ". O.D. 8". Thickness  $\frac{1}{8}$ ".

► **CAUTION**—Special driven member used on cars with Overdrive. Identify each type by hub damper spring color as follows: Damper Spring Color.  
Cars with Conventional Trans. .... 2 Lavender, 2 Black  
Cars with Overdrive Trans. .... 4 Lavender

**Pedal Adjustment:** Pedal free travel  $\frac{1}{2}$ " to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

Cars before Serial No. G-217064—Pedal free travel must be set to  $\frac{1}{2}$ " to  $\frac{3}{4}$ " on these cars.

**Hill-Holder Note:**—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages.

**Hill-Holder Adjustment:** See *Studebaker Shop Notes*.

**Removal:** Car manufacturer recommends Engine (with clutch attached) be removed. See *"Engine Removal"* in *Studebaker Shop Notes*. Block release levers. Remove six mounting screws in clutch cover flange, lift off clutch assembly and driven member.

## TRANSMISSION

**Warner Model AS1-T96 (Std.), AS2-T96 with R10B type Overdrive (Optl.).** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section* for complete data.

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

See *Transmission Section* for complete data.

**Removal:** Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

## OVERDRIVE

**Warner Type R10B (part of AS2-T96 Transmission).** New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."

See *Transmission Section* for complete data.

**Overdrive Solenoid:**—Warner Model No. 3AR10B-62, Studebaker No. 521429.

**Overdrive Governor:**—Warner Model No. AR10B-72, Studebaker No. 520454.

**Control Relay:**—Auto-Lite HRT-4001, Studebaker No. 523297.

**Throttle Kick-down Switch:**—Studebaker 515667.

**Lock-out Switch:**—Studebaker No. 521436.

**Fuse:**—20 ampere. On Overdrive Relay.

**Removal:** See Std. Transmission Removal data

## UNIVERSALS

**Spicer Model 1268-110X (Front & Rear), 1261-102X intermediate).** Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft)  
See *Universals Section* for complete data.

**Propeller Shaft & Support Bearing:** Two shafts used:  
1) Front Shaft with intermediate universal yoke bolted on rear end (no slip-joint).  
2) Rear Shaft with slip-joint on forward end at intermediate universal.

**Propeller Shaft & Support Bearing Removal & Servicing:**—See *"Propeller Shaft"* in *Studebaker Shop Notes*.

## REAR AXLE

**Spicer Salisbury Model 23.** Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

**Ratio:**—4.1-1 Std. 4.56-1 Optl. (Std. with Overdrive).

**NOTE:**—Rear axle ratio stamped on plate attached to axle by cover capscrew.

**Backlash:**—.003-.006". Shim adjustment.

**Removal:** Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

**Axle Shaft Removal:**—Remove wheel, remove wheel hub (use puller J-446-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with Puller HM-931.

**Wheel Bearing Adjustment:** Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Endplay—.001-.005".

## SHOCK ABSORBERS

**Honde (Houdaille).** Double acting, hydraulic type.  
**Front:**—Honde No. A-14269, Studebaker 523646.

**Rear:**—Honde No. A-11478 (Left), A-11477 (Right), Studebaker No. 517696 (Left), 517695 (Right).

See *Shock Absorber Section* for complete data.

**Adjustment:** Adjusting pointer on end of shaft should be lined up with scribed line on end of shaft. Turn pointer clockwise for firmer action, counter-clockwise for softer action (not more than 1/32-1/16").

**Refilling:** Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—Use only Houdaille Shock Absorber Fluid No. L-1404 (new type fluid for shock absorbers with new circular top filler plug)

## FRONT SUSPENSION

**Front Suspension:** Planar type independent suspension with transverse spring. NOTE—Suspension system has lower control arms (with leaf spring).

See *Front Suspension Section* for complete data.

**Kingpin Inclination:**—5 $\frac{1}{2}$ ° crosswise.

**Caster:**—+ $\frac{1}{2}$ ° to +1 $\frac{1}{2}$ °.

**Camber:**—0° to 1°. Shim adjustment (shims between upper control arm brackets and frame). One thin shim changes setting approx.  $\frac{1}{4}$ °. Thick shim equals 4 thin shims.

**CAUTION:**—Add or remove shims equally at front and rear brackets when adjusting Camber.

**Toe In:**—1/16-1/8". Adjust right hand tie rod only for toe in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. RHD Car Note—Make toe-in adjustments on left hand tie rod.

## STEERING GEAR

**Ross Model T-12 Cam-and-Twin Lever type.**

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes are new design with automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes. NOTE—New type actuating spring used on brake shoe contact plug on 1948-49 cars (replaces hairpin locks and contact plug coil spring).

See *Brake Section* for complete data.

**Drums:**—Composite type. Diameter 9".

**Clearance:**—Adjustment necessary only when new linings installed. See *Brake article in Brake Section*.

**Lining:**—Moulded type (all shoes). Width 2". Thickness 3/16". Length per wheel 18.5".

**Braking Power:**—57% Front. 43% Rear.

**Hand Brake:** See Service Brake data (above).

**Hill-Holder:** Optional Equipment on all models.

See *Brake Section* for complete data.

**Adjustment:**—See *Studebaker Shop Notes*.

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive)  
See *Miscellaneous Section* for complete data.

**Windshield Wiper:** Vacuum type—cable operated.  
See *Miscellaneous Section* for complete data.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** Stamped on plate on left front door lock pillar post.

South Bend Los Angeles  
1949 Numbers 4361001 Up. 4832701 Up

**Body Symbol Letter**—Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan; Y, Land Cruiser.

**ENGINE NUMBER:** Stamped on pad on upper front left corner of engine block.  
1949 Numbers—H-326001 Up.

**TUNE-UP**

**COMPRESSION PRESSURE:** 105 lbs. at 150 RPM. cranking speed for Std. 6.5-1 Head.

**VACUUM READING:** Steady 18-20" idling at 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .025" Limits .0225-.0275".

Plug Type—Champion Type J7 or J9. 14 mm.

**DISTRIBUTOR:** Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° Closed. 22° Open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.20-.25 microfarad.

**IGNITION TIMING:** 2° BTDC.

Timing Procedure—See Ignition Timing.

**Timing Mark**—Vibration Dampener mark "IGN/" aligned with pointer on gear case cover. NOTE—Insert .020" feeler between modifier control arm and clamp arm before tightening clampscrew (to prevent binding).

**Octane Selector Setting**—Set to just eliminate ping when engine hot and pulling hard.

**CARBURETION:**

**Idle Setting**—Idle screw set for smooth idle. Turn screw out for richer mixture.

**Idle Speed**—8-10 MPH. at normal operating temp.

**Float Level**—Fuel level  $\frac{3}{8}$ " below top edge of float bowl with engine idling.

**Accelerating Pump**—Center hole (med. stroke) Normal all-season setting. Inner hole (min.)—Summer, Outer hole (max.)—Winter used for temperature extremes.

**Choke Setting:** Centered (at index).

**Fuel Pump Pressure:** 4-5 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type operating in stainless steel bushings.

**Setting**—To test coil tension, free outer end of coil from bracket on manifold. With valve closed, hooked end of coil should be approx. 90° from bracket at 70°F. Replace coil if incorrect.

**NOTE**—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings.

**VALVE TAPPET CLEARANCE:** .016" All Valves, Cold.

**NOTE**—Self-locking tappet screws used.

**Valve Timing Check**—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchelllock Switch Model 42-R.

No. E-10336 (for Y & T lock) or E-10522.

**Ignition Lock**—Yale & T wne.

**COIL:** Auto-Lite No. CE-6007. Mounted on the engine above distributor (under spark plug cable bracket).  
**Ignition Current**— $\frac{1}{2}$ -1 $\frac{1}{2}$  amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite Part No. IG-2671.

**Capacity**—.20-.25 microfarad

**DISTRIBUTOR:** Auto-Lite Model IGC-4802. Full auto-Breaker Gap—.020". Limits .018-.022".

**Cam Angle**—38° closed, 22° open.

**Breaker Arm Spring Tension**—17-20 ozs.

**Rotation**—Counter-clockwise viewed from above.

Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
2	600	4	1200
5	900	10	1800
8	1200	16	2400
10	1400	20	2800

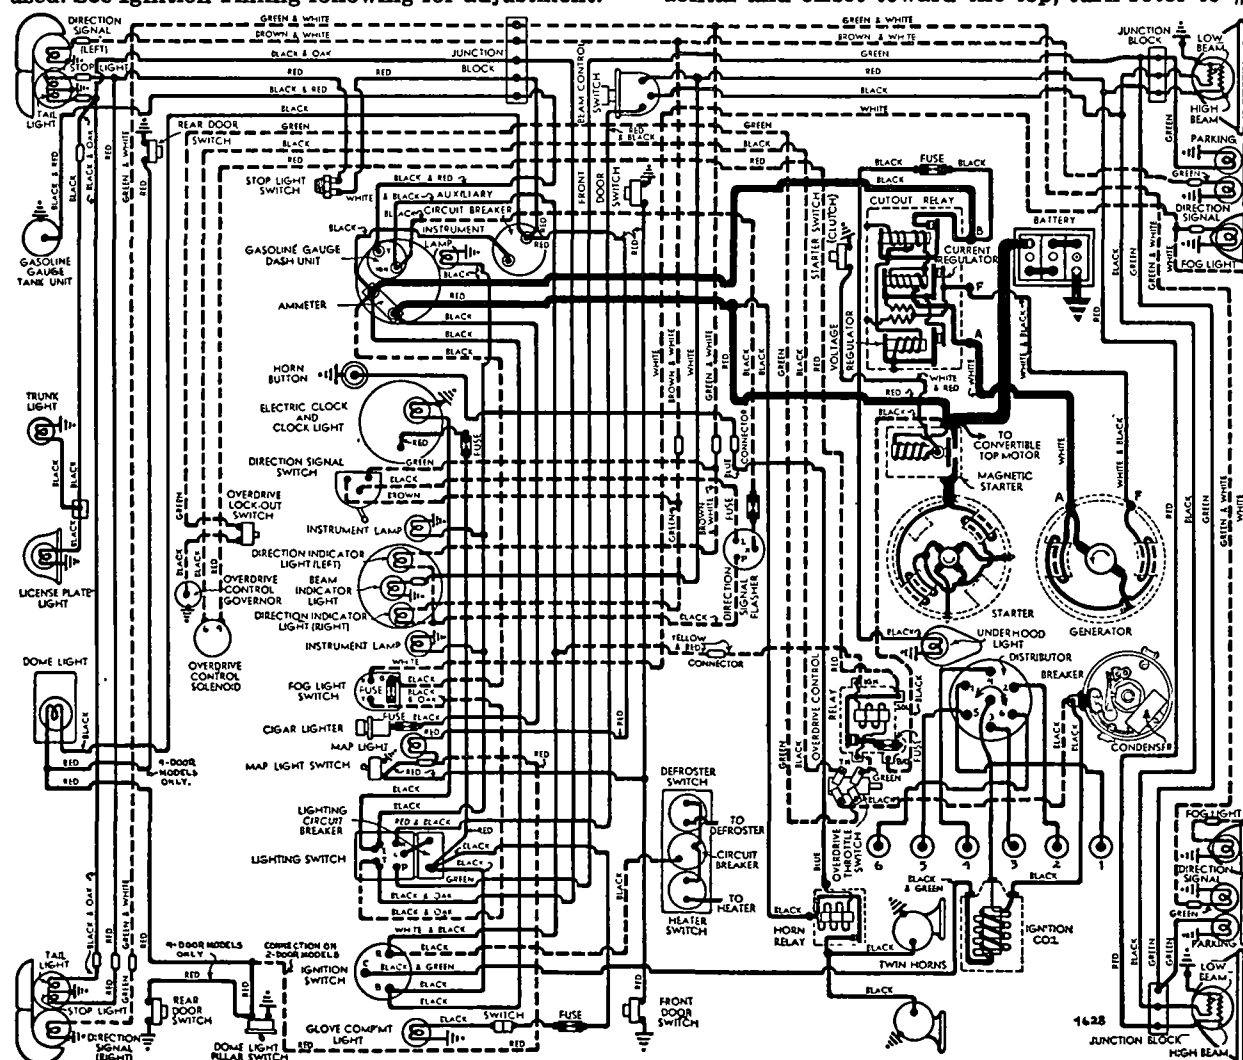

**Octane Selector**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

**Vacuum Spark Control:** Auto-Lite VC-4004. On hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring).

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3"
2°	4°	5"
3°	6°	6"
5°	10°	10"
6°	12°	12"

**Distributor Removal:**—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note**—When installing distributor, crank engine to firing position for #1 cylinder ('IGN' on vibration dampener in line with pointer on timing gear cover), sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is 30° from the horizontal and offset toward the top, turn rotor to #1

segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening clamp, to prevent binding), check timing.

### IGNITION TIMING

**Std. Setting** Flywheel Degrees  
All Engines ..... 2° BTDC.  
This setting correct for regular fuel (see Octane Selector Setting for service and fuel modification).  
**Timing (with Neon Timing Light)**—Neon Light No. 890 recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct light on vibration dampener (at pointer on timing gear cover). Loosen hold-down plate screw, center scale on pointer, tighten screw. Loosen clamp arm, rotate distributor until 'IGN' mark on vibration dampener lines up with pointer on timing gear cover. Insert .020" feeler between modifier control arm and clamp arm before tightening clamp (to insure clearance for modifier control arm). Check Octane Selector  
**Timing (without Neon Timing Light)**—Turn engine over to firing position for #1 piston with 'IGN' mark on vibration dampener in line with pointer on timing gear cover and distributor rotor opposite #1 segment in distributor cap. Adjust distributor.  
**Octane Selector Setting**—After setting ignition timing (above), loosen selector hold-down screw, advance selector (move toward 'A' end of scale) until motor 'pings' when it is hot and pulling hard. Then retard until ping just disappears.

### CARBURETOR

**Stromberg Model BXOV-26**, 1¼" Single Barrel, Downdraft, with Fast Idle & Automatic Choke. Code No. (on bowl cover)—6-104.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, & Accelerating Pump):** See Tune-Up data.

**Metering Jet**—Refer to Carburetor Index for Stromberg Downdraft Carburetor Jet Specification Table.

**Fast Idle:** Stromberg BXOV-26 carburetor type.

See Carburetion Equipment Section for data.

**Fast Idle Setting**—To check, hold stopscrew against lowest step of fast idle cam, move choke valve as far as possible toward closed position, check valve opening with 11/32" drill. Adjust by bending connector.

**Automatic Choke:**—Stromberg BXOV-26 type.

See Carburetion Equipment Section for data.

**Automatic Choke Setting**—'R' mark on thermostat cover in line with highest projection on housing. Shift to 'M' if engine loads up or overchokes. Use 'H' setting only if highly volatile fuels used.

### CARB. EQUIPMENT

**Air Cleaner:** AC No. 1544024 Oil-wetted type Std. Filter Element AC #6. Oil-bath Cleaner Optl.

**Servicing (Oil-wetted Type)**—Clean and re-oil filter element at 1000 mile intervals or as required.

**Servicing (Oil-bath Type)**—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

**Fuel Pump (Std.):** AC #1539217 Combination fuel-and-vacuum pump.

**Exchange Pump**—AC No. 9217.

**Pressure**—4-5 lbs. maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge:** Stewart-Warner Electric type.

**Dash Unit**—Studebaker No. 522177.

**Tank Unit**—Studebaker No. 525548.

See Carburetion Equipment Section for data.

### BATTERY

**Willard Type HW-1-100**, 6 volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five Second Voltage 4.3 volts.

**Grounded Terminal**—Positive (+) to cylinder head.

**Dimensions**—Length 9 3/64". Width 6 13/16". Height 8 5/8".

**Location**—In engine compartment on left side.

### STARTER

**Auto-Lite Model MCH-4001**, Armature MCH-2006.

**Drive**—Barrel Type Bendix Drive No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—130 RPM, approx. 175 amperes at 5.0-5.5 volts.

#### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
18.0 "	Lock	4.0	670

**Removal:**—Starter flange mounted on engine rear plate, on left side. To remove, take out flange mounting screws, remove starter assembly.

**Starting Switch:** Magnetic switch mounted on starter and controlled by Auto-Lite Model SW-4016 manual switch. Manual switch is mounted on toeboard and operated by clutch pedal when fully depressed.

### GENERATOR

**Auto-Lite Model GDZ-4805A**, Armature No. GDZ-2006F. Two brush type with current-voltage control.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—35 amperes, 8.0 volts, 2250 Gen. RPM (hot), at car speed 25.8 MPH and up with load or discharged battery (regulator setting).

Cold		Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal:**—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:**—Loosen pivot and clamp bolts, move generator out until 3/8"-1/2" belt deflection midway between generator and fan pulleys is obtained.

### REGULATOR

**Auto-Lite Model VRP-4004F**, Voltage & Current Type. Consists of Cutout Relay and vibrating type Voltage & Current Regulators in case on dash.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

#### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts), 10.4 MPH.

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

#### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

#### Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover).

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

### LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—At center of speedometer dial. Lighted whenever Country (upper) beams in use.

**Direction Signal:** See Electrical Equipment Section.

**Direction Signal Indicators**—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

#### Switches

**Lighting**—Douglas, Studebaker No. 519798.

**Beam Selector**—Delco-Remy No. 1997008, Studebaker No. 519246.

**Stop Light**—Studebaker No. 666858.

**Direction Signal**—Studebaker No. 520304.

### MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER (On Light Switch):** Studebaker No. 522014. 30-ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.

**Auxiliary Circuit Breaker (On Panel):** No. 523056. 15-ampere type. Protects Body & Stop Lamps.

**ACCESSORY CIRCUIT BREAKER:** One 15-ampere type used on cars with Climatizer and Defroster.

**FUSES:** Clock—3 ampere. In clock lead.

**Direction Signal**—14 ampere. In Fasher lead.

**Overdrive**—20 ampere. On Overdrive Relay.

**Glove Compt. Light**—5 ampere. In lamp lead.

**Under Hood Light**—5 ampere. In lamp lead.

**Fog Lights**—20 ampere. On Fog Light Switch.

**HORNS:** Sparton or Delco-Remy No. 1999610 (High Note), 1999611 (Low Note). Twin Airtone type horns operated by relay. Horn Current—12-15 amps (ea.).

**Horn Relay:** Delco-Remy No. 1116775.

**Contacts Close**—2.75-4.0 volts.

**Contact Gap**—.025". **Air Gap**—.015" (contacts closed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

**ENGINE**

**ENGINE REMOVAL** for Oil Pan Removal and all major engine work: See *Studebaker Shop Notes*.

**ENGINE SPECIFICATIONS:** Six cylinder, "L" Head. Bore—3 5/16". Stroke—4 3/4".

Displacement—245.6 cu. ins. Rated H.P.—26.35.

Developed Horsepower—100 at 3400 RPM.

Compression Ratio—6.5-1 Std. 7.0-1 Optl. iron hds.

NOTE—7.0-1 Head for 5000 ft. & higher altitudes.

Compression & Vacuum Reading—See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Studebaker Shop Notes*.

**TIGHTENING TORQUES:** See *Studebaker Shop Notes*.

**CYLINDER HEAD INSTALLATION:** See *Studebaker Shop Notes*.

**PISTONS:** Lynite aluminum alloy, Cam-ground, T-slot, bearing-metal plated type. Length 3 3/4". Weight—14.4 ozs. (stripped).

Clearance—Selective Fit (see *Fitting Pistons*).

Removal—Pistons and rods removed from above.

NOTE—Car manufacturer recommends that cylinders out-of-round or tapered more than .002" be re-conditioned.

**Fitting New Pistons:** Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 14-19 lbs.

**Replacement Pistons:** See *Studebaker Shop Notes*.

**Installing Pistons:** T-slot away from camshaft.

**PISTON RINGS:** Two compression, one oil control ring per piston, all above pin. Oil drain holes provided in oil ring groove.

Ring	Width	End Gap	Side Clearance
Comp. (#1,2)	3/32"	.009-.014"	.0015-.002"
Oil Contr. (#3)	3/16"	.009-.014"	.0015-.002"

**Installing Rings:** Beveled side of compression rings (Sealed Power) up.

**Replacement Rings:** Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

**PISTON PIN:** Diameter .8741-.8745". Length 2 7/8". Pin is locked in rod by tapered pin and locknut.

**Installing Pins:** Use Pin Assembly Tool J-1293. Install clamp bolt nut and star washer on heavy boss side of rod. NOTE—Threads on opposite end of clamp bolt used only to remove bolt from rod (install nut on this end, tighten nut to pull bolt out of rod).

**Pin Fit in Piston:** .0001-.0003" clearance or light finger push fit at room temperature (70°F).

**Replacement Pins:** Std. & .0025", .005" Oversize. Use Hone PH-1 to obtain proper piston pin fit. NOTE—Replacement pistons fitted with pins.

**CONNECTING ROD:** Length 7 15/16". Weight 33.3 ozs. Crankpin Journal Diameter—2.18675-2.18775".

**Lower Bearing:** Interchangeable steel-backed, micro-babbitt lined type. No shims.

Clearance—.0005-.002". Sideplay .005-.009".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.

NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.

**Palnut Installation:** See *Studebaker Shop Notes*.

**Replacement Bearings:** Bearings furnished Std. size and .001", .005", .010", .020" Undersize.

**Installing Rods:** Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number and oil hole in lower end of rod toward camshaft.

**CRANKSHAFT:** 4 bearing, 5 integral counterweights. Vibration dampener mounted on forward end.

**Vibration Dampener:** See *Studebaker Shop Notes*.

**Journal Diameters:** 2.8745-2.8750".

**Bearings:** Removable steel backed, babbitt-lined type. No shims.

Clearance—.0006-.0027".

**Rear Bearing Oil Seals:** Consist of rubber ring, Studebaker No. 523134 (After Eng. No. H-269,723), on crankshaft; two rubber seal strips, Studebaker No. 522144, in grooves on top of bearing cap; and two specially treated wood strips, Studebaker No. 187106, in grooves on sides of bearing cap.

► **CAUTION**—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** Furnished as sets or single bearings in Std. Size and .001", .010", .020", .030" U.S.

**End Thrust:** Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and main bearing journal. Adjust by changing shims furnished .003", .005", .007" thick.

**Endplay:** .003-.006".

**CAMSHAFT:** Four bearing, helical gear drive.

**Journal Diameters:** #1, 1.9975-1.9980"; #2, 1.9662-1.9670"; #3, 1.9357-1.9365"; #4, 1.1232-1.1240".

**Bearings:** Split steel-backed, babbitted bushings.

NOTE—Oil hole in bushings must be aligned with oil holes in engine block.

Clearance—.0007-.0022" (#1), .0010-.0027" (others).

**Camshaft Removal:** See "Camshaft & Bearings" in *Studebaker Shop Notes*.

**End Thrust:** Taken by thrust plate assembled on front face of engine behind camshaft gear (spacer assembled back of gear hub).

**Endplay:** .003-.006". Tighten cap screws alternately a few turns at a time to prevent distortion of plate.

**Timing Gears:** Crankshaft gear Cast Iron, Camshaft gear Celeron with steel hub, Backlash—.001-.003".

**Replacement Gears:** Camshaft gear furnished in three sizes: Standard (marked "S"), High Limit (marked "H"), Low Limit (marked "L"). Crankshaft gear furnished Standard size only.

**Timing Gear Removal & Installation:** See "Timing Gears" in *Studebaker Shop Notes*.

**Camshaft Setting:** Mesh marked tooth of camshaft gear between two marked teeth on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.0015-.0035"

**Valve Guides:** Pressed in block from above with upper end 1 5/32" below upper edge of valve seat and stepped end down. Ream guides to inside diameter of .3425-.3445". Replace worn guides when clearance exceeds .0035".

**Valve Springs:** Install with closed-coil end up. Replace springs if more than 10% weaker than test pressure of 125-135 lbs. at 1 3/4" (U-15 or other accredited tester). Spring free length 2 1/2".

Spring Pressure	Length
Valve Closed.....	54-60 lbs.....
Valve Open.....	125-145 lbs.....

NOTE—Dampeners used on top of all springs.

**Valve Lifters:** Mushroom type. Remove from below with camshaft out of engine. For camshaft removal directions, see *Studebaker Shop Notes*.

**Valve Lifter Tension Spring:** See "Valve System" in *Studebaker Shop Notes*.

Diameter—.624". Clearance—.0005-.00175".

**Replacement Lifters:** Std. & .0005", .001" O.S.

**VALVE TIMING**

**Tappet Clearance:** .016" All Valves, Engine Cold.

NOTE—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.

**Valve Timing:** See *Camshaft Setting* above.

**Intake Valves:** Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves:** Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check:** With .020" tappet clearance, No. 1 intake valve should open with No. 1 piston 15° BTDC. with the vibration dampener mark "IN. OP. 1-6/" aligned with pointer on timing gear cover. Reset tappet clearance at .016" Cold.

**LUBRICATION**

**Engine Oiling System:** Pressure to crankshaft, connecting rod, and camshaft bearings, and to valve lifters. Timing gears lubricated by oil by-passed by pump. Oil pump mounted externally on right side.

**Crankcase Capacity:** 6 quarts.

**Normal Oil Pressure:** 20-40 lbs. at 40 MPH.

**Oil Pressure Regulator:** On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

**Oil Pan Removal:** See "Engine Removal" in *Studebaker Shop Notes* (recommended for pan removal).

**Oil Pump:** Helical gear type mounted externally on right side of engine.

**Oil Pump Removal & Installation:** See "Oil Pump" in *Studebaker Shop Notes*.

**Oil Filter:** Fram Model F4 or F30S. Replacement Cartridge Kit Studebaker No. 521948 (F4), 520831 (F30S).

**Oil Pressure Gauge:** Stewart-Warner Bourdon Tube (not electric) type. Studebaker No. 522179.

**Crankcase Ventilation:** Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).

**Servicing:** Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—Filter in outlet pipe removed by taking out cotter pin.

**COOLING**

**Cooling System:** Positive circulation with water pump mounted on front of block with fan.

**Capacity:** 13 qts. (14 qts. with Climatizer).

**Water Pump:** Packless type. No lubrication required. See *Water Pump Section* for complete data.

**Removal:** Slack oil drive belt, take out capscrews in fan pulley hub and remove blades. Disconnect hose connection, take out mounting screws in pump.

**Belt Adjustment:** See *Generator Belt Adjustment*.

**Thermostat:** Fulton or Bishop & Babcock. In water outlet on cylinder head.

**Setting**—Starts to open at 151-155°F.

**Temperature Gauge:** Stewart-Warner Bourden Tube type (not electric). Studebaker No. 522180.

### CLUTCH

**Borg & Beck Model No. 9A7 with Borglite Driven Member.** Single plate, dry disc type.

**NOTE**—Clutch Assembly marked by number 943 See Clutch Section for complete data.

**Facings**—Moulded-metallic, 2 required. I.D. 6". O.D. 9¼". Thickness ⅛".

**Adjustment:** Pedal free travel ½ to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

**Hill-Holder Note**—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Adjusting nut and locknut at end of Hill-holder operating rod.

**Hill-Holder Adjustment:** See Studebaker Shop Notes.

**Removal:** Jack up rear end of car and rest on stands under rear axle. Remove transmission (see TRANSMISSION following). Disconnect one battery cable at battery take off starter and hang it clear of clutch housing. Remove clutch housing mounting cap-screws and bolts at top, working through opening in front floor. Free speedometer cable from frame cross-member and wire it up out of the way. Support rear end of engine with jack placed under oil pan at rear (CAUTION—Do not damage oil pan). Disconnect rear engine mounting by taking off nuts, bolts with insulators, washers, and spacers. Disconnect parking brake cable at bracket, clutch operating shaft from release shaft, and brake pedal return spring. Loosen exhaust pipe flange nuts at manifold, take off exhaust pipe support bracket at housing, loosen clamp and turn bracket for clearance. Remove rear engine support cross member. Take out clutch housing mounting bolts and remove housing. Block clutch release levers. Remove six mounting screws in clutch cover flange, lift off clutch assembly and driven member.

### TRANSMISSION

**Warner Model AS1-T86E (Std.), AS2-T86E with R10B type Overdrive (Optl.).** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

**Transmission Control:** Remote control type with gearshift lever mounted on steering column.

See Transmission Section for complete data.

**Removal:** Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing cap-screws, pull transmission straight back and remove from car.

### OVERDRIVE

**Warner Type R10B (part of AS2-T86E transmission).** New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."

See Transmission Section for complete data.

**Overdrive Control Units**—Same as Champion. See Champion 8G (1949) page for data.

**Removal:** See Std. Transmission Removal data

### UNIVERSALS

**Spicer Model 1268-111X (Front & Rear), 1261-102X (Intermediate).** Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft) See Universals Section for complete data.

**Propeller Shaft & Support Bearing:** Two shafts used:

- 1) Front Shaft with intermediate universal yoke
- 2) Rear Shaft with slip-joint on forward end at intermediate universal.

**Propeller Shaft & Support Bearing Removal & Servicing**—See Studebaker Shop Notes.

### REAR AXLE

**Spicer Salisbury Model 41-2.** Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

**Ratio**—4.09-1 Std., 4.55-1 Optl. (Std. with Overdr.). **NOTE**—Rear axle ratio stamped on plate attached to axle by cover cap-screw.

**Backlash**—.003-.006". Shim adjustment.

**Removal:** Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

**Axle Shaft Removal**—Remove wheel, remove wheel hub (use puller J-596-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft assembly (Puller HM-931).

**Wheel Bearing Adjustment:** Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Endplay—.001-.005".

### SHOCK ABSORBERS

**Houde (Houdaille)**—Double acting, hydraulic type. Adjustable type with thermostatic control on rear. **Front (All)**—Houde No. A-14269, Studebaker 523646. **Rear (exc. Conv.)**—Houde No. A-14174, Studebaker 523497.

**Rear (Convertible only)**—Studebaker No. 523538 (Right), 523539 (Left).

See Shock Absorber Section for complete data.

**Adjustment (Front):** Pointer on end of shaft should be lined up with scribed line on end of shaft. Turn pointer clockwise for firmer action, counter-clockwise for softer action (not more than 1/32-1/16"). **(Rear Shocks)**—Remove cap on end of shaft to expose adjusting screw. Slot aligned with scribe mark between "0" and "S" mark is original factory setting. Use special tool No. T-2860 (do not use screw-driver). Turn screw clockwise (toward "S") for firmer action, counter-clockwise (toward "0") for softer action (not more than 1/32" at a time).

**Refilling:** Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—Use only Houdaille Shock Absorber Fluid No. L-1404 (new type fluid for shock absorbers with new circular top filler plug

### FRONT SUSPENSION

**Front Suspension:** Planar type independent suspension with transverse spring. NOTE—Suspension system has lower control arms (with leaf spring).

See Front Suspension Section for complete data.

**Kingpin Inclination**—5½° crosswise.

**Caster**—Neg. 2° to Neg. 3°. No adjustment.

**Camber**—0° to +1°. Shim adjustment (shims between upper control arm brackets and frame). One thin shim changes setting approx. ¼°. Thick shim equals 4 thin shims.

**CAUTION**—Add or remove shims equally at front and rear brackets when adjusting Camber.

**Toe In**—1/16-¼". Adjust right hand tie rod only for toe in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments on left hand tie rod.

### STEERING GEAR

**Ross Model T-14 Cam-and-Twin Lever type.**

See Steering Gear Section for complete data.

### BRAKES

**Service:** Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes are new design with automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes. NOTE—New type actuating spring used on brake shoe contact plug on 1948-49 cars (replaces hairpin locks and contact plug coil spring).

See Brake Section for complete data.

**Drums**—Composite type. Diameter 11".

**Clearance**—Adjustment necessary only when new linings installed. See Brake article in Brake Section. **Lining**—Moulded type (all shoes). Width 2". Thickness 3/16". Length per wheel 22¼".

**Braking Power**—57% Front, 43% Rear.

**Hand Brake:** See Service Brake data (above).

**Hill-Holder:** Std. See Brake Section for complete data. **Adjustment**—See Studebaker Shop Notes.

### MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive See Miscellaneous Section for complete data.

**Windshield Wiper:** Vacuum type—cable operated. See Miscellaneous Section for complete data.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** Stamped on plate on left front door lock pillar post.

**1950 Numbers—**G-468101 Up (South Bend), G-851801 Up (Los Angeles), G-709401 Up (Hamilton).

**Body Symbol Letter—**Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan.

**ENGINE NUMBER:** Stamped on pad on upper front left corner of engine block.

**1950 Numbers—**521001 Up (South Bend & Los Angeles), C-10501 Up (Hamilton).

**NOTE—**Letter "A" following engine number indicates crankshaft main bearing journals .005" Undersize.

**TUNE-UP**

**COMPRESSION PRESSURE:** 120 lbs. at 150 RPM.

**VACUUM READING:** Steady 17-18" idling at 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .025" Limits .0225-.0275".

**Plug Type—**Champion Type J7, 14 mm.

**DISTRIBUTOR:** Breaker Gap—.020". Limits .018-.022".

**Cam Angle—**38° Closed, 22° Open.

**Breaker Arm Spring Tension—**17-20 ozs.

**Automatic & Vacuum Advance—**See Ignition.

**Condenser Capacity—**.20-.24 mfd. (IGC-4805), .21-.25 mfd. (IAT-4001).

**IGNITION TIMING:** 2° BTDC.

**Timing Procedure—**See Ignition Timing.

**Timing Mark—**Vibration dampener mark "IGN/" aligned with pointer on left side of engine.

► **CAUTION—**On IGC-4805 Distr., insert .020" feeler between modifier arm and clamp arm when tightening clamp arm to prevent binding.  
**Octane Selector Setting—**Set to just eliminate ping when engine hot and pulling hard.

**CARBURETION:**

**Idle Setting—**½-1½ turns open. Turn screw out for richer mixture.

**Idle Speed—**8-10 MPH. at normal operating temp.  
**Float Level—**¾". Measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover assembly inverted.

**Accelerating Pump—**No seasonal adjustment.

**Choke Setting:** Centered (at index).

**Fuel Pump Pressure:** 4-5 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type operating in stainless steel bushings.

**Setting—**To test coil tension, free outer end of coil from anchor post. With valve closed (counterweight up), hooked end of coil should be approx. 90° from anchor post with coil at 70°F. **NOTE—**To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings (do not ream bushings).

**VALVE TAPPET CLEARANCE:** .016" All Valves, Cold.  
**Valve Timing Check—**See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock. Studebaker No. 521955.

**Ignition Lock—**Yale & Towne.

**COIL:** Auto-Lite CE-6007 or CR-6007. On engine above distributor (under spark plug cable bracket).

**Ignition Current—**½-1½ amps. idling, 4-5 stopped.

**CONDENSER:** Auto-Lite No. IG-2671 (IGC-4805).

**Capacity—**.20-.25 microfarad.

**DISTRIBUTOR:** Auto-Lite Models IGC-4805 (Before Eng. No. 531285), IAT-4001 (Beginning Eng. No. 531285). Full automatic advance type with vacuum spark control.

**Breaker Gap—**.020". Limits .018-.022".

**Cam Angle—**38° closed, 22° open.

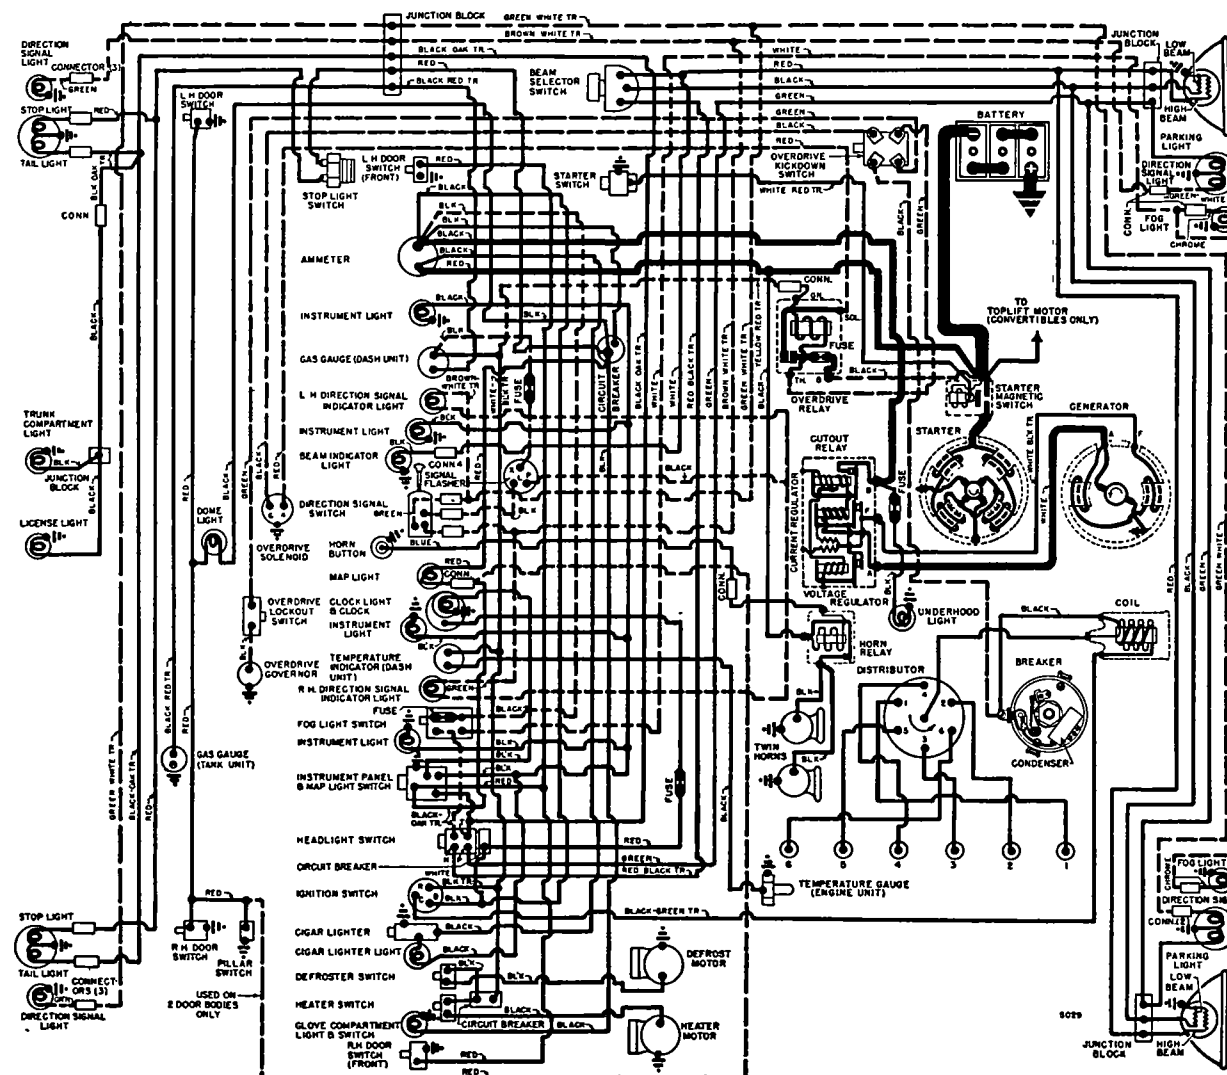

**Breaker Arm Spring Tension—**17-20 ozs.

**Rotation—**Counter-clockwise viewed from above.

**IGC-4805**

Distributor Automatic Advance		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start.....	400	0.....	800
2 .....	680	4.....	1360
4 .....	975	8.....	1950
6 .....	1265	12.....	2530
7 .....	1400	14.....	2800

**Vacuum Spark Control:** (IGC-4805)—Auto-Lite Model VC-4011. Unit mounted on hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

Vacuum Advance—IGC-4805		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	4"
1° .....	2°	4 7/8"
4° .....	8°	7 1/2"
8° .....	16°	11 1/8"
9° .....	18°	12"

**Octane Selector**—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

**Distributor Removal**—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note**—When installing distributor, crank engine to firing position for #1 cylinder (dampener mark 'IGN' in line with pointer on the timing gear cover), sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is parallel to and narrow half of offset toward camshaft, turn rotor to #1 segment, install distributor.

► **CAUTION**—On IGC-4805 Distr., insert .020" feeler between modifier arm and clamp arm when tightening clamp arm to prevent binding.

## IGNITION TIMING

**Std. Setting** Flywheel Degrees Piston Pos.  
All Engines ..... 2° BTDC ..... .0016" BTDC.  
This setting correct for regular fuel (See Octane Selector Setting for service and fuel modification).

**Timing (With Neon Timing Light)**—Clip timing light lead in series with #1 spark plug, direct light on vibration dampener at front of engine. Loosen hold-down plate screw, center octane selector pointer on scale, tighten hold-down screw. Run engine at idle speed, loosen clamp arm, rotate distributor until "IGN/" mark on dampener appears in line with pointer on left side of timing gear cover, tighten clamp screw. Check Octane Selector setting.

► **CAUTION**—On IGC-4805 Distr., insert .020" feeler between modifier arm and clamp arm when tightening clamp arm.

**Timing (Without Neon Timing Light)**—With #1 piston on compression, turn engine over until "IGN/" mark on vibration dampener lines up with pointer on left side of timing gear case. Adjust distributor as directed above.

**Octane Selector Setting**—After setting timing (above), loosen selector hold-down screw, advance timing by turning distributor clockwise (move pointer toward "A" end of scale) until engine "pings" when hot and pulling hard, then retard timing by turning distributor counter-clockwise (move pointer toward "R") until ping disappears.

## CARBURETOR

**Carter WE-715S**—1 1/4" single barrel, downdraft, with Carter Climatic Control.

**Casting No. on Flange**—620.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, & Accelerating Pump)**: See Tune-Up.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle**: Carter Single Barrel Carburetor type.

See Carburetion Equipment Section for data.

**Setting**—.046" between throttle valve and bore of carburetor. To check, remove thermostatic coil housing, gasket and baffle plate. Crack throttle valve and hold choke valve closed. Close throttle. Adjust by bending connector rod at lower angle.

**Automatic Choke**: Carter Climatic Control (Single Carburetor type).

See Carburetion Equipment Section for data.

## CARB. EQUIPMENT

**Air Cleaner**: AC No. 1543970 Oil-wetted type Std. Filter Element AC #1. Oil-bath Air Cleaner Optl.

**Servicing (Oil-wetted type)**—Clean and re-oil filter element at 1000 mile intervals.

**Servicing (Oil-bath type)**—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

**Fuel Pump (Std.)**: AC diaphragm type.

**Optl. (Fuel & Vacuum)**: AC #1539218.

**Pressure**—4-5 lbs. maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge**: Stewart-Warner Electric type.

**Dash Unit**—Studebaker No. 522177.

**Tank Unit**—Studebaker No. 525548.

See Carburetion Equipment Section for data.

## BATTERY

**Willard Type HW-1-100**. 6 volt, 15 plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five Second Voltage 4.3 volts.

**Grounded Terminal**—Positive (+) to cyl. head.

**Dimensions**—L. 9 3/64". W. 6 13/16". H. 8 5/8"

**Location**—In engine compartment on left side.

## STARTER

**Auto-Lite Models MZ-4151 (Early), MZ-4157 (Late).**

**Armature No.**—Auto-Lite No. MZ-2211.

**Drive**—Barrel type Bendix No. A1792 (MZ-4151).

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—150 amperes, 5.2 volts, 150 RPM.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.....	4300.....	5.5.....	70
.65 " .....	2500.....	5.5.....	100
2.55 " .....	1325.....	5.0.....	200
4.95 " .....	750.....	4.5.....	300
7.65 " .....	220.....	4.0.....	400
7.8 " .....	Lock.....	3.0.....	420
11.8 " .....	Lock.....	4.0.....	560

**Starting Switch**: Magnetic switch mounted on starter and controlled by Auto-Lite Model SW-4016 manual switch on toeboard operated by clutch pedal.

**Removal**: Flange mounted on engine rear plate at left side. To remove, take out flange mounting screws, take off starter and switch assembly.

## GENERATOR

**Auto-Lite GDZ-4804A (Early), GDZ-6001A (Later).**

**Armature No.** (GDZ-4804A)—GDZ-2006F.

**Two brush type with current-voltage control.**

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—35 amperes, 8.0 volts, 2250 Gen. RPM. (hot), at car speed of 21.2 MPH & above with load or discharged battery (regulator setting).

Cold		Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0 .....	6.4 .....	925 .....	0 .....	6.4 .....	1000 .....

30 .....	7.8 .....	1760 .....	30 .....	7.8 .....	1980 .....
35① .....	8.0 .....	1900 .....	35 .....	8.0 .....	2250 .....

①—Current Regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.6-1.8 amperes at 6.0 volts.

**Motoring Current**—4.2-4.6 amperes at 6.0 volts.

**Removal**: Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment**: Loosen pivot and clamp bolts, move generator out until 3/8-1/2" belt deflection midway between generator and fan pulleys is obtained.

## REGULATOR

**Auto-Lite Models VRP-4004F (Early), VRP-6001A (Later).**

**Voltage & Current Typ.** Consists of Cutout Relay and vibrating type Voltage & Current Regulators in case on dash.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts), 10.4 MPH.

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (check at hinge end of core).

### Voltage Regulator

**Setting**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked '35' on the cover).

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

## LIGHTING

**Headlamps**: Corcoran-Brown "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—At center of speedometer dial. Lighted whenever Country (upper) beams in use.

**Direction Signal**: See Electrical Equipment Section.

**Direction Signal Indicators**—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

### Switches

**Lighting**—Douglas, Studebaker No. 526380.

**Beam Selector**—Delco-Remy No. 1997008, Studebaker No. 519246.

**Stop Light**—Studebaker No. 666858.

**Direction Signal**—Studebaker No. 520304.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER (On Light Switch):** Studebaker No. 522014. 30-ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.

**Auxiliary Circuit Breaker (On Instrument Panel):** Studebaker No. 523056. 15-ampere thermostatic type. Protects Body & Stop Lamps by vibrating to limit current.

**ACCESSORY CIRCUIT BREAKER:** One 15-ampere type used on cars with Climatizer and Defroster.

**FUSES:** Clock—3 ampere. In clock lead.  
Direction Signal—14 ampere. In Flasher lead.  
Overdrive—20 ampere. On Overdrive Relay.  
Glove Comp. Light—5 ampere. In lamp lead.  
Under Hood Light—5 ampere. In lamp lead.  
Fog Lights—20 ampere. On Fog Light Switch.

**HORNS:** Delco-Remy No. 1999656 (High Note), 1999655 (Low Note). Twin Airtone type horns operated by relay. Horn Current—12-15 amps. (each).

**Horn Relay:** Delco-Remy No. 1116775.

Contacts Close—2.75-4.0 volts.

Contact Gap—.025". Air Gap—.015" (closed).

## ENGINE

**OIL PAN REMOVAL:** See *Studebaker Shop Notes*.

►Not necessary to remove engine for pan removal.

**ENGINE SPECIFICATIONS:** Six cylinder, "L" Head.  
Bore—3". Stroke—4".

Displacement—169.6 cu. ins. Rated H.P.—21.6.

Developed Horsepower—85 at 4000 RPM.

Compression Ratio—7.0-1 Std.

Compression & Vacuum Reading—See *Tune-up data*.

**ORIGINAL BORE & PISTONS:** See *Studebaker Shop Notes*.

**TIGHTENING TORQUES:** See *Studebaker Shop Notes*.

**CYLINDER HEAD INSTALLATION:** See *Studebaker Shop Notes*.

**PISTONS:** Lynite aluminum alloy, Cam ground, T-slot, bearing-metal plated type. Length—2 29/32". Weight—8.48 ozs. (without rings or pin).

Clearance—Selective fit (see Fitting Pistons).

Removal—Pistons and rods removed from above.

**Fitting New Pistons:** Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 11-16 lbs.

**Replacement Pistons:** See *Studebaker Shop Notes*.

**Installing Pistons:** T-slot away from camshaft.

**PISTON RINGS:** Two compression (Perfect Circle #200 Top, #70 —2nd), one Oil Control (#85).

Ring Width End Gap Side Clearance

Compr. #1 ..... 3/32" ..... .007-.017" ..... .0015-.002"

Compr. #2 ..... 1/8" ..... .007-.017" ..... .0015-.002"

Oil Contr. (#3) .5/32" ..... .007-.017" ..... .0015-.002"

**Installing Rings:** Step up top ring, step down 2nd ring.

**Replacement Rings:** Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

**PISTON PIN:** Diameter .7491-.7495". Length 2 5/8". Pin is locked in rod by tapered pin and locknut.

**Pin Fit in Piston—**.0001-.0003" clearance or light finger-push fit at room temperature (70°F).

**Installing Pins:** Use Pin Assembly Tool J-1293. Install clamp bolt nut and star washer on heavy boss side of rod. NOTE—Threads on opposite end of clamp bolt used only to remove bolt from rod (install nut on this end, tighten nut to pull bolt out of rod).

**Replacement Pins:** Std. & .0025". .005" oversize. Use Hone No. PH-1 to obtain proper piston pin fit. NOTE—Replacement pistons fitted with pins.

**CONNECTING ROD:** Length 6 3/8". Weight 20.48 ozs. Crankpin Journal Diameter—1.81175-1.81275". Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims. Clearance—.0005-.002". Sideplay—.005-.009".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or bearing caps. NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts. Palnut Installation—See *Studebaker Shop Notes*.

**Replacement Bearings:** Bearings furnished Std. Size and .001", .005", .010", .020" Undersize.

**Installing Rods:** Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number and oil hole in lower end of rod toward camshaft side.

**CRANKSHAFT:** Four bearing type with integral counterweights. Vibration dampener on front end. Vibration Dampener—See *Studebaker Shop Notes*. Journal Diameters—2.4370-2.4375" (All) Std.

►CAUTION—Journals are .005" Undersize on engines with letter "A" following Engine Number.

**Bearing Type—**Removable type, steel-backed, micro-babbitt lined. No shims.

Clearance—.0005-.0025".

**Rear Bearing Oil Seals—**Consist of rubber ring on crankshaft; two rubber seal strips in grooves on top of bearing cap; and two specially treated wood strips in grooves on sides of bearing cap.

►CAUTION—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

NOTE—Front oil pan seal block may be removed for access to front main bearing cap by removing four lower timing gear cover retaining screws. Use only malleable iron type filler block on these cars.

►CAUTION—Do not securely tighten timing gear cover-to-filler block screws until after oil pan screws tightened uniformly and securely.

**Replacement Bearings:** Furnished as sets or single bearings Std. & .001", .005", .010", .020", .030" U. S.

**End Thrust:** Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal. Adjust by changing shims (.003", .005", .007" thick). Endplay—.003-.006".

**CAMSHAFT:** Four bearing type. Helical gear drive. Journal Diameters—#1, 1.7475-1.7480"; #2, 1.7162-1.7170"; #3, 1.6857-1.6865"; #4, 1.6232-1.6240".

**Bearings—**Split, steel-backed, babbitted bushings. Clearance—.0007-.0022" (#1), .0010-.0027" (others).

**Bearing Adjustment:** None. Replace bushings with camshaft removed. NOTE—Align bushing oil hole with oil hole in block.

**Camshaft Removal:** See "Camshaft & Bearings" in *Studebaker Shop Notes*.

**End Thrust:** Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub).

**Endplay—.003-.006".** Tighten cap screws alternately a few turns at a time to prevent distortion of plate.

**Timing Gears:** Crankshaft gear Cast Iron, Camshaft gear Celeron with steel hub.

**Backlash—.001-.003".**

**Replacement Gears—**Camshaft gear furnished in three sizes: Standard (marked "S"), High Limit (marked "H"), Low Limit (marked "L"), Crankshaft gear furnished Standard size only.

**Timing Gear Removal & Installation—**See "Timing Gears" in *Studebaker Shop Notes*.

**Camshaft Setting:** Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

**VALVES:** Head Diameter Stem Diameter Length  
Intake ..... 1 11/32" ..... 5/16" ..... 4 11/32"  
Exhaust ..... 1 9/32" ..... 5/16" ..... 4 11/32"

Seat Angle Lift Stem Clearance  
All Valves ..... 45° ..... 11/32" ..... .0015-.0035"

**Valve Guides:** Pressed in block from above with top of guide 1 3/16" below top of block. Finish ream guides to inside diameter of .312-.3125" Use Valve Stem Guide Remover and Replacer Tool J-2034. Replace worn guides if clearance greater than .0035".

**Valve Springs:** Install with closed coil end up. Replace springs if more than 10% weaker than test pressure of 77-85 lbs. at 1 7/16" (U-15 or other accredited tester). Spring free length 2 3/32".

Spring Pressure Length  
Valve Closed ..... 52-56 lbs. .... 1 21/32"  
Valve Open ..... 93-103 lbs. .... 15/16"

NOTE—Install valve spring retainer with flange engaging flat surface on lower coil and tongue on inner diameter engaging groove in spring lock.

**Valve Lifters:** Mushroom type. Remove from below with camshaft out of engine. For Camshaft Removal directions, refer to *Studebaker Shop Notes*.

**Valve Lifter Tension Spring—**See "Valve System" in *Studebaker Shop Notes*.

Clearance—.0005-.00175".

**Replacement Lifters—**Furnished Std. size and .0005", .001" Oversize.

## VALVE TIMING

**Tappet Clearance:** .016" All Valves, Engine cold.

NOTE—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves—**Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves—**Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check—**With .020" tappet clearance, #1 intake valve should open with #1 piston 15° or .0893" BTDC. with vibration dampener mark "IN. OP. 1-6/1" in line with pointer on left side of timing gear cover. Reset tappet clearance to .016" Cold.

## LUBRICATION

**Lubrication System:** Pressure to crankshaft, connecting rod, and camshaft bearings and to valve lifters. Timing gears lubricated by oil by-passed by pump.

**Crankcase Capacity—**5 qts. ("Add Oil" point on oil level indicator stick is 3 qt. level).

**Normal Oil Pressure**—20-40 lbs. at 40 MPH.

**Oil Pressure Relief Valve**—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

**Oil Pump**: Helical gear type. Mounted externally on right hand side of crankcase.

**Oil Pump Removal & Installation**—See "Oil Pump" in *Studebaker Shop Notes*.

**Oil Pressure Gauge**: Stewart-Warner Bourden tube (not electric) type.

**Crankcase Ventilation**: Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).

**Servicing**—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—filter in outlet pipe removed by taking out cotter pin.

## COOLING

**Cooling System**: Positive circulation with water pump mounted on front of block with fan.

**Capacity**—10 quarts.

**Water Pump**: Packless, sealed ball bearing type.

See *Water Pump Section for complete data*.

**Removal**—Slack off drive belt, take out capscrews in the fan pulley hub & remove fan blades. Disconnect hose connection, take out mounting screws in pump body flange, withdraw pump from engine.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat**: Bishop & Babcock. In water outlet on cylinder head.

**Setting**—Starts to open at 151-155°F.

**Temperature Gauge**: Stewart-Warner electric type.

## CLUTCH

**Borg & Beck Model 8A7 with Borglite Driven Member**. Single plate, dry disc type. NOTE—Clutch assembly marked by number 980 stamped on cover. See *Clutch Section for complete data*.

**Facings**—Moulded Metallic type, 2 required. I. D. 5 $\frac{3}{8}$ ". O. D. 8". Thickness .125".

► **CAUTION**—Special driven member used on cars with Overdrive. Identify each type by hub damper spring color as follows:

Cars with Conventional Trans.....2 Lavender, 2 Black  
Cars with Overdrive Trans. ....4 Lavender

**Pedal Adjustment**: Pedal free travel  $\frac{1}{2}$ " to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

**Hill-Holder Note**—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages.

**Hill-Holder Adjustment**: See *Studebaker Shop Notes*.

**Removal**: Car manufacturer recommends Engine (with clutch attached) be removed. See "Engine Removal" in *Studebaker Shop Notes*. Block release levers. Remove six mounting screws in clutch cover flange, lift off clutch assembly and driven member.

## TRANSMISSION

**Warner Model AS1-T96 (Std.)**, AS2-T96 with R10B type Overdrive (Optl.). All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section for complete data*.

**Transmission Control**: Remote control type with gearshift lever mounted on steering column.

See *Transmission Section for complete data*.

**Removal**: Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

## OVERDRIVE

**Warner Type R10B (part of AS2-T96 Transmission)**. New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."

See *Transmission Section for complete data*.

**Overdrive Solenoid**—Warner Model No. 3AR10B-62, Studebaker No. 521429.

**Overdrive Governor**—Warner Model No. AR10B-72, Studebaker No. 520454.

**Control Relay**—Auto-Lite HRT-4001, Studebaker No. 523297.

**Throttle Kick-down Switch**—Studebaker 515667.

**Lock-out Switch**—Studebaker No. 521436.

**Fuse**—20 ampere. On Overdrive Relay.

**Removal**: See Std. Transmission Removal data.

## UNIVERSALS

**Spicer Model 1268-110X (Front & Rear)**, 1261-102X (intermediate). Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft). See *Universals Section for complete data*.

**Propeller Shaft & Support Bearing**: Two shafts used:

1) Front Shaft with intermediate universal yoke bolted on rear end (no slip-joint).

2) Rear Shaft with slip-joint on forward end at intermediate universal.

**Propeller Shaft & Support Bearing Removal & Servicing**—See "Propeller Shaft" in *Studebaker Shop Notes*.

## REAR AXLE

**Spicer Salisbury Model 23**. Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See *Rear Axle Section for complete data*.

**Ratio**—4.1-1 Std. 4.56-1 Optl. (Std. with Overdrive).

**NOTE**—Rear axle ratio stamped on plate attached to axle by cover capscrew.

**Backlash**—.003-.006". Shim adjustment.

**Removal**: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

**Axle Shaft Removal**—Remove wheel, remove wheel hub (use puller J-446-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with Puller HM-931.

**Wheel Bearing Adjustment**: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003" .005", .010", .030" thick). Endplay—.001-.005".

## SHOCK ABSORBERS

**Houde (Houdaille)**—Direct acting, non-adjustable type. Front Shocks are mounted within coil springs.

► **NOTE**—Shock Absorbers cannot be refilled or repaired.

**Front (All)**—Studebaker No. 524787 (Std.), Studebaker No. 527169 (Heavy Duty).

**Rear (All)**—Studebaker No. 524816 (Std.), Studebaker No. 527170 (Heavy Duty).

See *Shock Absorber Section for complete data*.

## FRONT SUSPENSION

**Front Suspension**: Independent, Coil Spring Suspension with front Shock Absorbers located within coil springs.

See *Front Suspension Section for complete data*.

**Kingpin Inclination**—5 $\frac{1}{4}$ ° crosswise.

**Caster**—0° to -1°. Eccentric pin adjustment.

**Camber**—0° to +1°. Eccentric pin adjustment.

► **NOTE**— $\frac{1}{2}$ ° more Camber favored on drivers side.  
**Toe-In**—1/16-1/8". Adjust right hand tie rod only for toe-in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. RHD Car Note—Make toe-in adjustments on left hand tie rod.

## STEERING GEAR

**Ross Model T-12 Cam-and-Twin Lever type**.

See *Steering Gear Section for complete data*.

## BRAKES

**Service**: Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes have automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes. See *Brake Section for complete data*.

**Drums**—Composite type. Diameter 9".

**Clearance**—If adjustment required, see "Lockheed (Wagner) Hydraulic Self-Adjusting Brakes" in *Brake Section*.

**Lining**—Moulded type (all shoes). Width 2". Thickness 3/16". Length per wheel 18 $\frac{1}{2}$ ".

**Braking Power**—57% Front. 43% Rear.

**Hand Brake**: See Service Brake data (above).

**Hill-Holder**: Optional Equipment on all models.

See *Brake Section for complete data*.

**Adjustment**—See *Studebaker Shop Notes*.

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL**: Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive). See *Miscellaneous Section for complete data*.

**Windshield Wipers**: Vacuum Cable operated type. See *Miscellaneous Section for complete data*.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** Stamped on plate on left front door lock pillar post.

1950 Numbers ..... South Bend ..... Los Angeles  
 4398601 Up..... 4839001 Up

**Body Symbol Letter**—Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan; Y, Land Cruiser.

**ENGINE NUMBER:** Stamped on pad on upper front left corner of engine block.  
 1950 Numbers—H-370001 Up.

**TUNE-UP**

**COMPRESSION PRESSURE:** 120 lbs. at 150 RPM. cranking speed for Std. 7.0-1 Head.

**VACUUM READING:** Steady 18-20" idling at 8 MPH.

**FIRING ORDER:** 1-5-3-6-2-4. See diagram.

**SPARK PLUG GAPS:** .025". Limits .0225-.0275".

Plug Type—Champion Type J7. 14 mm.

**DISTRIBUTOR:** Breaker Gap—.022".

Cam Angle—Closed 31° to 37° with .022" gap.

Breaker Arm Spring Tension—17-21 ozs.

Automatic & Vacuum Advance—See Ignition.

Condenser Capacity—.18-.23 microfarad.

**IGNITION TIMING:** 2° BTDC.

Timing Procedure—See Ignition Timing.

Timing Mark—Vibration Dampener mark "IGN/" aligned with pointer on gear case cover.

**CARBURETION:**

**Idle Setting (Stromberg)**—Idle screw set for smooth idle. Turn screw out for richer mixture. (Carter)— $\frac{1}{2}$ -1 $\frac{1}{2}$  turns open. Turn screw out for richer mixture.

**Idle Speed**—8-10 MPH. at normal operating temp.

**Float Level (Stromberg)**—Fuel level  $\frac{5}{8}$ " below top edge of float bowl with engine idling.

(Carter)— $\frac{7}{16}$ " from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and cover assembly inverted.

**Accelerating Pump (Stromberg)**—Center hole (med. stroke) Normal all-season setting. Inner hole (min.)—Summer. Outer hole (max.)—Winter used for temperature extremes.

(Carter)—No seasonal adjustment.

**Choke Setting:** Centered (at index).

**Fuel Pump Pressure:** 4-5 lbs. maximum.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type operating in stainless steel bushings.

**Setting**—To test coil tension, free outer end of coil from bracket on manifold. With valve closed, hooked end of coil should be approx. 90° from bracket at 70°F. Replace coil if incorrect.

**NOTE**—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings.

**VALVE TAPPET CLEARANCE:** .016" All Valves, Cold.

**NOTE**—Self-locking tappet screws used.

**Valve Timing Check**—See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** Mitchellock. Studebaker No. 526396.

Ignition Lock—Yale & Towne.

**COIL:** Delco-Remy Model #1115380. On engine above distributor (under spark plug cable bracket).

**CONDENSER:** Delco-Remy Part No. 1869704.  
 Capacity—.18-.23 microfarad.

**DISTRIBUTOR:** Delco-Remy #1110812. Automatic and vacuum advance type with new "center-bearing" breaker plate.

► **Breaker Plate Bearing Assembly**—Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 ozs. min., 16 ozs. max. with breaker plate assembly out of housing.

See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

Breaker Gap—.022".

Cam Angle—Closed 31° to 37° with .022" gap.

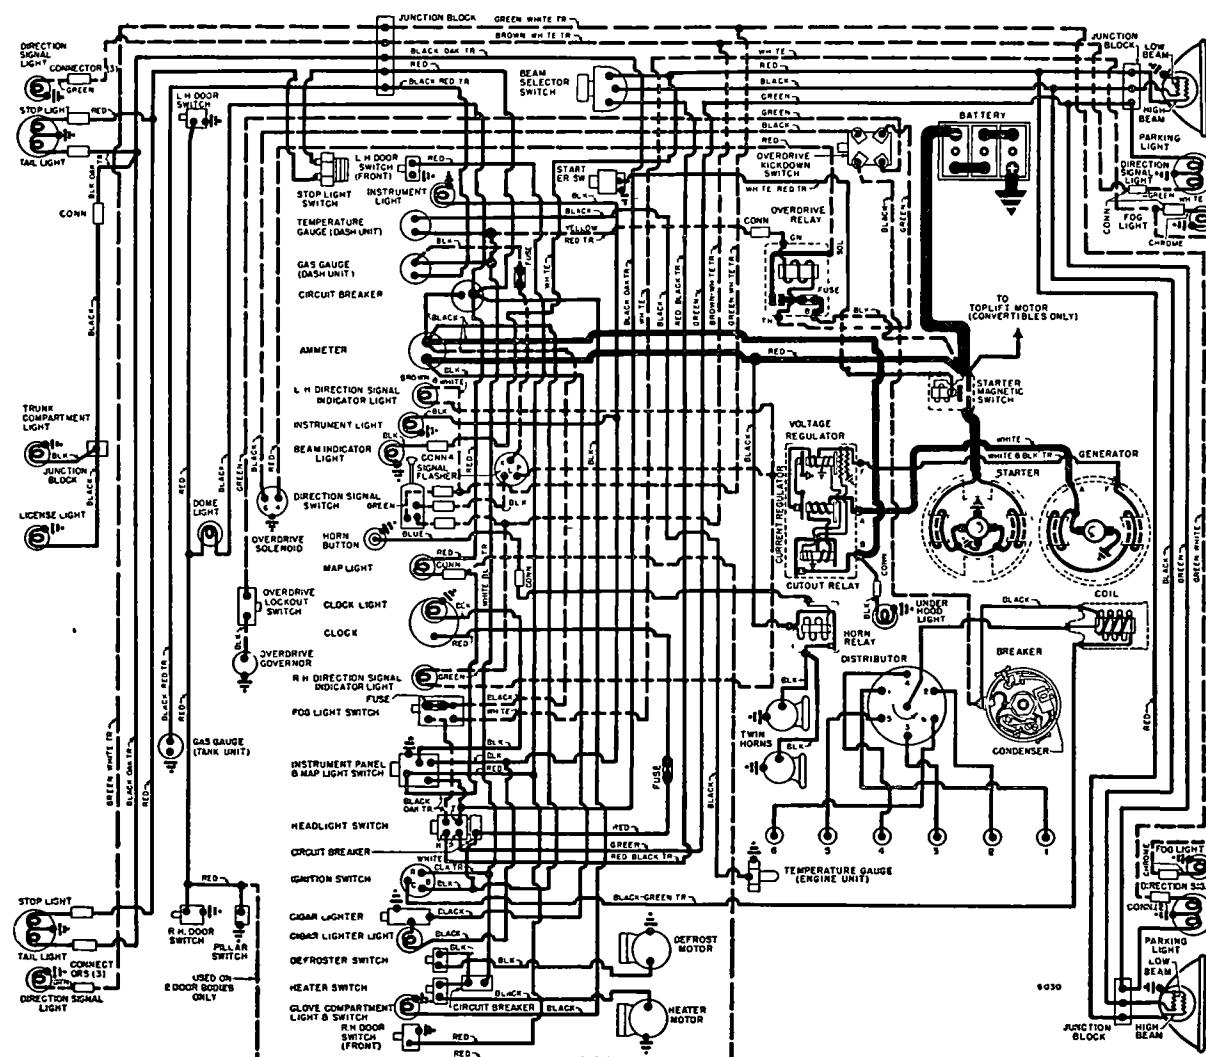

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Counter-clockwise viewed from above.

**Automatic Advance**

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start.....		400	2.....		800
11 .....		1400	22.....		2800

**Vacuum Spark Control:** Delco-Remy No. 1116052 linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

**Plunger Travel**— $\frac{1}{8}$ " maximum.

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	3-5"
6°	12°	9-14"

**Distributor Removal:** Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

**Installation Note**—When installing distributor, crank engine to firing position for #1 cylinder ('IGN' on vibration dampener in line with pointer on timing gear cover), sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is 30° from the horizontal and offset toward the top, turn rotor to #1 segment, install distributor, check timing.

## IGNITION TIMING

**Std. Setting** Flywheel Degrees  
All Engines ..... 2° BTDC.  
This setting correct for regular fuel.

**Timing (with Neon Timing Light)**—Neon Light No. 890 recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct light on vibration dampener (at pointer on timing gear cover). Loosen clamp arm, rotate distributor until 'IGN' mark on vibration dampener lines up with pointer on timing gear cover.

**Timing (without Neon Timing Light)**—Turn engine over to firing position for #1 piston with 'IGN' mark on vibration dampener in line with pointer on timing gear cover and distributor rotor opposite #1 segment in distributor cap. Adjust distributor.

## CARBURETOR

### STROMBERG

**Stromberg Model BXOV-26.**  $\frac{1}{4}$ " Single Barrel, Downdraft, with Fast Idle & Automatic Choke. Code No. (on bowl cover)—6-104.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, & Accelerating Pump):** See Tune-Up data.

**Metering Jet**—Refer to Carburetor Index for Stromberg Downdraft Carburetor Jet Specification Table.

**Fast Idle:** Stromberg BXOV-26 carburetor type.

See Carburetion Equipment Section for data.

**Fast Idle Setting**—To check, hold stopscrew against lowest step of fast idle cam, move choke valve as far as possible toward closed position, check valve opening with  $\frac{11}{32}$ " drill. Adjust by bending connector.

**Automatic Choke:** Stromberg BXOV-26 type.

See Carburetion Equipment Section for data.

**Automatic Choke Setting**—'R' mark on thermostat cover in line with highest projection on housing. Shift to 'M' if engine loads up or overchokes. Use 'H' setting only if highly volatile fuels used.

## CARBURETOR

### CARTER WE

**Carter WE-627SA** (On Cars between Eng. Nos. H-376, 298 and H-386,398).  $\frac{1}{4}$ " Single Barrel, Downdraft with Carter Climatic Control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, & Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Carter Single Barrel Carburetor type.

See Carburetion Equipment Section for data.

**Setting**—.054" throttle valve opening with choke valve closed. To check, open throttle wide to make certain fast idle cam drops into position, then with choke valve closed measure clearance between edge of throttle valve and carburetor wall on side opposite idle port (valve closed to fast idle position). To adjust, turn adjusting sleeve on connector link.

**Automatic Choke:** Carter Climatic Control (Single Carburetor type).

See Carburetion Equipment Section for data.

**Setting**—Centered (cover centered on scale).

## CARB. EQUIPMENT

**Air Cleaner:** AC. Oil-wetted type Std., Oil-bath Cleaner Optl.

**Servicing (Oil-wetted Type)**—Clean and re-oil filter element at 1000 mile intervals or as required.

**Servicing (Oil-bath Type)**—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

**Fuel Pump (Std.):** AC. Combination fuel-and-vacuum pump.

**Pressure**—4-5 lbs. maximum.

See Carburetion Equipment Section for data.

**Gasoline Gauge:** Stewart-Warner Electric type.

**Dash Unit**—Studebaker No. 522177.

**Tank Unit**—Studebaker No. 525548.

See Carburetion Equipment Section for data.

## BATTERY

**Willard Type HW-1-100.** 6 volt, 15 plate, 100 Ampere Hour Capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.5 minutes. Five Second Voltage 4.3 volts.

**Grounded Terminal**—Positive (+) to cylinder head.

**Dimensions**—Length 9  $\frac{3}{64}$ ". Width 6  $\frac{13}{16}$ ".

**Height** 8  $\frac{5}{8}$ ".

**Location**—In engine compartment on left side.

## STARTER

**Delco-Remy Model 1107084.** Armature No. 1878077.

**Drive**—Bendix Barrel type No. A1792.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—24-28 ozs.

### Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.7	65
12 "	Lock	3.4	525

**Removal:** Starter flange mounted on engine rear plate, on left side. To remove, take out flange mounting screws, remove starter assembly.

**Starting Switch:** Magnetic switch mounted on starter and controlled by manual switch. Manual switch is mounted on toeboard and operated by clutch pedal when fully depressed.

## GENERATOR

**Delco-Remy Model 1102728.** Armature No. 1879002.

Two brush type with current-voltage control.

**Charging Rate Adjustment**—None. See Regulator.

**Maximum Charging Rate**—As given below.

### Performance Data

	Amperes <sup>①</sup>	Volts	R.P.M.
Cold .....	30	8.0	1750

<sup>①</sup>—Not maximum output. See Current Regulator.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—25 ozs. each.

**Field Current**—1.75-1.9 amperes at 6.0 volts.

**Removal:** Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

**Belt Adjustment:** Loosen pivot and clamp bolts, move generator out until  $\frac{3}{8}$ - $\frac{1}{2}$ " belt deflection midway between generator and fan pulleys is obtained.

## REGULATOR

**Delco-Remy Model No. 1118302.** Voltage & Current Regulator.

► **NEW "1118300 SERIES"** regulators have screw adjustment for settings and single regulator springs. See Electrical Equipment Section for complete data.

**CAUTION**—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

### Cutout Relay

**Cuts In**—5.9-6.8 volts hot (set to 6.4 volts hot).

**Contact Gap**—.020" (same for both sets).

**Air Gap**—.020" (with contacts just closed).

### Voltage Regulator

**Setting**—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Electrical Equipment Section.

### Current Regulator

**Setting**—32-40 amperes hot (set to 36 hot).

**Air Gap**—.075" with armature pressed down to point where contacts are just touching.

**Checking & Adjustment**—See Electrical Equipment Section.

## LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

**Beam Indicator**—At center of speedometer dial. Lighted whenever Country (upper) beams in use.

**Direction Signal:** See Electrical Equipment Section.

**Direction Signal Indicators**—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

### Switches

**Lighting**—Studebaker No. 526350 (with circuit breaker).

**Instrument**—Studebaker No. 526351.

**Beam Selector**—Delco-Remy #1997008.

**Stop Light**—Studebaker No. 666858.

**Direction Signal**—Studebaker No. 526901P.

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER** (On Light Switch):

Studebaker No. 522014.

30-Ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.

CONTINUED ON NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

**Auxiliary Circuit Breaker (On Instrument Panel):** Studebaker No. 523056. 15-Ampere type. Protects Body & Stop Lamps.

**ACCESSORY CIRCUIT BREAKER:** One 15-ampere type used on cars with Climatizer and Defroster.

**FUSES:** Clock—3 ampere. In clock lead.  
Direction Signal—14 ampere. In Flasher lead.  
Overdrive—20 ampere. On Overdrive Relay.  
Glove Comp. Light—5 ampere. In lamp lead.  
Under Hood Light—5 ampere. In lamp lead.  
Fog Lights—20 ampere. On Fog Light Switch.

**HORNS:** Sparton or Delco-Remy #1999656 (High Note), #1999655 (Low Note). Twin Airtone type horns operated by relay. Horn Current—12-15 amps (ea.).

**Horn Relay:** Delco-Remy #116775.  
Contacts Close—2.75-4.0 volts.  
Contact Gap—.025". Air Gap .015" (contacts closed).

**ENGINE**

**OIL PAN REMOVAL:** See *Studebaker Shop Notes*.

►Not necessary to remove engine for pan removal.

**ENGINE SPECIFICATIONS:** Six cylinder, "L" Head.  
Bore—3 5/16". Stroke—4 3/4".  
Displacement—245.6 cu. ins. Rated H.P.—26.33.  
Developed Horsepower—102 at 3200 RPM.  
Compression Ratio—7.0-1 Std.  
Compression & Vacuum Reading—See *Tune-Up data*.

**ORIGINAL BORE & PISTONS:** See *Studebaker Shop Notes*.

**TIGHTENING TORQUES:** See *Studebaker Shop Notes*.

**CYLINDER HEAD INSTALLATION:** See *Studebaker Shop Notes*.

**PISTONS:** Lynite aluminum alloy, Cam-ground, T-slot, bearing-metal plated type. Length 3 3/4".  
Weight—14.4 ozs. (stripped).  
Clearance—Selective Fit (see *Fitting Pistons*).  
Removal—Pistons and rods removed from above.  
NOTE—Car manufacturer recommends that cylinders out-of-round or tapered more than .002" be re-conditioned.

**Fitting New Pistons:** Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 14-19 lbs.

**Replacement Pistons:** See *Studebaker Shop Notes*.

**Installing Pistons:** T-slot away from camshaft.

**PISTON RINGS:** Two compression, one oil control ring per piston, all above pin. Oil drain holes provided in oil ring groove.

Ring	Width	End Gap	Side Clearance
Comp. (#1,2)	3/32"	.009-.014"	.0015-.002"
Oil Contr. (#3)	3/16"	.009-.014"	.0015-.002"

Installing Rings: Beveled side of compression rings (Sealed Power) up.

**Replacement Rings:** Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

**PISTON PIN:** Diameter .8741-.8745". Length 2 7/8". Pin is locked in rod by tapered pin and locknut.

**Installing Pins:** Use Pin Assembly Tool J-1293. Install clamp bolt nut and star washer on heavy boss side of rod. NOTE—Threads on opposite end of clamp bolt used only to remove bolt from rod (install nut on this end, tighten nut to pull bolt out of rod).

**Pin Fit in Piston:** .0001-.0003" clearance or light finger push fit at room temperature (70°F.).

**Replacement Pins:** Std. & .0025", .005" Oversize. Use Hone PH-1 to obtain proper piston pin fit.  
NOTE—Replacement pistons fitted with pins.

**CONNECTING ROD:** Length 7 15/16". Weight 33.3 ozs.  
Crankpin Journal Diameter—2.18675-2.18775".  
Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims.  
Clearance—.0005-.002". Sideplay—.005-.009".

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file rods or caps.  
NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.  
Palmnut Installation—See *Studebaker Shop Notes*.

**Replacement Bearings:** Bearings furnished Std. size and .001", .005", .010", .020" Undersize.

**Installing Rods:** Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number and oil hole in lower end of rod toward camshaft.

**CRANKSHAFT:** 4 bearing, 5 integral counterweights. Vibration dampener mounted on forward end.  
Vibration Dampener—See *Studebaker Shop Notes*.  
Journal Diameters—2.8745-2.8750".

**Bearings:** Removable steel backed, babbitt-lined type. No shims.  
Clearance—.0006-.0027".

**Rear Bearing Oil Seals:** Consist of rubber ring, on crankshaft; two rubber seal strips in grooves on top of bearing cap; and two specially treated wood strips in grooves on sides of bearing cap.

►CAUTION—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.

**Bearing Adjustment:** None (no shims). Replace bearings. Do not file bearing caps.

**Replacement Bearings:** Furnished as sets or single bearings in Std. Size and .001", .010", .020", .030" U.S.

**End Thrust:** Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and main bearing journal. Adjust by changing shims furnished .003", .005", .007" thick.

Endplay—.003-.006".

**CAMSHAFT:** Four bearing. Helical gear drive.  
Journal Diameters—#1, 1.9975-1.9980"; #2, 1.9662-1.9670"; #3, 1.9357-1.9365"; #4, 1.1232-1.1240".

**Bearings:** Split steel-backed, babbitted bushings.  
NOTE—Oil hole in bushings must be aligned with oil holes in engine block.

Clearance—.0007-.0022" (#1), .0010-.0027" (others).

**Camshaft Removal:** See *"Camshaft & Bearings"* in *Studebaker Shop Notes*.

**End Thrust:** Taken by thrust plate assembled on front face of engine behind camshaft gear (spacer assembled back of gear hub).

Endplay—.003-.006". Tighten capscrews alternately a few turns at a time to prevent distortion of plate.

**Timing Gears:** Crankshaft gear Cast Iron. Camshaft gear Celeron with steel hub. Backlash—.001-.003".  
**Replacement Gears:** Camshaft gear furnished in three sizes: Standard (marked "S"), High Limit (marked "H"), Low Limit (marked "L"). Crankshaft gear furnished Standard size only.

**Timing Gear Removal & Installation:** See *"Timing Gears"* in *Studebaker Shop Notes*.

**Camshaft Setting:** Mesh marked tooth of camshaft gear between two marked teeth on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.0015-.0035"

**Valve Guides:** Pressed in block from above with upper end 1 5/32" below upper seat edge of valve seat and stepped end down. Ream guides to inside diameter of .3425-.3445". Replace worn guides when clearance exceeds .0035".

**Valve Springs:** Install with closed-coil end up. Replace springs if more than 10% weaker than test pressure of 125-135 lbs. at 1 3/4" (U-15 or other accredited tester). Spring free length 2 1/2".

	Spring Pressure	Length
Valve Closed	54-60 lbs.	2 3/32"
Valve Open	125-145 lbs.	1 3/4"

NOTE—Dampeners used on top of all springs.

**Valve Lifters:** Mushroom type. Remove from below with camshaft out of engine. For camshaft removal directions, see *Studebaker Shop Notes*.

**Valve Lifter Tension Spring:** See *"Valve System"* in *Studebaker Shop Notes*.

Diameter—.624". Clearance—.0005-.00175".

**Replacement Lifters:** Std. & .0005", .001" O. S.

**VALVE TIMING**

**Tappet Clearance:** .016" All Valves, Engine Cold.

NOTE—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves:** Open 15° BTDC. Close 49° ALDC.

**Exhaust Valves:** Open 54° BLDC. Close 10° ATDC.

**Valve Timing Check:** With .020" tappet clearance, No. 1 intake valve should open with No. 1 piston 15° BTDC. with the vibration dampener mark "IN. OP. 1-6/" aligned with pointer on timing gear cover. Reset tappet clearance at .016" Cold.

**LUBRICATION**

**Engine Oiling System:** Pressure to crankshaft, connecting rod, and camshaft bearings, and to valve lifters. Timing gears lubricated by oil by-passed by pump. Oil pump mounted externally on right side.

**Crankcase Capacity:**—6 quarts.

**Normal Oil Pressure:**—20-40 lbs. at 40 MPH.

**Oil Pressure Regulator:**—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

**Oil Pan Removal:** See *Studebaker Shop Notes*.

**Oil Pump:** Helical gear type mounted externally on right side of engine.

**Oil Pump Removal & Installation:**—See *"Oil Pump"* in *Studebaker Shop Notes*.

**Oil Pressure Gauge:** Stewart-Warner Bourden Tube (not electric) type.

**Crankcase Ventilation:** Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).

**Servicing:**—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—Filter in outlet pipe removed by taking out cotter pin.

## COOLING

**Cooling System:** Positive circulation with water pump mounted on front of block with fan.

**Capacity**—13.5 qts. (15 qts. with Climatizer).

**Water Pump:** Packless type. No lubrication required. See *Water Pump Section* for complete data.

**Removal**—Slack off drive belt, take out capscrews in fan pulley hub and remove blades. Disconnect hose connection, take out mounting screws in pump.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** Fulton or Bishop & Babcock. In water outlet on cylinder head.

**Setting**—Starts to open at 151-155°F. (Std.), 177°F. (High).

**Temperature Gauge:** Stewart-Warner electric type.

## CLUTCH

**Borg & Beck Model No. 9A7 with Borglite Driven Member.** Single plate, dry disc type.

**NOTE**—Clutch Assembly marked by number 943 See *Clutch Section* for complete data.

**Facings**—Moulded-metallic, 2 required. I.D. 6". O.D. 9 1/4". Thickness 1/8".

**Adjustment:** Pedal free travel 1/2 to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

**Hill-Holder Note**—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Adjusting nut and locknut at end of Hill-holder operating rod.

**Hill-Holder Adjustment:** See *Studebaker Shop Notes*.

**Removal:** Jack up rear end of car and rest on stands under rear axle. Remove transmission (see TRANSMISSION following). Disconnect one battery cable at battery, take off starter and hang it clear of clutch housing. Remove clutch housing mounting capscrews and bolts at top, working through opening in front floor. Free speedometer cable from frame cross-member and wire it up out of the way. Support rear end of engine with jack placed under oil pan at rear (CAUTION—Do not damage oil pan). Disconnect rear engine mounting by taking off nuts, bolts with insulators, washers, and spacers. Disconnect parking brake cable at bracket, clutch operating shaft from release shaft, and brake pedal return spring. Loosen exhaust pipe flange nuts at manifold, take off exhaust pipe support bracket at housing, loosen clamp and turn bracket for clearance. Remove rear engine support cross-member. Take out clutch housing mounting bolts and remove housing. Block clutch release levers. Remove six mounting screws in clutch cover flange, lift off clutch assembly and driven member.

## TRANSMISSION

**Warner Model AS1-T86E (Std.), AS2-T86E with R10B type Overdrive (Optl.).** All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See *Transmission Section* for complete data.

**Transmission Control:** Remote control type with gear-shift lever mounted on steering column.

See *Transmission Section* for complete data.

**Removal:** Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

## OVERDRIVE

**Warner Type R10B (part of AS2-T86E transmission).** New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."

See *Transmission Section* for complete data.

**Overdrive Control Units**—Same as *Champion*. See *Champion 9C (1950) page* for data.

**Removal:** See Std. Transmission Removal data.

## UNIVERSALS

**Spicer Model 1268-111X (Front & Rear), 1261-102X (intermediate).** Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft). See *Universals Section* for complete data.

**Propeller Shaft & Support Bearing:** Two shafts used: 1) Front Shaft with intermediate universal yoke. 2) Rear Shaft with slip-joint on forward end at intermediate universal.

**Propeller Shaft & Support Bearing Removal & Servicing**—See *Studebaker Shop Notes*.

## REAR AXLE

**Spicer Salisbury Model 41-2.** Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See *Rear Axle Section* for complete data.

**Ratio**—4.09-1 Std., 4.55-1 Optl. (Std. with Overdr.). **NOTE**—Rear axle ratio stamped on plate attached to axle by cover capscrew.

**Backlash**—.003-.006". Shim adjustment.

**Removal:** Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

**Axle Shaft Removal**—Remove wheel, remove wheel hub (use puller J-596-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft assembly (Puller HM-931).

**Wheel Bearing Adjustment:** Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). Endplay—.001-.005".

## SHOCK ABSORBERS

**Houde (Houdaille)**—Double acting, hydraulic type. Adjustable type with thermostatic control on rear.

**Front**—Studebaker No. 526092 (Right), 526093 (Left).

**Rear**—Studebaker No. 526148 (Right), 526149 (Left). See *Shock Absorber Section* for complete data.

**Adjustment (Front):** Pointer on end of shaft should be lined up with scribed line on end of shaft. Turn pointer clockwise for firmer action, counter-clockwise for softer action (not more than 1/32-1/16").

**(Rear Shocks)**—Remove cap on end of shaft to expose adjusting screw. Slot aligned with scribe mark between "O" and "S" mark is original factory setting. Use special tool No. T-2860 (do not use screwdriver). Turn screw clockwise (toward "S") for firmer action, counter-clockwise (toward "O") for softer action (not more than 1/32" at a time).

**Refilling:** Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—Use only Houdaille Shock Absorber Fluid No. L-1404.

## FRONT SUSPENSION

**Front Suspension:** Independent, Coil Spring Suspension.

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—5 1/4° crosswise.

**Caster**—1 1/2° to -2 1/2°. Eccentric pin adjustment.

**Camber**—0° to +1°. Eccentric pin adjustment.

► **NOTE**—1/2" more Camber favored on drivers side. **Toe In**—1/16-1/8". Adjust right hand tie rod only for toe in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments on left hand tie rod.

## STEERING GEAR

**Ross Model T-14 Cam-and-Twin Lever type.**

See *Steering Gear Section* for complete data.

## BRAKES

**Service:** Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes are designed with automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes.

See *Brake Section* for complete data.

**Drums**—Composite type. Diameter 11".

**Clearance**—If adjustment required, see "Lockheed (Wagner) Hydraulic Self-Adjusting Brakes" in Brake Section.

**Lining**—Molded type (all shoes). Width 2". Thickness 3/16". Length per wheel 22 1/4".

**Braking Power**—57% Front, 43% Rear.

**Hand Brake:** See Service Brake data (above).

**Hill-Holder:** Std. See *Brake Section* for complete data.

**Adjustment**—See *Studebaker Shop Notes*.

## MISC. MECHANICAL

**CONVERTIBLE TOP CONTROL:** Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive). See *Miscellaneous Section* for complete data.

**Windshield Wipers:** Vacuum Cable operated type. See *Miscellaneous Section* for complete data.

**CYLINDER HEAD****ALL MODELS**

**CYLINDER HEAD:** Installation—Use a torque indicating wrench to tighten cylinder head stud nuts and capscrews, tighten in correct sequence as shown

**WILLYS FOUR****WILLYS SIX**

**Tightening Torque**—See Tightening (Torque Wrench) Specifications below.

### TIGHTENING (TORQUE WRENCH) SPECIFICATIONS

**ALL MODELS**

**TIGHTENING TORQUES:** When tightening capscrews or bolt nuts retaining the parts listed below, use a torque indicating wrench and tighten to tensions listed:

	<b>Ft.Lbs.</b>	<b>In.Lbs.</b>
Cylinder Head Capscrews.....	65-75	780-792
Cylinder Head Stud Nuts.....	60-65	720-780
Main Bearing Capscrews.....	65-70	780-840
Connecting Rod Bolts (4 Cyl.).....	50-55	600-660
Connecting Rod Bolts (6 Cyl.).....	25-30	300-360
Flywheel Attaching Bolts.....	36-40	432-480
Rear Engine Mounting Bolts.....	38-42	456-504
Manifold Attaching Stud Nuts.....	31-35	372-420
(Intake & Exhaust)		
Generator Bracket Bolts.....	31-35	372-420
Starter Mounting Capscrews.....	20-25	240-300
Universal Joint "U" Bolts.....	15-18	180-216
Spring Center Clip "U" Bolts.....	50-55	600-660
Spring Pivot Bolt Nut.....	27-30	324-360

**ORIGINAL BORE & PISTONS****ALL MODELS**

**BORE & PISTON SIZES:** Engines originally equipped at factory with special oversize pistons may be identified by code letter stamped on engine following the engine number:

- "B"—Pistons are .002" Oversize.  
 "AB"—Pistons .002" Oversize. Main and connecting rod bearings are Undersize (see Original Bearing Sizes following).  
 "C"—Piston Pins .002" Undersize.

**4 CYLINDER MODELS**

**STANDARD BORE & PISTON SIZE VARIATION:** bores and pistons are graded in four .0005" steps as shown in table below and are marked as follows:

- Piston**—Letter stamped on piston head.  
**Cylinder Bore**—Letter stamped on top of block between valve ports and bore at center.

**4 Cylinder Bore & Piston Sizes**

<b>Letter</b>	<b>Cylinder Bore Size</b>	<b>Piston Size</b>
A	3.1255-3.1250"	3.1235-3.1230"
B	3.1260-3.1255"	3.1240-3.1235"
C	3.1265-3.1260"	3.1245-3.1240"
D	3.1270-3.1265"	3.1250-3.1245"

**6 CYLINDER MODELS**

**STANDARD BORE & PISTON SIZE VARIATION:** Cylinder bore and pistons are graded in six .0004" steps and are marked as follows:

- Piston**—Letter stamped on piston head.  
**Cylinder Bore**—Similar letter stamped on top of block between valve ports and bore.

**ORIGINAL BEARING SIZES****ALL MODELS**

**MAIN & CONNECTING ROD BEARING SIZES:** Engines originally equipped with special undersize mains and connecting rod bearings can be identified by code letter stamped on engine following the engine number:

- "A"—Main & Con. Rod Bearings .010" Undersize.  
 "AB"—Main & Con. Rod Bearings .010" Undersize and Pistons Oversize (see Original Bore & Pistons).  
 "D"—Main Bearings .010" Undersize.  
 "E"—Connecting Rod Bearings .010" Undersize.

**CRANKSHAFT & MAIN BEARINGS****ALL MODELS**

**CRANKSHAFT SERVICING: Bearing Replacement**—**CAUTION**—4 Cyl. engine must be removed from car for bearing replacement (bearings "doweled" in case and crankshaft must be taken out to remove and install bearings). 6 Cyl. bearings not doweled in this manner.

Make certain that oil holes in bearings line up with oil holes in crankcase. On 4 cylinder, see that bearings fit snugly on dowel pins in crankcase and bearing caps.

**Rear Bearing Oil Seal**—Consists of a wick type packing installed in grooves in bearing cap and crankcase. To install new packing, insert packing in groove, use round piece of wood or steel to "roll" packing into groove, working from both ends toward center. With packing firmly seated in groove, cut off ends flush with surface. **NOTE**—Crankshaft must be removed to install packing in upper (crankcase) half of bearing.

**Rear Bearing Cap Seal**—Bearing cap sealed by cylindrical rubber packing strips inserted in holes between cap and case. When installing bearing cap, coat upper face lightly with sealing compound, insert new packing strips after cap is in place. Packing strips should protrude 1/4" to provide proper compression when oil pan installed. **CAUTION**—Do not cut off this protruding portion of the packing.

**Front (Timing Cover) Oil Seal**—On all models, timing case cover (with double baffle and spring loaded leather seal) and new crankshaft pulley (with polished surface for seal contact) used. This new cover and pulley can be installed as an assembly on earlier engines (either chain or gear drive).

**FLYWHEEL**

**Flywheel**—Mounted on crankshaft flange by two special dowel bolts and four special head bolts. Whenever flywheel removed, make certain that arrow on flywheel center lines up with arrow on crankshaft flange when re-installed (to insure cor-

rect position of timing marks), tighten bolt nuts with a torque indicating wrench to 36-40 ft.lbs. and check flywheel run-out when installed. Run-out must not exceed .008".

**New Flywheel or Crankshaft Installation**—Taper dowel bolts should be replaced with new special snug fitting bolts supplied to eliminate necessity of reaming the special tapered holes. Assemble new parts as follows: Install flywheel on crankshaft (lining up arrows on both parts) using the four straight bolts previously used, tighten these bolts securely. Drill out tapered bolt holes with a 35/64" drill, ream these holes with a 9/16" (.5625") straight reamer, install special bolts, Part No. 116295 (with No. 52330 Lockwasher and No. 52804 Nut), in these holes and discard the tapered dowel bolts used previously. Tighten bolts to 36-40 ft.lbs. and check flywheel run-out (.008" max.).

**CONNECTING ROD & BEARINGS**

**PALNUT INSTALLATION:** Always use new Palnuts (discard nut after removal). After regular nut correctly tightened, install palnut with flat side down toward nut, tighten finger tight, and one-half turn additional.

► **1949 SELF-LOCKING NUT CAUTION**—Special "Hug-lock" self-locking nut used on some 1949 cars instead of regular nut & Palnut. This nut discontinued on later cars to avoid possibility of stripping bolt threads when nut removed.

**CAMSHAFT & BEARINGS****ALL MODELS**

**CAMSHAFT SERVICING: Removal**—Drain radiator and cylinder block, remove radiator and grille, cylinder head, manifold, valves, and valve springs. Remove oil pump, fuel pump, oil pan, crankshaft pulley (use puller), fan and governor drive belts, and fan assembly. Remove nuts on front engine support rubber insulators (CJ-3A only). Remove timing gear cover, remove camshaft gear and thrust plate, block up all valve lifters (can be tied up with string to manifold studs). On CJ-3A only, place jack under crankcase (use block of wood on jack to avoid damage to oil pan), raise front end of engine to provide clearance for camshaft. Remove camshaft through front of engine.

**Gear Puller Tool**—Use Puller Tool No. W-172 to remove gear on engines equipped with timing gears.

**Camshaft Front Bearing**—Consists of a steel-backed, babbitt-lined bushing which takes thrust. When installing this bushing, make certain oil hole lines up with drilled oil hole in crankcase, stake bearing in place to prevent turning in service.

**OIL PUMP****ALL MODELS**

**ROTOR TYPE OIL PUMP SERVICING:** Pump mounted externally on left hand side of crankcase.

**Pump Removal**—Remove mounting screws in pump body flange, slide pump assembly out. To disassemble pump, remove cover screws and lockwashers, lift off cover, remove pump outer rotor. To remove shaft and rotor assembly, file off end of pin in drive gear hub, drive pin through shaft using a small drift, remove gear, withdraw shaft and rotor from housing. To remove oil regulator, remove hexagonal-headed plug on side of housing, withdraw regulator spring and plunger. **CAUTION**—Do not lose adjusting shims located within plug above spring.

**Pump Servicing & Assembly**—Replac rotors if clearance between inner and outer rotor excessive, or if rotor clearance in housing excessive. Replace cover if rotor bearing surface is worn or scratched. Use new body and cover gaskets. Make certain that driving gear pin is securely installed.

**Pump Installation**—Turn flywheel to #1 piston firing position with flywheel mark "IGN" centered in inspection hole in right front face of flywheel housing below starter. Turn distributor shaft to #1 firing position with distributor rotor finger opposite #1 terminal in distributor cap. Hold oil pump in same relative position as when installed on engine, turn pump shaft until tongue offset is upward (widest part of shaft down) and line up gear retaining pin with right hand side of slot in pump body. Slide pump into place on mounting studs, recheck rotor position. NOTE—If distributor rotor not at #1 terminal with pump installed, remove pump, turn shaft as required, and re-install.

## OILING SYSTEM

### 6 CYLINDER MODELS

**EXCESSIVE OIL CONSUMPTION CORRECTION:** To correct complaints of excessive oil consumption, when not due to external leakage, excessive bearing clearance, or cracked vacuum pump diaphragm, check and correct following points:

- 1—On engines before Eng. No. 18121, plug holes in valve compartment floor using special synthetic rubber plugs (furnished in Kit No. 649319) exactly as directed below (CAUTION—all holes must not be plugged). Beginning Eng. No. 18121, number and location of these holes was changed and plugs should not be installed on these later engines.
- 2—If piston clearance not in excess of .005", remove glaze from cylinder walls with a hone and install set of new Service Type piston rings.
- 3—If piston clearance in excess of .005", install new pistons. Fit pistons to new clearance as specified on car model page.

► **CAUTION**—Coat pistons and rings with engine oil before installation, break engine in at 40 MPH. maximum for 300 miles.

**Installation of Valve Compartment Plugs (Engines before No. 18121):** Use Kit No. 649319 containing synthetic rubber plugs of correct size and number for installation in holes in floor of valve compartment on left side of engine as follows:

**Four No. 649304 Plugs (Small)**—Use to plug all four small holes just inside valve cover flange and immediately adjacent to lifter hole for #1, 2, 5, 6 cylinders.

**Three No. 649305 Plugs (Medium)**—Use to plug all three medium holes in innermost line between pairs of cylinders (1-2, 3-4, 5-6).

**Four No. 649306 Plugs (Large)**—Use to plug four large center holes located at side of and between lifter holes for cylinders #2, 3, 4, 5.

► **CAUTION**—Do not plug end holes of this group—holes at #1 cylinder and #6 cylinder MUST BE OPEN.

► **PLUG INSTALLATION NOTE**—Do not remove metal fins from holes when installing plugs (if opening less than 1/8" due to fins, no plug required). Taper plugs, if necessary, to fit holes, insert plugs with twisting motion to secure tight fit and leave approximately 3/8" exposed at top. Check by turning engine over several times before installing valve covers.

## ENGINE GOVERNOR

### UNIVERSAL JEEP & TRUCK MODELS

**GOVERNOR:** Governor is mounted on bracket on left front corner of cylinder head and is belt driven from the crankshaft. Various types of Governors are used with different engaging mechanisms as listed below. All governors have a dash control by which engine speed can be set in 200 RPM. steps from 1000 RPM. to 2600 RPM. maximum.

**Adjustment (King-Seeley & Monarch):** Check throttle linkage for sticking and binding by disconnecting accelerator spring and making certain that throttle opens and closes freely (this is necessary to prevent surging when governor operating). Reconnect accelerator spring, set hand throttle in wide open position, make adjustments in order as listed below. **CAUTION**—Novi governors are adjusted differently (see Novi data following).

**Throttle Linkage**—Adjust length of governor-to-throttle rod so that rod can be installed without disturbing position of the short (lower) governor lever or the carburetor throttle lever (King-Seeley), or to provide 1/16" slack or lost motion (Monarch). Rod length between ball centers should be 6" with King-Seeley governor. NOTE—1/16" slack required with Monarch governor to cushion governor action and prevent surging (no surge adjustment).

**Dash Control (Speed Adjustment)**—Engage governor clutch, place the governor dash control in first (1000 RPM) notch, make certain that hand throttle fully open, start engine and allow it to run until fully warmed up, then adjust governor control as follows: Check engine speed which should be 1000 RPM (see Note below), and if not correct disconnect dash control cable at upper end of governor upper (long) lever, place lever in position giving 1000 RPM speed, adjust clevis on lever end of dash control cable so that cable can be connected without disturbing position of lever, tighten adjustment locknut and connect cable. Recheck adjustment. If engine surges when throttle opened momentarily on cars with King-Seeley governor, adjust surge screw (below). NOTE—Monarch governor does not have surge adjustment.

**Engine Speed Note**—If tachometer not available, speedometer can be used to gauge engine speed. Jack up rear wheels securely, make certain that front drive disengaged, engage high or direct transmission gear. Speedometer readings for adjusting purposes should be 15 MPH. (1000 Engine RPM), 39 MPH (2600 Engine RPM).

**Surge Screw Adjustment**—If engine surges under load when controlled by governor, loosen locknut on adjusting screw on rear of governor housing, turn adjusting screw out until engine surges when dash control is operated between Low and High governed speeds, then turn screw in until surging stops and tighten locknut. **CAUTION**—Do not turn surge screw in further than necessary to eliminate surging or speed control will be lost.

**Adjustment (Novi Governor):** Check throttle linkage for sticking and binding. Disconnect accelerator spring, see that throttle opens and closes freely (prevents surging when governor operates). Reconnect spring. Make following adjustments in order:

**Throttle Linkage**—Adjust length of governor to throttle rod so that it can be installed on the ball studs with the governor hand control pulled out to last notch and carburetor throttle wide open, tight-

en adjustment locknut and install rod. NOTE—Rod length should be approximately 7 3/8" between ball stud centers.

**Dash Control (Speed Adjustment)**—With governor dash control in closed or "in" position, start engine and allow it to run until fully warmed up. With hand throttle control fully closed, check engine idling speed and adjust throttle stop screw for 600-650 RPM idle speed. Pull governor hand control out to first notch, check engine speed which should be 900-1000 RPM (see Note below). If not correct, disconnect dash control cable at upper end of governor upper (long) lever, place lever in position giving correct 900-1000 RPM engine speed, adjust clevis on lever end of cable so that cable can be connected without disturbing position of lever, tighten locknut and connect cable. Then push governor hand control all the way in, recheck engine idle speed. If speed greater than original setting of 600-650 RPM, loosen nut locking governor control handle on rod, unscrew handle from rod until carburetor throttle closed and throttle stop screw against stop, tighten governor control handle locknut.

**Engine Speed Note**—Speedometer can be used to gauge engine speed as follows: Jack up rear wheels securely, make certain that front drive disengaged, engage transmission High or direct speed. Speedometer readings should be 13 1/2-15 MPH for engine speed of 900-1000 RPM.

## SPRING SHACKLES

### UNIVERSAL JEEP & TRUCK MODELS

**SPRING SHACKLES:** Springs are fitted with "U" type shackle (front end of front springs, rear end of rear springs on Jeep; front end of front springs only on Trucks). Opposite end of all springs fitted with bronze bushing and conventional pivot bolt (rear shackle of rear springs on Trucks has same type bushing and bolt). **CAUTION**—When removing springs, remove pivot bolt first, then remove bushings from "U" shackle. Install springs as follows:

**Pivot Bolt Installation**—Install bolts with head and grease fitting toward outside, tighten bolt nut with a torque indicating wrench to 27-30 ft.lbs.

**"U" Shackle Installation**—Install grease seal retainer and grease seal on each leg of "U" shackle, insert shackle through inner face of frame hanger and spring eye (threaded bushings installed with hexagonal head toward outside), hold shackle tightly against frame and start upper bushing on shackle (see Bushing Caution below) taking care that bushing is not cross-threaded on shackle or in spring eye. Turn bushing on shackle approximately halfway, then start lower bushing similarly, turn both bushings in alternately and evenly until heads of bushings are snug against frame bracket and bushing in spring eye is 1/32" away from spring (measured from inside hexagonal head to spring). Lubricate bushing with high-pressure lubricant, check shackles for binding by flexing spring. If shackle is tight, remove and re-install bushing.

**BUSHING CAUTION**—Left-hand threaded "U" shackles are used at left front spring and right rear spring (Jeep), at left front spring only (Trucks) with the left-hand threaded end down (toward spring eye) and special left-hand threaded bushings must be used with these shackles. Shackles may be identified by small boss forged on lower shank and bushings identified by groove around head. Right-hand shackles and bushings are unmarked.

**MODEL IDENTIFICATION**

**SERIAL NUMBER:** (2-WD & 4-WD)—On dash panel.  
(4x4-63, 4-63, VJ-3)—On floor riser to left of drivers seat.

(CJ-3A)—Above glove compartment door.

**1949 Numbers—**(2-WD) 2T-21011 Up, (4-WD) 4T-30576 Up, (4-63) 79716 Up, (CJ-3A) 10001 Up.

**ENGINE NUMBER:** Stamped on top of water pump boss at front of engine.

**TUNE-UP**

**COMPRESSION PRESSURE:** 115 lbs at cranking speed of 160 RPM.

**VACUUM READING:** Steady 17-21" idling at 7-10 MPH.

**FIRING ORDER:** 1-3-4-2. See diagram.

**SPARK PLUG GAPS:** .030".

**Plug Type—**Auto-Lite AN-7 or Champ. J-7, 14 mm.  
**NOTE—**CJ-3A uses Auto-Lite AN-7B.

**DISTRIBUTOR: Breaker Gap—**.020-.024".

**Cam Angle (CJ-3A)—**39°-8'. (All Others)—50.8°.

**Breaker Arm Spring Tension—**17-20 ozs.

**Automatic & Vacuum Advance—**See Ignition.

**Condenser Capacity—**(IGB-1025) .20-.25 mfd., (IGW-3139) .23-.26 mfd.

**IGNITION TIMING:** 5° BTDC. (Reg. Fuel), At TDC (for Low Octane Fuel).

**Timing Procedure—**See Ignition Timing.

**Flywheel Mark—**Flywheel mark "5" (or "TC") for TDC setting), centered in inspection hole in right front face of housing below starter.

**CARBURETION:**

**Idle Setting—**Idle adjusting screw set for smooth idle with warm engine (on Carter Carb. ½-1½ turns open). For richer mixture, turn screw out on Carter, in on Zenith carburetors.

**Idle Speed—**600 RPM. or 8 MPH.

**Float Level (Carter WO-636SA)—**¾" top of float at free end to gasket seat on cover with valve closed (invert assembly).

**Float Level (Carter WA1-613S)—**5/16" from top of machined projection on bowl cover to top of soldered seam on free end of float (float inverted).

**Float Level (Zenith 228AV10)—**1½" from top of float to gasket seat on bowl cover with needle valve seated (float inverted).

► **CAUTION—**Do not compress spring in valve stem (allow float to hang freely on inverted cover assembly).

**Accelerating Pump (Carter Pumps)—**No seasonal adjustment.

(Zenith Pumps)—3 grooves in pump plunger stem. Engage hairpin cotter as follows: Center Groove normal setting, Upper (min. stroke) Hot Weather, Lower (max.) Cold.

**Choke Setting:** No adjustment required.

**Fuel Pump Pressure:** 4½ lbs. maximum.

**CRANKCASE VENTILATOR:** Remove and clean the vacuum control valve. See Crankcase Ventilator (following Carb. Equipment) for directions.

**MANIFOLD HEAT CONTROL:** Automatic thermostatic type. Valve must operate freely (no adjust-

ment required). When installing assembly, see that thermostatic spring end rests on top of spring stop bracket on manifold.

**VALVE TAPPET CLEARANCE:** .016" All Valves, Hot or Cold.

**NOTE—**Adjusting screws self-locking type.

**Valve Timing Check—**See Valve Timing.

**STARTING:** See Battery, Starter, Generator, Regulator.

**IGNITION**

**IGNITION SWITCH:** (2-WD, 4-WD, 4X4-63, 4-63, VJ-3)—Douglas or Mitchellock Switch. Willys No. 641720. (CJ-3A)—Willys No. 642073 (for Yale & Towne, No. 644001 (Hurd). In base of ignition coil. Lock Cylinder (2-WD, 4-WD, 4X4-63, 4-63, VJ-3)—Briggs & Stratton No. 50184. (CJ-3A)—Willys No. 661949 (for Yale & Towne), No. 644000 (for Hurd). Key Series (2-WD, 4-WD, 4X4-63, 4-63, VJ-3)—C250 to C499. Groove—No. 3.

**COIL:** Auto-Lite Models. (2-WD, 4-WD, 4X4-63, 4-63, VJ-3) IG-4090A or IG-6009. Service Coil IG-6005 (with Bracket IG-1798S). (CJ-3A)—IG-4314 or IG-

4314A with Service Coil IG-3033XS (Bracket CE-1248S). On right side of engine.

**Ignition Current—**2.5 amperes idling, 5 stopped.

**CONDENSER:** Auto-Lite—IGB-1025 (IGW-4129 & IGW-4189 Distr.), IGW-3139 (IAD-4008).

**Capacity—**(IGB-1025) .20-.25 mfd, (IGW-3139) .23-.26 mfd.

**DISTRIBUTOR:** Auto-Lite—(2-WD, 4-WD) IGW-4189, (4X4-63, 4-63, VJ-3) IGW-4129 and IGW-4189, (CJ-3A) IAD-4008, and IGW-4189. Automatic advance type with separate Vacuum Spark control.

**Breaker Gap—**.020-.024".

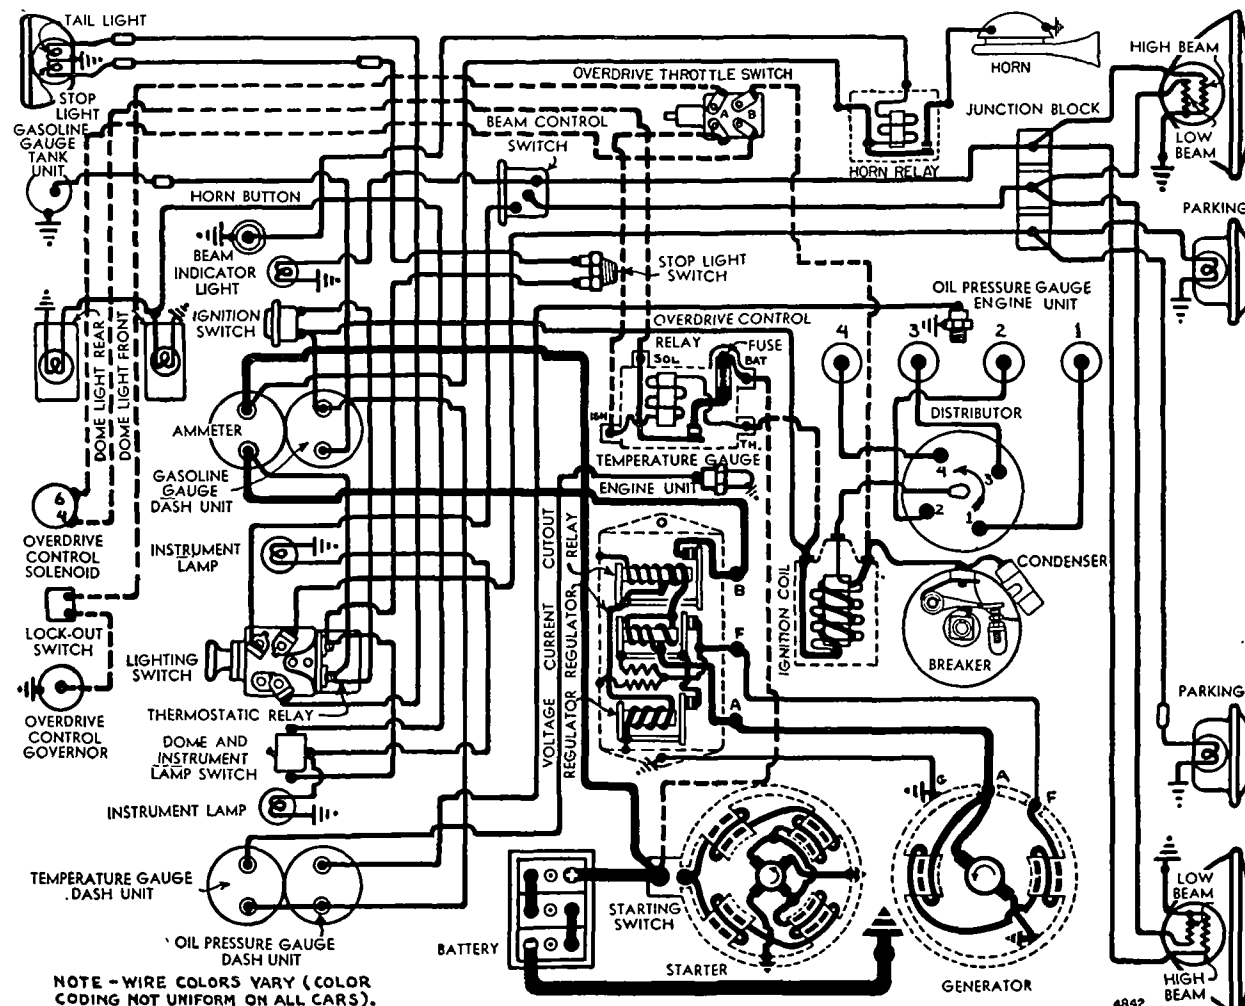

**Cam Angle (CJ-3A)—**39°-8'. (All Others)—50.8°.

**Breaker Arm Spring Tension—**17-20 ozs.

**Rotation—**Counter-clockwise viewed from above.

**Automatic Advance—IAD-4008**

**Vacuum Spark Control: Auto-Lite Type VC-4010.**

Separate unit mounted on hold-down plate, linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start.....	0°	3 1/2"
2°.....	4°	5 3/4"
5°.....	10°	9 1/4"
8°.....	16°	12 3/4"
10°.....	20°	15"

**Distributor Removal:** On right side of engine. To remove, disconnect vacuum line, take out hold-down screw in mounting plate.

**Installation Note—**If crankshaft has been turned with distributor off engine, install distributor as follows: Turn crankshaft to #1 cylinder firing position (see Timing), turn distributor shaft until rotor is at #1 segment (see diagram), install distributor on engine, rocking shaft slightly to engage drive coupling, push distributor down into place, install hold-down screw, check ignition timing.

**CAUTION—**If oil pump has been removed, see Oil Pump Installation under "Oil Pump" in Willys Special Data.

**IGNITION TIMING**

Std. Setting (Regular Fuel).....5° BTDC  
Spec. Setting (Low Octane Fuel).....At TDC

**Timing Marks—**Flywheel mark "5°" (or "TC/" (TDC setting) centered in inspection hole in right front face of housing below starter (remove inspection hole cover).

**Timing (Engine not Running)—**With #1 piston on compression, turn engine over until piston reaches firing position (see settings above) with flywheel

mark "5°" (or "TC/" (TDC setting) centered in inspection hole in right front face of housing, loosen advance arm clampscrew, rotate distributor until contacts begin to open, tighten clampscrew, see that rotor at #1 segment in distributor cap (see diagram), check spark plug cable connections.

**Timing Using Timing Light—(Engine Running)—**This method recommended by manufacturer. Direct timing light through inspection hole at flywheel, idle engine (engine must be warm), adjust distributor (as directed above) until "5°" (or "TC/" (TDC setting) mark centered in inspection hole.

**CARBURETOR****4-63 & VJ-3 WITH CARTER WA-1**

Carter WA-1 Type 613S—1 1/4" Single Barrel, Down-draft type with manual choke control.

Casting Number on Flange—485.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets—**See Carter Jet Table in Carburetor Section for complete data.

**Fast Idle:** Fast idle cam which serves as stop for throttle lever stopscrew is linked to choke valve lever and rotated to fast idle position when choke valve closed for starting.

Setting—No adjustment required.

**CARBURETOR****2-WD, 4-WD, 4X4-63, CJ-3A WITH CARTER WO**

Carter WO Type 636SA—1" Single Barrel, Down-draft type with manual choke control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets—**See Carter Jet Table in Carburetor Section for complete data.

**Fast Idle:** Interconnected linkage by which choke valve lever opens throttle to fast idle position when carburetor choked for starting.

Setting—No adjustment required.

**CARBURETOR****4-63 & VJ-3 WITH ZENITH**

Zenith Model 228AV10—Single barrel, Down-draft type with manual choke control.

Outline No.—10760. On round metal tag riveted on top of float cover. Use in ordering parts.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jets—**See Zenith Jet Specifications in Carburetor Section.

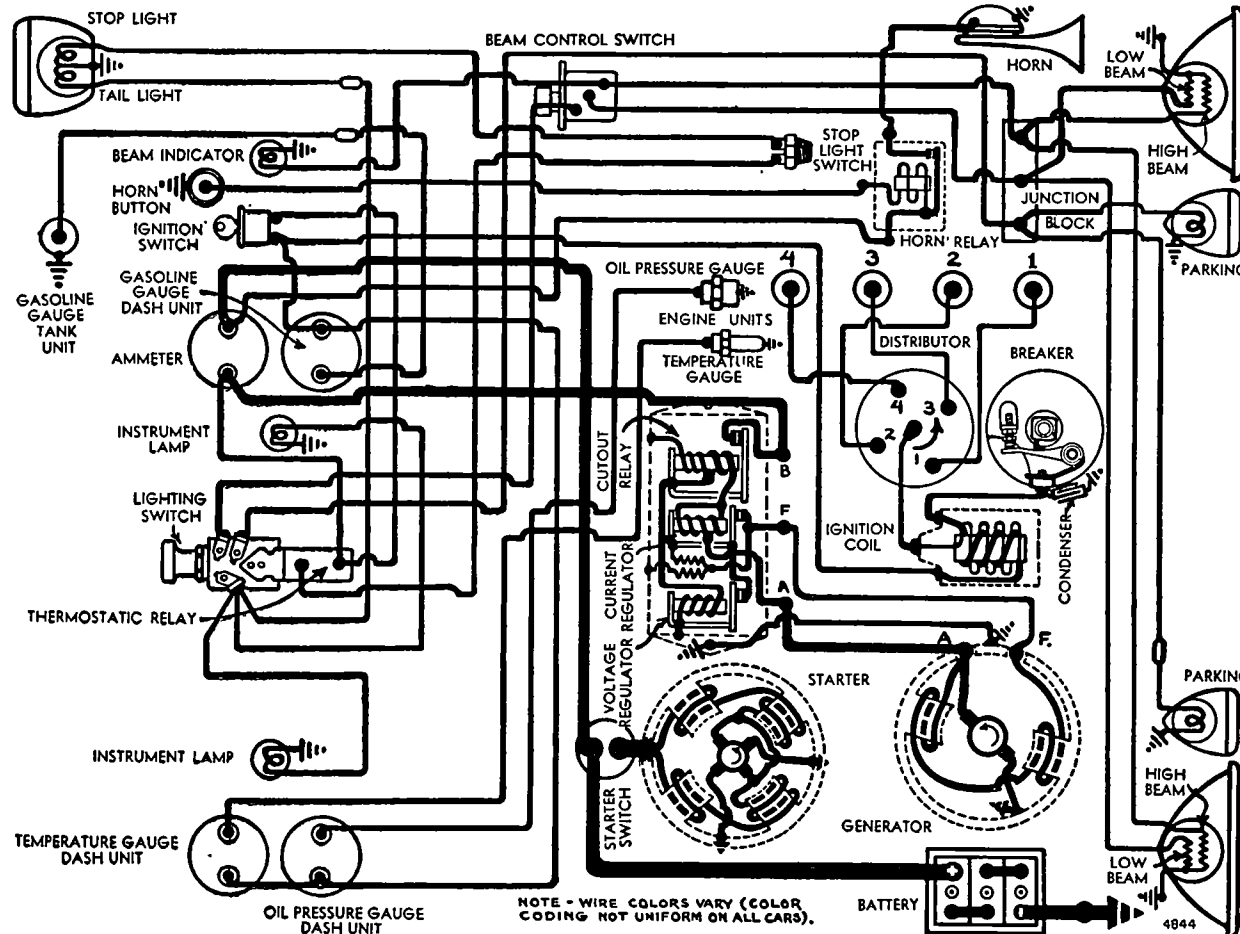

**Fast Idle:** Fast idle cam which serves as stop for throttle lever stopscrew is linked to choke valve lever and rotated to fast idle position when choke valve closed for starting.

Setting—No adjustment required.

**CARB. EQUIPMENT**

**Governor (Special Equip.):** King-Seeley "Handy" Model 26510-354, Monarch, or Novi Governors. Centrifugal types. Mounted on left front corner of cylinder head and driven by special belt from the crankshaft.

CONTINUED N NEXT PAGE

UNIVERSAL JEEP AND JEEP TRUCKS

## CONTINUED FROM PRECEDING PAGE

**Setting**—1000 to 2600 RPM of engine in steps of 200 RPM (in accordance with position of dash control lever which has nine settings).

**Adjustment**—See *Willys Special Data* for directions.

**Air Cleaner:** Oakes-Donaldson Oil Bath type. (2-WD & 4-WD) #616150-E653, (4X4-63, 4-63, CJ-3A, VJ-3) #613300-E653, (4-63) #616615, oil-wetted type optl. equip.

**Servicing (Oil-bath Type)**—Clean filter and fill to Oil level mark with same oil used in engine crankcase at 2000 mile intervals (when engine oil changed) or more often if required by operating conditions.

**Servicing (Oil-wetted Type)**—Clean filter element and re-oil at 2000 mile intervals or more often if required by operating conditions.

**Fuel Pump:** (2-WD & 4-WD)—AC #1539106, (4X4-63 & CJ-3A) AC #1539353, (4-63 & VJ-3) AC #1539306. Diaphragm type combination fuel-and-vacuum pump.

**Replacement Pump**—AC #9106 or 9307 (for 1539106), #9353 (for 1539353), #9306 (for 1539306).

See *Carburetion Equipment Section* for complete data.

**Pressure**—4½ lbs. maximum.

**Gasoline Gauge (CJ-3A):** Auto-Lite.

**Dash Unit**—Auto-Lite No. NG-10764D.

**Tank Unit**—Auto-Lite No. NG-10762T.

**Gasoline Gauge (All Others):** King-Seeley Electric type.

**Dash Unit**—King-Seeley No. 42570.

**Tank Unit**—King-Seeley No. 41285.

See *Carburetion Equipment Section* for complete data.

## CRANKCASE VENTILATOR

**Sealed Positive Ventilation Type**—Air intake pipe (from air cleaner to oil filler pipe) furnishes clean air to crankcase, air outlet pipe (from valve cover to manifold) allows fumes from crankcase to be sucked into intake manifold. Vacuum control valve at manifold connection must close at idling speed for satisfactory idling performance.

**NOTE**—Clean Vacuum Control Valve when engine tuned up.

**Cleaning Vacuum Control Valve**—Remove control valve by disconnecting pipe and unscrewing valve from manifold. Disassemble valve, withdraw valve and spring, clean valve and valve seat thoroughly.

**Servicing**—Make certain all connecting pipes tight and that oil filler cap gasket seals cap tightly. Remove and clean control valve when tuning engine or whenever system does not operate satisfactorily.

## BATTERY

**Auto-Lite Type PN-15**—6 Volt, 15 Plate, 100 Ampere Hour capacity (20 hour rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes.

**Five-second Voltage**—4.15 volts.

**Grounded Terminal**—Negative (—) grounded at starter.

**Engine Ground**—Strap at right front engine mounting.

**Location**—Right hand side of dash in engine compartment.

**Dimensions**—Lgth. 8 15/16". Width 7 1/8". Hgt. 8 5/8".

## STARTER

**Auto-Lite (2-WD, 4-WD, 4X4-63, VJ-3)—MZ-4137, (CJ-3A) MZ-4113.**

**Armature No.**—(MZ-4137) MZ-2214, (MZ-4113) MZ-2089.

**Drive (MZ-4137)**—Overrunning clutch and positive pinion shift actuated by starting pedal. (MZ-4113)—Special type Bendix Drive No. A2233.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 RPM., 150-175 amps., 5 volts.

## Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

**Removal:** On right front face of flywheel housing. To remove, disconnect pedal linkage and cables, take out flange mounting capscrews and bolt in bracket on commutator end.

**Starting Switch:** (MZ-4137)—Auto-Lite SW-2677A. Mounted on starter and operated by pinion shift lever. (MZ-4113)—Auto-Lite SW-4015. Mounted under floor to right of accelerator pedal. Operated manually by button on toeboard.

See *Electrical Equipment Section* for complete data.

## GENERATOR

**Auto-Lite Model GDZ-4817A—Armature GDZ-2006F.** Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—35 amperes, 8.0 volts (cold) with discharged battery (controlled by regulator).

**Charging Rate Adjustment**—None (see Regulator).

## Performance Data

Cold		Hot	
Amperes	Volts	Amperes	Volts
0	6.4	0	6.4
5	6.65	5	6.65
10	6.85	10	6.85
15	7.05	15	7.05
20	7.3	20	7.3
25	7.55	25	7.55
30	7.8	30	7.8
35	8.0	35	8.0

①—Current Regulator setting. See Regulator data.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.6-1.78 amperes at 6.0 volts.

**Motoring Current**—4.16-4.60 amperes at 6.0 volts.

**Removal:** Conventional pivot mounting at right front of engine. To remove, take out clamp bolt above generator and two pivot bolts under generator. Slip off drive belt and lift generator out.

**Belt Adjustment:** Loosen clamp and pivot bolts, swing generator out away from engine until belt can be deflected 1" midway between generator and fan pulleys with thumb pressure.

## REGULATOR

**Auto-Lite Model VRP-4007C-2. Voltage-Current Type.** Regulator case mounted on right side in engine compartment. Consists of Cutout Relay and vibrating type Voltage and Current Regulator units. **NOTE**—Regulator cover sealed. Warranty void if seals broken.

See *Electrical Equipment Section* for complete data.

## Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open measured at hinge end of core.

## Voltage Regulator

**Setting**—7.35 volts (7.2-7.5) at 70°F. See *Electrical Equip. Section* for settings at other temperatures.

**Checking (without breaking seals) & Adjustment**—See *Electrical Equipment Section*.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

## Current Regulator

**Setting**—34-36 amperes (marked "35" on cover).

**Checking (without breaking seals) & Adjustment**—See *Electrical Equipment Section*.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

## LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See *Electrical Equipment Section* for complete data.

**Headlamp Adjustment**—Aim upper beam straight ahead (hot spot center exactly 3" below lamp center height at 25 feet).

**Beam Indicator**—On left side of instrument panel. Lighted when upper beams in use.

## Switches

**Lighting (2-WD, 4-WD, CJ-3A)**—Douglas A-457, (4X4-63, 4-63, VJ-3) Culver-Stearns.

**Beam Selector**—Douglas #6351.

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:** 30 ampere type.

Mounted on lighting switch. Vibrating thermostatic type. Protects lighting circuits by vibrating to limit current. No adjustment.

**HORNS:** Sparton #C-5992 or B-10419, Auto-Lite HA-4033 or HA-4037. Vibrator type single horn controlled by relay. Auto-Lite HW-4007 (Low Pitch), HW-4008 (High Pitch) twin horns.

## ENGINE

**ENGINE SPECIFICATIONS:** Own Make. Four cylinder, "L" Head type. Cylinder block and crankcase cast enbloc. Cylinders offset from center-line of crankshaft toward camshaft side of engine.

**Bore**—3 1/8" (3.125-3.127"). See *Willys Special Data* for Original Bore Sizes.

**Stroke**—4 3/8".

**Displacement**—134.2 cubic inches.

**Rated Horsepower (SAE)**—15.63.

**Developed Horsepower**—60 at 4000 RPM.

## ENGINE

## CONTINUED FROM PRECEDING PAGE

Compression Ratio—6.48-1 Std. Cast Iron Head.  
NOTE—7.0-1 Cylinder Head is optional.

Compression & Vacuum Reading—See Tune-up data.

ORIGINAL BORE & PISTON SIZES: See Willys Special Data.

ORIGINAL BEARING SIZES: See Willys Special Data.

TIGHTENING TORQUES: See Willys Special Data.

CYLINDER HEAD INSTALLATION: See Willys Special Data.

PISTONS: Lo-Ex aluminum alloy (Lynite, Bohn, Permite), "T" slot, Cam ground, tin-plated type with heat insulation groove above top piston ring.  
Length—3¾".

Weight—12.7 ozs. without rings or pin.

Removal—Pistons and rods removed from above.

Clearance—Top Land .017-.019". Skirt .003".

Replacement Pistons: Furnished Std. to .0002", .005", .010", .015", .020", .025", .030", .035", .040", .045" Oversize.

►CAUTION—Pistons must not be "lapped" in (will destroy tin-plated surface).

Fitting New Pistons: Use .003" feeler stock, ¾" wide, inserted between piston and cylinder wall on opposite side from "T" slot. Pull required to withdraw feeler must be within 5-10 lbs. at 70°F.

Installing Pistons: "T" slot toward valve (left) side of engine (opposite side from oil spray hole in connecting rod lower end).

PISTON RINGS: Two compression, one oil control ring per piston, all above pin (piston has narrow heat insulation groove above top ring groove). Oil ring groove drilled with oil drainage holes.

Ring	Width	End Gap	Side Clearance
Compression	3/32"	.008-.013"	.0005-.001"
Oil Contr.	3/16"	.008-.013"	.001-.0015"

Installing Rings: Install compression rings with mark "TOP" (on side) toward top. Rings have taper face and must be installed correctly. Top ring inner bevel edge must be up.

Replacement Rings: For Rebored Cylinders—Furnished .005", .010", .015", .020", .025", .030", .035", .045" Oversize.

Service Type Rings (for cylinders not rebored) furnished Std.—.009", .010-.019", .020-.029", .030-.039", .040-.049" Oversize.

PISTON PIN: Diameter—.8117-.8119". Lgth—2 25/32". Pin is locked in connecting rod by clampscrew.

Pin Fit in Piston—.0001-.0005" clearance or light thumb push fit with piston and pin at 70°F.

Replacement Pins: No oversizes are available.

CONNECTING ROD: Length—9.1845-9.1905". Weight—39.41 ozs.

Crankpin Journal Diameter—1.9385-1.9375". See "Original Bearing Sizes" in Willys Special Data.

Lower Bearing—Steel-backed, babbitt-lined, replaceable type. CAUTION—Oil spray hole in upper

half of bearing must line up with oil spray hole in rod.

Clearance—.0005-.0025". Sideplay—.004-.010".

Bearing Adjustment: None (no shims). Replace bearings. Do not file connecting rods or bearing caps.

See Willys Special Data for "Palnut" installation.

NOTE—Replace bearings when clearance exceeds .005" or sideplay exceeds .013".

Replacement Bearings: Furnished Standard & .010", .020", .030" Undersize.

Installing Rods: Lower bearing offset. Install rods with short side of bearing toward nearest main bearing or toward front of engine (#1, 3), toward rear (#2, 4). Oil spray hole in lower end of rod toward right of engine (away from camshaft) on all rods.

CRANKSHAFT: Three bearing type with removable counterweights.

Journal Diameters—2.3341" (all bearings). See "Original Bearing Sizes" in Willys Special Data.

Bearings—Steel-backed, babbitt-lined, replaceable type. Bearing shells are dowelled in bearing caps and crankcase.

Clearance—(CJ-3A) .0001-.0025", (All Others) .0014-.0029".

NOTE—Replace bearings when clearance exceeds .006" or when endplay exceeds .018".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. See Crankshaft Servicing instructions in Willys Special Data.

NOTE—Engine must be removed from chassis for bearing replacement and crankshaft servicing.

Replacement Bearings: Furnished Standard & .010", .020", .030" Undersize.

End Thrust: Taken by flanged faces of #1 (front) bearing. Adjustable by adding or removing shims between crankshaft sprocket thrust washer and sprocket. NOTE—Crankshaft sprocket must be removed with a gear puller in order to make endplay adjustments. Adjusting shims furnished .002", .004", .010" and .030" thick.

Endplay—.004-.006".

FLYWHEEL: Removal—See Willys Special Data.

CAMSHAFT: Four bearing, helical gear drive.

Journal Diameters—#1, 2.188"; #2, 2¼"; #3, 2 3/16"; #4, 1¾".

Bearings—Removable steel-backed, babbitt-lined bushing (front), machined in crankcase (all others).

Clearance—.002-.0035". Service limit .006" (front), .008" (all others).

Camshaft Removal—See Willys Special Data.

End Thrust: Taken by thrust plate assembled behind gear with a spacer assembled behind plate. If required, a thin shim can be installed behind spacer if too little clearance, or spacer can be dressed to provide greater clearance.

Endplay—.003-.0055".

►Timing Case Cover (& Front Oil Seal) Change: See "Crankshaft & Main Bearings" in Willys Special Data.

Timing Gears: Crankshaft gear cast iron. Camshaft gear Fibre with steel hub.

►CJ-3A Jeep Engines with Timing Gears carry engine mark "J" ahead of engine number.

Timing Gear Backlash—.000-.002".

Camshaft Setting: Mesh gears with marked tooth of camshaft gear opposite marked space between gear teeth on crankshaft gear.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.373"	①
Exhaust	1 15/32"	.3725"	5 13/16"
①—(CJ-3A) 5 3/4". (All Others) 5 57/64".			

	Seat Angle	Lift	Stem Clearance
Intake	45°	23/64"	.0015-.00325"
Exhaust	45°	23/64"	.0025-.0045"

Valve Guides: Removable type. Remove guides from above with puller, install new guides with driver or press guides down in place to following dimensions:

Intake Guide—Top of guide 1 5/16" below top face of block. The shorter smaller-diameter section end of the guide should be up.

Exhaust Guide—Top of guide 1" below top face of block. Taper end (counter-bored end) of guide should be up.

Valve Springs: Install springs with closed-coil end up toward cylinder block. Spring free length 2½".

	Spring Pressure	Spring Length
Valve Closed	53 lbs.	2 7/64"
Valve Open	120 lbs.	1 3/4"

Valve Lifters: Mushroom type operating in reamed holes in block. Serviced by installing oversize lifters. Lifters furnished .004" Oversize.

Lifter Diameter—.6240-.6245".

Lifter Clearance—.0005-.002".

NOTE—Camshaft must be removed for lifter removal.

See Camshaft Removal instructions in Willys Special Data.

## VALVE TIMING

Tappet Clearance: .016" All Valves, Hot or Cold.

NOTE—Tappet adjusting screws are "self-locking" type (no locknuts).

Valve Timing: See Camshaft Setting (above).

Intake Valves—Open 9° BTDC. Close 50° ALDC.

Exhaust Valves—Open 47° BLDC. Close 12° ATDC.

►Timing Mark Note—No Valve Timing Mark provided but flywheel marked "TC" (top dead center) and "5°" (5° BTDC). Estimate 9° BTDC intake opening point from these marks and mark flywheel to check valve timing.

Valve Timing Check—Set tappet clearance #1 intake valve at .020". This valve should open with #1 piston 9° or .039" before top dead center with flywheel mark (see timing mark note above) centered in inspection hole on right front face of flywheel housing below starter. Reset tappet clearance to .016" running clearance.

CONTINUED ON NEXT PAGE

C NTINUED FR M PRECEDING PAGE

**LUBRICATION**

**Engine Oiling System:** Pressure to main and connecting rod bearings, camshaft bearings, and timing chain or timing gears. Oil pump mounted externally on left hand side of crankcase.

**Crankcase Capacity**—4 quarts.

**Normal Oil Pressure**—(CJ-3A) 40-50 lbs. at 30 MPH, (All Others) 35 lbs. at 30 MPH.

**Oil Pressure Regulator**—Under plug on side of pump housing. Opens at 35 lbs. Adjustable by adding or removing shims located above spring in plug.

**Oil Pump:** Rotor type pump mounted on left side of crankcase.

**Oil Pump Servicing**—See *Willys Special Data*.

**Oil Filter:** Purolator. On cylinder head bracket at right front corner of cylinder head with oil outlet connected to top of timing chain cover.

**CAUTION**—Filter should be drained at each crankcase oil change (2000 mile intervals) and filter element replaced at 8000 mile intervals for normal service.

**Oil Pressure Gauge (CJ-3A):** Auto-Lite #G-10763. Bourden tube type (not electric).

(All Others)—King-Seeley Electric type.

**Dash Unit**—King-Seeley No. 42565.

**Engine Unit**—King-Seeley No. 40767.

See *Miscellaneous Section* for complete data.

**COOLING**

**Cooling System:** Pressure type with pressure valve (relief valve) in filler cap.

**Capacity**—11 qts.

**Pressure Valve**—Radiator Filler Cap. Opens at 3 3/4 lbs. (3 1/4-4 1/4 lbs.).

**Water Pump:** Centrifugal, packless, ball bearing type. See *Water Pump Section* for complete data.

**Removal**—Loosen and remove drive belt, disconnect hose. Remove pump mounting screws, lift out pump and fan assembly.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat:** Harrison. In outlet elbow on cylinder head. Starts to open at 145-155°F. Fully open at 170°F.

**Temperature Gauge (CJ-3A):** Auto-Lite #H10766. Bourden tube type (not electric).

(All Others)—King-Seeley Electric type.

**Dash Unit**—King-Seeley No. 42575.

**Engine Unit**—King-Seeley No. 7000.

See *Miscellaneous Section* for complete data.

**CLUTCH**

Auburn Model 8501-19 (Sta. Wgn. & Jeepster), 8501-23 (Jeep & Trucks) with Borg & Beck Driven Member. Single plate, dry disc type.

**NOTE**—Model 8501-19 has neoprene driving lug inserts and Return Clip Springs.

See *Clutch Section* for complete data.

► **Clutch Facing Change & Return Clip Spring Installation to correct Clutch Chatter & Noise**—See "Auburn Clutch" in *Clutch Section*.

► **Jeep CJ-3A Release Lever Interference Correction** (causing premature clutch wear on first cars): See "Auburn Clutch" in *Clutch Section*.

**Facings**—Molded (flywheel side), Woven (pressure plate side). I. D. 5 1/8". O. D. 8 1/2". Thickness .132-.138".

**Pedal Adjustment:** Pedal free travel (2-WD, 4-WD, 4X4-63, 4-63, VJ-3) 3/4", (CJ-3A) 1 1/4" (gives 1/16" clearance between release bearing and clutch levers). To adjust, loosen locknut and turn adjusting nut on connector link at clutch fork, tighten locknut.

**Removal:** Remove transmission (see Transmission Removal), remove flywheel bell housing. Mark pressure plate and flywheel to insure correct re-installation, take out mounting screws in clutch cover flange (turn all screws out evenly), remove clutch assembly and driven member.

**TRANSMISSION****FOR 2-WHEEL DRIVE**

AS12-T96 (4-63), AS18-T96 (VJ-3), AS1-T90E (2-WD before Serial No. 22536), AS1-T90D (2-WD after Serial No. 22536)—Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type except spur type sliding gear on 2-WD.

See *Transmission Section* for complete data.

**Transmission Control** (All except 2-WD after Serial No. 22536): Remote control type with gearshift lever on steering column.

See *Transmission Section* for complete data.

**Removal:** Disconnect shift rods at transmission (remote control type) or remove shift lever (floor mounted gearshift). On Overdrive cars, disconnect wires from solenoid and rail switch, disconnect overdrive control cable and conduit, remove rubber mounted saddle support at rear end of overdrive, take off overdrive governor assembly. Disconnect front universal joint at transmission. Support engine weight on jack under flywheel bell housing, remove frame cross-member with rubber insulators attached. Place jack under engine to support engine. Back out four screws holding transmission to bell housing approximately 3/4". Pull transmission back to bolt heads which will provide opening between the two housings and relieve pressure on clutch release fork in bell housing. Using a long screwdriver through opening in side of bell housing, pry the clutch release fork from engagement with clutch release bearing carrier. Remove four transmission attaching screws, and pull transmission back until clutch shaft clears bell housing and remove the assembly.

**TRANSMISSION****FOR 4-WHEEL DRIVE**

Warner AS3-T90C (CJ-3A, 4X4-63 & 4-WD after Serial No. 34787), AS3-T90A (4-WD before Serial No. 34787).

Three-speed type. Constant-mesh, synchro-mesh, helical gears (Second & High), sliding spur gear (Low & Reverse).

See *Transmission Section* for complete data.

**Transfer Case:** Spicer Model 18. Two-speed auxiliary transmission and front-wheel drive unit mounted on rear of transmission case. Separate control levers provided for Low-High range (right hand lever), and front-wheel drive engagement (left hand lever).

**Transmission Control** (4-WD before Serial No. 34787 only): Remote control type with gearshift lever mounted on steering column.

See *Transmission Section* for complete data.

**Removal:** Transmission and transfer case are removed as an assembly. Disconnect front and rear propeller shafts at universal joints (NOTE—If equipped with Power Take-off drive, remove front end of power take-off propeller shaft assembly). Disconnect speedometer cable at transfer case, brake cable, transmission shift rods at transmission case levers (remote control type) or remove shift lever (floor mounted gearshift), and clutch release cable at cross-shaft bell-crank. Place support jacks under engine and transmission, remove transfer case rubber snubber bolt nut (on right side) and rear mounting bolt nuts at cross-member under transmission case. Remove floor board inspection plate. Drain radiator and loosen upper radiator hose. Remove transfer case shift lever pivot pin screw, remove pin and shift levers (NOTE—If Power Take-off used, remove power take-off shift lever plate screws and lift lever out). Remove bolts holding center cross-member at frame side rails and remove cross-member (CAUTION—with cross-member removed, engine and transmission weight will rest on support jacks). Remove bolts holding transmission on bell housing, force transmission to right until ball stud end can be disengaged from end of clutch control cross-shaft. Lower support jacks under engine and transmission and slide transmission and transfer case assembly to rear until clutch shaft clears bell housing, remove assembly from beneath car.

**OVERDRIVE**

**Warner Type "R10"** (part of transmission assembly). Solenoid operated, governor controlled with throttle "kick-down."

See *Transmission Section* for complete data.

**Control Relay**—Auto-Lite Model HRT-4001.

**Overdrive Governor**—Auto-Lite Model TGE-4002.

**Transmission Solenoid**—Delco-Remy 1118132.

**Removal:** Remove as a unit with transmission.

**UNIVERSALS****FOR 2-WHEEL DRIVE**

**2-WD & 4-63 Sta. Wgn.**—Detroit Series 4100. Ball & Trunnion type. NOTE—2-WD trucks have additional universal at intermediate bearing on frame cross-member.

**4-63 Sed. Del.**—Spicer No. 1261-102X (Front), 1268-111X (Rear). Needle roller bearing type.

See *Universals Section* for complete data.

**UNIVERSALS****FOR 4-WHEEL DRIVE**

**Front & Rear Drive Propeller Shaft Joints:** Spicer needle roller bearing types as follows:

	Transmission End	Axle End
Front Drive (All)	1261-102X	1268-104X
Rear Drive (CJ-3A)	1261-1X	1268-104X
Rear Drive (4-WD)	1261-102X	1268-101X

**Front Axle Shaft Joint:** Bendix or Rzeppa Constant-velocity type. One joint used at outer end of each shaft.

See *Universals Section* for complete data.

**Power Take-off Propeller Shaft Joints:** Detroit Series 4100 Ball-and-Trunnion type. Three used on 4-WD (additional joint at intermediate support bearing on frame cross-member).

See *Universals Section* for complete data.

**FRONT AXLE****F R 4-WHEEL DRIVE**

Spicer (Salisbury) Model 25—Full-floating, hypoid gear type. Differential assembly (ring and pinion gear assembly) is identical with Spicer Model 23-2 Full-floating Rear Axle and is serviced in same manner.

See Spicer (Salisbury) Full Floating Rear Axle in Rear Axle Section for complete data.

Ratio—5.38-1.

Backlash—.005-.007". Shim adjustment.

Removal: See Universal Jeep Model CJ-2A (1948) Front Axle Removal instructions.

Wheel Bearing Adjustment: See Universal Jeep Model CJ-2A (1948) "Front Axle" for Wheel Bearing Adjustment.

**REAR AXLE****ALL (EXCEPT TRUCKS)**

Spicer 23-1 (4-63 & VJ-3), Spicer 41-2 (4X4-63 & CJ-3A)—Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

Ratio (4-63 & VJ-3)—4.88-1 Std., 4.56-1 & 5.38-1 Optl.

Ratio (4X4-63 & CJ-3A)—5.38-1.

Backlash—.004-.008". Shim adjustment.

Removal: Support rear end of truck securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables and propeller shaft at rear universal. Place support jacks under axle housing to relieve springs of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of springs, lower springs to floor. Remove axle assembly.

**Axle Shaft Removal:** Remove wheel and hub assembly (use wheel puller), remove nuts on bolts holding backing plate and brake assembly, remove dust shield, oil seal, and backing plate. Remove axle shaft and wheel bearing. CAUTION—Do not lose bearing adjusting shims.

**Wheel Bearing Adjustment—**Endplay .003-.005". Adjust by adding or removing shims between backing plate and flange on axle housing. See axle shaft removal above for dismantling instructions.

**NOTE—**Shims installed on left hand end of axle housing only in production. Shims can be installed on right hand end of axle housing, if necessary, for correct endplay.

**REAR AXLE****TRUCKS NLY**

Timken Model No. 51540—Semi-floating, spiral bevel gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

Ratio—5.38-1 Std. Optl. Ratio (2-WD only) 4.88-1 and 6.17-1.

Backlash—.004-.018". No adjustment.

Removal: Same as for other Willys Models below.

Wheel Bearing Adjustment: Same as for other Willys Models below.

**SHOCK ABSORBERS**

Gabriel or Monroe—Hydraulic, direct acting, adjustable type. NOTE—Shock absorbers are sealed and cannot be dismantled for servicing or refilling.

See Shock Absorber Section for complete data.

**Adjustment—**Remove mounting bolt at lower end, fully collapse shock absorber by pressing up on lower end until adjusting key within unit engages slot in adjusting plate (can be determined by feel), turn unit in clockwise direction until limit of adjustment is reached (full range of adjustment is 4 turns), back off adjustment by turning unit counter-clockwise exactly one turn for standard setting. Make certain that adjusting key does not slip out of slot while making adjustment.

CAUTION—Units on both sides must be set alike.

**FRONT SUSPENSION****WITH CONVENTIONAL DRIVE OR 4-WHEEL DRIVE**

Conventional type (see Front Axles above for four wheel drive Models) with semi-elliptic springs.

**Steering Knuckle Bearing Servicing & Adjustment—**See Universal Jeep Model CJ-2A (1948) "Front Axle" for data.

Kingpin Inclination—7½° (All).

Caster—4¾° (2-WD), 3° (Others).

Camber—1° (2-WD), 1½° (Others).

Toe In—3/64-3/32" (All).

**FRONT SUSPENSION****INDEPENDENT TYPE**

Planadyne Type. Independent, linked parallelogram type with transverse spring (spring acts as lower control arm).

See Front Suspension Section for complete data.

►Replacement Spring Caution—See Willys Front Suspension for recommended replacement springs.

Kingpin Inclination—5° crosswise.

Caster—1°.

Camber—1½° (1¼-1¾°).

Toe In—1/8-3/16".

►See Willys Front Suspension for Toe In adjusting procedure.

**STEERING GEAR**

Ross Model T12, No. TA-13018—Cam-and-Twin Lever.

See Steering Gear Section for complete data.

**BRAKES**

Service Brakes: Bendix (Lockheed) Four Wheel Hydraulic, self-centering (except CJ-3A), Double anchor (CJ-3A). NOTE—Self-centering brakes do not have anchor pin adjustment.

See Brake Section for complete data.

**Drum Diameters—**(CJ-3A) 9", (4-63) 10", (2-WD & 4-WD) 11".

**Lining—**Molded type.

	Width	Thickness	Length Per Wheel
CJ-3A	1¾"	.206-.216"	16 53/64"
4-63	1¾"	.222"	19"
2-WD & 4-WD	2"	.182-.192"	22 1/16"

Clearance—.008" toe, .005" heel for each shoe.

NOTE—On self-centering type brakes, centralize shoes by hard brake application before making adjustment.

**Hand Brake (Except CJ-3A):** Hand lever applies rear wheel service brakes. See Service Brakes above.

**Hand Brake (CJ-3A):** Hand lever applies independent brake on drive shaft at rear of transfer case.

**Drum Diameter—**8".

**Lining—**Width 1¾". Thickness .206-.216". Length per drum 16¼".

**Hand Brake Adjustment—**See Universal Jeep Model CJ-2A (1948) "Brakes" for data.

**MISC. MECHANICAL**

Windshield Wiper (Except CJ-3A): Vacuum type, cable operated.

See Miscellaneous Section for data.

distributor on engine, rocking shaft slightly to engage drive coupling, push distributor down into place, install hold-down screw, check ignition timing.

**CAUTION**—If oil pump has been removed, see Oil Pump Installation under "Oil Pump" in Willys Shop Notes.

## IGNITION TIMING

**Std. Setting**.....At Top Dead Center  
**NOTE**—See Octane Selector Setting to compensate for special fuel and operating conditions.

**Timing Marks**—Line on rim of vibration dampener and pointer on timing gear cover. Flywheel also marked ('TC' on flywheel in line with horizontal center-line of inspection hole, right front face of housing).

**Timing (Engine not Running)**—With #1 piston on compression, turn engine until piston reaches firing position (TDC) with line on vibration dampener aligned with pointer on right side of timing gear cover. Loosen vacuum control link screw in distributor quadrant, center pointer on scale, tighten screw. Loosen clampscrew on hold-down plate, rotate entire distributor assembly until contacts begin to open, tighten clampscrew, see that rotor at #1 segment in distributor cap, check spark plug connections.

**Timing (Using Timing Light—Engine Idling)**—This method recommended by manufacturer. Direct timing light at vibration dampener, idle engine (engine must be warm), adjust distributor (as directed above) until timing mark lines up with pointer.

**Octane Selector Setting**—If engine pings on heavy pull, loosen vacuum control link screw at distributor quadrant, retard spark slightly by rotating distributor counter-clockwise. For High Octane Fuel, spark can be advanced by rotating distributor clockwise.

## CARBURETOR

### CARTER WA-1

Carter WA1 No. 645S. 1¼" Single Barrel, Downdraft type with manual choke control.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Rods & Jets**—See Carter Jet Table in Carburetor Section.

**Fast Idle:** Interconnected linkage by which choke valve lever opens throttle to fast idle position when carburetor choked for starting.

**Setting**—No adjustment required.

## CARBURETOR

### ZENITH

Zenith Model 228AV10—Single barrel, downdraft type with manual choke control.

**Outline No.**—10760. On round metal tag riveted on top of float bowl cover. Use in ordering parts.

See Carburetor Section for complete data.

**Settings (Idle Setting, Float Level, and Accelerating Pump):** See Tune-Up data.

**Metering Jets**—See Zenith Jet Specifications in Carburetor Section.

**Fast Idle:** Fast idle cam serving as stop for throttle stopscrew is linked to choke valve lever and rotated to fast idle position when choke valve closed for cold starting.

**Setting**—No adjustment required.

## CARB. EQUIPMENT

**Fuel Pump:** AC No. 1539245. Diaphragm type combination fuel-and-vacuum pump.

**Replacement Pump**—AC No. 9245.

See Carb. Equipment Section for complete data.

**Pump Pressure**—3½-4½ lbs. at 1800 Eng. RPM.

**Gasoline Gauge:** King-Seeley Electric type.

**Dash Unit**—King-Seeley No. 42570.

**Tank Unit**—King-Seeley No. 41248.

See Carb. Equipment Section for complete data.

**Air Cleaner:** AC No. 1544113 Oil-wetted type, Element #1.

**Servicing (Oil-wetted Type)**—Clean filter element and re-oil at 2000 mile intervals or more often if required by operating conditions.

## CRANKCASE VENTILATOR

**Sealed Positive Ventilation Type.** Air intake pipe (from air cleaner to oil filler pipe) furnishes clean air to crankcase, air outlet pipe (from valve cover to manifold) allows fumes from crankcase to be sucked into intake manifold. Vacuum control valve at manifold connection must close at idling speed for satisfactory idling performance.

**NOTE**—Clean Vacuum Control Valve when engine tuned up.

**Cleaning Vacuum Control Valve**—Remove control valve by disconnecting pipe and unscrewing valve from manifold. Disassemble valve, withdraw valve and spring, clean valve and valve seat thoroughly.

**Servicing**—Make certain all connecting pipes tight and that oil filler cap gasket seals cap tightly. Remove and clean control valve when tuning engine or whenever system does not operate satisfactorily.

## BATTERY

Auto-Lite PN-15 or Willard HW-1-100. 6 volt, 15 plate, 100 Ampere Hour capacity (20 hr. rate).

**Starting Capacity**—120 amperes for 20 minutes.

**Zero Capacity**—300 amperes for 3.2 minutes.

**Five-second Voltage**—4.15 volts.

**Grounded Terminal**—Negative (—) grounded at starter.

**Engine Ground**—Strap at left front engine mount.

**Location**—Right hand side of dash in engine compartment.

**Dimensions**—Lgth. 9". Width 6¾". Hgt. 8½".

## STARTER

Auto-Lite Model MZ-4137. Armature No. MZ-2214.

**Drive**—Overrunning clutch and positive pinion shift actuated by starting pedal.

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—42-53 ozs. (new brushes).

**Cranking Engine**—160 RPM., 150-175 amps., 5 volts.

		Performance Data		
Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	4300	5.5	70
.65	"	2500	5.5	100
2.55	"	1325	5.0	200
4.95	"	750	4.5	300
7.65	"	220	4.0	400
7.8	"	Lock	3.0	420
11.8	"	Lock	4.0	560

**Removal:** On right front face of flywheel housing. To remove, disconnect pedal linkage and cables, take out flange mounting capscrews and bolt in bracket on commutator end.

**Starting Switch:** Auto-Lite SW-2677A. Mounted on starter and operated by pinion shift lever.  
See Electrical Equipment Section for complete data.

## GENERATOR

Auto-Lite Model GDZ-4817A. Armature GDZ-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.

**Maximum Charging Rate**—35 amperes, 8.0 volts (cold) with discharged battery (controlled by regulator).

**Charging Rate Adjustment**—None (see Regulator).

		Cold Performance Data		Hot	
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35	8.0	1900	35	8.0	2250

**Rotation**—Counter-clockwise at commutator end.

**Brush Spring Tension**—35-53 ozs. (new brushes).

**Field Current**—1.60-1.78 amperes at 6.0 volts.

**Motoring Current**—4.2-4.6 amperes at 6.0 volts.

**Removal:** Conventional pivot mounting at right front of engine. To remove, take out two pivot bolts and clamp bolt, slip off drive belt.

**Belt Adjustment:** 1" deflection (thumb pressure) midway between generator and pump pulleys. To adjust, loosen all mounting bolts, pull generator away from engine.

## REGULATOR

Auto-Lite Model VRP-4007C-2. Voltage & Current type. On right side in engine compartment.

See Electrical Equipment Section for complete data.

**NOTE**—Regulator cover sealed. Warranty void if seals broken.

### Cutout Relay

**Cuts In**—6.4-7.0 volts (set to 6.4-6.6 volts).

**Cuts Out**—4.1-4.8 volts (approx. 4-6 amps. disch.).

**Contact Gap**—.015" minimum.

**Air Gap**—.031-.034" with contacts open (measured at hinge end of core).

### Voltage Regulator

**Setting**—7.35 (7.2-7.5) volts at 70°F. See Electrical Equipment Section for data at other temperatures.

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap**—.012" min. (armature against stop pin).

**Air Gap**—.048-.052" with contacts just opening.

### Current Regulator

**Setting**—34-36 amperes (marked "35" on cover).

**Checking (without breaking seal) & Adjustment**—See Electrical Equipment Section.

**Contact Gap & Air Gap**—Same as Voltage Regulator.

CONTINUED N NEXT PAGE

## CONTINUED FROM PRECEDING PAGE

## LIGHTING

**Headlamps:** Corcoran-Brown "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

**Adjustment**—Aim upper beam straight ahead with hot spot center 3" below lamp center height at 25 ft. **Beam Indicator**—On left side of instrument panel (above Radio). Lighted when upper beams in use.

## Switches

**Lighting**—Willys No. 645292.

**Beam Selector**—Willys No. 640302.

**Instrument**—Willys No. 641732.

## MISC. ELECTRICAL

**LIGHTING CIRCUIT BREAKER:** 30-ampere type. Mounted on lighting switch. Vibrating thermostatic type. Protects lighting circuits by vibrating to limit current. No adjustment.

**FUSES:** Overdrive—20 ampere. On control relay.

**HORNS:** Sparton Model C-5992 or Auto-Lite HW-4007 (Low Pitch), HW-4008 (High Pitch). Vibrator type with horn relay.

**Horn Current**—7-9 amperes.

**Horn Relay**—Willys No. 643889.

## ENGINE

**ENGINE SPECIFICATIONS:** Own 6-63. Six cylinder, "L" head type.

**Bore**—3" (3.000-3.002"). See "Original Bore Sizes" in Willys Special Data.

**Stroke**—3½".

**Displacement**—148.44 cu. ins. **Rated HP.** 21.6.

**Developed Horsepower**—72 at 4000 RPM.

**Compression Ratio**—6.42-1. Std. cast-iron head.

**Compression & Vacuum Reading**—See Tune-Up.

**ORIGINAL BORE & PISTON SIZES:** See Willys Shop Notes.

**ORIGINAL BEARING SIZES:** See Willys Shop Notes.

**TIGHTENING TORQUES:** See Willys Shop Notes.

**CYLINDER HEAD INSTALLATION:** See Willys Shop Notes.

**PISTONS:** Aluminum alloy, "T" slot, cam ground, tin or brass plated type. Length—3".

**Weight**—9 67 ozs., stripped.

**Removal**—Pistons and rods removed from above.

**Clearance**—.016-.0185" (top), .0015" (skirt).

**Replacement Pistons:** Furnished .005", .015", .020", .045" Oversize.

**Fitting New Pistons:** Use .0015" feeler gauge ¾" wide between piston and cylinder wall on side opposite slot. Pull required to withdraw feeler must be 7-12 lbs.

**Installing Pistons:** T-slot toward left (valve) side of engine (opposite side from oil spray hole in rod).

**PISTON RINGS:** Two compression rings, one oil ring per piston, all above pin. Oil drain holes in oil ring groove.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"①	.010-.016"	.002-.004"
Compr. (#2)	3/32"①	.010-.016"	.0015-.0035"
Oil (#3)	3/16"②	.010-.016"	.001-.0025"
①—.0925-.0935".	②—.1860-.1865".		

**Installing Rings:** Compression ring mark "TOP" (on side of rings) and bevel on inner edge must be UP.

**Replacement Rings:** Furnished in sets of Std. to .009", .010", .020", .030", .040" Oversize.

**PISTON PIN:** Locked in rod by clampscrew

**Diameter**—.7497". **Length**—2 17/32".

**Pin Fit in Piston**—.0001-.0005" or a light thumb push fit at normal room temperature.

**NOTE**—Pin hole in piston diamond-bored to inside diameter of .7498-.7500".

**Replacement Pins:** Furnished Standard size only.

**CONNECTING ROD:** Length—6 343-6.347".

**Crankpin Journal Diameter**—1.9797-1.9805". See "Original Bearing Sizes" in Willys Shop Notes.

**Lower Bearing**—Replaceable steel-backed, babbitt lined type. No shims. **CAUTION**—Oil spray hole in bearing upper half must line up with oil hole in rod. **NOTE**—Palnuts used as locknuts on rod bolts.

**Clearance**—.0004-.0025". **Sideplay**—.004-.010".

**Bearing Adjustment:** None (replace bearings). Do not file rods or bearing caps.

**Palnut Installation**—See Willys Shop Notes.

**Replacement Bearings:** Furnished Std. size and .010", .020" Undersize.

**Installing Rods:** Rods not offset. Install with oil spray hole in lower end toward right (away from camshaft) on all rods.

**CRANKSHAFT:** Four bearing with integral counterweights. Vibration dampener on forward end.

**Journal Diameters**—2.250" all Bearings See "Original Bearing Sizes" in Willys Shop Notes.

**Bearings**—Replaceable steel-backed, babbitt lined type. No shims.

► **NOTE**—Bearing shells can be removed and replaced without removing crankshaft (bearings are NOT doweled on six cylinder engine).

**Clearance**—.0009-.003".

**Bearing Adjustment:** None (replace bearings). Do not file bearing caps. Bearings can be removed and replaced without removing crankshaft.

**Rear Bearing Oil Seal Servicing**—See "Crankshaft & Main Bearings" in Willys Shop Notes.

**Replacement Bearings:** Furnished Std. size and .010", .020" Undersize.

**End Thrust:** Taken by #1 front bearing (flanged type) and thrustwasher in back of crankshaft gear. Adjusted by adding or removing shims behind thrust washer. Shims furnished .002" thick.

**NOTE**—Crankshaft gear must be removed with a gear puller for endplay adjustment.

**Endplay**—.002-.006".

**FLYWHEEL:** Removal—See Willys Special Data.

**CAMSHAFT:** Four bearing with helical gear drive.

**Journal Diameters**—#1, 1.8755-1.8760"; #2, 1.8425-1.8435"; #3, 1.8110-1.8120"; #4, 1.8245-1.8250".

**Bearings**—Removable steel-backed, babbitt-lined bushing (Front), machined in crankcase (all others). Front bearing reamed to 1.877" diameter.

**Clearance**—.001-.0025".

**Camshaft Removal**—See Willys Shop Notes.

**End Thrust**—Taken by thrust plate assembled behind camshaft gear with a spacer assembled behind plate. If required, a thin shim can be installed behind spacer if too little clearance, or spacer can be dressed to provide greater clearance.

**Endplay**—.003-.0055".

**Timing Gears:** Crankshaft gear Cast Iron. Camshaft gear Fibre with steel hub.

**Gear Backlash**—.000-.002".

**Camshaft Setting:** Mesh marked tooth of camshaft gear with marked space (between teeth) on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 3/8"	.340"	4½"
Exhaust	1 9/32"	.340"	4½"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.2843"	.0015-.00325"
Exhaust	45°	.300"	.0025-.0045"

**Valve Guides:** Removable type Remove guides from above with puller. Install new guides with driver or press guides down until upper end ⅞" below upper edge of valve seat (taper end up).

**Valve Springs:** Springs can be installed with either end up. Free length 1 57/64".

	Spring Pressure	Length
Valve Closed	50 lbs.	1 5/8"
Valve Open	105 lbs.	1 21/64"

**Valve Lifters:** Mushroom type. In reamed holes in block. Service by installing oversize lifters.

**NOTE**—Camshaft must be removed for lifter removal.

**Camshaft Removal**—See Willys Shop Notes.

**Lifter Diameter**—.597-.605". **Length**—2".

**Clearance in Block**—.0005-.002".

## VALVE TIMING

**Tappet Clearance:** .016" All Valves, Hot or Cold.

**NOTE**—Adjusting screws self-locking type.

**Valve Timing:** See Camshaft Setting above.

**Intake Valves**—Open 5° BTDC. Close 44° ALDC.

**Exhaust Valves**—Open 47° BLDC. Close 12° ATDC.

**Valve Timing Check**—Set tappet clearance #1 intake valve at .020". This valve should be about to open (clearance taken up) with #1 piston 5° or .007" BTDC. with flywheel mark "5°/" centered in inspection hole in right front face of housing below starter. Reset tappet clearance to .016".

## LUBRICATION

**Engine Oiling System:** Pressure to crankshaft, connecting rod, and camshaft bearings and to timing gears.

► **Excessive Oil Consumption Correction**—See "Oiling System" in *Willys Shop Notes*.

**Crankcase Capacity**—5 qts. refill.

**Normal Oil Pressure**—35 lbs. at 30 MPH., 10 lbs. with engine idling at 500 RPM.

► **Low Oil Pressure Correction**—If oil pressure less than 5 lbs. at idling speed with latest type oil gauge units installed (see Oil Gauge below), check main and connecting rod bearing clearance, oil pressure relief valve for sticking open, and timing gear jet oil hole size not greater than #54 drill.

**Oil Pressure Regulator**—Opens at 25 lbs. Located on oil pump housing. Adjustable by adding or removing shims from above spring within plug.

**Oil Pump**: Internal Rotor type. Mounted externally on left side of crankcase.

**Oil Pump Servicing**—See *Willys Shop Notes*.

**Oil Pressure Gauge**: King-Seeley Electric type.

► **CAUTION**—Gauge changed in production—correct Dash and Tank units must be used together.

Before Serial No. 13291

**Dash Unit**—King-Seeley No. 41305 (0-30-80 dial).

**Engine Unit**—King-Seeley No. 40767 (80 lb. type).

Beginning Serial No. 13291

**Dash Unit**—King-Seeley No. 42565 (0-20-50 dial).

**Engine Unit**—King-Seeley No. 40790 (50 lb. type).

See *Miscellaneous Section* for complete data.

**Crankcase Ventilation**: See special data following "Carb. Equipment."

## COOLING

**Cooling System**: Pressure type with relief valve in radiator filler cap.

**Capacity**—8¾ qts. (9½ qts. with heater).

**Pressure Valve**—AC No. 846740. In filler cap. Opens at 3¾ lbs. (3¼-4¼ lbs.).

**Water Pump**: Centrifugal, packless type with special sealed ball bearing shaft (no lubrication required). See *Water Pump Section* for complete data.

**Removal**—Loosen and remove drive belt, disconnect hose, remove pump mounting screws. Lift out pump and fan assembly.

**Belt Adjustment**—See *Generator Belt Adjustment*.

**Thermostat**: Harrison. In outlet on cylinder head. Starts to open at 145-155°F. Fully open at 173°F.

**Temperature Gauge**: King-Seeley Electric type.

**Dash Unit**—King-Seeley No. 42575.

**Engine Unit**—King-Seeley No. 7000.

See *Miscellaneous Section* for complete data.

## CLUTCH

**Auburn Model 8501-19 with Borg & Beck Driven Member**. Single plate, dry disc type.

**NOTE**—Clutch has neoprene driving lug inserts and Return Clip Springs for quieter operation.

See *Clutch Section* for complete data.

► **Clutch Return Clip Spring Installation** to correct disengagement noise—See "Auburn Clutch" in *Clutch Section*.

**Facings**—Molded (flywheel side), woven (pressure plate side), I.D. 5⅞". O.D. 8½". Thickness .132-.138".

**Pedal Adjustment**: Pedal free travel 1" (provides 1/16" clearance between release bearing and clutch levers). To adjust, loosen locknut and turn adjusting nut on connector link at clutch fork, tighten locknut.

**Removal**: Remove transmission (see *Transmission Removal*), remove flywheel bell housing. Mark pressure plate and flywheel to insure correct re-installation, take out mounting screws in clutch cover flange (turn all screws out evenly), remove clutch assembly and driven member.

## TRANSMISSION

**Warner Model AS20-T96 (with Overdrive)**. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type.

See *Transmission Section* for complete data.

**Transmission Control**: Remote control type with gear-shift lever on steering column.

See *Transmission Section* for complete data.

**Removal**: Remove floor boards, take off bell housing inspection cover, disconnect clutch throw-out bearing retracting spring. Disconnect transmission control rods and speedometer cable at transmission case. Disconnect propeller shaft at universal joints and remove shaft. Support engine with jack placed under bell housing, remove rear engine support bolts from cross-member under transmission case, raise rear end of engine so that transmission clears cross-member (CAUTION—use care that fan blades do not damage radiator). Remove transmission to bell housing bolts, pull transmission straight back to clear clutch shaft, remove from car.

## OVERDRIVE

**Warner Type R10B (part of AS20-T96 Transmission)**. New solenoid operated, governor controlled type overdrive (no centrifugal pawls) with throttle operated "kick-down."

See *Transmission Section* for complete data.

**Control Relay**—Auto-Lite Model HRT-4001.

**Overdrive Governor**—Auto-Lite Model TGE-4002.

**Transmission Solenoid**—Delco-Remy Model 1118132

**Removal**: Remove as a unit with the transmission. Removal instructions same as for regular transmission (above) after governor and solenoid wires and lock-out control cable disconnected, and overdrive case-to-cross-member bolts removed.

## UNIVERSALS

**Detroit Universals Series 4100**. Ball-and-trunnion type.

See *Universals Section* for complete data.

## REAR AXLE

**Spicer (Salisbury) Model 23-1**. Semi-floating, Hypoid Gear type with Hotchkiss drive.

See *Rear Axle Section* for complete data.

**Ratio**—5.38-1 Std., 4.88-1 Optl.

**Backlash**—.004-.009". Shim adjustment.

**Removal**: Support rear end of car securely, remove rear wheels, disconnect rear shock absorbers, rear brake line (at frame connection on right side), rear brake cables, and propeller shaft at rear universal joint. Place support jacks under axle housing so that springs relieved of weight, remove nuts on spring "U" bolts, remove pivot bolt at front end of

springs, lower springs. Remove axle assembly from beneath car.

**Axle Shaft Removal**: Remove wheel and hub assembly (use wheel puller), disconnect brake line at wheel cylinder, remove nuts on bolts holding backing plate and brake assembly on housing, remove dust shield, oil seal, and backing plate (with brake assembly).

**CAUTION**—Do not lose bearing adjusting shims located between backing plate and flange on housing. Remove axle shaft and wheel bearing.

**Wheel Bearing Adjustment**—Endplay .003-.007". Adjust by adding or removing shims between backing plate and axle housing flange at each wheel. See axle shaft removal (above).

## SHOCK ABSORBERS

**Monroe or Gabriel**—Direct acting, hydraulic type.

See *Shock Absorber Section* for complete data.

**NOTE**—Shock absorbers are sealed and cannot be dismantled for servicing or refilling.

## FRONT SUSPENSION

► **Replacement Spring Caution**—See *Willys Front Suspension* for recommended replacement springs.

**Planadyne Type**. Independent, linked parallelogram type with transverse spring (spring acts as lower control arm).

See *Front Suspension Section* for complete data.

**Kingpin Inclination**—5° crosswise.

**Caster**—1° No adjustment.

**Camber**—1½°. (1¼-1¾° limits).

**Toe-In**—1/8-3/16".

► See *Willys Front Suspension* for Toe-in adjustment procedure.

## STEERING GEAR

**Ross Model T-12**. Cam-and-Twin Lever type.

See *Steering Gear Section* for complete data.

## BRAKES

**Service Brakes**: Bendix (Lockheed) Hydraulic, self-centering type. Hand lever applies rear wheel service brakes.

**NOTE**—These self-centered brakes do not have anchor pin adjustment.

See *Brake Section* for complete data.

**Wheel Cylinders**—Diameter: Front 1", Rear 7/8".

**Drums**—Chrome-nickel type. Diameter 10".

**Lining**—Moulded type (all shoes). Width 1.760". Thickness .182-.192". Length per shoe: 10 11/16" forward shoe, 8 5/16" reverse shoe.

**Clearance**—.008" toe, .005" heel, for each shoe.

**NOTE**—No anchor pin adjustment provided. Brake shoes should be centralized by hard brake application (and then released) before adjustments are made.

**Hand Brake**: See *Service Brakes* (above).

**Adjustment**—Tighten link rod adjustment (cable equalizer connector) at brake lever on frame cross-member for slight drag with hand lever set two notches "on". Release hand lever and make certain that brakes free of any drag.

## MISC. MECHANICAL

**Windshield Wipers**: Vacuum type, cable operated. See *Miscellaneous Section* for data.

## 1949 CARTER (B&amp;B) UPDRAFT CARBURETORS

## Carter No.

517S—Chevrolet Cab-Over-Engine Truck Models (1949)

699S—Chevrolet Forward Control (Dubl-Duti) Delivery Trk. (1949)

► **ACCESS TO CARBURETOR ON DUBL-DUTI MODELS** (for Adjustment or Removal): Remove attaching screws in toepan, disconnect stop light switch wiring, disconnect accelerator pedal rod from throttle control rod, then remove toepan.

**DESCRIPTION:** Plain tube, updraft type of same design used on corresponding previous Chevrolet models.

**ADJUSTMENT & SERVICING:** See complete "Carter (BB) Updraft Type" Carburetor in previous release and set these carburetors to the following specifications:

**IDLING ADJUSTMENT**Idle Screw Setting— $\frac{1}{2}$ - $1\frac{1}{2}$  turns open (turn screw out for richer mixture).

Idle Speed—450-500 RPM. with warm engine.

**ACCELERATING PUMP**

Pump Stroke— $\frac{9}{16}$ " (Short Stroke) with connecting screw in holes in pump link and throttle lever nearest throttle shaft,  $\frac{1}{8}$ " (Long Stroke) with screw in holes farthest from shaft.

Pump Seasonal Setting—Short Stroke—Summer, Long Stroke—Winter.

**FLOAT LEVEL SETTING**

Float Level— $\frac{1}{32}$ - $\frac{1}{16}$ " (Gauge Carter No. T109-49 or Chevrolet No. J-818-13A) from top of float to top edge of bowl with needle valve seated.

Intake Needle &amp; Seat Assembly—Carter No. 25-44S (Intake hole size #38).

**THROTTLE VALVE SETTING**

Idle Port—.005-.009" from top of lower idle port to lower edge of throttle valve.

Vacuum Spark Port—.000-.004" from top of port to lower edge of throttle valve.

NOTE—Above specifications are with throttle valve tightly closed.

**SERVICE PARTS**

Gasket Set—Carter No. 170A.

Repair Pkg. (with Std. Metering Jet)—Carter No. 1327B (517S).

## CARTER (B&amp;B) DOWNDRAFT

## Carter No.

- ①E7L1, L2, L3, L4—Chrysler Six, C45 (1949)—with Prestomatic Trans.  
 ①E7J1, J2, J3, J4—Chrysler 8, C46 & C47 (1949)—with Prestomatic Trans.  
 ①E7L1, L2, L3, L4—De Soto, Model S13 (1949)—with Tip-toe Shift Trans.  
 E7V1—DeSoto, Model S13 (1949) City Traffic.  
 D6P1—Dodge, Models D29 & D30 (1949) With Fluid Drive only.  
 D6M1—Dodge, D30 (1949) Fluid Drive & Gyromatic Trans.  
 D6H1—Plymouth, Models P17 & P18 (1949)  
 D6N1—Plymouth, Models P17 & P18 (1949) City Traffic.  
 ①—See Production Change below.

► **CHRYSLER 6 & DE SOTO E7L1 & E7L2 PRODUCTION CHANGE:** Model E7L1 carburetor used on first cars, superseded by E7L2. These carburetors alike except for new Air Horn Assembly (No. 6-622S superseding No. 6-608S) with changes in idle system as follows: Idle Passage Air Bleed (in Air Horn)—(E7L1) .0531" (E7L2) .0465"; Restriction in Body—(E7L1) .0531", (E7L2) .0452". Body Flange Assy. (both)—No. 1-629S superseded by 1-687S, Air Horn Assembly—(E7L1) 6-608S, (E7L2) 6-622S, NOTE—Unitized Pkg. No. 195-42U furnished to bring Kick-down Switch up to later standards (E7L1 & L2).

► **CHRYSLER 6 & DE SOTO E7L3 & E7L4 PRODUCTION CHANGE:** Model E7L4 supersedes E7L3 and earlier carburetors. These models similar to E7L2 (above) except for following changes: Body Flange Assy. No. 1-687S, Throttle Shaft & Arm Assy. No. 3-671S, Pump Jet No. 48-167, Pump Link No. 117-141, Dash Pot Pick-up Arm Spring No. 61-393, Dash Pot Valve Cage Assy. (E7L4 only) No. 149-108S, Valve Plunger Rod & Plate Assy. (E7L4 only) No. 49-173S, Kick-down Switch Terminal Block No. 184-52 or 184-53S (with Clip Assy.).  
 NOTE—Accelerating pump on these models does not require adjustment other than to see that lifter arm link is at right angles to lifter link shaft.

► **CHRYSLER 8 E7J1 & E7J2 PRODUCTION CHANGE:** Model E7J1 carburetor used on first cars, superseded by E7J2. These carburetors alike except for new Air Horn Assembly (E7J1) No. 6-592S, (E7J2) No. 6-619S, and new Body Flange Assembly (E7J1) 1-600S, (E7J2) 1-631S, with changes in idle system as follows: Idle Passage Air Bleed (E7J1) .063", (E7J2) .0531", Restriction in Body (E7J1) .053", (E7J2) .057", Kickdown Switch Terminal Block (E7J1) No. 184-26, (E7J2) No. 184-52.

► **CHRYSLER 8 E7J3 & E7J4 PRODUCTION CHANGES:** Model E7J4 supersedes E7J3 and earlier carburetors. These models similar to E7J2 (above) except for following changes: Body Flange Assy. No. 1-688S (supersedes 1-631S), Valve Plunger Rod & Plate Assy. (E7J4 only) No. 49-173S, Dash Pot Valve Cage Assy. (E7J4 only) No. 149-108S, Step-up Jet & Gasket Assy. (E7J4 only) No. 149-110S.

► **SPECIAL BODY GASKET CAUTION:** Whenever carburetor air horn and float bowl cover removed, new gasket of correct type must be installed when carburetor reassembled to prevent air leaks at this point (float bowl vented to air horn and air leaks will interfere with correct operation of carburetor). Use correct gasket for each model as follows: No. 121-69 (D6H1), 121-90 (all others).

**DESCRIPTION:** Single barrel, plain tube, downdraft types of same design as used on previous models. These carburetors have transmission control kick-down switches and slow-closing throttle (anti-stall) as follows:

Throttle Kick-down Switch (E7J1, 2, 3, 4; E7L1, 2, 3, 4; D6M1 Carbs.): See complete "Chrysler & De Soto Kick-down Switch" in previous release.

Slow Closing Throttle (E7J1, 2, 3, 4; E7L1, 2, 3, 4; D6M1 Carbs.): Solenoid type (non-adjustable). See complete "Chrysler, De Soto, Dodge Slow-Closing Throttle" in previous release.

Slow-Closing Throttle (Dodge D6P1 Carburetor)—Adjustable type (see setting below) and also See complete "Chrysler, DeSoto, Dodge Slow-Closing Throttle" in previous release.

**ADJUSTMENT & SERVICING:** Same as for previous Carter (B&B) carburetors. See complete "Carter (B&B) Downdraft Type" Carburetors in previous release and set these carburetors to the following specifications:

## IDLING ADJUSTMENT

Car Model	Carburetor	Idle Screw Setting	Idle Speed
Chrysler & DeSoto②	All	1/2-1 1/2 turns open	450-475 RPM
DeSoto	E7V1	1/2-1 1/2 turns open	6 MPH
Dodge②	D6M1	1/2-1 1/2 turns open	450-475 RPM
Dodge①	D6P1	1/2-1 1/2 turns open	6 MPH
Plymouth	D6H1, D6N1	1/2-1 1/2 turns open	6 MPH

①—Cars with Synchro-mesh Transmission.

②—Cars with Fluid Drive & Hydraulically controlled transmission.

## ACCELERATING PUMP STROKE

Car Model	Carburetor	Pump Stroke	Pump Setting
Chrysler 6 & DeSoto	E7L1, E7L2	20/64"	Medium Stroke
Chrysler 8	E7J1, E7J2	26/64"	Medium Stroke
DeSoto	E7V1	26/64"	Medium Stroke
Dodge	D6M1, D6P1	22/64"	Medium Stroke
Plymouth	D6H1, D6N1	22/64"	Medium Stroke

► **E7L3, 4; E7J3, 4 NOTE:** No gauge required. Bend horizontal portion of pump lifter link so that lifter link arm is at right angles to lifter link shaft.

## FLOAT LEVEL SETTING

Car Model	Carburetor	Float Level	Checking Gauge
Chrysler & DeSoto	All	5/64"	T109-50
Dodge	D6M1, D6P1	5/64"	T109-50
Plymouth	D6H1, D6N1	5/64"	T109-50

## THROTTLE VALVE SETTING

Car Model	Carburetor	Idle Port Height①	Vacuum Spark Port
Chrysler 6 & DeSoto	E7L1, 2, 3, 4	.118-.122"	.052-.058"①
Chrysler 8 (first)	E7J1	.125-.129"	.052-.058"①
Chrysler 8 (later)	E7J2, 3, 4	.130-.134"	.052-.058"①
DeSoto	E7V1	.093-.097"	.052-.058"①
Dodge	D6M1, D6P1	.118-.122"	.021-.027"②
Plymouth	D6H1, D6N1	.118-.122"	.021-.027"②

①—Top of port above top edge of throttle valve.

②—Bottom of port above top edge of throttle valve.

## DASH POT (SLOW-CLOSING THROTTLE) ADJUSTMENT

Chrysler, DeSoto, Dodge D6M1—Non-adjustable (solenoid) type.

Dodge Model D6P1—Adjusting screw located on top of bowl cover. Standard setting is five full turns of the screw out from the inner closed position.

## SERVICE PARTS

Gasket Set—Carter No. 136 (D6H1), 194A (E7J1 to 4), 164A (E7L1 to 4).

Repair Package—Carter No. 1513 (D6H1), 1511A (E7J1 to 4), 1510A (E7L1, L2), 1528 (E7L3, L4).

③—City Traffic.

②—E7J1, 2, 3 only (.0433" on E7J4).

**CARTER TYPE W1 (CHEVROLET)**

Carter No.

684S—Chevrolet, All Pass. Cars &amp; Trucks exc. C-O-E &amp; Forward Control (1949)

► **CARBURETOR IDENTIFICATION (CODE NO.):** Casting No. 603 on face of flange.**DESCRIPTION:** Plain tube, downdraft type of same design as used on previous Chevrolet models except for new Fast Idle mechanism and Accelerating Pump as follows:**Fast Idle**—Consists of a lever pivoted on the throttle valve shaft and serving as a stop for the throttle lever stopscrew. Slot at upper end of lever is engaged on pin on choke lever so that lever is "rocked" when choke valve closed for cold starting and warming up. Rocking of the lever opens the throttle valve to the fast idle position.**Accelerating Pump**—New "submerged" type with short cylinder so that pump piston and seal are submerged in the gasoline in the float bowl at all times. Piston spring is placed above the piston so that the delivery stroke of the pump is spring-driven and independent of rate at which throttle is opened (pump link hole in countershaft is slotted and opening of the throttle allows the pump spring to actuate the pump piston). No seasonal adjustment of the pump is provided.**ADJUSTMENT, DISASSEMBLY & REASSEMBLY:** Same as for previous Carter W1 (Chevrolet) carburetors.

See complete "Carter W1 (Chevrolet) Carburetor" in previous release and set this carburetor to the following specifications:

**IDLING ADJUSTMENT****Idle Screw Setting**—1-2 turns open.**Idle Speed**—450-500 RPM, with warm engine (fast idle inoperative).**ACCELERATING PUMP**

No adjustment (pump stroke does not require adjustment and no seasonal adjustment provided).

**METERING ROD SETTING****Checking Gauge**—Carter No. T109-25 (2.795").**NOTE**—This gauge is Chevrolet No. 600996.**FLOAT LEVEL SETTING****Float Level**— $\frac{1}{2}$ " from top of float at free end to gasket seat on bowl cover with needle valve seated (invert cover and float assembly for checking).**Intake Needle & Seat Assembly**—Carter No. 25-33S (#48 drill hole size).**THROTTLE VALVE SETTING****Idle Port Opening**—.044-.048" top of lower port above top edge of valve.**Vacuum Spark Port**—.000-.004" bottom of port above top edge of valve.**NOTE**—Above specifications are with throttle valve tightly closed.**FAST IDLE**

No adjustment required (fast idle throttle opening will be correct if idling speed correctly set (see Idling Adjustment)).

**SERVICE PARTS****Gasket Set**—Carter No. 152A.**Repair Pkg. (with Std. Metering Rod)**—Carter No. 1500.**CARTER TYPE WE**

Carter No.

715S—Studebaker Champion, Model 8G (1949), 9G (1950)

627SA—Studebaker Commander 17A (1950)—First 10000 Cars.

► **CARBURETOR IDENTIFICATION (CODE NO.):** Casting number stamped on face of flange: (715S) 620, (627SA) 511.**DESCRIPTION:** Single barrel, downdraft type of same design used on previous Studebaker Champion models.**ADJUSTMENT & SERVICING:** Same as for previous Carter "WE" carburetors.

See complete "Carter WE Carburetor" in previous release and set this carburetor to the following specifications:

**IDLING ADJUSTMENT****Idle Adjusting Screw Setting**— $\frac{1}{2}$ -1 $\frac{1}{2}$  turns open.**Idle Speed**—8-10 MPH.**ACCELERATING PUMP SETTING****Pump Stroke**—(715S) 14/64", (627SA) 20/64", Use Gauge No. T109-117S.**METERING ROD SETTING****Operating (Upper Lip) Setting**—Use Gauge No. T109-102 (2.468").**Economy (Lower Lip) Setting**—Use Gauge No. T109-28 (3/16") and adjust lower lip for this 3/16" clearance between bottom of pump arm pin and top of lower lip with throttle valve seated.**ANTI-PERCOLATOR SETTING****Setting**—Use Gauge T109-29 (.030") and bend rocker arm for .025" clearance (715S), .005-.015" clearance (627SA) between rocker arm lip and pump arm with this .030" throttle opening.**FLOAT LEVEL SETTING****Float Level**—(715S) 3/8"—Gauge T109-80, (627SA) 7/16" from top of seam at free end of float to top of projection on bowl cover with needle valve seated invert cover assembly to check float).**THROTTLE VALVE SETTING****Idle Port Opening**—Top of port .112-.116" above top edge of valve.**Vacuum Spark Port Height**—Top of port .060-.070" (715S), .065-.069" (627SA) above top edge of valve.**CLIMATIC CONTROL (CHOKE) SETTING****Setting**—Centered (at index).**FAST IDLE SETTING****Throttle Opening**—(715S) .046", (627SA) .054" (edge of valve to wall) with choke valve held closed and throttle valve moved toward closed position as far as possible.► **CAUTION**—Thermostatic coil housing, gasket, and baffle plate must be removed to check and adjust fast idle.**AUTOMATIC CHOKE****Setting**—Centered (cover centered on scale) for all models.**UNLOADER SETTING****Choke Valve Opening**—(715S) 3/16"—Gauge T109-28, (627SA) 17/64", clearance between choke valve and air horn with throttle valve wide open.**NOTE**—Use Tool T109-187 to bend arm on choke trip lever for adjustment.**SERVICE PARTS****Gasket Set**—Carter No. 186A.**Repair Pkg. (with Std. Metering Rod)**—Carter No. 1504.**CARTER TYPE WO**

Carter No.

636SA—Willys Universal Jeep, Model CJ-3A (1949)

Wilys Jeep Trucks, Models 2WD &amp; 4WD (1949)

Wilys 4-Wheel Drive Sta. Wgn., Model 4x4-63 (1949)

► **CARBURETOR IDENTIFICATION (CODE NO.):** 505 stamped on flange.**DESCRIPTION:** Single barrel, downdraft type of same design as carburetor used on corresponding previous models.**ADJUSTMENT & SERVICING:** Same as for other Carter "WO" carburetors.

See complete "Carter WO" carburetors in previous release and set this carburetor to the following specifications:

**IDLING ADJUSTMENT****Idle Adjusting Screw Setting**—1-2 turns open.**Idle Speed**—600 RPM, or 8 MPH.**ACCELERATING PUMP****Pump Stroke**—17/64". Use Gauge No. T109-117S.**METERING ROD SETTING****Checking Gauge**—No. T109-26 (2.718").**FLOAT LEVEL****Setting**— $\frac{3}{8}$ " (Gauge No. T109-80) from top of float at free end to gasket seat on cover with valve seated (invert assembly to check level).► **CAUTION**—Do not compress spring in needle valve stem (allow float to hang freely). Compressing spring will result in false reading.**THROTTLE VALVE SETTING****Idle Port Opening**—.086-.090" above upper edge of valve.**Vacuum Spark Port Height**—Top of port .056-.062" above top edge of valve.**SERVICE PARTS****Gasket Set**—Carter No. 175A. **Repair Pkg. (Std.)**—Carter No. 1355C.

## CARTER TYPE WA-1

## Carter No.

749S—Hudson Pacemaker, Models 500 &amp; 50T (1950)

622SB—Kaiser, Special &amp; Traveler Model 491 (1949)

① 694S—Nash "600", Series 4940 (1949)

Nash Statesman, Series 5040 (1950)

① 683S—Nash Ambassador, Series 4960 (1949)

746S—Nash Ambassador, Series 5060 (1950)

710S—Oldsmobile 6, All Models with Synchro-mesh Trans. (1949)

709S—Oldsmobile 6, All Models with Hydra-Matic Drive (1949)

717S—Pontiac 6, All Models with Synchro-mesh Trans. (1949-50)

718S—Pontiac 6, All Models with Hydra-Matic Drive (1949-50)

613S—Willys 4, 4-63 Sta. Wgn. &amp; Sedan Del., VJ-3 Jeepster (1949)

645S—Willys 6, 6-63 Station Sedan (1949)

①—See Production Change Notes below.

▶ **NASH "600" 694S CARBURETOR CHANGE** to improve Acceleration Performance: Accelerating pump plunger travel should be set at 25/64". This setting increased from 23/64" originally specified for this model.

▶ **NASH AMB. 683S CARBURETOR CHANGE (New Metering Rod)**: Metering rod has been changed by increasing length of "power step" on rod but new rod has same part no. as original type. **IDENTIFICATION NOTE**—New metering rod (with increased power step) has raised dot in addition to trademark on rod flat on side opposite part number (trademark only on first rods).

▶ **NASH AMB. AIR CLEANER BOOT BAFFLE**: A new carburetor-to-air cleaner boot baffle, No. 3127726, has been released to prevent possibility of air turbulence in this boot restricting air flow to carburetor and causing an over-rich carburetor fuel mixture.

▶ **CARBURETOR IDENTIFICATION (CODE NO.)**: Stamped on flange as follows: 309 (622SB), 298 (694S), 290 (683S), 538 (709S & 710S), 388 (717S), 592 (718S), 485 (613S & 645S).

**DESCRIPTION**: Single barrel, downdraft, vacuum type (except Nash 683S) carburetors of same design as used on corresponding previous car models except Nash carburetors which have new Accelerating Pump System as follows:

Nash "Uniflo Jet" Carburetors (694S, 683S, 746S)—No separate pump discharge jet is used and the accelerating pump discharges fuel through the main nozzle into the primary venturi (a spring-loaded ball type check valve prevents fuel discharge except when pump in operation). Pump stroke adjustment is made in same manner as on other models.

**ADJUSTMENT & SERVICING**: Same as for previous Carter "WA-1" carburetors. See complete "Carter WA-1 Carburetor" in previous release and set these carburetors to the following specifications:

## IDLING ADJUSTMENT

Car Model	Carburetor	Idle Screw Setting	Idle Speed
Hudson	749S	1/2-1 1/2 turns open	7 1/2-8 MPH
Kaiser	622SB	3/4-1 3/4 turns open	550 RPM
Nash "600"	694S	3/4-1 3/4 turns open	7 MPH
Nash Amb.	683S, 746S	1/2-1 1/2 turns open	③
Oldsmobile 6	709S, 710S	1/2-2 turns open	①
Pontiac 6	717S, 718S	1-1 3/4 turns open	②
Willys 4	613S	1/2-1 1/2 turns open	600 RPM, 6 MPH
Willys 6	645S	1-2 turns open	600 RPM, 6MPH

①—425 RPM, or 6 MPH. (Synchro-mesh Trans.), 375 RPM. (Hydra-Matic Drive).

②—450-475 RPM. (Synchro-mesh Trans.), 365-385 RPM. (Hydra-Matic Drive).

③—7 MPH. (Synchro-mesh Trans. Cars), 375 RPM. (Hydra-Matic Drive Cars).

## ACCELERATING PUMP STROKE

Car Model	Carburetor	Pump Stroke①	Pump Setting
Hudson	749S	16/64"	Short Stroke
Kaiser	622SB	18/64"	Medium Stroke
Nash "600"	694S	25/64"③	Medium Stroke
Nash Amb.	683S, 746S	27/64"	Long Stroke
Oldsmobile 6	709S, 710S	16/64"	Non-Adjustable
Pontiac 6	717S, 718S	17/64"	Medium Stroke
Willys 4 & 6	613S, 645S	11/64"	Non-Adjustable

①—Use Pump Stroke Gauge No. T109-117S.

②—Supersedes 23/64" originally specified for this model.

## METERING ROD SETTING

Checking Gauge—No. T109-102 (2.468") for all carburetors listed above.

## ANTI-PERCOLATOR SETTING

Car Model	Carburetor	Checking Gauge	Throttle Opening
Hudson	749S	T109-29	.020"
Kaiser	622SB	T109-29	.030"
Nash "600"	694S	T109-29	.030"
Nash Amb.	683S, 746S	T109-29	.020"
Oldsmobile 6	709S, 710S	T109-29	.020"
Pontiac 6	717S, 718S	T109-29	.030"
Willys 4 & 6	613S, 645S	T109-29	.030"

NOTE—Gauge No. T109-29 used for both .020" and .030" settings.

## FLOAT LEVEL SETTING

Car Model	Carburetor	Float Level
Hudson	749S	1/2"
Kaiser	622SB	1/2"
Nash (all)	694S, 683S, 746S	1/2"
Oldsmobile 6	709S, 710S	1/2"
Pontiac 6	717S, 718S	7/16"
Willys 4 & 6	613S, 645S	5/16"

▶ **WILLYS CAUTION**—On Willys carburetors, use care not to compress spring in needle valve stem (allow float to hang freely on inverted cover when checking float level). Compressing spring will cause false reading.

## THROTTLE VALVE SETTING

Car Model	Carburetor	Idle Port Opening	Vacuum Port
Hudson	749S	136-140"②	.020"④
Kaiser	622SB	133-137"①	.033-.043"③
Nash "600"	694S	153-157"③	.021-.029"④
Nash Amb.	683S, 746S	137-141"②	.020-.030"④
Oldsmobile 6	709S, 710S	136-140"②	.050"③
Pontiac 6	717S, 718S	160-170"③	.022-.027"④
Willys 4 & 6	613S, 645S	198-202"②	⑤

①—Idle Port Opening below valve.

②—Idle Port Opening above valve.

③—Top of Port above valve.

④—Bottom of Port above valve.

⑤—(613S) .020-.028", (645S) .036-.044"—Top of Port above valve.

## CLIMATIC CONTROL (CHOKE) SETTING

Car Model	Carburetor	Choke Setting
Nash "600"	694S	2 Points Rich
Pontiac 6	717S, 718S	3 Points Rich
All Others		Centered (At Index)

NOTE—No Climatic Control used on Willys 613S and 645S carburetors.

## FAST IDLE SETTING

Checking Gauge—No. T109-85 for all models. Set for 5/8" choke valve opening with throttle valve closed and fast idle cam rotated so that first step is against (but not on) throttle stopscrew.

NOTE—This setting does not apply to Willys 613S and 645S carburetors (no adjustment required on these models).

## UNLOADER SETTING

Car Model	Carburetor	Checking Gauge	Choke Valve Clearance
Hudson	749S	T109-80	7/16"
Kaiser	622SB	T109-81	7/16"
Nash "600"	694S	T109-81	7/16"
Nash Amb.	683S, 746S	T109-80	7/16"
Oldsmobile 6	709S	T109-80	3/8"
Oldsmobile 6	710S	T109-81	7/16"
Pontiac 6	717S, 718S	T109-107	5/16"

NOTE—No Unloader used on Willys 613S and 645S carburetors.

## SERVICE PARTS

Gasket Sets—Carter No. 139A (622SB, 683S, 694S), No. 146 (717S, 718S), No. 157 (709S, 710S), No. 159A (613S, 645S).

Repair Pkgs. (with Std. Metering Rods)—Carter No. 1362B (622SB), No. 1399A (683S), No. 1501A (694S), No. 1383A (709S), No. 1097A (710S), No. 1366A (717S), No. 1388A (718S), No. 1360B (613S), No. 1385A (645S).

## CARTER DUAL TYPE WCD

## Carter No.

- 663S—Buick, Series 40, 50 (1949)  
 664S—Buick, Series 70 (1949)  
 725S—Buick, Special Series 40 (1950)  
 682S—Cadillac V8, All Series (1949)—Before Eng. No. 06566.  
 722S—Cadillac V8, All Series (1949)—Beginning Eng. No. 06566.  
 723S—Frazer & Manhattan, Models F-495 & F-496 (1949)  
     Kaiser Deluxe, Model K-492 (1949)  
 719S—Pontiac 8, All Models with Synchro-mesh Trans. (1949-50)  
 720S—Pontiac 8, All Models with Hydra-Matic Drive (1949-50)  
 ①—See Production Change Notes following.

► **CADILLAC 722S CARBURETOR JET CHANGE** to correct slight Acceleration Stumble at 20-35 MPH.—On carburetors dated before February 1949, this condition can be corrected by installation of following parts furnished in Carter Unitized Package No. 75-680U: Low Speed Jets No. 11-196S (identified by  $\frac{5}{8}$ " long hexagonal collar integral with tube), and Metering Rods No. 75-670 (identified by additional raised dot of same size as trademark on rod flat opposite part number).

**NOTE**—These new parts installed in production on all 722S carburetors after February 1949.

► **CARBURETOR IDENTIFICATION (CODE NO.):** Stamped on face of flange as follows: 546 (663S), 573 (664S), 624 (725S), 610 (682S & 722S), 550 (723S & 719S), 558 (720S).

**DESCRIPTION:** Dual (double barrel), downdraft type of same design as used on corresponding previous car models.

**ADJUSTMENT, DISASSEMBLY & REASSEMBLY:** Same as for other Carter "WCD" carburetors.

See complete "Carter Dual Type WCD" Carburetors in previous release and set these carburetors to the following specifications:

## IDLING ADJUSTMENT

Car Model	Carburetor	Idle Screw Setting	Idle Speed
Buick (all '49)	663S, 664S	$\frac{3}{4}$ -1 $\frac{1}{4}$ turns open	450 RPM, 8 MPH
Buick 40 ('50)	725S	$\frac{7}{8}$ -1 $\frac{3}{8}$ turns open	450 RPM, 8 MPH
Cadillac	682S, 722S	$\frac{1}{2}$ -1 $\frac{1}{2}$ turns open	①
Frazer & Kaiser	723S	1-1 $\frac{1}{2}$ turns open	550 RPM
Pontiac 8	719S, 720S	$\frac{3}{4}$ -1 $\frac{1}{4}$ turns open	②
①—Synchro-mesh Trans. Cars—400 RPM. Hydra-Matic Drive Cars—375 RPM.			
②—Synchro-mesh Trans. Cars—450-475 RPM. or 7-8 MPH. Hydra-Matic Drive Cars—365-385 RPM.			

## ACCELERATING PUMP

► **CAUTION**—Pump stroke on all carburetors except Buick 663S and 664S must be checked by new methods (two optional methods) as follows:

**Pump Stroke Checking & Adjustment**—Install pump connector link in hole of pump arm which provides correct stroke for checking (see table), back out throttle lever stopscrew so that throttle valves are tightly closed (CAUTION—see that fast idle cam does not hold throttle valves open). Then use scale or Pump Gauge T109-117S to check pump as follows:

(1) **Gauge T109-117S Method**—Invert gauge on edge of dust cover boss of bowl cover at pump plunger shaft (CAUTION—hold gauge vertical to insure correct reading). Turn knurled nut on gauge until gauge finger just touches upper end of plunger shaft. Number indicated on gauge should agree with "Gauge" figure in table below. Adjust by bending throttle connector rod at upper angle.

(2) **Scale Method**—Use a scale to measure distance from top of pump plunger shaft to top of dust cover boss on bowl cover. This distance should agree with "Scale" figure in table below. Adjust by bending throttle connector rod at upper angle.

## ACCELERATING PUMP STROKE

Car Model	Carburetor	Gauge—Reading—Scale	Pump Setting
Buick ('49)	663S, 664S	①	Long Stroke
Buick ('50)	725S	33	20/64" Short Stroke
Cadillac	682S	24	7/32" Non-Adj.
Cadillac	722S	32	5/16" Long Stroke
Frazer & Kaiser	723S	29	9/32" Short Stroke
Pontiac 8	719S, 720S	32	20/64" Short Stroke

①—On Buick 663S & 664S carburetors, use Gauge T109-117S and record gauge reading with plunger at rest (throttle stopscrew backed off and throttle valves closed tight), then open throttle just enough so that pump plunger bottoms in pump cylinder (approx.  $\frac{1}{2}$  throttle opening), again record gauge reading. Difference between these two readings should be 21 (21/64" pump stroke).

## METERING ROD SETTING

Car Model	Carburetor	Metering Rod Gauge	Length
Buick (all)	663S, 664S, 725S	No Gauge req'd (See Note)	
Cadillac	682S	T109-163	2.940"
Cadillac	722S	No Gauge req'd (See Note)	
Frazer & Kaiser	723S	T109-163	2.940"
Pontiac 8	719S, 720S	T109-163	2.940"

**Buick 663S, 664S, 725S & Cadillac 722S Metering Rod Checking Note**—No gauge is required and metering rods should be checked and adjusted as follows: Back off throttle lever stopscrew so that throttle valves tightly closed, loosen metering rod arm clampscrew (on countershaft under dust cover on bowl cover), press down on vacuum link until both metering rods just bottom in carburetor casting, rotate metering rod arm until finger on arm contacts lip on vacuum link, tighten clampscrew (CAUTION—do not disturb arm position).

## FLOAT LEVEL SETTING

► **CAUTION**—Floats must be adjusted laterally (parallel to gauge uprights) as well as vertically (Float Level specification below).

Car Model	Carburetor	Float Level	Checking Gauge
Buick (all)	663S, 664S, 725S	5/32"	T109-196
Cadillac	682S, 722S	9/64"	T109-160
Frazer & Kaiser	723S	①	
Pontiac 8	719S, 720S	3/16"	T109-162

①—Allow floats to hang freely on inverted cover so that spring in valve stem is not compressed. Floats should be Flush to 1/32" above edge of bowl cover. CAUTION—Compressing valve stem spring will result in false float reading.

## THROTTLE VALVE SETTING

Car Model	Carburetor	Idle Port Opening	Vacuum Spark Port
Buick 40, 50 ('49)	663S	.067-.073" ③	.046-.050" ①
Buick 40 ('50)	725S	.062-.068" ③	.046-.050" ①
Buick 70	664S	.082-.088" ③	.060-.064" ②
Cadillac	682S, 722S	.115-.121" ③	.033-.043" ②
Frazer & Kaiser	723S	.122-.128" ③	.033-.038" ②
Pontiac 8	719S, 720S	.122-.128" ③	.052-.056" ②

①—Bottom of port above throttle valve. ②—Top of port above valve.

③—Port Opening above top edge of throttle valve.

## CLIMATIC CONTROL (CHOKE) SETTING

Car Model	Carburetor	Choke Setting
Buick (All '49)	663S, 664S	Centered
Buick 40 ('50)	725S	1 Point Rich
Cadillac	682S	1 Point Rich
Cadillac	722S	Centered
Frazer & Kaiser	723S	Centered
Pontiac 8	719S, 720S	Centered

## FAST IDLE SETTING

► **CAUTION**—Two different settings required as noted below.

Car Model	Carburetor	(1)—Setting & Gauge No.—(2)
Buick (All)	663S, 664S, 725S	.020" T109-29 ① T109-44
Cadillac	682S, 722S	.010" T109-200 .020" T109-29
Frazer & Kaiser	723S	.010" T109-200 .018" T109-44
Pontiac 8	719S, 720S	.040" T109-143 .026" T109-189

①—(40, 50)—.015", (70)—.018". Same gauge used for both settings.

(1) **Fast Idle Cam Clearance**—Loosen choke valve lever clampscrew on choke shaft, insert gauge of correct thickness (See Checking Gauge (1) in table above) between lip of fast idle cam and boss on flange casting, hold choke valve tightly closed, remove all slack from linkage by pressing choke valve lever toward closed position, tighten choke valve lever clampscrew.

(2) **Fast Idle Screw Setting**—Hold choke valve tightly closed, tighten fast idle adjusting screw against high step of fast idle cam until throttle valve opening or clearance between edge of valve and carburetor bore on side opposite idle ports is correct (see Checking Gauge (2) in table above).

## CARTER DUAL TYPE WCD (C nt.)

## UNLOADER SETTING

► **CAUTION**—Fast Idle Cam Clearance (Fast Idle Setting (1) above) must be adjusted before Unloader Setting is adjusted.

Car Model	Carburetor	Throttle Opening	Checking Gauge
Buick (All)	663S, 664S, 725S	3/16"	T109-28
Cadillac	682S, 722S	3/16"	T109-28
Frazer & Kaiser	723S	1/8"	T109-36
Pontiac 8	719S, 720S	1/8"	T109-36

## CAR STARTER SETTING

Buick 663S, 664S, 725S Carburetors—Switch should make contact within 30° to 45° throttle opening range (check with Gauge T109-155S). Adjust by varying shim thickness on guide block under contact spring.

► **CAUTION**—Do not use less than one No. 153-11 (.018") Shim or more than three No. 153-11 (.018") Shims plus two No. 153-12 (.006") Shims.

## SERVICE PARTS

Gasket Sets—Carter No. 189 (for all carburetors listed above).  
Repair Pkg. (with Std. Metering Rods)—Carter No. 1391 (663S), No. 1392 (664S), No. 1506A (722S), No. 1508 (682S), No. 1512 (723S), No. 1507 (719S & 720S).

## CARTER DUAL TYPE WDO

## Carter No.

- ① 647S, SA—Hudson Six, Models 491, 492 (1949)  
648S—Hudson Eight, Models 493, 494 (1949)  
644SA—Packard Eight, "2200" & "2300" Series (1949)  
643SA—Packard Super 8, "2200" & "2300" Series (1949)  
531SA—Packard Custom 8, "2200" & "2300" Series (1949)  
①—See Production Change Notes following.

► **HUDSON SIX 647S CARBURETOR CHANGE** to correct complaint of Lean Condition at 20 MPH. On cars with new Intake Manifold (which mounts carburetor in vertical position) and new No. IGS-4213A-1 Distributor, new parts listed below can be installed in 647S carburetors which will bring them up to 647SA standards (CAUTION—If air horn removed with carburetor on car, do not open throttle valve which may cause pump check needle to drop down in manifold).

## Unitized Package No. 75-700U

Metering Rods (2 furnished)	Carter No. 75-686
Bypass Bleeder Screw Plugs (2 furnished)	Carter No. 11B-159
Identification Tag (647SA)	Carter No. 107-30

► **HUDSON SIX LATER 647SA CARBURETOR:** This carburetor used in production on later cars and has new parts as listed above for Model 647S.

► **CARBURETOR IDENTIFICATION CASTING NO.:** Stamped on face of flange as follows: 542 (647S, 647SA, 648S), 561 (643SA, 644SA), 564 (531SA).

**DESCRIPTION:** Dual (double barrel), plain tube downdraft type of same design as carburetors used on corresponding previous models.

**ADJUSTMENT & SERVICING:** Same as for other "WDO Vacuumeter" carburetors. See complete "Carter Dual Type WDO Vacuumeter Type Carburetors" in previous release and set these carburetors to the following specifications:

## IDLING ADJUSTMENT

Car Model	Carburetor	Idle Screw Setting	Idle Speed
Hudson 6	647S, SA	1 1/4-1 3/4 turns open	①
Hudson 8	648S	1-1 1/2 turns open	①
Packard 8	644SA	5/8-1 1/8 turns open	6 MPH.
Packard Super 8	643SA	3/4-1 1/4 turns open	6 MPH.
Packard Cust. 8	531SA	1 1/2-2 turns open	②
①—540-560 RPM. (Std.), 580-600 RPM. (With Vacuumotive Drive or Drivemaster).			
②—6 MPH. (Synchro-mesh Trans.), 400 RPM. (Ultramatic Drive).			

## ACCELERATING PUMP STROKE

Car Model	Carburetor	Pump Stroke①	Pump Setting
Hudson 6	647S, SA	18/64"	Long Stroke
Hudson 8	648S	14/64"	Long Stroke
Packard 8	644SA	14/64"	Short Stroke
Packard Super 8	643SA	28/64"	Non-Adjustable
Packard Cust. 8	531SA	26/64"	Short Stroke
①—Use Pump Stroke Gauge T109-117S.			

## METERING ROD SETTING

Checking Gauge—No. T109-113 (2.280") for all carburetors listed above.

## ANTI-PERCOLATOR SETTING

Car Model	Carburetor	Checking Gauge
Hudson (all)	647S, 647SA, 648S	None
Packard (all)	644SA, 643SA, 531SA	T109-72 (.015")

## FLOAT LEVEL SETTING

Car Model	Carburetor	Float Level	Checking Gauge
Hudson 6	647S, SA	3/16"	T109-28
Hudson 8	648S	13/64"	T109-39
Packard (all)	644SA, 643SA, 531SA	5/32"	T109-154

## THROTTLE VALVE SETTING

Car Model	Carburetor	Idle Port Opening	Vacuum Port
Hudson 6 & 8	647S, 647SA, 648S	157-163"②	.030-.040"①
Packard 8 & Super 8	644SA, 643SA	127-133"②	.060"①
Packard Cust. 8	531SA	152-158"②	.050-.054"①
①—Top of port above throttle valve. ②—Port opening above throttle valve.			

## CLIMATIC CONTROL (CHOKE) SETTING

Car Model	Carburetor	Choke Setting
Hudson 6	647S, 647SA	1 Point Lean
Hudson 8	648S	Centered
Packard 8 & Super 8	644SA, 643SA	Centered
Packard Cust. 8	531SA	1 Point Rich

## FAST IDLE SETTING

Car Model	Carburetor	Throttle Opening	Checking Gauge
Hudson 6 & 8	647S, 647SA, 648S	.054"	① T109-193
Packard 8	644SA	.020"	T109-29
Packard Super 8	643SA	.026"	② T109-189
Packard Cust. 8	531SA	.023-.028"	② T109-189
①—Gauge T109-193 used for both .040" and .054" settings.			
②—Gauge T109-189 used for both .023" and .026" settings.			

## UNLOADER SETTING

Car Model	Carburetor	Choke Valve Clearance	Checking Gauge
Hudson (all)	647S, 647SA, 648S	1/4"	T109-31
Packard (all)	644SA, 643SA, 531SA	11/64"	T109-166

## CAR STARTER SETTING

Packard (644SA, 643SA, 531SA Carbs.)—Switch must make contact within 30 to 45° throttle opening (check with protractor Gauge No. T109-155S). Adjust by varying shim thickness under contact spring.

► **CAUTION**—Do not use less than one No. 153-11 (.018") Shim or more than three No. 153-11 (.018") Shims plus two No. 153-12 (.006") Shims.

## SERVICE PARTS

Gasket Sets—Carter No. 149 (647S, 647SA, 648S), No. 156 (643S, 644S, 531SA).  
Repair Pkgs. (with Std. Metering Rods)—Carter No. 1381 (647S), No. 1382 (648S), No. 1375 (643SA), No. 1376A (644SA).

## CARTER DUAL TYPE WGD

Carter No.

714S—Oldsmobile Futuramic 8, 88 &amp; 98 (1949)

①728S, SA—Packard 8, "2300" Series (Late 1949)

①—See Production Change Note following.

► **PACKARD 728S & 728SA PRODUCTION CHANGE:** Model 728SA has changes in calibrations as follows:

**Metering Rod (Std.)**—(728S) No. 75-679, (728SA) No. 75-707.

**Main Nozzle**—(728S) #38 drill I.D., (728SA), #30 drill I.D. NOTE—Nozzle is installed permanently and should not be removed.

**DESCRIPTION:** Dual downdraft, horizontal air intake type (Oldsmobile), vertical air intake (Packard) type with vacuum controlled metering rods (vacuumeter), spring-loaded piston type accelerating pump operated by throttle lever, well type non-adjustable anti-percolator, and Automatic Choke and Fast Idle.

**Fuel System:** Consists of Idle (Low Speed) Fuel System, Main (High Speed) Fuel System, and Accelerating Fuel System which operate as follows (Idle & Main Fuel Systems duplicated for each carburetor barrel):

**Idle Fuel System**—Fuel for idling is taken from main nozzle well up through the Idle Tube which meters the fuel and is then mixed with air admitted through idle air bleed opening in air horn. Fuel mixture passes through restricted horizontal passage and additional air is admitted through idle passage bleed opening in air horn. Fuel mixture then flows down through passage to idle discharge ports at throttle edge. For closed throttle idling, all fuel is discharged through lower port below throttle and is controlled by the Idle Adjusting Screw (upper port serves as additional air bleed). As soon as the throttle is cracked open, additional fuel is discharged through upper port also. At higher car speeds idle system drops out and all fuel is discharged by main fuel system.

**Main Fuel System**—Fuel enters main well through metering jet and is metered by the metering rod in this jet. Fuel then flows up through main well and is discharged through Main Discharge Nozzle located in throat of primary venturi. Anti-percolator well acts as an air bleed for the main nozzle and this air bleed action is controlled by the size and location of the anti-percolator well vents so that at high speeds practically all back bleeding of air into the system is eliminated.

**Anti-Percolator Well Vents**—Well is vented through pocket formed by flat on nozzle in high speed passage at inner wall of primary venturi and by restricted opening in air horn at top of well. Additional side vent opening into top of idle well prevents accumulation of vapor in this well which might cause rough idle at higher than normal operating temperatures.

**IDLING ADJUSTMENT:** Adjust only with engine warmed up so that choke valve wide open and engine idling at hot or slow idle speed (Automatic Choke and Fast Idle inoperative). Set throttle stop-screw for correct idle speed, adjust both idle adjusting screws (one for each barrel) so that engine idles smoothly. Screws control fuel mixture and should be turned in for leaner mixture, out for richer mixture. See car model page for complete tune-up data.

## IDLE SETTING

	Idle Screw	Idle Speed
Oldsmobile	¾-1½ turns open	①375 RPM.
Packard		②6 MPH.
	①—Use tachometer (Hydra-Matic Drive).	
	②—400 RPM. on cars with Ultramatic Drive.	

**PERFORMANCE:** Should be satisfactory if idling adjustment correctly made and metering rods adjusted.

**ACCELERATING PUMP:** No seasonal adjustment provided. Pump stroke should be checked and adjusted before metering rods are adjusted as follows:

**Adjustment (Oldsmobile)**—Remove dust cover (on bowl cover) by taking out two screws. Back off throttle lever stop-screw so that throttle valves tightly closed. Place straightedge across dust cover boss at pump arm on countershaft. Bend connector rod linking throttle lever and pump arm at upper bend in arm until upper flat surface of pump arm is parallel to straightedge.

**Adjustment (Packard)**—Remove dust cover (on bowl cover) by taking out two screws. Back off throttle lever stop-screw so that throttle valves tightly closed, wedge choke valve in wide open position. Place Universal Pump Gauge T109-117S on edge of dust cover flange, turn knurled nut on gauge until finger at end of gauge extension just touches top of pump plunger shaft. Gauge reading should be 42 (indicating 15/32" distance from top of plunger to top edge of flange). Adjust by bending pump connector rod at upper angle near countershaft lever using tool T109-41.

► **CAUTION**—Check Metering Rod Adjustment after adjusting Pump.

► **Pump Vent Note**—Pump jet cluster pocket is vented to outside of carburetor body casting to prevent pump jet discharge when engine operated at constant-throttle. If accelerator pedal is depressed re-

peatedly with engine not running, fuel will be forced out vent and appear on outside of carburetor.

**METERING ROD ADJUSTMENT:** Metering rods are controlled by a single spring-loaded vacuum piston (rods held down in jets for maximum economy by vacuum piston, and lifted out of jets by spring for acceleration and full power operation when vacuum decreases as throttle is opened). A lip on the metering rod arm (on pump countershaft which is linked to throttle lever) acts as a stop for the vacuum piston link and insures correct metering rod position for all throttle positions.

► **CAUTION**—Check accelerating pump before adjusting metering rod (pump adjustment disturbs metering rod setting). No metering rod gauge required.

**Adjustment**—Remove dust cover (on bowl cover) by taking out two cover screws. Back off throttle lever stop-screw so that throttle valves are tightly closed. Loosen clamp-screw on metering rod arm on countershaft, press down on vacuumeter arm until metering rods just bottom in carburetor casting, hold rods and arm in this position, see that throttle valves closed, position metering rod arm so that lip on arm just contacts vacuumeter arm, tighten clamp-screw.

► **CAUTION**—Reset throttle stop-screw for correct idling speed after metering rod adjustment completed.

► **Countershaft Lubrication Note**—Lubricate shaft with light graphite grease through hole in center shaft support and outer dust cover screw hole before installing dust cover.

**FLOAT LEVEL:** Remove the bowl cover and air horn (CAUTION—use extreme care not to damage float and jets when lifting off bowl cover), remove gasket, invert cover and allow float to hang freely. Use correct checking gauge (see table below) between

CONTINUED ON NEXT PAGE

CARTER DUAL TYPE WGD CARBURET R

**CARTER DUAL TYPE WGD (C nt.)**

gasket face of bowl cover and nearest point on float (top center of float). Adjust by bending lip on float arm near pivot point.

► **CAUTION**—Do not bend float arm.

**FLOAT LEVEL**

	Checking Gauge	Float Level
Oldsmobile	T109-31	1/4"
Packard	T109-39	13/64"

Needle Valve & Seat—Furnished as matched set only. Install both parts together.

**FAST IDLE:** Oldsmobile fast idle consists of a fast idle screw on the throttle lever and a fast idle cam linked to the choke valve lever. On Packard, fast idle cam and lever assembly is mounted on choke valve shaft within automatic choke housing and is linked to throttle lever by a flat connector link.

**Adjustment (Oldsmobile)**—**CAUTION**—Two separate adjustments required as follows:

**Fast Idle Linkage**—Back off fast idle screw on throttle lever until fast idle cam can be revolved freely with throttle valves closed. Loosen clamp-screw on choke lever to which fast idle cam connected, use .015" feeler Gauge T109-72 between lip on fast idle cam and boss on carburetor casting, hold choke valve tightly closed, remove all slack from linkage by pressing choke lever toward closed position, tighten lever clampscrew while holding lever in this position.

**Fast Idle Screw**—Back off throttle lever stopscrew so that throttle valves tightly closed, revolve fast idle cam until raised projection (narrow separate step) on cam lines up with fast idle screw, turn screw in or out until it just touches this projection.

**NOTE**—This adjustment can also be made by closing the throttle valves against a special .015" round feeler gauge (insert feeler between edge of valve and carburetor wall). Close choke valve tightly, so that high step of fast idle cam is opposite fast idle screw. Turn fast idle screw in against step on fast idle cam until feeler gauge just falls free of throttle valve (**CAUTION**—Carburetor must be upright and gauge free to fall out when making this adjustment).

**Adjustment (Packard)**—Remove thermostatic coil and housing assembly, gasket and baffle plate (to expose fast idle mechanism). Open throttle valve to release fast idle, then close choke valve, hold choke valve closed and close throttle valve. Invert carburetor and check clearance between edge of throttle valve and carburetor wall with gauge T109-189 (.026"). If throttle opening not correct, adjust by bending choke connector rod at lower angle near throttle lever. Adjust Unloader (below).

**CHOKE:** Carter Climatic Control.

**Setting (Oldsmobile)**—Centered (index mark on cover centered on scale on housing).

**Setting (Packard)**—1 Point Lean.

**UNLOADER:** On Oldsmobile, unloader consists of a lip on the throttle lever which engages fast idle cam and opens choke valve when throttle valve opened wide to correct flooding. On Packard, unloader consists of a lip on the fast idle cam which engages a trip lever arm on the choke valve lever within the automatic choke housing.

**Setting (Oldsmobile)**—Hold throttle valve in wide open position, check choke valve opening with Gauge T109-31 (1/4"). Adjust by bending lip on throttle lever using tool J109-41.

**Setting (Packard)**—With thermostatic coil and housing assembly, gasket, and baffle plate removed, hold throttle valves wide open, close choke valve as far as possible, check choke valve opening with Gauge T109-36 (1/8"). Adjust by bending choke trip lever arm (on choke lever) using tool T109-187.

**CARBURETOR OVERHAUL:** With carburetor removed from engine, disassemble, clean, and inspect all parts as follows:

**Disassembly:** Remove dust cover on bowl cover by taking out two attaching screws, disconnect fast idle connector rod and pump connector rod at both ends. Take out eight bowl cover and air horn attaching screws, lift air horn straight up and remove from main body casting (**CAUTION**—use extreme care not to damage float and jets installed in cover). Disassemble these parts as follows:

**Air Horn & Bowl Cover**—Remove float by taking out float hinge pin and unhooking intake needle pull clip, remove intake needle seat. Loosen set-screws on metering rod arm and pump arm, slide countershaft out of housing. Lift out metering rod arm, pump arm, pump plunger assembly, vacuumeter piston and link, and metering rods, remove cover gasket. Unscrew low speed jets (Idle Tubes). Loosen clampscrew and remove choke shaft lever, take out attaching screws and remove choke valve. Take out three attaching screws, remove automatic choke cover and thermostatic coil assembly (rotate cover counterclockwise to free coil hook), remove gasket and baffle plate. Revolve choke shaft until piston clears vacuum cylinder, remove shaft and piston assembly. Take out three self-tapping screws and remove piston housing assembly from air horn casting, lift out piston housing gasket.

**Main Body Casting**—Take out attaching screw and remove pump jet cluster and gasket. Invert casting and catch vacuumeter spring, pump discharge needle, and lower pump spring. Remove metering jets, pump relief valve assembly, and pump intake strainer. Use tool T109-56 to remove retainer ring from bottom of pump cylinder, remove pump intake check ball (under retainer ring). Take out attaching screws and remove throttle flange assembly.

► **CAUTION**—Do not attempt to remove main nozzles from body casting (permanently installed in casting).

**Throttle Flange Casting**—Take out attaching screw and remove pump lever from throttle shaft, remove throttle shaft retaining ring, take out attaching screws and remove throttle valves. Slide throttle shaft and lever assembly out. Remove fast idle cam assembly. Remove idle adjusting screws and springs, and idle port plugs.

**Cleaning & Inspection:** Wash all parts in solvent or approved carburetor cleaner, dry with air, blow out all channels and passages with compressed air. Remove carbon from flange casting bore with sandpaper (**CAUTION**—do not use emery cloth). Examine vacuum cylinder in automatic choke housing for dirt and carbon accumulation (if necessary, remove welch plug from base of vacuum cylinder by drilling small hole in plug and using nozzle puller T109-178 to remove plug, install new plug after cleaning cylinder). Replace all worn or damaged parts. Use all new gaskets when reassembling carburetor.

**Reassembly:** Reassemble carburetor by reversing disassembly directions and note the following important instructions:

**Throttle Valve Installation**—Back off throttle lever stopscrew, install throttle valves with trademark (small "C") toward idle ports when viewed from manifold side of casting, insert screws loosely, hold valves firmly in place with fingers and tap valves lightly to centralize them in bores, hold lever end of shaft against flange casting boss, tighten valve screws securely. Then install new retaining ring on shaft.

**Pump Jet Assembly**—Install pump discharge needle first (insert with point downward), use new gasket under pump jet cluster, tighten retaining screw securely. Install pump relief valve assembly. Drop pump intake ball into recess in pump cylinder, use tool T109-122U to install retainer ring.

**Pump Plunger & Arm Assembly**—Assemble pump link on pump countershaft arm and install pin spring retainer. Insert pump plunger stem in place in bowl cover, slide lower end of link through hole in upper end of plunger stem and revolve 1/2 turn. When installing bowl cover and air horn, see that lower spring installed in pump cylinder, insert pump plunger, hold pump arm in place while inserting countershaft.

**Float Assembly**—Make certain that intake needle is attached to float arm with pull clip when installing float. Check float level before installing bowl cover and air horn on main body casting.

**Metering Rod Jets**—Do not use a gasket under these jets.

**Metering Rod & Vacuumeter Assembly**—Install metering rod spring in vacuum piston link and install vacuum piston spring in cylinder in main body casting. Install vacuum piston link through slot in bowl cover with lip on link pointing toward air horn. Install vacuumeter piston on link with pin extending toward air horn. When installing bowl cover and air horn on body casting guide vacuumeter piston into vacuum cylinder in body casting. Hold pump arm in position and slide countershaft in through arm and support in casting, then hold metering arm in position with lip on arm extending through slot in vacuumeter link and slide countershaft through arm. Install throttle connector rod and retainers. Install both metering rods (**CAUTION**—see that rods enter metering jets), connect metering rod spring. Check assembly for free movement by pressing down on vacuumeter link (should not bind in any position).

**Choke Assembly**—Make certain that new gasket installed in hot air passage in air horn, install piston housing assembly (**CAUTION**—attaching screws are self-tapping type and must be pulled down securely but with care not to strip threads). Install choke valve shaft and piston, rotating shaft to enter piston in cylinder. See that tapered edges of choke valve seat in air horn, hold valve with fingers and tap with screwdriver to centralize valve before tightening attaching screws. Check valve for free movement (valve should open freely of own weight). When assembling automatic choke mechanism, install flat baffle plate first (with choke lever prong extending through slot in plate), then install extruded baffle plate, gasket, cover and thermostatic coil assembly.

**Adjustments**—After carburetor assembled, check and adjust Accelerating Pump, Metering Rods, Fast Idle, Choke Setting, and Unloader. After carburetor installed on engine, adjust Idle setting. See adjustment instructions listed under each heading above.

## ROCHESTER (OLDSMOBILE) DUAL CARBURETOR

Oldsmobile Part No.  
7001570—Oldsmobile 8, 88 & 98 (1949)

**DESCRIPTION:** Dual downdraft, concentric bowl, horizontal air intake type with vacuum controlled power jet and positively operated diaphragm type accelerating pump operated by throttle lever through a rack-and-pinion engagement. The circular float bowl is mounted on the underside of the carburetor cover and is suspended in the air stream so that it is cooled by the air entering the carburetor.

**Fuel System:** Consists of Idle (Low Speed) Fuel System, Main (High Speed) Fuel System, Power Fuel System, and Accelerating Fuel System which operate as follows (Idle & Main Systems duplicated for each carburetor barrel):

**Idle Fuel System:** Fuel for idling is taken from the main jet well up through a brass Idle Tube which meters the fuel and is then mixed with air admitted through Idle Air Bleed in cover passage above tube. Fuel mixture then flows through horizontal passage in cover and additional air is admitted through Idle Channel Bleed opening into air horn. Fuel mixture is then taken down through passage to idle ports at throttle edge. For closed throttle idling, all fuel is discharged through lower port below throttle and is controlled by the Idle Adjusting Screw. As the throttle is opened, additional fuel is discharged through Secondary Idle Port and Top Idle Port also. Idle system supplies all fuel up to approximately 25-30 MPH.

**Main Fuel System:** Fuel is metered by Main Metering Jet in bottom of float bowl and flows up through vertical passage to Discharge Nozzle in small venturi. This fuel is mixed with air admitted through Main Well Air Bleed in cover. This air bleed action is controlled by the brass Main Well Tube in the upper end of the main well or vertical passage. Main Well Tube has calibrated holes on one side which control the fuel/air ratio through the driving range. Main discharge nozzles supply all fuel through the 30-60 MPH. driving range and this fuel is metered by the main metering jets.

**Power Fuel System:** Consists of a power valve controlled by a spring-loaded vacuum diaphragm assembly which bypasses fuel directly to the main Discharge Nozzles. Valve is normally closed (diaphragm and stem held up against spring tension by manifold vacuum) but is opened by the stem whenever manifold vacuum drops off (wide open throttle or full-power operation, or sudden acceleration) permitting fuel flow through Power Restriction.

**Accelerating Fuel System:** Consists of a diaphragm type pump assembly mounted on the side of the bowl and pump jets mounted in the pump housing which are aimed to discharge fuel across the throat of each carburetor barrel when throttle valve opened for acceleration. Pump is positively actuated through a rack-and-pinion drive by an actuating spring on the pump shaft which is wound up by the closing of the throttle. Return spring bearing on inner side of diaphragm is calibrated to take up all play and lost motion in the pump linkage. Pump intake strainer screen, intake ball check and outlet check needle located in bowl casting.

**IDLING ADJUSTMENT:** Adjust only with engine warmed up so that choke valve wide open and engine idling at hot or slow idle speed (Automatic Choke & Fast Idle inoperative). Set throttle stop-screw for correct idle speed, adjust both idle adjust-

ing screws (one for each barrel) so that engine idles smoothly. Screws control fuel mixture and should be turned in for leaner mixture, out for richer mixture. Recheck idle speed.

**Idle Setting:** Screws approximately 1 turn open.

**Idle Speed:** Exactly 375 RPM (use tachometer).

**PERFORMANCE:** Should be satisfactory if idling adjustment and accelerating pump seasonal setting correct. All jets are fixed non-adjustable type.

**POWER VALVE ASSEMBLY:** Not adjustable. Valve remains closed with manifold vacuum greater than 8" of HG. and opens when vacuum drops below 8".

**ACCELERATING PUMP:** Pump is controlled by throttle lever through connector rod and pump shaft lever with pump adjustment on pump shaft lever (3 holes for connector rod) as follows:

**Outer Hole:** Minimum stroke (factory setting).

**Center Hole:** Medium stroke.

**Inner Hole:** Maximum stroke.

► **Other Pump Adjustments—Pump Actuating Lever adjustment and Pump Jet Targeting adjustment should be made after carburetor has been overhauled:**

**Pump Actuating Lever Adjustment:** See that pump connector rod installed in recommended hole (outer) of pump shaft lever, disconnect rod from throttle lever. Back off throttle lever stop-screw and fast idle screw so that throttle valves close tightly. Hold throttle lever in closed throttle position, pull down on pump connector rod so that pump shaft and lever in closed position, check rod length. TOP edge of rod end should be flush with BOTTOM edge of hole in throttle lever (rod should be "too long" by

thickness of rod diameter). Adjust by bending rod at center bend. Connect rod.

► **CAUTION—Fast Idle and Engine Idle Speed must be readjusted after pump adjustment completed.**

**Pump Jet Targeting:** Pump jets must be aimed so that discharge stream from jet strikes housing venturi on opposite side of carburetor throat at point just below deflector boss on casting. To check pump jets with carburetor completely assembled and filled with fuel, note fuel discharge visible in air horn while operating pump slowly by hand. Fan-shaped spray should be noted and spray should not come out end of air horn. Adjust by bending pump jet slightly.

► **CAUTION—Use care not to damage pump jet.**

**FLOAT LEVEL:** **CAUTION—**Float Balance Spring tension must be checked and adjusted whenever the float level is adjusted.

**Float Level—**23/32" from top of seam on free end of float to gasket seat on cover with cover assembly inverted and needle valve seated. To check, remove and invert cover assembly, remove gasket, use scale or Carburetor Gauge BT-17 (see note) to measure from cover to top of float seam with float hanging freely. To adjust, bend float arm at point between needle valve and float (**CAUTION—**do not bend front of float, float must be parallel to cover).

► **BT-17 Gauge Note:** Marked line near square end of gauge is float measurement (23/32" from end).

**Float Balance Spring Tension:** Balance spring at back of float hinge pin assists float and also acts

CONTINUED N NEXT PAGE

## ROCHESTER (OLDSMOBILE) DUAL CARB. (C nt.)

as a dampener. To check float tension, hold cover assembly right side up and horizontal so that float drops of own weight against balance spring tension. Bottom of float at free end should be even with bottom of power valve stem. To check, place scale on bottom surface of valve stem. To adjust, bend tang on float arm which engages balance spring against spring to lessen float drop, away from spring to increase drop.

**Float Intake Needle & Seat**—Furnished only as matched set—Oldsmobile No. 7001846.

**CHOKE:** Rochester Automatic Choke.

► **CAUTION**—Choke Rod adjustment must be made whenever carburetor disassembled and overhauled.

**Choke Setting**—Centered (index mark on cover aligned with index mark on housing).

**Choke Rod Adjustment**—To check, hold throttle valve closed, move fast idle cam so that fast idle screw is against (not on) first step of cam, see that choke trip lever is in contact with counterweight on choke shaft, measure choke valve opening or clearance between lower edge of valve and air horn wall with Carburetor Gauge BT-17 (see Note below). Choke valve opening should be .147". To adjust, use Bending Tool BT-18 to bend connector rod between fast idle cam and choke lever slightly. Check to see that rod does not rub or bind on housing.

► **BT-17 Gauge Note**—This .147" opening is equal to the first or "C" step of the gauge.

**UNLOADER:** Consists of a tang on the throttle lever which engages the fast idle cam and opens the choke valve slightly when the throttle valve opened. **Setting**—.238" choke valve opening with throttle valve wide open. To check, hold throttle lever in wide open throttle position, see that choke trip lever is in contact with counterweight tang on choke shaft, measure choke valve opening or clearance between lower edge of valve and air horn wall with Carburetor Gauge BT-17 (see Note below). Adjust by using Bending Tool BT-18 to bend tang on throttle lever slightly.

► **BT-17 Gauge Note**—This .238" opening is equal to the second or "D" step of the gauge.

**FAST IDLE:** Consists of a fast idle cam serving as a stop for the fast idle screw (upper screw) on the throttle lever. Cam is linked to choke valve lever and is rotated so that the fast idle screw rests on the first (highest step) when choke valve closed.

**Setting (Carburetor on Engine)**—500 RPM, engine idling speed. To adjust, with engine and transmission warm, idle engine, open throttle partially and rotate fast idle cam by hand so that fast idle screw rests on first (low step) of fast idle cam. Adjust screw so that engine idling speed is 500 RPM.

**Setting (Carburetor on Bench)**—.020" throttle valve opening with choke valve closed and fast idle screw on highest (starting) step of fast idle cam. To check, move connector rod so that choke valve fully closed, close throttle so that fast idle screw rests on high step of fast idle cam. Check throttle valve opening or clearance between edge of valve and carburetor wall with Carburetor Gauge BT-17 (.020" opening equal to wire gauge "E" section of tool).

► **CAUTION**—If stalling experienced during warm-up with above setting (equivalent to engine speed of 1200-1250 RPM. with engine and transmission warm), increase this engine speed to 1600-1650 RPM. by turning fast idle screw in further.

**CARBURETOR OVERHAUL:** With carburetor removed from engine, proceed as follows:

**Disassembly:** Take out eight screws (outer circle of screws) retaining cover on carburetor housing, hold throttle lever in FULL open position (to free pump actuating lever from pump yoke inside housing), lift cover and bowl assembly straight up and out of housing. Take out six screws retaining bowl on cover, lift cover and float assembly off bowl.

**Carburetor Bowl**—Remove power valve and fibre gasket from bottom of bowl (use 5/16" width screwdriver), remove two main metering jets, remove retaining ring and pump strainer screen (use thin blade screwdriver or pointed tool to free ring). Invert bowl and catch two main well tubes, two idle tubes, and pump outlet check valve which should drop out (tap bowl lightly or use toothpick or other wooden wedge to lift tubes out if necessary—do not use metal tool to remove these tubes). Use small flexible wire hooked in outside hook of pump actuating spring to unwind spring three full turns to free position (CAUTION—use care not to distort or stretch spring). Take out five pump housing attaching screws, lift pump housing off (CAUTION—use care not to disturb pump jets which are aimed for proper targeting of pump discharge). Lift out conical pump return spring. Unscrew and remove pump intake ball check plug (use 1/4" width screwdriver).

► **CAUTION**—Do not attempt to remove Main Discharge Nozzles from bowl.

**Bowl Cover**—Remove float hinge pin, lift float off, remove intake needle valve. Take out three retaining screws and lift out power valve diaphragm and stem. Remove float intake needle seat and gasket. Remove fuel inlet nut and strainer screen.

**Carburetor Housing & Throttle Body**—Lift out balance tube in air horn. Take out three attaching screws and remove automatic choke cover and thermostatic coil as an assembly (CAUTION—use care not to distort coil). Take out choke valve attaching screws and remove valve. Disconnect and remove pump rod using care not to bend rod. Disconnect and remove choke rod. Take out choke shaft counterweight attaching screw, remove collar, washer, and counterweight. Revolve choke shaft until vacuum piston free from cylinder, withdraw piston and shaft as an assembly. Take out three throttle body attaching screws and lift off throttle body. Remove nut and lockwasher on pump shaft, remove pump yoke from within housing (CAUTION—do not lose small felt packing washer in housing counterbore at outer end of shaft).

**Throttle Body**—Take out fast idle cam attaching screw, remove fast idle cam. Remove both idle adjusting screws and springs.

► **CAUTION**—Do not remove throttle valves or shaft unless these parts require replacement (channels in throttle body can be cleaned with valves in place).

**Accelerating Pump Housing**—Lift off conical return spring, pull diaphragm and rack out (allow pump lever to rotate—necessary to disengage rack from pinion). Remove cotterpin and washer from end of pump shaft, tap shaft out of housing and pinion gear, lift pinion gear out.

► **CAUTION**—Do not lose felt washer on shaft at each side of housing.

**Cleaning & Inspection:** Clean all parts (EXCEPT Pump & Diaphragm Assembly and Power Valve Dia-

phragm Assembly) in carburetor cleaning solvent, blow out all fuel channels and passages with air, dry parts with air. Check all parts for wear or damage.

► **CAUTION**—Do not use wire or drills to clean or gauge jets and other calibrated parts.

**Reassembly:** Use all new gaskets (see Service Parts data below). Reassemble carburetor by reversing disassembly directions and note the following important instructions:

**Float Assembly**—Install float over power valve stem with tang on float arm on outside of balance spring. See that balance spring not distorted, replace spring if free length greater than 9/16". Adjust float level and balance spring tension before installing cover assembly on carburetor housing.

**Pump Housing Assembly**—Parts must be assembled and installed exactly as follows to insure correct pump operation: Place steel washer and felt washer on pump shaft, assemble actuating spring on shaft with small hooked end against actuating lever, place pinion gear in gear slot in housing, insert pump shaft, sliding shaft through gear until knurled section of shaft is against gear, then tap shaft lightly through gear, assemble felt washer and flat washer on end of shaft, install cotter pin. Check to see that shaft rotates freely. Install pump diaphragm, engaging rack teeth with pinion gear (pinion will turn as rack inserted in housing), in such a position that when the diaphragm is in the "pump refill" or "cocked" position, the flat side of the pump lever arm will be parallel to the mounting face of the pump housing (NOTE—this may require lifting of rack and rotating of pump shaft and lever until correct position is secured). Install conical return spring on diaphragm retaining cup (spread last spring coil slightly so that spring is retained in cup). Install housing assembly on bowl, insert five mounting screws loosely, see that diaphragm not pinched or distorted, tighten all five screws evenly and securely. Check assembly for free movement. Return spring should cause arm to rotate freely from "discharge" point to "cocked" position (NOTE—if pump binds, tap end of shaft lightly to free it in housing). Turn actuating spring so that free end is against housing, use light wire engaged in spring hook to "wind up" spring 2 1/2 turns, hook end of spring over pump lever. Check to see that pump operates freely from "cocked" to "discharge" position by hand.

**Main Well Tubes**—See that flat on head of each tube is aligned with flat in housing counterbore.

**Balance Tube**—Tube is curved and open end must face open end of air horn.

**Cover & Bowl Assembly Installation**—When installing assembly in housing, hold throttle valve in wide open position and make certain that pump actuating lever engages pump yoke in housing. After installation completed, check for free operation by moving throttle lever from closed to open position.

► **NOTE**—Pump spring will partially open throttle valves in closed position.

**Carburetor Adjustments:** After reassembly completed, check and adjust: Pump Actuating Lever, Pump Jet Targeting or Aim, Automatic Choke Setting, Choke Rod adjustment, Unloader & Fast Idle setting.

**SERVICE PARTS:** Gasket Set—Oldsmobile No. 7001849. Repair Kit—Oldsmobile No. 7001353.

## ROCHESTER (CHEVROLET) CARBURETOR

## MODEL B

Chevrolet—Partial Production (Late 1949)

**DESCRIPTION:** Plain tube, downdraft type of new design with concentric fuel bowl, double float, vacuum controlled power system, and fast idle and throttle kicker linkage for starting and warming up.

**Fuel System:** Metering jets are located in support assembly on underside of bowl cover and are suspended in the fuel in the bowl which minimizes accumulation of vapors in fuel passages. Fuel system operates as follows:

**Idle Fuel System—**Fuel is drawn from main nozzle cross-bar in air horn and mixed with air admitted through three air bleeds in cross-bar. Fuel mixture is then metered by idle tube (in end of cross-bar) and taken down through passage to idle ports at throttle edge. For closed throttle idling, fuel is discharged through lower port and controlled by idle adjusting screw. As soon as throttle valve is opened for low speed operation, additional fuel is discharged through secondary ports above throttle.

**Main Fuel System—**As throttle valve is opened and suction increases at main discharge nozzle under cross-bar, fuel mixture is discharged through this nozzle and idle system drops out. This fuel is metered by Main Metering Jet and mixed with air admitted through air bleeds in cross-bar. Main fuel system delivers all fuel required for normal operation in 25-70 MPH. range.

**Power System—**Consists of a ball type Power Valve controlled by a spring-loaded vacuum piston which permits additional fuel to flow to main nozzle when valve is open. Vacuum piston is normally held up by manifold vacuum so that power valve is closed by spring below ball. Whenever manifold vacuum drops below 5" (for full power or high speed operation), spring forces piston down and plunger stem opens valve. Fuel admitted through valve is metered by Power Restriction in fuel passage.

**Accelerating Pump System—**Spring-loaded piston type which provides sustained discharge regardless of rate of throttle opening (link hole in pump plunger slotted and actuating spring located above pump piston). Fuel is drawn into pump cylinder through intake ball check in bottom of cylinder and is discharged through pump jet which sprays the fuel on the lower edge of the small venturi.

**Pump Vapor Vent—**Consists of a ball check valve in the piston head which allows any fuel vapor in cylinder to escape through passage in pump plunger opening into bowl. This check valve is closed during normal pump operation.

**IDLE ADJUSTMENT:** If carburetor out of adjustment, turn idle adjusting screw in until it is seated, then back screw out  $1\frac{1}{2}$  turns. Start engine and allow it to idle until thoroughly warmed up. With engine warm (choke valve wide open, fast idle inoperative), adjust as follows:

**Idle Screw Setting—**Set for smooth idle. Final setting should not be more than  $\frac{1}{2}$  turn in or out from initial  $1\frac{1}{2}$  turns open position.

**Idle Speed—**450-500 RPM. with warm engine.

**ACCELERATING PUMP:** Not necessary to check pump. No seasonal adjustment provided.

**POWER JET:** Valve opens when manifold vacuum drops below 5" of mercury. No adjustment required.

## FLOAT LEVEL: CAUTION—Two adjustments required:

**Float Level—** $1\frac{5}{16}$ " from bottom of each float to machined surface (gasket seat) on bowl cover with needle valve closed (float and cover assembly inverted). To check float level, remove air horn and float assembly, remove float hinge pin and lift floats out, remove gasket. Re-install floats. Hold assembly

in inverted position, measure from gasket seat on cover to bottom of each float. If this distance not  $1\frac{5}{16}$ " and equal for both floats, adjust by bending float arms (CAUTION—do not twist arms which may cause floats to contact sides of bowl). Then check float travel.

CONTINUED ON NEXT PAGE

ROCHESTER (CHEVROLET) CARBURETOR

## ROCHESTER (CHEVROLET) CARBURETOR (C nt.)

## ►CAUTION—Both floats must be set exactly alike.

**Float Travel**—1 3/4-1 27/32" from gasket seat on cover to bottom of each float with valve open and floats in extreme lower position. To check, hold assembly in upright position so that floats drop to bottom of travel, measure from gasket seat on cover to bottom of floats. If distance not within limits, adjust by bending float tang on float lever.

►**INSTALLATION CAUTION**—Before re-installing air horn assembly, remove floats and install new gasket, hold throttle kicker in vertical position (against spring tension) when lowering air horn assembly on carburetor bowl.

**FAST IDLE (THROTTLE KICKER)**: Consists of a spring-loaded kicker lever mounted on the side of the bowl casting. Lower end of kicker lever acts as a stop for the throttle lever stopscrew and upper end bears against fast idle cam which is integral with the choke valve lever. Rotation of cam as choke valve is closed for cold starting rocks the kicker lever and opens the throttle valve to a fast idle position.

**Adjustment**—Not required. Operation will be satisfactory if parts correctly assembled.

**CHOKE**: Choke valve is offset semi-automatic type (shaft is spring-loaded on lever so that valve is free to assume correct position during warming up period).

**Adjustment**—With control wire retainer screw on choke lever loosened, see that choke button on instrument panel pushed all the way in, hold choke valve wide open, tighten retainer screw. Check operation to see that choke valve fully closed when button pulled out.

**CARBURETOR OVERHAUL**: With carburetor removed from engine, disassemble, clean, and inspect all parts as follows:

**Disassembly**: Take out four air horn and bowl cover attaching screws, remove choke control bracket. Hold throttle kicker in vertical position (free of fast idle cam), lift air horn and bowl cover assembly straight up using care not to damage floats. Disassemble these parts as follows:

**Air Horn & Bowl Cover**—Remove float hinge pin and float assembly, lift off gasket, remove float needle, needle seat, and gasket. Remove main metering jet and power valve from main well support (CAUTION—do not lose ball and spring when removing power valve). Take out main well support attaching screw, lift off support, remove gasket, lift out power piston and spring.

**Choke Mechanism**—If choke parts require servicing or replacement, remove choke valve screws, lift valve out. Remove retainer ring from groove in shaft boss on air horn, slide shaft, spring, and lever assembly out of air horn casting.

**Float Body**—Take out pivot screw and remove throttle kicker lever and spring. Hold pump plunger down in cylinder, remove cotter pin or hairpin retainer from pump link, remove link from throttle lever and pump plunger, lift pump plunger from bowl, lift out return spring. Remove ball check from bottom of pump cylinder. Turn pump discharge guide until it can be removed, remove discharge spring and ball check by inverting assembly and allowing these parts to fall out. Remove pump intake screen retainer and screen.

**Throttle Body**—After disassembling float body, take out two throttle body attaching screws, lift throttle body off. Unscrew idle adjusting screw and remove screw and spring.

►**CAUTION**—Do not remove throttle valve (valve is close fit and idle discharge holes are drilled in correct relationship to valve which will be disturbed if valve and shaft removed).
